Lists of jurors are prepared in accordance with the Jurors Act, 1949, the names of persons apparently qualified as jurors being so marked on the electors lists posted up in church porches and elsewhere. Persons who deem themselves to be entitled to exemption should communicate with the registration officer. A juror is entitled to 6 days' notice of the time at which he is required to attend, and if he is prevented by illness from attendance he must send a medical certificate to that effect to the associate of the court to which he is summoned. Failure to appear in the High Court or at Assizes when duly summoned may involve a fine of £10 (at a Co. Court, £5). Jurors are entitled to be paid, on a scale prescribed by the home secretary, expenses for travelling and subsistence and compensation for loss of earnings during the period of J. service.

Co. Court J.s, formerly composed of 5, now consist of 8 members. They are not often resorted to, and it is well known that Co. Court judges as a body are strongly opposed to having time wasted and their faculties implicitly condemned by summoning such J.s to assist them. Jurors may be objected to or 'challenged,' as it is termed, and either party may exercise this right, which is of 3 kinds: (1) challenge to the array, or an objection to the whole number of jurors on the panel on account of some reason alleged against the sheriff who summoned them; (2) challenge to the poll, i.e. to some particular jurymen or jurymen on one or more of the following grounds: (a) that the juror is a peer, or is (b) not properly qualified, or (c) is likely to be biased, or (d) has been convicted of some crime or misdemeanour; (3) peremptory challenge of jurors. A person indicted for felony or misdemeanour may challenge up to 7 jurors without giving any reason. A juror is not accountable for, nor will any action lie against him in respect of, anything he says or does in the discharge of his duty.

The J. system in civil actions is declining. In Co. Courts trial by J. has for many years been practically extinct. In the High Court any party to actions for fraud, libel, slander, false imprisonment, malicious prosecution, seduction, or breach of promise of marriage is tried by J. The right to a trial by J. in all other actions is in the discretion of the Court. See also COUNTY COURTS: CRIMINAL LAW; JUDGE. For the hist. of J.s see Sir F. Palgrave, *English Commonwealth*, 1831; W. Forsyth, *History of Trial by Jury*, 1852; H. Brunner, *Die Entstehung der Schwurgerichte*, 1872; T. Taswell-Langmead, *English Constitutional History*, 1875; W. Stubbs, *Constitutional History of England in its Origin and Development*, 1875-8; H. Philipps, *On Juries*; N. Huskins, *Institutions* (Harvard), 1918; M. S. Ames, *British Justice*, 1942; R. M. Jackson, *The Machinery of Justice in England* (2nd ed.), 1953; P. Archer, *The Queen's Courts*, 1956.

**Jus Civile**, see ROMAN LAW.

**Jus Devolutum**, in old Scots law, the right of the bishop of a diocese to appoint an incumbent (q.v.) to a vacant living if the owner of the right of presentation does not exercise his right within a prescribed time. It is now used to denote the comparable right of the presbytery to appoint a minister if the congregation fails to do so within 6 months.

**Jus Emphyteuticarium**, see EMPHYTEUSIS.

**Jus Gentium**, i.e. law of nations, was the body of laws applied in ancient Rome by the praetors to nations under Roman dominion which did not enjoy full Roman citizenship. It adapted those notions of natural justice (*lex naturae*) which could satisfy the practical requirements of Roman society. The Eng. merchant law (q.v.) owes many of its essential principles to those of the J. G. Classical jurists give, as equivalents for *jus gentium*, 'the common law of all men,' 'the law which all nations use'—expressions which are designed to emphasise that *jus* is a word which includes the principles of legal right as well as the rules of law. There is no exact equivalent for *jus* in the Eng. language, and though J. G. is often translated by 'the law of nations,' as if it were synonymous or co-extensive with what we call 'International Law,' the trans. is not justified. For the Rom. jurists included more in their J. G. than the law prevailing between states; and again, with modern jurists, 'the law of nations' is a law which rests on the consent of nations or states as such, whereas the Rom. jurists regarded the J. G. as resting on the consent of mankind. With the Romans, the underlying principles were the same for private as for public law, being in both the universally recognised principles of legal right.

In 'public law,' e.g., ambas. were sacred by the J. G.; but no special dept of law in force between nations was appealed to, nor was the consent of any nation as such implied; ambas. were, in fact, sacred because in matters concerning nations as well as in those concerning private persons principles which commended themselves to the conscience of all men were necessarily to be observed. Thus the meaning of J. G. was the same in private and public law. Gaius (q.v.) uses *jus naturale* as equivalent to J. G. and declares that J. G. is 'what natural reason establishes among all men,' a declaration which Justinian (see JUSTINIANUS) adopts from him. Ayala (q.v.), in writing on the laws of war, also adopts the current view of his time, that of a natural law to which the J. G. was added by common consent. But the J. G. of Grotius (q.v.) comprises only questions prevailing between states; and he divides it into that which is truly law and that which produces only a certain effect like that of the primitive law; the former being identical with the law of nature, the latter resting on the will of the society of states and including laws good and bad, such as the bad customary laws of war against which he inveighed.

See *The Collected Papers of John Westlake on International Law*, 1914, where all the opinions are collated.

**Jus Mariti**, in Scots law, the unlimited right of a husband, prior to the Married Women's Property Act, 1881, to manage and dispose of the movable estate of his wife, whether belonging to her at the date of marriage or acquired subsequently. The J. M. was lost only by express renunciation, or by exclusion by an antenuptial marriage contract. The Act of 1881 abolished the J. M. except as to cases where the marriage was contracted and the wife acquired property before 18 July 1881.

**Jus Primae Noctis** denotes the right of concubinage on the first wedding night. According to some historians, the medieval feudal law gave the lord the J. P. N. with his tenants' wives on their first wedding nights. Blackstone repudiates the assumption that the custom ever existed in England or Scotland, though it has occasionally been adduced as a plausible explanation of the custom of Borough-Eng. (q.v.), and of the origin of the fine paid by the tenant to the lord on the marriage of the tenant's daughter. But there is strong evidence of its former existence in Scotland, according to Skene, in the ordinance of King Evenus to the effect that the lord of the ground should have the right by way of casualty (q.v.). Malcolm III repealed the ordinance and decreed that the bridegroom should pay a sum of money (called *marra*) as compensation. Hence the Scottish term *merchet*, or *merchetu mulicrum*, to denote the old form of the marriage tax in the charters of Robert I. According to certain Fr. writers, the J. P. N. was synonymous with the *droit du seigneur*, but others consider that the latter term merely connoted the insistence of the Church on continence in brides. The term, according to Schmidt, Veullot, and others, had a quasi-religious significance, as exemplified in parts of China, where priests were said to deflower virgins at the express request of the girls' parents, and in W. India, where J. P. N. was extended to men of assumed divine caste. See Sir W. Blackstone, *Commentaries on the Laws of England*, 1765; W. Bell, *Dictionary and Digest of the Law of Scotland*, 1838; L. Veullot, *Droit du Seigneur*, 1854; K. J. L. Schmidt, *Jus Primae Noctis*, 1881; J. von Gierke, *Humor im Recht*, 1886, 1925.

**Jus Relictae**, in Scots law, the right of a wife after the death of her husband to one-third of his movable estate if he dies leaving children, and to one-half if he leaves none. The husband, by the Married Women's Property (Scotland) Act, 1881, has a corresponding right, called the *jus relictæ*, in the wife's property. The widow is not disentitled by reason of having been previously provided for by her husband, unless, in accepting such provision, she expressly renounced her right, and such renunciation is only effectual to bar her J. R. if it be shown that she was fully aware of the extent of her legal right. The husband cannot

affect the J. R. by any testamentary or other deed.

**Jusserand, Jean Adrien Antoine Jules** (1855-1932), Fr. politician and writer, b. Lyons. In 1887 he began his career as a diplomat, during which he fulfilled sev. important missions in London and Copenhagen. He was ambas. in the U.S.A., 1902-25. J. was a discerning critic, especially on Eng. literature. Among his writings may be mentioned *Le Théâtre en Angleterre depuis la Conquête jusqu'aux prédécesseurs immédiats de Shakespeare*, 1878, *Les Anglais au moyen âge*, 1884, *Le Roman anglais*, 1886, *Le Roman au temps de Shakespeare*, 1888, and *Histoire littéraire du peuple anglais des origines à la Renaissance*, 1894. In English he wrote *With Americans of Past and Present Days*, 1916, and *The School for Ambassadors, and other essays*, 1924.

**Jussieu, De**, name of a Fr. family of botanists. Among its chief members were:

**Antoine** (1686-1758), b. Lyons, prof. of botany in Paris, as the successor of Tournefort. He ed. Tournefort's *Institutiones rei herbariae*, 1719.

**Bernard** (1699-1777), also b. Lyons, superintendent of the gardens at the Petit-Trianon. To him is due the beginning of the arrangement of the plants according to a natural system, a method completed by his nephew. He ed. Tournefort's *Histoire des Plantes qui naissent dans les Environs de Paris*, 1725.

**Antoine Laurent** (1748-1836), nephew of Bernard, prof. of botany at the Jardin des Plantes, Paris, 1770. His *Genera Plantarum*, 1789, is the foundation of the modern method of botanical classification.

**Adrien** (1797-1853) is remembered for his pub. on Rutaceae, Meliaceae, Malpighiaceae, and Euphorbiaceae.

**Laurent Pierre** (1792-1866), nephew of Antoine Laurent, and a Fr. writer on education. His chief work is *Simon de Nantua*, 1818, trans. into sev. languages.

**Justianiana Prima**, see SKOPJE.

**Justice, Court of International**, see INTERNATIONAL JUSTICE, COURT OF.

**Justice, Royal Courts of**. Up to the time of the passing of the Judicature Act in 1873, the R. C. of J. were situated at Westminster Hall, the place where the *Aula regis* of the Norman and Plantagenet periods sat. The constituent courts in 1873 were the Queen's Bench (see KING'S BENCH), the Common Pleas (q.v.), and the Exchequer (q.v.), which were styled the Superior Courts of Common Law, in contradistinction to the High Court of Chancery, with its vice-chancellor's courts, which were generally referred to as the *Courts of Equity* (see EQUITY). In addition there were the High Court of Admiralty, usually called the *Instance Court* when exercising its jurisdiction in respect of maritime injuries, and the *Prize Court* when constituted for the decision of questions concerning booty of war; the Probate Court (q.v.), the Divorce Court (q.v.), the Palace Court (q.v.), and a Court of Chivalry. All the jurisdiction exercised by the superior courts of law and

equity, the High Court of Admiralty, the Courts of Probate and Divorce, and the Courts of Assize was by the Judicature Act, 1873, transferred to the High Court of J., situated in the Strand, which comprises: (1) the 2 Courts of Appeal (see APPEAL), (2) the Court of Criminal Appeal (see CRIMINAL APPEAL), (3) the Queen's Bench Div., (4) the Chancery Div., (5) the Probate, Divorce, and Admiralty Div., and (6) the Railway and Canal Commission Court. The bankruptcy work of the court is done by one judge from the Chancery Div. See also JUDICATURE ACTS.

**Justice of the Peace (J.P.)**. J.P.s are inferior and unpaid magistrates appointed by the lord chancellor on the recommendation of the lord-lieutenant of a co. to keep the peace within the co. bor., riding, liberty, or other div. in which they are appointed. The title of J.P. dates from 1360, when Edward III vested a criminal jurisdiction in the old Conservators of the Peace. The germ of these latter is traced by Bishop Stubbs (*Select Charters*) in the appointment by Archbishop Hubert as chief justice in 1195 of knights to receive the oaths for the maintenance of the peace (see the *Edictum Regium*). In 1253, and in other years, knights were assigned to keep the peace, and in Edward I's reign *custodes pacis* were sometimes elected by the co. freeholders. One of their prin. functions was the enforcement of the Statute of Winchester, 1285, which, *inter alia*, regulated the watch and ward in tns, and made dists. in which felonies had been committed liable to produce the bodies of the culprits. Edward III gave them the general power of trying practically all felonies, and in course of time they gradually usurped all the powers previously exercised by the Shire Moot. An Act of Henry VII empowered J.P.s to try all offences except charges of treason, murder, and felony, but from that date their powers as a body of criminal judges declined. For long, however, they exercised duties of local gov., and among the earliest of such duties were those of collecting benevolences, maintaining bridges, highways, and public buildings, granting licences, appointing local officials, and controlling local finance. The bulk of these administrative duties has long been transferred to the co. councils (q.v.) by the Local Gov. Act, 1888. But by means of a joint committee the J.P.s and the co. councils jointly superintend the co. police. The Act of 1888 did not interfere with the judicial work of J.P.s, and the decline in their criminal jurisdiction was rather a consequence of the practice of remitting the more serious felonies to the assizes—a practice now hardened in a statutory provision to the effect that the criminal jurisdiction of the quarter sessions (see COUNTY SESSIONS) is confined to the trial of certain minor felonies and misdemeanours.

The post of co. justice, formerly remunerated by a scale of wages regulated by a statute of 1389, is now purely

honorary, and since 1907 the old property qualification of £100 a year, or the necessity for any property qualification, has been abolished. The lord chancellor, the lord president of the Privy Council, the lord privy seal, the judges of the High Court, the attorney-general and solicitor-general are J.P.s *virtute officii*. Co. court judges, bor. recorders, metropolitan police court magistrates, and others by reason of holding certain minor judicial offices acquire the rank of J.P. Other classes of J.P. are mayors of municipal or metropolitan bors., ex-mayors of municipal bors. (for one year following their year of office), chairmen of co. and dist. councils, and the mayor and aldermen of the City of London. Bor. justices are now appointed under the Municipal Corporations Act, 1882, but a bor. can petition the crown for the appointment of a stipendiary magistrate to be appointed by the Home Secretary. Women are competent to be appointed as J.P.s (Sex Disqualification (Removal) Act, 1919). Petty sessions are sittings held by 2 or more J.P.s for the disposal of minor charges, admitting to bail persons accused of felony, the hearing of informations and complaints, and certain other purposes. The lord mayor or any of the aldermen of the City of London, or any stipendiary magistrate sitting in a court-house, where he has the usual power of 2 justices, constitutes a petty sessional court-house. A single magistrate sitting alone has very circumscribed powers. He can hear a charge prior to committing for trial, release a prisoner on bail (q.v.), take his recognisances to appear, and dismiss a case when the evidence is not strong enough to justify committal.

J.P.s perform a wide range of duties. Their criminal jurisdiction, which accounts for the bulk of the work of all courts, includes the hearing of cases involving such offences as assault, drunk and disorderly conduct, certain infringements of motoring laws, petty larcenies, and breaches of public health regulations. They have limited jurisdiction in matrimonial disputes (e.g. granting of separation orders, orders for the payment of a maximum of £5 per week for maintenance of a wife and £2 per week for each child). They also have other miscellaneous functions such as granting licences for public houses and places of entertainment, and limited powers of ejectment (q.v.) from lowly rented houses. See *Stone's Justices' Manual and The Justice of the Peace and his Functions*, and L. Page, *Justice of the Peace*, 1936.

**Justices, Lords.** The L. J., who are 8 in number, form, together with the Lord High Chancellor, the Lord Chief Justice of England, the Master of the Rolls, and the President of the Probate, Divorce, and Admiralty Div. as *ex-officio* members, the penultimate Court of Appeal for England and Wales. In practice, the Master of the Rolls alone of the *ex officio* judges sits as a regular member of the Court of Appeal. Ordinarily the Court of Appeal sits in 2 divs. of 3 judges, consisting of the

Master of the Rolls and 2 L. J. and 3 L. J. respectively. A judge of the High Court may be called on to sit in the Court of Appeal when necessary. The Court of Appeal hears appeals from the High Court, co. courts, and certain tribunals such as the Lands Tribunal. It does not hear criminal appeals. It may reverse a judgment, verdict, or finding, or order a new trial. A new trial may be granted on one or more of the following grounds: (1) misdirection by the judge; (2) misrepresentation of evidence or erroneous rejection of evidence by the judge; (3) misbehaviour of the jury; (4) excessive or inadequate damages; (5) discovery of fresh evidence; (6) total absence of evidence for the jury; (7) verdict against the weight of evidence; (8) surprise—term used to denote all cases where the appellant, through no fault of his own, was prevented from getting a fair trial, e.g. by his opponent keeping a material witness away, or misleading him as to the time of the trial. It is a rule of the Supreme Court that there is no appeal from an order of a High Court judge as to costs, such matter being entirely within the discretion of the judge making the order. In most cases a party has a right of appeal without leave, although the judge whose order or judgment is being appealed against may, on notice of appeal being given, refuse a stay of execution or impose certain terms as to paying money into court as a condition of appeal. From the Court of Appeal there is a right of appeal to the House of Lords, but it is an extremely expensive process. See also *JUDGE*.

**Justicia**, large genus of acanthaceous plants found in all tropical parts of the world, but preferring damp woods. Only a few species are cultivated as ornamental plants, such as *J. furcata*.

**Justiciar**, in Eng. hist. the chief political and judicial officer under the Norman and Plantagenet kings. The J. first appeared in Eng. hist. in the time of William I, as the regent of the kingdom in the sovereign's absence; e.g. Wm Fitz-Osborn, Earl of Hereford, acted in that capacity for William I during his absence in Normandy in 1087. The importance of the office was much increased by Ranulf Flambard under William Rufus and the J. became (next to the king) supreme in justice and finance. When the *Curia Regis* split up into the Courts of Common Law, in the time of Henry III, the power of the J. began to decline, as he could not preside over all the 3 courts. The office ceased to exist in the reign of Edward I and the J.'s powers passed to the Lord High Chancellor.

**Justiciary, High Court of**, supreme court for criminal cases in Scotland. There is no appeal from the decisions of the H. C. of J. to the House of Lords, and there is no separate Court of Criminal Appeal in Scotland, but appeals are heard before a tribunal consisting of 3 judges of the H. C. of J. Prior to 1926 there was no appeal whatever. The H. C. of J. sits permanently at Edinburgh, and various judges

go on circuit 6 times a year to Glasgow, 4 times to Aberdeen, Dundee, and Perth, and twice a year to Ayr, Dumfries, Inveraray, Inverness, Jedburgh, and Stirling; but special sessions may be held at any convenient tn. Its membership comprises the Lord Justice-General, the Lord Justice-Clerk, and 13 Lords Commissioners of Justiciary, i.e. the whole of the Lords of Council and Session and Senators of the College of Justice. A single judge usually sits, except in cases of special importance. Its jurisdiction extends to any crime against public law committed by a Brit. subject or a foreigner in Scotland, or partly in Scotland and partly abroad, or committed at sea if at the time the ship was within 3 m. of the coast of Scotland. Formerly certain crimes were triable only in the H. C. of J., such as robbery, rape, murder, and wilful fire-raising; but since 1887 the Sheriff Court has had jurisdiction in all crimes except treason, murder, and rape. In serious cases, however, the criminal is commonly remitted to the H. C. of J. for sentence.

**Justifiable Homicide**, see HOMICIDE.

**Justin Martyr**, St (c. AD 100-c. 165), early apologist of the Christian Church. B. Flavia Neapolis, now Nablus, in Samaria, of heathen parents, and brought up in the philosophy of the Stoics and Platonists. In his *Dialogue with Trypho the Jew* he ascribes his conversion to Christianity to a chance conversation with an aged Jew at Ephesus, who directed him to the O.T. prophets. After conversion he still wore his philosopher's cloak, disputing and lecturing at Ephesus, Rome, and other cities. His martyrdom, according to the *Acta SS. Justin et Sociorum*, took place under the prefect Rusticus (AD 163-7), but some authorities quote 148. Undoubtedly genuine works of Justin are *Apologies for the Christians*, in 2 books, and the *Dialogue*. The former, addressed to a cultured pagan audience, is of great value for the hist. of the early Church. To a certain extent J. reconciles Christianity with anct Gk culture. The latter (in the form of a 2 days' theological discussion at Ephesus) is a defence of Christian teaching, against Judaism. Other works ascribed to him are a speech and an address to the Greeks and an *Epistle to Zenas and Serenus*, of doubtful authenticity. See J. C. P. von Otto, *Justinus philosophi et Martyris opera quae feruntur omnia* (5 vols., 3rd ed.), 1862-81; the Oxford Library of Fathers, 1861; (C. Coxe, *Ante-Nicene Fathers*, vol. II, 1868); A. von Harnack, *Judentum und Judenthristentum in Justins Dialog mit Trypho*, 1913; E. R. Goodenough, *The Theology of Justin Martyr*, 1923; K. Thieme, *Kirche und Synagoge*, 1945.

**Justinianus, Flavius Anicius** (AD 482 or 483-565), Byzantine emperor, better known as **Justinian I**. He was b. in Illyricum, possibly of Thracian descent, Justinus, the emperor, being his uncle. Justinus had J. educ. in Constantinople, and appointed him his successor. Thus Justinian came to the throne in 527. The outstanding features of his reign are his

conquests and his laws. He has been described as vain and somewhat fickle of purpose, but his drive and energy were enormous. He was a man of wide interest and considerable intelligence.

The church received his constant attention. By edict he denounced the heresies of Theodore, a Nestorian, hoping thereby to put an end to the miserable schisms, and later he summoned a general council of the church. But the chief fruit of this was the tedious 'Three Chapters' controversy, and, as Justinian himself was suspected of Monophysitism and a more recent heresy, it is not surprising that his

JUSTINIAN I

From the Ravenna Mosaic

desire for peace was unfulfilled; and his rigorous persecution of heretics probably encouraged fanaticism and religious strife.

Belisarius (q.v.) and the Armenian eunuch, Narses (q.v.), were J.'s most famous generals. Under their commands Africa was wrested from the Vandals (535) and Italy from the Goths (552). Along the Danube there were successful skirmishes with the Bulgarians, Gepidae, and Langobards, whilst in 562 a truce was made after a 20 years' struggle with Chosroes I of Persia, whose encroachments on the E. frontier were thus momentarily halted. But J. has with some justice been accused of squandering the enfeebled resources of the empire in recovering exhausted ter. instead of strengthening the existing barriers against the Slavs, Huns, and Persians.

J.'s legal reforms are his most enduring monument. A body of 10 scholars under Tribonian brought out the *Code* in 529, and a second ed. followed in 534. Seventeen lawyers, again with Tribonian at their head, issued the *Pandects*, or *Digest*, in 533, having 'extracted the spirit of jurisprudence from the decisions and

conjectures, the questions and disputes, of the Rom. civilians' in the remarkably short period of 3 years. The *Institutes*, which was intended as a student's manual, preceded the *Digest*. Finally, 16 edicts and a number of 'novels' (*Novellae*) completed his compilation, a compilation destined for centuries to be the basis of European codes, except in England. Mommsen's ed. of the *Digest* (1868-70) and Krüger's ed. of the *Code* (1873-7) are the best. See monograph by E. Grupe, 1923, and W. Schubart, *Justinian and Theodora*, 1943.

**Justinianus II** (669-711), Byzantine Emperor, 685-95 and 705-11, succeeded his father, Constantine IV. He made war on the Arabs and Bulgarians, and so roused the hatred of his subjects by his rapacities and persecutions that they rose in rebellion under Leontius. J. fled into exile among the Bulgarians, who restored him in 705. His rule was as cruel as before, and he was finally deposed by Philipppicus, and put to death. J. was the last Heraclian emperor.

**Justinopolis**, see CAPODISTRIA.

**Justinus I** (d. 527), Byzantine emperor, a peasant boy of Dacia, who enlisted in the guard of the Emperor Leo I. He soon became its general and, on the death of the Emperor Anastasius, was proclaimed emperor (518).

**Justinus II** (d. 578), Byzantine emperor, succeeded his uncle Justinus I. He became emperor in 565, and was an incompetent ruler. He dismissed Narses (q.v.), and during his reign the Lombards conquered N. Italy. From 574 Tiberias was co-ruler with J., who suffered increasing bouts of madness.

**Justinus, Marcus Junianus**, Rom. historian of uncertain date, author of an epitome of Pompeius Trogus. His work enjoyed considerable vogue during the Middle Ages because of its wide scope and short compass. See the edition of F. Rühl (revised by O. Seel), 1935.

**Justus**: (1) The surname of St Joseph Barsabas (see under JOSEPH). (2) A Jewish convert and fellow worker of St Paul (Col. iv. 10). (3) A Corinthian convert, whose name is given variously as 'Titius J.' and 'Titus J.' (Acts xviii. 7).

**Jute**, vegetable fibre grown chiefly in E. Pakistan and Indian Bengal where it is believed to have been cultivated as early as 800 BC. In these countries it has been employed for centuries in manuf., but its introduction into Europe dates only from 1828. The founder of the Bengal J. industry was an Englishman, George Acland, who began as a midshipman in the navy, and served with the E. India Marine Service, afterwards leaving to take up a commercial life, first in Ceylon, then in Bengal. He got into touch with manufacturers of paper at Serampur who were experimenting with fibres in the hope of improving and cheapening their output, and this seems to have prompted the idea in Acland's mind of the manuf. of rhea. He returned to England to find capital and visited Dundee, already an important textile

centre in the flax and hemp industries, and with many of its machines and mills already being turned over to J. when the other fibres were not available. Messrs Balfour & Melville were the first to spin J. at their Chapelshade works in 1832, and, with machinery working to capacity, Dundee's pop. was trebled during the next 50 years. The growth of the factory system in India—began in 1855 when George Acland took out J.-spinning machinery from Dundee—curbed the expansion of the Scottish J. trade.

J. is obtained from the stems of 2 species of *Corchorus*, namely *C. capsularis* and *C. olitorius*, of the Tiliaceae family, which includes a dozen different types of fibre. The plants are anns., tall and spear-like with round stems as thick as a man's finger, and with hardly any branches except at the top. They reach a height of from 5 ft to 10 ft and are readily distinguished by their seed pods; the capsule of *C. olitorius* is a slender cylinder some 2 in. long, whilst that of *C. capsularis* is almost globular and rough to touch.

**Cultivation.** J. grows best in a hot, moist atmosphere where there is considerable rainfall. It flourishes in the Bengal region of India and E. Pakistan, especially in the highland dists., and attempts to introduce it into other parts of Asia and Africa have so far resulted in the yield of an inferior variety. The seed is sown broadcast from mid Mar. to mid May, but in the lowlands sowing is completed by mid April to allow the plants to reach a sufficient height before the floods. The plants mature in 4 to 6 months, the crop being raised by more than a million smallholders called ryots, each of whom tends the plants with the aid of his family. The appearance of the flower is the signal for harvesting. The stalks, which are either cut down with the sickle or pulled up by hand, are gathered into bundles and immersed in stagnant pools or streams to undergo the process known as 'retting.' This may last from 3 to 30 days, the object being to loosen the fibres and separate them from the stem. After being cleansed from vegetable impurities the fibre is made up into bundles, sorted according to quality, and passed through a powerful hydraulic press which reduces it to the familiar bales of commerce. Each bale weighs 400 lb., and an average crop yields about 2.6 bales per ac. The aggregate area under J. in Pakistan and India averages 2½ to 3 million ac., the ann. yield being from 7 to 10 million bales. Before the Second World War the crop was ample to meet world demand, but scarcity developed during and after the war and prices were high. The position was further aggravated by the partition of India in 1947. About three-quarters of the J.-producing area fell within the new state of Pakistan. But whereas the main growing area was in Pakistan, the manufacturing and shipping facilities were almost entirely in India. Serious economic differences followed between the two countries and for a time all

trade in J. ceased. In 1953 India reached agreement with Pakistan to import at least 1·8 million bales annually, equivalent to more than half the world supply of raw J. Since partition both India and Pakistan aimed to achieve greater self-sufficiency, India in the growing of J. and Pakistan in its manuf. Despite its slow decline between the two world wars the Dundee J. industry remains second only to India, but in 1956 it employed only 18,000 workers, or less than half the number employed in 1914. In 1946 the Brit. J. Trade Research Association was set up with laboratories in Dundee as part of the industry's post-war modernisation plan, whilst in the following year the industry's 6 sectional trade associations became linked in the Brit. J. Trade Federal Council whose H.Q. are at Bank St, Dundee. J. mills were estab. in Calcutta in 1855, and over 100 mills were in operation by the outbreak of the Second World War. The Indian J. Mills Association is probably the most important body affiliated to the Bengal Chamber of Commerce formed in 1886. In more recent years the Calcutta J. Dealers' Association has watched the interests of its members as dealers in J. for local consumption.

The U.S.A. is the biggest single market for J. manufs. Of India's total exports of all J. goods, about 50 per cent went to America during 1934-9 and 23 per cent between 1949-52, whilst nearly 24 per cent of Britain's J. goods exports in 1951 went to the U.S.A. The largest raw J. importers in 1951 were the U.S.A. (707,000 bales), U.K. (650,000 bales), France (513,000 bales), W. Germany (450,000 bales), Italy (418,000 bales), and Belgium (414,000 bales).

*Uses and characteristics of jute.* From very early times the people of the Indian subcontinent have made cordage, paper, and cloth out of this fibre. The chief cloth made to-day is 'gunny' cloth, which is woven of different textures, according to the purpose for which it is intended. Thus gunny bags are used for carrying poppy seed, pulses, and rice, and package covers, sails, sheets, and even wearing apparel are also made of this material. Other articles made of J. are string, cord, and rope, floor cloths, net bags, and lengths of stuff for tying bales of cotton. More than 80 different J. products and usages are claimed by the Dundee J. industry in various branches of industry, agriculture, and domestic life. Hessian, tarpaulin, sacking, and bagging are among bulk lines turned out from its factories, whilst from J. are also manuf. Wilton, Brussels, and other carpets and all kinds of rugs and matting. In common with other textiles modern research has made it possible to proof J. fabric against rot, mildew, fire, and acid fumes, and it is now extensively used as wrapping material, brattice cloth (for mine ventilation), linoleum and carpet backings, and for interlinings in clothing and upholstery. Although the best J. is inferior in durability and strength to hemp and flax, modern processing and blending with other

natural and man-made fibres have widely extended the range of its uses. The finest qualities, such as Serajungoo and Naraijungoo, are lustrous, soft, and smooth, long, uniform in fibre, and of a yellowish-white colour. Inferior qualities, as, for instance, Dalsee and Dowrah, are of a brownish hue, and are fit only to be dyed darker shades. Good fibres may be dyed delicate and also bright tints, but they rarely bleach a pure white. Balers have an elaborate system of marking the 4 main classes of the fibre and of subdividing these again according to tone and quality.

*Manufacture.* Two separate and distinct processes are involved in making J. fabric—the preparing, spinning, and winding in the mill, and the weaving and finishing in the factory. The first process in the mill is called 'batching,' in which the J. is classified by quality. In the softening machine the 'stricks' or 'heads' are thoroughly wetted between fluted rollers with water and oil, as they have been hardened in the course of baling by hydraulic pressure. The 'drawing frames' and 'roving frames,' in which each sliver is drawn out to many times its own length, complete the process of preparation. A length of 14,400 yds of J. yarn is called a 'spynole,' which in fine qualities weighs only 2½ lb. But a 'spynole' of coarse yarn may weigh as much as 10 lb. J.-spinning is a very similar process to flax-spinning.

For statistics see the Commonwealth Economic Committee's *Industrial Fibres*. See also T. Woodhouse, *Farn (counts and Calculations)*, 1921, and T. Woodhouse and J. Ireland, *An Introduction to Jute Weaving*, Dundee, 1922.

*Jüterbog*, Ger. tn in the dist. of Potsdam, 28 m. S. of Potsdam (q.v.). It was the scene of a Swedish victory during the Thirty Years War, and, near by, Bülow (q.v.) defeated the French in 1813. Pop. 15,000.

*Jutes*, Germanic tribe, who invaded Britain in the 5th cent., settling chiefly in Kent. Modern scholarship inclines to the view that the J. came to Britain from the region E. of the mouths of the Rhine, and not from the modern Jutland.

*Jutland* (Dan. Jylland), N. portion of the peninsula which extends northward to the Skaw headland (Skagen), from a line drawn from Lübeck to the mouth of the Elbe. J. is bounded in the S. by the R. Elbe, and includes part of the Ger. prov. of Schleswig-Holstein; the remaining and larger portion belongs to Denmark. Separated from Sweden by the Kattegat and from Norway by the Skagerrak, it is almost cut in two by the Lim Fjord (100 m. long). The Little Belt, the Strait, that is, between J. and Fyn, connects the Baltic and N. Seas. J. and Fyn are linked by the Little Belt bridge. Irrigation, tree plantations, and cultivation of the fens, etc., have transformed over 90 per cent of the heath and sand of the interior into arable land. J. is also known as the Cimbric Peninsula, as it is believed to have been inhabited by

the Cimbric (q.v.). N. Slesvig, in the S. of J., was ceded to Prussia after the war of 1864, but by plebiscite in 1920 it was returned to Denmark. In the Second World War J. was occupied by the Germans. J. has an area of 11,400 sq. m., and a pop. of 1,801,740. The chief ports

over a prepared ambush of submarines. The elimination of the High Seas Fleet at this time would have been an important easement to Great Britain, but it would not have had a decisive effect on the war. On the other hand, ruin would have overwhelmed the allied cause had the Brit.

THE SCENE OF THE BATTLE OF JUTLAND

The Times

are Aarhus, Aalborg, Esbjerg, Horsens, and Randers (q.v.). See also DENMARK. Jutland, Battle of, fought between the Brit. and Ger. fleets on 31 May 1916 off the W. coast of J. During the last week in May there had been indications that the cautious and timid tactics previously imposed on the Ger. Navy were now to be abandoned; that Adm. Scheer was planning an offensive against the Eng. coast with the aim of drawing the Brit. fleet

fleet been destroyed. It was, therefore, not surprising that the subsequent tactics of Adm. Jellicoe should have been governed by a measure of caution.

On the evening of 30 May both fleets put to sea, the Ger. consisting of 22 battleships, 5 battlecruisers, and numerous cruisers and destroyers. By dawn on the 31st Jellicoe had concentrated 24 battleships, 3 battlecruisers, with cruiser squadrons and destroyer flotillas, in the Long

Forties. Sixty-five m. ahead was Adm. Beatty with 6 battlecruisers, 4 battleships (5th Battle Squadron), light cruisers, and destroyers. All were steaming towards the Heligoland Bight and, if nothing was sighted by 2 p.m., it had been decided that the fleet should retire. The hour to turn arrived and Beatty had actually altered course to the N. when the cruiser *Galatea*, reconnoitring to the E., suddenly reported: 'Enemy in sight.' About 8 m. away she had sighted a steamer being molested by 2 strange vessels which turned out to be the leading torpedo boat destroyers of the Second Ger. Scouting Group. Fire was opened. Beatty turned his squadron at once to the SE., but by the time the Fifth Battle Squadron had turned they were 10 m. astern. At 3.20 5 Ger. battlecruisers under the command of Adm. von Hipper were sighted. They immediately turned about in order to draw Beatty towards the High Seas Fleet of whose proximity he was not aware. Both sides deliberately converged and fire was opened at 3.45. At 4 p.m. the *Indefatigable*, after 12 min. action with the *Von der Tann*, blew up and sank almost without survivors; 28 min. later the *Queen Mary*, smitten amidships by a salvo from the *Derfflinger*, burst into flames, capsized, and exploded. With the *Lion* (Beatty's flagship) in flames, a salvo struck the *Princess Royal* and Beatty remarked to his flag captain: 'Chatfield, there seems something wrong with our bloody ships to-day. Turn two points to port' (i.e. towards the enemy). The crisis was past. As Brit. shells took effect, the Ger. fire became ragged and the Fifth Battle Squadron was now in action with von Hipper's rear. At 4.33 the cruiser *Southampton*, scouting ahead, suddenly sighted the Ger. High Seas Fleet hastening to von Hipper's support, and Beatty instantly turned to steam back towards Jellicoe. With support at hand, von Hipper turned aside and now began the 'Run to the North.'

Meanwhile the Grand Fleet with Jellicoe flying his flag in the *Iron Duke* was steaming SE. at 20 knots through mist curtains which were beginning to hang over the sea. Jellicoe himself was in a haze of uncertainty due to conflicting reports about the enemy's position. Uppermost in his mind was the question: 'Where is the enemy battlefleet?' No one could tell him. Thus at about 5.30 the forces at Jellicoe's disposal were in the form of a huge crescent. Its SW. horn consisted of Beatty's detached squadron engaged with von Hipper and retiring on the Grand Fleet; its NE. horn composed of Adm. Hood in the *Invincible* with the Third Battlecruiser Squadron curling round to the S. Flung out ahead of the Grand Fleet were cruisers. Into the centre of this crescent von Hipper's battlecruisers and the Second Ger. Scouting Group (commanded by Boedicker) were plunging. Further astern was the High Seas Fleet.

At 5.20 the cruiser *Chester*, reconnoitring for Adm. Hood, was suddenly

overwhelmed by the Ger. Second Scouting Group as it emerged from the mist, but, shortly afterwards, Hood with his 3 battlecruisers bore down on the enemy and severely crippled 3 Ger. light cruisers. Boedicker and von Hipper, realising that they were being surrounded by superior forces, turned about and fell back on the High Seas Fleet and, during this movement the cruiser *Defence* suddenly found herself facing Ger. battlecruisers. Struck by a succession of shells she blew up. At this moment the *Lion*, much to Jellicoe's surprise as he had imagined Beatty to be much further to the E., came in sight of the *Iron Duke*. It transpired that the cumulative error in their relative positions amounted to 11 m. Instantly Jellicoe flashed the message: 'Where is the enemy battlefleet?' But no one knew. Finally, at 6.10 the *Barham*, leading the Fifth Battle Squadron, passed the vital information. But her report placed the leading Ger. battleship 3 m. nearer the Grand Fleet than was in actual fact the case.

Deployment was now imperative, and at 6.16 the much criticised order to deploy on the port wing column was carried out. Beatty, tearing across the front to take station in the van, obscured the already hazy atmosphere with smoke, while Hood wheeled into line ahead of Beatty. The Grand Fleet had now deployed into a single line between the enemy and his base. At 6.31 a salvo from the *Derfflinger* smote the *Invincible*, which blew up and sank with only 6 survivors. Scheer, now under heavy fire and considering himself about to be enveloped, turned his fleet 4 min. later, each ship turning simultaneously, and made off westward. At the same time he launched a destroyer flotilla to cover his retirement with smoke and a torpedo attack. Jellicoe turned away and the fleets fell rapidly apart. Twenty min. later Scheer again turned to the E., hoping to cross astern of the Brit. line. Instead he ran into the centre. As the Ger. ships emerged from the mist all the Brit. battleships opened a terrific fire on them. The *Seydlitz* burst into flames, the *Lützow* reeled out of line, and Scheer again executed his manoeuvre, all ships turning together towards the W. at 7.17. By luck a Ger. massed torpedo attack synchronised with this second turn away and forced Jellicoe to alter course in the opposite direction—to the E. The fleets separated and Scheer vanished into the mist. Abortive efforts were made by the Brit. battlecruisers to keep contact, but the mist was thickening, darkness was falling, and the Brit. fleet at that time had never considered night action or trained for it. Meanwhile Scheer brought his fleet round to a SE. course. His plan was simple: to go home as fast as he could by the shortest route, i.e. via the Horns Reef. Jellicoe imagined he would go for the Ems and sought a favourable position to renew the fight at daybreak. Destroyers were ordered to take station 5 m. astern of his line.

At 10.30 the Fourth Ger. Scouting Group had a brush with the Second Light

Cruiser Squadron on the starboard quarter of the Grand Fleet during which the Ger. cruiser *Frauenlob* was sunk. An hour later the High Seas Fleet crashed into the Fourth Destroyer Flotilla. *Tipperary* and *Broke* were disabled; the *Spitfire* collided with the battleship *Nassau* and the *Sparrowhawk* collided with the injured *Broke*. The Ger. cruiser *Elbing* was rammed and disabled by a consort, and the *Rostock* was torpedoed. Shortly after midnight the heavy cruiser *Black Prince* suddenly found herself within 1600 yards of the Ger. battle squadron and was instantly blown to pieces. There were no survivors. At 1.45 the head of the Ger. line, now on the port quarter of the

Hist.), vol. iii, 1923; *Official Narrative of Jutland* (H.M. Stationery Office), 1924; also Sir J. R. Jellicoe, *The Grand Fleet*, 1919; R. Scheer, *Germany's High Sea Fleet in the World War* (trans.), 1920.

Juvavum, see SALZBURG.

Juvenal, or Decimus Junius Juvenalis (c. AD 60-c. 140), Rom. satirist, was the son of a well-to-do freedman of Aquinum. His personal hist. is almost a blank, but the following are likely conjectures. After receiving a liberal education he devoted some time to the study of eloquence. Late in life he developed his genius for satire and incurred the displeasure of the Emperor Domitian by his contemptuous reference in the seventh satire to Paris, the

LIST OF SHIPS SUNK (AS PUBLISHED BY BOTH BRITISH AND GERMAN OFFICIAL PUBLICATIONS)

Grand Fleet, cut into 3 Brit. destroyer flotillas. The last contact was at 2.10 when the Twelfth Flotilla destroyed the battleship *Pommern* and sank a Ger. destroyer. That was the end of the fighting and at daybreak there was no enemy in sight.

Incredible though it may appear, Jellicoe was totally unaware of the events taking place during the night which indicated the movements of the enemy. No ship made a single report to him. The Brit. Navy felt that only bad luck had robbed them of complete victory. Though full of faith in its fighting prowess there was, however, a loss of confidence in material. Three capital ships had blown up with practically no previous damage, whereas no such disasters had befallen the Germans, and, while Brit. gunnery was fully equal, if not superior, to the Ger., the quality of Ger. shell was undoubtedly superior. These defects in shell were only made good 2 years later.

See Ger. Official Hist. (*Nordsee*, vol. v); Sir J. Corbett, *Naval Operations* (Official

pantomime dancer and court minion. There are also grounds, though not compelling grounds, for believing that he once commanded a Dalmatian cohort, that he sojourned in Egypt, perhaps as an exile, and that he lived into the reign of Antoninus Pius (AD 138-61). His *Satires*, 16 of which are extant, were pub. under Trajan and Hadrian. J. had learnt a lesson from Paris, and wisely husbanded his scathing portrait of the odious Domitian till after that emperor's death. It is a brutal, vivid, often disgusting picture that the poet draws of the vicious Rom. society of his day. The third satire, which is an Hogarthian painting of the metropolis, appeals the reader with the glare and variety of its colours, whilst the sixth, which may well be called the 'Legend of Bad Women,' displays to the full the grimness of the writer's humour, the remorselessness of his crude realism, and the sincerity of his spiritual revolt against the immoralities of the age, so that the truth of his own statement, 'Facit indignatio versum,' is obvious. Like Swift, J. often

descends to filth and indecency, and it must be confessed he was far too prone to verbal luxuriance and gaudy rhetoric. Yet at his best he writes with a style as vigorous and trenchant as Tacitus, and his verses are replete no less with the learning of a patient scholar than the worldly knowledge and wisdom of an anct Machiavelli. The first 9 satires are at the same time the finest and most virulent. The others reveal greater forbearance, loftier sentiment, but also a falling off in power. See the ed. of O. Jahn, F. Leo, and F. Buechler, 1910-32, and of A. E. Housman, 1931. There is a complete and unabridged trans. in Everyman's Library. See also P. de Labriolle, *Les Satires de Juvenal*, 1932, and J. W. Duff, *Roman Satire*, 1937.

**Juvenile Offenders.** Until 1908 there was no special judicial machinery for dealing with young offenders. The Children Act, 1908, set up juvenile courts to deal with delinquents aged 7-16. Under the Children and Young Persons Act, 1932, both the minimum and maximum age was raised 1 year, so that now no child under 8 can be charged with an offence (i.e. 8 is the age of criminal responsibility). In the case of a child aged 8-14, there is a presumption that he is not capable of criminal intent and it rests with the prosecution to rebut this presumption. In practice few children escape prosecution on these grounds. A young person (i.e. between the age of 14 and 17) charged with an indictable offence must be given the option of trial by jury. This is rarely exercised.

A juvenile court must sit in different premises or on a different day from the adult court. The juvenile courts can deal with all children and young persons charged with an offence other than murder or offences committed jointly with an adult. In the latter instance the adult court can remit the young offender to a juvenile court for a decision as to treatment, though this is not obligatory. The juvenile court also deals with children and young persons in need of care or protection, that is to say those who, having no parent or guardian, or a parent or guardian who does not, or is unfit to, exercise proper care and guardianship, are falling into bad associations, or exposed to moral danger or beyond control. Being found destitute, wandering, or begging is evidence of exposure to moral danger. Other children and young persons are included in the definition if certain specified offences have been committed against them or if they are members of a household in which such offences have been committed.

When dealing with an offender, the juvenile court sits as a court of summary jurisdiction bound by the same laws of evidence as an adult court and the procedure is in essence the same, though made less formal. No conviction is recorded when a juvenile is found guilty. The court 'makes an order'; it does not 'pass sentence', but the finding of guilt is duly recorded and remains on the police

record. When dealing with care or protection cases, the courts sit in a civil capacity.

The decision of the juvenile court, according to the 1932 Act, must 'have regard to the welfare of the child or young person.' The aim therefore should be educative rather than punitive.

Absolute and conditional discharge (see CRIMINAL LAW), fines, and probation (q.v.) apply to juveniles as to adults. In the case of a child a fine is normally imposed on the parents and not on the offender. Juvenile delinquents and children needing care and protection can both be placed under supervision of a probation officer.

The special methods of treatment available for juveniles are:

(1) Detention at a Remand Home for a period not exceeding 1 month (see REMAND).

(2) Attendance at an Attendance Centre in the case of offenders over 12. These centres were set up under the Criminal Justice Act, 1948, with a view to giving light disciplinary training. Attendance is on Saturday afternoons for not more than 12 hours in all and for not more than 2 hours on any occasion. The centres are generally run by the local police. Nearly all those so far set up have been for boys aged 12-14. There are none for girls.

(3) Committal to a Detention Centre in the case of offenders over 14 (see CRIMINAL LAW). Two have been set up for boys aged 14-17 and a third has been planned.

(4) Committal to the care of a fit person. This may be a private individual or, more often, the local authority.

(5) Committal to an Approved School (q.v.). Both (4) and (5) apply to care or protection cases as well as delinquents.

No court of summary jurisdiction can commit anyone under 15 to prison. Young persons over 15 can be sentenced to imprisonment by Assizes if no other method is considered suitable. The number so committed is almost negligible.

The peculiarity of the Brit. system, which is found throughout the Commonwealth, is the very low age of criminal responsibility. In other countries this is usually 13 or 14, children below that age being dealt with by some form of welfare organisation which may be linked with the judiciary. There is therefore no police record when children up to the specified age commit what would be regarded as a criminal offence in this country. In Scandinavia the age of criminal responsibility is even higher than 14, and the Child Welfare Councils, that take the place of our juvenile courts, have no connection with the judicial system. In the U.S.A. the juvenile courts are chancery courts.

In the autumn of 1956 a Departmental Committee was set up to consider amongst other points 'the constitution, jurisdiction, and procedure' of the juvenile courts. The question of the age of criminal responsibility is likely to be one of the important points considered. See also CHILDREN AND YOUNG PERSONS, WELFARE

OF and CRIMINAL LAW. *See* J. Watson, *The Child and the Magistrate*, 1950; Sir W. Clarke Hall and A. C. L. Morrison, *Law Relating to Children and Young Persons* (5th ed.), 1956; W. A. Elkin, *English Penal System*, 1957.

**Juvenile Water**, water of volcanic origin which migrates into the outer portion of the earth's crust from the depths of the earth.

**Juventius, Celsus**, *see* CELSUS.

**Juverna**, *see* IRELAND.

**Juxon, William** (1582-1663), Archbishop

of Canterbury, educ. at Oxford. In 1609 he became vicar of St Giles's, Oxford, and about 1614 rector of Somerton. Among the other appointments that he held were those of president of St John's College (1621), vice-chancellor (1626), dean of Worcester, Bishop of London, and Lord High Treasurer. He was a staunch adherent of Charles I, and attended him on the scaffold. After the king's death he was deposed from office. On the accession of Charles II, however, he was made Archbishop of Canterbury

# K

**K**, the eleventh letter of the Eng. alphabet, is a back voiceless stop or guttural tenuis, produced by a closure between the back surface of the tongue and the velum. The original N. Semitic *kaph* was written  $\aleph$  or  $\aleph$ . The Gk *kappa* was originally written  $\kappa$ ,  $\kappa$  (like the Semitic alphabets, the earliest Gk alphabet was written from right to left). The Greeks had 2 signs for the *k*-sound, the *K* and the *Q*. The Etruscans, who took over the Gk alphabet, did not know the distinction between *g* and *k*, employed the Gk *gamma* (which they wrote  $\gamma$ , i.e. the reversed *C*: also they wrote from right to left) both for *g* and *k*; they had, therefore, 3 signs for the sound *k*, i.e.  $\gamma$  (= *C*), used only before *e* and *i*, *K*, used before *a*, and *Q*, employed before *u* (they had no *o*). The Lat. alphabet, derived from the Etruscan, adopted all the 3 letters (*C*, *K*, *Q*), with their phonetic values, but in time it dropped the *K* (it was retained, however, in a few well-known or official words, such as *kalendae*), and retained the sign *Q* for the *k*-sound followed by *u*. In late Lat. MSS. *k* was sometimes employed to represent the hard sound of *c* before palatal vowels (*e*, *i*, *y*). *K* does not occur in O.E., but in early M.E. MSS. it is used as a variant of *c*. M.E. *c* had the hard sound of *k* before *e*, *i*, where these were originally guttural vowels. After the Norman Conquest, words of Fr. origin came in use in which *c* had the soft sound of *s* before *e*, *i*. For the sake of clearness the words of native origin were written with a *k*; cf. O.E. *cynn*, *cyning*, Mod. E. *kin*, *king*, and Fr. *cité*, Mod. E. *city*. In O.E. *c* had the hard guttural sound initially before consonants. In M.E. *c* was written as *k* before *n* and became silent, e.g. O.E. *cniht*, Mod. E. *knicht*. In Mod. E. there are many words of Scandinavian origin with initial *k*, e.g. *keg*, *kill*, *kirk*, and many foreign words have been introduced, e.g. *koran*, *karangaroo*. See ALPHABET.

**K2**, mt in the Karakoram, Kashmir; height 28,250 ft. **K2** is the world's second highest mt—750 ft lower than Everest. The name is a Survey of India sign meaning Karakoram Peak No. 2. Other names given to the mt, such as Mt Godwin-Auston, Dapsang, and Chogori, have fallen into disuse. The approach to **K2** is made from Srinagar by way of Askole, Shardu, and the Baltoro Glacier. Six attempts have been made to climb **K2**: 1902—an international expedition led by Oscar Eckenstein; 1908—It., led by the Duke of Abruzzi; 1938—Amer., led by Dr Charles Houston, who, like all after him, attacked by the SE. spur, the Abruzzi Ridge; 1939—Amer., led by Fritz H. Wiessner, who with Pasang Dawa Lama reached 27,500 ft, but suffered in a disastrous descent when Dudley Wolfe and 3 Sherpas *d.* in a snowstorm; 1953—

Amer., led by Dr Houston, when all 8 climbers were stormbound 6 days at 25,400 ft, until descent was forced by Gilkey's developing a fatal illness—a descent surpassing in epic quality even that of Annapurna; 1954—It., led by Prof. Ardito Desio, whose team won the summit. Ropes were fixed on the whole length of the Abruzzi Ridge. On 31 July Compagnoni and Lacedelli reached the top. They made this ascent without oxygen apparatus. See Filippo de Filippi, *Karakoram and Western Himalaya*, 1909; R. G. H. Bates, *Five Miles High*, 1940; C. S. Houston, *The American Karakoram Expedition to K2*, 1938, 1939; *Himalayan Journal*, 1940, 'The American Expedition to K2, 1939'; Ardito Desio, *La Conquista del K2*, 1954; C. S. Houston and R. G. H. Bates, *K2—The Savage Mountain*, 1955.

**Kaaba** (Arabic *ka'ba*, 'cube') is a relic of Arabian heathenism. It is a building about 40 ft long, 32 ft wide, and 49 ft high. It has been rebuilt more than once and was once extended to include an area to the NW. Now it is an empty room, though it contained idols in the Time of Ignorance. The corners face the cardinal points, and set in the E. corner is the Black Stone which was white when it fell from heaven but turned black for the sins of men. Stories vary; one says that angels built it for Adam and another that Abraham with the aid of his son built or rebuilt it. Circumambulation of the *K.* is a religious act. The door can only be reached by a movable step-ladder; it is seldom opened and most people have to pay for the privilege of entering. Every year the *K.* is given a covering of black damask which is now supplied by Egypt. The curtain over the door and a band round the building bear inscriptions in gold.

**Kaapland**, see CAPE (CAPE OF GOOD HOPE) PROVINCE.

**Kaapstad**, see CAPE TOWN.

**Kab**, El, in Upper Egypt, on r. b. of the Nile, about 40 m. S. of Luxor, site of Nekheb, the prehistoric cap. of Upper Egypt, situated opposite the early royal residence of Nekhen (Hierakonpolis). The goddess of Nekheb, called Nekhet, 'she of Nekheb,' had the form of a vulture. Nekheb was identified with Eileithya by the Greeks, who called *K. Eileithyiaspolis*. There are ruins of sev. temples and some important rock-tombs, including that of Ahmes, son of Ebana, with important biographical inscription covering the first 3 reigns of the 18th dynasty.

**Kabalevsky**, Dmitry Borisovich (1904—), Russian composer, b. St Petersburg, studied at the Moscow Conservatory. He is prof. of composition there. His works include 3 operas (*The Craftsman of Clamecy* is based on Romain Rolland's *Colas Breugnon*), 2 ballets, incidental, film,

and choral music, 2 symphonies, a concerto for piano and 2 for violin, a string quartet, piano pieces, and songs.

**Kabarda**, autonomous rep. in N. Caucasus, situated on the slopes of the main Caucasian range, largely W. of the R. Terek bend. Area 4600 sq. m.; pop. 300,000, mostly Circassians (q.v.) and Russians (before 1943 also Balkars, q.v.). There are coal mining and food industries, grain and sunflower growing, and cattle, sheep, and horse (K. breed) breeding. The cap. is Nal'chik. K. became a Muscovite protectorate in 1552, was contested by Russia, Crimea, and Turkey in the 17th and 18th cents., and finally became Russian in 1825. It belonged to the anti-Communist S.-E. League (q.v.), 1917-18, and the Mountain People's Autonomous Rep. in 1921; K. Autonomous Oblast was formed in 1921, K. Balkar Autonomous Oblast in 1922, Autonomous Rep. in 1936, and K. Autonomous Rep. in 1946. See W. Kolarz, *Russia and Her Colonies*, 1952.

**Kabbala**, see CABBALA.

**Kabul**, city, cap. of Afghanistan, on the K. R., 80 m. NNE. of Ghazni, at the foot of the Takht-i-Shah Hills, and also the name of a major prov. of Afghanistan. K. is of great antiquity, and was formerly walled. It is an ant. largely mud-built city, but is progressing. The K. Univ. was estab. in 1932. K. is well situated, has a splendid water supply, and is noted for its fruit. The high court of K. is the supreme judicial authority of Afghanistan. Situated at the junction of sev. central Asiatic trade routes, K.'s commerce is extensive, especially in carpets, camel's hair, cloths, and all kinds of skins. There are gov. factories and workshops designed partly for public instruction in mechanical appliances. Pop. (estimated) 120,000. See Rosita Forbes, *Forbidden Road—Kabul to Samarkand*, 1937, and Maud Dyer, *Kabul to Kandahar*, 1935.

**Kabul River**, rises in the Hindu-Kush, flows E. through Kabul and Jalalabad, and joins the Indus at Attock. It is 270 m. long.

**Kabushan**, see QUEHAN.

**Kabyles**, name given to a collection of tribes of N. Africa, chiefly in Algeria, whose members are of the Berber race. The men frequently serve as Fr. soldiers, the famous Zouave regiments taking their name from the most common dialect of the K. See also BERBERS.

**Kadavu**, or **Kandavu**, is. of the Fiji (q.v.) group, some 50 m. S. of Viti Levu. It is mountainous, with fertile valleys; copra and fruit are the chief products. Area 157 sq. m.; pop. c. 6500.

**Kadesh**, name of sev. places in Palestine, which signifies consecrated. K. or K. Barnea was the resting-place of the Israelites before entering the Holy Land, and was the scene of the people's demand for water, whence it derived its new name, Meribah K. It is named in the story of Abraham (Gen. xiv. 7; *En Mishpat*, 'spring of judgment', *ibid.* xvi. 14). Here **Komah** (q.v.) headed the revolt against Moses; Miriam d. here; and the water

which had failed was miraculously restored (Num. xvi, xx). **Ain Qadis**, about 50 m. S. of Beersheba, seems to meet all the requirements of the narrative and must always have been a centre of meeting for the tribes wandering over the wide wilderness. Mention is also made of 2 places called K. in 1 Chron. vi. 72, 76. One was the K. 'out of the tribe of Issachar,' whilst the other was the K. 'in Galliloe, out of the tribe of Naphtali.' K. (or Qadesh) is also the name of an ant. city on the Orontes in Syria, scene of the battle between the Kheta (or Khita) and Rameses II of Egypt. See HITTITES.

RAMESSES II IN HIS CHARIOT AT THE BATTLE OF KADESH

**Kadi**, see CADL.

**Kadikuei**, see CHALCEDON.

**Kadina**, tn of S. Australia, on the Yorke Peninsula, 91 m. from Adelaide. The discovery of copper in the dist. gave birth to the tn but the mines were closed in 1923. It is the centre of a rich wheat-growing dist. It has a high school and technical school. There are also a racecourse and a trotting track. Pop. 5000.

**Kadiyevka**, tn in the Lugansk oblast of Ukraine (q.v.), 28 m. W. of Lugansk. It is one of the main industrial centres of the Donets Basin (q.v.), producing about a quarter of the coal mined in Lugansk oblast; it has coking, chemical, and metallurgical plants. Founded in the 1840's as a coal-mining settlement, it has been a tn since the 1930's; its industrial development dates from the late 19th cent. and more particularly from the 1930's. The Stakhanov move-

ment (q.v.) started here in 1935. Pop. (1956) 170,000 (6th in Donbas; 1926, 17,000; 1936, 78,000; 1939, 68,000).

Kadzand, see CADZAND.

Kaempfer, Engelbrecht, see KÄMPFER.

*Kaempferia*, genus of rhizomatous herbs of E. tropical Asia, family Zingiberaceae, about 50 species. They thrive under warm greenhouse conditions, given abundant water during growth, but they should be kept dry during the dormant period.

**Kaffa:** 1. Prov. in the Galla country, forming part of Ethiopia. It consists of a large plateau, and is partly drained by the R. Omo. It is regarded as the native home of the coffee plant, which grows there abundantly. Estimated pop. 1,200,000.

2. The ancient kingdom of K. or Kafa in SW. Ethiopia was overthrown by the Ethiopians in 1897, and its organisation and customs thereby radically altered. The ritual surrounding the kingship was elaborate, and possibly connected with that of ancient Egypt and of the modern Bantu kingdoms of Buganda, Bunyoro, Ankole, and Ruanda (q.v.). It was one of the more famous examples of a divine kingship. See G. W. B. Huntingford, *The Galla of Ethiopia and the Kingdoms of Kafa and Janjero*, 1955.

3. See FEODOSIYA.

**Kaffir**, see NGUNI.

**Kaffir Lily**, see SCHIZOSTYLIS.

**Kaffraria** is a term loosely applied to the whole of the regions occupied by the various K. tribes, but it is better to confine it to Brit. K. and K. proper, though even these latter names have become obsolete. Brit. K., which is now known as the Ciskei, and K. proper extend, the former from the Keiskama R. to the Great Kei R., the latter from the Great Kei to Natal. Embracing an area of some 22,000 sq. m., they comprise an extremely fertile region, lying near the coast, abundant in forests, rivers, and mts. Brit. K. became a separate prov. in 1847, after the Kaffir war; in 1865 it was incorporated into Cape Colony. See also KAFFIR.

**Kafka, Franz** (1883-1924), Austrian novelist, b. Prague of Jewish parents. His youth and indeed his whole life were overshadowed by the dominant personality of his father. The conflict with authority, and at the same time the urge to receive its recognition, found expression in his work as a novelist. His best novels, *Der Prozess*, 1925 (Eng. trans. *The Trial*, 1937), *Das Schloss*, 1926 (Eng. trans. *The Castle*, 1930), and *Amerika*, 1927 (Eng. trans. *America*, 1938), are spiritual autobiography, portraying in allegory borrowed from dream, and bordering on nightmare, the isolation of the human soul in its attempt to come to terms with the world. Comparatively little was pub. during his lifetime. After taking his doctorate in jurisprudence at the Ger. univ. of Prague in 1906, he became a gov. clerk in the Workers' Accident Insurance Institute. Writing he regarded as a sacred vocation, a 'form of prayer.' His first pub. work (1913)

was a collection of short stories, *Betrachtung* ('Observation'). *Der Heiser* ('The Stoker'), afterwards the first chapter of *Amerika*, and *Das Urteil* ('The Sentence') appeared in periodicals the same year, and were pub. in Leipzig in 1916. The following year tuberculosis developed, but it was not until the last year of his life, in 1924, that he went into the sanatorium at Kierling, where he d. A posthumous collection of stories, *Beim Bau der chinesischen Mauer*, was pub. in 1931. His reputation was also increased by the miscellaneous writings, letters, and journals, collected and pub. by his friend, Max Brod, in 6 vols., *Gesammelte Schriften*, 1935-7. K.'s work showed throughout the influence of Jewish folklore and theological writing. K.'s *Diaries* have been ed. by Max Brod, and trans. into English (vol. 1, 1948; vol. II, 1949). See also life by Brod (trans. 1937); H. Tauber, *Franz Kafka, an Interpretation of his Works* (trans. 1948); C. Neider, *Kafka: His Mind and Art*, 1949.

**Kaganovich, Lazar' Moiseyevich** (1893- ) Russian Communist of Jewish origin, who started life as a leather-worker. He joined the Bolshevik party in 1911 and was active in the leather-workers' union. He led the seizure of power by the Bolsheviks in Gomel, then specialised in the organisational work of the party, quickly rising to important positions. In 1924 he became member and secretary of the party's Central Committee; from 1925 to 1928 he was head of the party organisation in the Ukraine, and from 1928 to 1939 he was again secretary of the Central Committee. From 1930 to 1935 he was also secretary of the Moscow Committee, and since 1930 he has been a member of the Politburo (q.v.). He was in charge of the collectivisation of agriculture (q.v.), 1929-34, and of the party purge, 1933-4. From 1935 to 1944 he was minister of transport and simultaneously directed other ministries; since 1938 he has been a deputy prime minister. During the Second World War he was a member of the State Defence Committee, and a political commissar in the Caucasus. From 1947 he again headed the party organisation in the Ukraine. K. was one of Stalin's chief lieutenants, both in the struggle against his opponents and rivals and in ruling the party and the country, but his influence declined in the last years of Stalin's life. After Stalin's death in 1953 K. became more prominent again, but in 1957, together with Malenkov and Molotov (q.v.), he was expelled from the Politburo and the Central Committee and dismissed from the post of a first deputy prime minister for opposing the concentration of power in the hands of Khrushchëv (q.v.), and the latter's policy.

**Kagoshima**, city of Kagoshimaken, Japan, in Kyushu Is., 90 m. SSE of Nagasaki. The seat of the prefectural gov., it manufs. pottery in imitation of 'old Satsuma' ware, cottons, silk, glass, starch, caramel, vegetable oil, and cigarettes. In 1863 Brit. warships bombarded K. following the murder there of

one Richardson. In the Selman Rebellion (1877) K. was a rebel base. Pop. 274,000.

**Kahn, Gustave** (1859-1936), Fr. poet, novelist, and critic, b. Metz. He came to Paris, and in 1885 founded, with others, the review *La Vogue*, and later *Le Symboliste*. K. was one of the first to formulate the theory of the *vers libre*; and in his *Palais nomades*, 1887, he showed complete disregard for the traditional rules of poetic art. His poetry, such as *Premiers poèmes, avec une préface sur le vers libre*, 1897, is perhaps less important than his influence on poets such as Mallarmé and Claudel. His novels include *L'Adultère sentimental*, 1902, and *L'Aube enamourée*, 1925. See A. v. Bever and P. Léautaud, *Poètes d'aujourd'hui*, 1929.

**Kai, Kel, or Key Islands**, group in the S. Moluccas, Indonesia, in the Banda Sea. Products are timber, copra, and trepang. The K. I. were colonised by the Dutch in 1645. They became part of Indonesia in 1950.

**Kaieteur**, cataract of Potaro R., a trib. of Essequibo R. in Brit. Guiana. See further under ESSEQUIBO.

**Kaifeng** (formerly Pienliang), former cap. of Honan prov., central China, 3 m. from the Yellow R. It was the cap. of the N. Sung dynasty (AD 960-1126), and has possessed a Jewish colony since 1183. K. is the site of Honan Univ. Chuhsien, near by, is one of the prin. Chinese marts. Pop. 450,000.

**Kailas**, mt range of SW. Tibet. Its highest peak (22,028 ft high) is the sacred 'Olympus' of the Hindus. It is between the N. chain of the Himalaya and the Kangri Mts. N. of Lake Manasarovar. The Indus, Sutlej, and Brahmaputra rivers rise from it.

**Kaillin**, see CAILLIN.

**Kails**, see SKITTLES.

**Kallyard School**, name applied in derision to the Idealist school of Scots novelists of which J. M. Barrie, 'Ian MacLaren' (John Watson), and S. R. Crockett (qq.v.) were the leading members. The term first appeared in the *New Age* for April 1895, and was taken from the opening line of a Jacobite song, 'There grows a bonnie brier bush in our kallyard,' from which Ian MacLaren had borrowed the title of his novel *Beside the Bonnie Brier Bush*, 1894, which had great popularity. A counterblast to the idealised pictures of Scottish rural life drawn in the works of the K. S. was the sordid realism of *The House with the Green Shutters*, 1901, by George Douglas Brown.

**Kain**, see QAYEN.

**Kainite**, deliquescent crystalline substance whose formula is  $KCl \cdot MgSO_4 \cdot 3H_2O$ . It is found in the deposits at Stassfurt (Germany) together with many other salts which owe their origin to the drying up of an inland sea, or salt-water lake. Another locality is Kalusz on the E. Carpathians. K. is used as a fertiliser, and as a source for the preparation of magnesium and potassium compounds, though it is of less importance than carnallite,  $KCl \cdot MgCl_2 \cdot 6H_2O$ , also found in the Stassfurt deposits.

**Kairouan, or Kairwan (Qairwan)**, city of

Tunisia, 30 m. SW. of Sousse, is an ancient holy place frequented by Muslim pilgrims. It has a citadel and numerous mosques. It was taken by the French in 1881. The caravan trade is considerable; the chief articles of commerce are carpets, morocco-leather goods, and copper wares. Pop. 32,299 (chiefly Arabs). See G. Marçais, *Cupole et plafonds de la grande mosquée de Kairouan*, 1925.

**Kairwan**, see KAIROUAN.

**Kaisarieh**, see KAYSERI.

**Kaisar-i-Hind**, 'Emperor (or Empress) of India'; title applied to Queen Victoria and subsequent Brit. monarchs as emperors of India. A K. medal was instituted under Brit. rule, which was awarded for outstanding public social service.

**Kaiser, Georg** (1878-1945), Ger. dramatist, b. Magdeburg, and educ. at the gymnasium there. He began to earn his living at Buenos Aires in an electrical undertaking, but ill health compelled his return to Germany. His earliest dramatic pieces were farces, but he soon found his true bent lay in serious plays turning on social problems. He is recognised as a disciple of Expressionism (q.v.), dealing with types, and making much use of allegory. His work shows the influence of Wedekind. Plays: *Die jüdische Witwe*, 1911; *Von Morgens bis Mitternachts*, 1916 (Eng. trans. 1920); *Die Versuchung*, 1917; *Gas* (2 parts), 1918, 1920, one of the best known expressionist plays, illustrating the domination of man by machines of his own devising; *Der Brand im Opernhaus*, 1918; *Kolportage*, 1924; *Papiermühle*, 1926; *Die Lederköpfe*, 1928; *Oktobertag*, 1928; *Der Soldat Tanaka*, 1940; *Zweimal Amphitryon*, 1943. Novels: *Es ist genug*, 1932; *Villa Aurea*, 1940. See study by B. Diebold, 1924, and E. A. Firian, 1947.

**Kaiser, Henry John** (1882- ), Amer. industrialist, b. Sprout Brook, New York, son of Ger. immigrants. Beginning his career at 13 in a New York store, at 22 he was junior partner in a photographic firm, and purchased the business within a year. In 1906 he went to Spokane and joined a hardware company; in 1912 he joined a construction company, and by 1914 he had estab. his own company and gained contracts for highway construction in the Pacific NW. and California. In 1927 came a contract to build 200 m. of highway with 500 bridges in Cuba, and he afterwards participated in the building of Hoover, Bonneville, Grand Coulee, and Shasta Dams, and in such projects as the piers of San Francisco Bay bridge, levees on the Mississippi, and pipelines in the NW., SW., and Mexico. In 1939 he founded the Permanente Cement Co., one of the largest in the world. During the Second World War the K. shipbuilding yards estab. a world-wide reputation for speedy construction, and K.-managed companies made substantial contributions to the U.S. war effort. K. Motors (since 1955 K. Industries Corporation) is the third largest U.S. exporter of commercial vehicles. The K. Foundation, a non-

profit-making charitable trust, has been estab. to build self-supporting hospitals and medical centres where a pre-payment health plan provides for medical attention; there are 50 hospitals and out-patient centres in the system, and 2 institutes of physical medicine and rehabilitation.

**Kaiser** (Lat. Caesar), name given to the emperors of the Holy Rom. Empire, and to the rulers of the Ger. and Austro-Hungarian empires before the First World War (1914).

**Kaiser Karlsbad**, see KARLOVY VARY.

**Kaiser Wilhelm Canal**, see KIEL CANAL.

**Kaiser Wilhelm II Land**, Australian Antarctic Ter., see ANTARCTICA.

**Kaiserslautern**, Ger. tn in the Land of Rhineland-Palatinate (q.v.), 44 m. SW. by S. of Mainz (q.v.). It was a favourite retreat of the Emperor Frederick I (q.v.), whose ruined castle still exists. There are 2 notable medieval churches. K. is an important industrial tn, with manufs. of cotton yarn, sewing-machines, furniture, and tobacco. It has also railway shops and iron works. Pop. 85,000.

**Kaka**, Maori name for a New Zealand parrot, *Nestor meridionalis*. It is light brown, variegated with grey on the crown and dark red beneath. The name, like cockatoo, is imitative. The kakapo, also a New Zealand parrot (*Strigops habroptilus*), has green plumage mixed with yellow and brown, and a disk of feathers round its eyes, whence its popular name, owl parrot. It cannot fly, its wings being used only for balance.

**Kakaterro Tree**, see DACRYDIUM.

**Kakhetia**, area in E. Georgia (Transcaucasia), in the valley of the Alazani, a trib. of the Kura. It is a famous wine-producing area. The prin. tn is Telavi. It was an independent kingdom from the 8th cent., part of the Georgian kingdom from 1010, again independent 1468-1762, then in the E. Georgia kingdom which joined Russia in 1801.

**Kakhovka**, tn in the Kherson Oblast of S. Ukraine, riv. port on the Dnieper. It has a large hydro-electric station (250,000 kW.). Before 1917 a lively trade centre, it was the scene of fierce fighting in the Russian civil war (1920). It includes the tn Novaya K., founded in 1951 at the building site of the power station. Pop. (1956) 19,000.

**Kaklomon**, see PORCELAIN, *Hard-paste*.

**Kalafat**, see CALAFAT.

**Kalahari**, tract of country in S. Africa, between the Zambesi and Orange R.s. forming a large part of the Bechuanaland Protectorate, is often called the K. desert, although true desert conditions do not prevail, for many parts are at times covered with grass and scrub, which provide cover for game. It consists of sandy plateaux, containing 'salt pans,' probably remnants of inland lakes now dried up. There is a very slight rainfall, and all the rvs. are periodic except the Okavango, flowing into Lake Ngami which is now only a swamp. It is believed that good water could be obtained by well-sinking in many parts, and that K. would then provide 20,000 sq. m. of fine ranching

country. Prof. E. H. L. Schwartz in 1918 formulated a scheme for restoring the lakes of the K., and so ending the country's drought problem. He claimed that these lakes had been drained away by the Zambesi, but that by an expenditure (variously estimated up to £5,000,000) the water could be diverted into them again, and not only would the danger of a desert encroaching on S. Africa be avoided, but the very existence of the lakes would cause such a rainfall as to relieve the Union of its periodic danger of drought. But in 1945 Mr Conroy, minister of lands and irrigation, and a group of M.P.s representing all parties toured the K. area, and subsequently issued a report to the effect that the Schwartz scheme was neither practicable nor would it produce the results envisaged by its author. The inhab., Bushmen and Bakalahari, live chiefly by hunting and number about 50,000. See G. A. Farini, *Through the Kalahari Desert*, 1886; S. Passarge, *Die Kalahari*, 1907; W. J. Makin, *Across the Kalahari Desert*, 1929; L. A. Mackenzie, *Report on the Kalahari Expedition*, 1945.

**Kalamata**, see CALAMATA.

**Kalamazoo**, city, cap. of K. co., Michigan, U.S.A., on K. R. midway between Detroit and Chicago, in a celery, fruit, and peppermint growing area. It manufs. paper, stoves, pharmaceuticals, fishing tackle, etc. It is the site of K. College, W. Michigan College, K. Museum and Art Institute. Pop. 57,700.

**Kalanchoe**, genus of sub-shrubs with succulent leaves, family Crassulaceae, over 100 species, chiefly tropical; *K. blossfeldiana* is much grown for winter decoration.

**Kalat**, **Khelat**, or **Kelat**, small semi-independent state forming part of the prov. of Baluchistan (q.v.) in Pakistan.

**Kalat Seman**, ruined city of N. Syria, about 25 m. N. of Aleppo. The church of St Simeon Stylites (460-560) is one of the best examples of Christian Syrian architecture, showing Byzantine influence.

**Kale**, or **Borecole**, *Brassica oleracea acephala*, form of cabbage with open

leaves, extremely hardy and grown as a winter vegetable in Europe. There are many varieties—Scotch or Curled K., Cottager's K., Russian K., Thousand-headed K., and strains grown for winter cattle fodder.

**Kaledin, Aleksey Maksimovich** (1861–1918), Russian general, in July 1917 elected Hetman (q.v.) of the Cossack armies. After the seizure of power by the Bolsheviks he was the head of the anti-Bolshevik Don Cossack gov. On being defeated by the Bolsheviks he shot himself.

**Kaleidoscope**, optical device invented by Sir David Brewster (q.v.) in 1817. It is a tube about a foot long, along the whole length of which extend 2 mirrors or reflecting glass plates placed at an angle of 60°. One end of the tube is closed with a metal plate having a small hole or eye-glass, whilst the other end is closed with 2 glasses separated by a small space containing a number of small fragments of coloured glass. On turning the tube round its axis various brightly coloured patterns with 6-fold symmetry appear successively before the vision.

**Kalenberg**, see CALENBERG.

**Kalends**, see CALENDIS.

**Kalevala**, or **Kalewala**, national epic of the primeval Finnish race, which was probably composed at different times by various bards. The scattered songs were first collected into a written form by Dr Topelius in 1822, which ed. was followed by the more complete and systematic one of Dr E. Lönnrot in 1835. The poem relates the story of Väinämöinen, Ilmarinen, and Lemminkäinen, the 3 sons of Kalewa (Finland), and deals entirely with the ancient mythology and folklore of the early Finns. It has been a source of inspiration to Sibellus and other composers. Longfellow borrowed its metre and some of its characters and incidents for his *Song of Hiawatha*. See Eng. trans. by W. F. Kirby (Everyman's Library).

**Kalgan**, or **Changkiakau**, tn in Inner Mongolia, China. It is situated near the Great Wall, and lies about 120 m. NW. of Peking. It occupies an important position commercially, as it lies at the foot of a pass on the route from Peking to Siberia, and is the centre of the tea trade between the two. Pop. (estimated) 30,000.

**Kalgoorlie-Boulder**, joint tn and dist. of W. Australia, formerly **Hannans**. Gold was first mined there in 1893, and it is now the greatest gold-producing dist. of the continent, production in 1954 exceeding £13,000,000 in value. It has an arid climate, but the tn has modern amenities, and has a water supply pumped 400 m. from the coast. K. is a junction for the transcontinental line to S. Australia. Pop. (tn) 22,834.

**Kalguev**, see KOLGUYEV.

**Kālī** (black), in Hindu mythology, the goddess of death and destruction and one aspect of Durga, the wife of Siva. She is represented as black, with 4 arms and blood-stained face, breast, and palms.

**Kālidāsa**, Hindu poet of the post-Vedic period of Sanskrit literature. The dates

of his life are extremely uncertain. He seems to have lived during the reign of Vikramāditya of Ujjain, but as there were sev. monarchs of that name from 57 BC to AD 1050, this does not assign any very definite limits. He has been traditionally assigned to the 1st cent. BC, but modern scholarship tends to place him considerably later. His most famous works are his dramas, especially *Sākuntalā*, which, when first introduced to Europe through the trans. of Sir Wm Jones in 1789, was received with great admiration. A later trans. by Monier Williams appeared in 1856. His other dramas are *Vikramorvasi* (The Hero and the Nymph), containing some fine lyrical passages, and *Mālavikāgnimitra*, a comedy. There are also assigned to him 2 epic poems, *Raghuvamśa*, trans. into English by P. de Lacy Johnstone, 1902, and *Kumāra Sambhava*, only remarkable for isolated passages, and differing so greatly that it seems doubtful if they can be credited to the same author; and sev. lyrics, the best, *Meghaduta* (The Cloud Messenger), being very beautiful. *Nalodaya*, a poetical romance, trans. by Rev. W. Yates, 1844, is also ascribed to K. See A. A. Macdonell, *History of Sanskrit Literature*, 1900, and A. Hillebrandt, *Kālidāsa: ein Versuch zu seiner literarischen Würdigung*, 1921.

**Kalings**, one of the 9 ancient kingdoms of S. India, extending, according to tradition, along the E. coast of Madras from 13° 30' to 18° 30' N.

**Kalinin, Mikhail Ivanovich** (1875–1946), Russian Communist, for many years the titular head of the Soviet State. K. was of peasant origin and until 1917 a metalworker. He joined the Social Democratic movement in 1897 and its Leninist wing (see ISKRA) in 1902, but was always of comparatively moderate views. During the First World War he was against Lenin's policy of defeatism, and after the Feb. revolution (q.v.) in 1917 he again opposed Lenin's aim of a Bolshevik seizure of power. He became a Central Committee member in 1919, and a Politburo (q.v.) member in 1926. From 1919 to 1937 he was chairman of the Central Executive Committee of the Soviets (see SOVIETS) of the Russian Rep., from 1922 also of the U.S.S.R. Central Executive Committee. He was chairman of the Presidium of the U.S.S.R. Supreme Soviet, 1937–46. In the party struggle after Lenin's death K. followed Stalin's lead. K.'s position was titular rather than influential; he was a likable person and easily accessible, and tried to ease hardship in individual cases that came to his notice.

**Kalinin** (until 1931 **Tver'**): 1. Oblast in central Russia, NW. of Moscow. It is situated on the Valdai moraine upland, and partly covered with mixed forests. There are peat and lignite deposits. Industries include textiles, engineering, saw-milling, tanning, and shoe-making; there are also old handicrafts and home industries. Flax and potatoes are grown and there is dairy cattle breeding. The prin. tns are K., Vyshny Volochek, and Itzhew. In the 19th cent. Tver' prov. was

renowned for its liberal-minded local gov. Area 25,500 sq. m.; pop. (1956) 1,604,000, mostly Russian, partly also Karelian (since 16th-17th cents.).

2. Cap., economic and cultural centre of the above, on the Volga and the Moscow-Leningrad railway. There are large textile and engineering (rolling-stock, textile and peat-working machinery) industries. It has a 16th-cent. church and many interesting 18th-19th-cent. buildings. Known since 1135, from the 1240's it was the cap. of Tver' principality (later Grand Principality), which after prolonged rivalry with Muscovy was absorbed by the latter in 1485. It was an important centre of crafts and commerce in the 14th-15th cents. In 1466-72 the Tver' merchant Nikitin travelled to India. Pop. (1956) 240,000 (1914, 66,000; 1917, 101,000; 1920, 166,000; 1936, 171,000; 1939, 216,000).

**Kalinograd:** 1. Oblast in the NW. of the Soviet Union, comprising the N. part (about one-third) of the former Ger. prov. of E. Prussia. It belongs to the Russian Federal Soviet Socialist Rep., but is not territorially connected with the rest of the rep. and is bounded by the Baltic Sea in the W., Lithuania in the N. (along the R. Niemen) and E., and Poland in the S. It is a slightly hilly lowland, partly covered with well-kept mixed forests. There are varied engineering, wood-working, and food industries, and intensive agriculture. The chief tns are K. (see below) and Sovetsk (see TISIT). The area has been under Soviet administration since 1945, pending a Ger. peace treaty. K. oblast was formed in 1946; for its earlier hist., see EAST PRUSSIA. Area 6100 sq. m.; pop. (1956) 621,000, mostly settlers from Central Russia (the far larger Ger. pop. was deported or expelled after 1945).

2. Cap. (until 1946 called **Königsberg**), economic and cultural centre of the above oblast, an important ice-free port on the Frisches Haff (now Vistula Bay) in the Baltic Sea. K. has shipbuilding, engineering, chemical, wood-working, and food industries. Königsberg grew up around a castle of the Teutonic Knights (fl. 1255); it was from 1457 the residence of the High Master of the Order, from 1525 to 1618 of the dukes of Prussia; cap. of E. Prussia, 1618-1945. Its famous univ., founded 1544, was abolished in 1945. The inner city was ruined during the 1945 siege. See also EASTERN FRONT.

**Kalinjar**, isolated hill fortress and shrine in India, on a spur of the Vindhya Mts in the extreme S. of Uttar Pradesh state. K. is of extreme antiquity, and is mentioned in the *Mahābhārata*. On all sides of the hill are ruins of anct statues and temples, the latter including the celebrated Nīl Kantha Mahadeo.

**Kallaz**, city of Poland, in Poznań prov., on the Prośna, 68 m. SE. of Poznań (q.v.). It is the *Gallia* of Ptolemy (q.v.), and has remains of great antiquity. In the Middle Ages it was an important textile tn. It went to Prussia in 1793, and to Russian Poland in 1815. In 1706 the Swedes were defeated here by Augustus II (q.v.) of

Saxony and Poland, and in 1813 a treaty of alliance between Prussia and Russia (against Napoleon I, q.v.) was signed in the tn. In modern times it was the cap. of a Polish prov. Metal goods, embroidery, and foodstuffs are manuf., and there are lignite mines in the dist. Pop. 56,000.

**Kalkstickstoff**, or Nitrolime, mixture of calcium cyanamide,  $\text{CaCN}_2$ , and carbon, made by heating calcium carbide in nitrogen to a temp. of about 1000° C. It contains 21 per cent nitrogen and is largely used as a fertiliser but under some circumstances is an effective weed-killer.

**Kallio**, **Kyösti** (1873-1940), Finnish statesman and patriot. He was sev. times Prime Minister, being in office at the outbreak of the Russo-Finnish war in 1939. His gov. was compelled to yield in 1940 as the result of Mannerheim's defeat in the war with Russia, and K. resigned (Nov. 1940) on account of ill health through his anxieties, dying a few days later. See also FINLAND, *Finnish-Russian War, 1939-1940*.

**Kalmar**, fortified seaport tn of Sweden, 47 m. NE. of Karlskrona, is the cap. of K. prov. (area 4456 sq. m.). It is built mostly of wood on the is. of Quarnholm in K. Sound, and connected with the mainland by a bridge of boats. The chief manufs. are matches and paper. It has a good harbour, and does a considerable coasting trade. There is a fine 17th-cent. cathedral and a castle dating from the 12th cent. In 1397, by the K. Union, the crowns of Denmark, Norway, and Sweden were united under the sovereignty of Queen Margaret. Pop. (tn) 28,714; (prov.) 237,462.

**Kalmia**, genus of evergreen or rarely deciduous shrubs, about 7 species, family Ericaceae, of lime-free soils. *K. latifolia*, Mountain Laurel or Calico-Bush, is a dense, rounded shrub or tree, up to 25 ft, with saucer-shaped, pink or white, 2-in. diameter flowers in terminal clusters in May and June. *K. angustifolia*, Sheep Laurel, grows 2 to 3 ft tall, with smaller, purplish-rose flowers, and is poisonous to grazing animals. Both species are native to E. N. America, and are grown in gardens.

**Kalmthout**, small tn in Belgium, 12 m. N. of Antwerp, in the heart of the picturesque Kempen (Campe) Heath. It is a favourite country resort of the Antwerp citizens. There are extensive tree nurseries. Pop. 10,100.

**Kalmucks**, or **Kalmuks**, see **KALMYKS**.

**Kalmyks**, Mongol-speaking and seminomadic Buddhist people. Until the 17th cent. they lived in E. Turkestan (see SINKIANG), then they moved W. and, pushing the Nogays (q.v.) further SW., occupied the area astride the lower Volga, between the R.s Don and Ural. In 1771 the majority (c. 300,000) went back, but most of them perished on the way in fighting the Kazaks (q.v.). The minority (50,000) remained W. of the Volga and later partly became Cossacks (q.v.). After the Oct. revolution (q.v.) the K. first belonged to the anti-Bolshevik SE. League

(q.v.); a Kalmyk Autonomous Oblast was created in 1920, and transformed into an Autonomous Rep. in 1935. In 1939 it had 200,000 inhab., including 130,000 K. Partly occupied by the Germans in 1942, it was abolished in 1943 by the Soviet Gov. and all K. deported to Central Asia. The 1957 decree on rehabilitation of the deported peoples provides for their return and the re-estab. of a Kalmyk Autonomous Oblast. See W. Kolarz, *Russia and her Colonies*, 1952.

**Kalocsa**, tn of Hungary, in Bács-Kiskun co., 45 m. SW. of Kecskemét (q.v.). It has been an eccles. centre since the time of King Stephen I (q.v.), and has a fine cathedral, an archiepiscopal palace, and a number of monasteries. There is a trade in agric. produce, livestock, bricks, vines, and flax. Pop. 13,000.

**Kalomiris**, Manolis (1883-), Gk composer, studied in Athens, Constantinople, and Vienna. He founded the National Conservatory of Athens in 1926 and became its director. His works include an opera based on Yeats's *The Shadowy Water*, incidental music, 2 symphonies and symphonic poems, chamber music, piano pieces, songs, and arrangements of folk-songs.

**Kalomo**, tn of N. Rhodesia, 90 m. NE. of the Victoria Falls. It was once the centre of administration, which was transferred to Livingstone, thence to Lusaka.

**Kalong**, Great, see FRUIT-BAT.

**Kalpa-sūtra**, or **Kalpa-sūtra**, name of certain Sanskrit writings dealing with the ceremonial connected with Vedic sacrifice. It is also the name of the most sacred book in Jain literature. See Jacobi, *The Kalpa-sūtra of Bhadrabahu*, 1879, and W. Weber, *Sacred Literature of the Jains* (trans.), 1893.

**Kaluga**: 1. Oblast in central Russia, SW. of Moscow, situated in the NW. of the central Russian upland, and partly covered with mixed forests. There are lignite and phosphorite deposits. Coarse grains, potatoes, and hemp are grown, and dairy cattle, hogs, and poultry (K. geese) are raised. There are engineering, wood-working, paper (since 1720), textile, and food industries. Area 11,600 sq. m.; pop. (1956) 895,000.

2. Cap., economic and cultural centre of the above, on the Oka (head of navigation). There are transport and electrical engineering, wood-working and food industries. It has many interesting 18th-19th-cent. buildings, and a drama theatre, founded in 1777. Known from 1389 as a Muscovite outpost, K. was an important centre of the grain trade in the 17th-19th cents. It was briefly occupied by the Germans in 1941. Pop. (1956) 122,000 (c. 1914, 55,000; 1920, 41,000; 1939, 89,500).

**Kalundborg**, tn and seaport on the W. coast of Zealand, Denmark, 58 m. W. of Copenhagen. It has a 12th-cent. church with 5 octagonal towers. There are chemical and engine works, and the tn has a long-wave wireless station. Pop. 9215.

**Kāma**, or **Kāmadeva**, in Hindu mytho-

logy, the god of love, the son of Brahmā or Dharmā, and the husband of Rati (voluptuousness). He was destroyed by Siva, whom he attempted to seduce, but was afterwards reborn as the child Pradyumna (Cupid).

**Kamakura**, city of Kanagawaken, Japan, 13 m. SW. of Yokohama, on the Bay of Sagami. There are numerous shrines visited by tourists, and a statue of Buddha (Daibutsu) 50 ft high. From 1192 to 1333 K. was the cap. of the first Shogunate gov. of Japan. Pop. 91,000.

**Kamba**, a Bantu tribe of Machakos, Kenya. They are closely related to the neighbouring Kikuyu (q.v.). They lack any form of centralised chieftship, and are ruled by a complex system of elders' councils. See G. Lindblom, *The Akamba in British East Africa*, 1920.

**Kambujiya** (Old Persian; Babylonian **Kambuziya**), see CAMBYSES.

**Kamohatka**: 1. Peninsula in NE. Asia, between the Sea of Okhotsk, the Pacific, and the Bering Sea. It is largely forested, with sev. functioning volcanoes and varied mineral deposits.

2. Oblast of the Russian Far E., comprising K. Peninsula and the adjacent mainland. There is a large fishing and fish-processing industry. The cap. is Petropavlovsk-Kamchatskiy. It is an area of banishment (since the 18th cent.) and labour camps. Area 218,400 sq. m.; pop. (1956) 209,000, mostly Russians (since 17th cent.), some Koryaks (q.v.) and other small tribes.

**Kamel**, see HAM.

**Kamenets-Podol'skiy** (formerly also **Kamenets-Podil'sk**, Ukrainian **Kam'yanets' Podil's'kyy**), tn in the Ukraine, 40 m. NE. of Chernovtsy. It is the cultural centre of the Khmel'nitskiy oblast, and has food industries. It has been known since the 12th cent., and has a 14th-cent. fortress and 15th-18th-cent. churches. Pop. (1956) 33,000 (c. 1914, 50,000).

**Kamenev** (real name Rosenfeld), Lev Borisovich (1883-1936), Russian Communist, of Jewish origin. He joined the Social Democratic party in 1901 and was from the start a follower of Lenin. In 1909-14, together with Lenin and Zinov'ev, he directed the Bolshevik organisation from abroad; then he returned to Russia to assume responsibility for the Bolshevik members of the Duma (q.v.) and the newspaper *Pravda* (q.v.). When war broke out K. was banished to Siberia. After the Feb. revolution (q.v.) in 1917 he led the Bolshevik party until Lenin arrived from abroad. He opposed Lenin's policy of seizing power and advocated the estab. of a coalition of all Socialist parties. After the Oct. revolution (q.v.) he became first chairman of the Central Executive Committee of the Soviets (see SOVIETS) and chairman of the Moscow Soviet; later deputy chairman of the Council of People's Commissars (i.e. deputy prime minister). From 1919 to 1923 he was a member of the party's Politburo (q.v.).

After Lenin's death K. allied himself with Stalin against Trotsky; then, together with Zinov'ev and later also with Trotsky, he led the Left Opposition (q.v.) against Stalin. In 1926-7 he was ambas. to Italy. He was twice expelled from the party but both times readmitted. Sentenced to 5 years' imprisonment in 1935, he was retried the following year and sentenced to death (see GREAT PURGE).

**Kamenskoye**, see DNEPRDZERZHINSK.  
**Kamensk-Shakhtinskiy** (formerly **Kamenskaya**), Russian tn on the Severskiy Donets, trib. of the Don, 120 m. N. of Rostov-on-Don, in the Rostov oblast. There are coal-mining and engineering industries. Until the 1930's it was a prosperous Cossack vil.; it has grown considerably since the war. Pop. (1956) 59,000 (1897, 24,000; 1936, 25,000).

**Kamensk-Uralskiy**, Russian tn in the Urals, in the Sverdlovsk oblast, 87 m. SE. of Sverdlovsk. It is a rapidly growing industrial centre (large aluminium plant, pipe foundry). It was founded in 1682 as an iron-smelting works, one of the first in Russia. Pop. (1956) 122,000 (1926, 5000; 1939, 51,000).

**Kamenz**, Ger. tn in the dist. of Dresden, on the Black Elster, 25 m. NE. of Dresden (q.v.). It has textile and glass industries. Lessing (q.v.) was a native. Pop. 15,000.

**Kamerlingh Onnes**, Heike, see ONNES.  
**Kamerun**, see CAMEROON.

**Kames** vil. of Argyllshire, Scotland, in the Kyles of Bute, 2 m. S. of Tighnabruich. Pop. 500.

**Kamet**, Himalayan peak, 25,443 ft, in Garhwal dist. The first and second ascents were both made in 1931 by a Brit. party and native porters led by F. S. Smythe. See F. S. Smythe, *Kamet Conquered*, 1932.

**Kamienna Góra** (Ger. *Landeshut*), tn of Poland, in Wrocław prov., on the Bobrava at the foot of the Riesengebirge (q.v.), 40 m. SW. of Wrocław (q.v.). It was formerly in Lower Silesia (q.v.). In 1745 it was the scene of a Prussian victory over the Austrians, and in 1760 of an Austrian victory over the Prussians. It has coal-mines, and there are textile and engineering industries. Pop. 14,000.

**Kaministiquia**, or **Kaministikwia**, tn of W. Ontario on the K. R. (q.v.), 21 m. W. of Fort William, on the Canadian Pacific Railway. There is zinc and silver mining in the dist. Pop. 3000.

**Kaministiquia River** rises in W. Ontario, Canada, SW. of Lake Nipigon, and flows into Thunder Bay, Lake Superior, passing over the Kakabeka Falls (130 ft high).

**Kaminski**, **Heinrich** (1886-1946), Ger. composer of Polish descent, studied at Hoidelberg and Berlin, and after a short spell of teaching and conducting retired to a Bavarian vil. to devote himself wholly to composition. His work is intensely serious and includes 2 operas, a good deal of choral, orchestral, and chamber music, piano and organ works, and songs.

**Kamloops**, city of Brit. Columbia, Canada, on the Thompson trib. of the Fraser R. Originally estab. as a fur trade

post in 1812, it is the distributing centre of a mining and ranching dist., and a junction on the Canadian Pacific Railway. Pop. 8884.

**Kammer, Lake**, see SALZKAMMERGUT.  
**Kampala**, commercial centre of Uganda (q.v.), connected by rail with Mombasa (872 m.), and the main line of the Kenya and Uganda railway extends to K. There is also a railway from K. to Port Bell (7½ m.). K. is a well-planned tn with broad streets lending itself to attractive development. Its pop. comprises about 4250 Europeans, 17,000 Indians, 500 Goans, and 17,000 Africans. The developed area, of which K. is the nucleus, comprises a number of hills, each tending to be appropriated to some special purpose. Within the municipal area are the hill of Nakasero, the gov. residential area with the commercial quarter and gov. offices at its foot; 'Old' K.—the original and true K., and the gov. H.Q. until their transfer in 1905 to Nakasero; and Kilolo Hill, occupied by the wireless and meteorological station. On the summit of Nakasero are the remains of the old gov. fort and a small museum, while its slopes are now largely an Asiatic residential suburb. At Mengo, beyond the township limits, are the kabaka's (native king's) palace, and H.Q. of native gov. Also beyond the township limits are the hill of Namirembe, on which are the Protestant cathedral (All Saints' Anglican Church) and the Church Missionary Society's Mengo Hospital; Rubaga Hill, with the Rom. Catholic cathedral and H.Q. of the Mill Hill fathers; and Makerere Hill, on which is Makerere College, the Univ. College of E. Africa. The Brit. flag was hoisted at K. Fort on 1 April 1893, when a provisional Brit. protectorate was proclaimed. It was announced in Jan. 1958 that K. is to become the administrative cap. of Uganda instead of Entebbe.

**Kampen**, old fortified seaport tn, on the R. IJssel, in the prov. of Overijssel, Netherlands, 9 m. NW. of Zwolle. It was one of the Hanseatic tns, and had a thriving trade which declined owing to the silting up of the harbour. Jetties have been constructed, and it is again flourishing. There are 2 Calvinistic colleges at K. The chief manufs. are machinery, blankets, cigars, and bricks. Pop. 25,370.

**Kamperduin**, coastal vil. of the Netherlands in the prov. of N. Holland, off which was fought the battle of Camperdown (q.v.) in 1797.

**Kämpfer**, **Engelbert** (1651-1716), Ger. doctor and explorer, b. Lemgo, Lippe. He travelled in S. Russia, Persia, Arabia, India, Siam, Java, and Japan, and wrote *Geschichte und Beschreibung des japanischen Reichs*, ed. by C. von Dohm (1777-1778).

**Kamtohatka**, see KAMCHATKA.  
**Kanakas**, term used by the Polynesians to describe themselves, *kanaka*, or *lanaka*, signifying man. The word is used indiscriminately by white races to describe all S. Sea islanders. The islanders were formerly forced into labour and exported to the Queensland sugar plantations of

**Australia.** The traffic was prohibited in 1906.

**Kanara**, area of India, on the W. coast, roughly between Mangalore and Goa, of which at present the N. part lies in Bombay state and the S. part in Madras state. The language Kanarese is also widely spoken in Mysore state.

**Kanaris**, or **Canaris**, Constantine (1790-1877), Gk. patriot, b. in the is. of Ipsara. In the war of Gk. independence he blew up the Capitan Pasha's flagship with 2000 Turks (1822), repeated his feat at Tenedos in the same year, and did further damage to the Turkish fleet in 1824-5. He helped to depose Otto from the Gk. throne, and after the revolution of 1862 became premier to the new king.

**Kanauj**, anc. city of Uttar Pradesh state, India, 50 m. NNW. of Cawnpore, is on the Kall Nadi R., trib. of the Ganges. It was formerly one of the most important cities of India, and is surrounded by ruins of its decayed greatness.

**Kanawha**, riv. of W. Virginia, U.S.A. Rising in the Blue Ridge, N. Carolina, in its upper course it is called the New It. The direction of its course is generally NW., through ranges of the Alleghenies and along valleys; it has a course of over 450 m., while the area of its basin is 10,800 sq. m. It eventually enters the Ohio at Point Pleasant, Mason co., W. Virginia, and is navigable for about 100 m. from its mouth. It has dams and navigation locks. Its valley, with coal and natural-gas fields and reserves of salt brine, is one of the world's great chemical-manufacturing regions. Charleston, W. Virginia, is its industrial centre.

**Kanazawa**, city of Ishikawaken, on the W. coast of Honshu Is., Japan. Seat of the prefectural gov., it is also the agric., commercial, and educational centre of the Hokuriku dist., and has manufs. of textiles (silk), metal leaf, and steel. Pop. 277,000.

**Kanchipuram**, tn in Madras state, India, 60 m. S. of Madras. K. is one of the oldest tns of India and one of the 7 sacred cities for Hindus. Buddha is said to have made converts here in the 5th cent. bc. No remains exist. There are in fact 2 tns, Great K. and Little K., and the whole area is studded with fine temples. It is of interest that both Vishnu and Siva are worshipped here. There was considerable fighting here in the war between the British and Hyder Ali (1780-1).

**Kandahar**, **Qandahar**, or **Candahar**, cap. of the prov. of K., in SE. Afghanistan. It is situated about 280 m. SW. of Kabul, and at a height of about 3500 ft above sea level. The city, which is well watered, is a place of great importance as a trade centre, amongst its chief products being silk, felt, and fruit. According to tradition it was founded by Alexander the Great, and for about 13 cents. practically nothing is known of its hist. In 1839 it was occupied by the British, and in 1842 Gen. Nott successfully defended it. In 1879 the British again took possession of it, and in 1880, when besieged by Ayub Khan, it was relieved by Maj.-Gen. (later

F.-M. Earl) Sir F. S. Roberts. Pop., with suburbs, 60,000.

**Kandavu**, see KADAVU.

**Kandersteg**, Swiss tourist resort and centre for winter sports, in the Bernese Oberland. K. lies at a height of 3940 ft, at the N. end of the Lötschberg tunnel (q.v.).

**Kandinsky**, Wassily (1866-1944), Russian painter, b. Moscow, studied art in Munich where with Franz Marc and others he founded the celebrated 'Der Blaue Reiter' group of 'expressionists.' He painted in entirely abstract fashion as early as 1910 and evolved a visual language full of emotional suggestion. A teacher at the Bauhaus in 1922, he left Nazi Germany for Paris in 1933, and d. at Neuilly, a naturalised Frenchman. See his *Concerning the Spiritual in Art* (Eng. trans.), 1910; also C. Etienne, *Kandinsky*, 1950.

**Kandy**, tn in Ceylon, 85 m. NNE. of Colombo, was formerly the cap. of the is. It is splendidly situated 1700 ft above sea level, on the shore of an artificial lake.

KANDY: ENTRANCE TO THE TEMPLE OF THE TOOTH

The Buddhist temple, Dalada Malagawa, is visited by pilgrims for the supposed tooth of Buddha it contains, and also its anc. MSS. Near by are the botanical gardens of Peradeniya. Has the ruins of the palace of the old native kings. Their throne, long kept in England by the Brit. royal family, was formally presented to Ceylon in 1934 on the occasion of the Duke of Gloucester's visit.

**Kane**, Elisha Kent (1820-57), Amer. explorer, b. Philadelphia. He took his medical degree in Pennsylvania Univ. and became a surgeon in the navy, visiting India, China, Africa, and Mexico. Twice he went on Arctic expeditions to discover traces of Franklin; he received a gold

medal from the Royal Geographical Society. He pub. *The U.S. Grinnell Expedition in Search of Sir John Franklin*, 1853, and *Arctic Explorations: the Second Grinnell Expedition* (2 vols.), 1856. See W. Elder, *Biography of E. K. Kane*, Philadelphia, 1858; J. Mirsky, *Elisha Kent Kane and the Seafaring Frontier*, Boston, 1954.

**Kangaroo**, or *Macropus*, genus of marsupial quadrupeds almost entirely confined to Australia and the neighbouring is., though a few species are found in New Guinea. Modern classification regards the K. family as comprising 21 genera, 2 belonging to New Guinea and 5 being fossil; but *Macropus* remains the chief genus. K.s form one of the most prominent and characteristic features of the fauna of these lands. They vary considerably in size; the great K. attains a length of 8 ft, including the tail, whereas the wallabies (brush-K.s) and rat-K.s, both of the same genus, are comparatively small. They are distinguished primarily by the possession of a pouch (*marsupium*), in which they carry their young at birth and to which the latter go for shelter after they are able to run and jump. They possess 6 teeth in the upper jaw and 2 in the lower, the canines being absent or rudimentary. The head is small compared with the rest of the body, and tapers forward. The shoulders and forelimbs are feebly developed, but the hind limbs are greatly elongated, and by means of these and the powerful tail the K. is able to take long leaps and make swift progress. The forefeet have 5 toes, each furnished with a strong, hooked claw. The hind feet are extremely long and narrow, and possess only 4 toes, the third one, corresponding to the fourth of the human foot, being greatly developed and terminating in an elongated nail, resembling a hoof. K.s are formidable consumers of pasture, and browse on grass and various kinds of herbage, and are hunted by colonists as much on account of the damage they do in eating grass required for cattle and sheep as for sport. They are by nature timid and inoffensive, except when brought to bay, when they will defend themselves with their sharp claws and powerful hind legs. The fur is soft and woolly and lighter in tint below than above, the skin being of value for both shoe and glove leather. The flesh is said to be nutritious and savoury, resembling mutton, the tail especially being considered a delicacy. In the Zoological Gardens of London the K.s and wallabies breed freely.

**Kangaroo Island**, in St Vincent Gulf, S. Australia, is cut off from Yorke's Peninsula by Investigator Strait. It was discovered by Capt. Flinders in 1802. It has salt deposits. Area 1710 sq. m.; pop. 1200.

**Kangaroo-rat**, see **POUCHED MOUSE**.

**Kangavar**, or **Kengavar**, dist. and tn of Persia between Hamadan and Kerman-shah. At K. are the ruins of a temple thought to have been built c. 200 bc. Pop. (tn) 6000.

**Kangchenjunga**, Himalayan peak on

the W. Sikkim frontier (28,146 ft). Its position at the S. of the Himalayan range favours the formation of ice rather than snow. It is a strikingly beautiful mt, but excessively difficult of ascent. Since 1905 sev. unsuccessful attempts have been made, notably those led by Paul Bauer from Germany in 1929 and 1931. His attacks from the E. side rank as the greatest mountaineering performance ever given in the Himalaya. In 1955 the mt was finally climbed by a Brit. expedition led by Charles Evans. They approached from the SW. by way of the Yalung Glacier. The summit was reached by George Band and Joe Brown, using oxygen. See D. W. Freshfield, *Round Kangchenjunga*, 1903; F. S. Smythe, *The Kangchenjunga Adventure*, 1930; P. Rauer, *In Kampf um den Himalaja*, 1931, and *Um den Kantsch*, 1933; G. O. Dyhrenfurth, *To the Third Pole*, 1955; C. Evans, *Kangchenjunga, the Untrodden Peak*, 1956.

**Kangra**, or **Nagarkot**, tn of the E. Punjab state, India, 90 m. ENE. of Amritsar. The famous temple of Devi Vajesri was destroyed by the earthquake of 4 April 1905. There is an anct. Rajput fort, sited on a sheer rock above a torrent.

**Kangting** (Tatsienlu), formerly cap. of Sinkiang prov., which is now incorporated into Szechwan (q.v.) prov., China, on the Tachinohuan R. It has been much used as a point of departure by travellers to Tibet, and is a centre for Tibetan trade with China. There is a wireless station.

**Kanjut**, see **HUNZA**.

**Kankakee**, city, co. seat of K. co., Illinois, U.S.A., on the K. R., 50 m. SSW. of Chicago, in a grain-growing, livestock, dairying, limestone area. K. manufs. bricks, furniture, and agric. machinery. It possesses sculpture by George Grey Barnard, and is the site of a state hospital for the insane. Pop. 28,900.

**Kano**, prov. and tn of N. Nigeria, one of the chief centres of the Hausa Muslims. It adjoins Bornu on the E., Banchi and Zana to the S., Sokoto on the W., while the international Anglo-Fr. boundary forms its N. limit for more than 200 m. On the whole it presents a uniformly 'park-like' appearance. Over thousands of square miles almost every acre is or has been cultivated, and the hedged or fenced road and fields give an impression of civilisation and ordered industry which is unexampled in tropical Africa. Generally speaking K. prov. consists entirely of flat or gently undulating plains; its rvs.—as a rule dry for 7 or 8 months of the year—flow in almost imperceptible valleys in sandy channels. By far the greater part of the prov. drains into Lake Chad. The watershed between the Chad and the Niger systems is a line drawn through the centre of the prov. S. by W. from a point between Katsina and Kazaure. The K. emirate is the most important of the native administrations of Nigeria. The larger tns of K. are usually protected by circular walls of sun-dried bricks plastered over with mud and surrounded by a moat. The wall of K. city is 30 ft high, 20 ft broad at the base, and has a circumference

of 12 m. The introduction of walled tns into Nigeria is traditionally ascribed to the founder of the Hausa states.

The township of K. has grown up outside the walls of the native city, and contains a considerable number of Europeans, as well as non-Europeans. The native administration has installed a water supply and electric light in K. city, a large and well-equipped hospital, a middle and 10 elementary schools, and a survey estab., and is responsible for the construction and maintenance of all communications in its area. K. has railway connection with S. Nigeria. It maintains a large central prison and its own police force, and has an international airport. For sev. months during the year there is a regular bus service from K. to Algeria. Pop. of native city and township 130,000.

According to oral tradition, the earliest inhab. of K. were a race now referred to as Abagayawa. A few families in K., the men of which are generally blacksmiths, still call themselves by this tribal name. Their legend is that one of their ancestors, a smith called K., came from Gulya (near K.) in search of ironstone and settled near Dulla Hill, when the present site of the tn was uninhabited. The first ruler of K. was Bagoda, son of Bauwo, grandson of Bayajibba, a legendary hero; Bagoda became *sarki* of K. in AD 999.

Before the advent of Islam the heathen rites in vogue included some form of tree and serpent worship, and the sacrifice of black animals. The advent of the Fulani into K. is nowhere recorded, but they were numerous in the 15th cent. For long the Fulani could not subdue the city of K. itself, its formidable walls and the amount of cultivated land within rendering it impregnable. Eventually a new leader, Suleiman, entered the city unopposed. After Suleiman's death in 1819 the rule devolved on the family of Mallan Jemo, and this has been the ruling family ever since. It was in the latter part of 1902 that news reached K. of the probability that the British would advance and occupy it. No effective resistance was offered and K. city was occupied in 1903.

See W. F. Gowers, *Gazetteer of Kano Province*, 1921; H. C. Hall, *Barrack and Bush in Northern Nigeria*, 1923; C. K. Meek, *The Northern Tribes of Nigeria*, 1925; M. Perham, *Native Administration in Nigeria*, 1937; A. Burns, *History of Nigeria*, 1942; C. R. Niven, *Nigeria*, 1946; Lord Hailey, *An African Survey*, 1957; *Annual Report on Nigeria*.

**Kanpur, or Cawnpore**, city of Uttar Pradesh state, India, situated on the S. bank of the R. Ganges, some 40 m. SW. of Lucknow. K. was the scene of a massacre of Brit. men, women, and children in July 1857 during the Indian Mutiny. It is now one of the greatest industrial cities of India, containing many textile, leather, sugar, and other factories, and is the H.Q. of the Upper India Chamber of Commerce. Pop. 705,383.

**Kansas**, N. central state of U.S.A., bounded on the N. by Nebraska, E. by Missouri S. by Oklahoma, and W. by

Colorado, covers an area of 82,276 sq. m. There are no mts, the surface rising gradually from 750 ft in the E. to nearly 4135 in the W. The Missouri forms its boundary on the NE., and its trib. the K. and the Arkansas and many smaller streams water the state. The E. part of the state is covered by carboniferous formations, the W. by Pliocene deposits, and the remainder by Cretaceous and Tertiary deposits. Bituminous coal, natural gas, lead, zinc, gypsum, limestone, sandstone, and salt are found, and petroleum ranks first in the mineral resources of K., output in 1951 being 115,218,000 barrels. Portland cement is produced. The surface is undulating prairie covered with rich loam of the highest agric. value, requiring, as yet, no artificial fertilising. The rainfall is sufficient, except in the W., and comes at the best period, i.e. early summer. The chief crops are wheat (K. normally produces one-fifth of the hard winter wheat in the U.S.A.), Indian corn, oats, barley, rye, hay, fruit, potatoes, broomcorn, oilseeds, and grain sorghums. The state is not naturally well wooded; the trees are usually small and found in riv. bottoms; red cedar is the only native evergreen. The luxuriant growth of wild sunflowers has given K. the name of the Sunflower State. In areas where crops do not thrive are excellent grasslands on which horses, cattle, sheep, and pigs are reared. Agriculture and cattle-raising employ most of the people, and many of the manufacturing industries are connected with them, as slaughtering, beef and pork packing, flour-mills, and the manu. of agric. implements. K. is one of the 4 greatest cattle-producing states in the union, with c. 3,500,000 head. Hogs (c. 1,200,000) are raised in the corn belt. There are also beet-sugar and glass works, and aircraft and metalwork manufs. K. is divided into 105 cos.; the prin. tns are Topeka, cap. (78,791); K. City (129,550); Wichita (168,279); Hutchinson (33,575); Salina (26,176); Pittsburg (19,341). Prin. educational institutions are the univ. of K., at Lawrence and K. City; K. State College of Agriculture and Applied Science, at Manhattan; the Municipal Univ. of Wichita; and Washburn Municipal Univ. of Topeka. There are many navigable rivs., and over 8950 m. of steam and 445 m. of electric railway. The greater part of K. was acquired by the Louisiana Purchase, 1803; it was completed in 1850, when the Mexican ter. was taken over. It suffered much during the Civil war. According to the constitution of 1861, when it was admitted to the union, the legislature consists of a Senate and a House of Representatives elected for 4 and 2 years respectively. Six members of the latter and 2 senators represent the state in Congress. The governor and executive officers are elected for 2 years. Pop. 1,905,299. See W. E. Connelley, *History of Kansas* (5 vols.), 1918; Federal Writers' Project, *Kansas: A Guide to the Sunflower State*, 1939; F. B. Streeter, *The Kaw: the Heart of a Nation*, 1941.

**Kansas City**: 1. City in Missouri, U.S.A.,

on Missouri R. at mouth of Kansas ('Kaw') R., adjoining K. C., Kansas, and 235 m. WNW. of St Louis. It is an outstanding rail, highway, and air transport centre, near oilfields and refineries, coal, lead, and zinc mines, and limestone quarries; it is also the H. Q. of a large live-stock industry, a great seed distribution centre, and has an important hay market. Industries include farm machinery, automobile assembling, refrigerators, metal and lumber and food products, chemicals, medicines, and printing. The ann. Amer. Royal Live-stock Show is held here. It is the H. Q. of the Unity School of Christianity and the seat of the univ. of K. C., the College of St Teresa, Rockhurst College, and K. C. College of Osteopathy and Surgery. Other points of interest: Union Station, Liberty Memorial, 3400 ac. of public parks (among them Swope Park, 1705) and 119 m. of connecting boulevards (among them Paseo Parkway, 8.5 m., and Cliff Drive, 3.5 m.), the K. C. Live-stock Exchange, Federal Reserve Bank, Public Library, Conservatory of Music, K. C. Philharmonic Orchestra, Municipal Auditorium, Art Institute and School of Design, and the Nelson Gallery of Art. K. C. has had a city manager since 1925. Westport, and Westport Landing, on the site of K. C., were important from 1821 at the E. end of the Santa Fe Trail, and Westport Landing was a great outfitting point in the gold rush of 1849. Pop. 456,622.

2. City, cap. of Wyandotte co., Kansas, U.S.A., largely on r. b. of Missouri R. at mouth of Kansas R. It is the second largest city in the state, and is the commercial, industrial, transportation, and cultural centre for a large wheat-growing and stock-raising area on the central plains. Its chief industries are food processing, oil refining, grain storage, the manuf. of structural steel products, cement, soap, aeroplanes and aeroplane parts, fibre boxes, bricks, and tiles. Oil and gas wells and limestone deposits are near by. The state school for the blind, theological seminaries, a conservatory of music, the univ. of Kansas School of Medicine, and an air force base are here. Pop. 129,550.

**Kansas-Nebraska Bill, The**, Act passed by Congress in 1854, regulating the terms of Kansas and Nebraska, allowing local option in slavery, and thus abrogating the Missouri compromise. It helped to start the Civil war, and caused the rise of the Republican party.

**Kansu**, NW. prov. of China, bounded on the N. by Inner Mongolia, S. by Szechwan, E. by Shensi, and W. by Chinghai; merged with Kinghsia prov. in 1953, together they cover an area of 263,828 sq. m. K. is mountainous; on the SW. the great Nanshan Mts form in part the boundary of the prov. with Chinghai. The Hwang-ho is the prin. riv., flowing from W. to NE. Minerals are abundant, especially coal. The valleys are fertile, and good crops of millet, beans, and tobacco are obtained. The climate is very dry. The products are mainly dyes, silk, tobacco, mercury,

wool, and cattle. Lanchow is the cap. The main trade route from Peking to Kashgar passes through the prov. K. had no railway before 1949; at present a whole network is under construction. The K. section of the Lanchow-Sinkiang railway connecting China with the Siberian railway was finished in 1957. Other lines are from Lanchow to Inner Mongolia, Szechwan, Shensi, and Chinghai. China's main oilfields are in Yumen. Tunhwang is the site of an art institute. Pop. 12,928,102 (1954).

**Kant**, Immanuel (1724-1804), one of the most important of modern philosophers, and perhaps the greatest of all metaphysicians, b. of Scottish descent at Königsberg (E. Prussia), then a centre of humane pietism, where his father was a master saddler. K. later in life greatly extolled his parents, both of whom seem to have met the vicissitudes of life with a resignation and gentleness born of their pietistical religion. It was his mother, however, who particularly influenced K.'s mind, notably in educating him to an appreciation of the beauty and glory of nature. K. was educ. at the Collegium Fredericianum, and subsequently at the univ., whither he proceeded in 1740 to study mathematics, theology, and philosophy, the latter chiefly of the Wolfian school, which at that time held sway in Germany. His teacher in philosophy and physics at the univ. was Marten Knutzen, one of the most independent of Wolfians. K. had entered the univ. as a theological student, but he attended very few theological lectures. Towards the end of the 6 years he spent there he was sorely pressed for money, on account of his father's death; and from 1746 to 1755 earned a scanty living as private tutor. In 1755, obtaining his degree of doctor of philosophy, he became *Privatdozent*, i.e. a private lecturer under the control of the univ., and 11 years later he was appointed a sub-librarian, a position carrying a salary of about \$11 per annum. His years as a tutor in distinguished families gave him that insight into the world which otherwise his secluded existence would have denied him. Also during that period he laid the basis of the wealth of thought and knowledge which he revealed on his earliest appearance as a univ. teacher and as a writer.

Prior to returning, in 1755, to Königsberg, his only pub. work was a short essay on physics. His lectures on physical geography and empirical psychology were designed on popular lines, though some were strictly philosophical in form and not intended for so wide a circle. Among his hearers in 1762 was Herder, who enthusiastically describes K.'s powers as a teacher of moral philosophy, in *Briefe zur Beförderung der Humanität*. Characteristic of this, his earlier period, is his independent criticism of his teachers, Wolff and Newton. It was not until 1770 that he succeeded to the coveted professorial chair; and in the new appointment he lectured not only on metaphysics and logic, but also on natural science, geography,

anthropology, physics, and mathematics. Meanwhile he had not been idle in the literary field; his first book, *Thoughts on the True Estimate of Living Forces*, was pub. in 1747, and the *Theory of the Heavens* in 1755. In this last named he criticises Newton's assertion that the present order of the solar system cannot be explained by the mechanical laws of nature, and propounds his celebrated hypothesis that the present system of the heavenly bodies has been evolved out of a gaseous atmosphere, endowed with primary rotation; and, in the firm interconnection of all the elements of the universe, he sees conclusive evidence of the assumption that the whole universe has its ultimate ground in an absolute and all-comprehending being; so that, in this work, he unites his scientific with his religious views, although rejecting the ordinary proofs of the existence of God. *Träume eines Geistessehers (Dreams of a Visionary)*, his first really significant work, appeared in 1766, probably inspired by his reading at that time of Swedenborg. This work has sometimes been regarded as the introduction to his ambitious system of critiques which came later; but perhaps it would be more correct to assign that place to his Lat. treatise, *Dissertatio de mundi sensibilibus*, etc., 1770. It was only during his occupation of the chair of philosophy at Königsberg Univ. (1770-97) that he was recognised at all widely as a profound and original thinker. As a lecturer he was successful, in spite of his weak voice, deformity, and slight physique.

His ultimate fame rests on the writings of the later part of this period, of which the *Kritik der reinen Vernunft (Critique of Pure Reason)*, 1781, his best-known work and the basis of all his subsequent writings, came first. As an introduction to this he pub. the *Prolegomena*, 1783; a year or so later an explanatory popular version was issued by one of his students; the *Die Metaphysik der Ethik (Metaphysic of Ethics)*, 1785, and *Metaphysic of Nature*, 1786, appeared, and the critique passed into its second ed. in 1787. Meanwhile Königsberg had become the centre of philosophical activity, and K.'s method had been adopted by nearly all the Ger. univs., not only for philosophy, but also in some instances for combination with Christian ethics. The remaining critiques, *Kritik der praktischen Vernunft (Of Practical Reason)*, 1783, and *Kritik der Urteilskraft (Of Judgment)*, 1790, complete the list of his most important works. In 1792 his teaching was censored by the Prussian Gov. on account of the anti-Lutheran ideas in his rationalistic thesis, *Die Religion innerhalb der Grenzen der blossen Vernunft (On Religion within the Limits of Reason Alone)*, 1792-3, of which the first part had appeared in the *Berlin Journal*, to which he was a regular contributor. Gradually, as time passed, K. showed signs of impaired health and mental vigour, and in 1797 he resigned his chair.

His philosophical development, as it appears in his works and pub. writings up to 1770, may be summarised thus: His first work is an attempt to reconcile

Descartes and Leibnitz in his Lat. habilitation thesis on the Principles of Metaphysical Knowledge, and also an attempt to reconcile Wolff and Crusius; while his *General Natural History and Theory of the Heavens* attempts to reconcile Newton and Leibnitz, or the mechanical and teleological standpoints. K. seems, indeed, to have been attracted to mechanism in nature and, therefore, to Lucretius; but at this period of his intellectual development (1755-63) he was at one and the same time discussing a number of questions in which man's interest had first been awakened in the Middle Ages; producing his *On the False Subtlety of the Syllogistic Figures*, 1762, *Attempt to Introduce the Notion of Negative Quantity into Philosophy*, 1763, *Only Possible Proof of the Existence of God*, 1793, and *On Evidence*, this last named being an essay for the Academy's prize won by Moses Mendelssohn, 1764. Generally speaking, K. at this period was an 'enlightener' of the school of Wolff, and indeed was giving lectures on the compendia of Baumeister, Baumgarten, and Meier, all adherents of Wolff. But already he was beginning to modify his own standpoint and, in his pub. works, anticipating something newer and higher, as may be seen from his *Dreams of a Visionary* and *On the Ground of distinguishing Particular Divisions in Space*, 1768. His altered general attitude appears, however, much more definitely in the work with which he entered on his office as ordinary prof. This, however, being written in Latin by way of academic exemplar, and given only a very limited circulation, received but little attention. This work, *De mundi sensibilibus et intelligibilibus forma et principiis*, 1770, is the border-line between the 2 periods in K.'s life which are styled by Rosenkranz the 'heuristic' and the 'speculative-systematic,' and shows us K. as he was after Hume had 'waked him out of his dogmatic slumber' (Erdmann).

K.'s philosophy was aimed at the scepticism of the Eng. empiricists (e.g. Hume), and at the eclectic triviality and dogmatic prejudice of the existing Ger. schools. It is customary to divide his work into 3 periods: (1) influenced by Leibnitz and Wolff; (2) a reaction against (1) under the influence of the Eng. empirical philosophers; and (3) his critical period, during which his own philosophy found mature expression. It is necessary to explain before considering the main points of his teaching that by 'pure' he meant that which is isolated from actual experience, and by 'empirical' that which results from actual experience. The chief divs. which he made in his own system were (a) transcendental, and (b) metaphysical; the former he developed more fully, and it has had more influence on subsequent thought—he has been called the re-creator of the transcendentalism of cognition. He divides the mind into (a) Intellect, subdivided into sensibility (passive), and thought (active); (b) Sensation, or Feeling, the lowest cognitive faculty; and (c) Volition. The old rationalism he rejects; for

its psychology he substitutes his examination of the subject; for its cosmology, his examination of the object; and for its theology, his examination of the relation between subject and object. Identifying the conception of God with the more general law of ethical necessity, he places responsibility on the reason as opposed to the emotions. That it should be possible for a man to accept this responsibility, it is necessary that he should be free from the control of the physical laws of natural causality. This spiritual emancipation, the elevation of subject over object, of noumenon over phenomenon, is attained

IMMANUEL KANT

as his critical conclusion that phenomena do not exist in themselves, but only in relation to the mind, with which they are, therefore, conformative. He denied the existence of any law of supreme, absolute, and external truth such as the rationalists had affirmed. He claimed to establish that only by a process of schematization does an object offer itself as a cognisable unit to the combined divs. of the mind, (a) the sensuous intuitions of time and space, and (b) the pure notions of understanding or 'categories'—the 12 categories being grouped under the 4 'forms' as follows: (1) Quantity (Unity, Multitude, Totality); (2) Quality (Reality, Negation, Limitation); (3) Relation, between substance and accident, cause and effect, action and reaction; and (4) Modality (Possibility, Existence, Necessity). His *Critique of Pure Reason* is an examination of experience and of the laws of practical reason which he ultimately announced as its controlling force; practical reason becomes one with morality, and the supreme cause is a moral cause, i.e. the subordination of the empirical, or sensuous, to the pure, or intellectual. His

final dicta on the relation of noumenon and phenomenon, i.e. experience, are to be found in his *Critique of Judgment*, in which he traces the ultimate value of life to ethical teleology. From his system of critical or transcendental idealism were developed the 'subjective' idealism of Fichte, the 'objective' of Schelling, and the 'absolute' of Hegel; and his works also influenced Jacobi, Schleiermacher, and Schopenhauer.

His 'religion within the limits of mere reason' impelled him to avoid religious subjects in his lectures, and immediately subsequent writings. This marks what is called the 'practical' period of his career. To this last period belong *On Everlasting Peace*, 1795, *Die Metaphysik der Ethik* (*The Metaphysic of Morals*, 1797), which as a general title was prefixed to the *Metaphysical Foundations of the Theory of Right*, 1796, *The Metaphysical Foundations of the Theory of Virtue*, and a number of short essays in the *Berliner Monatschrift*. With a new monarch on the throne the need for restraint had gone, and he pub. *Der Streit der Fakultäten* (*The Conflict of the Faculties*), 1798, and *Anthropology from a Pragmatical Point of View*, 1798.

During his own lifetime the courses of his lectures were printed singly and his minor writings were collected by Tieftrunk and others. But a complete ed. of his works was long in coming. The first was the 10-vol. ed. of G. Hartenstein (Leipzig), 1838-9, and the next, that of K. Rosenkranz and F. W. Schubert in 12 vols. (Leipzig), came in 1838-40 (this latter contains a biography as well as a hist. of the Kantian philosophy by Rosenkranz); and the most exhaustive, issued by the Prussian Academy of Science in 22 vols., 1900-1942.

Eng. trans.: *Critique of Pure Reason* by T. Meiklejohn, 1852, and M. Müller, 1881; *Critical Philosophy*, E. Caird, 1859; *Works* by J. P. Mahaffy, 1872, and J. Stirling, 1881; *Theory of Ethics*, T. K. Abbot, 1873; *Critique of Judgment*, J. H. Bernard, 1892. See K. Fischer, *Immanuel Kant*, 1897; M. Heidegger, *Kant und das Problem der Metaphysik*, 1929; N. Clark, *Introduction to Kant's Philosophy*, 1929; A. D. Lindsay, *Kant*, 1934; G. T. Whitney and G. F. Bowers (ed.), *The Heritage of Kant*, 1940; A. H. Smith, *Kantian Studies*, 1947; J. Bonds, *Kant*, 1949.

Kantemir, Demetrius, see CANTEMIR.

Kao, uninhabited is. in the Tongan Group. An extinct volcano, K. has a perfect cone, the summit being 3380 ft high, the highest point in Tonga (q.v.).

Kaohsiung, second largest city and port in Taiwan (q.v.), China, situated on the SW. coast of the is., opened to trade in 1858. During the Jap. occupation a naval base was built, operating against the Philippines and Malaya. It has docks, a shipbuilding industry, steel plants, and cement factories. The port can accommodate ships up to 8000 tons. Pop. 371,400.

Kaolin, or China Clay, is a fine, almost

impalpable powder of pure white colour, the product of the decomposition by weathering of the felspar of a granite rock. The name is derived from the Chinese Kao-ling, 'high ridge,' the name of hills in Chianghsi, a centre of the porcelain manuf. in China. When wet it is easily moulded, and it is the essential ingredient in hard-paste porcelain (q.v.). It is found in Cornwall, at Aue (Meissen), at Passau (Vienna, Ludwigsburg), at St Yrieix, Limoges, and elsewhere in France, and in U.S.A. K. is also used for surfacing paper and cotton goods and as a constituent of many paints or powders. Kaolinite is hydrated aluminium silicate.

**Kap Farvel**, S. extremity of Greenland, situated at the E. entrance to Davis Strait. It is seldom visited on account of the dangerous currents.

**Kapellen**, tn in Belgium, 8 m. N. of Antwerp, engaged in agriculture and cattle-breeding, and having brick works and distilleries. Pop. 10,700.

**Kapok** (Malay *kapok*), a fine silky cotton substance arising from the surface of the seed coats of sev. trees, but obtained chiefly from the K.-tree (*Eriodendron anfractuosum*, family Malvaceae of Java) and from the silk-cotton tree, or *Sumahuma*

KAPOK

A, ripe seed opening.

(*Ceiba pentandra*, var. *indica*, family Bombacaceae, with 19 genera). Other trees of the Bombax family, which has about 30 species (*B. manguba* of Brazil, *B. malabaricum* of India, *B. mexicanum* of Mexico), as well as *Ochroma lappaceum*, yield an inferior K. The fluff-like substance is produced in great quantities and, being impervious to water, the material is useful for stuffing life-saving apparatus. It is also used to stuff mattresses and cushions. From the seeds is expressed K. oil, used for soap-making and as an edible oil. K. was first introduced into Europe in 1851 and is also obtained from tropical Africa. A yellowish-brown kind, of a brilliant and silky texture, comes from Indo-China.

**Kaposvár**, tn of SW. Hungary, cap. of Somogy co., on the Kapos, 95 m. SW. of

Budapest (q.v.). It is built on hills, has a fine 18th-cent. church, and has textile, engineering, and foodstuff industries. It was under insurgent control during the anti-Russian risings of Oct.-Nov. 1956. There is an airfield. Pop. 33,000.

**Kapp, Gisbert** (1852-1922), Austrian electrical engineer, b. Mauer near Vienna; son of a native of Trieste and his Scottish wife. Studied at Zürich. Came to England, 1875. Travelled, returned to England in 1882. Made improvements in electrical measuring instruments and in dynamos. In 1885 began dynamo-making on his own account, but his dynamo has now been superseded by a more modern type. London editor of *Industries*, 1886-1889. In Germany, about 1894-1904, secretary to Ger. Association of Electrical Engineers. Returned to become prof. of electrical engineering at Birmingham Univ. till 1918. He was awarded the Telford medal. Wrote *Electric Transmission of Energy*, 1891, *Dynamos, Alternators, and Transformers*, 1893, and *Principles of Electric Engineering*, 1916.

**Kappel**, vil. of Switzerland, in the canton of Zürich, 4½ m. N. of Zug. At K. the reformer Zwingli (q.v.) met with his death in the conflict of 1531, and a monument was erected to his memory in 1838. There is an old Cistercian convent of 1185.

**Kapunda**, tn in co. Light, S. Australia, 48 m. NNE. of Adelaide. It is the centre of a thriving wheat- and wool-producing area, other products being dairy produce, olives, canary seed, mustard seed, oats, and barley. Average rainfall 19½ in. Its manufs. include weighbridges up to 100 tons capacity, hydraulic holsts, and garage equipment; it has flour and chalk mills. K. is served by rail express passenger service on the R. Murray route. There are bituminous roads from Adelaide through K. to N. tns. Features are the fortnightly sheep and cattle market, and ann. horse sales which attract buyers from all over the Commonwealth and the Middle E. Pop., in tn and dist., 3000.

**Kapurthala**, former Sikh state, now merged in the Patiala and E. Punjab States Union (P.E.P.S.U.), India. The ruler was also one of the prin. Talukdars of Oudh.

**Kara-Kalpaks** (Black Caps), Turkic people who inhabit the S. and E. coast of the Aral Sea, thus forming a geographical transition between the N. Kirghiz and S. Turkomans. Emigrants have settled in Astrakhan, Kuban, and Siberia. Their chief occupation is agriculture and horse-breeding. The land they inhabit is now known as Kara-Kalpakia, and is an autonomous rep. of Soviet Central Asia, included in the Uzbek S.S.R. Nukus is the cap. Pop. 435,000.

**Kara-Kul**, 2 lakes, distinguished as 'Great' and 'Little,' in Soviet Central Asia, in the Gorno-Badakhshan autonomous region of the Tajik S.S.R. The former has an area of 140 sq. m., and lies at an altitude of 13,200 ft.; the latter lies NW. of the Mustagh-ata peak, at an altitude of 12,700 ft.

**Kara-Kum**, desert area composing 90

per cent of the Turkmen S.S.R. of the Soviet Union. Efforts are being made to develop it for the growing of fodder. The K.-K. canal, designed to join the Murgab and Tedzhen R.s with the Amu Darya, is under construction.

**Kara Sea**, part of the Arctic Ocean off the shores of W. Siberia between Novaya Zemlya and Severnaya Zemlya. The chief rivs. flowing into it are the Ob' and the Yenisey, both forming long estuaries. The N. Sea Route goes through the K. S. The chief port is Dikson.

**Kara-Su**, see STRUMA.

**Karachay**, Turkic-speaking people who lived until 1943 on the N. slopes of the main Caucasian range, W. of El'brus, on the upper Kuban' R., and numbered (1939) 76,000. Known since the 16th cent., they were under the suzerainty of the Kabarda (q.v.), and from 1733 that of Turkey; they were conquered by the Russians in 1828. The K. were included in the Mt. People's Rep. (q.v.), in the K.-Circassian Autonomous Oblast in 1922, and the K. Autonomous Oblast in 1926, in which the K. made up four-fifths of the pop. In 1943 the K. were deported to Asiatic Russia for alleged collaboration with the Germans, and K. Autonomous Oblast was abolished and dismembered. Rehabilitated 1957. See W. Kolarz, *Russia and her Colonies*, 1952.

**Karachi**, cap. of Pakistan, situated in W. Pakistan, and now administered as a separate Federal Cap. Area 812 sq. m.; pop. (approx.) 1,500,000. Formerly the cap. of Sind Prov., K. has no anct hist. and owes its rapid development to its great advantages as a port and harbour on the W. coast of the subcontinent. Already a crowded city, K. suffered on partition from the influx of all the apparatus of a central gov. and a large concourse of Muslim refugees from India. In spite of strenuous efforts the ensuing congestion has not been wholly relieved, and the strain upon public services, especially lighting, has been severe.

Before partition the port was a very busy one, constantly used by many shipping lines serving India and the Far E. The tonnage handled annually is steadily increasing, and big plans are in hand for extending air facilities. A loan of nearly \$15,000,000 has been sanctioned by the World Bank to assist them. K. airport at Drigh Road is an international airport of great importance. The main public buildings, which are modern, include the Legislative Assembly, the Secretariat, the Governor-General's (now President's) residence, and the Law Courts. Up-to-date hotels have also been built. The pop. of the city proper is slightly over 1,000,000.

**Karadagh**, see MONTENEGRO.

**Karaganda**: 1. Largest oblast (prov.) of the Kazakh S.S.R. of the Soviet Union, and the main mining and metallurgical section of the rep. Pop. 460,000.

2. Cap. of K. oblast, centre of the coal industry. The pop. has grown from 150 in 1926 to 380,000 in 1955.

**Karakoram**, mt range in central Asia, separating Sinkiang and India, and

forming a continuation of the Himalaya (q.v.) to the Hindu-Kush. It extends 300 m. NW. as far as the Pamir (q.v.). This range contains some of the highest mts in the world, among them being K2 (28,250 ft.). Thirty-three peaks rise above 24,000 ft. It is crossed by sev. passes, such as the K. (over 18,000 ft high), the Muztagh, and the Hsiper. Extending to the W. there are numerous glaciers and ice-fields, one of the largest being the Baltoro. Gilgit, the remote spot in the high K. mts to the N. of Kashmir, formerly reached after only 12 days' trekking from Peshawar or Srinagar, has now been linked with the outside world by air. In addition Pakistani military engineers have widened the existing 350-m. caravan route from Peshawar to Gilgit via Chilas state over Babusar Pass (13,700 ft high) so that jeeps can traverse the whole distance within 4 days. Gilgit remains the centre of an age-old caravan traffic from Sinkiang or Chinese Turkestan. See W. M. Conway, *Climbing and Exploration in the Karakoram-Himalayas*, 1894; Filippo de Filippi, *Karakoram and Western Himalaya*, 1912; E. E. Shipton, *Blank on the Map*, 1938; Charles Houston, *K2—The Savage Mountain*, 1955.

**Karakorum**, name of 2 old Mongolian caps.: 1. The Uighur cap., the ruins of which remain on the l. b. of the Orkhon, a trib. of the Selenga R., in the Talai-Khaindala steppe. It flourished between the 7th and 9th cents., and was deserted on the fall of the Uighur kingdom.

2. The Mongolian cap., about 25 m. SE. of the above. It was founded by Genghis Khan, and its walls were built in 1234-5. The city was visited by Marco Polo in 1275, and was subsequently destroyed by Kublai Khan, the fourth king of the Mongolian dynasty, for rebelling against his authority. See *Works of the Orkhon Expedition*, 1892; F. and W. Workman, *Ice-bound Heights of the Muztagh*, 1908, and *Two Summers in the Ice-wilds of East Karakorum*, 1917.

**Karamania**, obsolete name for a region comprising most of the E. portion of the central tableland of Asia Minor, lying mostly within the prov. of Konya (q.v.).

**Karamojong**, Nilo-Hamitic cattle-keeping people of E. Uganda; the name is also given to the dist. of Karamoja. They are the most primitive people of Uganda, their country being poor, and they lack the economic and political advancement of other peoples of the protectorate.

**Karamzin**, Nikolay Mikhailovich (1766-1826), Russian historian, writer, and statesman, author of *The History of the Russian State* (12 vols.). A conservative in politics, K. was the leader of the new Sentimental school in literature, and played an important role in the formation of the modern Russian literary language.

**Karatepe**, anct city of the Hittites (q.v.) in Asia Minor, which appears to have flourished for sev. cents. from c. 1900 BC. In 1948 an expedition under the auspices of the Turkish Historical Society excavated a site there on 4 successive levels. The prin. discoveries include 1200

inscribed clay tablets, which have shed light on the hist. of the early Hittite Empire, some graves, and a number of fine pottery vessels some of which suggest the use of glaze.

**Karavelev**, Lyuben (1837-79), Bulgarian author and patriot. In 1857 he went to Moscow where he attended the univ. and wrote for Russian journals. He fell under the influence of the Socialists of the sixties. Finally he had to leave Russia, and he went (1867) to Belgrade and Novi Sad. He wrote sev. stories, full of social criticism, in Serbian. In 1869 he went to Bucharest where he became a member of the liberation movement and devoted himself to anti-Turkish clandestine journalism. After a disagreement with Botev (q.v.) on the nature of the revolution intended, he retired from politics. He just lived to set up his press within the newly freed Bulgaria. He is the father of the Bulgarian short story, and his sketches of vil. types strongly influenced the future course of Bulgarian fiction.

**Kardiseed Oil**, see SAFFLOWER OIL.

**Karelia**, autonomous rep. in NW. Russia, adjacent to the Finnish border. It is a forested, hilly plain with many lakes and a comparatively mild climate. There are large deposits of granite, marble, and other building stones, and mica. Area 68,900 sq. m.; pop. (1956) 615,000. Russians (since 11th cent.) and Karelians (see FINNS). The pop. are mostly Orthodox Christians, but include also many nonconformist sects. There are timber, wood-processing, and quarrying industries, also dairy farming and fishing. The cap. is Petrozavodsk. From the 12th cent. K. belonged to the Novgorod (q.v.) Rep.; SW. K. was contested by Swedes and Russians till the 18th cent., and by Finns and Russians in the 20th cent. (see VYBORG). The Karelian Labour Com. was formed in 1920, and renamed K. Autonomous Rep. in 1923, and Karelo-Finnish Union Rep. in 1940-56. See W. Kolarz, *Russia and her Colonies*, 1952.

**Karenni** (now called the *Kayah State*), constituent state of the Union of Burma (q.v.), situated between lats. 18° 50' and 19° 55' N., and longs. 97° 10' and 97° 50' E. The surface is principally high tableland of 3000 to 4000 ft. K. contains the famous Mawchi mines. Area 4519 sq. m.; pop. 70,000.

**Karens**, native race of Thailand and Burma, dwelling among the hilly dists. They number about 727,000, and are supposed to have descended from certain Chinese tribes. Many of them have been Christianised. In 1947 they were represented in the Burmese Constituent Assembly by 6 members, but in 1943 began to manifest a wish to break away from Burma, and rebelled.

**Karg-Elert**, Sigfried (1877-1933), Ger. composer, studied at the Leipzig Conservatory, where he joined the teaching staff in 1919. Although he wrote a number of other works, he is known exclusively as a composer for the organ, the harmonium, and the *Kunstharmonium*, and his vast output has been welcomed by

many organists as a modern acquisition to their scanty concert repertory.

**Kariba Gorge** (*Kariba Hydro-Electric Scheme*), site of one of the world's greatest hydro-electric schemes, situated on the Zambesi R., S. Rhodesia. The catchment area will be approximately 200,000 sq. m. and the installation of hydro-electric generating plant will operate under a head of about 280 ft. Initial capital cost exceeds £79,500,000. The power generated will be conveyed to consuming centres by overhead transmission lines joining K. G. with existing networks in N. and S. Rhodesia. It will be available to the copperbelt and to industrial and domestic consumers in S. Rhodesia. Estimated cost of power at receiving stations is 0.4d. per unit, when in full operation falling to 0.3d. per unit. The final cost will exceed £115,000,000. Funds for the scheme have been obtained from the following sources: World Bank loan, £28,600,000; copper-mining companies, £20,000,000; Brit. S. Africa Co., £4,000,000; Standard Bank of S. Africa, £2,000,000; Barclays Bank (Dominion, Colonial, and Overseas), £2,000,000; Federal Gov. of Rhodesia and Nyasaland, £6,000,000. The Commonwealth Development Corporation have agreed to put up £15,000,000 and the Commonwealth Development Finance Co. £3,000,000. A large proportion of the contracts in terms of money to be spent has been awarded to It. companies who were able to underquote other tenders. When the scheme is completed it is estimated that by 1961 there will be a saving in the carriage of coal of 950,000 tons, and by 1971 of over 3,500,000 tons, which would require 5000 wagons and 82 locomotives to move it. The saving based on 1956 costing will be £10,000,000 per annum to industrial and domestic users. The storage basin will cover a surface area of over 1,000,000 ac. and the lake, the largest man-made lake in the world, will have a shore line of 800 m. The capacity will exceed that of the Boulder Dam by 3 times. The lake itself will be 200 m. long.

**Karikal**, former Fr. ter. on the E. coast of India, 150 m. S. of Madras. Now incorporated by agreement in the Rep. of India.

**Karimata Islands**, group of more than 60 is. situated W. of Borneo. They are separated from the is. of Biliton by the strait of the same name. The largest one of this group, Grand K., is woody and mountainous. Pop. 500.

**Karl August**, Archduke (of Saxe-Weimar), see CHARLES AUGUSTUS.

**Karl Eitel**, Prince, see CHARLES I (of Rumania).

**Karl Franz Josef**, Emperor of Austria-Hungary, see CHARLES I.

**Karl-Marx-Stadt** (*Chemnitz*): 1. Dist. (*Besirk*) of the Ger. Democratic Rep. (E. Germany), bounded on the N. by Leipzig, on the E. by Dresden, on the S. by the Erzgebirge and Czechoslovakia, and on the W. by Bavaria and Gera (qq.v.). It was formerly part of Saxony (q.v.). Area 2320 sq. m.; pop. 2,269,000.

2. Ger. city, cap. of the dist. of K.-M.-S., at the foot of the Erzgebirge on the Chemnitz R., 120 m. S. by W. of Berlin. It stands on the site of a Wendish settlement, and had a linen-weaving monopoly in the early Middle Ages. It was the scene of a Swedish victory in the Thirty Years War (q.v.). During the Second World War it was very badly damaged. In the neighbourhood there are coal and lignite mines, and there are important textile and engineering industries. Pop. 290,000.

**Karlfeldt, Erik Axel** (1864-1931), Swedish poet, b. Dalarne, a prov. possessing a traditional peasant culture. His first vol. of poems, *Vildmarks och karleksvisor*, 1875, did not create a great stir at the time, but he later came to be regarded as the leading Swedish poet after the death of Fröding. He developed an individual, often purposely archaic, style, and his poetry with its feeling for nature reflects the peasant life of his native prov. His best-known collections of lyrics are *Fridolins visor*, 1896, *Fridolins lustgård*, 1901, and *Hösthorn*, 1927. In 1904 he was elected a member of the Swedish Academy, of which he was the permanent secretary from 1912. He refused the Nobel prize for literature during his lifetime, but it was awarded posthumously in 1931. A selection of his poems trans. into English was pub. in the U.S.A. in 1938 with the title *Arcadia Borealis*. See T. Fogelqvist, *E. A. Karlfeldt*, 1931, and J. Kulling, *Karlfeldts livsproblem*, 1943.

**Karli**, cave temple in Bombay state, India, is 34 m. NW. of Poona. It is the largest known Chaitya cave in India, and bears an inscription dating probably from the 1st or 2nd cent. BC.

**Karlings**, see CARLOVINGIANS.

**Karlovit, see SREMSKI KARLOVCI.**

**Karlovy Vary**: 1. Region (*kraj*) in W. Czechoslovakia, bordering on Germany, part of the former prov. of Bohemia (q.v.). It contains the S. half of the Erzgebirge (q.v.), and is watered by the Ohře (q.v.). Area 1767 sq. m.; pop. 300,000.

2. (formerly, Ger. Kaiser Karlsbad; then Karlsbad, or Carlsbad) Czechoslovak tn, cap. of the region of K., on the Ohře. It lies in a narrow valley, 1000 ft above sea level, and is a celebrated spa with hot sodium sulphate springs; the Sprudel spring has a temp. of 165° F. Knežín is found in the neighbourhood and pottery is manuf. Pop. 31,000.

**Karlsbad**, see KARLOVY VARY.

**Karlsburg**, see ALBA IULIA.

**Karlshamn**, seaport of Sweden, on the S. Coast, in the prov. of Blekinge. Pop. 11,270.

**Karlskoga**, tn in the prov. of Värmland, Sweden, long a centre for iron working. The Bofors munition works at Karlskoga are famous all over the world. Pop. 43,049.

**Karlskrona**, fortified seaport tn and chief naval station of Sweden, on the is. of Trossö and 4 smaller ones in the Baltic, is the cap. of the gov. of Blekinge. It was named after its founder, Charles XI. The is. are connected with each other and the mainland by 14 bridges. The harbour,

which can accommodate the largest ships, has arsenals, shipyards, and docks blasted from granite rocks, and is defended by strong fortifications. The chief trade is in matches, tobacco, and cloth. Pop. 33,552.

**Karlsruhe**, Ger. city in the *Land* of Baden-Württemberg (q.v.), 4 m. from the r. b. of the Rhine (q.v.), 38 m. WNW. of Stuttgart. It lies just N. of the Black Forest (q.v.). The city owes its foundation to the building of a castle on the site in 1715 by the Margrave Karl-Wilhelm of Baden-Durlach; around this castle the city was built in the shape of a fan. Newer additions to the original city have been constructed to a less regular pattern, but K. remains a tn of imposing design, with fine parks and avenues and many notable neo-classic buildings. The former ducal palace is now used as a law court. There are museums, a botanical garden, and academies of arts. Heinrich Hertz (q.v.) conducted his most important experiments in the K. technical college, and it was at K. that Benz (q.v.) built his motor-tricycle in 1885. The city is an important rail centre and has a busy riv. harbour. Its industries include brewing, and the manuf. of machinery, bicycles, cosmetics, and food-stuffs. During the Second World War K. was heavily bombed because of its position as a centre of communications; in particular, there was serious damage in a raid by heavy bombers on 27 May 1944. The city was taken by Fr. troops on 4 April 1945, by which time many dists. were in ruins. Since the end of the war there has been much reconstructed. Pop. 220,100. See DURLACH.

**Karlstad**, cap. of the co. of Värmland, Sweden. It stands at the N. end of Lake Vänern, on the is. of Thingvalla, and is connected with the mainland by bridges. It manufs. machinery, matches, and tobacco. It is an episcopal see. Pop. 38,694.

**Karma**, or **Karman**, Sanskrit noun denoting a deed or action. As applied to the action of a living human being, it is the doctrine that every action, good or evil, receives its reward or punishment. Hence it is concerned with the theory of transmigration, apparently unmerited reward or punishment having been caused by the K. of a previous life. The doctrine is found in the Buddhist and Jain religions. See also TRANSMIGRATION.

**Karmathians**, **Carmathians**, or **Qarmathians** were a Muslim sect, perhaps named after Hamdan Qarmat, who started a movement in lower Mesopotamia which drew its adherents from the discontented lower classes. He formed a fortified camp as a place of refuge and levied dues on his followers, who were required to give up private property for the common good. A branch of the sect under other leaders ravaged N. Syria and Mesopotamia, but this branch was destroyed by 906. A similar social movement had begun in Khorasan in 873, but the hope of converting the Sāmānid ruler was disappointed and the movement died away. In 890 a branch of the K. founded a state

in al-Hasa in E. Arabia from which they terrorised lower Mesopotamia, threatened Bagdad, captured pilgrim caravans, and carried off the Black Stone from Mecca; later they returned it. In all these doings the K. claimed to obey a higher authority. Their connection with the Isma'ilis is obscure; it may be that when the Isma'ilis were firmly estab. as lords of Egypt they were embarrassed by their less reputable associates. In al-Hasa the ruler was only first among his peers, indeed one account says that only in war was the command in the hands of one man. This form of gov. outlasted the end of the military power of the state, 1030, and survived into the 18th cent. The gov. was paternal: if a resident fell on evil days, he was given money with which to trade or in some other way repair his fortunes, and an artisan from outside was helped to buy tools and so to earn his living. The basis was a system of communism into which initiation was necessary; this was advanced by vigorous propaganda among the masses, peasants, and artisans. Their doctrines were very like those of the Isma'ilis (q.v.). See de Goeje, *Mémoire sur les Carmathes du Bahrein*, 1880.

**Karnak**, or **Carnac**, vil. of Upper Egypt, in the prov. of Kench, built on the ruins of the anct city of Thebes. See further under EGYPT, *Exploration and History*.

**Karnal**, tn of E. Punjab state, India, 50 m. SE. of Ambala, is of anct origin. It is on the old bank of the Jumna, which has changed its course and is now 7 m. away. K. was the scene of a severe defeat inflicted upon the Moghul emperor by the Persian Nasir Shah in 1739.

**Kärnten**, see CARINTHIA.

**Karolsfeld**, or **Carolsfeld**, **Schnorr von**, see SCHNORR.

**Károlyi**, **Michael Adam Georg Nikolaus**, Count (1875-1955), Hungarian statesman, b. Budapest. Before the First World War he was a prominent liberal politician, and, during it, opposed the Ger. hegemony. He formed a ministry upon the defeat of the dual monarchy in 1918, and in 1919 was provisional president of the new rep. of Hungary. From 1931 to 1932 he was Prime Minister, but went into exile when Horthy estab. a virtual dictatorship. During the Second World War he led the Free Hungarian movement and returned to Hungary in 1946, but was soon swept aside by the estab. of a Communist regime there, and retired from public life.

**Karor**, see CRORE.

**Karr**, **Jean Baptiste Alphonse** (1808-90), Fr. novelist, critic, and journalist, b. Paris. His first novel was *Sous les tilleuls*, pub. in 1832, of which the originality and charming humour and sentiment brought him fame. In 1839 he became editor of *Le Figaro*, and in the same year he started *Les Guêpes*, a monthly pub. in a keenly satirical tone; in 1848 he founded *Le Journal*. His other works include *Vendredi soir*, 1835; *Le Chemin le plus court*, 1836, a continuation of his autobiography; *Geneviève*, 1838; *Un Voyage autour de mon jardin*, 1845, one of his most popular

works; *Feu Bressier*, 1848; *Font en Thème*, 1853, a book which had some influence in promoting educational reform; and his reminiscences, pub. in 1879-80, under the title of *Livre de bord*.

**Karrer**, **Paul** (1889- ), chemist, b. Moscow, of Swiss parents, and educ. at Zürich Univ., where he was assistant to Alfred Werner, 1911-12. From 1912 to 1918 he collaborated with Paul Ehrlich at Frankfurt-on-Main. Since 1919 he has been director of the chemical institute of Zürich Univ. He has worked on vitamins, carbohydrates, carotenoids, etc., and was awarded the Nobel prize for chem. in 1937.

**Karri**, native name of an Australian tree, *Eucalyptus diversicolor*. It is one of the 'blue gums', and from it is derived a hard red timber useful in making wood-paving.

**Karroo** (from Hottentot *karusa*, hard), name give to the high plateau in the Cape of Good Hope, S. Africa, lying between the coast mts and the Orange R. basin. The area is divided into the Little K. and the Great K.; the latter is between the Nieuwveld Berge and the Zwart Berge, and is crossed by the railway. In the dry season the K. is a dry scrub, but after the rains the soil is covered with luxuriant vegetation, which makes rich pasturage for sheep, goats, and cattle. Area 100,000 sq. m. Average altitude 2000-3000 ft.

**Kars**: 1. Il in Asiatic Turkey, with an area of 7300 sq. m. It is watered by the Aras, Kur, and Arpacal R.s. The surface is mountainous and the climate changeable; cattle-raising is the chief occupation. Salt is found in the S. Pop. 488,406.

2. Tn, cap. of above il, 115 m. SW. of Tiflis, and connected with it by rail. In the 16th cent. it came into the possession of the Turks, and was fortified by Sultan Amurath III. In 1828 it was taken by Russia and restored to Turkey. Sev. times it was besieged, and finally stormed in 1877. It was ceded to Russia by the Berlin Congress in 1878, but after the First World War became again, with the il, a possession of Turkey. A treaty between the Soviet Gov. and Turkey was signed here in 1921. K. contains an 11th-cent. cathedral and sev. mosques, and manufs. carpets and coarse textiles. Pop. 20,500.

**Karsavina**, **Tamara** (1885- ), Russian ballerina. A pupil of the Imperial School of Ballet, St Petersburg, she made her début at the Mariinsky Theatre in 1902 and was promoted prima ballerina in 1907. She went to Paris in 1909 with the Diaghilev ballet, creating leading roles in many of the most important ballets staged by that company, notably *Les Sylphides*, *Carnaval*, *Petrouchka*, *Spectre de la rose*, *L'Oiseau de feu*, *Daphnis et Chloé*, *Le Tricorne*. Having married an Englishman and settled in Great Britain, she gave invaluable encouragement during the early years of Eng. ballet, dancing with the Ballet Club in 1930 and being concerned in the formation of the Camargo Society.

She coached Margot Fonteyn when the Sadler's Wells Ballet revived *Spectre de la rose* in 1944, and again when *L'oiseau de feu* was revived in 1954. Her memoirs were pub. under the title of *Theatre Street* in 1930.

**Karst** (Slavonic Kras; It. Carso), name of a region of Yugoslavia, composed of high ridges of limestone which join the E. Alps to the Dinaric Alps, E. of Istria. A series of parallel fractures borders the NE. Adriatic and continues inland; the N. Adriatic is a sunken hollow which has descended along these fractures. The limestone is porous and the water percolates and forms sinks, canyons, and caverns. Similar structure of land will produce the same result, and such a landscape is called a K. landscape; it is characterised by a barren aridity, in addition to the caves above mentioned. Examples may be seen in Derbyshire and parts of Yorks. See C. Diener, *Bau und Bild des Karsts*, 1903, and O. Lehmann, *Die Hydrographie des Karsts*, 1932.

**Karun**, only navigable riv. of Persia, rises in the Bakhtiari Mts. and, flowing through Khuzistan, joins the Shatt-ul-Arab at Khorramshahr. Small steamers ascend to Ahvaz.

**Kashan**, dist. and tn of Persia, 120 m. S. of Tehran. It has a trade in carpets. It was once noted for its silk and brocades. Prehistoric remains have been found at Siyalk near K. Pop. of tn 46,000.

**Kashgar**, important tn of Chinese central Asia, in Sinkiang. It is divided into two parts, called Kuhna Shahr, or Old City, and Yangi Shahr, or New City. These are 5 m. distant from each other, and separated by the Kizil-su. Kuhna Shahr is a clay-walled fortress built on an affluent of the Kizil-su after the destruction of the old K. in the early 16th cent. The ruins of the old city Aski Shahr are still extant. K. is popular as a political, religious, and commercial centre; it is a seat of Mohammedan culture, and owns the famous shrine of Hazret Afak. The new city was built in 1838. The surrounding dist. (pop. 300,000) is very fertile and well irrigated. Silk and cotton, boots, shoes, and saddlery form the chief manufs. A new airline links the tn with other major cities in Sinkiang. Pop. 80,000.

**Kashgar, River**, in Sinkiang, China, called in some parts the Kizil-su, rises in the Tien Shan Mts. and flows 500 m. E. to join the Yarkand.

**Kashgaria**, name sometimes given to the dist. generally known as Chinese or E. Turkestan.

**Kashka Darya**, oblast (prov.) of the Uzbek S.S.R., Soviet Central Asia.

**Kashmir** (more properly Jammu and Kashmir), former princely state on the N. frontier of India, bounded on the N. by the Karakoram Mts, on the E. by Tibet, and on the S. and W. by the former Punjab and NW. Frontier Provs. Geographically K. falls into 3 divs., i.e. (1) the remote and mountainous areas Ladakh and Gilgit (q.v.) adjoining Tibet; (2) the valley of the R. Jhelum in which the 'Happy Valley' of K. is set; and (3) the

lower and semi-mountainous area including Jammu, sometimes called the Jammu-K. plain. Areas (2) and (3) are well watered and drained by the Jhelum, Chenab, and Ravi R.s., the Jhelum also draining the great mts to the E. The valley, which is sheltered from the SW. monsoon, has a good climate. The N. region is reached from the valley by passes of 14,000 ft.

THE POSITION OF THE KASHMIR  
CEASE-FIRE LINE

Srinagar (q.v.), the cap. city, is situated in the valley, and it is here and in the Jammu region that the vast majority, said to be eleven-twelfths, of the pop. live. Apart from the normal grain crops, the main products of K. are silk and timber. Sericulture has been practised since the 16th cent. There are no internal railways but road communications link with the Indian railways at Pathanicoat and with Pakistan railways via Abbotabad or at Rawalpindi. Except in Jammu the bulk of the pop. is Muslim. Area 82,250 sq. m.; pop. (1950 estimate) 4,370,000.

It is recorded that Buddhist missionaries reached K. in 245 BC during Asoka's reign in India. Thereafter there were Hindu rulers until the Mogul invasion. Islam was introduced and a Muslim ruler is recorded in AD 1341. Akbar conquered K. in 1588 and it remained under Mogul control until 1739, when it was annexed by the Persian Nadir Shah. The Sikhs conquered the country in 1819, and in 1846, after the first Sikh war, it was assigned by treaty with the British to the Sikh ruler, Rajah Gulab Singh. The ruler of K. thereafter enjoyed Brit. support.

On the partition of India in 1947 it became incumbent upon the Maharaja, Sir Hari Singh, to determine whether to accede to India or to Pakistan—or, in theory, to remain independent. It is apparent that he found it difficult to make a decision, and while he hesitated K. was invaded by unruly tribesmen from the frontier, claiming to be safeguarding the rights of the Muslim majority, but also no doubt stimulated by the prospect of easy loot. The Maharaja, finding his troops

unable to withstand the incursion, promptly announced his accession to India and called for Indian military aid. This was immediately forthcoming. The Pakistan Gov. repudiated the accession as contrary to the wishes of the great Muslim majority in the country, and sent troops to prevent an Indian occupation. The consequent dispute has caused intense bitterness of feeling, which has persisted, between India and Pakistan. Repeated efforts by the U.N., which still continue, have been unable to resolve the deadlock.

In 1951 the Maharaja abdicated in favour of his son, but afterwards the State Assembly of Indian-occupied K. declared the state a rep. Later the same authority announced the integration of K. in the Union of India. The Pakistan Gov. has not recognised any of these actions, and has given its full support to the Azad K. Gov. which functions in the area occupied by Pakistani troops. Meanwhile the truce and the truce-line agreed upon under U.N. advice are being scrupulously observed.

**Kashmir Goat**, variety of the common goat (*Capra hircus*) of the ruminant family Bovidae. It occurs in Tibet, Bokhara, and Kirghiz, but attempts to introduce it into other countries have proved unsuccessful. It is a smallish goat, white, black, or brown in colour, with hanging ears, long horns, and long, straight, fine hair. The wool is used chiefly in the manu. of Cashmere shawls, which are very fine in texture, and have been valued at sev. hundreds of pounds.

**Kashmiri Red Deer**, see RED DEER.

**Kasimierz**, kings of Poland, see CASIMIR.

**Kasr-el-Kebir**, see ALCAZAR-KERIR.

**Kassa**, see KOSICE.

**Kassala**, tn of the Sudan, situated on a trib. of the Atbara, about 280 m. S. of Suakim. The railway to Sennar passes through K. Before the Mahdi's rising it held an important commercial position; it was taken by Italy in 1894, and given back to Egypt 3 years later. It is a trade centre for Eritrea; Amer. cotton is successfully grown here. The scene of an It. defeat by Brit. forces in the campaign which ended in the conquest of It. E. Africa in 1941. Pop. about 25,000.

**Kassel**, or Cassel, Ger. tn in the *Land of Hessen* (q.v.), on the Fulda (q.v.), 103 m. NE. by N. of Wiesbaden (q.v.). It was once the cap. of Hesse-K. (q.v.). The Huguenot (q.v.) settlement of Oberneustadt was incorporated with it in 1770. There is a famous art gallery; and at Wilhelmshöhe near by Napoleon III (q.v.) was imprisoned after the battle of Sedan. Rolling-stock, textiles, and optical and precision instruments are manu. Pop. 189,200.

In the Second World War K. was an important objective in the allied plan for crossing the Rhine (q.v.) and establishing a strong force on the far bank. The plan was to launch a main attack N. of the Ruhr (q.v.), supported by a strong secondary thrust from bridgeheads in the Frankfurt area, directly initially on K. to

complete the envelopment of the Ruhr. Following the capture of Marburg the armoured advance on K. was under way by 29 Mar. (1945). The crossing of the Rhine barrier was accomplished at fantastically small cost to the Allies. Gen. Eisenhower's (q.v.) next step was to envelop the Ruhr by converging thrusts from bridgeheads at Frankfurt and Wesel. In the course of the operations the Twenty-first Army Group and the Twelfth Army Group joined forces in the K.-Paderborn area, and the first allied airborne army were prepared to carry out an air drop in the K. area in order to seize the airfields there, and the Eder R. dam; but the rapidity with which the ground forces progressed rendered this airborne operation unnecessary. The encirclement of the Ruhr was completed by 1 April, after which Gen. Omar Bradley (q.v.) was instructed to launch an offensive with the central group of armies from the K. area, towards Leipzig. K. itself was cleared on 4 April, and the main allied advances to the E. began within the following week. Pop. 195,600. See WESTERN FRONT IN SECOND WORLD WAR.

**Kastamonu**: 1. Il of Asiatic Turkey, having on its N. the Black Sea. Area 19,750 sq. m.; pop. 394,000.

2. Tn, cap. of the il of the same name. It manu. copper ware, there being copper-mines near by. Pop. 13,000.

**Kästner**, Erich (1899- ), Ger. writer, b. Dresden. After contemplating teaching and banking as professions, he finally studied literature; living first by journalism, he was able to turn to writing by the income from his verse (*Herz auf Taille*, 1928; *Lärm im Spiegel*, 1929; *Ein Mann gibt Auskunft*, 1930). His satire is brilliant, and often extremely bitter. Among his novels, *Drei Männer im Schnee*, 1934 (Eng. trans. *Three Men in the Snow*, 1935), later filmed, was a great success. His satirical poems, *Lyrische Hausapotheke*, were pub. in Switzerland during the war, his books being banned in Germany during the Nazi regime. Post-war poems and essays were pub. under the title of *Die kleine Freiheit*, 1953; his play *Die Schule der Diktatoren*, 1956, is a burlesque on dictatorship. K. also wrote charming books for young people, which have become very famous, many of them being filmed and trans. into sov. languages: *Emil und die Detektive*, 1929, *Das fliegende Klassenzimmer*, 1932, and *Das doppelte Lottchen*, 1950.

**Kastoria**, tn of Greece in Macedonia, situated to the S. of Florina on the small lake of K. Formerly of great commercial importance, it still has a flourishing fur trade. Pop. 9500.

**Kastri**, Argolis and Corinthia, see HERMIONE.

**Kastri**, Phocis, see DELPHI.

**Kastro**, see MYTILINI.

**Katabolism**, name for the processes which result in the breakdown of chemical materials in the living organism, chief example of which is the oxidation of food for energy, as opposed to anabolism, which is the name for the building up of

protoplasm, etc., from less complex substances. The two processes considered together are known as metabolism (q.v.). See also CATALYSIS.

**Katanduanes**, see CATANDUANES.

**Katanga**, prov. of Belgian Congo, SE. part of the colony, having an area of 180,000 sq. m. It is one of the most important mining dists. in the world, with copper, gold, iron, tin, and uranium mines, and supplied 210,000 tons of copper in 1954-5. K. is very fertile, and cattle thrive on its uplands because there is no tsetse fly. Elisabethville is the cap.

**Kater, Henry** (1777-1835), physicist, b. Bristol; he entered the army in 1794, went to India with his regiment in 1799, and was of much assistance in the trigonometrical survey of India. In 1814 he retired on half-pay and devoted himself to scientific pursuits. His first important contribution to science was his proof of the superiority of the Cassegrainian to the Gregorian telescope; he carried on experiments for determining the length of a seconds pendulum, and invented the floating collimator. In 1814 he was decorated with the order of St Anne by Russia for his services in verifying the Russian standards of length, and in the same year was made a F.R.S.

**Kater's Pendulum**, see PENDULUM.

**Katha**, dist. of Upper Burma. Its chief riv. is the Irawadi, and its cap. is Katha. Gold, copper, iron, and lead are found, and rice, tea, sesamum, and tobacco are produced. Area 6994 sq. m.; pop. 290,000.

**Kathakali**, mimed ballet of Malabar, India, notable for the extensive use of *mudras*, or symbolic gestures, which constitute a complete dumb language. Muscular control, supplemented by elaborate facial make up, enables dancers to achieve the most remarkable facial movements and expressions, to which are added the hand movements, making it possible to tell a whole story with relatively few of the other movements involved in dance drama in other countries.

**Katharine the Great**, see CATHERINE II.

**Kathiawar**, peninsula of India, situated on the W. coast between the Gulfs of Cambay and Cutch. It consists of 280 states and estates, which in 1924, with the states of Cutch and Palanpur, were, as the W. Indian State Agency, placed directly under the gov. of India. In 1948, after the achievement of Indian independence, K. joined the first of the new unions—Saurashtra (q.v.). K. is noted for its important religious sites (particularly at Dwarka, Kalitana, Girnar, and Somnath). Area 37,894 sq. m.

**Kathode**, or **Cathode**, see ANODE and ELECTROLYSIS.

**Kations**, or **Cations**, see IONS.

**Katmai**, active volcano of the Alaska peninsula, 7500 ft high; erupted 6 June 1912, creating the Valley of Ten Thousand Smokes.

**Katmandu**, see KHATMANDU.

**Katō, Takaaki**, Viscount (1860-1926), Jap. statesman. He was educ. at the univ. of Tokyo, and in 1888 became private secretary to the minister of foreign

affairs. He was director of the banking bureau and of the taxation bureau, Finance Ministry, 1891-4. From this date till 1899 he was envoy extraordinary and minister plenipotentiary at the court of St James; minister of foreign affairs, 1900-1, and again in 1906; baron, 1911; foreign minister, 1914-15; viscount, 1916. In 1924 he became Prime Minister, and carried through manhood suffrage.

**Katowice**, 1. Prov. (*województwo*) of S. Poland, bordered on the S. by Czechoslovakia. The W. end of the prov. was, until 1945, part of Ger. Upper Silesia (q.v.), to which the whole of the ter. belonged until 1919. It is drained by the Vistula, Warta (qq.v.), and Kłodnica R. Coal, iron, zinc, and other metals are mined, and there is much heavy industry (steel, chemicals, textiles, glass). Area 3807 sq. m. In 1953 the prov. was called Stalinogród.

2. (Ger. *Kattowitz*) City of Poland, cap. of K. prov., 160 m. SW. by S. of Warsaw (q.v.). It is one of the chief industrial centres of Poland, and has coal, iron, steel, lead, zinc, oil, engineering, chemical, leather, distilling, porcelain, and printing industries. Pop. 200,000.

**Katrine, Loch**, lake of Scotland, situated in Stirlingshire and Perthshire, about 5 m. to the E. of Loch Lomond and 9½ m. W. of Callender. It is about 8 m. long, less than 1 m. wide, and discharges its water through Lochs Achray and Vennachar to Ft. Teith. It also supplies the city of Glasgow with water. It is situated among some of the most beautiful scenery in Scotland, in the heart of the Trossachs, with Ben Venue and Ben A'an on its bank. See ELLEN'S ISLE.

**Katsura, Tarō**, Prince (1847-1913), Jap. soldier and statesman. Military attaché at the Berlin embassy, 1875-8. He became vice-minister of war in 1884; and served with distinction in the campaign of 1894-5, receiving the title of viscount. After being minister of war, 1898-1901, he was Premier for 4 years. For his services he was raised to the rank of count in 1902, and marquess in 1905, when King Edward VII made him a K.C.M.G. Prince, 1911.

**Kattegat**, see CATTEGAT.

**Kattowitz**, see KATOWICE, 2.

**Kaub**, or **Caub**, Ger. tn in the *Land* of Rhineland-Palatinate, on the r. b. of the Rhine (q.v.), 22 m. WNW. of Mainz (q.v.). On an is. in the riv. at this point there is a 14th-17th-cent. fortress. The tn has a wine trade. Pop. 2500.

**Kaufbeuren**, Ger. tn in the *Land* of Bavaria (q.v.), on the Wertach, 47 m. WSW. of Munich (q.v.). It was once a free city of the empire. It has two fine Gothic churches, and has a glass and jewellery industry. Pop. 24,000.

**Kauffmann, Angelica** (1741-1807), Swiss artist and royal academician, b. Chur, in the Grisons. At the early age of 11 she was painting portraits of lt. nobilities. She visited Milan, Rome, Bologna, and Venice, and appeared in London in 1766, one of her first works being a portrait of Garrick. She was befriended by Sir

Joshua Reynolds and soon became famous as a painter of classic and mythological pictures and portraits. She is also known by engravings after her works by Bartolozzi and others. See lives by Giovanni de Rossi, 1810; F. A. Gerard, 1893; Lady Victoria Manners and G. C. Williamson, 1924.

W. F. Mansell

ANGELICA KAUFFMANN  
Self-portrait.

**Kauffmann, Nicholas**, see **MERCATOR, NICHOLAS**.

**Kaufman, George Simon** (1889-), Amer. playwright, b. Pittsburgh, Pennsylvania. Educ. at Pittsburgh High School, he went on to study law, but gave it up and worked as a surveyor, a commercial traveller, and a newspaper columnist before becoming a playwright. Most of his plays were written in collaboration with someone else, an exception being *The Buller and Egg Man*, 1925. With Marc Connelly he wrote *To the Ladies*, 1922, *Merton of the Movies*, 1922, and *Beggar on Horseback*, 1925; with Alexander Woolcott he wrote *The Channel Road*, 1929, and *The Dark Tower*, 1933; with Ring Lardner *June Moon*, 1929, a satire on song-writers; and with Moss Hart *You Can't Take It With You*, which won the Pulitzer prize in 1937, and *The Man Who Came to Dinner*, 1939.

**Kaufmann, Constantine Petrovich** (1818-1882), Russian general, b. near Ivangorod. He distinguished himself at Kars in 1855, and was appointed military governor of Turkestan in 1867, occupying Samarkand the following year. In 1873 he commanded the expedition against Khiva, and 2 years later conquered Khokand.

**Kaulbach, Wilhelm von** (1805-74), Ger. painter, b. Arolsen in Waldeck. He was a pupil of Cornelius at the Düsseldorf academy, followed his master to Munich

in 1825, and succeeded him as director of the academy there in 1849, an office which he continued to hold till his death. K. was an exponent of mural or monumental decoration, and also illustrated Shakespeare, Schiller, Goethe's *Faust*, and *Reineke Fuchs*. He showed theatrical imagination in the 'Destruction of Jerusalem' and the 'Battle of the Huns.' His ultimate work was a vast canvas, over 30 ft long, entitled the 'Sea Fight at Salamis,' painted at Munich. See lives by H. Müller, 1892, and F. von Ostini, 1906; also J. Durek-Kaulbach, *Erinnerungen an W. von Kaulbach und sein Haus* (3rd ed.), 1922.

His nephew, Friedrich August von K. (1850-1920), b. Munich, was a painter of historical scenes and portraits, and director of the Munich Academy.

**Kaunas** (formerly Russian Kovno), tn in Lithuania, on the Niemen, an economic and cultural centre of the rep. It has engineering, textile, and food industries, and is an important railway junction and a riv. port. There are many architectural monuments of the 14th-18th cents. Pop. (1956) 195,000 (c. 1914, 88,000; 1938, 108,000), before 1939 many of them Jews. K. has been known since the 13th cent., was contested by Lithuania and Teutonic Knights in the 14th cent., and finally became Lithuanian in 1404; it was the centre of a flourishing Lithuanian-Polish trade with Russia and W. Europe in the 15th-17th cents.; it became Russian in 1795, and a prov. cap. in 1842. It was occupied by the Germans in 1915-18 and 1941-4, and was the *de facto* cap. of independent Lithuania, 1918-40. A univ. was estab. in 1922, and abolished in 1951.

**Kaunitz, Wenzel Anton Dominik**, Count, from 1761 Prince of Kaunitz-Rietberg (1711-94), Austrian statesman and diplomat, b. Vienna. From 1741 to 1744 he was minister at Turin, and ambas. at the Fr. court from 1750 to 1753, forming an alliance between France and Austria. From 1753 to 1792 he was state-chancellor and chief minister, and in 1756 formed the coalition against Frederick the Great. See life by C. Kuntzel, 1923.

**Kauri**, or **Cowrie**, Pine, from New Zealand, is produced by *Agathis australis*. Other species of *Agathis* are found widely distributed in SE. Asia. The tree, which is often of great height and girth, produces a very fine softwood timber. In New Zealand only small areas of the originally large K. forests remain, the wood having been very much in demand for many purposes. See **FORESTRY** and **TIMBER**.

**Kavalla** (modern), see **CAVALLA**.

**Kavalla** (ancient), see **NEAPOLIS**.

**Kaveh**, legendary Persian blacksmith hero, whose sons had been slain to feed the serpents of the tyrant, Zahhak. He raised his leathern apron on a spear as a standard of rebellion and, the revolt succeeding, the apron became the standard of national liberty.

**Kaverin, River**, see **CAUVERY**.

**Kaverin** (real name Zh'berg), Veniamin Aleksandrovich (1902-), Russian writer

of Jewish origin, has written the stories and novels *Nine Tenths of Fate*, 1926, *The Russian*, 1928, *Artist Unknown*, 1931, *The Fulfillment of Desires*, 1935-6, *Two Captains*, 1940-5, *The Open Book*, 1950, and *Searchings and Hopes*, 1957. He consistently affirms the necessity for freedom of artistic creation.

**Kavieng**, see NEW IRELAND.

**Kavirondo**, dist. and native reserve of Kenya, N.E. of Lake Victoria, with a pop. density of more than 1000 per sq. m. Two distinct races dwell there, Nilotic and Bantu. The dist. is mostly fertile and well watered. The inhab. are an agric. people, but bad husbandry is accentuating the effects of natural erosion. Physically they are a fine people, courageous and good hunters. They practise witchcraft, are polygamous, and tend to ancestor worship. Marriage and other customs depend on whether the parties are of Nilotic or Bantu origin; for instance, premarital intercourse is permitted among the former, but among the Bantu a bride who is not a virgin is returned to her parents, the marriage price refunded, and a penalty paid. See G. Wagner, *The Bantu of the Kavirondo*, 1949.

**Kawartha Lakes**, Ontario, Canada; they extend from Lakefield to Cobocook, a distance of 70 m., and include Katchawanookna, Clear, Buckthorn, Chemong, Stoney, Lovesick, Pigeon, Cameron, Sturgeon, and Balsam lakes. The system is connected with the Trent Canal, running from Georgian Bay via the Severn R. to Lake Simcoe and thence to Trenton, a total distance of 240 m. The K. L.—the name means bright waters—are full of romantic charm, and are much favoured by anglers, campers, and holiday-makers.

**Kaweran**, tn in N. Is., New Zealand. Whakatane co., 35 m. N.E. of Rotorua. It is the centre of a newsprint production area and was not on the map until 1952 when it was selected as the site of the Tasman Pulp and Paper Co.'s newsprint plant, which was built in 2 years. Raw material is derived from 275,000 ac. of the Kaiangaroa Forest which was started in 1901 by prison labour. The company will obtain 23 million cu. ft. of logs annually for 25 years and natural regeneration will provide abundant material in perpetuity. Pop. 2729.

**Kawlun**, see KOWLOON.

**Kay** (or **Ke**, **Kel**, **Queux**, etc.), Sir, in Arthurian legend, the foster-brother of Arthur, who made him his seneschal. Surnamed 'the Rude' and 'the Boastful,' he is represented as treacherous, malicious, and bitter and sarcastic in speech. He figures in the *Brut*, *Perceval li Gallois*, *Golapros and Gawane* (pamphlet printed in 1508 by Chepman and Myllar), and *Gawain and Kay* (in the Dutch *Lancelot*). See T. Malory, *Morte d'Arthur*, 1485, and novel by E. P. Frankland, *The Bear of Britain*, 1914.

**Kay, John**, or **Kay of Bury** (fl. 1733-64), inventor, and a reed-maker for looms. In 1733 he took out a patent for his fly-shuttle, by which arrangement only one hand was required to throw the shuttle

backwards and forwards. He also invented the extended lathe and a card-making engine. See G. Guest, *History of the Cotton Manufacture*, 1823, and A. Barlow, *The History and Principles of Weaving by Hand*, 1878.

**Kay, John** (1742-1826), Scottish caricaturist, a member of the Society of Surgeon-Barbers (1771). In 1785 he opened a print-shop in Parliament Close, Edinburgh, and produced miniatures and sketches of local celebrities. These are chiefly of antiquarian interest, as a record of the social life of his times. See collection of his portraits by Paton, 1838, 1842, and 1877.

**Kay-Shuttleworth, Sir James Phillips** (1804-77), politician and educational administrator, b. Rochdale, Lancs. After studying medicine in Edinburgh he returned to Lancs to accept a post as senior physician at the recently created public dispensary. His work among various social classes in this industrial area enabled him to appreciate the problem of the social degradation of townspeople. He grasped the idea that education was the real remedy. Through it self-respect could be created, morals reformed, and knowledge acquired by the working class to guard them against dangerous opinions. Thus, after serving 5 years as an assistant poor-law commissioner during which time he learned the art of public administration, his energies were turned in 1839 to education. As first secretary to the committee of the Privy Council on Education he sought to promote a national system of education and teacher training. Denominational controversy thwarted these plans but he succeeded in creating a system of gov. school inspection, founded, with the help of E. Carlton Tufnell, the first training college for school teachers at Battersea (1839-40), and devised the pupil-teacher system of training elementary school teachers. Before his retirement on account of ill-health in 1849, when he was created a baronet, the role of the central gov. in education had become clear. It was to use parli. grants to stimulate, encourage, and maintain voluntary effort. At first a supporter of the Benthamite doctrine of greater central gov. control of education, he retreated in the face of opposition, leaving the initiative with the religious agencies. In semi-retirement he concerned himself with the treatment of delinquent boys, with the reconstruction of the N. public schools, with the design of an industrial training syllabus, and advised on the setting up of the Girls' Public Day School Trust. He wrote numerous papers on education, and his *Physiology, Pathology, and Treatment of Asphyxia* became a standard text-book. See A. V. Judges, 'James Kay-Shuttleworth, Pioneer of National Education,' in *Pioneers of English Education*, 1954.

**Kayah State**, see KARENHI.

**Kayak**, or **Kajac**, Eskimo term for a fishing-boat, common to all dists. from Greenland to Alaska, strictly only for that used by one man. It is a long, narrow-decked canoe, the light wood framework

being covered with sealakin, and weighs about 60 lb. An *umiak* (q.v.) is a larger type, capable of carrying heavy loads. See CANOE.

**Kaye, Danny** (real name Daniel Komin-ski) (1913- ), Amer. actor and comedian, b. Brooklyn, New York. He started on the stage in summer theatres; he toured in the act 'La Vie Parée'; and appeared in night clubs. In 1934 he toured the Orient. He appeared on Broadway in sev. shows, and he entered films in 1943 in *Up In Arms*; other films include *The Secret Life of Walter Mitty*, *Hans Christian Andersen*, *Knock on Wood*, *White Christmas*, and

*Kayseri*, tn in the fl of the same name in Asiatic Turkey, situated 160 m. SE. of Ankara. Pop. 81,127 (tn); 423,189 (fl).

**Kazakhs**, or **Kazaks**, name of the Turkic people now forming about half the pop. of the Kazakh S.S.R. (see KAZAKHSTAN). Their origin is obscure. The name Kazakh, which is not traceable before the 15th cent., means, according to Barthold, adventurer or revolutionary, and may have been first used to describe some elements who seceded from the Timurid empire. Before the revolution of 1917 the Russians called them Kirgiz or Kalsak-Kirgiz to prevent confusion with

G. Kristensen

*The Court Jester*. He formed his own production company in 1952. He also makes gramophone records.

**Kaye, Dr John**, see CAIUS, DR JOHN.

**Kaye-Smith, Sheila** (1887-1956), novelist, b. St Leonards-on-Sea, daughter of a clergyman. Educ. privately, she commenced writing at a very early age. In 1924 she married T. Penrose Fry, a rector at St Leonards, and in 1929 both were converted to Rom. Catholicism and settled in Sussex. *The Tramping Methodist*, 1908, her first novel, was followed in the next year by *Starbrace*, but her first real success was *Sussex Gorse*, 1916. Others were *Tamarisk Town*, 1919, *Green Apple Harvest*, 1920, *Joanna Godden*, 1921, *The End of the House of Alard*, 1923, *The George and the Crown*, 1925, *Shepherds in Sackcloth*, 1930, *Ember Lane*, 1940, and *The Lardners and the Laurehwoods*, 1948. *Joanna Godden Married*, 1926, is a collection of short stories. She also pub. 3 vols. of verse (*Willow's Forge*, 1914, *Saints in Sussex*, 1923, and *Songs Late and Early*, 1931), and with G. B. Stern wrote 2 studies of Jane Austen, 1943, 1949. *Three Ways Home*, 1937, is an autobiography.

the Cossacks of Russia, the real Kirgiz being called Kara-Kirgiz. During the 17th cent. the K. were loosely organized in 3 hordes or *zhuz* (hundreds). They came into contact with the Russians during the 18th cent. and their ter. was gradually annexed and colonised. Up to the revolution it was administered as the Stepnoy Kray or Steppe Region. The K. were monadic before the revolution, but have now been largely stabilised. They number about 2 million.

**Kazakhstan**, Kazakh Autonomous Socialist Soviet Rep., was created in 1920, to include that part of S. Siberia inhabited by the Kazakhs. K., comprising the govs. of Uralsk, Turgay, Akmolinsk, and Semipalatinsk, was made a union rep. in 1936. To this rep. were also added the parts of the old governorship of Turkestan inhabited mostly by Kazakhs. It consists of the oblasts (provs.) N., S. E., and W. K., Akmolinsk, Aktyubinsk, Alma-Ata, Guryev, Dzhambul, Karaganda, Kzyl-Ordu, Kokchetav, Kustanay, Pavlodar, Semipalatinsk, and Taldy-Kurgan. The area of the K. S.S.R. is 1,056,000 sq. m., and the pop. is 8,500,000 according to the 1955 election returns.

Situated far from the oceans, K. has a dry extreme continental climate. There are frequent dust storms, and in summer rainfall is slight. Near the Irtysh and other rvs. the grass vegetation is abundant; to the S. the characteristic brown soil zone supports a sparse steppe vegetation, water being scarce. On the banks of the salt lakes and streams are thickets of rushes, which serve to break the monotony of the landscape. The valleys, however, contain freshwater springs, and these are the spots chosen by the Kazakh herdsmen as their winter quarters. The steppe on each side of the Sary Su, which flows from the Kazakh upland to the Syr-Darya, but is now overgrown, is the habitat of wolves, badgers, and foxes, which are hunted by the Kazakhs. For cents the steppe and dry steppe lands of K. have been the home of nomadic herdsmen, but agriculture is the chief industry, state farms for increasing the grain supply occupying nearly 5,000,000 ac. before the Second World War, but to-day covering at least 10,000,000 ac. Cents ago settled life had developed near the rvs. along the borders of the mts in the SE., and irrigation works were constructed. The new Kyzyl-Orda dam in the Syr-Darya is intended for water conservation for 100,000 ac. of rice plantations and, in time, to increase the irrigated area in the Kyzyl-Orda region to 375,000 ac. Across the country were caravan trade routes from China, India, and Iraq. The tsarist settlers appropriated the more fertile lands, so that the majority of Kazakhs were forced to seek a precarious living as herdsmen. But in the last few decades great changes have taken place: modern farming technique has been adopted, and there are tractors and combine harvesters on the farms. Minerals include coal, iron ore, zinc, lead, oil, silver (undeveloped), and copper, a valuable deposit of which was found in 1928 near Lake Balkhash. The industrial development is in the direction of using the resources of oil, coal, and non-ferrous metals on the one hand, and of using the products of agriculture, especially cotton, on the other. The Karaganda coal basin is the third largest in Russia: copper refining and chemicals are amongst other industries.

This industrial development is reflected in the expansion of the railway communications. Before the First World War there was only one railway for the whole region from Orenburg to Tashkent. When, however, it was decided that the industries of the Asiatic Russian reps. were to be planned in relation to those of W. Siberia and the Urals, it was essential to create new means of transport, and altogether over 4000 m. of new railroad have been constructed. A railway crosses the rep. from NW. to SE., and another in the E. connects with it and the Trans-Siberian line. Thus Novosibirsk is linked with Tashkent and Alma-Ata; Petropavlovsk, by branch line, with Karaganda; and Dzhezkazgan, by another branch line, with Semipalatinsk. The chief tns are Alma-Ata, the cap. (formerly Verny),

which has a univ. (pop. 320,000); Karaganda, a new tn (380,000); Dzhambul (130,000); Leninogorsk (120,000); Petropavlovsk (120,000); Semipalatinsk (120,000); Chirchikent (120,000); Akmolinsk (100,000).

Kazalinsk, tn in the Russian region of Syr-Darya, in the Kazakh S.S.R., on the Syr-Darya R., which floods the tn in spring. It is situated at the junction of the prin. trade routes of central Asia, and carries on an active trade with the surrounding dist. Pop. 20,000.

Kazan, Elias (1909- ), Amer. producer and director of plays and films, b. Constantinople; educ. Williams College and Yale Dramatic School. He worked with the Group Theatre and acted on the stage, 1935-41, his plays including *Waiting for Lefty*, *Golden Boy* (in which he made his first London appearance in 1938), and *The Gentle People*. He made his acting debut in films in *Blues in the Night*, 1941. The stage plays he has directed include *The Skin of Our Teeth*, *All My Sons*, *A Streetcar Named Desire*, *Death of a Salesman*, *Camino Real*, *Tea and Sympathy*, and *Cat on a Hot Tin Roof*. He has 4 times won an award for the best stage director of the year. He became a film director in 1944, and won the Academy Award in 1947 for *Gentleman's Agreement*. Other films include *A Tree Grows in Brooklyn*, *Boomerang*, *Panic in the Streets*, *Pinky*, *A Streetcar Named Desire*, *Viva Zapata*, *Man on a Tightrope*, *On the Waterfront* (Academy Award, 1954), *East of Eden*, *A Face in the Crowd*, *Baby Doll*.

Kazan', city on the Volga, cap. and economic centre of the Tatar Autonomous Rep. (q.v.), one of the main centres of Russian and the centre of Tatar culture. It has large engineering (aircraft, agric. and transportation machinery, typewriters, shipyards near by), chemical (explosives, synthetic rubber, soap, photographic films), leather, fur (half the Russian output of furs), and other industries. It is an important transportation centre (riv. port, airport, major railway junction near by). K. has a branch of the U.S.S.R. Academy of Sciences (1945), a univ. (1804), and has had a theatre since the 18th cent. There are many architectural monuments of the 16th-19th cents. K. was founded by Tatars in the mid 13th cent., 30 m. NE. of its present site (transferred late 14th cent.); it was cap. of the independent K. Khanate in 1445, and was conquered and destroyed by Ivan the Terrible in 1552; it became cap. of the Volga region in 1708, was seized and burnt by Pugachëv in 1774, and became prov. cap. in 1781. Peter the Great built his Caspian fleet for the Persian campaign here: light and food industries developed during the 18th cent., heavy industry during the 1930's. The first Russian prov. lay secondary school was founded in K. in 1758, and the first prov. newspaper in 1811; the Theological Academy (founded as Slavonic-Lat. Academy in 1723) was abolished after 1917. Since 1917 K. has lost much of its former status as the intellectual cap.

of E. Russia. Pop. (1956) 569,000 (third on the Volga and sixteenth in Russia; 1917, 193,000; 1920, 146,000; 1926, 179,000; 1939, 402,000), Russians and Tatars.

**Kazbek**, mt in the Caucasus, one of the highest in the main range (16,546 ft).

**Kaz-Dagl**, see **IDA**.

**Kazembe**, see **CAZEMBE**.

**Kazinczy, Ferenc** (1758-1831), Hungarian linguistic and literary reformer, b. Er-Somlyén. He started the first Magyar literary magazine in 1788. Imprisoned from 1794 to 1801 for his part in the Martinovics conspiracy. He gradually built up a circle of writers prepared to accept his guidance in form and language and follow the models of Ger. classicism.

**Kea** (*Nesiotis notabilis*), New Zealand species of the Loridae, or Brush-tongued Parrots, the Maori name, K., being imitative of the bird's cry. Formerly living on fruit and insect grubs, during a time of scarcity it took to haunting the sheep stations and feeding on the offal of sheep killed for consumption. It soon showed a preference for the fat surrounding the kidneys and is credited with being a bird of prey, attacking living sheep on the runs, and tearing off the wool and flesh of the loins to reach the kidneys.

**Kea**, see **CANG**.

**Kea, Keos**, see **CEOS**.

**Keable, Robert** (1827-1927), novelist, b. Beds, son of a minister. Educ. at Whitgift School and Cambridge, he was ordained in 1811 and went as a missionary to Basutoland. During the First World War he was chaplain with the S. African forces; and as a result of his war experiences, of which he wrote in *Standing By*, 1919, he decided to give up the Church. *Simon Called Peter*, 1921, a novel which told of his loss of faith, was a tremendous success and made him rich and famous; its sequel, *Recompense*, 1925, was less successful. Going to the S. Seas in search of health he wrote *Tahiti: Isle of Dreams*, 1926, and *The Great Gaithean*, 1929.

**Keady**, mrtkt tn in co. Armagh, N. Ireland, 7 m. SW. of Armagh, with linen carpet manuf. Pop. 1640.

**Kealakekua**, bay in Hawaii, one of the Sandwich Is. (q.v.). It was here that their discoverer, Capt. Cook, was murdered in 1779.

**Kean, Charles John** (1811-68), actor, the second son of Edmund K. (q.v.), appeared at the age of 16 as Young Norval in Home's *Douglas* at Drury Lane. The favourable impression he made secured him an engagement at the Haymarket, where he was successful as Hamlet. Among his other triumphs were Richard III, Sir Giles Overreach, and Louis XI. He married, in 1842, Ellen Tree. He did much to improve stage scenery and *décor*. See life by J. W. Cole, 1859.

**Kean, Edmund** (1789-1833), actor, went on the stage as a child, at the age of 12 playing Prince Arthur in *King John*, with Kemble and Mrs Siddons. In 1814 he won his spurs at Drury Lane with a magnificent performance of Shylock, and the reputation he then acquired was vastly

increased by his Richard III and Hamlet. He had his failures, but in the annals of the Eng. stage he was unrivalled in tragic roles. Owing to drunkenness and personal extravagance he fell on evil times in his last years. There are biographies by Barry Cornwall, 1835, and F. W. Hawkins, 1869.

**Keane, John**, 1st Baron Keane (1781-1844), Eng. general, entered the army at the age of 12. In 1799 he became captain, serving sev. years in the Mediterranean, and also in Spain under Wellington, being made colonel in 1812, major-general in 1814, and general in 1815. From 1823 to 1830 he was commander of the forces in Jamaica. In 1839 he performed his most famous exploit, the capture of Ghazni, for which he was raised to the peerage. He was not so much a great as a fortunate soldier.

**Kearley, Sir Hudson Ewbank**, see **DEVONPORT, 1ST VISCOUNT**.

**Kearny**, manufacturing tn in Hudson co., New Jersey, U.S.A. Bridges spanning the Passaic connect it with Newark. It has shipyards and dry docks (greatly expanded in 1941), and manufs. tinoleum, aluminium ware, chemicals, batteries, electrical equipment, paints, brushes, varnish, wallboard, drugs, cosmetics, plastics, tools, and clothing; there is also gold and platinum refining. It includes industrial and residential Arlington. Pop. 40,000.

**Kearsley, or Kersley**, tn of Lanes, England, 3 m. SE. of Bolton, with cotton mills and paper works. Pop. 10,675.

**Kearton, Cherry** (1871-1940), photographer and traveller, b. Thwaite-in-Swaledale, Yorks, younger brother of Richard K. (see below). He was a pioneer of animal photography, and of ciné films of big game, and the first to illustrate books on natural hist. entirely by photographs. He illustrated many books by his brother Richard, and himself wrote numerous books on animals and on his travels, typified by *In the Land of the Lion*, 1930. A collected vol., *Cherry Kearton's Travels*, appeared in 1941.

**Kearton, Richard** (1862-1928), field naturalist and author, b. Thwaite-in-Swaledale, Yorks, son of a yeoman farmer and himself a yeoman farmer. He wrote numerous books on birds, many of them illustrated. Among the best known are *British Birds' Nests*, 1895, *Birds' Nests, Eggs, and Egg-collecting*, 1896, *With Nature and a Camera*, 1897, *Wild Life at Home*, 1899, *Our Rarer British Breeding Birds*, 1900, *Wonders of Wild Nature*, 1915, *Wild Bird Adventures*, 1923, and *A Naturalist's Pilgrimage*, 1926.

**Keaton, Buster** (1896-1957), Amer. actor, b. Pickway, Kansas. He began in vaudeville as a baby with his parents in an act called *The Three Keatons*. His career on the screen started with roles in support of Riscoe Arbuckle (Fatty). K. became a star first in short, then in feature, films. He made many silent features and also appeared in sound films. He was famous for his unsmiling 'deadpan' expression. A film story of his life,

*The Buster Keaton Story*, appeared in 1957.

**Keats, John** (1795-1821), poet, b. London, son of a livery-stable keeper. Educ. at Enfield, he was an orphan at the age of 15. He was intended to be a surgeon, and in 1816 was a dresser at Guy's Hospital, but soon he abandoned any intention of pursuing this profession. He made the acquaintance of Leigh Hunt, and began to publish verse in the latter's paper, *The Examiner*. Shelley, who greatly admired him, assisted him to bring out in 1817 a vol. of *Poems*, which attracted no attention among the general public. Undismayed by failure, K. began to write

N.P.G.

JOHN KEATS

The painting by William Hilton, after a miniature by Joseph Severn.

*Endymion*, which appeared in 1818, but did not at once win that chorus of praise with which it has since been rewarded. Indeed K. was bitterly attacked by Lockhart in *Blackwood's*, and Croker in the *Quarterly*, but after the first shock his confidence returned, and he was able to say: 'I think I shall be among the English poets after my death,' than which no self-criticism was ever more true. For K. poetry was the one and only calling, and indeed the clue to his whole artistic career is to be found in his words (written from Carisbrooke on 18 April 1817, before his fatal illness declared itself): 'I find I cannot exist without poetry—without eternal poetry—half the day will not do. . . . It was this devotion of his that helped him to triumph over difficult circumstance and discouragement. His distracting love for Fanny Brawne, whom he first met in 1818, conduced by its intensity to the undermining of his health, which

was already broken. Consumption declared itself in Feb. 1820; he was ordered to a warmer climate, and left for Italy in Sept. 1820, but d. in Rome on 23 Feb. 1821. The traditional view of K. as a moral weakling, who was killed by critical abuse of *Endymion*, is utterly ill-founded. The real K. was no decadent; rather was he courageous and even pugnacious. His letters to Fanny Brawne, with their hectic bursts of passion, may in some measure be held to justify the legendary conception of him; but they were written at a time of great anxiety and fast-ebbing health; and indeed other letters of the same period to his brother in America and to various friends meanwhile give evidence of plenty of grit in his character.

His other works include *Hyperion*, 1818-19, *The Eve of St Agnes*, 1819, *La Belle Dame sans Merci*, 1819, and *Lamia*, 1820. In *Endymion* K. was trying his prentice hand; it is full of crudities both of idea and style. In *Hyperion* he has mastered his instrument, and in its best passages his music and thought ring true and reveal the self-discipline which, in the interim, he had so rapidly acquired. In *Endymion*, there is every trick of egregious fancy and the 'ornamental art of rhyme is employed in its extravagance along with the real and imaginative faculty of the mind'; *Hyperion*, on the other hand, contains some of the greatest poetry in the language. *The Eve of St Mark*, which he left unfinished at his death, is very different, yet is as authentic in mode as *Hyperion*. It revealed the pictorial element which is perhaps most characteristic in all his shorter poems, particularly in *Lamia*, and has been well described as 'pre-Raphaelitism in a nut-shell.' In 1817 K. took up the study of Shakespeare's *Sonnets* and made a study of Shakespeare on the stage; but he was not the type of man to make a more formal and exemplary critic and reviewer, and one is impelled in reading his reviews to speculate rather about his future as a dramatic poet himself had he lived. K. had as much philosophy in him as perhaps even Shelley, but he was too fine an artist to let his philosophy dominate his muse. In a word, the poetry of K. is great in intellect as well as fantasy and his early death was one of the irreparable calamities of literature. His odes are not excelled by those of any other writer, those 'On a Grecian Urn,' 'To a Nightingale,' 'To Autumn,' and 'On Melancholy' being among the classic gems of Eng. literature.

From Dec. 1818 to 1820 K. lived in Wentworth Place, Hampstead. Wentworth Place in K.'s day comprised 2 houses, one shared by K. and Charles Armitage Brown, the other occupied by Charles Wentworth Dilke. Structural alterations were carried out and the building was opened in 1931 by Lord Crewe as K. House, comprising a K. Museum and a branch lending library by way of memorial to the poet.

Collected eds. of K.'s poetical works have been ed. by H. B. Forman, 1883, E. de Selincourt, 1905, Sir S. Colvin, 1915,

J. Middleton Murry, 1930, and H. W. Garrod, 1939 (the definitive ed.). His *Letters* were ed. by R. M. Milnes with life, 1848, Sir S. Colvin, 1891, and M. B. Forman, 1931 (the definitive ed.). See lives by E. Dowden, 1886; Sir S. Colvin, 1887; K. Bridges, 1895; Amy Lowell, 1925; H. W. Garrod, 1926; B. I. Evans, 1934; D. Hewlett (*Adonais*), 1937; B. Askwith, 1941. Also D. L. Baldwin and others, *A Concordance to the Poems of John Keats*, 1917; H. I. A. Fausset, *Keats: a Study in Development*, 1922; J. Middleton Murry, *Keats and Shakespeare*, 1925; M. R. Ridley, *Keats's Craftsmanship: a Study in Poetic Development*, 1934; Lord Gorell, *John Keats, the Principle of Beauty*, 1948.

Kebble, John (1792-1866), Eng. cleric, won double first-class honours, when, in 1811, he graduated from Corpus Christi College, Oxford; fellow and tutor of Oriel from 1811 to 1823; he was prof. of poetry in Oxford from 1831 to 1841; and in 1836 he accepted the country vicarage of Hursley, Hants, where he stayed till his death. In disposition K. was shy and unassuming, and, considering his talents, strangely unambitious. His friends have left generous tributes to his winning personality and his unsparing devotion to his duties. A Tory and cavalier in politics, he was, according to Newman, the 'true and primary author' of the Oxford movement in the Eng. Church. It grew out of his famous sermon on 'National Apostasy', 1833, the High Church sympathies of which reappear in his contributions to the celebrated *Tracts for the Times*, in his standard ed. of Hooker's works, 1836, and in all his sermons and poems. He is popularly known for his book of poems, *The Christian Year*, 1827. See lives by J. C. Shairp, 1866; Sir J. T. Coleridge, 1869; W. Lock, 1892, with bibliography; E. F. L. Wood (Lord Halifax), 1909.

Kebble College, Oxford, founded in 1868 as a memorial to John Keble, a leader of the Oxford movement and formerly prof. of poetry in the univ. It obtained full status, enjoying equal privileges with other colleges of the univ., in 1952. Its buildings, including the fine chapel, by Wm Butterfield, are of brick and stone in neo-Gothic style.

Kecskemét, tn of central Hungary, cap. of the co. of Bács-Kiskun, 65 m. SSE. of Budapest (q.v.). It has a Calvinist school of law, a 17th-cent. Calvinist church, and an 18th-cent. baroque Catholic church. The tn is the centre of a rich dist. of the Alföld (q.v.) and is famous for its fruit. Agric. machinery is manuf., and there is distilling (apricot brandy). Pop. 64,000.

Ked, Sheep, see SHEEP LOUSE.

Kedah, state of the Federation of Malaya prior to the formation of the Malayan Union after the Second World War (which was replaced by the present Federation of Malaya on 1 Feb. 1948), classed as an Unfederated Malay State in treaty relations with Great Britain. It is bordered by the Siamese provs. of Songkhla and Patani, and by Perak (q.v.), and extends along the sea coast from the R. Sanglang,

its boundary with Perlis (q.v.), to the Muda R., its boundary with Prov. Wellesley. The state includes the Is. of Langkawi, and a number of adjoining is., of which Pulau Dayang Bunting is the largest. Its area, including is., is 3660 sq. m. The highest peaks of the mainland are Gunung Binting (6100 ft), K. Peak (or Gunung Jeral) (3980 ft), and Bukit Perak (2823 ft). The S. and central area consists mainly of undulating land broken up by ranges of high hills; this area is principally occupied by large rubber plantations. The N. and coastal belt contains the best rice-growing area in the Federation of Malaya. The E. part along the Patani border is still largely undeveloped; its ranges of hills consist of granite, quartzite, and shales. The cap. of K. is Alor Star. Characteristic of the climate, as elsewhere in the Malay peninsula, are uniform temp., high humidity, and copious rainfall, except that in K. there is a well-defined dry season from mid Dec. to mid Mar. Little is known of the hist. of K. before the 15th cent., though there are references to a country which is identified with K. in the works of Arab voyagers of the 9th cent. AD, and in the Chinese chronicles of the T'ang dynasty. It was, however, always known to abound in tin, and it was also known that its people were Buddhist. At the end of the 15th cent. the ruler of K. was converted to Islam. The Portuguese Barbosa, in a MS. of 1516, described K. as a place in the kingdom of Siam, to which many ships resorted for trade in all sorts of merchandise; but Siamese influence did not save K. from Portuguese attacks in 1611, and in 1619 the Achinese carried its ruler into captivity. There is ample evidence of 17th-cent. Eng. trade with K., by both private merchants, and by the E. India Co.; but later, in 1683, the Dutch, who had obtained a concession in 1641, forced the Eng. company to concentrate on India. In the 18th cent. K. came under the influence of the Bugis, who were then dominant in Selangor (q.v.), and it was to secure assistance against them that the sultan of K., in 1771, approached Francis Light who, in 1786, concluded an agreement 'with the King of Quedah for the cession of Prince of Wales Island.' Penang was occupied by Capt. Light, and the Brit. flag hoisted there on 12 Aug. 1786, but a few years later the agreement was replaced by a treaty (1791) by which the K. Gov. was to receive an ann. payment from the E. India Co. for the lease of the is. In 1821 the Siamese invaded K., and divided it into 4 parts, Perlis, Setul, Kubang Pasu, and K., putting each under a separate ruler. In 1843 the sultan of K., who had lived in retreat in Malacca, was allowed to return to Alor Star and resume the rulership of K. Setul, Perlis, and Kubang Pasu, however, remained under their separate rulers, who were made independent of K. Later Siam allowed Kubang Pasu, which is a thinly populated dist. on the N. border of K., again to become a part of K. Setul is now a part of Siam. Perlis is independent of the sultan

of K. In 1909 under a treaty with Siam the suzerainty of K. was transferred from Siam to Great Britain. In 1923, by a treaty between K. and Great Britain, the K. Gov. agreed to continue to be under Brit. protection, and also to accept a Brit. adviser. Padi and rubber are the chief agric. products of K., and the areas under these crops in 1938 were 257,890 ac. (about 400 sq. m.) and 302,600 ac. (about 473 sq. m.) respectively. Other crops of commercial importance are coco-nuts, arecanuts, tapioca, bananas, and other fruit of various kinds. Tobacco, coffee, chillies, ground-nuts, sago, sweet potatoes, and kapok are fairly widely, though sporadically, planted, and are of some economic importance locally. The railway connecting Malaya with Siam passes through K. Pop. (1955) 682,949 (Malays and other Malaysians, 458,941; Chinese, 141,945; Indians and Pakistanis, 68,577; Siamese, Europeans, and others, 13,486).

**Kedgerree**, Indian dish of rice, boiled with onions, eggs, pulse, and butter. In European cookery it is a breakfast dish of cooked fish, usually finnan haddock, boiled rice, and hard-boiled egg.

**Kedleston**, Marquess of, *see* CURZON.

**Kedron**, or Kidron, valley lying E. of Jerusalem, down which the torrent-bed of the brook K. runs towards the Dead Sea; near it is the garden of Gethsemane. It was crossed by Christ on His way there and by David in his flight from Absalom.

**Keel** (botany), *see* CARINA.

**Keeler**, James Edward (1857-1900), Amer. astronomer, *b.* La Salle, Illinois. In 1890, when he was working in the Lick Observatory, he showed by means of photography that a large percentage of the small nebulae of the heavens are spiral, and measured the line-of-sight velocities of some bright line nebulae. Five years later, when he was director of the Allegheny Observatory, he verified by spectroscopic investigations the theory already advanced that Saturn's rings consisted of 'discrete particles of unknown minuteness.' His *Spectroscopic Observations of Nebulae* was pub. in 1894.

**Keeley**, Mary Ann, née Goward (1806-1899), actress. She left a lasting impression on all who saw her spirited impersonation of Jack Sheppard in a play founded on Almsworth's novel of that name. The hero, however, was a criminal, and the performance of the piece was accordingly forbidden. In 1829 she married the comedian Robert K. (1793-1869). Two of her finest roles were Nydia in *The Last Days of Pompeii* and Smilke in *Nicholas Nickleby*.

**Keeling**, or Cocos, Islands, group of 23 small coral is. in the Indian Ocean, 12° 5' S. and 96° 53' E. Discovered by Capt. Keeling in 1609, they came under Brit. protection in 1856, and since 1886 have been annexed to the Straits Settlements. Formerly owned by one Alexander Hare, who lived with some 200 slaves given to him by the rajah of Bandjer. Hare left in 1825, the next possessor being John Clunies-Ross, whose family has ruled the is. since that time. They

abound in coco-nut palms, and enjoy an equable, invigorating climate. Ferocious land-crabs are numerous. In the First World War the Ger. raider *Emden* destroyed the wireless station of the is., and it was off the coast of the is. that the *Emden* was destroyed. The is. were a Brit. bomber base in the Second World War, and were transferred to Australia on 23 Nov. 1955. Pop. about 1000.

**Keene**, Charles Samuel (1823-91), artist, *b.* Hornsey, at the age of 19 was apprenticed to a firm of wood-engravers. He soon began to indulge his artistic tastes, and illustrated *Robinson Crusoe* and other works. After contributions to the *Illustrated London News* his drawings began to appear in *Punch*, 1851, the staff of which he joined after 9 years' steady work, being recognised as a worthy successor of John Leech. The literary fun of his *Punch* drawings was largely supplied by his friend Joseph Crawhall, but as a black-and-white artist he had no rival. The beauty of his studies as serious works of art was rightly appraised by such fastidious critics as Degas and Whistler (q.v.). He produced also some excellent etchings and a few water-colours. There are biographies by G. S. Layard, 1892, and D. Hudson, 1947.

**Keene**, city on the Ashuelot R., 40 m. W. of Manchester, and the co. seat of Cheshire co., New Hampshire, U.S.A. K., which is situated on a level expanse guarded by high hills, manufactures boots and shoes, chairs, textiles, machinery, tools, and has railway workshops. Pop. 15,630.

**Keeper of the Great Seal**, officer of state who holds the great seal, i.e. the lord high chancellor (q.v.), formerly called the lord keeper. The delivery of the great seal into the hands of the chancellor confers the chancellorship upon him (*see* SEAL). On a demise of the Crown, when a new great seal must be made, the old seal belongs to the chancellor, though it is first theoretically broken or 'damasked' by a light blow with a hammer. *See* Lord Campbell, *Lives of the Chancellors*, 1845-7.

**Keeper of the Rolls** (*Custos Rotulorum*), in England a justice of the peace to whose custody are committed the records or rolls of the co. sessions. It is the practice to appoint as K. of the R. the lord-lieutenant of the co.

**Keeshond**, or Dutch Barge Dog, medium-sized, sturdily built, with erect ears and curled tail. It has a long top coat and short, very thick under-coat, grey in colour, with darker shading forming 'spectacles' round the eyes. Handsome, intelligent, and quiet, the breed is becoming increasingly popular; though generally regarded as a new arrival in Britain. It is in fact identical with the Wolf Spitz or large Pomeranian, known in that country for over 150 years.

**Keewatin** (N. wind), former dist. of NW. Canada, now absorbed in the provs. of Manitoba, Ontario, and the NW. Terrs.

**Kefauver**, Estes (1903- ), U.S. politician, *b.* Madisonville, Tennessee, and graduated from the univ. of Tennessee,

1924, Yale Univ., 1927 (LL.B.). He was admitted to the Tennessee Bar in 1926, and practised law in Chattanooga. K. was elected as a Democrat to the U.S. House of Representatives in 1939, and served there until elected to the Senate in 1949. In 1950 and 1951 K.'s activities as chairman of the Senate crime investigating committee received nation-wide publicity, largely because the hearings were televised. His book concerning the findings of this investigation, *Crime in America*, appeared in 1951. He was among the Democratic aspirants for the presidential nomination in 1952 and 1956, but was defeated on both occasions by Adlai E. Stevenson (q.v.). In 1956 K. was nominated for the vice-presidency with Stevenson but the Democrats were unsuccessful in gaining the presidency.

**Keflavik**, tn and fishing port in Iceland, on the S. coast of Faxaflói, 32 m. S. of Reykjavik by road. K. airport is the largest airport in Iceland and one of the largest in the world. The airport is also a N.A.T.O. military base manned by U.S. forces. Pop. 3452.

**Kehl**, Ger. tn in the *Land* of Baden-Württemberg (q.v.), on the r. b. of the Rhine (q.v.), opposite Strasbourg. As a vil., in the closing years of the 18th cent., it was made famous by the exploits of Desaix de Veygoux and Gouvion-St-Cyr (qq.v.). During the Second World War it was taken by the Allies on 15 April 1945, its capture clearing the way for bridging to be started at Strasbourg. Pop. 12,000. See Stendhal, *Memoirs of Marshal Saint-Cyr*.

**Kei Islands**, see **KAI**.

**Keighley**, municipal bor. of Yorks (W. Riding), England, near the confluence of the R.s. Worth and Aire, 9 m. NW. of Bradford, producing woollen and worsted goods, textile machinery, and general engineering products. Pop. 56,600.

**Keijo**, see **SEOUL**.

**Keimaneigh**, Pass of (the deer's pass), highest point on the main road from Cork to Glengariff, in a narrow, rock-bound gorge.

**Keir**, Sir David Lindsay (1895- ), Scottish constitutional historian. Educ. at Glasgow Univ. and New College, Oxford, he became a fellow of Univ. College in 1921, was univ. lecturer in Eng. constitutional hist. from 1931 until his appointment in 1939 as president and vice-chancellor of Queen's Univ., Belfast. In 1949 he became master of Balliol College, Oxford. He was knighted in 1946. Pubs.: *Cases in Constitutional Law* (with F. H. Lawson), 1928, and *Constitutional History of Modern Britain*, 1938.

**Keir Hardie**, James, see **HARDIE**.

**Keiser**, Reinhard (1874-1739), Ger. composer, son of an organist at Weissenfels, who first taught him, and afterwards a pupil at the St Thomas School at Leipzig. After a court appointment at Brunswick he settled about 1796 at Hamburg, where there was the only opera estab. in Germany not attached to a court. There he produced most of the very large number of operas he wrote (probably well over

100), and Handel was associated with him there as a very young man in 1703-6 and was no doubt influenced by him up to a point. K.'s operas were sung in a mixture of Italian and German, and the music derived from the It. school. K. also wrote oratorios. See H. Leichtentritt, *Reinhard Keiser in seinen Opern*, 1901, and A. Schering, *Geschichte des Oratoriums*, 1911.

**Keith**, Sir Arthur (1866-1955), physiologist and anthropologist; b. Old Machar, Aberdeen, son of John K. Educ. univ. of Aberdeen and Leipzig; Univ. College, London. President, Royal Anthropological Institute, 1912-14; Fullerian prof. of physiology, Royal Institution, 1917-23; secretary, Royal Institution, 1922-6; president, Brit. Association, 1927. Pubs.: *Introduction to the Study of Anthropoid Apes*, 1896, *Embryology and Morphology*, 1901, *Ancient Types of Man*, 1911, *The Human Body*, 1912, *Antiquity of Man*, 1915, *Menders of the Maimed*, 1919, *Engines of the Human Body*, 1919, *Nationality and Race*, 1920, *Religion of a Darwinist*, 1925, *Concerning Man's Origin*, 1927. Ed. Hughes's *Practical Anatomy*, 1902, and helped to edit Treves's *Surgical and Applied Anatomy*. In 1925 K. pub. the second ed. of his *Antiquity of Man*, since which year there has been an intensive search for the remains of fossil man. In 1931 he pub. *New Discoveries relating to the Antiquity of Man*, a work which examined the discoveries of the past 5 years. Other works include *Darwinism and its Critics*, 1935, *Stone Age of Mount Carmel Human Fossil Remains* (with T. D. McCoun, 1939), *New Theory of Human Evolution*, 1948, *Autobiography*, 1950.

**Keith**, Arthur Berriedale (1879-1944), Sanskritist and constitutional lawyer, b. Dunbar; educ. at Royal High School, Edinburgh, Edinburgh Univ., and Balliol College, Oxford. In 1907-8 he was deputy Boden prof. of Sanskrit at Oxford, and in 1914 became regius prof. of Sanskrit and comparative philology at Edinburgh, which chair he held for 30 years. He was a writer of great industry and erudition in two widely different fields of study: Indian studies and constitutional law. He ed. the catalogues of the Sanskrit and Prakrit MSS. in the Bodleian Library and the Indian Institute Library, at Oxford (4 vols.), 1904-11, and of the India Office Library (vol. ii), 1935. He also ed. sev. Sanskrit texts and pub. *Classical Sanskrit Literature*, 1923 (2nd ed., 1927), *Buddhist Philosophy*, 1923, *History of Sanskrit Literature*, 1928, and other important works. In constitutional law his voluminous treatises kept him abreast of a constitutional system that seemed to be moving somewhat too fast for him, and at times he seems to mingle his own prejudices and opinions on ephemeral issues of party politics with his constitutional exposition. His most competent works in this field are *Responsible Government in the Dominions*, 1909 (2nd ed., in 3 vols., 1912; revised ed., 2 vols., 1928), *The Sovereignty of the British Dominions*, 1929, *Constitutional*

*History of the First British Empire*, 1930, *The Governments of the British Empire*, 1935, *A Constitutional History of India, 1800-1935*, 1936, *The King and the Imperial Crown*, 1938, *The Constitution of England from Queen Victoria to George VI*, 1939, *Constitutional Law*, 1939, *The British Commonwealth*, 1941, *Federation: its Nature and Conditions*, 1942, and *The Constitution under Strain*, 1942.

Keith, George Elphinstone Keith, Viscount (1746-1823), Eng. admiral, distinguished himself as commander of the *Perseus* under Lord Howe in the siege of Charleston (1780), and again under Lord Hood during the siege of Toulon (1793). In 1796 he wrested from the Dutch their

accepted a professorship of his science at Ghent (1858) and later at Bonn Univ. (1865). Besides editing *Annalen der Chemie* he pub. *Lehrbuch der organischen Chemie*, 1861-87. His 'closed-chain' theory of benzene (q.v.) gave a remarkable stimulus to the preparation of aniline dyes, whilst his doctrine of valency played an important part in the development of chemical theory. See F. R. Japp, 'Kekulé Memorial Lecture,' in the *Journal of the Chemical Society*, 1898, and R. Anschütz, *Kekulé*, 1929.

Kelantan, state of the Federation of Malaya and, prior to the formation after the Second World War of the Malayan Union (which was in turn succeeded by

A VILLAGE ON PILES, KELANTAN

E.N.A.

settlement in the Cape of Good Hope, and obliged a detachment of their fleet to surrender in Saldanha Bay. The following year he assisted in the suppression of the mutiny at Sheerness, and in 1799, as commander in Sp. waters, effected a skillful landing at Aboukir.

Keith, James Francis Edward, known as Marshal Keith (1696-1758), soldier, b. near Peterhead, son of an old Scottish family. He took part in the Jacobite landing of 1719, and then did military service in Spain and in Russia, where he became a general, 1737. Afterwards he entered the service of Frederick the Great, and rose to field-marshal's rank. Killed at Hochkirch.

Keith, burgh and mkt tn of Banffshire, Scotland, 50 m. NW. of Aberdeen, an agric. centre with tweed manufs. and whisky distilleries. Pop. 4365.

Kekkonen, Urho Kaleva (1900- ), Finnish politician and statesman, President of the Finnish Rep. since 1956.

Kekulé von Stradonitz, Friedrich August (1829-96), Ger. chemist, was persuaded by Liebig (q.v.) to take up chem., and, after studying in Giessen and conversing with leading chemists in Paris and England,

the present Federation on 1 Feb. 1948), classed as an Unfederated Malay State in treaty relations with Great Britain. It was formerly under the suzerainty of Siam, S. of the Patani States. The area is 5750 sq. m. Behind a low sandy coastline 60 m. long lies a fertile plain 1000 sq. m. in area, densely populated, and closely cultivated with rice, coco-nut, and fruit trees. S. of this plain the country is hilly and broken, the highest (6000 ft) hills forming the boundary with Perak, and those on the Pahang border also rising to 6000 ft. This part of K., though thinly populated, contains the bulk of the Brit.-owned rubber estates and also the whole of the aboriginal pop. The climate is characterised by high humidity and copious rainfall, the state being in the equatorial zone of constant precipitation. Little is known of the early hist. of K. Folklore derives the name from *glam hulan* (*Melaleuca leucadendron*), a swamp tree of the coast. Mahmud, the last Sultan of Malacca, who ruled from 1488 to 1511, conquered K. A Pahang raja, Ali Jalla Riayat Shah, who was Sultan of Johore, 1580-97, had a son Raja Hussin, who became ruler of K. The state cap., Kota

Bahru, which is situated 6 m. from the mouth of the K. R., appears on Portuguese and Dutch maps of the 16th cent. and then disappears till late in the 18th cent. A treaty was made in 1910 with Great Britain providing that the Sultan of K. should receive a Brit. adviser. The chief products of K. are rice, coco-nuts, palm oil, pepper, and tapioca. Mineral resources are said to comprise gold and manganese, besides tin and iron. Silk-weaving and boat-building are carried on. Copra, rubber, and betel-nuts are exported. The tn of Kota Bahru lies 140 m. N.E. of Penang and has a pop. of 22,765. Other tns are Kuala Krai in the S. and Pasir Puteh in the E. Total pop. (1955) 516,000 (471,700 Malays; 27,500 Chinese; 6800 Indians and Pakistanis; 9996 Siamese and others). Connected with Bangkok and also with Penang through Kedah, and through Pahang with Singapore. One of the first objectives of the Japanese in their invasion of the Malay Peninsula in Dec. 1941 was the aerodrome of Kota Bahru. There was severe fighting in the Kota Bahru area after the Japanese had landed on the beaches S. of the tn, but the Japanese, being much better armed, soon overcame resistance and continued their advance down the peninsula. See MALAYA, BRITISH, JAPANESE INVASION OF (1941-1942).

Kelát, see KALÁT.

Kellisman, see CLAZOMENAE.

Kellaways Rock, geological name for a succession of highly fossiliferous sands and clays among which irregular calcareous sandstones are freely interspersed. The name is derived from a Wilt. vil.

Keller, Gottfried (1819-90), Swiss poet and novelist, the son of a master joiner of Zürich. For 2 years he studied art in Munich, but early discovered that literature was his vocation. For 5 years he lived in Berlin (1850-5), and from 1861 to 1876 acted as secretary to his native canton. His vol. of poetry, *Gedichte*, 1846, emphasises his high creative faculty, whilst the writing of his autobiographic novel, *Der grüne Heinrich*, 1851-3, reveals an imaginative temperament readily responsive to beauty and the nobler emotions. K. was particularly felicitous in his handling of the short story, and his sketches of Swiss prov. life entitled *Die Leute von Seldwyla*, 1856, have become classics (Eng. trans. by M. Hottinger). In this vol. are *Die drei gerechten Kammerer* and *Romeo und Julia auf dem Dorfe*, the first of which shows the richness of his humorous vein, whilst the impression left by the tragic intensity of the latter does not soon pass away. A second collection, *Zürcher Novellen*, appeared in 1876, containing the famous *Landvogt von Greifensee*. See H. Mayne, *G. Keller, sein Leben und seine Werke*, 1923, and F. Buri, *Gottfried Kellers Glaube*, 1944; also lives by Ricarda Huch, 1904, and E. Ackerknecht, 1939.

Keller, Helen Adams (1880- ), Counsellor on National and International Relations, Amer. Foundation for the Blind, b. Tusculum, Alabama. Deaf and blind

from the age of 19 months as the result of illness, she was educ. under the direction of Anne Sullivan Macy (1866-1936), B.A., Radcliffe College, 1904. Studied French, German, Latin, Greek, arithmetic, algebra, geometry, hist., poetry, and literature. On behalf of the blind-deaf she has lectured in 16 countries besides the U.S.A. Her writings include *The Story of my Life*, 1902, *Optimism*, 1903, *The World I live in*, 1908, *Out of the Dark*, 1913, *Midstream—my Later Life*, 1930, *Helen Keller's Journal*, 1938, and *Let us have Faith*, 1940.

Kellermann, François Christophe de (1735-1820), Duke of Valmy and marshal of France, b. Alsace, son of a peasant; entered the army at 17; served in the Seven Years War. He was a Republican throughout the great revolution. His brilliant victory over the Duke of Brunswick at Valmy (1792) delivered the infant rep. from the dread of Prussian domination, and, in the words of Goethe, 'opened a new era in the world's history.' Under Napoleon he was given the command of the reserves on the Rhine. In 1804 he became a marshal, and in 1809 Duke of Valmy. His support of the Bourbons after 1814 was rewarded with a seat in the Chamber of Peers.

Kellett, Ernest Edward (1864-1950), Brit. critic and essayist, was educ. at Kingswood and Oxford. Taking up teaching, he became senior Eng. master at Leys School. At the age of 59 he turned to critical writing and produced 2 vols. of essays: *Suggestions*, 1924, and *Reconsiderations*, 1928. In 1929 he pub. *The Northern Saga*, trans. from the Icelandic, and *The Story of Myths*. Further critical works were *Fashion in Literature*, 1931, and *Literary Quotation and Allusion*, 1933. *A Pageant of History* appeared in 1936 and *Aspects of History* in 1938. In 1911 he had ed. *The Book of Cambridge Verse*. *As I Remember* is a collection of reminiscences.

Kelley, Edward (1555-95), alchemist, b. Worcester, trained as an apothecary and early acquired some skill in chem. John Dee (q.v.) cast his horoscope and later figured prominently in his life. K. is supposed to have been educ. at Gloucester Hall, Oxford, but apparently under the assumed name of Talbot. In the ensuing years he figures as a fraudulent scrivener and attorney in London. He was pilloried at Lancaster (1580) for forging anet title-deeds. He declared himself an adept in the occult sciences. Acting on 'supernatural' advice Dee decided to co-operate with K. in researches in that science, and K. thenceforth became Dee's 'skryer' or speculator, interpreting the wishes of the spirits to his master by means of magic crystals—Dee thus becoming the dupe of his own assistant. He went to Bohemia, where he practised crystallo-mancy at the court of Rudolf II (1583-9), was imprisoned in Prague and lost his life in trying to escape. Though a charlatan, K. was a man of considerable abilities and imagination, and is credited with 2 poems and other writings, including a treatise in

hers' stone, issued in 1676. He figures in Butler's *Hudibras* (canto iii).

**Kellgren, Johan Henrik** (1751-95), Swedish poet and critic, b. Flöby. At first critic and later editor of the *Stockholms posten*, he led the attack against the revolutionary school of Thorild, thus anticipating the next cent.'s battle of Classics and Romantics. His own poetry is of classical perfection, and exemplifies the ideals for which he fought with such wit and satire, especially *Mina Lofen*, 1778, and *Vära Villor*, 1780. He was a master also of sensuous love poetry, as in *Den nya Skapelsen*, 1789. He was one of the first members of the Swedish Academy (1786), and is thought the greatest Swedish poet of his generation. See O. Sylvan, *J. K. Kellgren*, 1939, and N. Gyllenbaga, *Kellgrens ritm*, 1943.

**Kellogg, Frank Billings** (1856-1937), Amer. lawyer and politician, b. Potsdam, New York. He was elected to the U.S. Senate for the term 1917-23. In 1924 K. became Amer. ambas. in London, resigning in 1925 to become secretary of state in President Coolidge's Cabinet, which position he held until 1929. During his term of office America intervened in Nicaragua, thus beginning what the Latin Americans call the U.S.A.'s dollar diplomacy or dollar imperialism. For his part in the K. Pact (q.v.) he was awarded the Nobel peace prize for 1929. K. was a judge of the permanent court of International Justice, 1930-5.

**Kellogg Pact.** The K. P., officially called the Paris Pact of 1928, was initiated by Frank B. Kellogg (q.v.), U.S. secretary of state, in association with Briand of Franco. It consists of only 3 paragraphs of which the most important is a declaration condemning recourse to war for the solution of international controversies and renouncing war as an instrument of national policy in the relations of the signatories with one another. The pact was concluded on 27 Aug. 1928, and before the year was concluded 59 nations out of 67 comprising the world of independent states had signed it; but it had little practical effect on international politics. See D. H. Miller, *The Peace Pact of Paris*, 1928.

**Kells** (Ceannannus Mor), mrrkt tn. of co. Meath, Rep. of Ireland, 38 m. NW. of Dublin, connected with Dublin and Drogheda by rail. Its interest is antiquarian. In the churchyard stands an auct round tower (99 ft) and in the market-place a carved stone cross. The connection claimed for a stone-roofed cell with 6th cent. St Columelle (q.v.) is unsupported. Pop. 2125.

**Kells, Book of**, finest extant early Irish illuminated MS. of the Gospels written in Latin, and dating from the 8th or early 9th cents. It is now preserved in Trinity College, Dublin. As an example of its remarkable ornamentation it may be noted that in one space of about  $\frac{1}{2}$  in. square may be counted, with a magnifying glass, no fewer than 158 interlacings of a slender ribbon pattern, formed

of white lines, edged with black ones, upon a black ground. Hence the tradition that these unerring lines should have been traced by angels—'tam delicatas et subtiles . . . tam nodosas et vinculatum colligatas . . . notare poteris intricatas, ut vere haec omnia angelica potius quam humana diligentia jam asseveraveris esse composita' (Giraldus Cambrensis).

**Kelly, Howard Atwood** (1858-1943), Amer. gynaecological surgeon, b. Camden, New Jersey. He received his medical education at the univ. of Pennsylvania, graduating in 1882. He was prof. of obstetrics there, 1888-9, and was then appointed prof. of obstetrics and gynaecology at Johns Hopkins Univ., retiring in 1919. He became the recognised leader of his specialty in America. He was a pioneer in the development of local anaesthesia; he introduced new diagnostic and operative techniques and invented a number of gynaecological instruments. He made a notable contribution to the development of the new hospital and medical school of Johns Hopkins Univ. and is one of the 'four doctors' portrayed in J. S. Sargent's painting of W. H. Welch, H. A. Kelly, W. Osler, and W. S. Halsted. His books include *Operative Gynecology*, 1898, *The Vermiform Appendix* (with E. Hurdon), 1905, *Gynecology and Abdominal Surgery*, 1907-8, *Medical Gynecology*, 1908, *Cyclopedia of American Medical Biography*, 1912, and *Dictionary of American Medical Biography* (with W. L. Burrage), 2nd ed., 1928. See A. M. Chesney, *The Johns Hopkins Hospital*, 1943.

**Kelly, Hugh** (1739-77), playwright, b. Killarney, Ireland. He came to London and lived for a time in great privation, but ultimately got a good post in an attorney's office. From about 1762 he wrote essays, poetry, criticisms, and comments on politics. His poem *Thespis, or a Critical Examination into the Merits of all the Principal Performers belonging to Drury Lane Theatre*, 1767, attracted Garrick, and *False Delicacy*, 1768, a comedy, was produced under his auspices. *A Word to the Wise*, 1770, was a failure—in Boswell's words, 'fell a sacrifice to popular fury, and, in playhouse phrase, was damned'—owing to a demonstration by John Wilkes and his supporters. Johnson wrote a prologue for a benefit performance of the play in 1777. K. also pub. *Clementina*, 1771 (a tragedy), *The School for Wives*, 1773, *The Romance of an Hour*, 1774, and *The Man of Reason*, 1776. See M. Schorer, *Hugh Kelly: his Place in the Sentimental School*, 1933.

**Kelly, James Fitzmaurice**, see FITZ-MAURICE-KELLY.

**Kelly, Michael** (1762-1826), Irish actor and musician. He appeared as a child actor in Dublin, and studied music under Michael Arne and others, also singing under various It. masters. In 1779 he went to Italy for further studies; engaged at the Vienna Court Opera for 4 years; became friendly with Mozart and sang Basilio in the first performance of *Figaro*. He went to London in 1787, became

manager of the King's Theatre, London, from 1793, and wrote the musical settings for many plays, including Sheridan's *Picarro*. His *Reminiscences*, composed from his own materials and written by Theodore Hook, 1826, are very interesting.

**Kelmascott Press**, see MORRIS, WILLIAM.

**Kelp**, product of the combustion of seaweeds. It appears as hard, dark-greyish masses, and that of most value is obtained from driftweed, such as *Fucus vesiculosus*, *F. serratus*, *Laminaria digitata*, and *L. stenophylla*. These are dried in the sun and burnt in shallow pits, 1 ton of K. being obtained from about 20 tons of seaweed. The product consists chiefly of potassium sulphate, 14 per cent; potassium chloride, 17 per cent; sodium chloride, 14 per cent; sodium carbonate, 4 per cent; and smaller quantities of potassium and sodium iodides and other salts. The value of the K. lies in its iodine content. The K. is mixed with manganese dioxide and concentrated sulphuric acid and distilled, when iodine vapour comes off and is condensed in flat receivers called udeis. See IODINE and SEAWEED.

**Kelpie** ('tangle' or 'shelly-coat'), in Scottish mythology, a kind of water-sprite or riv. genius, usually with the appearance of a shaggy horse (sometimes of a man), supposed to appear as a warning to those destined shortly to be drowned near the spot where it appears.

**Kelso**, burgh and mkt. tn in Roxburghshire, Scotland, 42 m. SE. of Edinburgh. The Tweed here joins the Teviot, crossed by a handsome 5-arch bridge. There are the ruins of an abbey founded 1128. Sir Walter Scott was a pupil at the old grammar school in 1783. K.'s chief industries are manures, oil cake, iron founding, and implements. Pop. 4100.

**Kelt**, see SALMON.

**Keltay**, see KIELCE.

**Kelty**, vil. of Scotland in Fifeshire and Kinross-shire, 6 m. NE. of Dunfermline, with coal-mines. Pop. 7800.

**Kelvin**, William Thomson, 1st Baron Kelvin of Largs (1824-1907), scientist, b. Belfast, educ. at Glasgow, Cambridge, and Paris. After a distinguished college career he became prof. of natural philosophy at Glasgow Univ. (1846-99). He ed. various mathematical journ., contributing to them the results of his researches in physical phenomena, electricity, heat, magnetism, elasticity, vortex motion, etc. He was knighted (1866) for his discoveries in the transmission of electrical currents. and was electrical engineer for various ocean telegraphs, beginning with the Atlantic cable (1857) and ending with the Mackay-Bennett cable (1879). Lord K. made great improvements in signalling apparatus, and invented a new form of mariner's compass (1873-8), and a deep-sea sounding machine. He did most valuable work also in thermodynamics, and was the first to define the Absolute Thermodynamic Scale of Temp., the units of which are degrees Kelvin ('K') or degrees Absolute ('A') (see ABSOLUTE TEMPERATURE and METROLOGY). He was president of the Brit. Association in 1871, of

the Royal Society from 1890 to 1895, and was given the title of Lord K. in 1892. His various papers have appeared in book form as *Mathematical and Physical Papers*, 1882-4, *Electrostatics and Magnetism*, 1884, *Popular Lectures and Addresses*, *Baltimore Lectures*, . . . 1904. With P. G. Tait he wrote *A Treatise on Natural Philosophy*, 1879-83. See C. Bright, *Story of the Atlantic Cable*, 1903; also lives by O. Munro, 1902; A. Grey, 1908; S. P. Thompson, 1910; A. King, 1925; H. N. Casson, 1930.

**Kelvin Balance**, instrument for the measurement of currents and, in a slightly modified form, used as a wattmeter. Flat circular coils carrying the current are connected in series and so arranged that the force of repulsion or attraction between them can be measured. The 4 coils,

A, B, C, and D, are fixed, and E and F are at the ends of a beam pivoted about O. With the currents flowing, a weight W is moved along the beam to restore the coils E and F to some standard position, and the distance from O is measured. The balance must be calibrated by means of a silver voltameter. See CALIBRATION and CURRENT ELECTRICITY.

**Kelvin Effect**, or **Thomson Effect**, see THERMOELECTRICITY.

**Kelvin's Absolute Scale of Temperature**, see ABSOLUTE TEMPERATURE and THERMODYNAMICS.

**Kemal**, see ATATÜRK.

**Kemble**, Charles (1775-1854), actor, made his first appearance at Drury Lane in 1794, and quickly rose to an important position in his profession. He played leading parts in London for many years, and in 1822 became manager of Covent Garden. His farewell performance in 1836 was as Benedick at the Haymarket. Although he played the prin. tragic roles his successes were made in comedy.

**Kemble**, Frances Anne (Fanny), afterwards Mrs Butler (1809-93), actress, was the daughter of Charles K. At the age of 20 she appeared as Juliet at Drury Lane under her father's management, and at once achieved a great success. Both in England and America she became very popular, and remained so until her final retirement in 1849. She wrote sev. plays and poems, and *Notes on some of Shakespeare's Plays*, 1882; she also pub. the very interesting autobiographical *Record of a Girlhood*, 1878, *Records of Later Life*, 1882, and *Further Records*, 1891. She was a very charming person, and was much beloved by men of letters, especially Edward FitzGerald, whose letters to her have been ed. by W. A. Wright, 1895. See H. Gibbs, *Affectionately Yours, Fanny*,

1947; also lives by D. Bobbé, 1931, and M. Armstrong, 1938.

**Kemble, John Philip (1757-1823)**, actor, b. Prescott, Lancs. He was sent to a Rom. Catholic school to be trained for a priest, but he decided that he had no vocation. In 1776 he played Theodosius at Wolverhampton, and remained in the provs. until 1783, when he appeared at Drury Lane as Hamlet—a performance that aroused much controversy. For 19 years he was at Drury Lane, playing most of the great Shakespearian roles. He was brother of Sarah Siddons. There is a biography by H. Baker, 1942.

**Kemble, Maria Theresa (1774-1838)**, actress, came to England from Vienna about 1786, and acted at Drury Lane under her maiden name of de Camp. She made a popular success 6 years later as Macheath in *The Beggar's Opera*, and thereafter played leading parts, including Portia and Desdemona. After her marriage to Charles K. in 1806 she continued to act until her retirement in 1819. In 1808 she played in her own comedy, *The Day after the Wedding*, at Covent Garden on the occasion of her husband's benefit.

**Kemal Hussein, or Hosain (1853-1917)**, first Sultan of Egypt. He succeeded Abbas Hilmi in Dec. 1914, the Brit. Gov. deposing the latter in the fourth month of the First World War because it was manifest that he was making every preparation to side with the Turks and Germans. On his death in 1917 he was succeeded by his brother, Prince Ahmed Fuad (q.v.).

**Kemerovo**: 1. Oblast in S. Siberia, situated largely in the Kuznetsk basin (q.v.). There are large and varied coal deposits, also iron ore, zinc, manganese, and gold. It has coal-mining, iron and steel (since 1771), non-ferrous metallurgical, chemical, and engineering industries. Agriculture specialises in dairy farming and growing potatoes and other vegetables. The prin. tns are K., Stalinsk, Prokop'yevsk, Leninsk-Kuznetskiy, Anzhero-Sudzhensk, and Kiselevsk. It is an area of rapidly expanding industry and of labour camps. Area 36,900 sq. m.; pop. (1956) 2,626,000, mostly Russians (since 17th cent.), also Shorians (q.v.); it is the most densely populated oblast in Siberia.

2. (until 1932 Shcheglovsk) Cap. and one of the economic and cultural centres of the above, on K. Tom', a trib. of the Ob'. It has a large chemical industry (since 1916), also engineering and coal-mining industries. It was founded in 1918, through fusion of the 2 vils. Shcheglova (founded 1720) and K. (founded 1863); the tn has constantly grown in industrial importance since 1929. In 1943 it became cap. of the newly created K. oblast. Pop. (1956) 240,000, third place in the Kuznetsk basin (1928, 22,000; 1939, 133,000).

**Kemmel Hill**, important position on the W. front in the First World War, acting as an essential observation post for the Brit. troops below the Messines Ridge. It was the scene of very bitter fighting during 24-7 April 1918, in the Lys battle, the Germans, by sheer weight of men and

metal, forcing the British and French to give way; but they were unable to exploit these successes.

**Kemp Land**, Australian Antarctic Ter., see ANTARCTICA.

**Kempe, Anna Eliza**, see BRAY.

**Kempen**: 1. Ger. tn in the Land of N. Rhine-Westphalia (q.v.), 6 m. WNW. of Krefeld (q.v.), manufacturing textiles. K. was the bp. of Thomas à Kempis (q.v.). Pop. 9850.

2. Or Campine, region of NE. Belgium stretching between the R.s. Scheldt and Meuse to the N. of the Dyle and the Demer. The dist. is chiefly in the prov. of Antwerp, but it extends also into Belgian Limbourg and Dutch Brabant. Two important canals pass through the Campine, of which the latest, the Albert Canal, has been planned to assist the wide industrialisation of the region because the sandy heath land covers an important coal basin whose exploitation commenced only in 1918. Hasselt, Herentals, and Turnhout are the chief tns.

**Kempenfelt, Richard (1718-82)**, rear-admiral, served with distinction in the W. Indies and under Pocock in India (1758-9). When Lord Howe was commander of the fleet (1782) K. served under him. He went down with the *Royal George* at Spithead. Howe adopted and improved his system of signalling. He wrote religious poetry, including the lyric *Bursl, ye Emerald Gates*.

**Kempis, Thomas à (c. 1379-1471)**, Augustinian canon and religious writer, called after his bp. Kempen, near Düsseldorf. His surname was Hammerken, and he came of a peasant family. In 1399 he was admitted into the Augustinian convent of Mt St Agnes at Zwolle, and took the vows in 1406. He was a prolific writer, but by far the most celebrated of his treatises is the *Imitatio Christi*, which has been trans. into more languages than any other book except the Bible. The earliest Eng. trans. now in Magdalen College, Oxford, is that of Pynson, dated 1438. A controversy has raged around the authorship of the *Imitation*, the other candidates being Jean Gerson, chancellor of the univ. of Paris, and the abbot of Verceil, but the learned, as well as the popular, verdict is in favour of the traditional authorship of a K. The *Imitation*, with its combination of simple faith and mysticism, appeals to all manner of men and women of all denominations. It has great literary beauty. An ed. of the complete works was ed. by M. J. Pohl (1902-1922). See BRETHREN OF COMMON LIFE. See also S. Kettlewell, *Authorship of the De Imitatione*, 1877, and *Thomas à Kempis and the Brothers of the Common Life*, 1882 (Liddon's trans., 1889; Biggs, 1898); F. R. Cruise, *Outline of the Life of Thomas à Kempis*, 1904; J. de Montmorency, *Thomas à Kempis: his Age and Book*, 1906; also lives by J. Brewer, 1676; F. R. Gulse, 1887; J. C. Montmorency, 1906; J. Williams, 1910; A. Klöckner, 1921.

**Kempsey**, tn on Macleay R., in New S. Wales, Australia, 313 m. N. of Sydney. The prin. rural pursuits in the surrounding

dists. are dairying and maize-growing. Pop. 7740.

**Kempston**, tn of Beds, England, adjoining Bedford, the chief industries being the making of electric lamps and crayons, and light engineering. It has the H.Q. barracks of the Beds and Herts Regiment, and has a large military training camp. Civilian pop. 9000.

**Kempten**, Ger. tn in the *Land* of Bavaria (q.v.), on the Iller, a trib. of the Danube (q.v.), 65 m. WSW. of Munich. It was first mentioned by Strabo (q.v.), and its monastery was founded in the 8th cent. It has a notable baroque church, other old churches, a Gothic tn hall, and the former palace of the abbot-princes. The tn is an important milk, butter, and cheese market; there are textile, paper, and engineering industries. Pop. 42,000.

**Kempton Park**, in the par. of Sunbury, Middx, England, near the Thames. A racecourse was estab. there in 1889, the prin. event being the Great Jubilee Handicap in the spring.

**Kemsley**, of Farnham Royal, James Gomer Berry, 1st Viscount (1883- ), journalist and newspaper proprietor, b. Merthyr Tydfil, Wales. He is the younger brother of Lord Camrose (q.v.), with whom he was for many years closely associated in many important newspaper enterprises. By 1925 they were the foremost newspaper proprietors in Great Britain, obtaining control of Amalgamated Press in 1926. In 1937 Camrose and K. separated their interests. K. took over his brother's interests in Allied Newspapers, which in 1943 changed its name to K. Newspapers. In 1947 this company's 23 newspapers, including the *London Sunday Times*, *Daily Graphic*, and *Sunday Graphic*, had a sale of over 9,000,000. K. was created a baronet in 1928, a baron in 1936, and became a viscount in 1945.

**Ken**, Thomas (1637-1711), celebrated prelate and one of the fathers of hymnology, b. Little Berkhamsted, Herts. Educ. at Winchester and New College, Oxford, graduating in 1664. At the age of 25 he took orders and held successively the country livings of Little Easton (Essex), Brightstone (Isle of Wight), and E. Woodhay (Hants). In 1674 he visited Rome with young Isaac Walton, his step-sister's son, which resulted in confirming his regard for the Anglican Church. In 1679 Charles II made him chaplain to Mary, wife of William of Orange, and in 1685 nominated him bishop of Bath and Wells. The chief public event of his bishopric was his trial and acquittal as one of the 'seven bishops' who, in 1688, refused to read the Declaration of Indulgence. In 1691 he was superseded by Dr Kidder, dean of Peterborough, for refusing to take the oath of allegiance to William of Orange. Amongst the many beautiful hymns written by K. are 'Awake my Soul and with the Sun' and 'Glory to Thee, my God, this Night.' See lives by W. L. Bowles, 1830; J. Laviecount Anderson, 1834; S. H. Plumptre, 1838, 1890.

**Ken Wood**, on the E. side of Hampstead Heath, in the bor. of St Pancras, London.

It was formerly the estate of the Earl of Mansfield. The house (partly the work of Robert Adam), grounds, furniture, and art collection were given to the nation (1927) under the will of the 1st Earl of Iveagh (q.v.).

**Kenath**, in Bible times a city of Manasseh. It is generally accepted that Kanatha was a later name, and that the 2 places are identical. Probably identical with Karawat, 16 m. N. of Bozrah.

**Kendal**, Countess Ehrenhard Melusina von der Schulenburg, Duchess of (1667-1743), mistress of George I. She entered the service of the Electress Sophia and became the future George I's mistress c. 1690. When he came to England she followed him, and in 1716 was created Duchess of K., and granted valuable pensions. She had great influence over the king, but her greed made her generally unpopular.

**Kendal**, mrkt tn and municipal bor. in the co. of Westmorland, England, 22 m. N. of Lancaster. Woollens, hosiery, boots and shoes, paper, and agric. instruments are manuf. Pop. 18,500.

**Kendal Green**, dye resulting from a mixture of woad and the dye made from the flowers of *Genista tinctoria*.

**Kendall**, Edward Calvin (1886- ), Amer. biochemist, b. S. Norwalk, Connecticut, and educ. at Columbia Univ., New York. He was prof. of physiological chem. and head of the section of biochemistry at the graduate school, Mayo Clinic, Rochester, from 1914 to 1951, and is now prof. emeritus. His work has included the isolation of thyroxine, the hormone of the thyroid gland (1914), the synthesis of glutathione (1929), and the isolation and synthesis of hormones of the adrenal cortex, including cortisone (since 1930). For this last work he shared the Nobel prize for medicine in 1950.

**Kendall**, Henry Clarence (1841-82), Australian poet, b. near Ulladulla, New S. Wales. While a boy he was taken for a 2 years' cruise in the S. Seas. He worked first in a solicitor's office in Sydney, then entered the State Survey Dept. His *Poems and Songs* were pub. in 1862, and having won a prize for his poems 'Death in the Bush' and 'The Glen of Arrawatta' he removed to Melbourne, where he wrote *Leaves from Australian Forests*, 1869. Discouraged by poverty, he returned to Sydney and became a clerk in a timber business. In 1880 his *Songs from the Mountains* appeared, and in the following year he was appointed inspector of state forests, but prosperity came too late; his constitution gave way and he d. a year later. K. is reckoned the father of Australian native poetry; his verses were collected in a single vol. in 1903. See also AUSTRALIAN LITERATURE.

**Kendo** (swordsmanship), art of using the Jap. military sword. It began with the rise of the Samurai (q.v.) class in the 9th and 10th cents., was steadily developed, and culminated in the early 17th cent. with such exponents as Miyamoto Musashi, who is also recognised as one of the greatest painters, sculptors, and philosophical writers of Japan. The Samurai

regarded K. not only as a military art, but also as an essential part of spiritual and moral training, aiming at the harmonious unit of body and soul. When the Tokugawa Shogunate gov. was overthrown in 1858 there were at least 150 schools of swordsmanship. Until the Second World War K., judo (q.v.), or archery was compulsory in middle school education.

**Kenealy**, Edward Vaughan Hyde (1819-1880), Irish barrister and author, called to the Eng. Bar in 1847. In 1873 he became leading counsel for Orton, the Tichborne claimant, and his unprofessional and

2. Suburb of Cape Town (q.v.), S. Africa. It has a racecourse.

**Kenites**, kinsfolk of the Midianites (Num. x. 29; Judges iv. 11), nomads, some of whom joined the Israelites (Num. xxiv. 21; Judges i. 16). They resided at Sinai, where Moses took refuge with them, and married the daughter of a Kenite priest, Jethro, Reuel, or Hobab (Exod. ii. 18 ff.; iii. 1; Num. x. 29; Judges iv. 11), who had great influence on him (Exod. xviii). Jael, who killed Sisera in his sleep, was the wife of a Kenite (Judges v. 24).

**Kenmare**, tn and beauty spot in co.

Valentine & Sons Ltd, Dundee

KENILWORTH CASTLE

violent conduct throughout the case was censured by the jury. Founding the *Eng. Ishman*, 1874. K. still upheld Orton's claim, and after libellous attacks on Cockburn and others was disbenched by Gray's Inn. He wrote *Brallaghan or the Deipnosophists*, 1845, *Goethe, a New Fantomime*, 1850, *Poems*, 1864 (collected 1875-9), and *Proceedings of the Tichborne Case*, 1875.

**Kenilworth**: 1. Urb. dist. of Warwickshire, England, 5 m. N. of Warwick. The castle, begun in the 12th cent., was extended by King John, and used by Henry III as a royal palace. Elizabeth I was lavishly entertained there in 1575; it was finally dismantled under Cromwell. Here are also remains of an Augustinian priory (c. 1122). K. has a variety of industries, largely associated with motor and agric. engineering; caravan and motor bodywork is manuf. Pop. 11,000. See Sir W. Scott, *Kenilworth*, 1821; J. Beck, *Kenilworth Castle*, 1845; E. H. Knowles, *Kenilworth Castle*, 1872.

Kerry, Rep. of Ireland, at the head of K. Bay. Pop. 907.

**Kennebec**, riv. of Maine, U.S.A., rising in Moosehead Lake and flowing S. into the Atlantic Ocean. It is about 150 m. long, and during its course it drops 1000 ft. It is navigable for 75 m. to Augusta, and furnishes power to Bingham, Skowhegan, Waterville, Augusta, and Gardiner. The first Eng. settlement in Maine (Fort St George) was made at the mouth in 1607.

**Kennedy**, Benjamin Hall (1804-89), Eng. schoolmaster, noted for his extensive and thorough scholarship, fellow and classical lecturer of St John's, Cambridge (1828). He was assistant master at Harrow (1830-6), and headmaster of Shrewsbury (1836-66). In 1867 he became regius prof. of Greek at Cambridge and canon of Ely. K. helped to establish Gilton and Newnham colleges. See F. D. How, *Six Great Schoolmasters*, 1904.

**Kennedy**, James (c. 1406-66), Bishop of St Andrews, and previously Bishop of

Dunkeld in which capacity he attended the council of Florence. He took a prominent part in the politics of Scotland during the minority of James II, and afterwards acted as regent during the minority of James III. He was the founder of St. Salvatore's College (1450).

Kennedy, John Pendleton (1795-1870), Amer. statesman and novelist, b. Baltimore. He became a member of Congress and secretary of the navy. He was a friend of Thackeray, whom he helped in writing *The Virginians*. Among his works are *Horseshoe Robinson*, 1835, *Life of William Wirt*, 1848, and *Mr Ambrose's Letters on the Rebellion*, 1865.

Kennedy, Margaret (1896- ), novelist, b. London. She was educ. at Cheltenham and Somerville College, Oxford, where she studied hist., her first pub. being *A Century of Revolution*, 1922. Her first novel was *The Ladies of Lyndon*, 1923, and in the following year she became famous with *The Constant Nymph*, which was later dramatised and filmed. In 1925 she married David Davies, a barrister. Others of her novels are *Red Sky at Morning*, 1927, *Return I Dare Not*, 1931, *Together and Apart*, 1936, *The Mechanised Muse*, 1942, *The Feast*, 1950, *Troy Chimneys*, 1953, which won the Tait Black Memorial prize, and *Act of God*, 1955. *Escape Me Never!*, 1934, is a 3-act play, and she also wrote a life of Jane Austen, 1950.

Kenneth, St, see CENYDD.

Kenneth I, called MacAlpin (d. c. 860), Scottish king, son of Alpin of Dairiada (d. c. 841). He conquered the Picts (c. 843), becoming ruler of the united monarchy. He made Dunkeld the eccles. centre of his kingdom, transferring the relics of St Columba there. K. invaded England 6 times.

Kenneth II (d. c. 995), King of Scotland, son of Malcolm I, succeeded to the throne in 971. He was murdered in mysterious circumstances.

Kennett, Basil (1674-1715), Eng. miscellaneous writer, b. Postling, Kent, brother of White K. (q.v.). He was educ. at St Edmund's Hall and Corpus Christi, Oxford, of which he became a fellow in 1697. He pub. antiquarian and religious works, of which the most important are *Romae Antiquae Notitia*, or *The Antiquities of Rome*, 1696, and *A Brief Exposition of the Apostles' Creed*, 1705. Other works are a poem to Queen Anne and *Lives of the Latin Poets*. It has been suggested, on the authority of James Tyrrell, that the third vol. of White K.'s *Complaid History* was really the work of Basil K.

Kennett, White (1660-1728), prelate and author, b. Dover, and educ. at Westminster School and at St Edmund's Hall, Oxford. While still an undergraduate he was employed by Anthony Wood in collecting notes about eminent Oxford men. Disliking James II's eccles. policy, he joined the Low Church party and openly supported the revolution. He became prebendary of Salisbury in 1701; dean of Peterborough in 1707, and was bishop there from 1718 to 1728. He was a co-founder of the Society for the Propagation

of the Gospel and acquired a reputation as historian, antiquarian, topographer, and philologist. Among his works are *Parochial Antiquities*, 1695 (new ed., 1818), *A Register and Chronicle, Ecclesiastical and Civil*, 1728, dealing with the Restoration in more detail than his less valuable vol. iii of a *Complaid History of England* (from Charles I to Anne), 1706. This latter work has been attributed to his brother Basil. See life by W. Newton, 1730.

Kenney, James (1780-1849), dramatic writer, b. Ireland. He first attained popularity by his farce *Raising the Wind*, 1803, produced at Covent Garden. He wrote more than 40 dramas and operas, including *False Alarms*, 1807, *The World*, 1808, *Love, Law, and Physic*, 1812, *The Sicilian Vespers*, 1840, a tragedy, and the most popular, *Sweethearts and Wives*, produced at the Haymarket in 1823, and revived sev. times. K. was a friend of Rogers and Lamb. See P. W. Clayden, *Rogers and his Contemporaries*, 1889.

Kennicott, Benjamin (1718-83), cleric and Heb. scholar, b. Totnes and educ. at Wadham College, Oxford. His dissertations *On the Tree of Life in Paradise* and *On the Oblations of Cain and Abel* won him his B.A. and election as fellow of Exeter College, Oxford (c. 1747). He pub. *The State of the Hebrew Text of the Old Testament Considered* in 1753, unfolding his intention of labouring to improve the Heb. text by the collation of Heb. MSS. K. met with opposition from Warburton, Horne, and others, but gained the support of most of the clergy. Aided by many learned Eng. and continental scholars, he produced the *Vetus Testamentum Hebraicum cum variis Lectionibus*, 1776, for which over 600 Heb. MSS. and 16 MSS. of the Samaritan Pentateuch (q.v.) were consulted. These latter he valued highly, while showing a disregard of the Massoretic tradition. De Rossi continued his work in *Variae Lectiones Veteris Testamenti*, 1784-7, and Jahn pub. an excellent abridgment (1806). K. was appointed Radcliffe librarian (1767) and canon of Christ Church, Oxford (1770).

Kennington, dist. and a parl. div. in the bor. of Lambeth, London. A royal palace existed here in medieval times. Much of the land belongs to the Duchy of Cornwall. K. Oval is the co. ground of the Surrey Co. Cricket Club.

Kenny, Elizabeth (1886-1952), Australian nurse, b. Warialda, New S. Wales. She qualified as a nurse in 1911 and worked among the children in the Australian Bush. After service with the army during the First World War she made a special study of infantile paralysis (poliomyelitis) which she considered was being incorrectly treated. She worked out a new method which was subsequently adopted in many parts of the world: maintenance of a bright mental outlook, encouragement of the patient to carry out movements (even when the muscles concerned were so completely paralysed that such movement was impossible), hydrotherapy and remedial exercises, maintenance of circulation, and the avoidance of

splinting and other forms of immobilisation. Details are given in her *Infantile Paralysis and Cerebral Diplegia*, 1927. Her method was the subject of controversy but despite an adverse report from a royal commission in Queensland in 1938, about 40 Kenny clinics were subsequently opened in various parts of the world. See her autobiography, *And They Shall Walk*, 1943.

**Kénogami**, adjoining tn to Jonquiére, 8 m. E. of Chicoutimi, in Quebec, Canada. The prin. industry is pulp and paper. Pop. 11,200.

**Kenora**, co. tn of K. and Patricia dists., Ontario, Canada, situated on the Lake of Woods. On the main line of the Canadian Pacific Railway and also on the Trans-Canada highway, 300 m. W. of Fort William. Being on the beautiful Lake of Woods it is the centre of a very popular, unspoilt summer resort, with good hunting and fishing. The tn has 2 cathedrals, sev. churches, 2 good hospitals, a public library, high and primary schools, and also 2 Indian residential schools. All public utilities are owned by the municipality. Industries include flour mills, lumber mill, pulp and paper, boat factory, and aerated waters. There is an important Ontario Gov. fish hatchery, and sev. wholesale fisheries. The vicinity supplies spruce, red and white pine, poplar, gold, silver, copper, and mica. The tn or settlement was discovered over 2 cents. ago by the famous Fr. explorer, Pierre de la Verendrye, and became known as Rat Portage. Pop. 9317.

**Kenosha**, port city, co. seat of K. co., Wisconsin, U.S.A., on Lake Michigan, 35 m. S. of Milwaukee. It manufs. motorcars, metal products, mattresses, and furniture. Pop. 54,400.

**Kensal Green**, dist. of NW. London, partly in the bor. of Kensington and partly in the bor. of Hammersmith. Its well-known cemetery contains the graves of many illustrious persons, including Thackeray, Cruikshank, and Trollope. In the Rom. Catholic cemetery adjoining (in the bor. of Hammersmith) Cardinal Wiseman and Francis Thompson are buried.

**Kensington**, parl. and metropolitan bor. in the W. of London, going back in hist. to a group of mediæval manors and vills. obliterated except for a few names. It is a 'royal bor.' by the 1901 grant of Edward VII. Modern development began with the erection of Holland House (see HOLLAND PARK) and K. Palace (q.v.). K. became an area of great charm, to be somewhat altered when large museums and learned institutions (the Victoria and Albert Museum, Natural Hist. Museum, etc.) were constructed from about the mid 19th cent. onwards, at the same time as considerable numbers of terraces of large stuccoed houses. The W. part of K. gardens stands within the bor., which returns 2 members to Parliament. Area 2291 ac.; pop. 170,600. See Rachel Ferguson, *The Royal Borough*, 1950.

**Kensington Palace**, London, part of the Royal Household. It was formerly Nottingham House, the home of the 1st

Earl of Nottingham (see FINCH, HENEAGE), purchased in 1689 by William III, who had it remodelled by Wren, whose work survives mainly in the S. front and N.E. wing. Under George I there was further reconstruction by Benson and Wm Kent (N.E. and S.E. wings). Among the more remarkable features are the Cupola Room by Benson (ceiling by Kent, marble relief over fireplace by Rysbrack), the Presence Chamber with ceiling by Kent and overmantel by Grinling Gibbons, the Orangery by Wren or Vanbrugh, and the Queen's Staircase. The building is entirely of red brick. The gardens were laid out c. 1725 in the Fr. grand manner. K. P. contains a collection of paintings. Mary II, William III, Queen Anne, and George II, the last sovereign to use the palace, all d. here. Queen Victoria and Queen Mary (consort of George V) were b. here, and the former here received the news of her accession. The London Museum (q.v.), formerly at Lancaster House, Green Park, was reopened here in 1951.

**Kensingtons**, The, popular name of the former 13th Co. of London Regiment, a T.A. regiment. It became the Army Phantom Signal Regiment in 1949.

**Kent, Edward Augustus**, Duke of (1767-1820), Eng. prince and soldier, fourth son of George III. He served under Grey against the French in the W. Indies (1794), became lieutenant-general (1796), Duke of K. and Strathern and Earl of Dublin (1799), and commander-in-chief in N. America. Fort Edward in Martinique and Prince Edward Is. were named after him. He was governor of Gibraltar (1802), but a mutiny followed his severe administration. In 1818 he married Victoria Mary Louisa (1786-1861), widow of the Prince of Leiningen, and their only child, the future Queen Victoria, was b. the following year.

**Kent, George Alexander Edmund**, Duke of (1902-42), Brit. prince, fourth son of George V. b. Sandringham. Entered navy, 1916; midshipman, 1921; lieutenant, 1926. He was appointed to H.M.S. *Nelson*, 1927, and to *Durban*, 1928, but in 1929 he retired from the navy for health reasons. He married Princess Marina, daughter of Prince Nicholas of Greece and Denmark, in 1934, and received title Duke of K. He was chancellor of the univ. of Wales from 1937. He was killed in an aeroplane crash in Scotland, whilst on a flight to Iceland to inspect Brit. forces there. His 3 children are Prince Edward George, b. 1935, succeeded to the title in 1942; Prince Michael, b. 1942; and Princess Alexandra Helen, b. 1936.

**Kent, James** (1763-1847), Amer. jurist, graduated at Yale in 1781. He lectured on law at Columbia College (1793-6; 1823-47), became judge of the supreme court of New York (1798), chief justice (1804), and chancellor (1814-23). His great work is *Commentaries on American Law* (1828-30). He also wrote *Dissertations*, 1795, and *A Course of English Reading*, 1831. See Johnson's *Chancery Reports* (7 vols.), 1816-24, which contain his judgments as chancellor; J. Story, *On*

*the Conflict of Laws*, 1834; J. Duer, *Discourse on the Life, Character, and Public Services of James Kent*, 1848; *The National Portrait Gallery of Distinguished Americans*, vol. II, 1852; W. Kent, *Memoirs and Letters of Chancellor Kent*, 1898.

**Kent, William** (11685-1748), architect, decorator, and landscape gardener, b. Bridlington. He is said to have been apprenticed to a coach-painter in Hull. He studied in Italy, 1709-10, at the expense of some wealthy patrons; and in Rome met Richard Boyle, 3rd Earl of Burlington, who brought him back to England and estab. him as a friend and collaborator at Burlington House, Piccadilly. With Burlington, K. carried out various architectural work (see BOYLE, RICHARD, 3rd EARL OF BURLINGTON).

He designed many important buildings, including Devonshire House, Piccadilly (demolished), the Royal Mews, Charing Cross (demolished), the Horse Guards, and part of the Treasury (all these in London), and the enormous mansion of Holkham, Norfolk. He laid out many notable gardens, and designed the State Barge, now in the Victoria and Albert Museum.

**Kent, William Charles Mark** (1823-1902), Eng. poet, biographer, and miscellaneous writer, b. London. He ed. the *Sun*, 1845-70, and the *Weekly Register*, 1874-81. He wrote under the pseudonym Mark Rochester, among his works being *Altheia*, 1850, *Poems*, 1870, *Mythological Dictionary*, 1870, *Corona Catholica*, 1880, and *Seven Wonders of the World*, 1890. K. also issued critiques, eds., or memoirs of Dickens, 1872, Burns, 1874, Lamb, 1875, Lytton, 1875, Father Prout, 1881, and others.

**Kent**, maritime co. in the SE., often referred to as 'the garden of England.' It includes the Is. of Thanet and Sheppey, and sends 12 representatives to Parliament from the co., and 6 from the bors. K. is mostly in the diocese of Canterbury, whose archbishop is the Primate of All England. Maidstone is the cap., and other important tns are Chatham, Hythe, Rochester, Gravesend, Dover, Deal, Folkestone, Ramsgate, Margate. Chatham and Sheerness contain dockyards, Tunbridge Wells is a noted health resort. Four of the Cinque Ports—Dover, Romney, Sandwich, and Hythe—belong to K. Faversham is the centre of the fruit trade. The N. Downs runs from W. to E. through the co., ending in the white cliffs of Albion.—Dover, Folkestone, and Hythe. Off the E. coast are the Goodwin Sands, between the N. and S. Foreland. Among the chief rvs. of K. are the Thames, Medway, Stour, Darent, and Rother. Romney Marsh, in which the Royal Military Canal was cut as a defence against Napoleon, is in the SW., and in the S. is the Weald, once densely wooded. Cereals and fruits are produced, and hops extensively cultivated. Cattle and sheep are reared and pastured. Oysters come from Whitstable and other parts. Manufs. include bricks, pottery, cement, paper, sacks, and gunpowder. There are many breweries, engineering works, and ship

building yards, and there is an oil refinery. The W. end of the co. lies within the London area, and many former Kentish tns are now little more than London suburbs. K. has a number of interesting architectural remains. Area 1525 sq. m.; p. 1,564,324. See J. Harris, *The story of Kent*, 1719; W. Lambard, *A Perambulation of Kent* ('containing the description, hystorie, and customes of the shire'), 1576, 1826; J. R. Smith, *Bibliotheca Cantiana*, 1837; E. Hasted, *Historical and Topographical Survey of Kent*, 1886 (following original ed. of 1778-99); W. Jerrold, *Highways and Byways in Kent*, 1908; J. W. Horsley, *Place-names in Kent*, 1921; W. Page (editor), *The Victoria History of the Counties of England: Kent* (2 vols., 1908, 1926); R. Church, *Kent*, 1948; S. P. B. Mais, *The Land of the Cinque Ports*, 1949.

**Kent Breed**, see SHEEP.

**Kentigern** (or Mungo), St (c. 518-603), of Culross, Perthshire, reared in St Serf's (Servanus) monastery. The 'Apostle of the Strathclyde Britons,' he became Bishop of Glasgow c. 543. Driven from Scotland by Morken, he took refuge in Wales, founding the monastery of S. Asaph. Also he founded Glasgow Cathedral (St Mungo), and is Glasgow's patron saint. See Jocelyn of Furness, 'Vita Kentigerni' (c. 1180) in *Forbes's Historians of Scotland*, v, 1874.

**Kentish Dialoct**, see ENGLISH LANGUAGE.

**Kentish Fire**, name of a peculiar form of applause at public dinners, or political meetings, produced by clapping the hands in unison in a certain rhythm (v-v-v). The effect is sometimes heightened by stamping, and a cry of 'rah' at intervals. It may mark approval or serve as an interruption. It probably originated in the Kentish meetings protesting against Rom. Catholic emancipation (1818-29), and has since been constantly used at Protestant, Conservative, or Orange meetings, especially in N. Ireland.

**Kentish Knock**, Battle of the. In this naval battle, fought 15 m. NE. of the N. Foreland, Adm. Robert Blake defeated the Dutch under De Witt and De Ruyter on 28 Sept. 1652.

**Kentish Rag**, local name applied to the calcareous sandstone occurring on the Kentish coast, in the Lower Greensand measures. It is a greyish-blue, and contains fossil sponges.

**Kentish Town**, dist. of London, in the bor. of St Pancras, originally a *tum*, or settlement of Kentishmen.

**Kentranthus**, family Valerianaceae, genus of European and Mediterranean herbs, of which *K. ruber*, the perennial Red Valerian, has naturalised in Britain. *K. macrosiphon* is a Sp. annual, grown in gardens. Sometimes incorrectly spelt *Centranthus*.

**Kent's Cavern**, or **Kent's Hole**, cave in a small wooded limestone hill near Torquay, Devon, England. It has yielded the bones of extinct or no longer indigenous animals, intermingled with implements of stone and bone. See R. Munro, *Prehistoric Problems*, 1897.

**Kentucky**, S. central state of the U.S.A., bounded on the N. by the Ohio R., separating it from Ohio and Indiana, SE. by Virginia, S. by Tennessee, W. by Illinois, and SW. by Missouri. It has a land area of 40,109 sq. m., and its greatest length is 425 m., breadth 180 m. In the E. and SE. it is mountainous, being traversed by ranges of the Allegheny system; but westward is the Bluegrass region (whence the name Bluegrass State), a beautiful and fertile tract noted for its stock-breeding and grazing capacity. K. is drained mainly by the tribs. of the Ohio R. It is 45 per cent wooded, and the prevailing species of trees are the blue ash, black walnut, tulip-tree, and sweet gum. Tobacco is the most valuable crop, closely followed by corn; hemp, maize, hay, potatoes, fruit of all kinds, cotton, and sorghum are also grown. The tobacco crop in 1951 was 444,084,000 lb., or over one-third of the total crop of the U.S.A. K. tobacco is mainly of the burley type used in the manuf. of chewing tobacco. The horses of K. have long been famous; mules, cattle, sheep, and pigs are also reared. Coal is the chief mineral mined, K. ranking third in production nationally, and next in importance are the iron ores. Petroleum is found, also natural gas and mineral springs. There are clay works and sandstone and limestone quarries; lead, natural cement, and asphalt are among the other minerals. Prin. industries are tobacco and agric. implements, pork packing and tanning, metal goods, textiles, lumber, and furniture. The climate is healthy, and on the whole temperate. K. is divided into 120 cos. Originally a part of Virginia, a settlement was made in 1775 by Daniel Boone, and the same year an effort was made to organise the ter. Admitted to the Union as a state, 1792. K. sends to Congress 2 senators and 8 representatives; the General Assembly consists of a Senate of 38 and a House of Representatives of 100, elected for 2 years. The chief cities are Louisville, 369,129; Covington, 64,450; Lexington, 55,534; Owensboro, 33,651; Paducah, 32,828; Ashland, 31,131; Newport, 31,044; Frankfort (cap.), 11,916. There is a state univ. at Lexington, and a univ. at Louisville. Transport facilities are good, K. being served by the great waterways of the Ohio and Mississippi; there are over 4140 m. (steam and electric) of railway. Pop. 2,944,806. See R. M. McElroy, *Kentucky in the Nation's History*, 1909; J. W. Townsend, *Kentucky in American Letters*, 1913; T. D. Clark, *History of Kentucky*, 1937.

**Kentucky River**, U.S.A., formed by the junction of the N. and Middle forks, rises in the Cumberland Mts and enters the Ohio after a N.-westerly course of about 250 m. It is navigable for its entire course by means of locks. Part of its course is through a deep chasm in the limestone.

**Kenturk**, makt in NW. co. Cork, Rep. of Ireland, with important dairying centre; also manufs. hosiery. It has a 16th-cent. castle, vested in the Irish National Trust. Pop. 1630.

**Kentville**, tn of Nova Scotia, Canada, cap. of Kings co. It is the railway and commercial centre for a rich farming and fruit area, and has canning factories. Site of Nova Scotia Sanatorium. Pop. 4240.

**Kenya**, Mount, extinct volcano which gives its name to a Brit. ter. in E. Africa; situated between 10° and 12° S. of the equator. Called by the Kikuyu 'Kilim-yaga,' and by the Masai 'Doenyo Egeru' ('grey' or 'spotted mountain'). It is a huge truncated pyramid, about 30 m. in diameter at the base, supporting a precipitous rocky pinnacle, divided from its summit by a deep cleft, thus making in effect 2 peaks, 17,058 ft and 17,160 ft high and covered with perpetual snow.

**Kenya Colony and Protectorate**, ter. formerly known as the E. African Protectorate (see BRITISH EAST AFRICA). It includes the coastline from the Umba R. to Dick's Head, together with vast ters. in the interior bounded in part by international convention lines. Like Uganda, K. was practically unknown up to the beginning of the present cent.; Uganda, however, had been visited and described by Stanley, Burton, and Speke, but the ter. which is to-day the colony of K. was shut off from easy communication with the coast by a waterless desert, and the greater part was overrun by the warlike tribesmen, the Masai. K. is bounded on the N. by Ethiopia; on the E. by Jubaland (as to the agreement with Italy see BRITISH EAST AFRICA); on the W. by Uganda; on the S. by Tanganyika. The K. Protectorate consists of the mainland dominions of the Sultan of Zanzibar, extending 10 m. inland along the coast from Tanganyika to Kipini. For these ters. K. has hitherto paid the sultan a rent of £10,000 a year. By the K. Annexation Order in Council, 1920, the ters. outside the mainland dominions of the Sultan of Zanzibar were recognised as a colony, known as K. C., while the sultan's ters. are known as K. Protectorate. Area of protectorate and colony, 224,960 sq. m., including 5230 sq. m. of inland water. A scheme of administration providing for the separate control of the African and settled areas came into operation in 1921. The cap. is Nairobi, and the prin. port Mombasa (q.v.). Other ports are Kisumu (q.v.) on Lake Victoria and the seaport of Malindi (q.v.).

**Divisions and physical features.** The provs. and dists. of K. are: (1) *Northern*: Turkana, Marsabit, Moyale, Mandero, Wazir, Garissa, Isiolo; (2) *Rift Valley*: W. Suk, Trans-Nzola, Usain Gishu, Nandi, Elgeyo-Marakwet, Baringo, Samburu, Laikipia, Nakuru; (3) *Nyanza*: N. Nyanza, Central Nyanza, S. Nyanza, Kericho; (4) *Southern*: Narok, Kajiado, Machakos, Kitui; (5) *Coast*: Taita, Kwale, Kilifi, Tana R., Lomu; (6) *Central*: Nanyuki, Nyeni, Fort Hall, Kiambu, Thika, Embu, Meru; and also the extra-prov. dist. of Nairobi. The country is watered by the Upper Nile, Bahr-el-Ghazal, and Tana R.s, and forms a high plateau. Much of the vast region consists of pasture lands on which very large herds are grazed, or of

barren wastes. There are also, however, dists. of great actual and potential fertility both in the interior and on the coast. The coastal regions have a tropical climate with cool nights, except during the hottest months (Dec. to April). The climate in the highlands is invigorating, with cool breezes, and considerable areas in the Central and Rift Valley Provs. are reserved for settlement by Europeans. The mean maximum shade temp. at Nairobi is about 80° and the mean minimum 54°. The rainfall is under 20 in. in the N. Desert area; from 40 to 80 in. on the coast and in the Nyanza and Kikuyu Provs.; and from 20 to 40 in. in the remainder of the country.

Big game is abundant, the colony being a veritable hunter's paradise. The largest pair of elephant's tusks on record were taken from K., and more lions have been shot annually for the past 20 years in K. than anywhere else, yet they are as numerous in certain outlying parts as ever. The record buffalo also was shot in the colony, and herds are so large that no fewer than 6 bulls are permitted under the Game Laws. Other game are hippopotamus, eland, oryx, wildebeeste, and giraffe. Leopard, hyaena, wild dog, and jackal, all common, are regarded as vermin. Ant-bear, aardwolf, gnanhog, and various cats such as lynx and cervail are plentiful. The bird life is remarkably varied and prolific, including numerous kinds of duck and geese, snipe, bustard, quail, guinea fowls, francolin, sand grouse, pigeon, whistling teal, diving duck, garganey, pintail, and pochard; and, in addition to game-birds, there are ostrich, crane, heron, secretary bird, hornbill, widdah (whidiah), the sunbird of gorgeous plumage, bee-eater, hawk, and starling. The best shooting grounds are either in the N., in the direction of Ethiopia, on lakes Baringo, Hannington, and Rudolph, and on the R.s Tana and N. Usao Nyiro; or S., towards Tanganyika. There is plentiful fishing, either for deep-sea fish like tarpon, Nile perch in the lakes, or brown trout in the mt streams. Entomologists, too, have ample scope for their activities, the insect life including butterflies of astonishing size, colour, and shape, chameleon flies, and mantis, beetles, and other remarkable mimetic insects. Nairobi is the best starting point for the sportsman, and all kinds of outfit, provisions, etc., can be bought there, including any kind of firearm. The Royal National Parks and National Game Reserves of K. provide a rare opportunity for observing big and small game in their actual habitat. The Nairobi National Park is less than 5 m. from the cap. The largest of the national parks, Tsavo, is 7000 sq. m. in area.

**Population.** The pop. of K. was roughly estimated at mid 1955 as follows: African, 5,815,000; Indian, Pakistani, and Goan, 144,000; European, 52,000; Arab, 32,000; others, 5000; grand total, 6,048,000. The encouragement of European settlement in K. was largely due to the desire to establish in the vicinity of

the railway line a pop. that would provide sufficient traffic for the line to repay the heavy outlay on its construction, the railway itself having been built primarily as a means of communication with Uganda. At 31 Dec. 1955 some 13,000 sq. m. of land had been alienated to European (mostly Brit. and S. African) settlers, or were available for alienation, within an area in the highlands of the Central and Rift Valley provs. specifically reserved for such settlement. No freeholds have been granted since 1915. Areas reserved for occupation by Africans, including African settlement areas, totalled 52,000 sq. m.; these do not include the 115,000 sq. m. of the N. Frontier and Turkana, which are largely arid semi-desert.

The introduction of Brit. administration in K. was followed by a considerable influx of immigrants from India. Indians had long lived and traded on the E. African coast, and when the building of the railway was started in 1895 Indian labour was brought in for its construction. In all 35,000 Indians were employed and many of them, with their families, remained as small traders and did much to open up trade with Africans in the interior. Indian immigration has continued steadily to the point where Indians, Pakistanis, and Goans form the second largest community. The Arab pop. is long-established but mainly confined to the coastal lands.

The presence of these various communities, with sharply contrasting modes of life and at widely differing stages of development, naturally carries with it the elements of inter-communal tension, accentuated as the growth of the African pop. creates pressure on agric. land. The grant of the franchise to Europeans in 1919 created a demand for equal privileges by the Indians, which the Europeans bitterly opposed. The Devonshire White Paper of 1923 granted the Indians representation in the legislature on a communal basis, providing also for an Arab elected member and a nominated member to represent African interests. The paper confirmed the special position of the European settlers in the highlands but declared that K. was primarily an African country and that African interests must be paramount in case of conflict. In 1934 a commission under Sir Morris Carter re-examined land questions and certain areas were added to the African reserves under the Native Lands Trust Board. In 1952 extreme elements of the Kikuyu, Embu, and Meru tribes launched the anti-European movement called Mau Mau and began a number of brutal attacks against Europeans and loyal Africans alike. A state of emergency was declared and vigorous action taken against the terrorists, and the revolt, which was confined to a small part of the colony, was virtually ended by 1957. The King's African Rifles (q.v.) played an active part in the suppression of violence and the re-establishment of law and order.

**Administration.** The emergency was

not allowed to halt political progress, which had for some time been moving in the direction of multi-racial representative gov., which was declared to be the aim. The constitution of 1954—the 'Lyttleton Constitution'—provided for a legislative council comprising the governor as president, a vice-president who was speaker, 8 *ex officio* and 18 nominated members, 1 Arab, 6 Asian, and 14 European elected members, 6 African representative members, and 1 Arab representative member. This constitution was declared unworkable in 1957. The present Council of Ministers, together with the Governor's Arab adviser, is the prin. instrument of gov. The council contains 6 officials and 2 other members (these may be officials or unofficial persons), and a further 8 members—4 European, 2 Asian, and 2 African—appointed from among the representative members of the legislative council. There were also 1 Asian, 1 Arab, and 3 African parl. secretaries. In 1957 the African representative members were for the first time chosen at a general election, on a system of plural votes awarded in accordance with certain specified qualifications (see H.M.S.O., Cmd. 309).

Local gov. in the non-African areas is in the hands of municipal authorities in the urban areas and co. and dist. councils in rural areas. Responsibility for prov. and dist. administration in the African areas devolves on the prov. administration under the guidance of the minister for African affairs. There are 24 African dist. councils, bodies corporate with wide powers. At a lower level are locational councils, which may be compared with par. councils.

See E. Huxley, *Lord Delamere and the Making of Kenya*, 1935, and *The Sorcerer's Apprentice*, 1948; N. Farson, *Last Chance in Africa*, 1949; M. Perham and E. Huxley, *Race and Politics in Kenya* (revised ed.), 1957; Lord Hailey, *An African Survey* (revised ed.), 1957; also the *Reports of the K. Land Commission*, Cmd. 4556, 1934, and of the E. Africa Royal Commission, Cmd. 9475, 1953-5.

*African tribes of Kenya.* The African peoples of K. are divided into a great number of tribes, some large, some numbering only a few hundred. The largest tribe is the Kikuyu (q.v.), which with over 1 million members accounts for a fifth of the African pop. The Kikuyu tribe originated in the Central Prov. but has emigrated widely throughout E. Africa. Second in size is the Luo tribe, 760,000 strong, dwelling in the Nyanza Prov. The Baluhya of N. Nyanza are 650,000 strong, the Kamba of the S. Prov. over 600,000. The tribes of K. are of various origins and arrived there as the result of a series of emigrations: some are Bantu, some Hamitic, some Nilotic. Among the most picturesque, though not the most numerous, are the nomad Hamitic Masai, a cattle-owning tribe once renowned as warriors, who formerly dominated a great part of SW. K.; other Hamitic tribes, the Kipsigis, Nandi, and Suk, are beginning to settle and practise agriculture.

The practice of magic for both beneficial and harmful purposes is common to African tribes. It is generally believed that the ritual treatment of certain substances by persons possessed of special powers can affect human beings, animals, or crops in a manner which is recognised to be outside the ordinary course of nature; thus magic to produce courage in war may include portions of a lion among its ingredients, and in many tribes the fertility of the soil is held to be directly influenced by the sexual life of the chief. Only harmful magic can approximately be called sorcery, and this is universally

E.N.A.

MASAI WOMAN OF KENYA

regarded by Africans themselves as a heinous crime. The witch doctors derive their power from the belief that by divination and other means they are able to indicate sorcerers and protect the tribe and individuals against the practice of harmful magic. See A. C. Hollis, *The Masai: their Language and Folklore*, 1905, and *The Nandi: their Language and Folklore*, 1909; C. W. Hobley, *Ethnology of the A-Kamba, and other East African Tribes*, 1910, and *Bantu Beliefs and Magic*, 1922 (refers also to the Kikuyu); W. M. H. Beech, *The Suk*, 1911; G. Lindblom, *The Akamba in British East Africa*, 1920; G. St J. Orde Browne, *The Vanishing Tribes of Kenya*, 1925 (deals with the minor tribes of the Kikuyu dist.); J. A. Massam, *The Cliff Dwellers of Kenya*, 1927 (refers to the Elgeyo tribe); J. G. Peristiany, *Social Institutions of the Kipsigis*, 1939.

*Agricultural and other products.* The main crops and products are sisal, coffee, tea, wattle extract, cotton, maize, wheat, and pyrethrum. In addition the African peasant cultivators produce millets, grains, and pulses, some of which yield an exportable surplus. Beef production, dairying, sheep, pigs, and poultry are

important in the economy, and hides and skins provide a valuable export. The forests produce podocarpus and pencil cedar, camphor, and E. African olive. Soda ash, mainly from Lake Magadi, is the prin. mineral export; others are salt, mullite, gold, limestone, diatomite, and graphite. Considerable damage to agric. land has been caused by soil erosion, the result of unscientific cultivation, especially on sloping land. Included in K.'s £22 million development plan is a plan for the intensified development of African agriculture—the 'Swynnerton Plan'—under which it was planned to spend £6,745,000 in the period 1954-8, on measures including soil conservation, water supply, clearance of tsetse-fly from infested areas, and planned resettlement.

**Trade and revenue.** Under the Congo Basin treaties equality of treatment in respect of imported goods irrespective of origin is ensured, and the grant of imperial preference is therefore inadmissible. For purposes of customs K. and Uganda form a single unit, and by agreement with the Tanganyika Gov. a common tariff has been accepted by the 3 dependencies, thereby securing free movement within these terr. of both imported goods and local products. The prin. exports in 1955 were coffee (£8,905,000), tea (£2,761,000), wattle extract (£2,261,000), sisal (£1,959,000), maize (£1,665,000), hides and skins (£1,302,000), and soda ash (£1,277,000). Figures of external trade for recent years, including bullion and specie and excluding all inter-territorial trade with Uganda and Tanganyika, are:

	Net Imports £ (thousands)	Exports and Re-exports £ (thousands)
1938	5,229	3,989
1950	34,078	20,736
1953	51,718	22,896
1954	60,329	22,769

In 1955 the main imports into K. and Uganda were iron and steel manufs., other base metal manufs., industrial and commercial machinery, road and rail vehicles and other transport equipment, electrical equipment, motor and other fuels, rubber tyres, cotton fabrics (piece goods), blankets and travelling rugs. The U.K. sent 44.3 per cent of these imports, other Brit. Commonwealth countries and foreign countries 55.7 per cent.

Revenue and expenditure for 1938, 1952-3, and 1954-5 were as follows:

Year	Revenue £	Expenditure £
1938	3,776,030	3,876,952
1952	20,548,149	18,858,621
1953	21,351,865	22,853,430
1954-5	35,000,848	38,930,039

In 1954 the financial year was changed to run from 1 July to 30 June. Public debt at 30 June 1954 was £33,064,740.

**Communications.** The K. and Uganda Railway, since 1 May 1948, has been amalgamated with the Tanganyika Railways to form the E. African Railways and Harbours (see EAST AFRICAN RAILWAYS).

See N. Leys, *Kenya, 1924, and A Last Chance in Kenya, 1931*; W. MacGregor Ross, *Kenya from Within, 1927*; C. W. Hobley, *Kenya: From Chartered Company to Crown Colony, 1929*; H. O. Weller, *Kenya without Prejudice, 1931*; L. S. B. Leakey, *Kenya Contrasts and Problems, 1936*, and *Mau Mau and the Kikuyu, 1952*; K. Gandar Dower, *The Spotted Lion, 1937*; Sir F. J. Jackson, *The Birds of Kenya Colony and the Uganda Protectorate, 1938*; Lord Cranworth, *Kenya Chronicles, 1939*; E. M. Wiseman, *Kenya—Then and Now, 1948*.

**Kenyon, Sir Frederic George (1863-1952)**, Director and Prin. Librarian of Brit. Museum; noted antiquary, and skilled in study of papyri and numismatics. Was elected president of the Brit. Academy, 1917; in 1918 prof. of anc. hist. at the Royal Academy; in 1934 president of the Society of Antiquaries. He also served as president or on the committee of a number of other learned bodies and societies and was the recipient of many honours. Among his numerous publs. are *Classical Texts from Papyri in the British Museum, 1841*, *Facsimiles of Biblical MSS. in the British Museum, 1900*, *Handbook to the Textual Criticism of the New Testament, 1901* (new ed., 1912), *The Buildings of the British Museum, 1914*, *Ancient Books and Modern Discoveries, 1928*, *Libraries and Museums, 1930*, *The Bible and Archaeology, 1940*, *The Chester Beatty Biblical Papyri (8 parts), 1933-41*, *The Reading of the Bible, 1944*, and *The Bible and Modern Scholarship, 1948*.

**Kenyon, Lloyd, Lord (1732-1802)**, lawyer, lord chief justice of England (1788-1802). He won fame by his defence of Lord George Gordon, on trial for treason over the outbreak opposing toleration of Rom. Catholics (1779). K. became attorney-general in 1782, and received the title Lord K., Baron Greddington (1788). See J. C. Campbell, *Lives of the Chief Justices, 1849-57*, and *Lives of the Lord Chancellors, 1845-69*; also life by G. T. Kenyon, 1873.

**Keokuk**, city of Iowa and port on the Mississippi R. where the K. Dam (53 ft high, 4649 ft long, with hydro-electric plant, dry docks, and navigation lock) since 1913 has formed Lake K., covering the old Des Moines Rapids and reaching 32 m. to Burlington. K. manufs. food and metal and wood products, calcium carbide, blasting powder, and shoes. Here the Des Moines R., separating Iowa from Missouri, flows into the Mississippi. Pop. 16,100.

**Kephallenia**, see CEPHALONIA.  
**Keppler, or Keppler, Johannes (1571-1630)**, Ger. mathematician and astronomer. b. Weil der Stadt. His parents, though of noble descent, were in reduced

circumstances, and while K. was a child his father became innkeeper at Eimendingen. In 1586 K. was admitted into the monastic school at Maulbronn, where the cost of his education was defrayed by the Duke of Württemberg, and from there he passed to Tübingen Univ. He had originally intended to prepare for the ministry of the Evangelical Lutheran Church, but c. 1594 he accepted the astronomical lectureship in the univ. of Grätz (now Graz). His own modest assurances that at that period he had given no particular attention to astronomy are misleading; in his mathematical studies he had been well grounded in the subject, had learned Copernican principles from Moestlin, his famous tutor at Tübingen, and had been praised by Moestlin for his essay on primary motion. In 1596 his *Prodromus dissertationum cosmographicarum seu mysterium cosmographicum* was pub. and won him the friendship of Tycho Brahe and Galileo (qq.v.). He married in 1597, and in 1600 he became assistant to Tycho Brahe. On the latter's death in the following year he succeeded him as prin. imperial mathematician to Rudolph II, and was given the task of completing the *Rudolphine Tables* (1622), left unfinished by Brahe. He was now able to devote much of his time to astronomical research. Rudolph had a far greater interest in astrology than in astronomy, and K., like Brahe, was of great value to him, and to his successor, Matthias, because of his knowledge of the casting of nativities. K. himself attested his faith in the subject, and one of his pubs. which brought him fame during his lifetime was an astrological one, *De fundamentis astrologiae*, 1602. After Rudolph's death K. remained in favour and continued his astronomical research. His wife d. in 1611, and he remarried in 1614. In 1619 he pub. *De harmonia mundi*, dedicated to James I. of England, on which Newton later began his studies for the *Principia*. James invited him to England, but, though in constant poverty at a court which rarely paid him his salary, K. refused the invitation. About 1629 he became astrologer to Wallenstein. At his death he had pub. 33 works; he left 22 vols. in MS. and a voluminous correspondence. K.'s prin. claim to immortality lies in his discovery of the 3 celebrated laws of planetary motion which bear his name. These laws, though not proved till Newton's *Principia* appeared, revolutionised astronomical calculations, and entitle K. to rank as one of the 4 great men who laid the foundations of modern astronomy. For an account of K.'s laws see ASTRONOMY and GRAVITATION. There are eds. of his collected works by C. Frisch, 1858-72, and W. von Dyk and M. Caspar, 1937 ff. See also lives by Sir D. Brewster, 1841; C. G. Reuschle, 1871; H. W. Bryant, 1921; F. E. Brasch and others, 1931, and a useful study by E. Zinner, 1934; also H. Macpherson, *Makers of Astronomy*, 1933; M. Caspar, *Johann Keplers wissenschaftliche und philosophische Stellung*, 1935 and Biblio-

*graphica Kepleriana*, 1936; K. Hildebrandt, *Kopernicks und Kepler*, 1944; Carola Baumgardt, *Johannes Kepler, Life and Letters*, 1951.

**Keppel, Augustus**, Viscount (1725-86), Eng. admiral, son of the 2nd Earl of Albemarle. After having entered the navy he was successful in many expeditions, among them the capture of Havana in 1762. He was a Whig sympathiser and believed that the Tory gov. would be glad to see his failure in action. In 1778 he allowed the Fr. fleet to escape off Ushant. At the subsequent court martial K. made charges of neglect of duty against Sir Hugh Palliser (q.v.), his subordinate, which were declared malicious and ill-founded. He was, however, acquitted. In 1782 he was made First Lord of the Admiralty, and created a viscount. See life by T. Keppel, 1842.

**Keppel, Sir Henry** (1809-1904), Eng. admiral and writer, son of the 4th Earl of Albemarle. After service in other places he was instrumental in putting down piracy off the shores of China and in the Pacific about the middle of the 19th cent. He was in command of the naval brigade at Sevastopol, and in 1857 was successful against the Chinese in Fatsan Bay. In 1869 he was made a full admiral; G.C.B. in 1871, and in 1877 admiral of the fleet. His writings include *Visit to the Indian Archipelago*, 1853, and *A Sailor's Life under Four Sovereigns*, 1899. See Sir A. West, *Memoir of Keppel*, 1905.

**Ker, Family of**, surname of 2 noble families of Anglo-Norman extraction, said to have been living in Scotland at the end of the 12th cent. They settled in Roxburghshire, and derived their descent from the families of Fernihirst and Cessford. In 1357 John K. of Altonburn gave origin in his 3 sons to the families of Linton, Cessford, and Gateshaw, and in a grandson to that of Fernihirst—the Marquess of Lothian being the present chief male representative of this family. Sir Walter K., son of Sir Andrew K. of Cessford, was created Earl of Roxburghe in 1616. The grandson of the 2nd Earl of Roxburghe, viz. the 5th earl, was created duke in 1707, and the present Duke of Roxburghe is the chief male representative of the family of Cessford.

**Ker, Robert**, see SOMERSET, EARL OF.  
**Ker, William Paton** (1855-1923), scholar, b. Glasgow. Educ. at Glasgow Academy and University and Balliol College, Oxford, he became a fellow of All Souls in 1879. In 1883 he was appointed prof. of English and hist. at Cardiff, and in 1889 moved to the Quain Chair of English at Univ. College, London. In 1920 he became prof. of poetry at Oxford. He was one of the greatest authorities on medieval literature, his chief works being *Epic and Romance*, 1897, *The Dark Ages*, 1904, *The Art of Poetry*, 1920, *Essays on Medieval Literature*, 1923, *English Literature: Medieval*, 1924, and *Form and Style in Poetry*, 1928, a collection of lectures and notes ed. by R. W. Chambers. See J. and F. McCunn, *Recollections of William Paton Ker*, 1924.

**Kerala**, state of India along the SW. coast, bounded on N. by Mysore and on E. by Madras. It consists of an alluvial coastal plain and a hilly hinterland (part of W. Ghats) which cuts it off from the rest of India. It has a truly tropical climate, temps. seldom going outside the range of 70-90° F., and a heavy rainfall. The coastal backwaters and lagoons, linked by canals, give it great beauty besides being useful as means of transport.

**History.** K. is cut off from India and has been out of the main stream of Indian hist. Though settled from the earliest times, and linked by sea with the W. from Phoenician days, K. was never part of the great empires of Hindustan. The great S. dynasties of Cheras (whence 'Kerala') and Pandyas ruled here. It was part of Vijayanagar, and later part of it was under Bijapur and Mysore kingdoms. Vasco da Gama landed at Calicut and Cochin saw the first European settlement in India (by the Portuguese). The local dynasties of Cochin and Travancore retained their kingdoms, though the Zamorins of Calicut lost theirs; the former both acceded to independent India in 1947, and were fused into one state in 1949. In 1956 the addition of Malabar dist. of Madras state made all K., the land of the Malayalis, one state.

**Development.** Rice and coco-nuts are the main crops; tapioca, sweet potatoes, ground-nuts, and spices are also produced. Plantation crops; are rubber, tea, and coffee—mainly in the hills. Mineral resources are white clay (used in ceramics), lignite, and, of modern strategic interest, the ilmenite, monazite, and zircon sands of the beaches with a big radio-active thorium content. Fisheries, rich in prawns and sardines, will be of increasing importance. K. has many cottage industries connected with the coco-nut palm. Modern industries include rubber, textiles, fertilisers, oil soap, and cement.

**Culture.** Ethnographically K. is most interesting. Its Hindus carried orthodoxy to absurd extremes. Its 'untouchables' were actually unapproachable and 'un-seecable' by the high caste Nambudri Brahmins without pollution of the latter. The Nambudris are less educ. than most other Brahmins of India; their marriage customs tend to their extinction. The leaders in progress are the Nairs, with an interesting matriarchal system of inheritance, considerable freedom for their women, and a martial tradition. The Syrian Christians, in places 30 per cent of the pop., antedate any European mission in their origin; Cochin has ant. communities of Black and White Jews; and the Muslim Moplahs are said to date back to the settlement of Arab sailors. Malayalam is the language—it is linked with Tamil.

K. has the highest literacy in India (over 50 per cent where India's average is 13 per cent). The univ. with H.Q. at Trivandrum has over 40 affiliated and constituent colleges. Educ. unemployment has been a big problem.

**Government.** The governor acts through

ministers responsible to a legislative assembly of 126. K. is the only Indian state with a sizeable Communist party in its legislature, and in 1956 this party won control of the assembly at the general elections. In India's Parliament K. has 9 seats in the Upper and 18 in the Lower House.

The cap. is Trivandrum (pop. 187,000), former cap. of Travancore. Other tns are Calicut (pop. 159,000), famed for calico; Alleppey (pop. 116,000); Trichur (pop. 58,000); and Ernakulam (pop. 47,000). With an area of 15,035 sq. m. and a pop. of 13.5 million, K. is the most densely populated state of India.

*See also* COCHIN; MALABAR; TRAVANCORE.

**Kerbela**, sacred tn of Iraq, about 60 m. SW. of Bagdad, connected with the Euphrates by a canal. Here is the tomb of Hussein, son of Ali, the goal of numbers of pilgrims. The people are engaged in making sacred bricks, and the chief exports are cereals and dates. Pop. (liwa) 276,670; (tn) 72,000.

**Kereh'** (anc. Panticapæum), tn on the K. Peninsula in E. Crimea. It is an important industrial and transportation centre, with an iron and steel industry (since 1846), shipbuilding, and fisheries; it is a seaport, with a train ferry to the Caucasus. There are many ant. monuments, and an archaeological museum (founded 1826). K. was founded by Greeks in the 6th cent. BC; from the 5th cent. BC to the 4th cent. AD it was cap. of Bosphor Kingdom (q.v.), then in turn Byzantine, Tatar, and Turkish; since 1774 it has been Russian. It was destroyed in the Crimean War and in 1941-3. Pop. (1956) 95,000 (1926, 36,000; 1939, 104,000).

**Keren**, plateau and tn in Eritrea, Federation of Ethiopia and Eritrea, of strategic value since it covers Asmara, and the railway from Sudan to the coast. In the Second World War, it. positions therein were captured after heavy fighting between 21 and 27 Mar. 1941.

**Keren Hayesod**, *see* ZIONISM.

**Kerenskiy**, Aleksandr Fëdorovich (1881- ), Russian politician, b. Simbirsk, son of a headmaster. He studied law at St Petersburg Univ., and practised in Saratov. He achieved popularity by his eloquent defence in political cases, and in 1912 was elected to the fourth Duma (*see* DUMA), where he became leader of the Labour group (a group of moderately Socialist peasant members); later he joined the party of Socialist Revolutionaries (q.v.). At the beginning of the revolution in 1917 he became deputy chairman of the St Petersburg Soviet of Workers' Deputies (*see* SOVIETS) and minister of justice in the Provisional Gov. (q.v.). In May he became minister of war and navy, in July Prime Minister, in Sept., after the Kornilov affair (*see* KORNILOV), also supreme commander-in-chief. The policy of the democratically minded provisional coalition govs. headed by K. was to continue the war and to defer major reforms until the convocation of the

Constituent Assembly. This enabled the Bolsheviks (q.v.), together with their allies the Anarchists and the Left Socialist Revolutionaries, to exploit the war-weariness and the impatience of the politically immature Russian masses and to seize power. K. emigrated and lived in Paris, where he pub. a left-wing Russian paper *Dni (The Days)*; since 1940 K. has lived in the U.S.A. See his *The Crucifixion of Liberty*, 1933, and *The Road to Tragedy*, 1935; also W. H. Chamberlin, *The Russian Revolution*, vol. i, New York, 1935.

**Kerguelen Islands**, Fr. is. in the SE. of the Indian Ocean, 38°-50° S. lat. and 70°-80° E. long. They are mountainous and volcanic, and are used as a scientific research base and administrative H.Q. The is. include St Paul, New Amsterdam (lat. 38°), which has a fishing industry and an important radio station, and Crozet Is. (lat. 46°), which are uninhabited. A characteristic feature of the vegetation is the Kerguelen cabbage (*Pringlea antiochensis*), a member of the order Cruciferae and a preventative of scurvy. The is. were discovered by Yves Joseph de Kerguelen-Trémarec (1745-97) in 1772 and annexed by the French in 1893. Area 1480 sq. m.

**Koriya**, or **Kiria**, tn in Sinkiang, China, situated 95 m. E. by S. of Khotan, and standing at a height of 4500 ft. Jade is found. Pop. 13,000.

**Kerkade**, tn in the prov. of Limburg, Netherlands, 15 m. ENE. of Maastricht, near the Ger. border. It is the centre of a coal-mining region. Pop. 46,140.

**Kerkuk**, see **KIRKUK**.

**Kerkyra**, see **CORFU**.

**Kermadec Islands**, group of uninhabited volcanic is. of the Pacific Ocean, lat. 30° S. and long. 178° 30' W., one of the chief being Sunday or Raoul Is. (20 m. in circuit). They belong to New Zealand. Area 15 sq. m.

**Kerman**, or **Kirman**: 1. Prov. in the SE. of Persia, bounded on the N. by Khorasan, the E. by Baluchistan, the W. by Yazd, and the S. by Mekran, and having an area of about 85,000 sq. m. Most of the surface is barren, especially in the N. and NE. The inhab. are chiefly engaged in agriculture, and carpet-making is the most important local industry. Pop. about 600,000.

2. Cap. of the prov. of the same name, stands at an elevation of over 5000 ft. A centre of the Persian carpet industry. It has a spinning factory and wool-carding plants. It has a small Zoroastrian community. Pop. 62,000.

**Kermanshah**, tn of Persia, 275 m. WSW. of Tehran, and standing at the junction of the caravan routes from Bagdad, Tehran, and Isfahan. It has a small oil-refinery, which is connected by pipe-line to Naft-i Shah. It is the centre of a large grain-growing area. Pop. 125,000.

**Kermanshahan**, dist. of W. Persia, bounded on the N. and W. by Sanandaj, on the NE. by Asadabad, on the S. by Shahabad, on the E. by Nehavand and Tuysarkhan, and on the SE. by Khorrama-

bad. It is a fertile grain-producing area. Pop. 300,000.

**Kermes**, see **ADELGES**.

**Kern, Jerome** (1885-1945), Amer. composer, b. New York. He studied under Paolo Gallico and Alexander Lambert, and turned to the composition of musical comedy and other light music. His works include *Sunny*, 1925, *Show Boat*, 1927, *Music in the Air*, 1933, and others. He also wrote music for films.

**Kernahan, John Coulson** (1858-1943), author, b. Ilfracombe, Devon. Educ. privately by his father, Dr James K., F.C.S., and at St Albans, he collaborated with F. Locker-Lampson in editing the anthology *Lyra Elegantiarum*, and was until 1905 literary adviser to Ward, Lock & Co. His works include *A Dead Man's Diary*, 1890, *God and the Ant*, 1895, *Captain Shannon*, 1901, *Scoundrels & Co.*, 1901, *In Good Company*, 1917, *Spiritualism*, 1919, *Black Objects*, 1920, *Six Famous Living Poets*, 1922, *The Reading Girl*, 1925, *Five More Famous Poets*, 1928, *A Dog and his Master*, 1932, and *Chatter about Dogs*, 1936.

**Kerner, Justinus Andreas Christian** (1786-1862), Ger. poet, b. Ludwigsburg in Württemberg. He studied medicine at the univ. of Tübingen, took his doctor's degree in 1808, and practised in Wildbad. In 1815 he was made medical officer of Guldorf, and in 1818 of Weinsberg, where he spent the rest of his life. His works include *Die Reiseschatten von dem Schattenspieler Luchs*, 1811, *Deutscher Dichtervald*, 1813, *Der letzte Blütenstrauss*, 1852, *Winterblüten*, 1859. In later life he became interested in occultism, and wrote the novel *Die Seherin von Prevorat*, 1829. See F. Heinzmann, *Justinus Kerner als Romantiker*, 1908, and H. Straumann, *Justinus Kerner und der Okkultismus*, 1928.

**Kerosine** (Gk *kēros*, wax), colourless mixture of liquid hydrocarbons distilled (between 150° and 300° very approximately) from petroleum. The sp. gr. varies from .780 to .825, the boiling range is about 140°-300° C., the flash point varying accordingly. In England it is often known as paraffin or paraffin oil. It is a colourless liquid, with a characteristic smell and a blue fluorescence. The composition of K. varies according to the purpose for which it is intended. It has long been used as an illuminant and domestic heating fuel, and the spirit prepared for these purposes tends to exclude all but the paraffin hydrocarbons, since the aromatic and naphthenic hydrocarbons form smoke readily. In the same way a low sulphur content is desirable. When it is used as fuel for low-compression spark-ignition engines (as in tractors and some small boats) in the form of vaporising oil a wider range of hydrocarbons is possible. The third major use of K. is as fuel for gas turbine engines in jet aircraft. Here a high calorific value is important, while hydrocarbons tending to become viscous at the low temps. encountered at high altitudes have to be eliminated. K. has also numerous uses as a solvent.

Kérroualle, Louise Renée de, see PORTSMOUTH AND AUBIGNY, DUCHESS OF.

Kerr, Orpheus C., see NEWELL, R. H.

Kerr, P. H., see LOTHIAN, MARQUESS OF.

Kerria, monotypic genus, family Rosaceae; *K. japonica*, Jew's Mallow, of China and Japan, being a popular wall shrub in gardens, especially variety *flore pleno*, with double flowers.

Kerry, maritime co. of Munster, SW. Rep. of Ireland. The coastline is deeply indented with bays and harbours, such as Tralee, Dingle, Kenmare, and Bantry. The surface is very mountainous, containing the Macgillcuddy Reeks (highest range in Ireland) with Carrantnohill (3410 ft), Brandon and Mangerton, Slieve Mish, and Cahra Mts. The famous Killarney lakes are in this co. The rivers are short and of little importance. Among the islands off the coast are the Skelligs, Blaskets, and Valentia, where slates and flagstones are quarried. The chief towns are Tralee (cap.), Killarney, Listowel, Dingle, Cahirciveen, and Castleisland. Oats and butter are exported, and potato-growing and fisheries are extensive. Rebellions in Elizabeth's reign destroyed much of the co.'s former prosperity. Area 1,161,708 ac.; pop. 140,000. See R. Haydon, *In the Kingdom of Kerry*, 1946.

Kerry, Ring of, famous coastal strip round the Iveragh peninsula, containing some of the finest scenery in Ireland.

Kerry Blue Terrier. Compact and sturdy dog, with a soft, full coat of dark bluish tone, ears carried close to the head, tail thin and held erect. Strong, inclined to be pugnacious, it makes a good watchdog. It is popular in England, as well as in Ireland, its country of origin.

Kerry Hill Breed, see SHEEP.

Kersey, kind of woollen cloth which is twilled, and has a smooth face, soft nap, and diagonally ribbed appearance. It probably derives its name from K. in Suffolk, England.

Kersley, see KEARSLEY.

Keshub Chunder Sen, or Keshava Chandra Sen (1838-84), Indian religious reformer, b. Calcutta, of a high-caste family, and educ. at one of the colleges there. In 1857 he joined the Brahmo Samaj, a movement for religious reform, of which he shortly became the leader. In 1870 he visited England and was warmly welcomed, especially by the Unitarians. For an account of his doctrine and work see BRAHMO SAMAJ.

Keshwa, see QUEBWA.

Kessel-Loo, tn in prov. of Brabant, Belgium, 2 m. NE. of Louvain. Pop. 17,500.

Kesseling, Albert (1885- ), Ger. soldier, b. near Baireuth, of a good Bavarian middle-class family; entered the army in 1904, and served in the artillery. After 2 years on the W. front he joined the general staff, 1916. In 1926 he was transferred to the high command, under von Seeckt. He became a specialist in land-air co-operation, and one of the first advocates of the dive-bomber. In 1936 he was transferred to the Luftwaffe as the delegate of the Reichswehr, and became chief of the air staff, so as to restore full liaison

with the army. Having learned to fly he took command, in 1939, of the first Ger. operational air-fleet, and in the war co-operated with von Bock's army group in Poland, in Flanders, and in the advance towards Moscow. In 1940 he became field-marshal. It fell to his lot to command the Ger. arms in three of the most crucial battles of the war against Britain: the battle of Britain (together with F.-M. Sperrle), the battle of Malta, and the battle of the Salerno beaches. He began all three with greatly superior forces, and with the odds all in his favour; and he lost them all. His defeats were not those of a blundering Nazi intruder; they were the defeats of the military caste itself. Nevertheless in April 1942 he was made commander-in-chief of the S. while Rommel (q.v.) remained only an army commander. But he failed again, his most resounding defeat being the conquest by the Allies of the Gothic line. Later, after von Rundstedt's defeat in the Ardennes battle, K. was put in command on the W. front. He was tried in 1947 before a Brit. military court, at Venice, for war crimes: for the massacre of 335 It. civilians at the Ardeatine caves in Mar. 1944, and for inciting his forces to ruthless acts against partisans. The trial began on 10 Feb., and closed on 6 May, K. being found guilty and sentenced to death by shooting, this being later commuted to life imprisonment. He appeared before a denazification court in 1952, and was released in June of that year. See his memoirs, 1953.

Kessels, Matthew (1784-1836), Dutch sculptor, b. Maastricht, studied in Paris, under Girodet, and at Rome, where he reproduced the 2 famous medallions of 'Dawn' and 'Night,' and won a prize in open competition with his statue 'St Sebastian pierced by Arrows.' His masterpiece was the mausoleum for the Comtesse de Selles at Rome.

Kessingland, par. and vil. of Suffolk, England, 4½ m. SW. of Lowestoft. Pop. 2000.

Kesteven, Parts of, div. of the co. of Lincs. in the SW. of the co. Area 463,490 ac.; pop. 130,717.

Kestrel, popular name of *Falco tinnunculus*, a species of birds belonging to the Falconidae, the alternative name, wind-hover, being sometimes given, owing to its habit of suspending itself in mid air while searching for its prey. The K. feeds on small mammals, insects, frogs, worms, etc., and is welcomed by landowners as a destroyer of vermin. The male bird attains a length of 12½ in., and has plumage of a reddish tinge, with head and neck of ashy grey; the female has dark spots or streaks with indistinct bars on the tail. It rarely builds its own nest, but uses those of crows, magpies, etc., or scrapes a hole on some cliff-ledge. It is found all over Europe and N. Asia, and migrates in the winter to China, India, and NE. Africa. *F. naumanni*, the lesser K., is an inhab. of S. and SE. Europe.

Keswick, anct mkt tn of Cumberland, England. K. has a Druid Circle of 88 stones. Crosthwaite (the old par.) church

stands on the spot where St Kentigern planted his cross in 583. Greta Hall was the home of Southey, and, for a time, of Coleridge. Formerly a mining and woollen centre, K. now manufs. lead pencils. It is at the foot of Skiddaw (3085 ft. q.v.), and is a famous centre for rock-climbers and fell-walkers. Pop. 5000.

**Ketch**, Jack (*d.* 1886), public executioner, appointed about 1863, and for 2 cents. his name was used as a nickname for the holder of his office. This was probably due to the notoriety he obtained after his bungling execution of Lord Russell in 1883 and the Duke of Monmouth in 1685.

**Ketch** (from Turkish *gaik*, a boat; cf. Dutch *kits* and Fr. *carche* or *cache*), strongly built, 2-masted vessel of 100 to 150 tons burden. The peculiarity of the rig formerly afforded ample space, and they were used as bomb-vessels. The masts are the main and the mizzen, and the sails are mostly fore and aft. K.s were formerly much used as yachts.

**Keteleeria**, genus of 2 Chinese coniferous trees, family Pinaceae; *K. davidiana* and *K. fortunei* eventually grow to 80 to 100 ft.

**Ketene**,  $\text{CH}_2\text{:CO}$ , an unstable reactive gas made by passing acetone (q.v.) through strongly heated metallic tubes. It is used in the cellulose acetate industry.

**Ketones**, class of organic compounds allied to the aldehydes, but containing 2 alkyl, 2 aryl, or 1 alkyl and 1 aryl, groups united to the carbonyl (CO) group. The simplest ketone is acetone, or di-methyl ketone,  $\text{CH}_3\text{:CO:CH}_3$ ; phenyl methyl ketone or acetophenone (used as soporific under name of hyponne) is  $\text{C}_6\text{H}_5\text{:CO:CH}_3$ , and so on. K.s are prepared by oxidising secondary alcohols or by heating the calcium salt of a fatty acid; they are stable substances which form crystalline addition products with sodium bisulphite and condensation products with phenylhydrazine and hydroxylamine. On reduction they yield secondary alcohols, and on oxidation a mixture of acids. See ACETONE.

**Ketrzyn** (Ger. *Rastenburg*), tn of Poland, in Olstzyn prov., 40 m. ENE. of Olstzyn (q.v.). Until 1945 it was in E. Prussia (q.v.), and was the site of a Ger. national stud farm. It has a trade in agric. produce. Pop. 6000.

**Kett**, Robert (c. 1500-49), rebel. Though popularly called a tanner, K., who lived at Wymondham, possessed a good deal of land in Norfolk. He led an agitation against the enclosure of common lands. With his brother, Wm, he marched with a body of rebels to Norwich, and encamped on Mousehold Heath (6 July 1549). Later the rebels took Norwich, but in Aug. their forces were destroyed by troops under the Earl of Warwick. The K. brothers were captured and hanged, Robert being put to death in Norwich, 7 Dec., after a trial in London. See J. Clayton, *Robert Kett and the Norfolk Rising*, 1912.

**Kettering**, mkt tn of Northants, England, 72 m. NNW. of London. Its prin.

industries are the manuf. of footwear and clothing, and engineering. The H.Q. of the Boot, Shoe, and Allied Trades Research Association is in K. Wicksteed Park of 100 ac., which lies S. of the tn, was the gift of Mr Charles Wicksteed. Pop. 38,510.

**Kettle-drum**, see DRUM.

**Keulen**, or **Ceulen**, Ludolph van (1540-1610), Dutch mathematician, b. Hildesheim, in the prov. of Hanover; prof. of fortification at Leyden. He devoted many years to finding the value of  $\pi$ , and in 1586 had computed its value to 20 decimal places. He continued his calculations up to the time of his death when he had worked it out to 35 decimal places. The term 'Ludolphische Zahl' was used until comparatively recent times in Germany to denote  $\pi$ . See also CIRCLE; METROLOGY;  $\pi$ .

**Keuper**, stratigraphical name, originating in Germany, for Upper Triassic rocks. In Britain K. beds fall into 2 divs.; an underlying K. Sandstone div. made up of continental sandstones with some marls followed by the K. Marls consisting chiefly of marls and shales. Important salt deposits occur in the K. Marls. In Germany the K. includes the Rhaetic Series and is divided into 3 groups: the Rhaetic, or Upper (Hautkeuper or Gypskeuper), the Middle, and the Lower (Kohlenkeuper or Lettenkohle). The first is mainly composed of sandy, dark grey shales and marls; the second, the thickest bed, of grey and green marls, gypsum, dolomite, and sandy shales below; the third, of grey dolomite with impure coal at the base. Some authorities regard the Brit. Rhaetic as the highest div. of the K. (see also RHAETIC BEDS and TRIASSIC SYSTEM). K. is not rich in fossils.

**Kew**: 1. Par. of Surrey, England, in the bor. of Richmond, on the R. Thames, 7 m. SW. of London, of which it is a suburb. A bridge connects K. with Brentford. The church on the green, dating from 1713, contains the mausoleum of the first Duke and Duchess of Cambridge and Gainsborough's (q.v.) grave. In the 18th cent., Frederick, Prince of Wales, lived at K. House. George III purchased the property later, and Queen Charlotte d. there (1818). The magnificent royal botanical gardens, containing the most famous collection of plants in Europe, were founded in 1759 by George III's mother, and have since increased in extent from 11 to about 200 ac., now forming the chief feature of interest at K. They were presented to the nation by Queen Victoria (1840), and have since been kept up at national expense, and are open daily to the public. Sir W. J. Hooker (q.v.) (1785-1865), and his son, Sir J. D. Hooker (q.v.) (b. 1817), who were both in turn directors of the botanical gardens (1841-85), contributed largely to their excellence. The temperate house (finished 1899) is one of the largest plant-houses in the world. There are numerous fine conservatories, palm-houses, ornamental temples, and an arboretum. The herbarium, which is the most important

in the world, the taxonomic library, the 3 museums, the Jodrell laboratory, and N. gallery, together with the living collections, constitute an unrivalled equipment for the identification of plants. These gardens have been of enormous practical use to the Brit. colonies; it is owing to researches carried on there, for instance, that rubber was estab. in

The Royal Botanical Gardens, Kew

#### THE CHINESE PAGODA AT KEW

the Malay peninsula, and that the cinchona tree, from which quinine is obtained, was introduced into India. The Chinese pagoda (erected 1761) is about 163 ft high. Chronometers and scientific instruments are tested at the K. observatory or meteorological station. See also BOTANIC GARDENS. See H.M.S.O., *Kew Gardens—Illustrated Guide*, 1935.

2. City of Bourke co., Victoria, Australia, residential suburb, 4 m. from Melbourne.

**Kewanee**, city in Illinois, U.S.A., 30 m. NE. of Galesburg, in agric. and coal-mining area. K. manufs. boilers, pumps, etc. Pop. 16,800.

**Keweenaw Peninsula**, Michigan, U.S.A., part of the Upper Peninsula of Michigan, curving 60 m. into Lake Superior. Formerly very rich in copper, it is now

a resort area, though there is still copper-mining, and also lumbering, farming, and commercial fishing. It is crossed by the Keweenaw Waterway and has boat connections to Isle Royale National Park.

**Key**, Sir Astley Cooper (1821–88), admiral, b. London; entered the navy in 1833. He distinguished himself at the time of the Crimean War. Between 1869 and 1872 he was superintendent of Portsmouth and of Malta dockyards. In the latter year he was made president of the Royal Naval College of Greenwich, was made admiral in 1878, and First Naval Lord of the Admiralty from 1879 to 1885. See P. H. Colomb, *Memoirs of Sir A. C. Key*, 1898.

**Key**, Ellen (1849–1926), Swedish authoress, b. Gladhammar. At first a teacher, she became interested in social reform, and began to write on marriage and the raising of the standard of living. Her *Barnets drhundrade*, 1900, was a plea for the welfare of children. Her other works include *Tankebilder*, 1898 (trans. as *Ideas*), and *Lifslinjer*, 1906 (*Lines of Life*). See J. Landquist, *Ellen Key*, 1904, and M. Leche-Löfgren, *E. Key Hennes liv och verk*, 1930.

**Key**, Francis Scott (1779–1843), Amer. lawyer, b. Maryland. Wrote the national anthem of the U.S.A., *The Star-Spangled Banner*. He is buried at Frederick, Maryland, where there is a monument erected to him at the entrance to the cemetery. The poem which has preserved his name was written in intensely dramatic circumstances during the war of 1812.

**Key**, Thomas Hewitt (1799–1875), Eng. classical scholar, b. London; educ. at St John's and Trinity Colleges, Cambridge. From 1825 to 1827 he was prof. of mathematics at the univ. of Virginia, and in 1828 prof. at the univ. of London. In 1832 he was made joint headmaster of Univ. College School, and in 1842 sole headmaster. He introduced the crude form system used by Sanskrit grammarians into the study of the classics. Writings include *Philological Essays*, 1868, and *Language: its Origin and Development*, 1874.

**Key**, see LOCKS AND KEYS.

**Key**, see SAMARA.

**Key**, in music, the term applied to a succession of notes in a scale considered with reference to their harmonic relations to one another, and to the chords which can be formed by them. The starting-note of each scale is the tonic or keynote, and gives its name to the K., which may be either major or minor, according to the intervals. The term K. is also applied to the levers by which the sounds of a musical instrument are produced.

**Key-dwellers**, name formerly given by archaeologists to a now extinct race. They lived in the numerous is. reefs or 'keys' (Sp. *cayo*, 'shoal', 'reef') off the W. Indies and Sp. America, especially in the low islets or sandbanks off the SW. coast of Florida, the chief being Cayo Largo and Cayo Hueso (Thompson's Is. or Key West) about 55 m. from Cape Sable. Wrecks are

frequent near this group of coral is. See F. H. Cushing, *Report of the Pepp Heresi Expedition*, Philadelphia, 1897.

**Key Islands**, see KEA ISLANDS.

**Key West**, port of entry, health resort, and co. seat of Monroe co., Florida, U.S.A., on K. W. Is. (4 m. long, 14 m. wide), the most westerly of the group of Florida Keys (130 m. SSW. of Miami). Its harbour, which is an exceedingly fine one, is defended by Fort Taylor. The people are engaged principally in the manu. of cigars and in sponge fishing, but turtles, fish, fruit, and vegetables are also among the exports. The U.S. Gov. has a naval station, an air station, and a coastguard base here. Pop. 26,433.

**Keyes, Frances Parkinson** (1885-), Amer. novelist, b. univ. of Virginia, where her father, John Henry Wheeler, was prof. of Greek. She was educ. at Boston and various centres in Europe in the course of extensive travels which continued all her life. In 1904 she married Henry Wilder K., who was governor of New Hampshire from 1917 to 1919, and an Amer. senator from 1919 to 1937. Her first novel, *The Old Grey Homestead*, 1919, was followed by *The Career of David Noble*, 1921, *Queen Anne's Lace*, 1930, *Senator Marlowe's Daughter*, 1933, *Honor Bright*, 1938, *All That Glitters*, 1941, *Came a Cavalier*, 1943, *Dinner at Antoine's*, 1949, *Joy Street*, 1950, *The Royal Box*, 1954, and *Blue Camellia*, 1957. She also wrote *Letters from a Senator's Wife*, 1924.

**Keyes, Sidney Arthur Kenilworth** (1922-1943), poet, b. Dartford, Kent. He was educ. at Dartford Grammar School, Tonbridge School, and Queen's College, Oxford. He entered the army in 1942, and was commissioned in the Royal W. Kent Regiment, with which he served in the Tunisian campaign in the Second World War. In April 1943 he was either killed or d. while a prisoner of war in Tunis. His 2 pub. vols. of poetry, *The Iron Laurel*, 1942, and *The Cruel Solstice*, 1944, have a sibylline quality revealing a maturity remarkable in so young a man, a preoccupation with the themes of love and death, and a reliance on symbolism, at times obscure. His imagery is romantic, moving, and often beautiful, and springs from a mind well stocked both from literature and legend, and from an original and exact observation of nature. K. is believed to have written a number of poems in Africa, now lost. His essay, 'The Artist in Society,' was contributed to a symposium entitled *The Future of Faith*, 1942. His poems, with a memoir by Michael Meyer, were collected in an ed. pub. in 1945.

**Keyes of Zeebrugge and Dover**, Roger John Brownlow, 1st Baron (1872-1945), Eng. admiral, son of Gen. Sir Charles K. Entered navy as a cadet in 1885 and in 1890 served in Adm. Fremantle's naval brigade in the punitive expedition against the Sultan of Vitu. In the Boxer rebellion of 1900 he was in command of a destroyer, and with a handful of blue-jackets he achieved the formidable task of capturing the Taku forts, and was

promoted commander. Between 1906 and 1910 he was naval attaché at Vienna and Rome successively. In 1912 he was advanced to the post of commodore in charge of the submarine service, which he held until Feb. 1915. In this capacity he was responsible for all submarine operations in home waters in the first 6 months of the war, the boats under his command forming part of the naval screen which covered the completely successful passage of the B.E.F. to France. It was K. who, in Aug. 1914, submitted to the Admiralty a scheme for attacking the Ger. patrols in the Helligoland Bight, out of which developed the brilliant action of 28 Aug., K. being present on the *Lurcher*. K. also took part in the abortive operations for catching the Ger. cruisers which, in 1914, shelled Scarborough and Hartlepool. As chief of staff to Adm. de Robeck in 1915 K. supervised the naval movements in the Dardanelles from the first big naval attack to the final evacuation of Gallipoli. Following his promotion to rear-admiral in April 1917, he went to the Admiralty as director of the plans div. In Jan. 1918 he succeeded Adm. Bacon in command of the Dover Patrol (q.v.). On St George's Day, 1918, the raids on Zeebrugge and Ostend were carried out under his direction, with his flag in H.M.S. *Warwick* (see WORLD WAR, FIRST). After the war he was employed in command of the battle cruiser squadron of the Atlantic fleet; as deputy chief of the naval staff at the Admiralty, 1921-5; and, in succession, as Commander-in-Chief, Mediterranean station, and Commander-in-Chief, Portsmouth station, until 1931. In 1935 he passed automatically to the retired list. In the previous year he was elected Unionist M.P. for Portsmouth N., and represented that constituency till he was raised to the peerage in 1943. In Parliament his outstanding contribution was his forthright condemnation of the Norwegian campaign in the early summer of 1940. In 1940 he was restored to the active list, to serve as naval attaché for special liaison with the Belgian king. After Leopold's surrender K. urged that judgment on the king should be suspended until all the facts became known; a year later a pub. attack on Leopold and himself led K. to sue for libel, the case being settled in K.'s favour. Later he was appointed the first director of combined operations, being in charge of the organisation and training of the commandos and of the naval and air contingents that were then organised to work with them. But in Oct. 1941 his appointment was terminated on the advice of the chief of staff's committee. Though impetuous and outspoken, he was a sailor of combative instincts and intuitive dash, noted for his combination of coolness with remarkable daring; and in him and in his conduct of the famous raids on Zeebrugge and Ostend, the old offensive spirit of the navy was personified. His honours included G.C.B., K.C.V.O., D.S.O., many foreign orders, and honorary degrees of univ. His books include *Naval Memoirs* (2 vols.), 1935, *Adventures*

*Ashore and Afloat*, 1939, *The Fight for Gallipoli* (largely reprinted from his *Memoirs*), 1941, and *Amphibious Warfare and Combined Operations*, 1943. His son, Lt.-Col. Geoffrey K., was killed in leading a commando raid on Rommel's H.Q. in Libya, and was posthumously awarded the V.C.

**Keyham**, situated on K. Lake, is a part of Devonport (q.v.), England, and has a large dockyard.

**Keymer**, par. and vil. of Sussex, England, 8 m. N. of Brighton. Pop. 3032.

**Keyne**, St. virgin saint who lived about 485, first in Wales and afterwards in Cornwall. She is supposed to have imparted a certain power to the water in a spring there, so that the first of a newly married pair drinking it shall be the ruler. The name still survives in a Cornish par. near Liskeard, and also at Keynsham in Somerset, where she is said to have lived as a recluse.

**Keynes of Tilton**, John Maynard Keynes, 1st Baron (1883-1946), economist, b. Cambridge, eldest son of Dr John Neville K., registrar of Cambridge Univ. and lecturer in moral science, was educ. at Eton and King's College, Cambridge, being twelfth wrangler in the mathematical tripos, 1905. President of the Cambridge Union, 1905, he won the members' Eng. essay prize for an essay on the political opinions of Burke. K. studied deeply in philosophy and economics, being influenced by Sidgwick, Marshall, Whitehead, and W. E. Johnson. In 1906 he passed into the first div. of the civil service, and chose the India Office, being attracted by the Indian currency issue. He gained a fellowship at King's College, Cambridge, and delivered a series of lectures on money. From 1912 he ed. the *Economic Journal*, and from 1921 to 1938 was chairman of the National Mutual Assurance Society; he also conducted an investment company (it is significant of his skill that he left over £400,000 at his death). A member of the royal commission on Indian currency and finance (1913-14), he worked in the Treasury (1915-19), going with Lord Reading's mission to the U.S.A.; was prin. Treasury representative at the Paris peace conference; deputy for the chancellor of the exchequer on the Supreme Economic Council (1919); and member of the Macmillan committee on finance and industry (1929-31). In 1940 he was appointed a member of the chancellor of the exchequer's consultative committee, and was made a director of the Bank of England. In the same year he pub. a pamphlet, *How to Pay for the War*, putting forward the idea of deferred credits. From 1943 he played a leading part in the negotiations with America to effect a transition from war to peace conditions of trade and set up international bodies which would avoid the damaging fluctuations and restrictions which so gravely prejudiced world prosperity between the 2 world wars. In 1944 he headed the Brit. delegation to the Monetary Conference of the U.N. at Bretton Woods (q.v.), and he was the chief figure in the Brit. delegation

which in 1945 discussed the terms of the Amer. Loan Agreement. Shortly before his death he was appointed governor of the International Monetary Fund and the International Bank for Reconstruction and Development.

K. was raised to the peerage in 1942; was chairman of the Arts Council, 1945. In 1925 he married the famous Russian dancer, Lydia Lopokova, and pub. *A Short View of Russia*. The posthumous *Two Memoirs* appeared in 1949.

Press Portrait Bureau

JOHN MAYNARD KEYNES

His genius was manifested in his weighty contributions to the principles of economic science; in his power of securing public interest in the practical application of economics on critical occasions; and, not least, in his attractive prose style—as exemplified particularly in his *Economic Consequences of the Peace*, 1919, and in his *Essays in Biography*, 1933. Few thinkers have ever achieved equal influence and recognition in their own lifetime, and to find an economist of comparable influence one would have to go back to Adam Smith. In his special field of political economy he became the teacher of a whole generation. The pub. of his *General Theory* has been described as the opening of a new era—the 'Keynesian era'; and the influence he exercised over his contemporaries was the greater because he was so much more than an economist. The traditional theories made no appeal either to his temperament or

to his reason. With the available resources and technique, he believed the W. world, at last, was 'capable of reducing the economic problem, which now absorbs our moral and material energies, to a position of secondary importance.' It was his faith and conviction that the day was not far distant when that problem would take a 'back seat where it belonged, and that the arena of the heart and head would be occupied by our real problems—those of life and human relations, of creation and behaviour and religion.' When once it had become evident to him that the classical theory could not explain, or prescribe remedies for, the outstanding economic malady of mass-unemployment, his intellectual integrity impelled him to challenge orthodox views with ever-increasing severity, and without regard to what he himself had believed and taught in the past.

He pub. his important *Indian Currency and Finance* in 1912. His *Treatise on Probability*, 1921, is a notable achievement; in it he uses mathematical symbols, yet rather than seeking to supplement the mathematical theory of probability it examines the philosophical bases of that theory and with a wealth of learning in the hist. of the subject. His *The Economic Consequences of the Peace*, pub. in 1919 after his resignation from the Brit. delegation to the Paris peace conference, made him world famous. Opinions differ on the merits of the Versailles Treaty, but there was common agreement, as to reparations, on his view that the settlement was ill conceived and likely to prejudice world economy.

More recently there has been increasing doubt on the validity of K.'s thesis in *The Economic Consequences of the Peace*, and whether this brilliant book did more good than harm. In any event it contributed greatly to the belief, both in Great Britain and America, that not only was the reparation policy impracticable, but that the treaty of Versailles was in general vindictive and evil. This in turn was a factor in increasing the isolationist forces in America and helping the nationalist movement in Germany. Étienne Mantoux maintains in his posthumously pub. work that K. greatly understated the potential capacity of Germany to pay substantial reparations, under appropriate conditions, with disastrous consequences.

His subsequent attack on the gold standard did not prevent a return to the standard in 1925, but certainly condemned that system afterwards. At the Treasury he carried his new ideas on to the plane of practical affairs, and the changed official outlook is an indication of his profound influence. His most searching contribution in this field was in what was theretofore called the theory of money, but which through his interpretation had an enlarged scope. For K. departed from the purely monetary aspect of the subject, and analysed all the factors determining the level of aggregate demand for goods and services. In explaining 'effective demand' he emphasised the distinction

between consumption expenditure and expenditure on investment. He showed that where the amount which the community wishes to save at the full employment level of income exceeds the amount which is wanted for investment purposes in the same circumstances, an equilibrium level of saving and investment might be brought about by a reduction in income, and therefore in saving, rather than by any factor in the situation tending automatically to raise investment demands to the level of full employment saving. K. aimed at what, mathematically, was a complete explanation of the phenomena studied, and did not concentrate on one particular phase of the trade cycle. He also linked together the factors responsible for short-period changes with those operating to determine the average levels of the variables over longer periods, and proved that these levels are also dependent on the quantitative responses of the system (see J. R. N. Stone, 'Lord Keynes: the New Theory of Money,' *Nature*, 9 Nov. 1946, vol. 158, No. 4019).

In the interval between the wars K. lectured at Cambridge, ed. the *Economic Journal*, and took a leading part in determining the economic and financial policy of the Liberal party. He was, unfortunately, unable to persuade the Conservative Gov. of 1925 not to reestablish the pound at its old parity, an error which was largely responsible for the general strike of 1926, and for an economic depression which occurred in Great Britain at a time when the rest of the world was recovering.

K. was right in his advice and accurate in his prediction of the consequences. In 1930 he pub. his *Treatise on Money*. This was original in its emphasis on the disparity between saving and investment. Wicksell, the Swedish economist, had approached this kind of analysis, but K.'s biographer, R. F. Harrod, says that K. reached his conclusions independently and not through Wicksell. Harrod adds that K. was indebted to D. H. Robertson; and he mentioned that K. knew of A. H. Abbot's *The Final Buyer*, 1928, 'which contained similar ideas,' and also refers to *Unclaimed Wealth*, 1924, 'by this interesting pioneer.' The *Treatise* proved to be a stepping-stone to a still greater work with an extended scope. This was *The General Theory of Employment, Interest, and Money*, 1936, which transformed the economic thinking of Great Britain and the whole of the W. world, and estab. K. beyond argument as the world's leading economist, both in his reputation and in his undeniable influence on policy. For long K. taught the Ricardian economics, which reflected progress under conditions in which the *laissez-faire* system seemed preferable to any practical alternative. But under changed modern conditions of industrial organisation and social laws, the limitations of that system have become increasingly obvious and serious in their consequences, of which the most evil has been the spectre of mass unemployment. K. revolted against the fatalism

of orthodox economics in face of mass unemployment, arguing for the control of all forms of investment, so as to combine collective direction with individual initiative, and for the proper timing of public expenditure; and he developed a new economic theory compatible with such a policy. *The General Theory* was comparable in its influence to Adam Smith's *Wealth of Nations*. In this book K. refuted the orthodox theory that all savings made by the individual flowed through the banks to the business community, to create new productive plant, etc. K. proved this to be a fallacy, and that there is no automatic mechanism to equate the total demand and the supply of productive labour. 'Whether the theoretical basis of his argument be accepted or not, enough of his doctrine to support most of his practical conclusions may now be said to be accepted as orthodox, and in any case these conclusions have been in fact embodied in policy both in Great Britain and in other countries. In the United States the "New Deal" under Roosevelt, and the new "full employment" policies in Great Britain, owe more to Keynes than can ever be precisely assessed' (see Sir Arthur Salter in *Personality in Politics*, 1947). 'Full employment,' moreover, is written into the Havana Charter. K. is often represented as the destroyer of the system of classical economics. The truth would seem to be that his followers, *plus royaliste que le roi*, read far too much into his writings and saw what they hoped they would see. In the *General Theory* itself K. said: 'The result of filling in the gaps in the classical theory is not to dispose of the "Manchester System," but to indicate the nature of the environment which the free play of economic forces requires if it is to realise the full potentialities of production. The central controls necessary to ensure full employment will, of course, involve a large extension of the traditional functions of government. Furthermore, the modern classical theory has itself called attention to various conditions in which the free play of economic forces may need to be curbed or guided. But there will still remain a wide field for the exercise of private initiative and responsibility. Within this field the traditional advantages of individualism will still hold good . . . advantages of efficiency . . . the safeguard of personal liberty . . . the safeguard of the variety of life.' And in the last article he wrote, published in the *Economic Journal*, he said: 'I find myself moved, not for the first time, to remind contemporary economists that the classical teaching embodied some permanent truths of great significance, which we are liable to overlook because we associate them with other doctrines, which we cannot now accept without much qualification.' See CLASSICAL ECONOMISTS and ECONOMICS OF EMPLOYMENT. See also R. F. Harrod, *The Life of John Maynard Keynes*, 1951.

Keynsham, tn in Somerset, England, lying midway between Bristol and Bath. A Rom. villa has been found here, and

there are ruins of a 12th-cent. abbey. Industries include the manu. of chocolate and paper. Pop. 11,000.

Keys, House of, third estate in the Isle of Man. It consists of 24 members, elected by the adult inhab., men and women.

Keys, The (W. Indian Is.), see CAICOS. Keyserling, Count Hermann (1880-1946), Ger. essayist and philosopher, b. Livonia, Russia; he was descended from a well-known family of Baltic barons and acquired Ger. nationality; he was educ. in the high school of Pernau and at Dorpat Univ. His first philosophical work was *Das Gefüge der Welt*, pub. in 1906; this was followed by *Unerblichkeit*, 1908, and *Prolegomena zur Naturphilosophie*, 1910. Deprived of his estate by the Russian revolution of 1905, he travelled round the world and, out of these experiences, wrote his *Reisebuch eines Philosophen*, 1918, pub. in English as *The Travel Diary of a Philosopher*, 1925, which made him famous, not only in Germany, but in other countries. This book, like his other works, shows him to be a facile essayist on philosophical, psychological, and sociological subjects rather than an original philosopher. In *Das Spektrum Europas* (pub. in English as *Europe*, 1928), *America Set Free*, 1929, and *Südamerikanische Meditationen*, 1926-32, he purports to interpret the countries and races of the civilised world with reference to their natural environment, biological characteristics, and social hist. He became a vigorous opponent of the Nazis, who forbade him to lecture or to publish books. See M. G. Parks, *Introduction to Keyserling*, 1934.

Keystone State, see PENNSYLVANIA.

K.G.B. (Russian abbr. for Committee of State Security), name of the Soviet security service since 1953. It has essentially the same functions and methods as its predecessors the M.G.B. and M.V.D. (q.v.), but its position in the state is more modest and is subordinated to that of the party (see COMMUNIST PARTY OF THE SOVIET UNION), and its use of terroristic methods is far more restricted. The party leaders (see POLTBURO) appear anxious not to allow the security service to become a tool in the hands of any one individual.

Khabarovsk: 1. Kray in the Russian Far E., situated on the Lower Amur and along the Okhotsk littoral. It is largely covered with forests, and has a cold monsoon climate. There are large gold, coal, and iron ore deposits. There are mining and metallurgical industries, lumbering, and fisheries; there is agriculture in the S. The prin. tns are K., Komsomolsk, and Nikolayevsk. The area was first reached by Russians 1649-53; finally Russian, 1858-60. Jewish Autonomous Oblast (q.v.) estab. 1934. Area 332,000 sq. m.; pop. (1956) 1,140,000, mainly Russian and Ukrainian, also Jews (since 1928) and small local Asiatic tribes (until 1937 also Koreans and Chinese).

2. Cap. of the above, on the Amur and the Trans-Siberian Railway, largest city,

chief transportation and political centre, and second cultural centre of the Russian Far E. There are engineering, oil refining, and other industries. Founded 1858 as military post, in 1880 replacing Nikolayevsk as cap. of the Maritime Prov. 1918-22 mostly held by the Whites. 1926-38 cap. of the whole Soviet Far E. Pop. (1956) 280,000 (1913, 55,000; 1923, 34,000; 1939, 199,000).

**Khachaturian, Aram Ilyich** (1903- ), Armenian-Soviet composer, studied at Gnossin's school in Moscow and later under Miaskovsky and Vassilenko at the Conservatory. His works include 2 ballets, incidental music (e.g. *Macbeth*), 2 symphonies, various concertos, chamber, violin, and piano music.

**Khadi**, or **Khadadar**, cloth made from handspun yarn in India. Its cult was developed by Gandhi to help under-employed peasants to supplement their incomes during periods of waiting for harvest time, etc., and leaders of the independence movement set an example by spinning and wearing K. and Gandhi caps made of K.

**Khadija**, first wife of the prophet Mohammed. She was a well-to-do widow, employed Mohammed as an agent for business, and then married him, though it is hard to believe that he was 25 and she 40, as is related. She bore him sev. children of whom only girls survived. She is said to have been the first to believe in his mission and was evidently a source of strength to him.

**Khaifra**, or **Cephren**, 3rd king of the 4th dynasty of Egypt, and the builder of the second largest of the 3 Giza pyramids.

**Khaibar Pass**, see KHYBER.

**Khair-ed-din**, see BARBAROSSA.

**Khairpur**, tn of W. Pakistan, 280 m. NE. of Karachi. K., once a seat of the Baluchi Amirs of Sind, is noted for woodwork with enamel inlay.

**Khakas Autonomous Oblast** in Russia, formed in 1930, lies in S. Siberia, in the Minusinsk basin (Krasnoyarsk Kray) W. of R. Yenisey. It has coal, iron ore, and gold deposits. There is gold- and coal-mining, lumbering, and cattle- and sheep-breeding. The cap. is Abakan. Area 24,000 sq. m.; pop. (1956) 408,000, Russians (since 18th cent.) and Khakas (a Turkic-speaking people, numbering 53,000 in 1939). See W. Kolarz, *The Peoples of the Soviet Far East*, 1954.

**Khalid ibn al-Walid**, 'the Sword of God,' was largely responsible for the defeat of Mohammed at the battle of Uhud, but became a Muslim in 629. He took part in the fighting during the rest of Mohammed's life, was the chief agent in defeating the Arab defection after his death, and led the early campaigns in Mesopotamia to victory and captured Damascus. He was for a time governor of a dist. in Syria and d. in Hims (Emesa) in 642. He was a great soldier but was almost dismissed from service for having an Arab chief killed and marrying his widow immediately afterwards.

**Khalid ibn Yazid** (d. 704), emir of the Umayya family. He is remembered as

the first Muslim alchemist, and is said to have learned the art from a Christian monk named Morienus. Some of his alchemical verse is still extant.

**Khalifa**, **Hajji**, or (in full) **Mustafa ibn 'Abdallah Katib Chelebi Hajji Khalifa** (c. 1598-1658), Turkish author of works in Arabic and Turkish. He was with the army in Bagdad (1625), and present at the siege of Erzerum, returning to Constantinople in 1628; he made a pilgrimage from Aleppo to Mecca in 1633. His chief work is *Bibliographica Encyclopaedia* in Arabic (pub. by G. Flügel, 1835-58), on Arabic, Turkish, and Persian books and authors. For other historical works see C. Brockelmann, *Geschichte der arabischen Literatur*, II, 1902.

**Kham**, prov. now known as the Chamdo Autonomous Region, situated in the E. of Tibet. Chamdo is its chief tn. The upper courses of the Mekong, Salween, and Brahmaputra traverse K.

**Khamil**, see HAMI.

**Khammurabi**, see HAMMURABI.

**Khamsin** (Arabic 'fifty'), hot, oppressive, southerly wind of Egypt, blowing at intervals during Mar., April, and May for about 50 days, lasting generally for 3 days or so. It fills the air with sand, and during its prevalence diseases native to the country are very virulent. In Mediterranean regions it is known as the sirocco.

**Khan**, Turkish title, a contraction of *Kaghan*, a title of the monarch. It was used in the 10th cent. in central Asia by the Illekhans on their coins. Before the Mongol conquest it had become the title for a prince as opposed to sultan for the monarch. In Mongol times it was given to the governor of a prov., but later the distinction between it and the uncontracted form was lost. In Persia the title was given to the governor of a big prov. and sultan to the governor of a smaller div.

**Khan, Genghis**, or **Jenghis**, see GENGHIS.

**Khan-Tengri**, snow-capped peak of the Tianshan Range, central Asia, on the borders of the Kirgiz S.S.R. and Sinkiang, China, 85 m. SE. of the E. shore of Lake Issik-kul. Height 24,000 ft.

**Khanagiri**, tn in Iraq; 30 m. to the S. is a large oilfield, worked by a subsidiary of the Anglo-Iranian Oil Co. A pipeline runs to a refinery at K.

**Khandagiri**, vil. in Orissa state, India, 6 m. N. of Bhubaneswar. It is known for a large number of caves of both Buddhist and Jain origin.

**Khania**, see CANEA.

**Khanty** (formerly Russian *Ostyaks*), Ugrian-speaking people scattered in the K.-Mansi National Dist. and the surrounding areas, numbering 22,000 in 1927, mostly fishers and hunters, now collectivised. The K. were conquered by the Siberian Tatars; they stubbornly resisted Russian conquest and rule in the 16th-18th cents.

**Khanty-Mansi National District** lies astride the middle course of the Ob' (W. Siberia) and is included in the Tyumen' oblast. It consists of swampy forested

lowland, and has natural gas deposits. Fishing, hunting, and grain and potato growing are the main activities, and the prin. tns are Khanty-Mansiysk and Berëzovo. The area belonged to the Siberian Khanate and was annexed to Russia in the 16th cent. Area 215,500 sq. m.; pop. (1956) 118,000, largely Russian, also Khanty and Mansi (q.v.).

**Khanty-Mansiysk** (until 1940 *Ostyako-Vogul'sk*), tn in the Tyumen' oblast of W. Siberia, near the confluence of the Irtysh and the Ob', cap. of the K.-Mansi National Dist. It was built in the 1930's opposite the old vil. Samarovo. Pop. (1956) 19,000, mostly Russian.

**Khaqani** (c. 1106-c. 1185), Persian poet, b. Ganja and d. Tabriz. He is regarded as a master of the *qasida*, though his style is admitted to be difficult and obscure. He also wrote odes and a *mathnawi* poem, *The Gift of the Two Iraqs*. See N. de Khanikof, *Mémoire sur Khâcânî, poète persan du XII siècle*, 1864-5.

**Kharbin**, see HARBIN.

**Kharga**, see EL KHARGEH.

**Khargeh, El**, see EL KHARGEH.

**Khar'kov** (Ukrainian *Kharkiv*): 1. Oblast in NE. Ukraine, situated in the SW. of the central Russian upland, in the black earth belt, traversed by the Severskiy Donets, a trib. of the Don. There are large engineering and food industries, and natural gas extraction; the region also has wheat, sugar-beet, sunflower, and vegetable growing, dairy farming, and hog-raising. It was the E. border area of the Kievan state, Pereyaslav principality, Lithuania, from 1362; Muscovite, 1503, colonised largely by Cossack refugees from Polish-held Ukraine. Area 12,000 sq. m.; pop. Ukrainians, Russians, and Jews.

2. Cap. of the above, one of the main economic and cultural centres of the Ukraine and the whole Soviet Union. It is the largest industrial centre of the Ukraine, with a vast engineering industry (locomotives, tractors, aircraft, turbines, electrical and mining equipment, machine tools, agric. machinery, bicycles, etc.) and diverse light industries. Natural gas is pipelined from Shebelinka (q.v.). It is a big transportation centre (8 railway lines and an airport), third in the country after Moscow and Leningrad, in goods and passenger traffic. It has a univ. and other higher educational and research establs. There are some notable 17th-20th-cent. buildings. K. was founded in 1654 by immigrants from the r.b. of the Ukraine. It was an important frontier fortress and till 1765 H.Q. of a Cossack regiment; then prov. cap. From the 18th cent. it was the intellectual centre of S. Russia (K. College, founded 1721 in Belgorod, transferred to K. 1726; univ. founded 1805); in the 19th cent. it was a centre of the Ukrainian literary and national movement. Its economic importance dates from the second half of the 18th cent., when K. became a commercial tn with big fairs; from the 1870's K. was the gateway to the Donets basin (q.v.) and the economic and administrative

centre of the S. industrial area. K.'s own heavy industry dates from the same time (agric. machinery plant, 1879; locomotive plant, 1897). Sev. big factories were evacuated here from Riga during the First World War, and many new ones built in the 1930's. Politically K. was one of the Bolshevik strongholds both before 1917 and in the 1920's: it was the cap. of the Ukrainian Soviet Rep., 1919-1934. During the Second World War the city was in 1941-3 the key-point of sev.

*Soviet Weekly*

**KHAR'KOV: MONUMENT TO TARAS SHEVCHENKO, THE UKRAINIAN POET**

large-scale operations; it changed hands 5 times and was largely ruined. Pop. (1956) 877,000 (second in the Ukraine, fourth in the U.S.S.R.; 1917, 288,000; 1920, 230,000; 1926, 417,000; 1939, 833,000), Ukrainians, Russians, and Jews. **Kharsivan**, another name for salvarsan (q.v.).

**Khartoum**, or **Khartum**, prov. and chief tn of the rep. of the Sudan, Africa, on the Blue Nile (Bahr-el-Azrek), near its junction with the White Nile (Bahr-el-Abiad). K. was founded about 1820 by Mohammed Ali, and is strengthened by walls and forts. K. has fine quays, mosques, a cathedral, barracks, and a street railway. There are railway connections with Lower Egypt and with Upper Egypt and Suakin on the Red Sea. A bridge connects the tn with its suburb, K. North or Halfaya. K. is the H.Q. of the Sudan Airways, a gov.-controlled organisation which links the Sudan with neighbouring ters. There are sev. schools, and a technical institute. Higher education is catered for in the Univ.

College of K., consisting of the Gordon Memorial College and the Kitchener School of Medicine. The college has been granted recognition by the univ. of London as a univ. college; it has faculties of arts, science, agriculture, engineering, veterinary science, and law. The Kitchener School of Medicine was opened in 1924, with its final examinations under the supervision of visitors from the Eng. royal colleges. Secondary education is also available at 2 new non-gov. schools, and the Sudanese are admitted to the Comboni College and to the Coptic College in K. K. was formerly a depot for slaves sent from the Sudan and Ethiopia into Egypt. It fell into the hands of the Mahdi in 1885, and Gordon, after his gallant defence, was murdered in the subsequent massacres. The Dervishes under the Khalifa (the Mahdi's successor) next ruined the city, and made Omdurman their H.Q. Not until 1898 were they defeated and K. recaptured by Anglo-Egyptian troops under Kitchener. Much of its former trade and prosperity was subsequently restored. Pop. 44,900; including K. North and rural dist. 136,400. See P. Crabtree, *The Winning of the Sudan*, 1934; K. D. Henderson, *Survey of the Anglo-Egyptian Sudan, 1898-1944*, 1946; W. J. Arkell, *Early Khartoum*, 1948.

**Khasi**, Indo-Chinese race, numbering about 193,000, inhabiting the K. hills, Assam, India. Their language appears to have its nearest kin in Cambodia and Vietnam. Inheritance of property is through the female line, as among Nairs in Malabar.

**Khasi Hills**, The, form, with the Jaintia hills, a dist. of Assam, India. They extend, E. to W., for about 200 m. and attain an altitude of nearly 10,000 ft, forming a barrier, some 60 m. wide, between the great valleys of the Brahmaputra and the Surma. They are of limestone formation, and are frequently visited by earthquakes. Shillong, Assam's administrative cap., lies in their midst at an altitude of 4800 ft. See also **KHASI**.

**Khaskovo**, tn of S. central Bulgaria, cap. of K. prov., on a trib. of the Maritsa (q.v.), 125 m. ESE. of Sofia (q.v.). It has important tobacco and textile industries. Pop. 27,000.

**Khatanga**, riv. in N. Siberia, rising in the central Siberian plateau and flowing NE. into the K. Bay of the Laptev Sea. Length 940 m., basin 130,000 sq. m.

**Khatmandu**, or **Kátmándu**, cap. of Nepal, India, near the confluence of the Baghmati and Vishnumati R.s. and 75 m. from the Indian frontier.

**Khayyam**, Omar, see **OMAR KHAYYAM**.

**Khazakstan**, see **KAZAKHSTAN**.

**Khazars**, Turkic-speaking people who in the early Middle Ages lived astride the lower Volga. They were culturally much influenced by Central Asian peoples, especially the Khorezm; the Jewish religion predominated but others were tolerated. From the 7th cent. the Khazar state embraced a vast ter. from the Urals to beyond the Dnieper and from the Caucasus to the R.s Oka and

Kama. Defeated by the Kievan Prince Svyatoslav in 966, the Khazar state declined, and the people are not known after the 12th cent.

**Khedive** (Persian *khidiv*, sovereign, ruler). In Persia the sense is quite general, but in Turkey it denoted a governor of a prov., so it may have been used in Azerbaijan when that prov. was under Turkish rule. In 1867 this title was granted by the Sultan of Turkey to the ruler of Egypt in place of *wali*, governor, and it was used by his successors till in 1914 it was replaced by sultan, and in 1922 by king.

**Khelát**, **Kelát**, or **Kalát**, see **KALÁT**.

**Kherson**: 1. Oblast in S. Ukraine, N. of Crimea, a region of flat, dry steppe traversed by the Dnieper. Wheat and sunflowers are grown, and cattle, hogs (Ukrainian steppe breed), and sheep (Askania breed) are reared. There are engineering, food, and textile industries, and a large hydro-electric power-station. A vast irrigation system is under construction. The prin. tns are K. and Kakhovka. Unpopulated until 1774-1783, when it was annexed by Russia. Area 10,600 sq. m.; pop. (1956) 807,000, Ukrainian and Russian.

2. Cap., economic and cultural centre of the above, port on the Dnieper near its mouth, 'sea-gate' to the Dnieper basin (oil from Batumi). There are agric., engineering, food-canning, and textile industries. Founded 1778 by Catherine II as a seaport and naval base with fortress. Pop. (1956) 134,000 (1914, 81,000; 1923, 41,000; 1939, 97,000).

**Khersones**, see **CHERSONESUS**.

**Khdiv**, see **KHEDIVE**.

**Khingan**, 2 ranges of volcanic mts, Great and Little K., in the Chinese prov. of Heilungkiang on the E. of the desert of Gobi, separating Mongolia from Manchuria. Between them lies the Zeya-Bureya plateau, along the S. edge of which is the Amur valley. Their greatest altitude is 6500 ft. Also called the Bureya Mts.

**Khiva**, see **KHOREZM**.

**Khiva**, Desert of, see **KARA-KUM**.

**Khmel'nytskiy** (Ukrainian **Khmel'nyts'kyy**): 1. (until 1954 **Kamenets-Podolskiy**) Oblast in the Ukraine, SW. of Kiev, on the Volhynia-Podolia upland in the black earth wooded steppe belt. It has sugar-beet and wheat growing, horticulture, cattle- and hog-breeding, and food (sugar), metalworking, wood processing, and light industries. The prin. tns are K. and Kamenets-Podolskiy. It belonged to Volhynia, becoming Lithuanian in 1363, Polish in 1430, and Russian in 1793. Area 8000 sq. m.; pop. (1956) 1,631,000, mostly Ukrainians (before the war also Jews and Poles).

2. (until 1954 **Proskurov**) Cap. of the above (since 1944), on the S. Bug, an important railway junction. There is some industry (sugar, machine tools). It has been known since the 15th cent. Pop. (1956) 52,000 (c. 1914, 41,000), before the war almost half Jewish.

**Khmel'nytskyy**, **Zinoviy Bohdan** (1593-

1657), Ukrainian hetman (see UKRAINIAN HERMANS). Wronged by a Polish gentleman, he failed to obtain justice from the Polish senate and king, and in 1648 aroused the Ukrainian Cossacks (see COSSACKS; SICH) against Polish rule, winning with the support of the Crimean Tatars sev. victories. Pressed by the Poles, K. succeeded in obtaining protectorate from Muscovy and became a vassal of the Tsar Alexis Mikhaylovich (q.v.). See also UKRAINE. See G. Vernadsky, *Bohdan, Hetman of Ukraine*, New Haven, 1941.

**Khmer Language**, see LINGUISTIC FAMILIES, *Austro-Asiatic Linguistic Family*.

**Khnopff**, Fernand Edmond Jean Marie (1858-1921), Belgian painter, b. Grembergen, Termonde. He studied under X. Mellery, and was much influenced by the Eng. pre-Raphaelite school, notably later Burne-Jones. His work is distinguished by a certain curious mystic note, as found in the enigmatic 'Silence,' 1890, and 'Sibyl,' 1894. See the studies by Pol de Mont, 1901, and Dumont-Wilden, 1907.

**Khoi-Khoi**, see NAMAQUA.

**Khoi, Khoy**, see KHUY.

**Khojend**, or **Khojent**, see LENINABAD.

**Kholm**, see CHELM.

**Kholmogory**, vil., former tn, in the Archangel oblast of N. Russia, on the N. Dvina, 52 m. SE. of Archangel. It is the centre of a dairy-farming area (K. breed). K. has been known since 1355, and was cap. of the Russian N. under Novgorod and Moscow until 1700; in the 15th-16th cents. it was a lively trade centre. Pop. (1926) 1000.

**Khonds**, or **Kus**, Dravidian people who inhabit the Central Provs. of India. They used formerly to offer human beings as sacrifices. They must not be confused with the Gonds. Their number is estimated at 700,000.

**Khonsar**, or **Khunsar**, dist. and tn about 160 m. NE. of Ahvaz. Pop. of tn 25,000.

**Khorasan**, or **Khurasan**, N.-easterly prov. of Persia, bounded by Russian Turkestan on the N., Afghanistan on the E., Gorgan on the W., and Kerman on the S., with an area of about 124,000 sq. m. It is traversed by spurs of the Elburz Mts. The chief products of the soil are grain, tobacco, opium, cotton, and fruits, and it is famous for its wool. There are turquoise mines at Nishapur. In the early Middle Ages the name K. was applied to all the Muslim provs. E. of the Great Persian Desert as far as the frontier of the Indian mts. In the later Middle Ages it was taken to extend only to the Oxus in the NE. In medieval times it was divided into 4 quarters, the main tns of which were Nishapur, Marv, Herat, and Balkh. The cap. at the present day is Mashhad (q.v.). Pop. about 2,000,000.

**Khorezm**, or **Khiva**, former khanate of Russian central Asia, and now an oblast (prov.) of the Uzbek S.S.R., occupying part of the delta of the R. Amu Darya, and extending from 41° to 43° 40' N. lat., and from 58° to 61° 50' E. long. The dist. around K. is watered by numerous

irrigating canals from the R. Amu, and forms an oasis with an area of 5210 sq. m. Here are grown millet, rice, wheat, barley, oats, peas, flax, hemp, and a great variety of fruits, including grapes and large quantities of melons. Sheep, cattle, horses, and camels are reared, and pottery, textiles, and silk produced. Once a mighty kingdom holding great possessions, in 1873 it became a vassal state to Russia. The khan was deposed in 1920, and in 1924 K. joined the Socialist reps., part of it being included in Turkmenistan, part in Uzbekistan. Chief tns: Khiva, Urgench, and Kungrad. Pop. 330,000.

**Khorramshahr**, dist. and tn in the prov. of Khuzistan, Persia. The tn, formerly called Munhammerah, is situated between the Shatt-ul-Arab and the Karun R.s. It is at the S. end of the Trans-Iranian Railway, and has become the most important Persian port in the Persian Gulf. Pop. of tn 43,800.

**Khorsabad**, vil. of Iraq, 13 m. NE. of Mosul. The first discovery of the antiquities of Nineveh was made here by Paul Botta in 1842.

**Khosru I and II**, see KHUSRAW I and II.

**Khotan** (locally *Hehi*), name of a tn and oasis of Sinkiang, China. The oasis lies between the N. extremity of the Kunlun and the edge of the Takla-makan Desert; there are two small tns therein, Kara Kash and Yurin Kash, and 300 vils. Cereals, rice, flax, hemp, tobacco, silk, and cotton are produced, and a trade is carried on with India and China. The tn of K., formerly of great importance, lies about 180 m. SE. of Yarkand, and is composed of narrow, winding streets, with open squares at intervals. Sven Hedin discovered the ruins of ancient cities in the K. dist., and in 1913-16 Stein discovered many priceless Buddhist frescoes, etc. Jade or nephrite for fancy articles, etc., has long been a famous product, and other minerals, including gold and precious stones, abound; in addition carpets, silk, silk goods, felt, and hides are manuf. It is linked by road and airline with other tns in Sinkiang. Area of desert 400 sq. m.; pop. (oasis) 40,000.

**Khotanese Language**, see INDO-EUROPEAN LANGUAGES.

**Khotin** (Rumanian *Hotin*), tn in N. Bessarabia, on the Dniester, in Chernovtsy oblast of the Ukraine. It has the ruins of 13th-cent. Genoese and 18th-cent. Turkish fortresses. It has been variously held by Moldavians, Poles, and Turks; in 1812 it became Russian, and 1918-40 and 1941-4 it was Rumanian. Pop. (1930) 15,000 (1922, 32,000), mostly Ukrainian.

**Khrushchëv**, Nikita Sergeyevich (1894-), Russian Communist, since 1953 first secretary of the Central Committee of the party. He comes from a peasant family, and received little school education; as a youth he was a coal-miner in the Donets Basin, where he joined the Communist party in 1918. K. soon specialised in organisational work in the party. In 1934 he was second secretary of the Moscow party organisation under

Kaganovich, in 1935 first secretary, in 1938 first secretary of the party in the Ukraine. Both in Moscow and the Ukraine K. was active in carrying out the great purge (q.v.). In 1939 he became a member of the Politburo (q.v.), and during the war he was active as a high-ranking political commissar in the armed forces. In the last years of Stalin's rule K. became the party's main agric. expert, but his first ambitious project in this field—creating 'rural cities' out of groups of collective farms—was a fiasco and the plan was abandoned. The struggle in the party leadership after Stalin's death resulted in K. superseding Malenkov as the first secretary of the Central Committee. After Malenkov's resignation in 1955, K. emerged as the most prominent member of the 'collective leadership.' In 1957 he ousted from the leadership his chief rivals, Malenkov, Kaganovich, Molotov, and Zhukov (qq.v.); and in 1958 he replaced Bulganin (q.v.) as chairman of the Council of Ministers (Prime Minister), while still retaining the leadership of the party.

Khulna, tn of E. Pakistan, 80 m. ENE. of Calcutta. K. is an important riv. port in the Ganges-Brahmaputra delta, but a new seaport is being energetically developed at Chalna, 18 m. to the S.

Khunsar, see KHONSAR.

Khurasan, see KHORASAN.

Khuraw I reigned over Persia AD 531 to 579. He is known also under the name Anushirvan. During the reign of his father, Qubad, he put down a dangerous revolt by the Mazdakites (see MAZDAK). In 540 K. broke the peace with the Emperor Justinian made in 531, invaded Syria, and carried off the inhab. of Antioch to found a new city near Ctesiphon called Khuraw-Antioch. In 562, after successive warfare against the Romans in Lazica (Colchis) and Mesopotamia, he made a peace whereby the Romans agreed to pay subsidies but kept Lazica, whilst K. agreed not to persecute the Christians. Uniting later with the Hephthalites against the Turks, K. proceeded to conquer Bactria, and in 570 he made Yemen a Persian dependency. K. carried out various measures of military reform, and completed the financial and agrarian reforms begun by his father, Qubad. K.'s reign was a brilliant epoch and he is regarded by later Muslim writers as the type of a just ruler. The name K. was known to Byzantine and W. historians as Chosroes.

Khuraw II reigned AD 590 to 628; he estab. himself firmly on the Persian throne after recourse to the help of the Emperor Maurice to defeat the usurper Bahram Chobin in 591. Three years later he began war against the Christians and Rome, ostensibly to avenge the murder of his ally, Maurice. His armies overran Syria and Asia Minor, and captured Damascus and Jerusalem (614), Alexandria, and other dists. in Egypt. But between 622 and 629 the Emperor Heraclius recovered all the recent conquests and restored the Holy Cross to

Jerusalem. During K.'s reign Persia was reduced to a state of chaos. He was killed during a revolt of his generals, his eldest son being proclaimed king.

Khuyl, dist. and tn in the prov. of Azerbaijan, Persia, 75 m. NE. of Tabriz. The dist. is bounded by Maku on the N., Reza'iyeh on the S., Marand on the E., and Turkey on the W., and covers about 1100 sq. m. It has a moderate climate. The chief industry is agriculture; fruit, grain, tobacco, and cotton are especially cultivated. The tn was partially destroyed by an earthquake in 1842. Pop. of tn 34,500.

Khuzistan, formerly called Arabistan (ancient Susiana), prov. of Persia, bordering on the N. shores of the Persian Gulf. The N. and E. dists. are hilly and productive. Large tracts are used as pasture land, and rice, cotton, sugar-cane, dates, tobacco, and opium are grown. The S. portion is flat and infertile. The Karkheh, Dez, Karun, Jarrabi, and Hendian Rs flow through the prov. It contains large oil deposits. Ahvaz is the chief tn. Area 25,700 sq. m.; pop. about 1,140,000.

Khyber, or Khaibar, Pass, narrow pass connecting Pakistan and Afghanistan. Its length is about 33 m., and its width varies from 450 ft in its widest part to about 50 ft in its narrowest part. It is the great N. military route from India (Pakistan) into Afghanistan, and all the great invasions of India have come through it. Commanding near Jamrud to the W. of Peshawar, it twists NW. through the mts at the junction of the Safid Kuh with the Sulaiman range and eventually debouches near Lalpura, on the Kabul R. It is flanked on both sides by mts which rise sheer above it to a height of 3000 ft in some places, its summit being at Landi Kotal, which is 1700 ft higher than Jamrud. During the Afghan wars of 1839-42 and 1878-80 the Brit. were successful in crossing it in spite of great resistance. Since 1925 there has been a railway running through the pass as far as the Afghan frontier. (See illustration, p. 470.)

Kiashta, Kiakhta, see KYAKHTA.

Kiamil Pasha (1832-1915), Turkish politician, b. Leukas. He was grand vizier in 1885. His action in regard to the Armenian unrest in 1890 led to his dismissal. As an advanced Liberal he was again made grand vizier in Aug. 1908, after the Young Turk revolution. He was forced to resign in Feb. 1909, and was succeeded by Hilmi Pasha. He was grand vizier for a third term during the Balkan war (1912-13), and was succeeded by Mahmud Shevket Pasha at the coup d'état of 23 Jan. 1913.

Kiangsi, E. prov. of China, with an area of 64,956 sq. m. The Nanshan Mts lie across the prov. in a S.-westerly and N.-easterly direction. In the NE. region is the immense Poyang Lake (1200 sq. m.), which receives the waters of the Kankiang and the Yangtze. Black tea was for long the most important product, but, with the general decline of the China tea trade, K.'s teas are now chiefly green teas,

intended for export to Russia. Other products are coal, copper, timber, rice, cotton, silk, linen, and paper. Porcelain is made at Chingtochen. The cap. is Nanchang (q.v.), on the Kankiang; other notable tns are Kanchow, Chian (q.v.), Pingshiang (rich in coal), and Kiukiang (q.v.). From 1927 to 1932 K. was the continuous arena of bitter fighting between Chiang Kai-shek's troops and the Chinese Red Army, and the civilian pop. suffered greatly. The beginning of July

Kiaochow, *see* TSINGTAO.

Klayukwan, *see* CHIAYUKUAN.

Kibo, *see* KILIMANJARO.

Kieckham, Charles Joseph (1826-82), poet and novelist, b. Mullinahone, Tipperary. He intended to become a doctor, but a shooting accident which injured his sight and hearing prevented this. Joining the Fenians, he was appointed in 1865 to the supreme executive of the projected Irish Rep., but on the failure of the rising he spent 4 years in prison, where he

THE KHYBER PASS

E.N.A.

Camel caravans threading their way through the gorge.

1942 saw the Jap. invaders in control of the major air bases of K. and Chekiang. Pop. (1954) 16,772,865.

Kiangsu, maritime prov. of China, bordering on the Yellow Sea to the E. Area 40,583 sq. m. It is a great plain with no hills, and is watered by the Grand Canal running S. to N., and by the Hwai and Yangtze R.s. The cap. is Nanking, and the chief port Shanghai. Some coal and iron ore are extracted near Nanking; sugar, tea, rice, wheat, and cotton are grown; and beautiful silks are manuf. K. is among those provs. where the literacy of the pop. is very high, and is known to have produced the greatest number of scholars, poets, and scientists. Its big, anct cities like Soochow, Wusih, and Yangchow have preserved numerous famous gardens. Pop. (1954) 41,252,192.

wrote his first novel, *Sally Kavanagh*, or *The Untenanted Graves*, 1869. He stood unsuccessfully as a candidate for Tipperary, and after that devoted himself to writing. His poems and stories, written from a nationalist point of view, were collected in *Poems, Sketches, and Narratives Illustrative of Irish Life*, 1870. Later novels were *Knocknagow*, or *The Homes of Tipperary*, 1879, and *For the Old Land, a Tale of Twenty Years Ago*, 1886.

Kicking Horse Pass, in the Rocky Mts, between Brit. Columbia and Alberta, Canada, 35 m. NW. of Banff. With an altitude of 5339 ft it is the highest point on the Canadian Pacific Railway.

Kidd, Benjamin (1858-1916), sociologist, who had but small advantages of education and social position. At 19 he

entered the civil service as a clerk in the Inland Revenue, where, after 17 years of obscurity, he pub. his *Social Evolution*, 1894, which was so successful that he resigned from the service and devoted himself to travel and writing. The dominant idea of his book is that religion is the central feature of human hist., that moral progress consists in compelling individual selfishness to subordinate itself to the common good, and that reason gives no help in this conflict. K. had no literary style, and no power of shaping his ideas into a coherent system of philosophy, though he had the gifts of a popular philosopher. Also wrote *Principles of Western Civilisation*, 1902, and *The Science of Power*, 1918. See *Dictionary of National Biography*, 1912-21.

Kidd, William (Captain Kidd) (c. 1645-1701), Scottish pirate, who emigrated to America as a young man. In 1691 he was awarded £150 from the council of New York for his services in privateering against the French. He was put in command of a ship in 1696 with orders to seize the pirates that infested the E. seas, and reached Madagascar in 1697. In 1698-9, however, news reached England that K. was plundering trading vessels, and had associated himself with the pirates. He was arrested, and, having been formally charged with the murder of one of his crew and with piracy, was found guilty and hanged at Execution Dock, London. See G. Brooks (ed.), *The Trial of Captain Kidd*, 1930.

Kidderminster, municipal bor. and mkt tn in the co. of Worcs, situated on the Stour, 14 m. N. of Worcester. The church of All Saints is a fine example of Early Eng. architecture, with Decorated and Perpendicular additions. K. has long been the prin. centre of the Brit. carpet trade, and 42 per cent of the industry is concentrated there. Wilton, Axminster, Brussels, and chenille carpets are the chief varieties made, but 'K.' or ingrain, carpets are no longer woven locally. Cloth has been woven in the tn since 1235, at least, and the charter of incorporation, granted by Charles I in 1636, describes it as 'an ant. borough of great commerce for the making and manufacture of cloth.' Carpet manuf. was introduced in 1735. Other industries represented are worsted spinning, drop forgings, electrical equipment, chemical manuf., tin-plating, and light engineering. There is also a large sugar-beet factory. Sir Rowland Hill, originator of penny postage, Sir Josiah Mason, philanthropist and inventor of the steel pen, and Frederick Easthope Martin, the composer, were b. in K. Richard Baxter (1615-91), nonconformist divine and creator of popular Christian literature, was vicar for 14 years. The Staffs and Worcs Canal passes through the tn. Area 4694 ac.; pop. 37,960.

Kidnapping is defined by Blackstone as the forcible abduction or stealing away of a man, woman, or child from his or her own country to another. It is now, however, usually confined to the offence of

child-stealing, or the crime of leading, taking, or enticing away a child under 14, with intent either to deprive the parent or other person having lawful care or charge of the possession of the child, or to steal any article upon the child. The offence is a felony under the Offences against the Person Act, 1861, punishable with 7 years' imprisonment. Of a similar nature is the misdemeanour of forcibly taking an unmarried girl under 16 out of her parents' or lawful guardian's possession, such abduction being punishable by imprisonment not exceeding 2 years. Blackstone under the title of K. notices also the cognate offence of forcing a seaman on shore from a vessel and leaving him there; which offence is now a specific crime under the 57 and 58 Vict. c. 60, and punishable with imprisonment not exceeding 2 years, or summarily with 6 months' imprisonment or a penalty not exceeding £100. In the U.S.A., which has had a number of sensational cases of this crime, the K. and transportation of any person, regardless of age, across a state border for the purpose of extortion is punishable by imprisonment for life or by death. See also ABDUCTION.

Kidney, one of 2 glands situated, in man, in the upper and posterior part of the abdominal cavity, one on each side of the vertebral column, the function of which is to form and excrete urine. The concave side of the K. is turned towards the spine and the renal artery, a branch of the abdominal aorta, enters through this concavity, and the renal vein leaves to join the inferior vena cava. A cross-section of the K. (see figure) shows that externally it is covered by a tough fibrous capsule; next to the capsule is the cortex; inside the cortex comes the medulla, from which a number of pyramids point their apices into what is known as the pelvis. The pelvis is a cavity into which the urine is excreted and from which it is drained by the ureter, the tube leading from the K. to the bladder (q.v.). On top of each K. lies a pyramidal-shaped ductless gland known as the suprarenal capsule (q.v.). The K. lies loosely embedded in surrounding fat and connective tissue and is fairly mobile. The so-called floating K. is nothing but a slightly greater degree of mobility than usual, and is of no pathological significance. The renal medulla consists in hundreds of minute tubules, the renal tubules, open at one end where, at the apex of the pyramids, they excrete urine into the pelvic cavity. The other end of the tubules is sealed off and terminates in an expanded, cup-shaped capsule. Within the cavity of the cup many capillary blood vessels are coiled and this bunch of capillaries is known as a glomerulus. The glomerulus and the capsule of the tubule together are known as the Malpighian bodies (Malpighi, M., It. anatomist, 1628-94). Capillary blood vessels also surround the tubules in their course from the glomeruli to their termination at the apex of the pyramid. The whole structure of glomerulus, tubule, and the blood supply to the tubule is known

as a 'nephron.' The nephrons enable the K. to perform its function, which is to maintain the volume and concentration of the various constituents of the body fluids within normal limits. To achieve this the nephrons regulate the excretion of water, sodium, potassium, chlorides, phosphates, oxalates, and urates, and also eliminate from the body the waste products of metabolism, such as urea. The glomerulus acts as a filter, and as blood flows through the glomerular capillaries fluid of the same composition as protein-free blood plasma enters the tubule. As the filtrate passes down the

of blood flowing through the glomeruli is reduced. Nature so arranges her affairs as to have plenty of reserves against failure of the vital functions of the body. Thus it is that there are 2 kidneys, but health can be maintained by one alone, and thus it is also that each K. can still function efficiently with but two-thirds of the number of nephrons with which it is furnished. Average excretion of urine per day is about 50 oz., or 2½ pints.

**Diseases.** Inflammation of the perinephric part of the K. is described under NEPHRITIS. Inflammation from bacterial infection of the pelvis of the K.

KIDNEY

Left: structure. Right: A, kidneys; B, ureters; C, bladder; D, urethra.

tubule some 98 per cent of the water and lesser amounts of the substances dissolved in it are re-absorbed by the epithellum lining the tubules and pass back into the blood stream. As relatively more water than its solutes is re-absorbed, by the time the fluid reaches the end of the tubule it contains more sodium, more chloride, and more urea per ml. of water than it did at the start of its journey. Urea is formed from the metabolic breakdown of proteins and the level in the blood is largely governed by the rate of excretion by the K. The amount excreted depends largely upon the amount of fluid filtered through the glomeruli and this, in turn, depends upon the pressure and volume of blood flowing through them and by the rate of urea formation in the body. From this the reader may understand how uraemia (q.v.) may readily occur in those diseases of the K., such as nephritis (q.v.), which interfere with the proper functioning of the glomeruli and in those diseases in which, for various reasons, the volume

is described under PYELITIS. Suppurative infection of the perinephric fat and connective tissues is apt to occur in connection with septic infections elsewhere in the body—for instance, a carbuncle (q.v.)—with the formation of a perinephric abscess. *Renal calculus*, or stone, formation commonly occurs in the pelvis of the K. Consisting in concretions of deposits of phosphates, oxalates, or urates, these calculi grow from small seedlings to sizes up to that of a hen's egg. When small they may be passed down the ureter into the bladder and their passage causes acute pain of a colicky nature, known as *renal colic*, and very often blood in the urine, or *haematuria*. Renal colic may also occur when a calculus attempts to pass down the ureter but fails because it is too large. A calculus may cause obstruction to the passage of urine from the pelvis into the ureter with the result that the excretions of the K. are dammed back and remain within the pelvis. The increasing accumulation of

fluid distends the pelvis like a balloon until it reaches a considerable size and the resulting pressure destroys the K. tissue. If the obstruction is not relieved the K. is eventually replaced by a bag of fluid. This condition is known as *hydronephrosis*. A hydronephrosis often becomes infected with bacteria and the fluid becomes purulent. The condition is then known as *pyonephrosis*. The reason why some people should form renal calculi and not others is not always clearly understood. Stone formation is probably due to some metabolic fault, and if this fault could be known then prevention might be possible. As it is, stones that are causing symptoms must be removed by operation. Cancer of the K. may occur, as it may occur in any organ, but it is not common.

**Kidney Bean, see BEAN.**

**Kidney Stones**, reniform masses of ferric oxide, usually red or brown; neither so hard nor so dense as crystalline haematite; usually occur in association with clay, as in the S. of England. This deposit is the red ochre of commerce.

**Kidney-vetch**, or **Lady's Fingers**, popular name of *Anthyllis vulneraria*, a leguminous plant which flourishes in Britain. The plant is a herb with glaucous leaves, the capitulate inflorescence is composed of yellow flowers, the stamens are united by their filaments, and the floral mechanism is like that of the *Lotus*, bird's-foot trefoil.

**Kidron, see KEDRON.**

**Kidsgrove**, tn of Staffs, England, 8 m. N. of Stoke-on-Trent. Industries include nylon spinning, electronic engineering, light engineering, and the manuf. of chemicals and clothing. Pop. 16,540.

**Kidston, George Pearson Glen** (1897-1931), Brit. millionaire, naval lieutenant-commander, and airman. In April 1931 he broke the existing England to Cape record, landing at Cape Town in 6½ days. He was killed in a plane crash in Natal.

**Kidwelly**, or **Cydwell**, bor. of Carmarthenshire, Wales, on the Gwendraeth, near Carmarthen Bay. It has silica and brick works, an optical glass factory, and coal-mines. Here are the ruins of an 11th-cent. castle. Pop. 3200.

**Kieff, see KIEV.**

**Kiel**, city of N. Germany, cap. of the *Land* of Schleswig-Holstein (q.v.). It is on the Baltic, on the natural harbour of the Kieler Förde, at the terminus of the K. Canal (q.v.). It became a city in 1242, and was a member of the Hanseatic League (q.v.). After 1871 it grew into the chief naval port of Germany. In 1918 the naval mutiny at K. (see *GERMANY, History*) was the precursor of Germany's downfall. After the war the city's fortifications were destroyed, but it had again been strongly fortified before the Second World War, during which K. was badly damaged (see below). It has since been largely reconstructed. The most interesting of the ancient buildings remaining is the 13th-cent. castle. K. has a univ. (1665), good libraries and theatres, an Institute of World Economics, and

botanical gardens. A memorial has been erected to the 36,000 Germans who lost their lives in U-boats (see *SUBMARINES*) in both world wars. The chief industries are shipbuilding, fishing, and the manuf. of machinery and foodstuffs. Pop. 257,000.

K. was frequently attacked from the air in the Second World War. One of the earliest of the heavier raids was in Mar. 1942. The *Gneisenau* came under heavy air attack in its floating dock at K. in Feb. 1942, and was moved to Gdynia for extensive repairs. There were frequent daylight raids on K. during Nov.-Dec. 1943, the targets including aircraft factories. There were further attacks in 1942, 1943, and 1944. In July the allied assault on communications involved massive attacks on K. and Bremen and other great ports, the attacks being integrated with both the offensive on the W. front and with the Russian advance. K. in that month and Aug. was repeatedly the target for attacks in which fire bombs were used in a vast and ever-increasing quantity. K. was one of the objectives of the Twenty-first Army Group of F.-M. Montgomery (q.v.) in the closing stages of the war after the Allies had reached the Elbe. Montgomery's task was first to secure Hamburg, and then advance with the utmost speed on the general area of Kiel-Lübeck and liberate Denmark, using, if necessary, an airborne assault to force the K. Canal, and allied naval and air forces were to assist in the operations. The Brit. Second Army encountered persistent opposition in its attacks towards Bremen and Hamburg, but following the fall of Bremen (26 April) the situation changed; Hamburg having surrendered on 3 May, the Germans were sealed off in Denmark, and, with the junction of the allied fronts, all resistance in N. Germany ceased. See *WESTERN FRONT IN SECOND WORLD WAR*.

**Kiel Canal (Kaiser Wilhelm Canal)**, Ger. canal in the *Land* of Schleswig-Holstein, connecting the Baltic at the Kieler Förde with the N. Sea at the estuary of the Elbe (qq.v.). An early canal (1784) from Kiel to the Eider (qq.v.) proved inadequate, and the cutting of the present canal was begun in 1887; it follows the course of the earlier canal as far as Rendsburg (q.v.) and then runs SW. It was opened by William II in 1895, but work on it (particularly with the object of enabling it to take the largest warships) continued until 1914. In 1954 it was used by 56,687 vessels with a net tonnage of 25,700,000. Length 61 m.

**Kielce**: 1. Prov. (*województwo*) of SE. Poland, drained by the Vistula (q.v.) and Pilica R.s. It includes the greater part of the former Kelsey and Radom dists. of Russian Poland. Some of the ter. of the pre-Second World War prov. of K. (area 9880 sq. m.) is now in the provs. of Katowice and Crakow (qq.v.). The land is in general fertile upland; livestock is raised, and cereals and flax are grown. There are textile and metal industries. Area 7545 sq. m.; pop. 2,500,000.

2. (*Russian Kelsey*) City of Poland, cap. of K. prov., 195 m. S. by W. of

Warsaw (q.v.). In 1795 it went to Austria, and in 1815 to Russian Poland (where it was the cap. of the Ketsy dist.). It has ironworks, and manufs. rolling-stock, munitions, foodstuffs, and chemicals. There are marble quarries near by. Pop. 50,000.

Kiepert, Johann Samuel Heinrich (1818-1899), Ger. geographer, b. Berlin, and educ. at the univ. there. His first work, in conjunction with Karl Ritter, *Atlas von Hellas und den hellenischen Kolonien*, 1840-6, estab. his reputation as a cartographer of ant. hist. From 1845 to 1852 he acted as director of the geographical institute at Weimar, and in 1858 was appointed prof. of geography at Berlin. He travelled in the E. Mediterranean and the E. His works include *Historisch-geographischer Atlas der alten Welt*, 1848, the famous *Atlas antiquus*, 1854, *Lehrbuch der alten Geographie*, 1877-8, and *Leitfaden der alten Geographie*, 1879 (Eng. trans., 1881). See P. de Chikhachev, *Reisen in Kleinasien und Armenien*, 1847-1863. His son Richard K., 1846-1915, educ. at Jena Univ., was also a noted cartographer, his chief individual work being his Special Map of Asia Minor. From 1874 for some years he was occupied in completing Baron von Richtofen's atlas of China (see RICHTOFEN, FERDINAND, BARON VON). He also prepared maps from the information given by Heinrich Barth, Möllendorff, and other Ger. travellers. From 1875 to 1887 he was editor of the geographical magazine, *Globus*.

Klaring, see BLEACHING.

Kierkegaard, Søren Aaby (1813-55), Dan. philosopher, b. Copenhagen. He graduated in 1840 at the univ. of his native tn, and then travelled for 2 years in Germany. His first pub., *Papers of a Still Living Man*, 1838, on Hans Andersen, received little notice, but his *Enten—Eller* (Either—Or), pub. in 1843, made his reputation as a great thinker. He also wrote *Stadier paa Livets Vei* (Stages on Life's Way) in 1845, and many other works. In these he examined the fundamental principles of Christianity and discussed aesthetic ideas for the rules of life. In later life he vigorously attacked the practices of the Dan. National Church. K. is numbered among the Christian existentialists, but, unlike Gabriel Marcel (q.v.), does not aspire to a systematic unity of thought. He tells us that from his earliest years he was initiated into a sombre and bitter version of Christianity and that, in view of the pastoral career he at first meant to embark on, he deeply examined the doctrine of the Protestant religion. As a student of theology he was hardly conscientious, leading the easy life of a privileged person, intent on counteracting the wretched confined years of his childhood and therefore frequenting the theatres and cafés, drinking and incurring debt, and realising at the end of it that he 'wanted to shoot himself' (*The Journal*). But he left this 'way to perdition' on 19 May 1838, a conversion which brought him moments of joy as extreme as his moments

of mental anguish, whose excess tended to disturb his mental balance. It is not easy to deduce any system from his prolific writings, even existentialism. God, he concludes, is above moral categories; and this he finds to be true of exceptional individuals, for whom the general rules of morality are no longer valid. These opinions would seem to ally his thought to an essential thesis of the existentialism of Sartre, as also his opinion that subjectivity is truth not only in the sense in which 'I do not know truth except when it becomes life in me, but in a genuinely relativist sense.' In other words, 'consciousness creates out of itself what is true'—essentially part of the existentialist philosophy (see Paul Foulquie, *Existentialism*, 1947). A collected ed. of his works, sev. of which have been trans. into English, was pub. in 1901. See E. L. Allen, *Kierkegaard, his Life and Thought*, 1935; W. Lowrie, *Søren Kierkegaard*, 1938; H. V. Martin, *Kierkegaard, the Melancholy Dane*, 1950.

Kieselguhr (Diatomaceous Earth, Trippolite, Guhr), naturally occurring deposit composed largely of the siliceous remains of small plants known as diatoms. Usually contains 70-80 per cent of SiO<sub>2</sub>, together with some organic matter, water, and oxides of metals like iron and aluminium in small quantities. K. is a bad conductor of heat, has a low density, and above all is capable of absorbing liquid such as nitroglycerin (see DYNAMITE), petroleum, and acids.

Kiev (Ukrainian Kyiv; Russian Kiyev): 1. Oblast in central Ukraine, on both banks of the Dnieper, lowland in the N. (see POLES'YE) and E., upland in the SW.; it has large peat deposits. Coarse grain, flax, and potatoes are grown in the N., wheat and sugar-beet in the S., and vegetables in K. metropolitan area; there is also cattle- and hog-raising. There are food, light, and engineering industries. The area was the core of the medieval K. principality and of the Kievan state (see KIEVAN RUSSIA); it became Lithuanian in 1362, Polish in 1569, and Russian partly in 1667 and partly in 1793. Pop. about 2,500,000, mostly Ukrainians (before the war also many Jews).

2. Cap. of the above and of the Ukrainian Rep., directly subordinated to the gov. of the rep.; it is one of the main economic and cultural centres of the Soviet Union, and one of the oldest and most beautiful Russian cities, called in the chronicle 'mother of the Russian towns.' It is situated on the high r. b. of the middle Dnieper. There are large and diverse engineering industries (equipment for food, woodworking, and light industries, for printing establs., shops, offices, hospitals, laboratories, etc.; also riv. vessels, wagons, motor-cycles, chemical and electro-technical equipment, machine tools); there are also light, food, and polygraphic industries, and a natural gas pipeline runs from Dashava (q.v.). K. is an important transportation centre (4 railway trunk lines, a riv. port, and an airport). Academic institutions include the

Ukrainian Academy of Sciences (founded 1918 under Hetman Skoropads'kyi—see UKRAINIAN HETMANS); a univ. (founded 1805 as a Polish lyceum in Kremenets, in Volhynia, transferred to K. and opened as a univ. in 1834, abolished in 1920, and re-estab. in the 1930's); a polytechnic institute (founded 1898); a conservatoire (founded as a musical school 1868, transformed 1913); and many other higher educational and research establs. There are also an opera and ballet theatre (founded 1867, Ukrainian since 1926); a Russian drama theatre (founded 1891); and many museums, including what was formerly (till 1926) the K. Cave Monastery. K. is a treasury of medieval Russian and of Ukrainian architecture. The most famous buildings of the 10th–12th cents. are the Desyatynnaia Church (foundations), the cathedral of St Sophia with many mosaics and frescoes, the remnants of the Golden Gate, and K. Cave Monastery; those of the 17th–18th cents. in the so-called Ukrainian Baroque style include the cathedral of St Nicholas and sev. buildings in the Cave Monastery; in the Rococo style are the bell-tower of the St Sophia Cathedral, St Andrew's Church, and the former Theological Academy. Askol'd's Grave is in the 19th-cent. Empire style; the univ. is classical, while the cathedral of St Vladimir is an example of pseudo-Byzantine architecture. Some of the most valuable architectural monuments have been destroyed by modern vandals: the 12th-cent. Archangel Michael's Monastery by the Bolsheviks in the period of 'militant atheism'; the 11th-cent. cathedral of the Assumption during the Ger. occupation in 1941.

Continuous existence of the city can be traced from the 8th cent. In the 9th cent. K. became cap. of the Polyane tribe and of the Kievan state. Ruined by Tartars in 1240, it became Lithuanian in 1362, Polish in 1569, and Muscovite in 1654. K. was prov. cap. (1797) and the seat of the governor-general of the SW. region; in 1917–19 it was the seat of various ephemeral Ukrainian nationalist govs. (see UKRAINE, THE, *History*), and from 1934 has been the cap. of the Ukrainian Soviet Rep. K. was occupied by the Germans in 1918 and 1941–3, and by the Poles in 1920; it changed hands sev. times during the Russian Civil War and was the scene of bitter fighting in 1941 and 1943. Lying on the trade route from Scandinavia to Byzantium, K. was a great commercial centre in the 10th–12th cents. In the 14th cent. it recovered from the Tartar devastation, and in 1499 received municipal autonomy according to the Magdeburg Law (abolished 1833). The commercial importance of K. grew steadily, particularly after the transfer in 1797 to K. from Dubno of the ann. Contract Fair; in the 19th cent. it was the main commercial centre of S. Russia (mostly agric. products, particularly sugar); by contrast there was comparatively little industry before the 1930's. The first tramway in Russia was built in

K. in 1898. K. is the historical centre of Russian and Ukrainian culture. Christianisation of Russia began with the christening of K.'s inhab. in 988; it was the centre of the Russian Orthodox Church till 1299, and the religious and cultural centre of the Russian (Ukrainian and Belorussian) pop. in Lithuania and Poland in the 14th–17th cents. (K. College founded 1615, transformed into Academy 1689, into Theological Academy 1810, abolished after 1917). In the 19th cent. K. was a centre of the Ukrainian literary and national movement, of Populism (q.v.), and later of Social Democracy. Pop. (1956) 991,000 (first in the Ukraine and third in the U.S.S.R.; 1897, 248,000; 1917, 576,000; 1920, 366,000; 1926, 514,000; 1939, 864,000), Russians, Ukrainians, and Jews. See guide-book in English. *Kiev*, 1956.

**Kievan Russia**, medieval Russian state which existed from the 9th to the 13th cent. It embraced all E. Slav and some neighbouring Finnish tribes and was ruled by the princes (later Grand Princes) of the house of Rurikidae (q.v.). The most outstanding rulers of K. R. were the Princess Olga, who became a Christian and a saint of the Russian Church; Svyatoslav who routed the Khazars (q.v.); St Vladimir, who in 988 christianised the country; Yaroslav the Wise (1019–54), so called for his legal code, the first of its kind in Russia; and Vladimir Monomach (1113–25), who for a short time succeeded in stopping the feuds between the descendants of Yaroslav's sons, among whom Yaroslav had divided the country. Continuing feuds after his death were among the chief causes of the disintegration of K. R. and the rise of regionalism (see GALICIA and VOLHYNIA, KINGDOM OF; NOVGOROD; VLADIMIR). There were other causes, economic and political. Situated on the great trade routes from Scandinavia to Byzantium, and from W. Europe to central Asia, K. R. had taken an active part in international trade, and sev. of her tns, including Kiev (cap.), Novgorod, and Smolensk, developed into important commercial centres. But the Crusades changed the pattern of world trade, and the economic ties with K. R. were greatly weakened. Different trends of social and political development in the main regions—growth of the power of the prince in Vladimir, of the *veche* (q.v.) in Novgorod, and of the *boyars* (q.v.) in Galicia—contributed to the process of disintegration. The Mongol conquest of 1237–40 (see BATTU) put an end to K. R. The 'gathering of Russian lands' which had belonged to K. R. was an important element in the policies of the Tsars of Muscovy, and of the Russian Imperial and even the Soviet Govs., and was not finally completed until the 1940's. See G. Vernadsky, *Kievan Russia*, New Haven, 1948, and B. D. Grekov, *The Culture of Kiev Rus*, Moscow, 1949.

**Kikinda** (or Velika Kikinda: Hungarian Nagyikinda), tn in Serbia, Yugoslavia, in the autonomous prov. of Vojvodina (q.v.). It is a railway junction, and

has a trade in wheat and fruit. Pop. 28,000.

**Kikuyu:** 1. Dist. of the Central Prov., Kenya Colony. It contains Mt Kenya (q.v.). Also the name of a place where there is a Presbyterian mission station, 20 m. N. of Nairobi. The surroundings are much cultivated, sweet potatoes, maize, millet, beans, and wattle predominating.

2. Name of an important Bantu people of Kenya, numbering about 1 million. They have no traditional centralised political organisation. Clan elders exercise considerable authority within their own clan groups, and political authority generally is in the hands of councils consisting of elders, each council being effective only within a small area. Initiation of all young men and girls takes place, the initiates first becoming warriors, and later becoming junior elders and then senior elders. They are mainly an agric. people, cultivating maize as a chief crop, and these days also work for Europeans on farms and in the towns. The basic unit of K. is the large family group living on its own plot of land called *githaka*, an area originally acquired by the initial clearing of the indigenous forest. There is to-day much soil erosion and overcrowding, with pop. densities of 1000 per sq. m. in some parts, and outright sale of land is practised, a rare phenomenon in Africa. Land grievances have played a large part in the relations of the K. with Europeans which culminated in the Mau Mau outbreak (q.v.), a revolt couched largely in terms of an atavistic religious revival. The gov. is trying to resettle the K. in large new vils. and to re-establish the system of chiefs and local administration, which was destroyed by the Mau Mau. See W. S. and K. Routledge, *With a Prehistoric People*, 1910; C. W. Hobley, *Bantu Beliefs and Magic*, 1922; *Report of the Kenya Land Commission*, Cmd. 4556, 1934; L. S. B. Leakey, *Mau Mau and the Kikuyu*, 1952; J. Middleton, *The Kikuyu and Kamba of Kenya*, 1953; J. Kenyatta, *Facing Mount Kenya*, 1953; H. E. Lambert, *Kikuyu Social and Political Institutions*, 1956; Lord Hailey, *An African Survey*, 1957. See KENYA COLONY.

**Kilauea, Mt.**, see HAWAIIAN ISLANDS.

**Kilbarchan, tn** in Renfrewshire, Scotland, 5½ m. W. of Paisley. It has paper-making industries, and is noted for its hand-woven tartans. Pop. 3400.

**Kilbirnie, tn** in Ayrshire, Scotland, 17 m. WSW. of Glasgow. Its chief industries are iron and steel works, cotton and linen, and fishing-net manufs. Pop. 1625.

**Kilbowie**, see CLYDEBANK.

**Kilbride:** 1. East, tn in Lanarkshire, Scotland, 6 m. S. of Glasgow, now being developed as a new tn with a target pop. of 45,000. There are various types of engineering works. Pop. 15,000.

2. West, vil. and par. of Ayrshire, Scotland, 4 m. NNW. of Ardrossan. Pop. 5000.

**Kilburn, dist.** on the NE. edge of the co. of London, partly in the bor. of Hampstead and partly in the bor. of

Willesden, Middx, the div. being the Edgware Road. There was an important priory here in the Middle Ages, and in the 18th cent. it was a spa with sulphureous springs.

**Kilohumlin**, see FORT AUGUSTUS

**Kildare:** 1. Co. in the Rep. of Ireland, situated in the prov. of Leinster. It is bounded on the E. by Dublin and Wicklow. It contains an extensive plain, part of which forms the Bog of Allen. Its prin. rvs. are the Boyne, Liffey, Barrow, and Lesser Barrow. The dist. of the Curragh in the centre of the co. is most fertile and affords excellent pasturage. Potatoes, oats, and barley are very extensively cultivated. The chief tn is Naas. Area 654 sq. m.; pop. 66,426.

2. Mkt tn in co. K., founded by St Brigid in AD. 470. K. is the centre of the Irish horse breeding and training industry, and the national stud is at Tully. Pop. 2300.

**Kilfinane, dairy tn** of co. Limerick, Rep. of Ireland, noted for the anct earthworks in the vicinity (Cush and Ardpatrick). Pop. 750.

**Kilian, or Chilian, St** (fl. AD 700), Irish missionary bishop and apostle of Frania, who preached to the heathen of Würzburg, and was put to death by Duke Gozbert. His festival falls on 8 July. See J. O'Hanlon, *Lives of Irish Saints*, 1875-1904 (vol. vii).

**Kilid Bahr**, see DARDANEELES.

**Kilimane**, see QUILMANEE.

**Kilimanjaro, mt** mass in the N. of Tanganyika Ter., situated between Lake Victoria and the coast, 3° S. of the equator. The highest mt in Africa, it culminates in 2 peaks, Kibo (19,565 ft) and Mawenzi (16,892 ft), which are both craters of extinct volcanoes. The crater of the former is 6500 ft in diameter, and 650 ft deep. The mt was first climbed in 1889 by Dr Meyer and Herr Purtscheller; the ascent was first made by Englishmen when Mason and Gillman climbed Kibo in 1921. New Moshi, to the SE., is the nearest settlement, and the first part of the ascent from there is easy, through bush and some cultivated land - coffee is grown on the SW. slopes. From 6000 to 10,000 ft is the forest belt, some 5 to 7 m. wide; grasslands extend about 3000 ft above that, and then there are glaciers and snow, descending, owing to warm air-currents, much lower on the SW. than on the N. There is a native irrigation system on Mt K. See Sir H. Johnston, *An Expedition to Kilimanjaro*, 1893, and C. Dundas, *Kilimanjaro and its People*, 1924.

**Kilinyaga**, see KENYA, MOUNT.

**Kilkee**, seaside resort on the W. coast of co. Clare, Rep. of Ireland, 58 m. from Limerick. Pop. 1700.

**Kilkeel**, fishing port of co. Down, N. Ireland, at the foot of the Mourne Mts. Pop. 2350.

**Kilkenny:** 1. Co. in Leinster, Rep. of Ireland, is bounded N. by Leix co., E. by Carlow co. and Wexford co., S. by Waterford co., and W. by Tipperary. Its chief rvs. are the Suir, Barrow, and Nore, which rise in the Slieve Bloom Mts., and

flow into Waterford Harbour. Anthracite coal is obtained from the Castlecomer basin. The climate is agreeable and mild. Cattle trading is carried on, and potatoes and turnips are largely cultivated. Area 796 sq. m.; pop. 66,683.

2. The cap., on the R. Nore, is divided into 2 dists., Englishtown and Irishtown. The cathedral of St Canice dates from 1255, and is built partly in Early Eng. style. The ruins of a Dominican and of a Franciscan monastery still exist, also the Protestant College of St John, where Swift and Bishop Berkeley received part of their education. Pop. 10,570. See C. P. Meehan, *Confederation of Kilkenny*, 1905.

**Kilkhampton**, vil. and par. of Cornwall, England, 6 m. from Bude, with a par.

connects with the middle and lower lakes by means of the Long Range, a channel 2½ m. long. Places of especial beauty and historic interest are the Macgillcuddy Reeks, the Torc and Purple Mts. and the famous gap of Dunloe. The Innisfallen ruins, Muckross Castle, and Aghado church are other noteworthy features. Pop. 6300. See M. Gorges, *Killarney*, 1912, and J. C. Coleman, *The Mountains of Killarney*, 1948.

**Killer-whale**, or *Grampus* (corruption of the Fr. *grand poisson*, Norman *grapots*, Sp. *gran pes*, It. *gran pesce*), a toothed whale which is to be found in most seas of the world. It belongs to the Delphinidae or dolphin family, and is the only cetacean which preys upon its own kind,

*British Railways*

UPPER LAKE, KILLARNEY

church associated with the Grenville family, part Norman and part Perpendicular in style. The S. doorway is particularly fine Norman work, and there are many carved bench-ends of the 15th and 16th cents. Pop. 860.

**Killala**, small tn in co. Mayo, Rep. of Ireland, which dates back to the 5th cent. The French landed there in 1798. Pop. 900.

**Killaloe**, cathedral tn in co. Clare, Rep. of Ireland, on R. Shannon, 17 m. from Limerick. It was the former seat of the High King of Ireland, and is renowned for its beautiful scenery. Pop. 900.

**Killarney**, mkt tn and favourite resort for tourists, situated in the co. of Kerry, Rep. of Ireland. The lakes of K. are 1½ m. from the tn, and are shut in by wood-crowned mts. The lower lake, called Lough Leane, is dotted about with wooded is., the most important one being named Ross Is.; another isle contains the beautiful ruins of the abbey founded by St Finian the leper. Muckross Abbey, which was built by the Franciscans about 1440, divides the lower lake from the middle or Torc lake. The upper lake

the porpoise, dolphin, and whale, and also on seals and sea birds. It is enormously strong and very voracious. Its special characteristics are the rounded head, conical teeth, and high dorsal fin. The adult male measures from 20 to 30 ft long, and is more than 10 ft in girth. The upper part of the body is black, changing to white on the under surface and on part of the sides. It sometimes appears in herds numbering hundreds.

**Killiecrankie**, Pass of, in Porthshire, Scotland, in the valley of the Garry, extends from K. station 1½ m. to Garry Bridge. On the plain at the top of the pass Viscount Dundee defeated the troops of William III under Mackay in 1689, and received his death wound.

**Killigrew**, Thomas (1612-83), dramatist, b. London, the son of Sir Robert K., vice-chamberlain to Queen Henrietta Maria. He was page to Charles I in 1633. His play, *The Parson's Wedding*, was popular before the Civil war, after the outbreak of which he resided abroad with the Eng. court. At the Restoration he returned and was appointed groom of the bedchamber by Charles II. He built

a theatre where Drury Lane Theatre now stands, and there produced many plays, including some of his own composition. His works were collected and pub. in 1664. See A. Harbage, *Thomas Killigrew, Cavalier Dramatist*, 1930.

**Killigrew**, Sir William (1607-95), playwright, eldest son of Sir Robert K. and brother of Thomas K. (q.v.). He was gentleman usher to Charles I, and had command of a troop which guarded the king's person during the Civil war. He pub. *Three Plays, viz. Selindra, Pandora, Ormasdes*, 1665, and various pamphlets concerned with the unsuccessful attempts to drain the Lincs fens, 1647-61.

**Killiney**, seaside resort, 10 m. SE. of Dublin, Rep. of Ireland. K. Hill is a noted beauty spot. Pop. 800.

**Killiz**, Killis, or Kalls, tn. of Turkey on the Syrian frontier, 50 m. from Aleppo. It is noted for its olive groves, which produce very fine oil. Pop. 30,000.

**Killorglin**, vil. in co. Kerry, Rep. of Ireland, 16 m. S. of Tralee, the scene of the famous 'Puck Fair', where a puck goat is enthroned annually from 10 to 12 Aug. Pop. 718. See FAIR.

**Killybegs**, coastal tn. of co. Donegal, Rep. of Ireland, 17 m. W. of Donegal. It is an important centre of the fishing industry with a fine natural harbour. K. is famous for hand-made carpets. Pop. 1000.

**Killyleagh**, seaport on Strangford Lough, co. Down, N. Ireland, 6 m. from Downpatrick. K. Castle is in the vicinity. Sir Hans Sloane, founder of the Brit. Museum, was b. here. Agric. produce is exported, and the manu. of linen and suede leather are the prin. industries. Pop. 1600.

**Killmainham**, W. suburb of Dublin, Rep. of Ireland. It contains the co. jail in which Parnell, O'Brien, and other political prisoners were held, and a military hospital. Pop. 11,000.

**Killmallock**, mkt tn. of co. Limerick, in the Golden Vale of the earls of Desmond. Pop. 1100.

**Kilmarnock**, municipal burgh in Ayrshire, Scotland, situated on K. Water, a trib. of the Irvine, 24 m. SW. of Glasgow. The Burns Memorial, a museum in Kay Park, contains sev. MSS. of the poet. K. is noted for its woollen manu., and also for the manu. of lace, carpets, boots and shoes, and china and earthenware. There are important engineering and machinery works. Pop. 42,120.

**Kilmer**, Alfred Joyce (1886-1918), Amer. poet, b. New Brunswick, New Jersey. Educ. at Rutgers College and Columbia Univ., he taught Latin for a year, then joined the staff of the *Standard Dictionary*, and subsequently held editorial posts on the *Churchman*, the *Literary Digest*, and the *New York Times*. Enlisting as a private in the First World War, he was killed in action and posthumously awarded the Croix de Guerre. His first book of poems, *Summer of Love*, appeared in 1911, but his best-known poem, 'Trees,' printed in 1913, was the title-poem of a vol. pub. in the following

year. *The Circus and Other Essays* appeared in 1916, and *Main Street and Other Poems* in 1917. In 1918 his works were ed. with a memoir by R. C. Holliday.

**Kilmuir**, David Patrick Maxwell Fyfe, 1st Viscount (1900- ), lawyer and politician, educ. at George Watson's College, Edinburgh, and Balliol College, Oxford. He was called to the Bar in 1922; Q.C. 1934. From 1935 to 1954 K. was M.P. for the W. Derby div. of Liverpool. He was solicitor-general, 1942-5, and attorney-general, 1945. In 1945-6 he was deputy chief prosecutor at the Nuremberg War Crimes Trials. When the Conservatives returned to power in 1951 K. became home secretary and minister for Welsh affairs. In 1954 he was created a viscount, and became lord chancellor in succession to Lord Simonds (q.v.).

**Kiloat**, see KILWA KISIWANI.

**Kilogram**, see METROLOGY.

**Kilometre**, see METROLOGY.

**Kilowatt**, measure of electrical power equal to 1000 watts. See METROLOGY; POWER; UNITS, ELECTRICAL.

**Kilpatrick**, Old or West, tn. in Dunbartonshire, Scotland, on the R. Clyde, 10½ m. NW. of Glasgow. It is supposed to have been the bp. of St Patrick, and has remains of the Rom. Antonine Wall. Pop. 3227.

**Kilpinen**, Yrjö (1892- ), Finnish musician and foremost *lieder* composer of N. Europe. He has been a member of the Academy of Finland since 1948, and devotes himself entirely to composing.

**Kilpisjärvi**, Finnish lake and tourist resort on Enontekiö, where the frontiers of Finland, Sweden, and Norway meet in Alpine surroundings.

**Kilrenny**, see ANSTRUTHER.

**Kilronan**, see ARAN ISLANDS.

**Kilrush**, seaport on the estuary of the R. Shannon, co. Clare, Rep. of Ireland. It is noted for its fisheries and flagstone quarries, and there is also considerable trade in grain and timber, as well as an export of peat, kelp, hay, and stone. K. has furniture and seameal products. There is a good harbour. Pop. 3300.

**Kilsyth**, burgh of Stirlingshire, Scotland, 13 m. from Glasgow, and scene of a battle between Montrose and the Covenanters in Aug. 1645; the former's victory gained him temporary domination of Scotland. Wm Chalmers Burns inaugurated a religious revival here in 1839. Industries include coal-mining and hosiery. Pop. 10,000.

**Kilit**, see HIGHLAND DRESS.

**Kilwa Kisiwani**, is. and tn of Tanganyika; formerly known to the Portuguese as Quiloa and to the Arabs as Kiloat, it was a very important Arab trading station, with a fine harbour from which a well-defined track leads to Manda, on Lake Nyasa. The old tn was founded by Prince Ali Ibn Hassan, a Persian, in 957, and many ruins show the importance of the settlement. Ibn Batuta, writing in 1331, called it 'the most nobly built city on earth.' K. K. was captured by the Portuguese in 1505. The mainland opposite is fertile and well populated.

**Kilwinning**, municipal burgh of Ayrshire in Scotland, on the r. b. of the Garnock, about 25 m. SW. of Glasgow. The tn derives its name from St Winnin, who lived there in the 8th cent. A famous abbey was raised to his memory by Hugh de Morville in 1140. Pop. 6533.

**Kim Van Kieu**, the national poem of Viet Nam (q.v.) composed by Nguyen Du (q.v.) at the beginning of the 19th cent. The K. V. K., written in alternate lines of 6 and 8 feet or words, describes the love of 2 young people, Kim and Kieu, and the adventures and sufferings which they undergo before finally marrying. It reflects the turmoil in Viet Nam during the period of the Tay-Son (see VIET NAM) rebellion and embodies many of the feelings and characteristics of the Vietnamese people. It is known and loved by all Vietnamese.

**Kimawenzi**, see KILIMANJARO.

**Kimberley**, John Wodehouse, 1st Earl of (1826-1902), statesman, b. Wymondham, Norfolk, and educ. at Eton and Christ Church, Oxford. He held office in Lord Palmerston's first and second govts., and was Brit. minister at St Petersburg, 1856, and under-secretary for India, 1864, becoming lord-lieutenant of Ireland the same year, and in consequence of the work of pacification which he accomplished while holding this office was created Earl of K. In 1868 he was lord privy seal in Gladstone's first administration, and in 1870 succeeded Granville at the Colonial Office. It was during his tenure of this post that the grant of complete self-gov. was given to the Boers, after the Brit. defeat at Majuba Hill, 1881. In 1882 he was transferred to the India Office, and in 1891 was leader of the Liberal party in the House of Lords. Kimberley, S. Africa, is named after him.

**Kimberley**: 1. Cap. and chief commercial centre of the N. Cape, S. Africa, the most important diamond-mining centre of that country. The tn (situated 4012 ft above sea level) is built round about the mining camps, which are scattered. K. is the chief diamond centre of the world; the industry has been placed on a sound basis and at the present time 3 mines are in production. It is also the centre of the largest cattle-ranching area in the country. Diamonds were first discovered by diggers on the farms of Du Toit's Pan and Bultfontein in 1870 (see also HOPETOWN). Further discoveries of diamonds were made in 1871 at de Beers and Colesberg Kopje. Ultimately the mines were placed under Brit. control, when the whole diamond market became vested in 1 company, the de Beers Consolidated Mines Ltd. The diamond industry was badly hit by the First World War, and even more by the slump that followed, the mines at one period being actually closed down. The K. (Diamond) mine, as it was once named, has now for 70 years been empty of men, and all the machinery taken away; it is known to-day as 'the Big Hole,' and is situated just off one of the main streets. Miners sank workings underneath the hole to a

depth of 3600 ft. Diamonds have been found in all sorts of places in K.—in old mine dumps, in back yards, and even in the streets at times; but the finest are those which de Beers are able to show the visitor to the city, a collection worth £1,000,000. The K. of to-day is not the K. of yesterday, for between the wars the city experienced such fluctuations of fortune that many foresook diamonds for the gold of the Rand. Other notable features of K., besides diamonds, are the fine, park-like gardens of Alexanderfontein; the MacGregor museum, where there are some fine models of famous diamonds; some memorial cairns and crosses recalling the Anglo-Boer war; the Honoured Dead memorial to those who fell in the defence of K. during the siege in the S. African war; and the Duggan-Cronin Bantu gallery, housing a collection of photographs of all the native tribes of S. Africa.

K. holds an important position owing to its situation. There has been railway communication with K. from the Cape since 1885. The climate is salubrious, and the soil is fertile, the tn being provided with a good water supply from the R. Vaal. The mining of base metals and minerals in the area is becoming an increasingly important factor in the economic structure of S. Africa. Manganese, iron ore, blue asbestos, gypsum, and salt are some of the minerals being produced on an increasing scale. The construction of sev. large irrigation schemes in the region in recent years has made this one of the chief food production areas in the country. Large quantities of beef, mutton, wheat, maize, ground-nuts, butter, cheese, fruit, and vegetables are produced.

The new civic centre includes a new technical college, art gallery, new law courts and gov. offices, and a new city hall. Provision has been made for facilities for secondary industry. Estab. industries include textile, clothing, and furniture factories, joinery and engineering works, cheese, mineral water, yeast, cement, and bonemeal factories. The tn underwent a siege during the Boer War, 1899-1900, which was relieved by Gen. Sir John French. Pop.: Whites, 21,055; Bantu, 26,760; Coloureds, 13,511; Asiatic, 1103.

2. Gold-field in the K. dist., Australia, 300 m. SE. of Derby.

**Kimbolton**, old mkt tn of Hunts, England, 11 m. W. of Huntingdon. The castle (partly rebuilt by Vanbrugh) was occupied by Catherine of Aragon after her divorce until her death in 1536, and is now used as K. school. The church dates from the 13th cent. Pop. 700.

**Kimbri**, see CIMBRI.

**Kimchi**, David (c. 1160-1235), Jewish commentator, b. Narbonne in France, where he spent his life. His great work was the *Séfer Mikhl*, which consists of 2 parts: the *Mikhl*, or grammar, and the *Séfer ha-Shordahim*, or lexicon. He also wrote commentaries on portions of the Scriptures, of which his commentary on the prophets is the best. His grammar and lexicon have been the basis of subsequent

Heb. grammars and lexicons. See L. Finkelstein, *The Commentary of David Kimchi on Isaiah*, 1926; W. Windfuhr on the *Commentary on Nahum*, 1927; H. Cohen on the *Commentary on Hosea*, 1929.

**Kimmeridge Clay**, geological name of a group of Upper Jurassic beds, named after the Dorset vil. of K. where they are clearly seen. The term Kimmeridgian is applied to rocks formed at the same time as the K. C. (see JURASSIC SYSTEM). The upper part of the K. C. consists of dark blue bituminous shales, and the lower part of clays and shales in which calcareous concretions are found. It continues from the Dorset coast into Wilts, and thence along the Jurassic outcrop into Yorks. The economic products of the formation include alum, and clay for the making of bricks, tiles, etc. Fossils are abundant in both series of the formation, including remains of dinosaurs, plesiosaurs, and ichthyosaurs.

**Kin**, Next of, or 'nearest of consanguinity,' in the same degree of relationship are those among whom is distributed the personal property of a person who dies wholly or partially intestate as to that property. As a general rule the right to take out administration to the personal effects of an intestate follows the beneficial right to the property. Since the Administration of Estates Act, 1925, the devolution of real property has been assimilated to that of personality. (For the order in which the representatives take see SUCCESSION, INTESTATE.) A husband has the exclusive right of taking out letters of administration to his wife's estate, and if he dies without doing so the wife's next of K. may take out administration, but they will hold the beneficial interest in the property for the husband's personal representatives. Where none of the K. will take out administration a creditor is entitled to do so. A gift, whether in a deed or will, to the 'next of K.,' whether *simpliciter*, or with reference to the Statutes of Distributions, or to intestacy, does not include a wife or husband. The phrases 'next of K.' and 'next of kin according to the statutes,' as frequently used in gifts under deeds and wills are to be distinguished. The former is strictly confined to the literal meaning of the words, but the latter includes those who, not actually next of K., represent deceased next of K. See Goodeve's *Personal Property*. See also INTESTACY.

**Kincairdine**, or **Penatngore**, tn of Bruce co., Ontario, Canada, situated on Lake Huron. It has iron foundries and salt works. Pop. 2662.

**Kincairdineshire**, or **The Mearns**, maritime co. in the NE. of Scotland, lying between the R.s Dee in the N. and the N. Esk in the S. The surface is mountainous, the highest peak being Mt Battock, 2555 ft, but in the N. the co. slopes into the valley of the Dee and in the S. into the Howe of the Mearns (a continuation of Strathmore). In the mountainous region are grouse moors, but in the valley of the Dee and the Howe of the Mearns and the sea coast, the most fertile part, agriculture

flourishes, prin. crops being oats and barley, turnips and potatoes. Cattle-rearing and fishing, especially salmon fishing, are carried on, and there is some shipping at Stonehaven, the co. tn. Part of the city of Aberdeen lies in K. With N. Angus, the Mearns returns 1 member to Parliament. Area 379 sq. m.; pop. 28,000.

**Kinck**, **Hans Ernst** (1865-76), Norwegian novelist and playwright, b. Øksfjord, Finnmark. He spent his childhood in country surroundings, and his novels reflect his interest in the peasant mentality. His use of colourful dialect often makes his style difficult to understand and to trans. His work is influenced by repeated visits to Italy. His best-known works are *Sneskavlens brast*, 1918-19, and the verse play *Driftkaren*, 1908. See D. Lea, *H. E. Kinck*, 1941, and A. H. Winsnes, *H. E. Kinck og vår tid*, 1954.

**Kinder Scout** (2088 ft), mt in Derbyshire, England, and the highest point in the Peak dist. (q.v.).

**Kindergarten** comes from the Ger. word meaning children's garden, and was the name chosen by Friedrich Froebel for his children's school, where he evolved the best methods, in his opinion, for the all-round development of children, whom he thought of as being like young plants needing constant loving care and attention to help them to grow. Inspired by the ideals of Pestalozzi (q.v.) and building on his own experience, Froebel elaborated a system of organised occupations by means of 'gifts' calculated to satisfy the child's inborn love of play and fellowship and at the same time to exercise and develop its sensibilities and healthy activities, and to teach it unconsciously something of its duties towards God, Nature, and Man. Froebel's 'gifts'—as they are called—which were used in this system of education, have long fallen into disuse in this country, as also have most of the occupations which accompanied them, but the underlying principles of Froebel's educational philosophy are still the basic principles in the progressive K.s of to-day. Like the anc. Greeks, Froebel was fully alive to the value of rhythm in speech and music. Training in speech and music, together with movement, forms an important part of any child's education in a K. to-day, where a child is regarded as a growing person to be respected and studied, and where self-activity is the keynote of its education. Learning as far as possible is attained through doing wholeheartedly the play and work that is appropriate to the age of the child. This includes the acquisition of techniques and essential skills when the time is ripe for them, and after careful previous preparation through a number of varying experiences and different media. The aim of the discipline imposed is the attainment of self-discipline. The acquisition of this is necessarily slow, and the child requires not only sympathetic help for its growth, but the right environment where it can experience responsibility suitable to its stage of development where it learns to recognise

the value of social service, and where co-operation between the home and school is of the first importance. Froebel early recognised the responsibilities of the teacher who attempted to carry out his ideas, and for this purpose advocated the careful training of these teachers of children. One direct result of this is seen today in the primary training colleges, and in the teacher's certificate A, the trainer's diploma and handwork diploma awarded by the National Froebel Foundation. The Ministry of Education recognises this certificate after the teachers have been trained at one of the recognised colleges. A list of all the Froebel training colleges can be obtained from the National Froebel Foundation, 2 Manchester Square, London, W.1. The principles of Froebel met with no very wholehearted appreciation in his country, but Germany does not stand alone in rejecting her own prophet. K.s. flourish best in America. The National K. Association was founded in 1909 in New York in order to bring the advantages of K. education to all the nation's children, and in 20 years' time it had secured the estab. of nearly 1400 K.s. See also CHILD STUDY; EDUCATION; FROEBEL; FRIEDRICH WILHELM AUGUST; INFANTS' SCHOOLS; MACMILLAN, RACHEL; MONTESSORI, MARIA; NURSERY SCHOOLS.

**Kinderscout Grit**, geology, a variety of the Millstone Grit overlying the Carboniferous Limestone. It takes its name from Kinder Scout (q.v.), a summit of the Peak dist. The formation consists of shales, grits, and sandstones, and is coarser and harder than the millstone grits in general. Though not yielding such good building stone as the other sandstones of Derbyshire, it is quarried for such purposes as foundations, etc., where its disadvantages as regards dressing need not be apparent.

**Kinematics**, branch of the science of mechanics, in which the phenomena of motion are considered without reference to any force or mass. K. is usually treated as a study preliminary to that of dynamics, and involves only the conceptions of space and time. By making a few simple assumptions, it is possible to formulate certain relationships which can afterwards be examined in the light of dynamical knowledge.

The *velocity* of a point in a given direction is defined as the rate of change of its displacement in that direction. The velocity is said to be *uniform* if the point traverses equal distances (in the same direction) in equal intervals of time, however small those intervals may be. In such a case the velocity of the point is given by the equation  $v = \frac{s}{t}$ , where  $s$  is the distance traversed in the time  $t$ . In the case of non-uniform velocity we define the velocity *at a point* as the average velocity over a very short distance enclosing the point, i.e.  $v = \frac{\delta s}{\delta t}$ . Velocity is a vector

quantity, i.e. it has direction as well as magnitude. *Speed*, a scalar quantity, is

defined in the same way as velocity but without reference to direction, and therefore has magnitude alone. Acceleration is the rate of change of velocity; if a body has an initial velocity of 5 ft per sec., and that velocity is increased by 2 ft per sec. every sec., its velocity at the end of successive secs. will be 7, 9, 11, 13 . . . ft per sec. The final velocity at the end of any period may be measured by the relation  $v = V + ft$ , where  $V$  = initial velocity in, say, ft per sec.,  $f$  = acceleration in ft per sec. per sec.—that is, the number of velocity units added on per sec.—and  $t$  = number of secs. The average velocity during the period, if the acceleration be uniform, may be taken as the velocity at the middle of the period; that is it will be the mean of the initial and final velocities. Average velocity therefore =  $\frac{V+v}{2}$ ; that is,  $(V+V+ft) \div 2$ , or,  $V + \frac{1}{2} ft$ .

Now, the length traversed by a body moving with uniformly accelerated velocity would be the same as if it moved uniformly with the average velocity throughout the period. Therefore we have, in this case,  $s = (V + \frac{1}{2} ft) \times t$ , or  $s = Vt + \frac{1}{2} ft^2$ . Eliminating  $t$  between the equations  $v = V + ft$  and  $s = Vt + \frac{1}{2} ft^2$ , we get a third equation,  $v^2 - 2fs = V^2$ . We now have certain relationships of space and time expressed concisely by formulae, which may be recapitulated thus: for uniform velocity,  $s = vt$ ; for uniformly accelerated velocity,  $v = V + ft$ ,  $s = Vt + \frac{1}{2} ft^2$ ,  $v^2 = V^2 + 2fs$ . The acceleration of a body falling freely in vacuo is an example of uniformly accelerated motion,  $f$  being 32.2 ft per sec. per sec. In the case of non-uniformly accelerated motion, the acceleration *at a point* is defined as  $\frac{\delta v}{\delta t}$ , where  $\delta v$  is the increase in velocity in a short interval  $\delta t$ , in the vicinity of the point in question.

As in the case of velocity, acceleration is a vector quantity; it is completely specified only when its direction and magnitude are known.

K. also deals with the direction in which motion takes place, and the determination of the resultant of sev. velocities possessed by a particle. All motion, of course, is relative; and it may be the purpose of a problem to determine the motion of a body with reference to a certain body or surface, as, for instance, the surface of the earth (see DYNAMICS and KINETICS).

**Kinematograph**, see CINEMATOGRAPH.

**Kineshma**, tn in central Russia, on the Volga, in the Ivanovo oblast. It is an important transportation centre (transfer from water to railway and vice versa) and an old industrial town (textiles). Known since 15th cent. Pop. (1956) 84,000 (1926, 34,000; 1939, 75,000).

**Kinetic Theory**, in chem. and physics, assumes that the molecules of a gas are in constant and rapid motion, and that they behave as perfectly elastic objects. On this theory, the laws that describe the behaviour of gases under variation of temp. and pressure, etc., find a satisfactory theoretical explanation. The K. T. in its

present form is due to many scientists, notably Joule, Clausius, and Clerk-Maxwell (about the middle of the 19th cent.). See GAS AND GASES.

**Kinetics**, branch of the science of mechanics which considers the action of forces in producing or changing the motion of a body. If the body remains in a position of rest or equilibrium, the consideration of the conditions is a part of *statics*, or the science of equilibrium of forces. This div. of the study of forces into 2 parts according as they produce motion or equilibrium is an arbitrary one. The laws of statics are merely special cases of the laws of dynamics in which the acceleration and the velocity of the body are zero. It is convenient, however, to treat of certain particular deductions from Newton's laws of motion under the heading of K.

**Kinematics** (q.v.) treated of motion without regard either to the nature of the moving body or to the cause of change of motion. K. introduces the considerations of mass and force. Newton's first law, which states that change of motion is caused by forces acting upon a body, gives us, therefore, a definition of force. The law may be otherwise stated as 'a material body possesses inertia.' The second law states that the change of motion is proportional to the impressed force and takes place in the direction of that force. By motion is meant momentum, which is measured by the product of the body's mass and its velocity. Force is measured, therefore, by consideration of the mass of the body and the acceleration or change of velocity induced by the force. This gives us the fundamental relationship of K., which may be concisely stated thus:  $P = mf$ ; that is, force = mass  $\times$  acceleration. The unit of force is called the *poundal* in the F.P.S. system (see PHYSICAL UNITS AND DYNE) and is defined as that force which, acting on a mass of 1 lb. for 1 sec., gives it an additional velocity of 1 ft per sec. in the direction of the force. Newton's third law of motion states that action and reaction are equal and opposite, i.e. if a body A exerts a force on a body B, then B simultaneously exerts an equal and opposite force on A. A force may not cause actual motion, but it always tends to do so. If the point of application of the force moves in the direction in which the force acts, the force is said to do *work*. Work is measured by the distance through which the point of application moves in the direction in which the force acts, multiplied by the magnitude of the force. The unit of work in the F.P.S. system is that amount of work done by a force of 1 poundal by moving its point of application 1 ft; it is called a foot-poundal. A body may have the capacity of doing work by virtue of the momentum it possesses, or through its position or configuration; it is then said to possess *energy*. Energy possessed by virtue of motion is called *kinetic energy*; that possessed by virtue of the position of a body, as in a weight supported above the ground, or

through the position of its parts, as in a coiled watch spring, is called *potential energy*. The work done in bringing a moving particle to rest can be shown to be  $\frac{1}{2}mv^2$ ; this is therefore defined as the kinetic energy of a particle of mass  $m$ , moving with a velocity  $v$ . If a body whose weight is  $W$  is raised through a vertical height  $h$ , the work done against the mutual attraction of the earth and the body is  $Wh$ . This is the measure of the increase of the potential energy of the body in its new position. See DYNAMICS and KINEMATICS.

**Kinetoscope**, see CINEMATOGRAF.

**King, Edward** (1829-1910), Bishop of Lincoln, educ. at a private school and Oriel College, Oxford. Ordained in 1855, and in 1863 became principal of Cuddesdon Theological College, where he exercised an enormous influence over the ordinands studying under him. In 1873 he became prof. of pastoral theology at Oxford, and in 1885 passed to the bishopric of Lincoln. Here he speedily became a great force and his work was only interrupted by a fruitless attempt by the Church Association to secure his condemnation for the use of certain ceremonies (see LINCOLN JUDGMENT). See B. W. RANDOLPH and J. W. TOWNROE, *The Mind and Work of Bishop King*, 1918.

**King, Henry** (1592-1680), Bishop of Chichester and poet, educ. at Westminster School and Christ Church, Oxford. In the year that he was made Bishop of Chichester (1642) he was taken prisoner by the parl. army, but was later released. He was a personal friend of Charles I. He pub. a metrical trans. of the Psalter (1651) and some poetry. In one of his poems he makes a reference to *Eikon Basilike* as the work of the King. He was restored to his see at the Restoration. He was one of the executors of John Donne (q.v.).

**King, Peter**, 1st Baron (1669-1734), lawyer and Whig politician, a relative of J. Locke (q.v.). He became recorder of London, and was knighted (1708) Baron King of Ockham; lord chancellor, 1725-1733. He wrote 2 theological works: *An Enquiry into the Constitution of the Primitive Church*, 1691, and *History of the Apostles' Creed with Observations*, 1702. See J. C. CAMPBELL, *Selections from Speeches of Lord King*, 1842, and E. FOSS, *The Judges of England*, 1848-54.

**King, Sir Richard** (1730-1806), admiral, b. Gosport. He entered the navy in 1738, and having served in the Mediterranean and E. Indies was promoted to be lieutenant in 1746. In 1756 he was in command of the landing party at the capture of Calcutta and Hugli, and distinguished himself in 1782 in the action off Sadras, after which he was knighted. In 1787 he was promoted to be rear-admiral, in 1792 was created a baronet and appointed governor and commander-in-chief at Newfoundland, and in 1795 was made admiral.

**King, William** (1663-1712), Brit. satirical and miscellaneous writer and poet. A good scholar, he was a supporter of the

Tory and High Church party. From 1701 to 1708 he held various offices in Ireland. His works include *Animadversions upon the Pretended Account of Denmark*, 1694, in answer to R. Molesworth's pamphlet; *Dialogues of the Dead, Relating to the Present Controversy concerning the Epistles of Phalaris*, 1699, satirising Bentley; *A Journey to London in the Year 1698*, 1699; *The Transactioneer, with some of his Philosophical Fancies, in Two Dialogues*, 1700, a satire on the Royal Society; *Findication of Dr Sacheverell*, 1711. See J. Brown (ed.), *Remains of the Late Learned and Ingenious Doctor William King*, 1732; J. Nichols (ed.), *The Original Works of William King*, 1776; S. Johnson, *Lives of the Poets*, 1781.

**King, William**, see CO-OPERATION.

**King, William Lyon Mackenzie** (1874-1950), Canadian Liberal statesman; b. Berlin (now Kitchener), Ontario; eldest son of John K., Q.C., and grandson of Wm Lyon Mackenzie, the famous political reformer and rebel. Graduated at univ. of Toronto, 1895; fellow in political economy, Chicago Univ., 1896-7; Harvard, 1897-1900. Became deputy minister of labour for Canada and editor of *Labour Gazette*, 1900; chairman of sev. royal commissions on labour and immigration problems. Represented Canada in negotiations with Great Britain regarding immigration, 1906 and 1908. In latter year entered Dominion Parliament as member for N. Waterloo, Ontario. Beaten in the Liberal overthrow of 1911, he spent the years 1914-18 in the U.S.A. with the Rockefeller Foundation. He was elected member for Prince Edward Is. in 1919; in Aug. of that year he was chosen to succeed Laurier as Liberal leader. In 1921, when he was elected for New York, Ontario, he became Premier in succession to A. Meighen. In the 1925 general election he lost his seat. When he returned to Parliament as member for Prince Albert, Saskatchewan, his advice to the governor-general to dissolve was rejected, and he resigned. Meighen tendered the same advice, which was then accepted—and the Liberals won the 1926 election. K. remained Premier 4 years longer. He attended the Imperial Conferences of 1923 and 1926. In July 1930 the elections went against him, and he was succeeded by R. B. Bennett. When the statute of Westminster (q.v.) was promulgated it was seen that the theories he preferred and enunciated at the Imperial Conference of 1926 had been given practical expression. From the first time he entered public affairs K. realised the need for Canada being united within herself, co-operative within the Commonwealth, and influential within the wider family of nations. In 1935 his party won the most sweeping victory in the hist. of Canadian politics—winning 174 seats out of 250. He thus became Prime Minister for the third time in his career. In the same year he concluded a commercial treaty with the U.S.A. He attended the coronation of King George VI and Queen Elizabeth, 1937.

When Britain declared war on Germany

in 1939, K., by postponing Canada's declaration for a week, in effect affirmed Canada's complete independence in foreign affairs. How far he had succeeded in achieving national unity was only fully realised when the war broke out. He brought a united Canada into the war, and it may be doubted if any other Canadian political leader could have done so. The Canadian achievements in the war under K.'s leadership were impressive. When his Conservative opponents criticised Canada's war effort as inadequate,

National Film Board, Canada

WILLIAM LYON MACKENZIE KING

he sought re-election and gained it decisively—the real issue being conscription, which he consistently opposed. In Aug. 1940 he negotiated with Roosevelt the setting up of a permanent Joint Defence Committee for the defence of the W. hemisphere.

Between 20 Dec. 1921 and 15 Nov. 1948 K. was in office for over 20 years, and no contemporary statesman has held office for so long a time. The period which included his administrations raised Canada to its modern position in world affairs; and in the inter-war period the changes which occurred profoundly altered the country's imperial and international relationships. K. played an important part in bringing about these changes, in fulfilment of a dual policy founded on national autonomy and imperial and international co-operation. He brought to fruition Canadian ideals that had been gradually maturing since confederation was estab., and had been fostered in their time by other Canadian

Premiers, notably by the Liberal Sir Wilfrid Laurier and the Conservative Sir Robert Borden. K. never favoured proposals for executive centralisation of the Empire countries, believing that such an arrangement would not make for unity among them.

He resigned in 1948, being succeeded in the premiership of Canada by Louis S. St Laurent, and *d.* in July 1950. See *Canada and the Fight for Freedom* (speeches—Sept. 1941–June 1944); E. Ludwig, *Mackenzie King: a Portrait Sketch*, 1944; B. Hutchison, *The Incredible Canadian*, 1953; H. S. Ferns and B. Ostry, *The Age of Mackenzie King*, 1955.

**King, William Rufus** (1786–1853), vice-president of the U.S.A.. He was admitted to the Bar in 1806 and entered Congress in 1811. He represented Alabama in the Senate from 1820 to 1844, and was minister to France in 1844, and showed himself an active advocate of the annexation of Texas. In 1848 he was again a senator, ultimately becoming president of the Senate, and in 1852 vice-president of the U.S.A.

**King:** 1. Is. off Australia, lying to the NW. of Tasmania, in Bass Strait.

2. Co. in Washington, U.S.A., bounded on the W. by Puget Sound and Admiralty Inlet. Co. seat, Seattle. It has lumber, clays, coal, fruit, nuts, dairy products, livestock, and truck farming. Pop. 532,922.

**King (A.-S. *cyning***, man of the tribe, or chief), the man who (actually or nominally) holds supreme power in a state. A reigning queen has equal power, but not a queen consort. See GOVERNMENT; PARLIAMENT; SOVEREIGNTY; and individual K.s and queens.

**King Charles Spaniel**, dog characterised by a large head, its nose almost touching the skull between the eyes; it has very long ears, dark and lustrous eyes. The coat is long and silky, the colour determining the sub-varieties of this breed: black-and-tan, ruby, tri-coloured, or Blenheim (white marked with red). Popularised by King Charles II, the breed has been largely ousted by the introduction of the Pekinese.

**King Charles's South Land**, largest is. of Tierra del Fuego, S. America. It is generally level except in the W., where the highest point, Mt Sarmiento, reaches a height of nearly 7500 ft. See FUEGO, TIERRA DEL.

**King Crab**, name given to any species of the class Xiphosura of the subphylum Arachnida. There are 5 species forming a single family, Xiphosuridae. Formerly these were all included in a single genus *Limulus*. This genus has been discarded in favour of 3 genera, *Xiphosura*, *Carcinoscorpius*, and *Tachyplesus*. It is a marine arthropod whose body, apart from its spike-like tail, is almost covered by a large shell or carapace. Unable to swim, the K. C. is found in comparatively shallow water. Sometimes they bury themselves in the mud or sand, using their tails to change their position. Their eggs are laid in the sand at

high-tide mark. Their food consists of bi-valves and annelids.

KING CRAB

**King Edward VI School**, Southampton, grammar school founded under letters patent of King Edward VI in 1553, by the will of the Rev. Wm Capon, D.D., master of Jesus College, Cambridge, the main part of the existing buildings being erected in 1937. The school has associations with Queen's College, Oxford.

**King Edward VII Land**, region in the Antarctic, lying to the E. of Victoria Land, about lat. 76° S. and long. 152° 30' W., part of Ross Sea Dependency (see Zealand).

**King Edward's Hospital Fund**, see HOSPITAL FUND.

**King Edward's School**, Birmingham. Dating from 1552, the foundation includes 7 schools for boys and girls, to a total of about 4000.

**'King George V.'** name of 2 Brit. battle-ships. The first, after service throughout the First World War, including Jutland, was scrapped in 1926. With ten 13.5-in. guns and a displacement of 23,600 tons, her speed was 21 knots. The second was completed in 1940, served in the convoys to Russia, in the *Bismarck* action, and at the landings in Italy, and took part in Pacific operations, including the bombardment of the Jap. mainland. She has a displacement of 44,650 tons, a length of 740 ft, a beam of 103 ft, and a weight of armour of 10,000 tons. Her armament consists of ten 14-in., sixteen 5.25-in., eight 40-mm., thirty-eight 20-mm., and eighty-eight 2-pounder guns. Aircraft were originally fitted, but were removed in 1943. Other ships of the same class are the *Anson* (q.v.), *Duke of York*, *Howe*, and *Prince of Wales*, the last sunk by the Japanese in 1941.

**King George Sound**, inlet of W. Australia, containing Princess Royal and Oyster harbours, and having on its shore the tn of Albany. Pop. 8265.

**King George's Fields Foundation**, trust responsible for the playing fields side of

the national memorial to King George V. When the national appeal was made in 1936 for funds for a statue in London and playing fields throughout the country, it was the intention that any tn or vil. that needed playing fields and desired to commemorate King George V in that way should have an opportunity of taking part in the national scheme. The appeal closed in 1937, and up to 1939 the amount remitted to the foundation by the National Memorial Fund Committee was £471,000. Surveys made at the time showed that few tns had sufficient playing fields for their pops., and that on the average not one rural par. in ten possessed a public field. The problem, therefore, facing the administrative council at the beginning was how best, where millions of pounds would be required, to make use of its limited funds, and it was decided to make grants towards the capital cost of schemes promoted and maintained by local authorities or local bodies of trustees. This policy has been operated in collaboration with the National Playing Fields Association. Up to the end of 1955 the total number of schemes approved was 492, of which 367 are in England, 86 in Scotland, 30 in Wales, 8 in N. Ireland, and 1 in the Channel Is. Memorial fields in the colonies of Aden, Barbados, Falkland Is., Malta, and Nigeria have also been recognised by the foundation as coming within the scheme and accorded the heraldic panels which distinguish every field within the national memorial.

'King-maker,' see WARWICK, EARL OF.

King-of-Arms, see HERALD.

King Paradise Bird, see BIRD OF PARADISE.

King-post, upright post, often carved, in the centre of the truss or frame of a timber-frame roof, resting on the tie beam and supporting the ridge-pole. For an account of the construction of a king-post truss, see CARPENTRY; see also ROOF.

King William's Town, locally called King, a tn in Cape Prov., S. Africa, situated on the Buffalo R. in the midst of an agric. dist.; forests of valuable timber are found near by. It is a busy trade centre of a populous area. When Kaffaria was a separate colony, K. W. T. was the cap. Pop.: Whites, 6505; Bantu, 4315; Coloureds, 1638; Asiatics, 106.

Kingcup, see MARSH MARIGOLD.

Kingdom of Galicia and Volhynia, see GALICIA AND VOLHYNIA, KINGDOM OF.

Kingfisher, Great, see LAUGHING JACKASS.

Kingfishers are members of the Alcedinidae, a family of coraciiform birds remarkable for their peculiar shape and brilliant colouring. The head is exceptionally large, and the long angular beak is keeled; the tail and wings are relatively short, and the metatarsus only slightly developed. The Alcedinidae are sometimes divided into the sub-families Daceloninae, or wood K., and Alcedininae, or water K. The common European Kingfisher, *Alcedo atthis*, is in the latter group;

it has greenish-blue plumage, with bright blue head and tail, and white patches at the side of the neck; the bill is black with orange-tinted base. It is generally found by shady forest streams, sitting on a branch overhanging the water, or hovering with vibrating wings in search of the fish which form its prin. diet; having sighted the prey it dives perpendicularly, with folded pinions, and returning with the morsel dashes it on a stone or tree-branch before swallowing. K. feed also on insects, and on small crustaceans, in search of which they occasionally visit the seashore. Their eggs are usually deposited on a bed of fish-bones, concealed in holes in riv. banks, in tree stumps, or in old walls.

Kinghorn, royal burgh and seaside resort in the co. of Fife, Scotland, on the Firth of Forth, about 3 m. SSW. of Kirkcaldy. A monument marks where Alexander III was killed (1286). Industries are bottle-making and golf-club making. Pop. 2337.

Kinglake, Alexander William (1809-91), Eng. historian, was called to the Bar in 1837. Two years earlier he had travelled in the E., and in 1844 he pub. his experiences in *Eothen, or Traces of Travel brought Home from the East*. His interest in military hist., to the study of which he had devoted much time, took him, in 1846, to Algiers, where he accompanied the flying column of Saint-Arnaud, and, later, to the Crimea at the beginning of the war. The first vols. of his *Invasion of the Crimea* appeared in 1863, and the eighth in 1887.

Kinglet, see GOLDEN-CRESTED WREN.

Kings, *The Books of*, a hist. of the kings of Israel and Judah, from the time of David to the captivity. They anciently counted as one, the fourth in the series of the Former Prophets. It is difficult to make any clear separation between Samuel and K. The div. emphasises the fact that Solomon's reign inaugurated a new epoch, at first of great glory and then of decadence. Samuel and K. were compiled from similar sources, and probably underwent successive redactions by the same hands. The principal of these sources are: (1) The various chronicles, such as the Book of the Acts of Solomon, mentioned in 1 Kings xl. 41, and the Book of the Chronicles of the K. of Judah. These are frequently referred to, but their exact nature is not known. (2) The Book of Jashar and other popular and vivid collections of tales. (3) Certain official records of the temple, which furnish details about the dedication of the temple and its later hist. The main interest of the last redactor lay in this religious development, and his standpoint is definitely deuteronomistic, all the early kings being judged according to the standard of this time. See W. O. E. Oesterley, *An Introduction to the Books of the Old Testament*, 1934; W. F. Albright, *Archaeology and the Religion of Israel*, 1946; J. H. Bewer, *The Literature of the Old Testament in its Historical Development*, 1947; de Vaux, *Les Livres des Rois*, 1949.

King's African Rifles, regiment of 6

battalions of askaris, locally enlisted African tribesmen (Ethiopian, Kavirondo, Nandi, Masai, Somali, Galla, Yao, Mkamba, etc.), and the Somaliland Camel Corps, commanded and trained by regular Brit. officers, with a few specially selected Brit. warrant and non-commissioned officers for training and administrative duties at H.Q. The units are raised as far as possible locally, and are allotted as distinct garrisons to the various Brit. E. African dependencies. The present 3rd K. A. R. were formerly the E. African Rifles, the 4th were the Uganda Rifles; the 1st and 2nd battalions were formed, 1902, from the Central Africa Regiment, recruited in Nyasaland. The K. A. R. have been on more or less continuous active service from 1893—the beginning of the 'scramble for Africa'—until the end of the First World War, and again throughout the Second World War. For years the K. A. R. have been a vital factor in upholding Brit. authority in E. Africa. After 1894, when Sir Gerald Portal declared a Brit. protectorate over Uganda, the so-called scramble for Africa began in earnest. This abrupt transition from tribal independence to tutelage under European powers was not effected without serious fighting, the brunt of which was borne by African troops. Designated by various titles, as shown above, these forces of askaris were eventually co-ordinated and reorganised as the K. A. R. Before the Second World War a garrison of only 5000 riflemen was found sufficient to guarantee the internal security and guard the frontiers of the 5 Brit. dependencies, Kenya, Uganda, Tanganyika, Nyasaland, and Brit. Somaliland, with an aggregate area of 800,000 sq. m. and a total pop. of 12,000,000. But although each dependency has its own separate garrison of K. A. R., the various units are liable to be used to reinforce the troops in any particular dependency in which operations on an extended scale may have been undertaken. Owing to the variations of character and the difference in the temperaments of the different tribesmen in the K. A. R., the transfer of units to countries beyond their own has always to be effected with discretion. Thus Somalis, though tireless in the arid wastes of their own country, are especially prone to malaria and would therefore be of little use for operations in the vicinity of the Uganda lakes or in the swamps of Tanganyika. Again, in view of the great differences in religion, character, and even in colour of the personnel of the K. A. R., it is essential for the officers to study the hist. and customs of all the tribes from which the askaris are recruited. The K. A. R. played a prominent part in the operations against the Mad Mullah between 1899 and 1903, but in the latter year 1 detachment was wiped out at Gumburru. They also fought bravely in the First World War in their own terrain; but, except in the world war periods, the numbers of troops engaged have usually been small, though the distances to be traversed are vast, and the tribal enemy frequently merely

elusive unclad warriors, often armed only with spears and bows and arrows. The services of the K. A. R. in the First World War afforded sufficient argument for their existence as trained cadres in peace, by means of which, if necessary, large bodies of trained troops could be raised and placed in the field at short notice. In that war the K. A. R. took an important part in the operations in E. Africa from the beginning, and particularly after 1916, in Gen. Smuts's advance which swept the Germans out of Brit. ter., and led to the occupation of Dar-es-Salaam and the pursuit of the fleeing enemy by Gen. van Deventer. Various columns, consisting for the most part of battalions of the reorganised K. A. R., pursued the enemy forces till news of the armistice brought about the surrender of von Lettow and his force. In the Second World War the K. A. R. were reinforced by part-time volunteers of the E. African Defence Force. For many months after Italy's entry into the war in 1940, the K. A. R. bore the brunt of the fighting in the desert country of E. Africa. With the N. Rhodesian contingent and the Somaliland Camel Corps they offered stubborn resistance to the It. invasion of Brit. Somaliland, and later, when the British passed to the offensive, they took a prominent part in the recovery of that ter. It was the speed of the advance of the K. A. R. to Afmadu which made the Italians evacuate Kismayu. In Feb. 1941, in the assault across the Juba R., the K. A. R. rendered notable service in the trackless bush. One mobile detachment with tanks and armoured cars took Modun and 1000 prisoners. Other companies of the regiment won victories at Todenyang and Namaraputh, and at Merca they released 200 Brit. sailors, victims of a Ger. raider, who had been lodged in an It. prisoner-of-war camp. In Ethiopia the K. A. R. were responsible for the brilliant capture of Mt Fike, which was instrumental in dealing a mortal blow to It. hopes of counter attack. The K. A. R. were also in the advances which led to the assault on Gondar and in the attack which ended the Ethiopian campaign. Volunteers of the K. A. R. in Burma played a major part in the capture of the reputedly impregnable Mt Kennedy in Nov. 1944, and stormed Kalewayn, guarding the approaches to Kalewa on the Chindwin R., their speed and stamina completely baffling the Japanese. The K. A. R. have taken an active part in the suppression of the Mau Mau outbreaks which began in 1952. In the same year a contingent was sent to serve against the Communist guerrillas in Malaya. See W. Lloyd-Jones, *King's African Rifles*, 1927, and Lt.-Col. H. Moyse-Bartlett, *The King's African Rifles*, 1956.

**King's Badge**, see SILVER WAR BADGE. **King's Bench Prison**, formerly in Southwark, London, which certainly existed early in the 14th cent. Much later it became used for debtors until 1862, when it became a military prison until closed and demolished in 1879-80.

**King's Champion**, see CHAMPION.

**King's College, Cambridge**, was founded in 1441 by King Henry VI. K. C. was exempt from the jurisdiction of the Archbishop of Canterbury, the Bishop of Ely, and even, in certain matters, of the univ. The chapel (Perpendicular) is very fine. It was begun in 1446 by Henry VI (architect: Reginald Ely), and continued by Edward IV and Richard III (architect: Simon Clerk) and Henry VII (architect: John Wastell); the stonework was finished in 1515, with the completion of John Wastell's splendid fan vault. The incomparable windows, for the most part the work of Netherlandish glaziers, inserted between 1517 and 1531. Henry VIII gave the woodwork, carved by foreign craftsmen of unknown nationality, and dated by the monogram 'HA,' for Henry and Anne Boleyn.

**King's College, London**, college of London Univ. (q.v.), founded in 1828, its constitution being amended by an Act of Parliament in 1882, and again in 1908 when the college was reorganised under a scheme of incorporation, becoming Univ. of London K. C. (which includes the faculties of arts, laws, science, medicine, and engineering, and a dept of education) and K. C. theological dept. The faculty of engineering began in 1838, and the theological dept in 1846. K. C. Hospital was estab. in 1839 in Portugal St. but is now at Denmark Hill under a separate governing body. The junior dept of the college moved to Wimbledon in 1897 as K. C. School and was transferred by statute in 1911 to the corporation in which the property of the school is now vested. Civil service classes were begun in 1856 and developed into the Strand School (taken over by the L.C.C. in 1912) and into St George's College. The dept for higher education for women was opened in 1885 in Kensington; its home science dept was moved in 1915 to Campden Hill, becoming K. C. of Household and Social Science in 1928 and Queen Elizabeth College (q.v.) in 1953; the rest was merged into Univ. of London K. C. in 1915. The dept of oriental language and literature was transferred to the School of Oriental and African Studies (q.v.) in 1917, and the dept of Russian to the School of Slavonic and E. European Studies in 1932. The college has over 2000 students, and is situated in the Strand.

**King's Council**, see CURIA REGIS.

**King's Evil**, old and popular name for scrofula (q.v.). The origin of the term lies in the belief that a royal personage was endowed with healing power directed particularly to this form of tuberculosis. The power was claimed by the royal houses of England and France, and was attributed to the use of 'chrism,' or oil of peculiar sanctity, in the coronation ceremonial. From the time of Edward III the custom of touching afflicted persons was maintained until the time of the Stuarts; under the Hanoverians the actual custom became obsolete, although the Stuart pretenders practised it in their exile and during their invasions of this country.

See ANGEL. See also H. L. Seaver, *The Royal Touch* (in Massachusetts Hist. Society Proceedings, vol. 65, 1946).

**King's Langley**, vill. of Herts, England, 4 m. from Watford. Here is the site of a former royal palace, residence of Eng. sovereigns from Henry III to Richard II. Pop. 4200.

**King's Letter**, see BRIEF.

**King's Lynn**, Lynn Regis, or Lynn, municipal bor., mkt tn, and seaport of Norfolk, England, situated at the mouth of the Great Ouse, 97 m. N.E. of London. The harbour is some 30 ac. in extent; there are 2 docks, spacious quays, and good roadsteads between them and the Wash. The Alexandra Dock, opened in 1869, has a water area of nearly 7 ac. with a depth of 31 ft. In addition there are riverside quays. On its landward side the tn was formerly defended by a fosse, and remains of the old wall, including a handsome Gothic structure known as the S. Gate, may still be seen. The streets are generally narrow and winding. In the centre of a public promenade in the Walks is an octagonal chapel called the Red Mt. (1485), which was formerly the resort of pilgrims. The par. church of St Margaret (1100) is a fine Gothic structure, with 2 towers at the W. end. St Nicholas's chapel (1150) has many interesting monuments; All Saints' Church is a beautiful and anct cruciform building. Among other notable buildings are the Trinity Guildhall (tn hall adjoining) with Renaissance porch, and W. Lynn church, the E. wall and window of which have been rebuilt. Clifton House, with a 5-storeyed brick watch-tower, is among the most interesting of the merchants' houses, dating from the 16th or early 17th cent., and has recently been purchased by the corporation for preservation. St George's Hall, in King St, the old medieval hall of the Guild of St George, is now in use as an arts centre; a festival of music and arts is held annually. The grammar school dates back to Henry VIII. The fisheries of K. L. are important, and include mussels, cockles, and shrimps; there are boat-building yards, manufs. of sails, artificial manures and fertilisers, engineering works, iron foundries, a beet-sugar factory, and fruit- and vegetable-cannelling, and shellfish-bottling factories, corn-mills, agric. implement manufs., and a brewery. Pop. 26,173.

**King's Medal for Service in the Cause of Freedom**, silver medal instituted in 1945 to recognise services by civilians of foreign nationality in furtherance of the interests of the Brit. Commonwealth in the allied cause during the Second World War. The obverse bears the king's crowned effigy. The reverse, designed and modelled by Mr T. H. Paget, shows a knight in armour, fresh from the heat of combat, and with his lance broken, receiving refreshment from an allegorical female figure. A similar medal, for 'courage in the cause of freedom,' is awarded for deeds of gallantry, generally to members of resistance movements who helped Brit. servicemen to escape from the enemy.

he dealt with various abuses. As the movement became more revolutionary in its character, his sympathies were alienated from it, and his later books had nothing to do with its propaganda. *Hypatia*, 1853, is a brilliant and forcible picture of life in the 5th cent. at Alexandria in the days when the Christian Church and the Rom. Empire were struggling for mastery. *Westward Ho!*, 1855, his most popular work, is a stirring story of the Elizabethan heroes. *Two Years*

CHARLES KINGSLEY

Water-colour by Carlo Pellegrini,  
drawn for *Vanity Fair*.

*Ago*, 1857, is a story of the Crimean War. He pub. the delightful *Water-babies* in 1863, and, subsequently, other books. He also wrote poetry, and some of his verses have the true poetic ring, notably 'The Three Fishers,' 'A Farewell,' and 'Young and Old.' K.'s power of characterisation was weak. His characters are either lay figures or unoriginal. His one outstanding creation is Miriam in *Hypatia*. He had a great command of language, and his scene-painting is admirable. In few Eng. authors can there be found finer pictures than are contained in his books, whether of King. landscape, as in *Yeast*, of wretched hovels, as in *Alton Locke*, of Alexandria and the desert, as in *Hypatia*, of the hills of Devon, and the solitude of the great S. Amer. forest which Amyas Leigh and his followers traverse, as in *Westward Ho!*, or of the feulands, as in *Hereward the Wake*.

The blend in K. of jingoism, latitudinarianism and anti-popey coincided well with the tastes of Queen Victoria, and in 1859 all remembrance of his youthful radicalism was forgotten in an invitation to preach in Buckingham Palace. He soon became one of the queen's chaplains-in-ordinary, and almost at the same time

Palmerston offered him the Cambridge professorship of modern hist. The only reason for supposing that he was qualified for the post was that he had written 3 historical novels, and he soon showed that he was not really suited to the chair. The queen then appointed him tutor to her heir, then studying at Cambridge. To prepare himself for this additional privilege, K. immersed himself in Ger. hist., only to learn with dismay that he was to instruct the prince in the period from William III to Waterloo. However, he continued to deserve and enjoy the queen's approval. He attacked popery, he championed Governor Eyre (q.v.), and he welcomed the Prussian victory at Sadowa. Yet year followed year, deaneries and bishoprics fell vacant, and K. remained rector of Eversley. When the queen suggested him in 1868 for a canonry at Worcester, even this small prize was with held, for the reason that it would have been prejudicial to Disraeli. In the following year Gladstone, who shared few of K.'s opinions, made amends for K.'s earlier disappointments, and he was made a canon, first of Chester, then of Westminster. Had he not d. at 55, he might well have become a bishop. In a new reassessment of K., Dame Una Pope-Hennessy reveals him as a greater man than most imagine. There was a rugged independence of mind, though not supported by intellect of an equal order. Christian Socialist, Imperialist, and Chart-ist sympathiser, he was often guided by impulse rather than principle, and showed a desire to throw himself into a conflict with an added pleasure when he found himself on the unpopular side. Dame Una rightly insists upon K.'s passion for nature, and suggests that, if he had concentrated upon describing natural scenes, he would rank to-day above Richard Jefferies. However that may be, it was this passion that enabled K. to admire Darwin, whereas most other intellectuals, including Goethe and George Eliot, excoriated his contempt.

See his *Life and Letters*, ed. and written by his widow, 1877; C. E. Raven, *Christian Socialism*, 1920; W. H. Brown, *Charles Kingsley: the Work and Influence of Parson Lot*, 1924; M. Hanawalt, *Charles Kingsley and Science*, 1937; G. Kendall, *Charles Kingsley and his Ideas*, 1947; and Una Pope-Hennessy, *Canon Charles Kingsley*, 1948.

**Kingsley, Henry** (1830-76), novelist, b. Barnack, Northants, a brother of Charles K. (q.v.). Educ. at King's College, London, and Oxford, he went to the Australian goldfields in 1853. Returning in 1858, he began to write novels, the first of which, *Geoffrey Hamlyn*, appeared in 1859. From 1864 he ed. the *Edinburgh Daily Review*, and acted as war correspondent for the paper during the conflict between France and Germany (1870-1). His masterpiece is *Ravenshoe*, 1860. See also AUSTRALIAN LITERATURE. See life by S. M. Ellis, 1931.

**Kingsley, Mary Henrietta** (1862-1900), ethnologist, sociologist, and traveller,

remarkable for her researches into W. African ethnology. B. Islington, daughter of George Henry K., brother of Charles K.; studied ethnology at Cambridge Univ. After the death of her parents she decided to go out to W. Africa and make a study of native religion, law, customs, and folklore. She pub. an account of her exploration in *Travels in West Africa*, 1897. Other works include *West African Studies*, 1899, and *The Story of West Africa*, 1899. Mary K.'s life was an unselfish one and she d. in S. Africa at an early age from enteric fever contracted in nursing fever cases during the Boer War. See life by S. Gwynn, 1932; O. Campbell, *Mary Kingsley: a Victorian in the Jungle*, 1957; C. Howard, *Mary Kingsley*, 1957.

**Kingsport**, tn in Tennessee, U.S.A., on the Holston R., in the S. Appalachian Mts. Industrial products include cellulose acetate, iron, glass, and rayon, and there is a large book-printing works. The city is on the site of the fort (built 1761) on the old Wilderness Road. Pop. 19,570.

**Kingston**, William Henry Giles (1814-1880), writer of boys' books, b. London, son of a merchant who lived in Oporto. Here he wrote articles for the Portuguese newspapers, which were instrumental in the conclusion of a commercial treaty between England and Portugal. His first success came with his story for boys, *Peter the Whaler*, 1851. He was encouraged by this success to retire from business and devote himself to tales of adventure. He soon became one of the most popular authors of adventure stories, and within 30 years wrote some 130 tales of adventure for boys. Among them were *From Powder Monkey to Admiral*, which ran as a serial in the *Boy's Own Paper*. Others were *The Three Midshipmen*, 1862, *The Three Lieutenants*, 1874, *The Three Commanders*, 1875, and *The Three Admirals*, 1877. He also conducted sev. papers, including *The Colonist* and *The Colonial Magazine and East India Review*. He was also interested in emigration, volunteering, and various philanthropic schemes. For his services in negotiating the treaty mentioned above, he received a Portuguese knighthood, and for his literary labours a gov. pension.

**Kingston**: 1. Seaport and cap. of Jamaica, situated in the SE. of the is. It has one of the finest natural harbours in the world; the area of the harbour is 16 sq. m., of which about 7 sq. m. have a depth of from 7 to 10 fathoms. K. is beautifully situated on regularly sloping ground virtually at the foot of the Blue Mts and on the N. shores of the harbour, and is one of the is.'s tourist resorts. The streets were laid out by compass, those at right angles to the shore running N. and S., those parallel to the shore-line running E. and W., but flood waters have worn the N. and S. streets below the general level. K. was not the first place chosen for the commercial cap. Port Royal flourished as such until it was destroyed by an earthquake in 1692, when a law was passed declaring K. to be the

'chief seat of trade and head port of entry.' From that time the prosperity of K. was assured. It was swept by a great fire in 1780, but soon recovered. A disastrous earthquake occurred in Jan. 1907, when nearly 2000 lives were lost. Poverty and unemployment led to serious riots in May-June 1938, and damage was done to corporation and other property. The Jamaican Gov. railway links K. with Montego Bay and Spanish Town, and it has an airport. In 1923 K. and the adjacent par. of St Andrew were incorporated under a joint mayor and council. Pop., with St Andrew, 338,010, mostly Negroes.

2. City of Ontario, Canada: cap. of Frontenac co., on the NE. of Lake Ontario at the mouth of the Cataract R., and 160 m. E. of Toronto. Called the Limestone City from many public and private buildings of that material. It was incorporated as a city in 1838, and in 1841 became for a time the cap. of Canada. In the same year was founded Queen's Univ.—the third largest in all Canada. Besides the univ., it has the Royal Military College of Canada, a fine collegiate institute and vocational school, and good public and private schools. K. has also an excellent public library, and good hospitals. There are 2 cathedrals and many churches. Its industries include locomotives, textiles, shipbuilding, biscuits, and chemicals. It is on the Canadian National (main line) and Canadian Pacific railways, has a good harbour, and is an important port of call for Great Lakes freight and passenger services. K. was founded in 1673 by Count Frontenac, governor of New France. Captured by the British in 1758, and in 1783 settled by United Empire Loyalists. Pop. 43,145.

3. City of New York, U.S.A., and co. seat of Ulster co., situated on the Hudson R. Its chief industries are the manuf. of clothing, textiles, refrigerators, bricks, and metal products; there is also mushroom growing. K. is in a fruit-growing area. Pop. 28,800.

4. Bor. of Pennsylvania, U.S.A., in Luzerne co., situated on the r. b. of the Susquehanna R. The manufs. are silk goods and hosiery, and there are railway works and machine factories. Coal is extensively mined in the neighbourhood. Pop. 21,090.

**Kingston-upon-Hull**, see HULL.

**Kingston-upon-Thames**, royal and municipal bor. and mkt tn of Surrey, England, 11 m. SW. of Charing Cross. It is a residential suburb, possessing fine promenades and public gardens on the riv. bank. Occupations include aircraft manuf. and many lighter industries. K. is historically interesting; sev. Saxon kings were crowned here, and the coronation stone, which is supposed to have been used for the throne, now stands in the forecourt of the Guildhall. The Saturday market was granted by James I, and the Wednesday market by Charles II. A fair, held in Nov., but now discontinued, was granted by Henry III. King George VI, with the queen in Oct. 1948, opened the new power station at K., the first of

25 planned for the whole country. Pop. 39,300.

**Kingstown:** 1. Inland seaport of Dublin, Rep. of Ireland, see DUN LAOGHAIRE.

2. Seaport and cap. of St Vincent, W. Indies, situated on the SW. coast. It exports spices, sugar, cocoa, spirits, etc., virtually the whole of the St Vincent's commerce being through K. Pop. 6000.

**Kingsway,** thoroughfare in London, which connects Holborn with the Strand. It was so called in compliment to King Edward VII, who opened it on 18 Oct. 1905. It runs from High Holborn, opposite Southampton Row to Aldwych, and is 1800 ft long and about 110 ft wide. A tunnel, formerly for tramways, runs below K., connecting Theobalds Road with the Thames embankment.

**Kingswinford,** see BRIERLEY HILL.

**Kingswood:** 1. Urb. dist. of Glos., England, about 3 m. from Bristol, with manufs. of boots, underwear, brushes, food products, and motor-cycles. Here in 1739 John Wesley and George Whitefield began their field preaching mission. Pop. 19,000.

2. Vil. of Glos., England, about 20 m. from Bristol, with 3 elastic mills, formerly a centre for cloth manuf. The 15th-cent. gatehouse is all that remains of a Cistercian abbey founded here in 1149. Pop. 1000.

3. See BANSTEAD.

**Kingswood School,** Bath, public school for boys, founded by John Wesley (q.v.), 1748, originally for the sons of Methodist ministers.

**Kington,** mkt tn of Herefordshire, England, on the R. Arrow, 19 m. NW. of Hereford. The church dates from the 14th cent.; the tower is Norman. Hergest Court, with its 14th- and 15th-cent. buildings, is all that remains of the border castle. Limestone is quarried near by. Pop. 2000.

**Kinrossie,** burgh of Inverness-shire, Scotland, 43 m. S. of Inverness. It is a favourite summer resort. Pop. 1050.

**Kinkajou,** or *Jupura* (*Potos flavus*), carnivore of the suborder Arctoidea and placed with the raccoons in the family Procyonidae. The K. has a short, rounded head, a long, prehensile tail, and the feet are provided with short, sharp claws, particularly used when the animal is climbing. It is much the same size as a domestic cat but has a longer tail. It is found in Central and S. America and is almost entirely arboreal, feeding by night on small mammals, birds, and insects; fruits and honey are also eaten. The false K. (*Basaricyon*) resembles the K., but the tail is not prehensile.

**Kinleith,** tn in N. Is., New Zealand, 144 m. S. of Auckland, 39 m. N. of Taupo. H.Q. of new Kraft pulp and paper industry, estab. by New Zealand Forest Products Ltd., and the site of a modern saw-mill with the largest output of sawn timber in the country. A residential tn for mill employees is Tokoroa, 4 m. away. Pop. 300 in 1949; 5000 in 1955; expected to reach 10,000 by 1960.

**Kinlochleven,** tn at the head of Loch Leven, Argyll, Scotland, is of recent

growth, and owes its existence to the development of the water-power of the dist., and the estab. of the works of the Brit. Aluminium Co. See LEVEN. Pop. 2000.

**Kinloss,** vil. of Ontario, Canada, situated in Bruce co., close to Kincardine.

**Kinnear,** Norman Boyd (1882- ), ornithologist, son of an Edinburgh architect, educ. at Edinburgh Academy and Trinity College, Glenalmond. From 1905 to 1907 he was an assistant at the Royal Scottish Museum, and for the next 12 years curator of the Bombay Natural Hist. Museum, as well as assistant editor of the Bombay Natural Hist. Society Jour. In 1920 he entered the natural hist. dept. of the Brit. Museum, in 1927 becoming deputy keeper in charge of birds. He became keeper of zoology in 1945, and 2 years later director of the natural hist. dept. He has pub. a number of papers on ornithology.

**Kinnaird,** Sir John Macdonald (1782-1830), traveller and diplomatist, b. Carneden, Linnithgow. In 1804 he was appointed ensign in the Madras Infantry, and became captain in 1818. He made numerous journeys in Persia, and also travelled through Armenia and Kurdistan, publishing his results in a *Narrative of Travels in Asia Minor, Armenia, and Kurdistan in 1813-14, 1818*. He was envoy to Persia, 1824-30, and took part in the hostilities with Russia.

**Kino,** astringent (q.v.) drug obtained from certain trees on the W. coast of Africa, in India, and in Ceylon. The substance recognised as K. at the present day is the product of the tree *Pterocarpus marsupium*. The properties of the drug are due to the presence of kino-tannic acid and pyrocatechin. It is a useful astringent, and was formerly used as a gargle and given internally, in the form of a powder, for diarrhoea.

**Kinross:** 1. Inland co. of Scotland, bounded on the N. and W. by Perthshire, and on the S. and E. by Fife. Its surface is hilly in the N. and W. (Ochil Hills); to the E. are the Lomond heights. In the SE. is Loch Leven (q.v.), drained by the R. Leven; Mary Queen of Scots was imprisoned on an is. in the loch. The co. is well cultivated; barley and oats are grown, and cattle and sheep are reared. Linen is manuf. and wool-spinning carried on. K. and W. Perth form a single parl. div., returning 1 member. Area 87 sq. m.; pop. 7420.

2. Co. tn of the above co., 8½ m. from Dunfermline. K. was the prin. residence of Alexander III. K. House (built 1685-1690) is a fine example of 17th. Renaissance style architecture. There is a woollen mill and linen is manuf. Pop. 2500.

**Kinross of Glaslune,** John Blair Balfour, 1st Baron (1837-1905), lord president of the court of session in Scotland, b. Clackmannan. He was called to the Scottish Bar in 1861, and rose to be the foremost advocate in Scotland. He was appointed solicitor-general for Scotland in 1880, and in 1881 became lord advocate, again holding the office in 1886 and from

1892 to 1895. In 1899 he succeeded James P. Bannerman as lord president of the court of session, and in 1902 was raised to the peerage.

**Kinsale**, seaport tn, 15 m. SW. of Cork, Rep. of Ireland. Built on the slopes of Compass Hill, its streets are narrow and steep. It has remains of Charles (now K.) Fort, one of the first examples of military architecture in the world. K. Harbour is the estuary of the Bandon R.,  $\frac{1}{4}$  m. wide and winding for 2 m. Off the Old Head of K., on a rocky coast with a lighthouse which is the first landfall of ships coming from the U.S.A., the *Lusitania* was sunk in 1915. Pop. 2000.

**Kinsen**, see CREMULPO.

**Kinsakiang**, see CHINGSHA.

**Kinston**, tn of N. Carolina, U.S.A., and the co. seat of Lenoir co. It is situated on the Neuse R., about 26 m. SE. of Goldsboro by rail. It is a tobacco market and tobacco-processing centre; it manufs. shirts, yarn, textiles, and paper boxes, and there are lumber mills. Pop. 18,336.

**Kintore**, royal burgh of Aberdeenshire, Scotland, 12 $\frac{1}{2}$  m. from Aberdeen. The tn hall was built in the 18th cent. Pop. 850.

**Kintyre**, or **Cantire**, peninsular dist. of Argyll, Scotland, situated between the Firth of Clyde and the Atlantic, and joined to the Argyll mainland by the isthmus of Tarbert. It is 43 m. long (average width 6 $\frac{1}{2}$  m.); the prin. tn is Campbeltown. The chief occupations are agriculture, fishing, coal-mining, forestry, and stone quarrying. The Mull of K. is a headland at the S. extremity; there is a lighthouse on it with a fixed light visible 24 m. distant.

**Kinver Edge**, Staffs, 5 m. W. of Stourbridge and 5 m. N. of Kidderminster; 198 ac. of high heath and woodland with fine views, including an early Iron Age camp and the Holly Austin and Nanny's Rocks. There are some interesting rock dwellings on the property. Presented in 1917 as a memorial to Mr Grosvenor Leo by his children.

**Kioga**, one of the chain of lakes in Uganda, forming a swampy kind of extensive backwater in the headwaters of the Nile. Navigable channels have to be maintained by constant cutting through the Sudd.

**Kios**, see CHIOS.

**Kiosk**, originally a Turkish or Persian summer-house, usually supported on pillars. In modern life, the term is applied to small erections for the sale of newspapers, etc., especially in Paris.

**Kioto**, see KYOTO.

**Kiowas**, tribe of N. Amer. Indians of the plains culture and one of the most bitter enemies of the White Amers. Like the Comanche and Apache, they raided Mexican ter. until subdued. To-day they number about 2000, mostly in Kansas.

**Kipling**, **John Lockwood** (1837-1911), author and artist, b. Pickering, Yorks, father of the novelist, Rudyard K. (q.v.). He was educ. at Woodhouse Grove, and entered the Indian Civil Service in 1867. He was architectural sculptor at the Bombay School of Art, 1865-75, and principal of the Mayo School of Art and

curator of the Central Museum at Lahore, 1875-93. He pub. *Beast and Man in India*, 1901, a collection of Hindu and Mohammedan folk-tales, and also executed illustrations for his son's books: *Kim*, the *Jungle Book*, and the *Second Jungle Book*.

**Kipling**, **Joseph Rudyard** (1865-1936), novelist and poet, b. Bombay, son of John Lockwood K. (q.v.) and Alice Macdonald (d. 1910). He was educ. at the United Services College, Westward Ho!, N. Devon. A somewhat highly coloured picture of his life there is presented in *Stalky and Co.*, 1899. At the age of 17 he returned to India and became sub-editor of the *Lahore Civil and Military Gazette*. In 1886 appeared his *Departmental Ditties*, a vol. of light satirical verse; in the following year, *Plain Tales from the Hills*; and during the next 2 years *Soldiers Three*, *The Story of the Gadsbys*, *In Black and White*, *Under the Deodars*, *The Phantom Rickshaw*, and *Wee Willie Winkie*. These tales quickly became famous in India, and it was recognised that a new force had come into the literary world. During the years 1887 and 1889 K. travelled through India, China, Japan, and America, and thence to England, where he arrived to find himself famous. His travels also took him to Africa during the Boer War, and to Australasia. His travel sketches were pub. in 1899 under the title of *From Sea to Sea*. In 1892 K. married Miss C. S. Balestier, the sister of W. Balestier, in conjunction with whom he wrote *The Naulahka*, 1891. *Life's Handicap* was pub. in 1890, and in 1891 his first novel appeared, *The Light that Failed*, which was afterwards dramatised in 1905. *Barack Room Ballads*, verse, was pub. in 1896 and also in the same year *Many Inventions*, a collection of stories. In 1894 a new vein was opened up by his *Jungle Book*, followed in 1895 by the *Second Jungle Book*. These masterly stories of animal life are considered by many K.'s best work. *The Seven Seas*, verse, was pub. in 1896, and the novel *Captains Courageous* in 1897, followed by *The Day's Work*, 1898, *A Fleet in Being*, 1898, *Stalky and Co.*, 1899, *Kim*, 1901, and *Just So Stories for Little Children*, 1902. Another book of verse, *The Five Nations*, appeared in 1903, and 2 collections of stories, *Traffics and Discoveries* in 1904, and *Actions and Reactions* in 1909. *Puck of Pook's Hill*, stories which vitalise the hist. of England, came out in 1906, and was followed by a sequel, *Reveries and Fancies*, in 1910. In 1911 K. pub. a *History of England*, written in collaboration with C. R. L. Fletcher. *Songs from Books*, a collection of his chapter-headings, was pub. in 1913, and in that year also a play, *The Harbour Watch*. During the First World War K. wrote *The New Armies in Framing*, 1914, *Fringes of the Fleet*, 1915, *Sea Warfare*, 1916, *A Diversity of Creatures*, 1917, and *The Years Between*, 1918, another book of verse. K.'s son, who served with the Irish Guards, was killed at Loos, and the achievements of that regiment were

commemorated by K. in *The Irish Guards in the Great War*, 1923, a compilation from diaries and regimental papers. His collected verse was pub. in 1919, and after that time he pub. *Letters of Travel*, 1920, *Land and Sea Tales for Scouts and Guides*, 1923, *Debts and Credits*, 1926, *A Book of Words*, 1928, *Thy Servant, a Dog*, 1930, *Limits and Renewals*, 1932, *Souvenirs of France*, 1933, *The King and the Sea*, 1935, and *Something of Myself, for my Friends, Known and Unknown*, 1936.

K.'s best work is in his short stories, and his early collection, *Life's Handicap*, is

E.N.A.

RUDYARD KIPLING

among his finest books. His main interest was the Brit. Empire in all its manifestations, from the big drums to the humble outposts of empire in out-of-the-way places. It was the man of action that K. loved, be he engine-driver, empire-builder, or polo-player. It was his preference for action over the introspections of the individual, so often the subject of the modern novel, that distinguished him from his contemporaries. Some critics argue that K. portrayed only types, and not characters, but if this is true his type is always embodied in an individual; for K. was no lover of crowds, believing man to be a solitary who must work out his own salvation. K. was a romantic writer, but his romanticism is everywhere rooted in realism. In his best stories there is nothing vague or uncertain, although occasionally he gives way to didacticism. That K. has a permanent place in Eng. literature seems certain, especially for his earlier prose and verse. But his verse is the more difficult to estimate because, apart from the changing standards of poetry, K.'s own standards changed from

the more youthful, confident, clarion note to a later stage of maturity, in which an element of mysticism is evident.

One deep source of his great popularity was a mastery of the native rhythms of English, which appealed to everyone by its directness, and both his poetry and prose stories are characterised by a remarkably vivid imagination, revealing a skill in narrative and description which are well matched by a rare power of intensifying character. Impregnated as he was with the spirit of the national consciousness and the racial temperament, K. was obsessed with the conviction of Britain's noble destiny, a destiny in which the inspiring motives were not power or domination, but moral obligations and service. In his mind's eye was a compelling vision of external forces with puny man living dangerously and valiantly amidst such forces. K. disregarded intellectual subtleties, not because he was incapable of them, but rather from an intuitive dislike based on a good understanding of their values. T. S. Eliot makes the distinction that K.'s verse ranks as 'great verse,' and not as 'great poetry,' but he does not define the latter, nor does he show how K. did not achieve it. It has been frequently objected that K.'s poetry is careless, even deficient, of beauty, and subordinates this element to the clamour of 'politics.' But the special colour beauty of a poem of Keats is not the only kind of poetic beauty, and to speak only of the clamour of politics is to misconceive politics generally, besides ignoring the intense sensations with which K. contemplated the role of England in the scheme of things. There is a mystic poetry in his stories, and it harmonises with the mystic realism of his verse.

In recognition of his work K. received many honours. In 1907 he was awarded the Nobel prize, and in 1926 the gold medal of the Royal Society of Literature. He was also awarded honorary degrees at the univs. of Oxford, Cambridge, Durham, Edinburgh, Paris, Strasburg, and Athens, and from 1922 to 1925 he was rector of the univ. of St Andrews. In 1933 he was elected a foreign associate member of the Fr. Académie des Sciences et Politiques, an honour then shared only by King Albert of Belgium and Cardinal Mercier. K. d. in the Middlesex Hospital on 18 Jan. 1936, after an operation. His home, Kipling House, at Burwash, Sussex, is kept as a memorial under the National Trust.

See C. Charles, *Rudyard Kipling*, 1911; C. Falls, *Rudyard Kipling*, 1915; R. T. Hopkins, *Rudyard Kipling*, 1921, and *Rudyard Kipling's World*, 1928; E. W. Martindell, *A Bibliography of the Works of Rudyard Kipling*, 1923; E. Shanks, *Rudyard Kipling: a Study in Literature and Political Ideas*, 1940; T. S. Eliot, *A Choice of Kipling's Verse*, 1942; C. Hilton Brown, *Rudyard Kipling, a New Appreciation*, 1945; R. Croft-Cooke, *Rudyard Kipling*, 1948; and the official biography by C. Carrington, *Rudyard Kipling, his Life and Work*, 1955.

**Kippis, Andrew** (1725-96), Presbyterian minister, b. Nottingham. He was educ. for the ministry at Northampton and in 1753 he became minister of a church in Westminster. He wrote for various magazines, planned and ed. the *New Annual Register*, which lasted from 1780 to 1826, wrote sev. biographies, among them that of Dr Doddridge, under whom he had studied, and ed. the *Biographia Britannica*, 2nd ed., but had completed only 5 vols. before he d.

**Kipp's Apparatus**, ingenious and very useful device for obtaining intermittent supplies of various gases in chemical laboratories. The apparatus consists of

KIPP'S APPARATUS

3 parts (see diagram): a large central bulb, A, which is connected with a receptacle, B, and a kind of large thistle funnel, C, which passes through A into B. The joint between A and B is made air-tight by vasoline, and the opening between A and B is narrow, so that when C is inserted there is only a little space between the two. Sticks of ferrous sulphide are placed in A, sticks being used so that the substance will not fall through the narrow opening into B. Sufficient hydrochloric acid is poured in at C to fill the vessel B and overflow into A so that it just covers the sulphide. Hydrogen sulphide is immediately evolved:  $\text{FeS} + 2\text{HCl} = \text{FeCl}_2 + \text{H}_2\text{S}$ . The gas is led out, when required, at the tap. When sufficient gas has been used the tap is closed, but the acid is still covering the ferrous sulphide, so that hydrogen sulphide is still being evolved. Since the gas cannot escape, the pressure in A increases, and in time is sufficiently great to force all the acid out of A into the top part of C. When the tap is opened again the gas rushes out, the pressure inside A becomes atmospheric, so that the acid falls from C into B, and hence into A.

Thus, so long as the tap is open the acid covers the ferrous sulphide, and the gas is generated. The apparatus is named after its inventor, P. J. Kipp, a Dutch chemist, 1808-64.

**Kipsigis**, Nilo-Hamitic tribe of the highlands of Kenya. They were once a pastoral people but are now agriculturalists. They lack a centralised political organisation, their form of gov. being a system of age-sets and elders' grades based on initiation. They were great warriors, with a well-organised military system. They are often erroneously called Lumbwa. See J. G. Peristiany, *The Social Institutions of the Kipsigis*, 1939.

**Kipu**, see QUIPU.

**Kiran**, see PIRAN.

**Kircher, Athanasius** (c. 1601-80), Ger. scholar, was prof. at 6 Jesuit colleges in his native country, and from 1635 to 1643 lectured on mathematics at the Collegio Romano in Rome. His *Oedipus Aegyptiacus*, 1652-5, promoted the study of Egyptian hieroglyphics, and his *Prodromus Coptus*, 1636, of the Coptic tongue. A wide knowledge of ancient and modern Italy is revealed by his *Latium*, 1669, but perhaps his greatest claim to fame rests on his investigation of subterranean forces, as in his *Iter extaticum secundum*, 1657.

**Kirchheim**: 1. (Unter Teck) Ger. tn in the Land of Baden-Württemberg (q.v.), 16 m. SE. of Stuttgart (q.v.). It has a castle and ancient ramparts, and is overlooked by the fortress of Teck. There are textile and metal manufs. Pop. 21,000.

2. Ger. tn in the Land of Baden-Württemberg (q.v.), on the Neckar (q.v.), 17 m. N. of Stuttgart. It has ancient fortifications and houses, and is a wine-producing centre. Pop. 3,000.

**Kirchhoff, Gustav Robert** (1824-87), Ger. physicist, b. Königsberg, graduated Ph.D. from the univ. of his native tn in 1847. In the same year he formulated the laws named after him relating to the distribution of currents in a network of conductors. He held the chair of physics successively at Breslau (appointed in 1850), Heidelberg (1854), and Berlin (1875). In collaboration with von Bunsen he evolved the theory and practice of spectrum analysis, and indicated how the prism may be used to establish the chemical composition of celestial bodies. In 1860, with Bunsen, he discovered the elements caesium and rubidium by means of spectrum analysis. His *Vorlesungen über mathematische Physik*, 1876, contains an original treatment of dynamics.

**Kirchhoff's Laws**, see CURRENT ELECTRICITY.

**Kirchhörde**, S. suburb of Dortmund (q.v.), Germany.

**Kirgiz**, or Kirghiz, formerly nomadic Turkic people originating from the Yenisey R. and now forming the bulk of the pop. of Kirgizia in Soviet Central Asia. In Tsarist times the name was erroneously applied to the Kazakhs (q.v.) in order to avoid confusion with the Cossacks (Russian Hazak), the real K. being known as Kara-K. See also next article.

**Kirgizia**, or **Kirgizstan**, rep. in the E. of Soviet central Asia, situated on the frontier between the U.S.S.R. and Sinkiang. K. became an autonomous rep. in 1926, and was elevated to the status of a union rep. in 1936. The inhab. are Kirgiz (who constitute over one half of the pop.), Russians, Ukrainians, Uzbeks, Uigurs, and Dungans, the last being of Chinese Muslim origin.

The Kirgiz dwell in the highlands between the R. Issyk-Kul and the Kuen-Lun, and from the E. borders of Fergana across to the Muzart Mts. They number in all about 800,000, and are divided into 2 main sections: the Sol in the W. and the On in the E. They are nominally Sunnite Muslims. Physically they resemble the Mongolians, but their speech is purely Turkic. They breed fat-tailed sheep, hardy horses, camels, goats, and oxen, and cultivate wheat and millet, sugar-beet, fruit, and vines in the foothills and irrigated valleys. The region has large deposits of coal, oil, gold, lead, antimony, quicksilver, sulphur, and limestone. The country has been developed considerably since the First World War by the extension of land under cultivation, irrigation, and the estab. of good production and textile industries. There is fishing on Lake Issyk-Kul. K. supplies coal to almost the whole of central Asia. Frunze (formerly Fishpek), the cap., is a well-built city (pop. 155,000) with many fine buildings. Pop. 1,400,000.

**Kiria**, see **KERYIA**.

**Kirin**, or **Girin**: 1. Prov. of Manchuria, to the N. of Korea and S. of Russia, with an area of 116,135 sq. m. The country itself is fertile even in the mountainous distr. Millet, wheat, barley, potatoes, rice, tobacco, and sugar-beet are produced, but the greatest product is soya-bean, about 2 million tons per annum. Timber in the Changpaishan ranges covers an area of 17 million ac. Among minerals are gold, copper, iron, and coal. Mink fur is also produced in quantity. The chief tns are Changchun (the cap.), Yungchi (K.), Yunchun, Shuangcheng, and Kianusze. Pop. (1954) 11,290,073.

2. Or **Yungchi**, once cap. of the prov. of the same name, situated on the Sungari, 245 m. NE. of Mukden. A railway connects it with Changchun. Pop. (1951) 230,000.

**Kirjath-jearim**, tn in anct Judah about 10 m. W. of Jerusalem. Here the ark rested until taken up to Jerusalem. It was the home of the prophet Uriah.

**Kirjath-sopher**, according to Judges i. 11, was the older name of Debir (Tell Beit-Mirsim), which has been excavated.

**Kirk**, Sir John (1832-1922), administrator and naturalist, b. near Arbroath. He was educ. for the medical profession and, after serving as a doctor in the Crimean War, went out as physician and naturalist with Livingston's second exploring expedition (1858). His African experiences led to his appointment as vice-consul at Zanzibar (1866), and in 1873 he became consul. It was in this capacity that he so distinguished himself

by securing the extinction of the slave trade in the dominions of the Sultan of Zanzibar. K. retired from the consular service in 1887, though he subsequently represented the Brit. Gov. at various African conferences. He was one of the first 4 white men to see Lake Nyasa (16 Sept. 1859), and his name is perpetuated in Nyasaland in the K. Range, W. of the Shire R. Received the gold medal of the Royal Geographical Society in 1882. His botanical collections laid the foundation of the *Flora of Tropical Africa*, which was pub. under gov. auspices, 1868-1917. See Sir R. Coupland, *The Exploitation of East Africa, 1856-1890*, 1939, which is in effect a study of K.'s career.

**Kirk o'Shotts**, see **SHOTTS**.

**Kirk Session**, see **PRESBYTERIANISM**.

**Kirkburton**, tn in the W. Riding of Yorks, England, about 5 m. SE. of Huddersfield. It manufs. woollen goods, and coal-mining is carried on. Pop. 17,800.

**Kirkby-in-Ashfield**, urb. dist. and tn of Notts, England, 12 m. NE. of Nottingham, and centre of an extensive coal-mining area. Pop. 20,340.

**Kirkby Lonsdale**, mrkt tn of Westmorland, England. The Devil's Bridge crosses the R. Lune. Pop. 1300.

**Kirkby Moorside**, mrkt tn in the N. Riding of Yorks, England, on the R. Dove, 6 m. W. of Pickering. It manufs. iron ware, agric. implements, and light aircraft. Pop. (tn) 2067; (rural dist.) 4785.

**Kirkby Stephen**, mrkt tn in Westmorland, England, on the R. Eden, 10 m. SE. of Appleby. Limestone quarrying is carried on in the vicinity. Pop. 1700.

**Kirkcaldy**, or **Kirkaldy**, of **Grange**, Sir William (c. 1520-73), Scottish soldier and politician, was early won over to the Protestant party, and having assisted in the murder of Cardinal Beaton (1546) took refuge in St Andrews Castle, and, on its surrender to the French, became a prisoner of the enemy and was confined in Mont St Michel, Normandy. Soon, however, he made good his escape, and after serving with distinction in the Fr. Army returned to Scotland in 1557. At home he proved zealous in the cause of reformation, was implicated in the murder of Rizzio, and having joined the nobles against Bothwell received the surrender of the queen at Carberry Hill (1567). Her defeat at Langside in the same year was largely the outcome of his able strategy; but henceforward, prevailed on, it seems, by the plausible arguments of the subtle Maitland of Lethington, he became Queen Mary's stalwart champion. As governor of Edinburgh Castle he proceeded to fortify it for the royalist faction. In 1572 he broke off negotiations with the regent Morton, preferring to stand 'stiff upon his honesty' and not betray his friends. He surrendered on 3 June 1573, and was executed at the cross of Edinburgh. See lives by J. Grant, 1849, and L. A. Barbé, 1897.

**Kirkcaldy**, royal burgh (c. 1450) and seaport of Fifeshire, Scotland, on the Firth of Forth, 15 m. N. of Edinburgh. The tn

itself has been called the 'Lang Toun,' its main street being about 4 m. long. The par. of Abbotshall has been amalgamated with K. since 1876, and in 1930 the burgh of Dysart was annexed to K. The earldom of Dysart dates from 1643. K. was the bp. of Adam Smith. The tn is the centre of linoleum manuf., and is also engaged in bleaching, linen manuf., engineering, and iron-founding. Pop. 50,500.

**Kirkcudbright:** 1. Maritime co. in the S. of Scotland, bounded on the NW. by Ayr, on the NE. by Dumfries, on the S. by the Solway Firth, and on the SW. by Wigton. The coast is rocky and much indented, and the surface of the co. is mountainous, the highest point being Mt Merrick (2764 ft.). The prin. rivs. are the Dee, Urr, and Cree. Granite is quarried in the co., and the pasturage is good; the rearing of cattle—especially of the polled Galloway breed—and dairy farming, with almost exclusively Ayrshire herds, are the prin. occupations. K. is noted for its honey. The chief tns are Castle Douglas, Dalbeattie, and Kirkcudbright. With Wigtownshire, K. forms the parl. constituency of Galloway, returning 1 member to the House of Commons. Area 897 sq. m.; pop. 30,750.

2. Royal burgh and co. tn of Kirkcudbrightshire, Scotland, situated on the l. b. of the Dee. It has a good harbour. There are remains of a 13th-cent. church and of a 16th-cent. castle. Pop. 2800.

**Kirkdale Cave**, cavern in a limestone rock in the N. Riding of Yorks, about 2 m. WSW. of Kirkby Moorside. This cave, which was discovered in 1821, contains the fossil remains of animals, among which are the hyaena, tiger, and hippopotamus.

**Kirkenes**, tn in Finnmark, Norway, near the Russian border, on the shore of Varanger Fjord. K. was the main Ger. base for submarine attacks on allied convoys to Murmansk in the Second World War, and was liberated by the Russians in Oct. 1944. Though practically destroyed during the war, K. has now been rebuilt. It is a port for the shipment of iron ore from the nearby Syd-Varanger mines, the largest mines in Norway. Pop. 4000.

**Kirkham**, mrkt tn in the co. of Lancs, England, 8 m. WNW. of Preston. It is engaged in the cotton and linen manuf. Pop. 6482.

**Kirkintilloch**, burgh of Dunbartonshire, Scotland, 7 m. NE. of Glasgow. It has iron and steel foundries, and switchgear and ferro-concrete works. Pop. 15,470.

**Kirkland, Joseph** (1830-94), Amer. novelist, b. Geneva, New York State. After a boyhood spent in Michigan he worked for a time as a clerk, then studied law, was admitted to the Bar in 1880, and practised as an attorney. His novels, most of which are written round the life of the early settlers, include *Zury: the Meanest Man in Spring County*, 1885, and *The McVeyes*, 1888. *The Captain of Company K*, 1891, tells of the Civil war, in which K. took part.

**Kirklareli**, formerly Kirk-Kilisse, li and tn of European Turkey, about 33 m. E. of Adrianople. For a time after the First World War the tn passed into Gk possession, but was restored to Turkey by the treaty of Lausanne, 1923. Near this tn was fought the first battle between the Bulgarian and Turkish forces during the Balkan war of 1912-13 (q.v.). It is an agric. centre, and trades in coal, wines, flour, hides, and tobacco. Pop. (11) 213,843; (tn) 14,500.

**Kirklees Park**, seat of the Armytage family for over 300 years, near Brighouse in Yorks, England. On the estate are the remains of a 12th-cent. Cistercian nunnery and the reputed grave of Robin Hood.

**Kirkley**, see LOWESTOFT.

**Kirkliston**, vil. of W. Lothian, Scotland, on the R. Almond, 10 m. W. of Edinburgh. There is a malt extract factory. Pop. 1000.

**Kirkmabreck**, par. in SW. Kirkcudbrightshire, Scotland, including Creetown (q.v.). Pop. 1301.

**Kirkmaiden**, par. in Wigtownshire, Scotland, situated on Luce Bay and in the peninsula of Galloway. It is the most southerly point of Scotland, and is mentioned as Maldenkirk in the expression signifying from extreme S. to extreme N. of the country, i.e. 'from Maldenkirk to John o' Groat's.' Pop. 1250.

**Kirkoswald**, vil. in Ayrshire, Scotland, 4 m. SW. of Maybole, with the graves of Burns's Tam O'Shanter and Souter Johnnie. Pop. 1800.

**Kirkstall**, par. of Yorks (W. Riding), England, 3 m. NW. of Leeds of which it forms a suburb. Here are the ruins of K. Abbey, built in the 12th cent. Pop. (par.) 10,000.

**Kirkstone Pass** (1489 ft), pass in Westmorland, England, on the Patterdale to Windermere road. It takes its name from a rock with a supposed resemblance to a church.

**Kirkton**, see CREDITON.

**Kirkuk**, tn of Iraq, in the liwa of the same name, 145 m. N. of Bagdad. Seat of an appeal court. It has valuable oil wells, and a trade in naphtha and salt. Its mosque is said to contain Daniel's tomb. Pop. (tn) 92,000, most of whom are of the Sunni religion; (liwa) 285,878.

**Kirkwall**, seaport tn and the cap. of Orkney, Scotland, situated on the NE. coast of Mainland, or Pomona. The chief buildings of interest are the cathedral of St Magnus, dating from medieval times, the earl's castle, and bishop's palace. K. possesses an excellent harbour. Distilling and boat-building are engaged in, and the tn is important for shipping and is a centre for the intense agric. cultivation of the whole co. Pop. 4348.

**Kirkwood, Daniel** (1814-95), Amer. astronomer, b. Harford, co. Maryland, was prof. of mathematics at Delaware College (1851), and in 1856 accepted a similar post in the univ. of Indiana. He asserted that the unequal distribution of asteroids was due to the attractive force of Jupiter. The name 'Kirkwood's Gaps' has been given to certain portions of the

planotoid region in which none of these bodies is found. He also pointed out that the magnitude of the interval between any 2 planets was incompatible with Laplace's nebular hypothesis. Between 1867 and 1888 he pub. *Comets and Meteors and Asteroids*.

**Kirkwood**, city in St Louis co., E. Missouri, U.S.A. There is horticulture and lime, cement, and lumber industries. It was incorporated in 1865. Pop. 18,640.

**Kirman**, see KERMAN.

**Kirmanshah**, see KERMANSHAH.

**Kirn**: 1. Ger. tn in the Land of Rhineland-Palatinate (q.v.), on the Nahe, 40 m. WSW. of Mainz (q.v.). It has woollen manufs. Pop. 8000.

2. Holiday resort, in the burgh of Dunoon (q.v.).

**Kirov** (real name Kostrikov), **Sergey Mironovich** (1886-1934), Russian Communist. He joined the Bolsheviks in 1905. After the Oct. revolution (q.v.) he was active in the estab. of the Soviet power in the Caucasus; in 1921 he became head of the party in Azerbaijan, and from 1926 in Leningrad. He was a Politburo (q.v.) member from 1930. K. assisted Stalin in his struggle against his rivals, but after the 17th Party Congress in 1934 led the opposition in the Central Committee against Stalin's personal rule. He was assassinated in Dec. 1934 under circumstances which pointed to Stalin's complicity. His assassination started the wave of terror that culminated in the great purge (q.v.).

**Kirov**: 1. Oblast in the NE. of European Russia, occupying the basin of the Vyatka, main affluent of the Kama. It is a rolling plain partly covered with forests and marshes. K. has peat, iron ore, and phosphorite deposits. There are engineering, iron and steel (since 18th cent.), lumbering and woodworking, leather, and chemical industries, old handicrafts, coarse grain and flax growing, and dairy farming. In the 12th-15th cents. the area formed an independent Vyatka Rep., absorbed by Muscovy in 1489. It was well known for vigorous local gov. before 1917. Area 47,000 sq. m.; pop. (1956) 1,919,000, mostly Russian (since 12th cent.).

2. (before 1780 **Khlynov**, until 1934 **Vyatka**) Cap., economic and cultural centre of the above, on the Vyatka. There are engineering, chemical, woodworking, and leather industries, and school equipment is produced. There is a big public library, founded by Herzen. Known since 1174, K. was founded by colonists from Novgorod, and was the centre of Russian colonisation of the area and cap. of the Vyatka Rep. Pop. (1956) 211,000 (1913, 44,000; 1920, 41,000; 1939, 143,000).

**Kirovabad** (until 1935 **Gandzha**, 1804-1918 Russian **Yelizavetpol'**), tn in Transcaucasia, the second economic and cultural centre of the Azerbaijan Rep. There are many architectural monuments. Founded in the 5th or 6th cent., it was an important medieval commercial and cultural centre. It has been Russian since

1804. Pop. (1956) 111,000 (c. 1914, 60,000; 1926, 55,500; 1939, 99,000).

**Kirovograd**: 1. Oblast in S. Ukraine, on the r. b. of the Dnieper, largely on the Dnieper upland. It consists of black earth steppe with a few remaining oak forests. There are large lignite deposits. Wheat, sunflowers, and sugar-beet are grown, and cattle are raised; there are food, engineering, and coal-mining industries. The area was almost unpopulated until colonisation began in the 1740's. Area 9600 sq. m.; pop. (1956) 1,206,000, mostly Ukrainians.

2. (until 1924 **Yelizavetgrad**, then **Zinov'yevsk** till 1936, and **Kirovo** till 1939) Cap., economic and cultural centre of the above, 120 m. W. of Dnepropetrovsk. It has engineering (agric. machinery) and food industries. Founded in 1754 as a fortress, it soon became the administrative centre of New Serbia (q.v.). Before 1917 it was an important commercial tn. Jewish pogroms in Russia started in K. in 1881. Pop. (1956) 115,000 (c. 1914, 76,000; 1926, 66,000; 1939, 100,000), Ukrainians and Russians (before the war also Jews).

**Kirriemuir**, burgh, par., and agric. centre of Angus, Scotland, on the Gairie Burn, 5 m. WNW. of Forfar. It manufs. jute cloth, and is celebrated as being the 'Thrums' of Sir J. M. Barrie's novels and the author's bp. Pop. 4000.

**Kirton**, see CREDITON.

**Kirsinion**, see HALMYROS.

**Kiruna**, tn in Lapland (q.v.), in area the largest tn in the world, includes vast iron ore minefields. Most of the mining is above ground. The iron ore is transported to the Norwegian seaport Narvik by rail. Many Lapps are nowadays employed at the minefields. Pop. 21,480.

**Kirwan**, **Richard** (1733-1812), Irish chemist, whose experiments on the sp. gr.s of saline substances promoted methods of analytical chem. and won for him the Copley medal in 1782. Supported the phlogiston theory of combustion (q.v.), but later was won over to the views of Lavoisier (q.v.). Wrote *Elements of Mineralogy* (1784—long a standard work), *An Estimate of the Temperature of Different Latitudes*, 1787, and *Geological Essays*, 1799.

**Kiryu**, industrial city of Gunmaken, Japan, 60 m. WNW. of Tokyo; has manufs. of silk, gauze, and crape. Pop. 117,000.

**Kiselevsk**, tn in the Kemerovo Oblast of S. Siberia, in the Stalinsk conurbation, 35 m. NW. of Stalinsk, bordering on Prokop'yevsk. It is a major coal-mining and engineering (mining equipment) centre in the Kuznetsk Basin. Founded in the 1920's as a mining settlement in Prokop'yevsk, it became a tn in 1936. Pop. (1956) 116,000 (1939, under 50,000).

**Kisfaludy**, **Károly** (1788-1830), Hungarian poet and dramatist, b. Tét. Served in the army (1804-9), writing poetry meanwhile. He then settled in Vienna, intending to follow painting, but the success of two of his plays caused him to

turn to literature. He won the reputation of being the father of Hungarian drama and of modern Hungarian literature. With his brother he founded a literary periodical, *Aurora*, and subsequently an Aurora Society, which became a centre for young writers. After his death this society developed into the Kistfaludy Társaság, Hungary's leading literary society. His works include *Murderer*, 1808, *Klára Zách*, 1812, *Ilka*, 1819, *The Tartars in Hungary*, 1819, *The Rebels*, 1819, *Irene*, 1820, *Vajda Sándor*, 1820, and *Mária Szécsi*, 1820.

**Kish**, anct city of Sumer and Babylon (qq.v.). Excavations at the modern site, about 8 m. E. of Babylon, called Tell-el-Uheimir, or 'little red ruin-mound,' by first the French and later the Oxford-Chicago expeditions uncovered a vast Sumerian temple complex dedicated to Aruru, the earth-goddess, over which Nebuchadnezzar built the Hursagkalama temple with its twin-staged temple towers or *ziggurats* (q.v.). Rich cemeteries, reliefs, and inscriptions cover the life of the place from c. 3000 BC to 700 BC, and especially the 2 periods of great prosperity under Sargon of Agade (c. 2400 BC) and Hammurabi of Babylon (qq.v.). There are traces of 2 early flood levels in the early fourth millennium. The prin. finds at adjacent Jamdat Nasr were a distinctive pottery type and tablets inscribed with the earliest pictographic script (c. 3200-3000 BC). See S. Langdon, *Excavations at Kish*, 1924.

**Kishiněv** (Rumanian Chisinau), tn in Bessarabia, cap., economic and cultural centre of the Moldavian Rep. (q.v.). It has extensive food (wine, tinned fruit) and tobacco industries, varied light industries, and agric. engineering, and has the Moldavian branch of the U.S.S.R. Academy of Sciences (1949) and a univ. (1945). K. has been known since 1420, was Turkish in the 16th cent., became Russian in 1812 (cap. of Bessarabia), and was Rumanian 1918-40 and 1941-4. During the 19th cent. it was a major centre of trade in agric. products. The School of Horticulture and Viniculture was founded in 1842, and is of importance for the whole of S. Russia. There was a Jewish pogrom in 1903 with sev. hundred victims. Pop. (1956) 190,000 (1918, 133,000; 1939, 112,000), Jews, Moldavians, and Russians. **Kishm**, see QISHM.

**Kishmárton**, see EISENSTADT.

**Kiskörös**, tn of Hungary, in Bács-Kiskun co., 28 m. SW. of Kecskemét (q.v.). It was the bp. of Petőfi (q.v.). It is a railway junction, and has a trade in agric. produce, flour, and fruit. Pop. 13,000.

**Kiskunfélegyháza**, tn of Hungary, in Bács-Kiskun co., 16 m. SSE. of Kecskemét (q.v.). It was destroyed by the Turks in the 17th cent., but was rebuilt in 1743. The tn is a railway junction, and the centre of a rich agric. dist., with a trade in cereals, fruit, wine, tobacco, and livestock. Petőfi (q.v.) spent his youth here. Pop. 39,000.

**Kiskunhalas** (formerly Halas), tn of

Hungary, in Bács-Kiskun co., 35 m. SSW. of Kecskemét (q.v.). It was originally a settlement of Kumania (q.v.), has an agric. market, and is known for its lace. There is a small lake (Lake Halas) near by. Pop. 34,000.

**Kiskunmajsa** (formerly Majsa), tn of Hungary, in Bács-Kiskun co., 30 m. S. of Kecskemét (q.v.). It has a trade in cereals, flour, tobacco, and livestock. Pop. 12,300.

**Kiskunság**, see CUMANIA.

*Soviet Weekly*

**KISHINĖV: THE LOCAL HISTORY MUSEUM, BUILT IN 1895**

**Kislodovsk**, health resort (since late 17th cent.) in the mineral water group of spas in Stavropol' Kray, N. Caucasus. Its mineral water, *narzan*, sold all over Russia, is good for nervous and heart troubles. There are about 125,000 patients yearly. Pop. (1956) 58,000.

**Kismayu**, port in Somalia (formerly It. Somaliland), stands near the mouth of the Juba R., in a dist. inhabited by Somali tribes; it has an excellent harbour. Pop.: 50 Italians; 50,000 Africans.

**Kismet** (an Arabic word from a root meaning 'to divide'), in Turkish and Persian means 'fate.' It is not used in the Koran, which speaks with a double voice on this problem; it enlarges on the overpowering might of God and as frequently on man's freedom of choice.

**Kiss**, form of salutation, or an expression of reverence or love, which consists in pressing or touching with the lips the lips, cheek, hands, or feet of another. Newly appointed cardinals kiss the sandal on the Pope's right foot as a symbol of veneration, and the 'K. of peace,'

*oculum pacis*, is still a part of the ritual of the mass in the E. and Rom. churches. See C. Beadnell, *The Origin of the Kiss*, 1942.

**Kissavos**, see OSSA.

**Kissingen**, Bad, Ger. spa in the Land of Bavaria (q.v.), in the valley of the Fränkische Saale (q.v.), 157 m. NNW. of Munich (q.v.). Its saline-chalybeate springs were known in the 9th cent. Pop. 15,000.

**Kistna**, see KRISHNA.

**Kisújszállás**, tn. of Hungary, in Szolnok co., 28 m. ENE. of Szolnok (q.v.). The dist. produces cereals, hemp, and livestock, and at the end of the Second World War, under the Communist regime, K. became one of the first centres of the co-operative farm movement. Pop. 15,000.

**Kisumu**, formerly Port Florence, port of Kenya Colony, Nyanza Prov., on Lake Victoria, of which it is the chief port. Altitude 3759 ft. It is a thriving, well-laid-out tn. has an international airport, and is the railway terminus from Mombasa. Pop.: 390 Europeans, 5136 Asiatics.

**Kit**, term used for a soldier's outfit. A recruit on joining the army is provided gratis with underclothing, razor, brushes, towels, mess-tin, knife and fork, and cleaning materials, and these things constitute his K. It is his duty to keep them in good order and to obtain new articles as occasion arises. In popular language his uniform and other outward accoutrements are often erroneously included in his K.

**Kit-Cat Club**, founded in 1703, ostensibly to encourage literature and art, and named after Christopher Cat (or Katt), at whose tavern it met. It ultimately became a Whig society to promote the Hanoverian succession. Among its original 39 members were Marlborough, Walpole, Addison, Steele, and Congreve. The number was later increased to 48. Kneller was one of them and painted the portraits of 44 members under the direction of Jacob Tonson, who was secretary and general manager of the club. The portraits were of a uniform size, about 36 by 28 in., which is now termed 'kit-cat.' In 1945 the National Art Collections Fund purchased these portraits for the National Portrait Gallery. In a poem of 1708 on the club and its founder we read:

'All the first members for their Place were fit,

Tho' not of Title, Men of Sense and Wit.'

But eventually one-half of the 44 were men of title, including 9 dukes. The 3 most sociable of the 5 lords of the Whig junto, Wharton and Somers and Montagu, Earl of Halifax, were Kit-Cats. See 'Kit-Cat Club Portraits' by G. M. Trevelyan, *The Times*, 10 Mar. 1945.

**Kitara**, traditional name of the empire of Bunyoro (q.v.).

**Kitchen**, see COOKERY and HOUSEWIFERY.

**Kitchen Gardening**, see GARDENING.

**Kitchen Middens**, **Kitchen Mounds**,

**Shell Heaps**, or **Shell Mounds** (*Kjokken-moddinger*), names given to the refuse heaps of various prehistoric peoples. Until 1860 they were believed to be raised beaches or glacial deposits, and little notice was taken of them. Prof. Steenstrup, a Dan. archaeologist, found that though the mounds were largely composed of shells, yet they contained fragments of animal and bird bones, pottery, and implements of stone and wood. In some cases burnt wood was found, as well as stones showing marks of fire, suggesting the stones put under the cooking-pot by gypsies to this day. Among the shells were those of oyster, mussel, periwinkle, and cockle. Two other facts—that the shells all belonged to well-grown animals, and the entire absence of gravel in any heap—proved that the natural theory was wrong, and the conclusion was that these heaps had been formed by early man as domestic refuse dumps. They have since been formally recognised as the work of Mesolithic peoples who, in addition to their fishing and fowling, gathered shell-fish. In Europe they have been discovered on the coast of the Brit. Isles, in Cornwall and Devon and Scotland, in France, Sardinia, and Portugal. They are also found on many parts of the coast of N. and S. America, Australia, and Japan. Some of the largest middens measure as much as 1000 ft in length, 200 ft in breadth, and 10 ft in depth, but most are much smaller. In Florida some of the middens examined have measured as much as 40 ft in height.

**Kitchener**, **Horatio Herbert, Earl of Khartoum** and of Broome in Kent (1850–1916), b. Bally Longford, Ireland. After studying at Woolwich, he entered the Royal Engineers in 1871. He was engaged on the Palestine Survey (1874–8), and then on that of Cyprus (1878–82), after which he entered the Egyptian Cavalry, and took part in the Sudan campaign of 1883–5 for the relief of Gen. Gordon, attaining the rank of lieutenant-colonel. He became governor of Suakin in 1886, and sirdar of the Egyptian Army in 1890. In that capacity he recovered Dongola in 1896, for which he was made major-general and K.C.B. In April 1898 he defeated the dervishes at the Atbara, and in the following Sept. he won the decisive victory of Omdurman, capturing Khartoum, and completely overthrowing the power of the khalifa. For these services he was raised to the peerage. During his brief stay in England at this time he raised by subscription the sum of £100,000 to found a college for natives in Khartoum, in memory of Gen. Gordon. The victory of Omdurman was followed by immediate pacification, and by the most skillful handling of the situation at Fashoda (q.v.).

When the S. African war broke out K. went (Dec. 1899) to S. Africa as chief of staff to Lord Roberts, and had a large share in organising the victorious campaign that followed. When Lord Roberts returned home in Nov. 1900 K. assumed supreme command with the rank of lieutenant-general, and brought the war to a

successful conclusion by means of a system of 'block-houses' and extensive 'drives' introduced to combat the guerrilla tactics of the Boers. Assisted by Lord Milner he arranged with the Boer leaders the terms of the peace which was signed on 31 May 1902. He was raised to the rank of viscount in the peerage, while Parliament voted him a sum of £50,000, and thanked him for his services. In Nov. of the same year (1902) he went to India to take over the chief command of the forces there, where he remained till 1909. After leaving India K. became commander-in-chief in the Mediterranean, and was raised to the rank of field-marshal. He also, about this

LORD KITCHENER

time, went to Australia, and planned the reconstitution of the commonwealth forces. He was then appointed to take over the work of agent and consul-general at Cairo, where he had an opportunity of displaying his fine qualities as an administrator. In July 1913 the khedive, on his advice, granted a parl. constitution on a more democratic basis.

It was when he was at home from Cairo on leave that the First World War broke out, and it was with the universal approbation of the Brit. people the world over that he was appointed to be war minister at Whitehall. His long contact with the E., coupled with the strangely romantic circumstances of his career, had unquestionably a strong influence on his habits and general bent of mind; and the fact that he had always worked alone and with but slender financial resources from Lord Cromer's budgets, had thrown him on his own initiative to a remarkable degree, and made him at the same time intolerant and even contemptuous of criticism. His habitual practice of doing everything himself and of ignoring press and departmental criticism was incompatible with the thought of a democratic country,

especially at a time when the country was endeavouring to adapt itself to the requirements of a national war.

It was in these circumstances that he set about the performance of his great achievement—the creation, amidst the anxieties of war, of those great new armies which stemmed the tide of the enemy's successes until such time as conscription was to restore the balance. His instructions to Gen. French after the battle of Mons, to remain in the line and to abandon his expressed intention to retire behind the Seine so as to protect Paris, were amply justified by subsequent military events, though it is to be said for Gen. French that his intention was in accord with Cabinet orders to save his army from isolation by overwhelming numbers, as at Mons. The raising of the K. or new or service battalions was K.'s great contribution to winning the war, and it seems probable that he was the only man in England whose name and fame stood sufficiently high in the opinion of his fellow countrymen to ensure an adequate response to his call for volunteers. Voluntary recruiting, urged by the magic of K.'s name, added no fewer than 1,700,000 men to the ranks by May 1915. Up to this point K. was omnipotent at the War Office and in the war committee, particularly as all the best Brit. military brains were then in France. The necessities of the situation demanded, however, that one man, however eminent his talents, should not attempt to combine the role of war secretary and chief of staff, the functions of administrator and strategist being entirely distinct, and the blunders in the Dardanelles were referable to this confusion of roles and to the lack of first-class strategical direction on the general staff.

After the failure at the Dardanelles a reaction, fomented by a section of the press in conjunction with politicians, set in against K. The Cabinet grew hostile towards him. He went to the Mediterranean late in 1915, and, when there, was invited to take control in Egypt—a hint to resign the seals of office. This he did, after sending Gen. Horne to take command in Egypt in his stead. Asquith refused the resignation, and K. remained in office, though Sir Wm Robertson returned from France to become chief of staff. It is generally agreed that both K. and Asquith—the former in his ministerial capacity—unduly delayed the transition from voluntary recruiting to conscription, but the question was essentially a political one, and it is to the credit of K. that he had at all events created vast new armies to meet the nation's needs, no fewer than 3,000,000 men voluntarily enlisting in his 'service' battalions. When his tragic loss, on 5 June 1916, in the *Hampshire* became known, the sorrow of the people was the most striking possible tribute to his memory.

See J. R. Rye and H. G. Groser, *Kitchener in his own Words*, 1917; Viscount Esher, *The Tragedy of Lord Kitchener*, 1921; V. Germain, *The Truth about Kitchener*, 1926; also lives by Sir

G. Arthur, 1920; C. R. Ballard, 1930; G. Hodges, 1936; H. de Watteville, 1939.

**Kitchener**, co. tn of Waterloo co., Ontario, Canada, 60 m. W. of Toronto and 90 m. NW. of Niagara Falls. It is on the Canadian National Railways, with electric railway to Canadian Pacific Railway at Galt, 10 m. SE. It lies at an altitude of 1100 ft. in the fertile valley of the Grand R., in a rich agric. dist., and is the market centre for the tns of Elmira and Waterloo, and the vils. of New Hamburg, Baden, Erbsville, and others. K. was first known as the Sand Hills in a community called Ebytown. The name Berlin was adopted in 1826. Berlin was incorporated as a tn in 1871 and as a city in 1912. In 1916 the name was changed to K. in commemoration of Lord K. of Khartoum. Its city hall is in the centre of a large public square, in which the war memorial has been erected. A 'living memorial' to the men and women who gave their lives in the two world wars will be the auditorium. A new armoury will complement the auditorium as the second major building in the city's proposed community centre. The federal building is an imposing structure, and one of the newer co. buildings is the registry office. K. has 38 churches, the K.-Waterloo collegiate and vocational school, a Rom. Catholic college, St Mary's business college, many primary schools, a public library, 2 large hospitals, a Little Theatre, philharmonic choir, and symphony orchestra. The giant Shand dam holds back the Grand R.'s springtime torrents and creates the 7-mile Lake Belwood. There are sev. parks and the rockery is one of the outstanding local beauty spots. The outdoor swimming pool is one of the largest in the dominion. A modern community airport has been built. There are 2 radio stations. K. is a most highly industrialised city and ranks ninth in the dominion from the standpoint of industrial production. It has about 170 manufacturing estabs., the leading plants including rubber tyres and footwear, gloves, tanning, and leather shoes. The heavy metal industries produce fans and ventilator equipment, car seat springs, trucks and trailers, woodworking and shoe machinery. Other products are veneer, fine furniture, radios, twines and ropes, textiles and shirts. There are also large meat-packing estabs. Waterloo adjoins K. K. was the bp. of Wm Lyon Mackenzie King. Pop. 55,645.

**Kitching, Wilfred** (1893-), *sec* SALVATION ARMY.

**Kite**, name popularly given to *Milvus milvus*, a species of Falconidae. It is now distributed through Europe, Palestine, Asia Minor, and N. Africa, and will breed occasionally in certain parts of N. and W. Britain. Three or four cents. ago these birds were found in great numbers in the streets of London, where they acted as scavengers. *M. milvus* is generally distinguished as the red K., its general colour being reddish-brown, with tail-feathers of a light red, barred with brown; the bill is black and strongly curved; the deeply

forked tail is capable of great expansion, and ensures the rapid, graceful flight which is such a marked feature of this bird. The habits of the K. are gregarious and sluggish, and its food consists of offal, small birds, fishes, insects, etc. Its nest, which is formed largely of rags and other rubbish, is generally placed in the cleft of a tree. *M. ater*, the black K., is very common in some parts of Europe. *M. govinus* is the pariah K. of India; *M. affinis* is an Australian species; and *M. melanotis* is confined to E. Asia.

**Kites** (so called from resemblance to the bird, cf. Ger. *Drache* (dragon, 'kite')), light frames of varying shapes on which some material, such as paper, silk, etc., is stretched. A cord is attached and the kite is flown in the air, the cord being let out as it ascends. It ascends by making use of the pressure of the wind on its area so as to provide a 'lift', or component of the pressure force opposed to its weight. When made of the common diamond shape, or triangular with a semicircular top, K. have a 'tail' attached for balancing purposes. The invention of K. is ascribed by tradition to Archytas of Tarentum in the 4th cent. BC, but there is no doubt that long before this time K. had been known to the Asiatic nations and to some savage tribes. The origin of the practice of kite-flying is obscure; it is perhaps religious, and certainly still partakes of such a nature among the Maoris. The pastime has always been the national one of the Korean, Chinese, Jap., Tonkingese, Annamese, Malay, and E. Indian nations. Kite contests, i.e. pitting one kite against another with the object of bringing down the rival, were popular in Japan until after the First World War. During the same period it was not unknown for the whole population of a Jap. vil. to combine in raising a huge kite, the area of which was sometimes no less than 1000 sq. ft. But these forms of amusement have long since been abandoned, except for the flying of K. by children in the high winter winds, especially on New Year's Day. K. were used for scientific purposes in 1749 and in 1752, when Benjamin Franklin's famous electrical experiment was carried out, but their widespread use for meteorological and military purposes may be said to date from the later years of the 19th cent. At one time many observatories in the U.K. and America made constant use of K. to record not only the temp., but also the humidity of the atmosphere and the velocity of the wind at various altitudes. The K. used were mostly box or Hargrave K., so called after their inventor. K. have now been superseded in meteorological work by balloons, chiefly the radiosonde (q.v.).

**Kits Coty House**, well-known megalithic structure near the vil. of Aylesford, Kent, consisting of three great sarsen stones upright with a capstone across them. It is the dummy entrance to a long barrow, the mound of which has been entirely destroyed by cultivation, although its lines have been seen on an aerial photograph.

The name is said to be derived from that of a shepherd who used to take shelter inside the monument. See MEGALITHIC CULTURE.

**Kittatinny**, see BLUE MOUNTAINS.

**Kittel**, Rudolf (1853-1929), Ger. Protestant theologian, b. Eningen, Württemberg, prof. of O.T. studies at Leipzig (1898-1924), and editor of the Heb. O.T. and numerous commentaries.

**Kittery**, seaport tn of York co., Maine, U.S.A. It is situated at the mouth of the R. Piscataqua, opposite Portsmouth, about 46 m. SSW. of Portland. Portsmouth naval base is on islands in the riv. John Paul Jones's ship the *Ranger*, the first to fly the Stars and Stripes, was launched here in 1777. Pop. 8380.

**Kitiwake**, bird of the gull family, genus *Rissa*. The chief characteristic which distinguishes the K.s from the rest of the gulls is the rudimentary condition or absence of the hind toe. The chief species are the familiar Brit. species *R. tridactyla*, with dark brown feet and white under wing-coverts, and *R. brevirostris*, from the N. Pacific, with vermilion-coloured feet and grey under wing-coverts. A third form, *R. pollicaris*, with a slightly more developed hind toe than in normal *R. tridactyla*, is recognised by some Amer. naturalists and is mostly found in the N. Pacific. The K. is about the same size as the black-headed gull and breeds in vast numbers in Greenland and Spitzbergen. It is a good swimmer and feeds chiefly on fish. The young K. is called a tarroch.

**Kitwe**, tn, N. Rhodesia, largest European pop. on Copperbelt (8000 in 1956). H.Q. of the N. Rhodesia Chamber of Mines. Nkana township is adjacent. African pop. 75,000.

**Kitzingen**, Ger. tn in the Land of Bavaria (q.v.), on the Main (q.v.), 129 m. NNW. of Munich. It has a 15th-cent. Gothic church, a Renaissance tn hall, and fine old timbered houses. The tn is an important centre of the wine trade. Pop. 17,500.

**Kiukiang**, riv. port in the prov. of Kiangsi, China, situated on the s. b. of the Yangtze, 130 m. SE. of Hankow. Tea, tobacco, fibre, paper, porcelain, and cotton are exported. The city's foreign settlement was returned to Chinese administration in 1927. The nearby Lushan (4500 ft) is famous for its scenery. Pop. approximately 90,000.

**Klungchow**, tn of China, on the is. of Hainan, belonging to the prov. of Kwangtung. Its port is Holhow, situated about 3 m. away, which was opened to foreign trade in 1876. Pop. 47,000.

**Klutsnig**, see CHÜCHING.

**Kiveton Park**, vil. and rural dist. of Yorks (W. Riding), England, 12 m. E. of Sheffield. The area is described in Scott's *Ivanhoe*, and Harthill Walk passes through the vil. The Trysting Tree is  $\frac{1}{2}$  m. from its centre. Pop. 4550.

**Kivi**, Alexsis (real name Alexsis Stenwall) (1834-1872), one of the best writers of modern Finland, and a founder of its native style, b. Nurmijärvi, of true peasant

stock. K. will live because of his great novel *The Seven Brothers*, 1870. It is the story of 7 farmer's sons who go into the farm's backwoods and carve out a democse for themselves. All aspects of Finnish peasant life are there—the recklessness, the strong drink, the accessions of remorse and religious feeling, the love of nature and the chase, the riotous humour. A Finnish literary society had the book printed; it was acclaimed, after K.'s death, as the greatest modern production of Finnish literature. See life by V. Tarkainen (5th ed.), 1915.

**Kivu**, lake of the Belgian Congo, S. of Lake Edward and N. of Lake Tanganyika, into which it discharges by the R. Rusizi, 62 m. long. K. lies at an elevation of 4829 ft among 9000-ft mts, of which only Ninagongo and Namlagira are now active volcanoes. The tns of Bukavu, Kisenyi, and Goma are on the left shore, all of them catering for tourists. K. gives its name to an administrative dist. The surrounding highlands, being free from tsetse fly, are good grazing ground for cattle. The region is perhaps the most interesting of equatorial Africa.

**Kiwi**, see APTERYX.

**Kizel**, tn in the Molotov Oblast of the Urals, 125 m. NE. of Molotov, centre of the K. coal-mining basin stretching N.-S. along the railway K.-Chusovoy. It was founded in 1765. Pop. (1933) 40,000.

**Kizil Uzun**, see SAFID RUD.

**Kiziladalar**, see PRINCES ISLANDS.

Ministry for Foreign Affairs, Reykjavik  
JOHANNES S. KJARVAL

Kjarval, Johannes S. (1885- ), Iceland's greatest painter. He excels in landscape painting and is especially esteemed for his handling of colour.

**Kjellin Furnace**, see IRON AND STEEL.

**Kjerulf, Halfdan** (1815-88), Norwegian composer, b. Oslo (then Christiania), son of a high gov. official. Educ. for a legal career and graduated at Christiania Univ. On the death of his father he was able to devote himself to music. Actually he began his career as a teacher of music and composer of songs without ever having seriously studied music at all and he did not win recognition for nearly 10 years. Then, however, like Grieg, he received a gov. grant to enable him to study abroad. His fame rests mostly on his manly national part-songs and lyrical solo songs, but he also composed some charming pianoforte pieces.

**Kjölen Mountains** (*kjölen*, the keel), name given to the main mt system of the Scandinavian peninsula, which consists of a vast plateau grooved by deep valleys. These mts run N. and S. and form the backbone range which divides the 2 kingdoms of Norway and Sweden.

**Kladno**, Czechoslovak tn in the region of Prague (q.v.) with coal, iron, steel, and engineering industries. Pop. 40,700.

**Klagenfurt**, Austrian tn, cap. of the prov. of Carinthia, on the Glan. In 1919 it was included in the newly formed kingdom of the Serbs, Croats, and Slovenes (see YUGOSLAVIA), but was included in Austria by plebiscite in 1920. It has a Renaissance cathedral and prov. assembly house, a museum, and sev. old churches. The tn is in a fertile basin, surrounded by mts, and is near the E. end of the Wörther lake (10 m. long) with its many lidos and resorts. It has iron, chemical, textile, leather, machinery, and tobacco industries. Pop. 62,800.

**Klaipeda** (German *Memel*), tn and Baltic seaport in Lithuania. It has wood-processing industries and fisheries. Founded 1253 by Livonian knights, and from the 16th cent. an important trade centre. (For recent hist. see MEMEL). 1950-3, cap. of K. oblast (abolished). Pop. (1939) 41,000, before 1945 mostly German.

**Klamath**, riv. of S. Oregon and N. California, U.S.A., rising in the S. part of Oregon and flowing through K. Lake. It assumes a S.-westerly direction, and empties into the Pacific Ocean. Its course, which lies in a mountainous country, is through narrow canyons, and it has a length of about 263 m., but is navigable for 40 m. only. It supplies water for irrigation and hydro-electric power through Copco No. 1 Dam, in California.

**Klamath Falls**, city, cap. of Klamath co., S. Oregon, U.S.A., a lumbering and rail centre for a farming and sheep- and cattle-raising area. Pop. 15,857.

**Klang**, tn in Selangor, Federation of Malaya, situated near the K. R. It is the chief seaport of Selangor. At the mouth of the riv. is K. Is. Pop. 40,000.

**Klapka, György** (1820-92), Hungarian general, b. Temesvár, joined the Hungarian revolution of 1848, when he won sev. victories and greatly distinguished himself in the siege of Komorn, where he

continued the defence long after the main Hungarian army had capitulated. He wrote *Memoirs of the War of Independence in Hungary, 1850, The War of the East, 1855*, and other military works.

**Klaproth, Heinrich Julius** (1783-1835). Ger. orientalist, b. Berlin. Studied Chinese at the age of 14. Travelled in Russia, the Caucasus, Italy, and France. In 1815 he settled in Paris. In 1816 he was appointed by Friedrich Wilhelm III, King of Prussia, prof. of the languages and literatures of Asia, with permission to remain in Paris. Among his numerous works the following are outstanding: *Reise in den Kaukasus und Georgien in den Jahren 1807 und 1808* (2 vols.), 1812-1814, *Archiv für die asiatische Literatur, Geschichte und Sprachkunde*, 1810; *Asia Polyglotta*, 1823; *Mémoires relatifs à l'Asie* (3 vols.), 1824-8. He also trans. Chinese works, and was one of the founders of the Société Asiatique in Paris.

**Klaproth, Martin Heinrich** (1743-1817). Ger. chemist, b. Wernigerode. He was appointed lecturer in chem. to the Royal Artillery in 1787, and prof. at the univ. of Berlin in 1810. He was the leading Ger. chemist of his time, and discovered uranium, titanium, zirconium, and mellic acid; he also made experiments on coal and completed the discovery of tellurium. His writings include *Beiträge zur chemischen Kenntnis der Mineralkörper*, 1793-1815, and *Chemische Abhandlungen gemischten Inhaltes*, 1815.

**Klatovy** (Ger. *Klattau*), Czechoslovak tn in the region of Plzeň (q.v.). It manufs. textiles, machinery, and matches. Pop. 13,300.

**Klattau**, see KLATOVY.

**Klausen Pass**, Swiss Alpine pass and carriage-road (6400 ft), connecting Altdorf in the canton of Uri with Linthal in the canton of Glarus.

**Klausenburg**, see CLUJ.

**Klausthal**, see CLAUSTHAL-ZELLERFELD.

**Kléber, Jean Baptiste** (1753-1800), Fr. general, b. Strasburg. Studied at the military academy, Munich, and served in the Austrian Army. From 1783 practised in France as architect. In 1792 he enlisted in the National Guard, and after taking part in the defence of Mainz was promoted to brigadier-general.

He fought against Fr. and foreign foes of the rep. Won the battle of Altenkirch against the Austrians in 1796. Accompanied Bonaparte to Egypt; was left in command when Bonaparte returned. In 1800 retook Cairo. Assassinated by a Turk during treaty negotiations.

**Klebs, Edwin** (1834-1913), Ger. pathologist and bacteriologist, b. Königsberg, Prussia. He studied there and at Würzburg and Berlin, where he took his medical degree in 1856. He became assistant to R. Virchow in 1861 and 5 years later prof. of pathology successively at Bern (1866), Würzburg (1871), Prague (1873), Zürich (1882), and Rush Medical College, Chicago (1886). A man of restless instincts, he returned to Europe in 1900, working successively at Hanover, Berlin, Lausanne, and Bern. K. was a pioneer in

developing the bacterial theory of infection; he was first to see the typhoid bacillus (1881) and the diphtheria bacillus (1883). He investigated the pathology of wound infection and found bacteria to be present (1871). He devised a filter impervious to bacteria and was first to filter them. His experiments included the inoculation of apes with syphilis (1873) and the production of bovine tuberculosis (1873).

Klee, Paul (1879-1940), Swiss painter, b. near Bern. He studied at Munich, and in 1912 took part in founding there the 'expressionist' group 'Der blaue Reiter' with Kandinsky, Franz Marc, and August Macke. From 1920 to 1926 he taught at the famous Bauhaus, and in 1930 was prof. at Düsseldorf. On the advent of Hitler to power K. returned to Switzerland. His work was first exhibited in London in 1938, but it was not until the full-scale exhibition of 1946 that K.'s merits were fully recognised in England. In his early years he was influenced by Cézanne, Matisse, and Blake, as well as his Ger. *confrères*. His own theories were expressed in his *Über die moderne Kunst*, 1945 (Eng. trans., 1948); the artist, he says, 'does nothing other than gather and pass on what comes to him from the depths'; he uses the metaphor of the process by which soil is converted to the foliage of a tree to describe the transformation of life itself by the artist, through his medium, into a finished work. The development of his work was towards the imaginative and fantastic, though he stands somewhat apart from the surrealists. He combined a feeling for craftsmanship with an original sense of colour to reproduce the varied processes of his own subconscious, often in abstract designs to which his titles gave fanciful meanings. There is a great sensitivity about most of his work, and in many examples a gay and witty charm. See J. T. Soby, *The Prints of Paul Klee*, 1948; See also studies by W. Hausenstein, 1921; W. Grohmann, 1929; A. H. Barr, 1941; D. Cooper, 1953.

Kleist, Bernd Heinrich Wilhelm von (1777-1811), Ger. dramatist and novelist, b. Frankfurt-on-Oder. He served in the Rhine campaign of 1796, but left the service in 1799, and devoted himself to the study of law and philosophy, finally taking up literature. K. was perhaps the most gifted and also the most unhappy of the romantics, although both in his drama and novel he attains an individual style, which later influenced the realists. His first drama *Die Familie Schroffenstein*, a gloomy tragedy, appeared in 1803; this was followed by *Penthesilea*, 1808, from a Gk source; and a romantic play *Das Käthchen von Heilbrunn, oder die Feuerprobe*, the same year. Other dramas are *Die Hermannsschlacht*, 1809, and *Prinz Friedrich von Homburg*, 1821, generally considered his best work. He also wrote the first realistic comedy *Der zerbrochene Krug*, 1811, whilst his novel *Michael Kohlhaas*, 1808, is one of the best Ger. stories of its time. K.'s genius was,

however, not recognised during his lifetime, and he took his own life in 1811. See C. Braig, *Heinrich von Kleist*, 1925; S. Zweig, *Der Kampf mit dem Dämon*, 1928; T. Kaiser, *Vergleich der verschiedenen Fassungen von Kleists Dramen*, 1944.

Kleist, Paul Ludwig von (1881- ), Ger. soldier, b. Braunfels, Prussia. Served as a cavalry officer and regimental commander in the First World War. After the war he was a cavalry instructor, but on Hitler's advent to power, he was raised to the command of an army corps. Took part in the invasion of Poland in 1939. He was in command against France in 1940, in Yugoslavia in 1941 and took Belgrade, and on the S. Russian front in Aug. 1941. Early in the invasion of Russia his armoured forces led the assault on Kiev and the advance through the Ukraine. His tank forces captured Dnepropetrovsk in Aug. 1941, but his victory was nullified by the Russian destruction of the great dam at that place. On 22 Nov. (1941) he took Rostov-on-Don, but was outmanoeuvred by Marshal Timoshenko, who retook the town a week later. This set-back, though limited in its immediate scope, marked the turning-point of the campaign. In the Ger. offensive of mid 1942 he commanded the first Ger. armoured force and advanced to the foothills of the Caucasus up to Moxdok, but was then turned back by the Russian winter offensive of 1942-3. Reached the rank of colonel-general. See also EASTERN FRONT OF RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR.

Kleptomania, a psychopathological condition which takes the form of an irresistible desire to steal. It is not a specific disease but a symptom of psychological maladjustment symbolising an emotional want or deprivation. Hence the cause is frequently to be found in the sufferer's childhood. In court cases K. is often fraudulently pleaded as a defence.

Klerksdorp, tn in the Potchefstroom dist., Transvaal, S. Africa, 117 m. SW. of Johannesburg. There is a gold-field in the vicinity and diamonds have been found. Pop.: Whites, 9138; Bantu, 13,682; Coloureds, 974; Asiatics, 435.

Kleve, see CLEVES.

Klingenthal, Ger. tn in the dist. of Karl-Marx-Stadt, in the Erzgebirge (q.v.), 38 m. SW. by S. of Karl-Marx-Stadt (q.v.). It has manufs of musical instruments. Pop. 7000.

Klinger, Friedrich Maximilian von (1752-1831), Ger. playwright and poet, b. Frankfurt-on-Main, became an ardent disciple of Goethe. His drama, *Sturm und Drang*, 1776, gave its name to that movement in Ger. literature, characterised by exuberance of action and want of form. Another drama of his, *Die Zwillinge*, 1775, is also celebrated. From 1780 to 1830 he was employed in Russia, chiefly as head of the corps of pages. In later life he wrote sev. philosophical novels. See M. Rieger, *Klinger in der Sturm und Drangperiode*, 1880, and H. Steinberg, *Studien zu Schicksal und Ethos bei Friedrich Maximilian Klinger*, 1941.

**Klinger, Max** (1857-1920). Ger. painter, etcher, and sculptor, b. Leipzig, son of a merchant. He commenced his studies at Karlsruhe, in 1874. In 1878 his paintings and his etchings—including a series called 'Fantasies upon the Finding of a Glove'—attracted hostile criticism and suspicions of insanity, but they were later bought for the National Gallery, Berlin. He treated biblical and mythological subjects in a somewhat gruesome manner. Supplied mural paintings for Leipzig Museum and Univ. K. also produced a poly-chromatic statue, of Beethoven, 1902. See study by F. Avenarius, 1917.

**Klinsky**, tn in the Bryansk oblast of central Russia, 100 m. SW. of Bryansk. It is an important light industry centre (since early 19th cent.; chief product, woollen fabrics). K. was founded in the 17th cent. Pop. (1936) 37,000.

**Klip-das**, see HYRAX.

**Kłodzko** (Ger. Glatz), tn of Poland, in Wrocław prov., at the S. foot of the Eulengebirge, on the Silesian Neisse (q.v.), 50 m. SSW. of Wrocław (q.v.). Until 1945 it was in Lower Silesia (q.v.). It has an anct castle, and has manufs. of textiles and machinery. Pop. 24,000.

**Klondike**, small riv. situated in Yukon Ter., Canada, about 120 m. long. The region of the goldfield includes part of the basin of the riv., and also of the Indian R., the existence of the mineral in this dist. being first discovered in 1896.

**Kloof**, Afrikaans (q.v.) word for a ravine or valley, in common use throughout southern Africa.

**Kloos, Willem Johan** (1859-1938), Dutch poet and critic, b. Amsterdam; one of the leaders of the new literary group called 'the men of '80,' and in 1885 founded their jour. *De Nieuwe Gids*. He surpasses his fellow writers, especially as a lyric poet, his preferred form being the sonnet. The forcefulness of his language and imagery had great influence on later Dutch poets. See K. H. de Raaf, *Willem Kloos*, 1934.

**Klopstock, Friedrich Gottlieb** (1724-1803), Ger. poet, b. Quedlinburg. He studied theology at Jena and Leipzig. Early in life he felt called upon to write a great religious epic, and finally chose the Messiah as his theme. The first 3 cantos appeared in 1748. They were received with great enthusiasm, and K. was hailed as the deliverer of Ger. literature from the formalism of Gottsched and mere imitation of Fr. works. *Der Messias* was not completed until 1773. Written in hexameters, it is a very uneven poem, some parts of it being imbued with deep feeling and fervour, while others are flat and trivial. In 1750 K. spent some time with Bodmer in Zürich, but his conduct was too frivolous for his serious-minded host. In 1751 he received a pension from the King of Denmark, and remained at Copenhagen till 1771. K. also wrote dramas, principally upon old Ger. hist. (*Hermanns Tod*, 1757, *Die Hermanns-schlacht*, 1769, and *Hermann und die Fürsten*, 1784), but their worth is small. Many of his odes (1771), however, are

imperishable. See life by Muncker, 1888; also H. Wöhlert, *Das Weltbild in Klopstocks Messias*, 1915, and I. Böger, *Bewegung als formendes Gesetz in Klopstocks Oden*, 1939.

**Kloster-Hellsbrunn**, see HELLSBRUNN.

**Klostermansfeld**, Ger. tn in the dist. of Halle, at the E. foot of the Harz Mts (q.v.), 24 m. WNW. of Halle (q.v.). It has copper industries. Pop. 6000.

**Klosterneuburg**, Austrian tn, a NW. suburb of Vienna, on the Danube. It has the immense Baroque buildings of an Augustinian abbey, founded in 1106, and produces wine. Pop. 23,300.

**Klostern**, health resort and winter sports centre in the canton of Grisons, Switzerland, 10 m. N. of Davos (q.v.).

**Klosterzeven**, Convention of, concluded in Sept. 1757 by the Duke of Cumberland with the Fr. commander, Duc de Richelieu, by which the former, who had been defeated at Hastenbeck and was without means of retreat, agreed to disband his army and leave Hanover to the French. The convention roused extreme indignation in England and George II recalled Cumberland in disgrace.

**Klotz, Otto** (1852-1923), Canadian astronomer and seismologist, b. Preston, Ontario. Educ. at Toronto and Michigan univs. In early days he explored the NW. ters. of Canada, later carrying out an exploratory survey of Hudson Bay. He took up astronomy in 1885 and was appointed director of the Dominion of Canada Observatory at Ottawa in 1917. He wrote numerous papers on terrestrial magnetism and seismology.

**Kluck, Heinrich Rudolf Alexander von** (1846-1934), Ger. field-marshal, b. Münster; son of Karl K., gov. architect. Entered 55th Infantry, 1865; fought in wars of 1866 and 1870—twice wounded near Metz. General of Infantry, 1906. K. commanded First Army in W., to the extreme left of the Allies' line in N. France, Aug. 1914. All the advancing line received orders to halt when K.'s force was already across the Marne; and he was obliged to execute a movement that brought him within 30 m. of Paris on 6 Sept. Then followed the first battle of the Marne, ending 9 Sept. with K.'s retreat to the Aisne. Wounded in trenches, 1915, he was retired, Oct. 1916, with field-marshal's rank. His account of his last campaign was pub. in England in 1920 as *The March on Paris*.

**Kluge, Gunther von** (1882-1944), Ger. soldier. Served in the First World War. In command of the force which occupied the Polish corridor (q.v.) in 1939. Served on the W. front in 1940; in NW. Russia in 1941; commander on the central Russian front in 1942, and made commander-in-chief in W. Europe in July 1944. D. in Aug. 1944. The retirement of von Rundstedt and his replacement by von K. 3 weeks after the beginning of the Anglo-Amer. offensive of June 1944, while officially attributed to ill health, was an expression of discontent at the Ger. failure to achieve the paramount aim of repelling the allied landing. But it brought no

essential change in tactics, and no effective steps to restore a situation which was steadily deteriorating as far as defence was concerned. Von K. was himself removed after the disaster of the Falaise Gap, and was reported to have d. shortly afterwards, his place being taken by von Model, recalled from the Russian front to handle the Ger. retreat to the Rhine. See also WESTERN FRONT IN SECOND WORLD WAR.

**Klukhori** (until 1943 *Mikoyan-Shakhar*), tn in the Stavropol' Kray of N. Caucasus, on R. Kuban' and the Sukhumi Military Road, 90 m. S. of Stavropol'. It was founded in 1927 as cap. of the Karachay (q.v.) Autonomous Oblast. From 1943 to 1955 it belonged to Georgia. Pop. (1933) 3400. Renamed Karachayevsk in 1957.

**Klyuchevskiy, Vasily Osipovich** (1841-1911), Russian historian, disciple of S. V. Solov'ev (q.v.) and his successor as prof. at Moscow Univ. His works (*Foreigners' Reports on the Muscovite State*, 1866-7, *Boyar's Duma in Ancient Russia*, 1882, *The Origin of Serfdom in Russia*, 1885, *History of Social Estates in Russia*, 1886-7, and *Course of Russian History*, 1st ed., 1904-10—Eng., *A History of Russia*, 5 vols., 1911-31) have greatly influenced subsequent historians of Russia, both Russian and foreign. He was also famous as a brilliant lecturer. He took part in the constitutional movement of the Zemstvo (q.v.) liberals and in working out the electoral law for the first Duma (q.v.).

**Knacker** (Icelandic *knakhr*, saddle), dealer who traffics in old or disabled horses. By Brit. law a K. must slaughter the horse delivered to him within 2 days. He must not work any horse sent to him, nor sell it alive. Moreover, he must keep a full record of his transactions. He must not slaughter any animal within sight of another waiting to be slaughtered, nor must he cut off any of its hair before it is killed. To-day, however, there are persistent reports of cruelty in the traffic of exporting horses for human consumption. It is averred by some that of every 10 horses slaughtered 6 are sold on the black market for human consumption at prices three times or more the legal maximum.

**Knapweed**, see CENTAUREA.

**Knaresborough**, tn in the W. Riding of Yorks, England, 17 m. NNW. of York. There are remains of an old castle. The grammar school was founded in 1616. There is also a 'dropping well' and St Robert's Cave. The tn manufs. linens and rugs. Pop. 8700.

**Knobworth**, mkt tn and par. of Herts, England, 9 m. E. of Luton. Here is K. House and park, home of the Lytton family since 1492, where many of Bulwer-Lytton's novels were written. Pop. 2675.

**Knee**, joint between the lower and upper leg, involving articular surfaces on the femur, tibia, and patella, or knee-cap. The articular surface of the femur comprises the greater part of the surface of the condyles, which are separated by a deep

notch, while faint transverse grooves show the limit of their articulation with the patella. The articular surface of the tibia is deepened by 2 cartilages, one on each side, known as the semilunar cartilages from their crescent shape. The patella is a heart-shaped bone; the wide upper part is concave and smooth, and is divided into 2 articular portions by a rounded ridge; the lower part is rough and non-articular. The joint is nearly surrounded by a series of ligaments of complex structure and movement. The ligaments are lined by the synovial membrane, which is the largest in the body

SECTION OF KNEE

A, femur; B, tibia; C, patella; D, D, synovial sac; E, E, bursae.

The movement of the K. is in general that of a hinge-joint, though a certain amount of rotatory movement is possible when the joint is moderately flexed. The mechanism of the joint is particularly adapted to maintaining the erect attitude, which involves extension of the joint. The K. is subject to the same injuries and diseases as other joints (see under ARTHRITIS; DISLOCATIONS; RHUMATISM; SPRAINS; TUBERCULOSIS). Dislocation is not common. The patella is liable to fracture from direct or indirect violence, but is rarely dislocated. The most frequent K. injury, and one to which athletes are particularly prone, is damage to one or other of the semi-lunar cartilages, most often the internal. The cartilage is split and displaced, the loose pieces interfering with joint movement and causing sudden locking from time to time. The treatment is surgical and consists in removing the damaged cartilage.

**Kneeling** seems to have been the primitive Christian attitude for non-liturgical prayer, and also for penitents at the Liturgy, during the greater part of which

the faithful stood. At other services K. seems to have been the custom in prayer except on Sundays and during Eastertide, i.e. until the octave of Pentecost. K. was then more like prostration, and the terms are frequently used synonymously. The practice of standing at the Liturgy is retained in the E. Church and in Italy. The Canon of the Mass refers to the congregation as 'circumstantes,' standing round the altar. Elsewhere the people almost invariably kneel for prayer. While the celebrant receives the sacrament standing, the people do so kneeling.

**Kneller, Sir Godfrey** (1646-1723), German portrait painter, who provided the link between Stuart portraiture, which had been dominated by foreigners (e.g. Sir Anthony Van Dyck, Sir Peter Lely), and the national school that was founded early in the 18th cent. *B. Lübeck*, he avoided becoming a soldier, and studied art in Holland instead. Here he took lessons under Ferdinand Bol (q.v.), and came under the influence of Rembrandt. He travelled to Italy, staying in Rome and Naples, and setting up a studio in Venice. In 1674 he came to England, intending to return to Venice, but as he quickly became extremely popular and successful he decided to settle in England, and soon set up a vast practice. He replaced Lely as chief court painter to Charles II in 1680. He married the daughter of the archdeacon of Lincoln, Susannah Crane. He was probably buried in his garden at Twickenham, but his monument by Rysbrack is in Westminster Abbey.

K. has been named the most prolific portrait painter of any country. His works number nearly 6000, among which there are almost 800 unfinished. He worked at an extreme speed. Walpole said of him: 'Where he offered one picture to fame he sacrificed 20 to lucre.' He was also more wanting in conscience than any other painter of his rank, and was inclined to be bored by his sitters—which is reflected in some of his works. He employed sev. assistants who completed and made copies of many of his works. Probably his best portrait is that of Wm Wycherley, the dramatist; and among some of his better known are those of Thomas Burnet, William III, the Duke of Portland, Charles II, James II, and sev. other people of note. K. had considerable influence upon his successors. This is shown in 2 ways: by his paintings and by his teaching. His studio was the immediate forerunner of the first real drawing school in London, at which attended most of the notable Eng. artists of the 18th cent. K.'s influence was uncertain, as his paintings varied greatly, but the fine handling of his few notable portraits did not fail to impress his successors, and of his 'Chinese Convert' (Kensington Palace) he was justly proud. *See* Lord Killanin, *Sir Godfrey Kneller and his Times, 1646-1723, 1948.*

**Kneller Hall, see TWICKENHAM.**

**Knesset**, constituent and legislative assembly of the modern state of Israel (q.v.).

**Knickerbocker Club, see CLUB.**

**Knickerbocker Families**, term applied to the people of New York who are descended from Dutch settlers. The name arose from Washington Irving's *History of New York*, 1809, which purported to have been written by one Dietrich Knickerbocker.

**Knife** (A.-S. *cnif*, a cutting implement). Of the weapons and tools found as relics of the Stone Age, the term knife is applied to those sharpened flints which were designed to be held in the hand or mounted upon a short handle to give slightly more leverage for cutting. The manifold uses to which a K. can be put give it great importance in the development of races. As distinct from the dagger, which is always two-edged, the prime importance of the K. is its use as a tool; its use as a weapon can easily be seen to be secondary, as only its ready accessibility favours its adoption in preference to more specialised weapons. Bronze K.s have been found amongst relics of the Bronze Age, and the use of iron was common long before hardened steel became the estab. material for the making of K.s.

From a remote period in Eng. hist. the manuf. of K.s has been associated with the tn of Sheffield in Yorks. The earliest form of steel K., a blade of steel fastened rigidly to a wooden or horn handle, was followed by the jack K., which closed into a groove in the handle, in the 16th cent. In the 17th cent. the pocket K., with spring back, was introduced, and has developed with increase in the number of blades and improvement in workmanship ever since. K.s are made usually of shear steel, the various processes being forging, hardening, tempering, grinding, polishing, and finishing. Sometimes the less essential parts of the K., such as the tang by which it is fastened to the handle, are made of malleable iron which is welded to the cutting portion. Among various forms of K.s may be mentioned pocket, table, carving, hunting, surgical, butchers', shoemakers', and pruning K.s. Many tribes of the Nile and Congo dists. are very expert in throwing K.s as a method of attacking animals.

**Knight, Charles** (1791-1873), author and publisher, b. Windsor. After serving his apprenticeship with his father, a bookseller, he went to London in 1822 and founded *Knight's Quarterly Magazine*, to which Macaulay and other rising literary men contributed. In 1827 he became associated with the Society for the Diffusion of Useful Knowledge; as publisher to the society he was a pioneer in furthering popular instruction by means of cheap pubs. He issued the *Penny Magazine*, 1832-45, *Penny Cyclopaedia*, 1833-44, *Pictorial History of England*, 1837-44, and also ed. the *Pictorial Shakespeare*, 1838-41. His *Popular History of England* appeared in 8 vols., 1856-62, and in 1860 he was appointed publisher of the *London Gazette*. He wrote sev. books, including an autobiography, *Passages of a Working Life*, 1863-5. *See* life by A. Clowes, 1892.

**Knight, Eric Mowbray** (1897-1943), novelist, *b.* Menston, Yorks. He went to the U.S.A. in 1912, and became naturalised just before his death. He served with the Canadian forces in the First World War, and with the Amer. Army in the Second, attaining the rank of major. He was killed in an aeroplane crash while on an official mission. Among his novels are *Song on Your Bugles*, 1936, *The Flying Yorkshireman*, 1937, *The Happy Land*, 1940, *This Above All*, 1941, and *Lassie Come Home*, 1941.

**Knight, Dame Laura**, painter, daughter of Charles Johnson, *b.* Long Eaton, Derbyshire. She was educ. at Brincliffe, Nottingham, and studied at Nottingham School of Art. She won the gold, silver, and bronze medals, S. Kensington, and the Princess of Wales scholarship. Married Harold K., 1903, the year she first exhibited at Royal Academy. Represented in art galleries all over Eng.-speaking world. She and her husband have lived at Staithes, Yorks, in Holland, and at Newlyn, Cornwall. D.B.E., 1929; A.R.A., 1927, and R.A., 1936. First woman to become a full member of the Academy since Angelica Kauffmann and Mary Moser. Pub. *Oil Paint and Grease Paint*, 1936.

**Knight, Richard Payne** (1750-1824), connoisseur, *b.* Herefordshire. The jour. which he kept when he visited Sicily with the Ger. painter, Philip Hackert, was trans. and pub. by Goethe in his biography of Hackert. His magnificent collection of coins, bronzes, pictures, etc., was bequeathed to the Brit. Museum. He was regarded as an authority on anc. art, and was vice-president of the Society of Antiquaries. His works include *An Analytical Essay on the Greek Alphabet*, 1791, and *An Inquiry into the Symbolical Language of Ancient Art and Mythology*, 1818.

**Knight, Sarah Kemble** (1666-1727), Amer. diarist, *b.* Boston. Her father, Thomas Kemble, was a merchant, and she married Richard K., a shipmaster. She kept a writing school, which Benjamin Franklin is said to have attended, and later moved to Connecticut, where she speculated in land and kept a shop. Her *Diary*, printed in 1825, gives an interesting picture of the life of the early settlers.

**Knight, Thomas Andrew** (1759-1838), horticulturist, *b.* Herefordshire. He was awarded the first Knightian medal, founded in his honour in 1836, and was president of the Horticult. Society, 1811-1838. He wrote *A Treatise on the Culture of the Apple and Pear*, 1797, *Pomona Herefordiensis*, 1811, and over 100 papers, some of which were pub. in 1841.

**Knight-Service**, system of land tenure in feudal days, introduced after the Norman Conquest. The king divided the land amongst his tenants-in-chief, who rendered him K.-S. in return, i.e. they had to provide so many knights for service in the field according to the amount of land (knights' fees) held, and were also liable for certain fees. Tenure by K.-S. was abolished in 1660.

**Knighthood**, word which in its origin was intimately bound up with the class of military tenants of the feudal system. It is purely a matter of antiquarian interest whether the term knight (O.E. *cniht*, a boy) ever superseded or was ever synonymous with the Lat. *miles* or the *gesith* or *comes* of Tacitus, or whether it applied solely to the military tenants of a baron or earl exclusive of those of the king himself. But it is at least certain that under the feudal system as introduced by the Conqueror and developed under Henry II the military strength of the nation was measured by the number and efficiency of the knights whom the king was able to summon to the field, and a knight then meant no more than a person whose holding of land was on condition of performing military service for the sovereign (knight's fee or tenure in chivalry). Chivalry was practically a synonym for K., but was not used with the same utilitarian connotation, and is rather to be regarded as a semi-religious, semi-epic growth of the feudal system, which reached its flower of perfection during the crusades. The Church early threw its aegis of solemnity over the formal investiture of a youthful knight into the profession of arms and inculcated in him those virtues which we habitually associate with the word chivalry. The institution of the celebrated military orders of the Knights Templars and the Hospitallers, or Knights of St John, was the direct result of the crusades. The members of these orders were pre-eminently and primarily soldiers of the Cross, whatever charges of misbegotten wealth, worldly living, idleness, and heresy may with justification be hurled against their representatives of a later age. These knights have ever in the popular imagination existed as an almost legendary class of men, far more heroic than the mere tenants in chivalry of the feudal system. Nor is this remarkable, because their primary object being to repulse the infidel, their orders were essentially cosmopolitan and attracted the pick of knight-errantry, and the honour of K. was conferred upon their members by various European monarchs quite irrespective of any property qualifications, for the most part purely on account of military distinction. But side by side with these orders existed the knights of the feudal system, and indeed this territorial K., as it may be termed, and chivalry in its more appropriate sense declined together. In England even in the Middle Ages K. was not by any means an unquestionably desirable honour if, as contemporary chronicles show, the king was frequently obliged to resort to constraint to compel those who held the knights' fees (land of about £20 ann. value) to take the order of K., or prove that they were qualified to take the field as knights. This practice soon developed into a lever for inducing tenants to compound with the king by way of fine (*scutage*), and ultimately into a process for extorting money from those who would have been exempt at common

law, which regulated the amount of a knight's fee by the sufficiency of the land to support a knight, and not by its fluctuating normal value in a debased currency. This process of extortion by compulsory K. was revived by Charles I as a means of raising money without resorting to Parliament, with the result that an Act was soon passed abolishing the prerogative of compulsory K.

At the present day the ant military origin of K. is preserved in the continued existence of the accolade or symbolical

St Patrick, the Bath, the Star of India, St Michael and St George, and the Indian Empire. Similar continental orders, equally pressing the hallowed claims of an exalted, if generally legendary, antiquity, are the order of the Holy Ghost founded by Henry III of France, and the order of the Golden Fleece of Spain. Probably the most distinguished of the Brit. orders is that of the Garter. The pretensions of that of the Bath to an equal dignity of genesis are now generally agreed to be invalid, in spite of Selden and Camden.

N.P.G.

INSTALLATION OF KNIGHTS OF THE GARTER BY QUEEN ANNE AT KENSINGTON PALACE, 14 AUGUST 1713  
Painting by Peter Angelis.

ceremony of dubbing a man a knight by touching his head with the tip of the royal sword. K. gives precedence over esquires and other untitled persons. 'Sir' is prefixed to the baptismal name of knights and baronets, and their wives have the legal designation of 'Dame,' which in modern parlance is converted into 'Lady.' The designation 'Dame' is now, however, applied to Dames Grand Cross of the Brit. Empire (*see* DAMES). Besides those who are simply knights there are others who are members of particular orders or classes which exist in most of the European states, and owe their foundation generally to some sovereign prince. Of this class of honorary associations are the Brit. orders of the Garter, the Thistle,

For details of the different orders of K., *see* ORDERS OF KNIGHTHOOD.

**Knights Hospitallers, *see* HOSPITALIERS.**

**Knights of Columbus**, an organisation founded in the U.S.A. in 1882 as a fraternal benefit association for Rom. Catholic men by Rev. M. J. McGivney and 9 parishioners of St Mary's Catholic Church in New Haven, Connecticut. Numbering more than 640,000 members, it operates in the Amer. Union, Mexico, Puerto Rico, Alaska, Panama, Cuba, and the Philippines. Besides their normal activities in the sphere of youth-training and public relief, the K. of C. did outstanding welfare work during the two world wars.

**Knights of Labor, *see* TRADE UNIONISM IN THE U.S.A.**

**Knights of Rhodes and Malta**, *see* HOSPITALIERS, KNIGHTS.

**Knights of St John of Jerusalem**, *see* HOSPITALIERS, KNIGHTS.

**Knights of the Golden Circle**, Amer. anti-federal, pro-slavery secret society and political organisation which flourished in the N. 1855-64 and sympathised with the Secessionists.

**Knights of the Round Table**, *see* ROUND TABLE, THE.

**Knights of the Sepulchre**, *see* SEPULCHRE.

**Knights of Windsor**, *see* MILITARY KNIGHTS OF WINDSOR.

**Knights Templars**, *see* TEMPLARS.

**Knightbridge**, name of a dist. of W. London, once a hamlet, which extends into the city of Westminster, and also into the par. of St George's, Hanover Square. It has one of the more fashionable shopping areas in London.

**Kniphofia**, genus of perennial herbs of S. and E. Africa, family *Iridaceae*, notable for their long spikes of yellow and red flowers; popularly termed Red-hot Pokers. There are 24 species; *K. uvaria* and its varieties being grown in Brit. gardens.

**Knitting**. The origins of K. are completely obscure. But we do know that 'sprang,' a form of needle weaving, has much in common with the technique of both K. and crocheting, while the fragments of Peruvian needle K. of the first cent. of the Christian era show the evolution from a 'sprang' to a K. technique.

K. was also practised in ancient times, as to-day, by fishermen; and here again we can see clearly the evolution from netting on a single stick to K. on 2 needles.

The earliest known fragment of Arabic K. is dated 7th to 9th cent. The fabric is extremely fine and worked at a tension of 36 stitches to the inch. There is a coloured geometric pattern in deep maroon on a gold ground, the colour not in use being stranded across the back of the work. The fabric itself is knitted throughout in cross stocking stitch. The interest in this specimen is that it shows a long development behind it, suggesting that K. must have been practised as early as 1000 bc. Coptic Christians learnt to knit from the Arabs and the art eventually reached Spain. From there it moved across Europe, centring in Italy and France, both countries claiming to be the originators of knitted silk hose. In France hand-K. flourished and by the 13th cent. had become one of the staple industries of the country, the knitters' guild founded in Paris being the most highly organised guild of master knitters the world has ever known. We know that in the reign of Edward IV the Fr. knitters were exporting hosiery to Britain. In Italy coloured brocaded K. worked in gold and silver thread and bright-coloured silks added its mark to this phase of the craft's development. To-day brocaded Florentine knitted waistcoats are prized by collectors, a perfect specimen of this craft being among the knitted garments at the Victoria and Albert Museum. The 16th cent. was the golden age of K. and

one still looks with wonder at the knitted carpets designed and worked by the master craftsmen during this period. In England K. appears to have estab. itself during the reign of Queen Elizabeth I as a pastime among the ladies of the court. It is recorded that a Mrs Montague presented the queen with 2 pairs of silk stockings knitted by her own hands.

Colour K., that is, producing patterned fabrics in different shades of wool and silk, would appear to have centred largely in Spain and Italy, and it has been suggested that sailors, who were saved from the wrecked Armada, carried this phase of the craft to the W. of Ireland and to the Shetlands. While this theory is disputed there is ample evidence to support its truth, for Donegal K. to-day still preserves the simple geometric designs the Spaniards mastered from Arabic sources. Many of the original Fair Isle patterns are a direct link with the Catholic tradition of Spain where they originated. In S. Austria heavily embroidered K. has been in vogue for sev. cents., the basic fabric being knitted in simple lace designs in heavy wool, the embroidery being worked in gay colours on top of the knitted fabric. In N. Germany plaited and cable fabrics have always been dominant, while in Belgium and France knitted laces, some of them almost as fine as cobwebs, have added a new charm to this fascinating craft. K. reached Scandinavia during the 17th cent., Dutch craftsmen being invited by the King of Denmark to estab. themselves and their craft in that country. It is probable that in the N. of Scandinavia K. flourished at a much earlier date, as there is a long record of 'sprang' fabrics being produced there in the Bronze Age.

As London became the commercial centre of England K. moved further and further N. The first K. school was founded in York in the 16th cent., while the frame K. hosiery trade estab. itself in Leicester and Nottingham about the same period. During the 17th and 18th cents. the Yorks dales became the centre for hand K. in England, various records proving that the K. of hosiery was a thriving industry during this period. The Victorian age, following the Industrial Revolution, slowly undermined the hand K. industry, and while fishermen of the Shetlands and the E. coast fishing ports still carried on the craft, it became mainly a drawing-room hobby practised by the genteel daughters of the rising middle class who were beginning to dominate the domestic life of the Brit. Isles. It is a notable fact that wars have always produced a revival of hand K. The Balaclava helmet was the forerunner of knitted comforts for the troops that once again commanded our attention during the last 2 European wars. The spinning of hand-K. wools by reputable firms and production of K. books and K. leaflets giving simple instructions how to produce knitted garments at home have contributed largely to the development of K. to-day. The latter are a direct development from

the K. patterns that can be found in many of the gentlewomen's magazines of the Victorian era. K. worked on big needles and with very thick wool is very popular for pullovers and cardigans of all varieties. In England the larger numbers denote a smaller needle and in America the reverse is true. An Eng. No. 12 is an Amer. No. 1; an Eng. No. 11 is an Amer. No. 2, and so on.

Home K. machines are of various types: the latch, the open needle or pin, and circular. All types are easy to use and the worker requires very little tuition, which is given free. *See also* Hosiery.

The knitter's craft itself is very simple, requiring only a set of K. needles, a ball of wool, cotton, silk, or linen. A single loop is made on the end of the fibre that is being used and from this loop the stitches are cast on to the needles, the basic action of the craft consisting of transferring the loops from one needle to another, 'weaving' the new set of loops transferred on to the second needle from the first set of loops by passing the point of the second needle through the loop, wrapping the fibre over the point of the needle, and then passing the loop over the fibre wrapped round the needle. By working across the back of the loops a purl stitch is produced, K. and purling being the foundation stitches out of which the most simple or elaborate patterns are created. To-day we seem to be moving into another golden age of K., and many firms of K.-wool spinners throughout the world are doing much to preserve the ancient traditions of this simple and lovely craft. *See Mary Thomas's Dictionary of Knitting Patterns*, 1943; *Mary Thomas's Knitting Book*, 1948; J. Norbury, *The Knitter's Craft*, 1950; *Knit with Norbury*, 1952; also *Vogue Knitting Book* (biennially) and *Stitchcraft* (monthly).

**Knoblock** (**Knoblauch**), Edward (1874-1945), dramatist, b. New York City. Of Ger. extraction, he was educ. at Berlin and Harvard, where he studied drama. Coming as a young man to London, he gained experience of the theatre by writing, adapting, and translating plays. In 1906 his adaptation, *The Shulamite*, was produced at the Savoy, and the next year he became reader of plays at the Kingsway Theatre. After visiting Tunis and Kairouan to study local colour, he wrote the play *Kismet*, which was produced at the Garrick Theatre in 1911 with great success by Oscar Asche. In 1912 appeared *Milestones*, the comedy of three generations of a family, in which he collaborated with Arnold Bennett, and which became one of the most famous plays of the period. After collaborating with Tom Pellatt ('Wilfrid Coleby'), the schoolmaster, in the play *The Headmaster*, he produced *My Lady's Dress*, 1914, which is considered by some to be his best play, though others think that his *Marie-Odile*, 1915, a study of the true innocence of women, surpassed it. During the First World War he became naturalised and changed the spelling of his name, devoting himself to the service of the French in

Britain. In 1931 he dramatised J. B. Priestley's *The Good Companions*. His book of reminiscences, *Round the Room*, appeared in 1939.

**Knock**, par. and vil. of co. Mayo, Rep. of Ireland, 7 m. NE. of Claremorris. K. is renowned as the scene of apparitions (the first on 21 Aug. 1879) of the Blessed Virgin, which are the subject of ecclcs. inquiry, and the little church is now visited by vast throngs of pilgrims. Pop. (of vil.) 300.

**Knock-knees** (*Genu valgum*), condition in which the knees are close together and the feet widely separated. In infants it is usually the result of rickets (q.v.), which is now a rare disease. K. sometimes results from injury to the femur, such as a fracture, and when this occurs in adults it may need an operation to correct the deformity. K. is the opposite to bow-legs (*Genu varum*, q.v.).

**Knocking**, detonation, explosion of petrol-air mixtures in the cylinder of internal-combustion engines, caused by too high a compression ratio. It may be overcome, at least in part, by the addition to the petrol of 'anti-knocks' such as aromatic hydrocarbons, alcohol, or lead tetra-ethyl (q.v.).

**Knockmealdown**, mt range, 12 m. by 4½ m., in the S. of Tipperary and the NW. of Waterford, Rep. of Ireland. The highest summit is 2609 ft.

**Knokke**, tn in the prov. of W. Flanders, Belgium, 10 m. NNE. of Bruges. Its extensions along the N. Sea, called Albert-Strand (Albert-Plage) and Het Zoute (Le Zoute), range among the most modern seaside resorts of the Belgian coast. K. has a famous casino-kursaal and an aerodrome. Pop. 12,400.

**Knole**, one of the largest private houses in England, situated in K. Park, 1 m. from Sevenoaks, Kent. It was begun by Thomas Bouchier, Archbishop of Canterbury, in 1456, but greatly extended, c. 1603, by Thomas Sackville, 1st Earl of Dorset (q.v.), to whom it was granted by Queen Elizabeth I. The state rooms contain a large number of historic pictures, rare furniture (e.g. the K. settee), rugs, and tapestries dating from the early 17th to the late 18th cent. It was given in 1946 by the 4th Lord Sackville to the National Trust, although the family retain a lease of part of the house. *See* L. Sackville-West, *Knole House*, 1906, and V. Sackville-West, *Knole and the Sackvilles*, 1934.

**Knollis**, or **Knollys**, Sir Francis (c. 1514-1596), Eng. statesman, educ. at Oxford, descendant of Sir Thomas Knollys (d. 1435, lord mayor of London). He fought for Edward VI in Scotland, and was knighted in 1547. His strong Protestant convictions forced him to leave England in Mary's reign, but he returned under Elizabeth I, and was sent by her on a mission to Ireland (1566), and later to take charge of Mary Queen of Scots (1568-9).

**Knollys**, Francis, 1st Viscount (1837-1924), courtier, private secretary to Edward VII when Prince of Wales from

1870 to 1901; and from 1901 to 1910; also private secretary to George V from 1910 until 1913. K. was created 1st Baron Caversham in 1902, and 1st Viscount K. in 1911.

**Knossos** (Lat. *Cnossus*), anct city of Crete (q.v.). The excavation of the Palace of Minos during the present century by Sir Arthur Evans (q.v.) is among the most spectacular and most important achievements in the hist. of archaeology, revealing Crete as the fountain-head of Aegean Civilisation (q.v.). See A. J. Evans, *The Palace of Minos*, 1921-36, and J. D. S. Pendlebury, *A Handbook to the Palace of Minos, Knossos*, 1955.

**Knot** (O.E. *cnotla*, from a Teutonic stem *knutt*, of. *knit*), in cordage, an intertwined loop of rope, cord, string, or any flexible material, used to fasten a rope to an object or to another rope. The various methods of fastening are known by the technical names of K.s, bends, hitches, seizings, and splices, all of which, save the last two, would be termed varieties of K.s by the layman. 'Bends' and 'hitches' are methods of fastening ropes together or round spars, etc.; 'seizings' (Fr. *saisir*) are ways of fastening two spars to one another by a rope, or two ropes by a third; 'splices' (cf. split) are made by weaving the ends of two ropes together (see below). The principle on which all are constructed is that the strain they bear shall serve to draw them tighter. Among the various kinds of K.s used on board ship for different purposes may be mentioned: figure of eight, bowline, running bowline, half-hitch, clove hitch, Blackwall hitch, double Blackwall hitch, cat's paw, marlinspike hitch, fisherman's bend, timber hitch, Carrick's bend, sheet bend, single and double wall K.s, Matthew Walker, inside clinch, midshipman's hitch, Turk's head, Sp. windlass, shroud K., Flem. eye, racking seizing, diamond K., etc.

Splices are methods of fastening two ropes together in such a way that there is no great increase in size or decrease in efficiency and strength at the point of junction; there are three main kinds, the short, the long, and the eye splice.

The short splice is formed by unlaying the strands of the rope for a short distance, 'marrying' them, and passing them over one strand and under the next, twice each way, with the aid of a marlin-spike. Before being turned in a second time the strands are halved, the upper half only of each strand being turned in; all the projecting strands are then cut off neatly. In a long splice, not only are the ends unlaid for three times as long as in the short splice, but one of the strands of each rope is unlaid for a still further distance, thus making the splice firmer. An eye splice is made by unlaying the strands of the rope and placing them upon the same rope, spread at such a distance as to give the right size of loop for the eye required. A splice is then made in a similar manner, and when projecting ends have been trimmed, the part disturbed is bound tightly round with a hard line.

In a scientific sense a K. is a physical

line, i.e. a flexible inextensible line that cannot be cut, that cannot be deformed into a circle. J. B. Listing (1802-82) was undoubtedly the pioneer of the scientific study of K.s; in his *Vorstudien zur Topologie*, 1848, he gives in a few pages what is evidently only a précis of his observations on the subject. Prof. P. G. Tait treated of K.s according to their 'knottiness,' 'be-knottedness,' and 'knotfulness' in his paper to the Royal Society of Edinburgh (see *Transactions Royal Society, Edinburgh*, xxviii. 145, 1876-7). He applies the name of 'amphichetral' (αμφι and χεῖρ) to K.s which can be deformed into their own perversion, that is, their image in a plane mirror. It has been shown that any K. can be represented by three plane curves, none of which has double points and of which no two intersect, and C. F. Klein has proved (*Mathematische Annalen*, ix. 478) that K.s could not exist in space of four dimensions. In addition to the works cited above, see T. Bowling, *Book of Knots*, 1866; J. T. Burgess, *Knots, Ties, and Splices*, 1884; C. W. Ashley, *The Ashley Book of Knots*, 1947. (See illustration, p. 514.)

**Knot**, *Calidris canutus*, bird of the snipe and curlew family (Scolopaciidae). It differs from the snipe, curlew, and woodcock in having a much shorter bill and legs. In winter the plumage is ashy-grey above with white underparts, but during the breeding season the mantle is blackish and the head and breast are chestnut coloured. In winter it is widely distributed, occurring as far S. as the coasts of Australia, Patagonia, and Africa, though it is also found around the Brit. Isles.

**Knot**, see LOG and METROLOGY.

**Knotgrass**, *Polygonum aviculare*, ann. native of Britain, and sometimes a troublesome weed in gardens.

**Knott, Ralph** (1878-1929), architect, b. London, won the great competition for the London Co. Hall in 1908, while employed as an assistant in the office of Sir Aston Webb (q.v.). The building was considerably extended after his death.

**Knottingley**, par. and urb. dist. of W. Riding, Yorks, England, on the R. Aire, 3 m. N.E. of Pontefract. There are glass bottle works, chemical works, and foundries; and light engineering, ship-building, and limestone quarrying are carried on. Pop. 10,410.

**Knout** (Russian *Knut*), whip; a special kind of K. was used in Russia as a particularly cruel instrument of punishment and torture. It was first mentioned in the Code of 1497, and finally abolished in 1845.

**Knowland, William Fife** (1908- ), Amer. politician, educ. public schools of Alameda and the univ. of California. He has been a Republican senator since 1945 and has been the Republican leader in the Senate since 1953. K. is a traditionalist Republican, and has often expressed views considerably more to the Right than those of his fellow-Republican president.

**Knowledge**, see EPISTEMOLOGY.

**Knowles, Herbert** (1798-1817), poet, b. Gomersal, near Leeds. Educ. at Richmond Grammar School, he wished to go

TWELVE KNOTS

1, bowline (in stages); 2, Carrick's bend; 3, cleve-hitch; 4, fireman's chair knot (in stages); 5, fisherman's bend; 6, half-hitch; 7, reef knot; 8, granny knot; 9, sheepshank (shortening knot); 10, sheet bend; 11, double sheet bend; 12, timber hitch.

to Cambridge, but lacked the means; so he sent to Southey (q.v.) his poem 'Three Tabernacles,' suggested by Matt. xvii. 4, and better known as 'Stanzas written in Richmond Churchyard.' These verses, which were certainly astonishingly mature work for a schoolboy, hardly merited the extravagant praise they received at the time; they secured for K. the place he sought at Cambridge, but he d. of consumption just after his election to a sizarship.

**Knowles, James Sheridan** (1784-1862), dramatist, b. Cork, son of James K., the lexicographer. After failing in sev. callings he turned as a last resource to the writing of plays, in which he achieved considerable success. His tragedy of *Caius Gracchus* was produced at Belfast in 1815, and won much praise. Five years later his *Virginian*, suggested to him by Keats, was performed at Drury Lane. For Macready at Covent Garden he wrote *William Tell*, 1825, and 3 years later was produced *The Beggar's Daughter of Bethnal Green*. Among his other plays were

*Alfred the Great*, 1831, *The Hunchback*, 1832, and *The Chase*, 1837. In later life he became a Baptist preacher. There is a biography by his son, Richard Brinsley K., 1872. See also L. H. Meeks, *Sheridan Knowles and the Theatre of his Time*, 1934.

**Knowles, Sir James Thomas** (1831-1908), editor, b. London. Educ. at Univ. College there, he began life as an architect. He was editor of the *Contemporary Review* from 1870 to 1877, and then founded the *Nineteenth Century*, which, with Gladstone, Tennyson, Huxley, Fitzjames Stephen, Manning, and other celebrities contributing, was from the first a great success. He was made K.C.V.O. in 1903.

**Knowlesley**, vil. and par. of Lancs, England, 5 m. W. of St Helens. K. Hall has been the home of the Stanley family since the reign of Richard II. Kirkby trading estate, one of the largest in the country, is 2 m. to the N. Pop. 7200.

**Knox, Edmund George Valpy** (1881- ), humorist, was a son of the Bishop of Manchester and a brother of Ronald K. (q.v.). Educ. at Rugby and Oxford, he served

during the First World War with the Lincolnshire Regiment. In 1921 he joined the staff of *Punch*, writing usually under the pen-name 'Evoe,' the Lat. cry at the festival of Bacchus, and from 1932 to 1949 he was editor. His collections of light verse and humorous articles include *The Brazen Lure*, 1911, *A Little Loot*, 1919, *Parodies Regained*, 1921, *These Liberties*, 1923, *Quaint Specimens*, 1925, *Here's Misery!*, 1931, and *Folly Calling*, 1932. He also ed. an anthology of *Humorous Verse*, 1931.

Knox, John (c. 1513-72), Scottish religious reformer, b. at Morham or Giffordgate, Haddington. From statements of K. himself it would appear that his father was a feudal dependant of the Earl of Bothwell. His mother's name was Sinclair. Little is known of his early years, but it is known that he took minor orders, and c. 1540-3 he acted as an apostolical notary in Haddington, and in 1544 he became tutor to Francis and John, sons of Hugh Douglas of Longmiddy and Alexander Cockburn of Ormiston. At the houses of Douglas and Cockburn and Crichton of Brunton he met George Wishart, whose Protestant zeal made a deep impression upon him. In 1546 Wishart was burned at St Andrews for heresy, and K., who had become his close associate, took refuge in the castle of St Andrews in the following year in order to escape arrest. The castle was held at the time by the murderers of Cardinal Beaton. K. preached the Protestant cause in the castle and par. church of St Andrews, making a profound impression. A few months later the castle was surrendered to the French and, in violation of the terms of surrender, K. and others were condemned to the Fr. galleys. K. was a prisoner in France for 18 months, and then, in Feb. 1549, he was released through the intervention of Edward VI. He went over to England, and preached at Berwick-upon-Tweed, Newcastle, and in Bucks. In 1551 he was made one of the six royal chaplains, and in this capacity took part in the revision of the second Prayer Book of Edward VI. The 'Black Rubric,' which was K.'s suggestion, remains in the Prayer Book to-day. On the accession of the Rom. Catholic Mary Tudor, K. fled to the Continent. From Dieppe he proceeded to Geneva, where he spent most of the next 18 months, interrupted only by short visits to Zürich and Frankfurt-am-Main. At the latter place he ministered to the Eng. refugees, but left owing to objections to his radical teaching. At Geneva he met Calvin, and from this time onwards it was from Calvinist Protestantism that he was to take all his inspiration. He returned to Scotland in Sept. 1555, and it was about this time that he married his first wife, Marjory Bowes. He found many of the nobles of Scotland already strongly inclined towards Protestantism. The Church in Scotland was undoubtedly enfeebled and in need of drastic measures to rid it of the abuses which were weakening it; it was to prove no match for the fervour of K. and the

self-interested greed of the powerful nobility, and its sole influential protector, the court, was fast becoming too weak to help it. K. proceeded to champion the cause of Protestantism with so much vigour and effect that his opponents compelled him to quit the country, but not before he had laid the foundations of ultimate success. He was summoned by the bishops to appear at the Blackfriars Kirk in Edinburgh on 5 May 1556, but he came with so strong a following that the prosecution was abandoned. He returned to Geneva in July 1556, and during his 3 years' residence there he sent

JOHN KNOX

over to Great Britain a series of propagandist pamphlets, including his well-known *First Blast of the Trumpet against the Monstrous Regiment of Women*, 1558.

He returned to Scotland in 1559, and never left it again for any length of time. He had been invited back by the Protestant nobles now in open revolt against the Rom. Catholic queen regent, and he advanced their cause greatly by his powerful preaching at Perth, St Andrews, and Edinburgh. His political capabilities were also proved at this time. It was mainly through his efforts that the aid of England was obtained in forcing the queen regent to send the Fr. soldiers out of the country. The death of the queen regent occurred about this time, opportunely for her opponents, and Calvinism was estab. as the religion of the country, K.'s Confession of Faith being formally adopted on 17 Aug. 1560. This was the state of things when Mary Stuart, a Rom. Catholic, who was, however, apparently prepared to tolerate her subjects' Protestantism if they would allow her free exercise of her own religion, came to Scotland in 1561. K. was no believer in such compromises. He had become minister of Edinburgh in the previous year, and felt that he had a special duty towards her, and a sermon which he

preached at St Giles, Edinburgh, in 1561 led to the first of his famous interviews with the queen, which he has so vividly described. Many of the nobles seemed disinclined to go the full length of K.'s Calvinistic ideals, but the mistakes of the queen aided his aims considerably. K., nevertheless, remained in the background for a time, and after the murder of Rizzio he deemed it prudent to withdraw to Kyle in Ayrshire. After the murder of Darnley K. came to the front again, and denounced the queen and Bothwell, acting once more with Moray, from whom he had been estranged for a time. These events and the flight of the queen to England resulted in the final overthrow of Roman Catholicism in Scotland. K.'s work was now almost done. His imprisonment in France in earlier years had greatly impaired his health, and that, combined with his many years of strenuous agitation, began to tell upon him, but he was still a force to be reckoned with. James Melville draws a striking picture of the reformer in his later days at St Andrews, where he was so weak that he had to lean against the pulpit on his first entry, but before the sermon was ended he was 'like to ding that pulpit in blades [fragments], and fly out of it.' His last public appearance was on 9 Nov. 1572, at the induction of his successor, Lawson, to St Giles, Edinburgh. This effort greatly exhausted him, and he gradually sank, and *d.* on the twenty-fourth of the same month. Two days later he was buried in the churchyard then attached to St Giles, but now forming part of the courtyard of Parliament House. The spot where his remains lie is indicated by a plate bearing the initials I. K. K.'s first wife *d.* in 1560, and in 1564 he married Margaret Stewart, then a girl in her teens. He was survived by his second wife and by all his children.

To modern minds K. presents the character of a rugged, stern, fierce reformer, in fact, almost a fanatic; yet he had a great share in fashioning the destiny of his native country, and has left an abiding impression upon its religious life. That Presbyterianism in Scotland became, as it did, a 'popular' movement is undoubtedly largely due to K.'s magnetic personal influence. In denunciation he was supreme—in fact, the word 'Protestant' finds one of its outstanding examples in him. His eloquence and the virility of his utterances made him a valuable asset to the cause he championed, and his political ability made him far more than a pulpit force. He was in no sense a pioneer in theology, but carried into practice the stern creed of Calvin. That his idealism was exploited by the Scottish Protestant nobility for their own material ends is obvious from their rejection of K.'s first Book of Discipline, which would have used the confiscated Catholic revenues for the benefit of the Presbyterian Church and the common people, instead of (as occurred) for the personal enrichment of the nobility. K. undoubtedly inspired the Scottish Reformation, but his control of it was not quite complete. He *d.* a

national hero. The regent, the Earl of Morton, said at his graveside: 'There lies he who never feared the face of man, who hath been often threatened with dag and dagger, but yet hath ended his days in peace and honour; for he had God's providence watching over him in a special manner when his life was sought.'

See K.'s *Historie of the Reformation of Religion within the Realme of Scotland* 1584, which is his most abiding monument as a writer. See also T. McCrie, *Life of Knox*, 1813; T. Carlyle, *Heroes and Hero Worship*, 1841; P. Hume Brown, *John Knox*, 1895; A. Lang, *John Knox and the Reformation*, 1905; E. Muir, *John Knox: Portrait of a Calvinist*, 1929; Lord Percy of Newcastle, *John Knox*, 1937.

Knox, John (1720–90), philanthropist, b. Scotland, and for many years a bookseller in the Strand, London. He then retired to Scotland, devoting his energies to improving Scottish fisheries and manufs., and making 16 tours through Scotland (1764–75). His works include *View of the British Empire*... (pub. anonymously), 1784, *Observations on the Northern Fisheries*... 1786, and *A Tour through the Highlands*... 1787.

Knox, Ronald Arbuthnot (1888–1957), priest and writer, son of the Rev. E. A. K. who was afterwards Bishop of Manchester (1903–21). Educ. at Eton and Balliol College, Oxford, where he had a most distinguished career. K. was elected fellow and lecturer at Trinity College in the same univ., 1910, and chaplain, 1912. In 1917 he resigned these positions and was received into the Rom. Catholic Church, in which he was subsequently ordained. Appointed Rom. Catholic chaplain at Oxford Univ. in 1926, he resigned in 1939 in order to undertake a new trans. of the Vulgate (q.v.). The N.T. appeared in 1945, the O.T. in 1949. K. was made domestic prelate to the Pope in 1936 and protonotary apostolic in 1951. His other academic distinctions were as follows: honorary fellow of Trinity College, Oxford, 1941, and of Balliol, 1953; fellow of the Royal Society of Literature, 1950; honorary doctor of literature of the National Univ. of Ireland, 1954. His numerous writings include 3 detective stories: *The Viaduct Murder*, 1925, *The Footsteps at the Lock*, 1928, and *The Body in the Silo*, 1933; also *A Spiritual Aeneid*, 1918, *The Belief of Catholics*, 1927, *Essays in Satire*, 1928, *Barchester Pilgrimage*, 1935, *Let Dons Delight*, 1939, *God and the Atom*, 1945, *Enthusiasm: a Chapter in the History of Religion*, 1950, and *Off the Record*, 1954. Shortly before his death K. delivered the Romanes lecture at Oxford, on the art of trans., having just completed a trans. of the autobiography of St Thérèse of Lisieux (q.v.).

Knox, William (1789–1825), poet, b. Roxburghshire. He became a farmer in Dumfriesshire from 1812 to 1817, and settled in Edinburgh in 1820, following a literary career. His poetical works include *The Lonely Hearth*, 1818, *The Songs of Israel*, 1824, and *The Harp of Zion*, 1825. His *Collected Poems* appeared in

1847. See Sir W. Scott, *Journal*, i, 1891, and J. J. Lockhart, *Life of Scott*, vi, 1837.

**Knox, William Franklin** (1874-1944), Amer. statesman and soldier, b. Boston, and educ. at Alma College, Michigan. He fought with the Rough Riders in the Cuban war, 1898. He became a newspaper publisher and eventually acquired a controlling interest in the *Chicago Daily News*, in which he strongly opposed the New Deal. He commanded an artillery regiment in France in the First World War, and was Republican nominee for the Amer. presidency in 1936. From the outbreak of the Second World War he consistently supported the Allies and opposed the isolationists. In June 1940 Roosevelt appointed him secretary of the navy.

**Knoxville**, city and the co. seat of Knox co., Tennessee, U.S.A., on the Tennessee R., 165 m. E. of Nashville. It has a beautiful situation in a fertile and healthy region, and is the centre of the marble trade of Tennessee. It also manufs. cotton and woollen goods, furniture, flour, iron goods, and other articles. Here are situated the univ. of Tennessee, K. College, and the administrative H.Q. of the Tennessee Valley Authority. Pop. 124,770.

**Knutsford**, mkt tn, co. of Cheshire, England. It lies 15 m. SW. of Manchester. This tn, supposed to have derived its name from Canute's ford, is very picturesque, and is described in Mrs Gaskell's *Cranford*. There are paper works, saw mills and a joinery, and photographic works. Pop. 7000.

**Knysna**, div. and tn of Cape Prov., S. Africa. Its magnificent scenery has made it famous as a tourist centre. The rare stinkwood grows in the K. forests and is the basis of a furniture industry. K. R., 139 m. W. of Port Elizabeth, is an excellent harbour, the bar at the entrance having an average depth of water of 13 ft 6 in. Pop.: Whites, 3144; Coloureds, 4826; others, 930.

**Koala** (*Phascolarctus cinereus*), small marsupial related to the wombats and phalangers of Australia, and known as the Australian bear. Greyish-white fur, tufted ears, and no tail. It is a vegetarian feeder, living exclusively on the leaves of certain species of eucalyptus trees. The single young one stays in the pouch for about 3 months and is weaned at the age of 6 months. The young K. changes from a milk diet to a 'pap' of eucalyptus leaves which issues from the mother's anus. This vegetable food contains no excrement.

**Kobdo**, tn and trading centre of Outer Mongolia, situated on a plateau about 4000 ft above sea level. Pop. 6000.

**Kobe**, seaport city of Hyogoken (q.v.), Japan, on the Bay of Osaka. In 1868 it was opened to foreign trade, and the city of Hyogo was opened at the same time, the former becoming the foreign residential quarter. Since 1892 the 2 tns have formed one. It possesses an excellent harbour. K. did not share the phenomenal growth of the other leading cities of Japan during the inter-war

decades; but its pop., 967,000 (1941), shows what would, by other standards, be a striking increase—50 per cent in 15 years. It has two of Japan's biggest shipbuilding yards and its industries include steel, rubber goods, cotton and chemical textiles. It was heavily damaged during the many Amer. air-raids on Honshu in 1945, especially on 4 June 1945, when large areas of K. were devastated by 500 Super-Fortresses. It was quickly rebuilt, and in 1956 had a pop. of 979,000.

**København**, see COPENHAGEN.

**Koblenz**, or **Coblenz**, Ger. city in the Land of Rhineland-Palatinate (q.v.), at the confluence of the Rhine and the Moselle (qq.v.), 37 m. NW. of Mainz. It stands at the site of a Rom. fort (called 'Confluentes'). From 1018 until 1796 it belonged to the elector-bishops of Trier (q.v.). In 1798 it was incorporated in France, but after the Congress of Vienna (q.v.) it was ceded to Prussia. After the First World War it became the seat of the Inter-Allied Rhineland Commission (1919-1930). During the Second World War it was severely damaged; it was taken by Amer. troops in the offensive of 15-19 Mar. 1945, which cleared the l. b. of the Rhine from K. to Bingen. In 1946 the city was made the cap. of the Land of Rhineland-Palatinate, but it was later superseded by Mainz. K. has sev. anct. churches, of which that of St Castor (largely 13th cent.) was consecrated in 836, and that of St Florin dates from the 12th cent. The palace of the last elector was built 1780-6, and there is also a fortress of the electors, part of which dates from the 13th cent. Other structures of note are the baroque tn hall and the 14th-cent. bridge over the Moselle. On the r. b. of the Rhine is the great fortress of Ehrenbreitstein (q.v.). There are machinery, paper, and piano manufs., and the city is an important centre of the wine trade. Pop. 83,000.

**Kobresia**, family Cyperaceae, a genus of perennial herbs, native to N. temperate Europe and Asia. K. *simpliciuscula* is native to Brit. moors.

**Koburg**, see COBURG.

**Koch, Johannes**, see COCCIEUS.

**Koch, Ludwig** (1881-), Ger. naturalist, educ. Frankfurt-am-Main, Paris, and Milan. He was singer of *Lieder*, being a pupil of Jean de Reszke, 1905-14. K. was the first to record directly the songs of wild birds and the cries of other wild creatures, and is the originator of sound-books. Since 1936 he has lived in Britain as a naturalist, author, and broadcaster. Pub. *Songs of Wild Birds* (with E. M. Nicholson), 1936, 1937, *Animal Language* (with J. Huxley), 1938, and *Memoirs of a Birdman*, 1955.

**Koch, Robert** (1843-1910), Ger. bacteriologist, b. Klausthal and educ. at Göttingen. While in general practice he isolated the anthrax bacillus (1876), later proposing a means of preventive inoculation against the disease. He was thus the first to show a specific micro-organism as the cause of a definite disease and inaugurated the era of bacteriological research. In 1882 he discovered the bacillus of

tuberculosis, and led the cholera expedition to Egypt and India (1883), finding the cause of cholera in the comma bacillus. K. was prof. of hygiene and bacteriology at Berlin Univ. (1885) and director of the Institute for Infectious Diseases (1891). He prepared tuberculin (1890-7), by which he hoped to cure tuberculosis; it failed to prove a remedy, though valuable as a diagnostic agent. K. held that there was a distinction between tuberculosis in man and cattle and denied the possibility of transmission from one to the other, but the Royal Commission Reports on Tuberculosis (1904, 1907, 1909, 1911) disproved him. In 2 visits to S. Africa (1896 and

zur Aetiologie der Tuberkulose, 1882, Ueber die Cholerabakterien, 1884, Heilmittel gegen die Tuberkulose, 1891, Ueber neue Tuberkulinpräparate, 1897, Die Bekämpfung des Typhus, 1903. His collected works were pub. in 1912. He was awarded the Nobel prize for medicine in 1905. See study by J. Löbel, 1935, and life by B. Möllers, 1950.

**Kosh, Pali, or Rajbansi**, race of India of aboriginal descent, which inhabit NE. Bengal and Assam. They are probably of Mongolian stock. The wealthier members of the race assert that they descend from Siva, and claim the title of Rajbansi or sons of kings.

German Tourist Information Bureau

#### KOBLENZ

'Deutsches Eck' ('German Corner'), showing the junction of the Rhine and Moselle.

1903) K. studied the 'rinderpest' (cattle plague), investigated malaria and its causes in Ger. E. Africa (1897), and the W. African 'sleeping sickness' (1905-6). K.'s postulates state that a micro-organism is proved to be the cause of a disease when (1) the micro-organism can be isolated in every case of the disease; (2) it can be cultivated in a pure culture; (3) inoculation from such culture must reproduce the disease in susceptible animals; (4) it must be re-obtained from such animals and again grown in a pure culture. Those postulates are the pillars on which the whole of modern bacteriology rests. K. and his pupil Petri were responsible for the introduction of solid culture media, containing gelatin or agar, whereby bacteria could be isolated and grown in pure culture; Pasteur referred to this discovery as 'un grand progrès.' His works include *Untersuchungen über die Aetiologie der Wundinfektionskrankheiten*, 1878, *Ueber die Milchbrandimpfung*, etc., 1882, *Beitrag*

**Kocher, Emil Theodor** (1841-1917), Swiss surgeon, b. Bern, where he received his medical education and was prof. of surgery, 1872-1911. B. is perhaps the greatest surgeon in Swiss medicine. His prin. work was as a pioneer in the treatment of goitre by removal of the thyroid gland; he is said to have performed this operation 2000 times with a mortality rate of only 4½ per cent. Technically he was one of the great masters of surgery; his skill and perfect aseptic technique made it possible for him to do pioneer work in abdominal surgery. He also investigated intracranial pressure, lesions of the spinal cord, and bullet wounds. He received the Nobel prize for medicine in 1909 for his investigations on goitre.

**Kochi**, city of Kochiken, Japan, seat of the prefectural gov., situated on the SE. coast of Shikoku, 135 m. SW. of Kobe. An agric. and fishery centre, it is noted especially for coral goods and dried bonito. Pop. 188,000.

**Kock, Charles Paul de** (1794-1871), Fr. novelist, b. Paris, son of a Dutch banker. His novels deal mostly with various aspects of Parisian life in a witty and realistic manner. Among the chief are *Georgette ou la mère du Tabellion*, 1820, *André le Savoyard*, 1825, *Le Barbier de Paris*, 1826, *Mon Voisin Raymond*, 1837, and *Gustave*, 1842. See his *Mémoires*, 1873, and life by T. Trimm, 1873.

**Kodak**, popular photographic hand camera using roll film, characterised by ease of manipulation and portability. Trade name, belonging to K. Ltd, makers of photographic apparatus and material, of Kingsway, London, with branches elsewhere in London and provs. The controlling interest is held by the Eastman K. Co., Jersey City, U.S.A.

**Kodály, Zoltán** (1882- ), Hungarian composer, folk-song collector, and music critic; b. Kecskemét. He studied composition under Koessler and, in 1905, began to devote his attention to Hungarian folk music, in which he was associated with Bartók (q.v.). Later he made a collection of some 4000 peasant tunes, some noted orally from peasants, others recorded by phonograph, and nearly all of them from dists. the most unaffected by urb. culture. In 1919 he was appointed prof. at the Budapest Conservatory and in 1945 he became director of the Budapest High School of Music. As a composer he is best known in Britain by the orchestral suite from the musical play *Hány János*, 1926, and the *Psalmus Hungaricus* for tenor, chorus, and orchestra, given at the Three Choirs Festival of 1928. He wrote a good deal of other Church music in Latin and Hungarian, and a vast amount of secular choral music, often based on folk material, which is difficult to export on account of the Hungarian words, and the same is true of his solo songs; but sev. of his instrumental works are generally known, e.g. 2 sets of orchestral Dances, 2 string Quartets, the string Trio, the Duo for violin and cello, the unaccompanied cello Sonata and a number of piano pieces.

**Kodas Eli**, see ISMD.

**Koechlin, Charles** (1867-1951), Fr. composer of Alsatian descent, b. Paris. He studied at the Conservatoire under Massenet, Fauré, and others. He lived a retired life, devoted to composition, and never held any official teaching-post; but in various ways, not least through his theoretical writings, he exercised a considerable influence on younger Fr. composers. His output is vast and leaves hardly any category of music unprovided, and although he sought no success and obtained little, his work is of high quality and lasting interest.

**Koekelberg**, manufacturing suburb of Brussels, Belgium, 2 m. to the NW. of the city. It is engaged in the manuf. of food-stuffs, furniture, chemicals, and has dye-works and breweries. Pop. 15,100.

**Koeleria**, genus of Gramineae, contains 15 species, all of which flourish in temperate lands. *K. gracilis*, Crested Hair-grass, *K. albescent*, and *K. vallesiensis* are Brit. species.

**Koffyfontein**, tn in the Orange Free State, S. Africa, situated 30 m. NW. of Ficksburg. A rich diamond mine is worked in the neighbourhood. Some of the finest diamonds in the world have been found here. Pop.: whites, 1264; others, 1700.

**Kogălniceanu, Mihail** (1817-91), Rumanian statesman, studied in Paris, and wrote at the age of 20 his *Histoire de la Valachie et de la Moldavie*, 1837. Upon his return to Moldavia he did much by his writings to pave the way for the revolution of 1848. He was a staunch advocate of the union of the 2 principalities of Wallachia and Moldavia, and in 1863 was chosen by Prince Cuza as his Prime Minister. His measures included confiscation of the property of monasteries, compulsory elementary education, distribution of land among the peasantry, and abolition of serfdom. He pub. a collection of old Rumanian chronicles (2nd ed. 1872), *Esquisse sur les Triganes* in 1873, and other works.

**Kogarah**, metropolitan municipality of Sydney, in Cumberland co., New S. Wales, Australia, close to Botany Bay (q.v.). Pop. 44,020.

**Kohat**, tn of Pakistan in the NW. Frontier area, 37 m. S. of Peshawar. K. lies on the railway to Thal and the approach to the Kurram Pass into Afghanistan.

**Kohen, Johannes**, see COCCINIUS.

**Kohinoor**, or Koh-i-nûr, one of the most famous diamonds in the world. When presented to Queen Victoria in 1850 it weighed 186½ carats, but by recutting it was reduced to 106½ carats. It is considered by some to be a portion of the Great Mogul Diamond which was in the possession of Aurangzeb in 1685. The K. belonged in 1739 to Nadir Shah, was in the possession of the Rajah of Lahore in 1813, and was presented to Queen Victoria by the E. India Co. It is now among the Brit. crown jewels. The name means 'Mountain of Light.'

**Kohistan** (land of mts), name given to mountainous regions in Persia, Afghanistan, India, and Turkestan.

**Kohl**, or Kuhl. The word is derived from the Assyrian *kuhu*, meaning eye-paint, and was applied by Paracelsus (1493-1544) to spirit of wine, whence our *alcohol*. K. is a finely divided black powder, generally antimony sulphide, used in the E. and in theatrical make-up for darkening the eyelids, eyelashes, and eyebrows.

**Kohlraibi**, also known as the Turnip Cabbage; a variety of *Brassica oleracea* var. *caulorapa*, distinctive in that it forms a turnip-like swelling or head bearing leaves above ground, and is hardy and resistant to drought or frost.

**Koizumi, Yakumo**, see HEARN, LAF-CADIO.

**Kokand**, or Kokan, formerly cap. of the old K. Khanate, now tn in the Fergana oblast of the Uzbek S.S.R., S. of the Syrdarya, 350 m. ENE. of Bokhara. It has cotton-spinning factories and silk mills. Pop. 90,000.

**Kokchetav:** 1. Oblast (prov.) of the Kazakh S.S.R. of the Soviet Union situated in the wooded steppe zone. Wheat, oats, and millet are extensively cultivated. Pop. 460,000.

2. Tn and cap. of the K. oblast. An important agric. centre with meat-packing and tanning industries. Pop. 60,000.

**Kokomo**, city, cap. of Howard co., Indiana, U.S.A., 54 m. N. of Indianapolis. It manufs. glass, steel, iron, and brass products, automobile and tractor parts, and pottery. Pop. 38,700.

**Koko-nor**, or **Kuku-nor** (blue lake), lake in Ch'inghai prov., China. The lake lies between the K'un-lun and the Nan-shan Mts. It is 60 m. in length, 40 m. in width, has an area of 2500 sq. m., and is at an altitude of 9976 ft. It has no outlet, its waters are salt and bitter, and frozen for 3 months of the year. The region of K., which lies between Tibet, Kansu, and the Gobi desert, is sometimes taken to include Tsaidam and the plateau of Odontala.

**Kokoschka**, **Oskar** (1886- ), Austrian painter, b. Pöchlarn, Austria (now Czechoslovakia). He studied art at the Vienna School of Applied Arts, where his work was first exhibited; in 1907 he went to Berlin and then travelled to Italy and Switzerland. He had already a strong prejudice against formal and academic rules, and this displayed itself violently after the First World War, in which he was wounded. Both in pictures and writing he conveyed his sense of human suffering and cruelty. From 1920 to 1924 he was prof. at the Dresden Academy, later travelled in Europe, N. Africa, and Asia Minor, and was exiled from his native land when the Nazis took over, his violent expressionism placing his work on Hitler's proscribed list. K. then made his home in England and became a naturalised Brit. subject. Very individual in style and outlook, he does not conform even to modern theories in art but may be called an expressionist in his emotional appreciation of life which his many portraits and landscapes ardently convey. Among the latter, his paintings of the Thames are especially notable as spaciouly conceived panoramas. His work is represented in the public galleries of Europe and the U.S.A. He conducts an unconventional art school in Switzerland. The plays K. has written include *Der brennende Dornbusch*, 1911, *Friob*, 1917, and *Orpheus and Eurydike*, 1916, which was set to music by Krenek in 1923. On his painting see monographs by Edith Hoffman, 1948, and J. S. Plaut, 1949.

**Kokra-wood** and **Coco-wood** are terms applied to the wood of the *Inga vera*, a leguminous tree found in the W. Indies, used for flute-making and turnery.

**Kokura**, seaport city of Fukuokaken, Kyushu, Japan, situated at a mouth of the Inland Sea (q.v.), opposite Shimono-shiki (Honshu). Important for shipping, coal, and cement. Pop. 242,000.

**Kola**, peninsula in NW. Russia, between the Barents Sea and the White Sea. Together with the adjacent mainland it forms the Murmansk oblast (q.v.).

**Kolar**, tn of Mysore State, India, 43 m. E. of Bangalore. The K. gold-fields produce nearly all the gold output of India. They cover an area of 14 sq. m., and two of the mines are 9000 ft deep.

**Kolarovgrad** (formerly **Shumlia**, **Shumen**), city of E. Bulgaria, cap. of K. prov., 185 m. ENE. of Sofia (q.v.). It was founded in the 10th cent., and was successively under Bulgarian, Byzantine, and Turkish rule. It was taken by the Russians in 1878 and ceded to Bulgaria. There is a ruined fortress and there is a remarkable 17th-cent. mosque. Metal and leather goods are manuf. Pop. 31,000.

**Kolberg**, see **KOLOBRZEG**.

**Kolchak**, **Aleksandr Vasil'yevich** (1870-1920), Russian admiral and Arctic explorer, a Crimean Tartar by origin. In the First World War he commanded the Baltic, then the Black Sea fleet; in 1917 he was in America. In 1918-19 he led the anti-Bolshevik struggle in Siberia. He overthrew the Ufa Directory (q.v.) and set up a Siberian Gov. in Omsk, then was recognised by anti-Bolshevik organisations as Supreme Ruler of Russia. His initial spectacular successes were followed by a long retreat until he was taken prisoner and shot at Irkutsk. See **CIVIL WAR, RUSSIAN**.

**Kol'chugino**, see **LENINSK-KUZNETSKIY**.

**Kolding**, tn and port of E. Jutland, Denmark, on the K. Fiord. 29 m. SSW. of Horsens. The royal castle of Koldinghus, dating from 1248, was burnt down in 1808, but partly rebuilt later, now containing a museum. Main manufs. are textiles and hardware, and there are large bacon and chocolate factories. Pop. 33,170.

**Kolguev**, is. in the Barents Sea off the coast of the Archangel oblast of N. Russia. K. is covered with tundra and has few inhab. Area 1350 sq. m.

**Kolhapur**, formerly an independent feudatory Deccan state in the Bombay presidency of Brit. India, and the largest of the Deccan states. After 1933 it formed an agency with Deccan, Janjira, and other states previously in political relations with the gov. of Bombay. In 1949 it merged with Bombay state. A Maharashtra principality, whose rulers were by tradition the heirs of Shivaji, the founder of the Maratha empire 300 years ago, K. was one of the most prominent states to lose its identity rather than join one of the new groups or unions of states (see **INDIAN PRINCIPLE STATES**). The city of K. has both large modern buildings and very ancient temples.

**Kolhida**, see **COLCHIS**.

**Koli**, beauty spot on Ukko-Koli, Finland, highest point of K. hill chain, 348 metres above sea level. K. Tourist Inn is centre of all-year-round expeditions.

**Kolín**, or **Nový Kolín**, Czechoslovak tn in the region of Prague (q.v.) on the Labe (see **ELBE**). In 1757, during the Seven Years War (q.v.), Frederick the Great was defeated here by Marshal Daun (q.v.). K. is a riv. port, is famous for fruit and vegetables, and has engineering, petroleum

refining, and chemical industries. Pop. 20,100.

**Kolkhida**, see **COLOHIS**.

**Kolkhoz** (Russian abbrev. for collective economy), main form of agric. organisation in Soviet Russia. Statutorily a K. is a co-operative undertaking of a number of peasants, who pool their land and other means of production and are paid in kind and money according to the amount of work they put in. In fact the K.s are managed by the gov. through the M.T.S. (q.v.). Membership in a K. is automatic for those b. into it, and it is difficult for a member to leave a K. The K. system does not provide sufficient material incentives for the peasants to take an interest in their work, and their general standard of living is now probably lower than before the collectivisation of agriculture (q.v.). In 1955 there were 85,700 K.s in the U.S.S.R., embracing 19.7 million peasant households.

**Kolkwitzia**, monotypic genus of Caprifoliaceae; *K. amabilis* being a Chinese deciduous shrub with bell-shaped, pinkish flowers in terminal corymbs, in May.

**Kolmar**, see **COLMAR**.

**Köln**, see **COLOGNE**.

**Kolobrzeg** (Ger. Kolberg), tn of Poland, in Koszalin prov., on the Baltic at the mouth of the Prosnica, 25 m. W. of Koszalin (q.v.); formerly in Pomerania (q.v.). It was once a member of the Hanseatic League (q.v.), and was a salt-trading tn in the Middle Ages. During the Thirty Years War it was taken (1631) by Gustavus Adolphus (see **GUSTAVUS II**). In 1648 it went to Brandenburg (q.v.), and in 1741 it was captured by the Russians. At the end of the First World War it was the last H.Q. of the Ger. General Staff. In the Second World War the tn was almost razed. Pop. 5000.

**Kolomna**, tn in the Moscow oblast, 72 m. SE. of Moscow. It has been an important engineering centre since 1863 (locomotives, machine-tools). There are towers of a 16th-cent. fortress, and interesting 14th-18th-cent. buildings. Pop. (1956) 94,000 (1939, 75,000). Known since 1177, Muscovite outpost from 1300.

**Kolonnes**, Cape, see **COLONNES**.

**Kolonos Hippios**, see **COLONUS**.

**Kolozsvár**, see **CLUJ**.

**Kol'tsov**, Aleksey Vasil'yevich (1808-1842), Russian poet. The son of a peasant cattle-dealer, he received no education. His poetry is mainly concerned with peasant life and nature, and in form and style is near to folklore.

**Kolyma**, riv. in NE. Siberia, rising in the plateau between the Verkhoyansk and the Cherskiy ridges and flowing NE. into the E. Siberian Sea. Length 1600 m.; basin 250,000 sq. m. In recent years a large gold-mining industry has been developed in the upper K. region (see **MAGADAN**), which is notorious for its labour camps.

**Kom**, see **QOM**.

**Komárno** (Ger. Komorn; Magyar Komárom), Czechoslovak tn in the region of Nitra (q.v.) on the Schütt is. in the Danube (q.v.). It was once a strong

point, its fortifications having been constructed by Matthias Corvinus (q.v.). Until 1920 it was in Hungary. It is a riv. port, has a textile industry, and is connected by a bridge across the riv. to the Hungarian tn of Komárom.

**Komárom**, see **KOMARNO**.

**Komárom County**, see **TATABÁNYA**.

**Komatsu**, city of Ishikawaken, Japan, 12 m. SW. of Kanazawa (q.v.). There are manufs. of silk gauze, and cast-iron, and most of the clay for the Irai and Kanazawa potteries is obtained here. Pop. 72,000.

**Komensky**, John Amos, see **COMENIUS**.  
**Komi**, Finnish-speaking people (see **FINNS**) in the NE. of European Russia, numbering about 370,000. They are Orthodox Christians (since the 14th cent.), mostly peasants, now collectivised. They are the most civilised of the 'N. peoples' in Russia. See W. Kolarz, *Russia and Her Colonies*, 1952.

ALEKSEY V. KOL'TSOV

**Komi Autonomous Republic** comprises the basins of the Pechora and Vychegda R.s. and is largely forested lowland. It has large coal (Pechora Basin) and oil deposits. There are coal-mining (since the 1930's), oil (since 1745), and timber industries; grain and dairy farming is practised. The prin. tns are Syktyvkar (cap.) and Vorkuta. The area belonged to the Novgorod rep. from the 13th cent. K. Autonomous Oblast was created in 1921, and transformed into a rep. in 1936. It is an area of banishment and labour camps. Area 156,000 sq. m.; pop. (1956) 670,000, mostly K. and Russians.

**Komi-Permyaks**, branch of the Komi people living in the NW. of Molotov Oblast, numbering about 150,000. Komi-Permyak National Dist., formed in 1929 (area 12,000 sq. m.; pop. (1956) 218,000), has grain and dairy farming and a timber industry. The cap. is Kudymkar.

**Komorn**, see **KOMARNO**.

**Komotau**, see **CHOMUTOV**.

direction. It empties into the S. end of K. lake, emerges from the W. arm at Nelson, and flowing SW. enters the Columbia R. at Castlegar. Total length 406 m. Canadian Pacific steamers ply on the lake, but the riv. itself is too rapid for traffic. Almost all the ter. it drains is highly mineralised.

**Kop** (Afrikaans 'a head'), **Koppie**, or **Kopje**, word applied throughout S. Africa to any small hill, such as the famous Spion Kop (q.v.).

**Kopais** (anct *Topolias*), see **COPAIS**.

**Kopar**, or **Koper**, see **CAPODISTRIA**.

**Kopek** (Russian *Kopeyka*), Russian monetary unit, one-hundredth of a rouble (q.v.).

**Köpenick** (formerly *Cöpenick*), suburb of SE. Berlin (q.v.), Germany, on the Spree (q.v.), 10 m. from the city centre. It has engineering industries. K. achieved fame through the exploits of the 'Captain of K.', a shoemaker (Wilhelm Voigt), who in 1906, masquerading as a military officer, induced the burgomaster of K. to part with the municipal funds.

**Kopeysk**, tn in the Chelyabinsk Oblast of the Urals, in Chelyabinsk conurbation, 11 m. SE. of Chelyabinsk. It is the main lignite-mining centre in Chelyabinsk area, and has an engineering industry (agric. and mining equipment). It was founded as a mining settlement, and has been a tn since the 1930's. Pop. (1956) 149,000 (1936, 65,000; 1939, under 50,000).

**Kopparberg**, see **FALUN**.

**Köprülü**, or **Kuprillü**, Albanian family, sev. of whose members became celebrated Turkish statesmen. The most famous are **Mohammed** (c. 1585-1661), who became grand vizier in 1656, and waged war with the Venetians, capturing from them Lesbos and Tenedos. He also subdued Transylvania and fortified the Dardanelles. **Ahmed** (c. 1630-76), son of Mohammed, was made grand vizier in 1656. He invaded Transylvania, and though defeated at St Gotthard he succeeded in obtaining the Peace of Vasvár, by which the Turks retained the fortress of Grosswarden. **Mustapha** (c. 1640-91), brother of Ahmed, saved the life of Solymán (Suleiman) III during the rebellion against Sultan Mohammed IV and was, on the former's accession, made grand vizier. He carried on a vigorous campaign against the imperial forces, driving them from Bosnia and Serbia, and capturing Belgrade.

**Koprü**, see **EURYMEDON**.

**Korah**, a Levite who rebelled with Dathan and Abiram against the exclusive sacerdotal privileges of the sons of Aaron. They were swallowed up by the ground for their presumption. The sons of K. were later appointed by David to direct liturgical music (1 Chron. xxv. 4-8; vi. 33-7) and many of the Psalms are assigned to them (e.g. xlv, xlv).

**Koran**, **The** (*Arabic Qur'an*, recitation, reading), sacred book of Islam consisting of the revelations made to Mohammed. The orthodox view is that it is uncreated, written on the Preserved Tablet in heaven and revealed piecemeal by Gabriel. It

was collected in book form only after Mohammed's death at the command of Abu Bekr (q.v.), and revised under the third caliph. It is in Arabic and is divided into 114 chapters, arranged according to length, the longest first; an exception is the short opening chapter. The earliest passages are short and emotional: warnings of the last judgment, exhortations to obedience, addresses to and praise of God, descriptions of His majesty and goodness and of man's weakness and need of Him. Then the tone becomes quieter though the matter is much the same. Stories of anct prophets are repeated sev. times, all hinting that as punishment followed men's rejection of them, so it will follow the rejection of Mohammed. After the move to Medina new elements appear, laws, statements of policy, and defence of Mohammed's actions, both public and private. In Medina he came into contact with Jews and from them learnt much about some biblical characters, using this knowledge in his preaching; he made little use of the N.T.: he either did not know it or felt it did not serve his purpose. He learnt much from popular stories. He borrowed fearlessly; it is suggested that Penelope, unravelling at night what she had woven during the day, has left her mark on the K. The text of the book is sound; it can be read in 10 ways but in few cases do the variations make serious difference in the sense. Some reject the last 2 chapters, the Shittes (q.v.) claim that 2 have been left out, and some early sectarians rejected the chapter 'Joseph' as a worldly tale. It is the only well-told tale in the book; the others read as if they were notes to be amplified into a story. Later passages sometimes cancel earlier, a matter which is the object of much discussion. Each chapter is named, usually after a word or incident in it; e.g. the Cow, Bee, Repentance; John of Damascus refers to the Camel, a name no longer known. Mohammed is emphatic that he only restores the original true faith and is the final prophet.

See R. Bell, *Introduction to the Qur'an*, 1953. Trans. are many: G. Sale, E. H. Palmer, J. M. Rodwell, and others; H. Pickthall, *The Meaning of the Glorious Koran*, 1930, gives the modern orthodox interpretation; A. J. Arberry, *Selections from the Koran*, 1953, may be recommended to those who do not wish to read the whole book.

**Korat**, cap. of the prov. of Nakornraj-sima, Thailand. It lies 170 m. NE. of Bangkok, with which it is connected by rail. It is situated in a silk-producing dist. Pop. 731,722.

**Korčula** (It. *Zurcola*; anct *Coreyra Nigra*), Yugoslavian is. in the Adriatic, part of the Dalmatian archipelago. It was ruled by the Venetians from 998 until in the 12th cent. it was taken in succession by the Hungarians and Genoans, to return to Venice in 1420. During the Napoleonic wars, it was at different times in Russian, Fr., and Brit. hands. It was ceded to Austria by the Congress of Vienna

(q.v.), and to Yugoslavia in 1919. The prin. tn, also called K. (pop. 6900), has many anct buildings, including a fine 15th-cent cathedral. A traditional dance, performed annually on 29 June, symbolises the victory of the islanders over the Turks. Area 107 sq. m.; pop. 28,000.

**Korda, Sir Alexander** (1893-1956). Brit. film producer, of Hungarian origin, b. Turkiye, Hungary. Educ. at the Royal Univ., Budapest, he began life as a journalist. Entering the film industry in 1915 he produced and directed films in Budapest, Berlin, Paris, London, and Hollywood. Settling in England, he formed London Film Productions (1932), and in the next 8 years did much to make Brit. films the equal of the Hollywood product. From 1940 to 1943 he was in Hollywood; then returning to London he linked his company with Metro-Goldwyn-Mayer to form M.G.M.-Brit. Productions. In 1945 he resigned and concerned himself solely with the work of London Film Productions Ltd, of which he became chairman. Among many notable films made by him were *The Private Life of Henry VIII*, *The Scarlet Pimpernel*, *Sanders of the River*, *Rembrandt*, *The Four Feathers*, *The Lion has Wings*, and *Perfect Strangers*. In 1939 he married the film actress, Merle Oberon, the marriage being later dissolved. He was knighted in 1943.

**Kordofan**, prov. of the Sudan, between Darfur and the White Nile. More than half the surface of 146,930 sq. m. is flat, but in the SE. quarter some 50,000 sq. m. in extent, is the Jebel Nuba, a tumbled series of rocky massifs rising from the plain, honeycombed with caves and thickly populated by black aboriginal Nuba pagans living in autonomous groups under the control of their *mekes* and rain-makers and observing the cult of the spirits of the dead. In N. K., as well as in part of Kassala, are the great grazing areas beloved of the nomadic Arabs whose wealth consists of camels and sheep. During the rainy season, which lasts from June to Sept., the vegetation is luxuriant, but in the dry season the country is almost a desert. The development of the inland water supply by a well-boring programme was begun in 1924. The climate is fairly healthy. Rich gum forests are found, and ground-nuts, cotton (Ainer cotton has proved successful), tobacco, and millet are grown, and ostrich feathers, gum arabic, hides, and ivory are exported. The most important tribes are the Nuba, Shilluk, and Dinka. The most important of the elements of non-Arab origin in the Sudan are those to be found in K. (and Darfur). The cap. is El Obeid. Pop. about 600,000. In 1883 the Mahdi, in spite of the gallant defence by Mohammed Pasha Said, took El Obeid (q.v.) by storm. The Egyptian Gov. then sent a mob of untrained fellahin from Cairo under Hicks Pasha without regard to the consequences. In the succeeding Nov. the unfortunate Hicks and his army were ambushed and annihilated at Shekan to the S. of El Obeid, and large stores of arms fell into the hands

of the dervishes. Following the Brit. reoccupation in 1898 K. was added (1899) to the number of provs. of the Sudan. Before the coming of the Turks it had been an appanage of Darfur. In 1928 K. Prov. was amalgamated with the prov. of the Nuba Mts which had been a separate prov. since 1913. See Sir H. Mac-michael, *The Anglo-Egyptian Sudan*, 1934, and S. F. Nadel, *The Nuba: an Anthropological Study of the Hill Tribes in Kordofan*, 1947.

**Korea**, or **Corea** (Chosen, Daihan), comprising, since 1948, the Democratic People's Rep. of K. in the N. and the Rep. of K. in the S., is a peninsula of E. Asia, lying between the Yellow Sea and the sea of Japan. It is separated from Manchuria and, for some 10 m., Siberia on the N. by the Yalu and Tumen R.s. and from Japan on the S. by the K. Strait, 102 m. wide. Its area is 85,156 sq. m., and it is about 600 m. long by 105 m. wide. A cordillera traverses the peninsula throughout its length; the mts slope precipitously and are very near the coast on the E. side, leaving only a narrow strip of land available for cultivation. On the W., however, the mts have a gentler slope, and as this portion is well watered, it is exceedingly fertile. The highest point in the range of mts, Mt Paiktu-Shan, reaches 8700 ft. The mts have been almost entirely denuded of the forests that should naturally cover them, but from 1905 the Japanese tried to put this right by afforestation. Many bays and harbours are found round the W. coast, and many is., the largest being Quelpart on the SW. On the S. and E. coast harbours are not so numerous. The tides are strong and the waters shallow off the W. coast, deeper off the E., and almost tideless. The chief rvs., the Yalu, the Tai-dong, and the Han, are all navigable for some distance. The fauna includes stags, hares, foxes, wolves, sables, tigers, which are rapidly becoming extinct, and panthers. The climate is temperate and regular, and very healthy, and earthquakes, hurricanes, etc., are unknown.

The country is mainly agric., and the prin. crops are wheat, cotton, rice, millet, hemp, beans, and tobacco; fruit-growing is a developing industry. The cultivation of cotton on a large scale was begun by the Japanese in 1905, and continued with success. Silkworms are being increasingly cultivated. Ginseng, salt, and tobacco are produced. Korean cattle are a good and well-known breed; oxen are generally used in agric. work. The minerals of the country include coal, iron, copper, mica, graphite, and, most important, gold. The fishing industry was developed under Jap. influence. The manufs., mainly in the N., are still in a rather backward state; they include the making of hemp-cloth, an excellent kind of paper, and brass-ware. From the beginning of the 20th cent. the trade of K. increased enormously. The chief imports of the country are cotton, silk, and woollen goods, metals, and fire-arms; the chief exports are ginseng, beans, rice,

cotton, silk, cattle, hides, fish, grain, and gold and iron ores. The prin. railways are from Seoul to Fusan (a distance of 267 m.), from Fusan to Masad-po, from Seoul to the Yalu (300 m.), and from Chemulpo to Seoul (30 m.); there are sev. branch lines. The total mileage in 1940 was 2919 (gov. railways). There were also 1234 m. of private railways. The prin. open ports are Keijo (Seoul), Jinsen (Chemulpo), Fusan, Gensan, Chinnampo, Mokpo, Kusan, Seishin, Hefjo, Rashin,

and Koreans was abolished, but secondary and higher education was, for financial reasons, enjoyed chiefly by the Japanese. The knowledge of Chinese classics, and of Confucian doctrine, once held to be essential to an upper-class education, yielded under Jap. influence to a more practical system of instruction. Shinto being the Jap. national religion, shrines were established throughout K., and attendance at the shrines on stated occasions was obligatory on gov. officials and others.

*Camera Press*

#### A KOREAN LANDSCAPE

The patriarch is wearing traditional dress.

Yuki, Joshin, and Shingishu. Pyongyang is an inland port on the Tai-dong, and now the cap. of N. K. The privilege of owning mines in K. was extended to foreigners by the Mining Regulations of 1906.

Koreans belong to the Mongoloid family, but are distinct in features, dress, and customs from both the Chinese and Japanese. The former classical (Chinese) language is much used for literary purposes, though there is a Korean script called Eh-mun. The spoken tongue belongs to the Turanian group of languages, and is polysyllabic, having 11 vowels and 14 consonants. Since 1905 and during the Jap. occupation much was done to improve the educational system, but up to the 1930's some 90 per cent of the pop. were illiterate. In 1938 the system of separate schools for Japanese

The native annals date back to 57 BC, but until the 4th cent. have little historical value. Early Korean hist. is to be found in Chinese dynastic *Histories*. N. K. was the Lo-Lang Prefecture of the Chinese Han Empire from 108 BC to the 4th cent. AD, and modern Jap. archaeologists have shown that the Koreans used the Chinese language after that time. In AD 644, 647, and 661 the T'ang emperors again sent expeditions to K., and in 663 the Chinese force crushed a Jap. intervening force in central K., and made K. a prov. of China in 667. Under the Manchu gov. K. was a protectorate of China. As late as 1884 Chinese troops were in full control of K. Hiaksi, which with Koral and Shinra then constituted K., was a centre of literary culture in the 4th cent., through which the Chinese classics and the art of

writing reached the other 2 kingdoms. Buddhism, a forceful civilising element, reached Haksu in AD 384, and from it the sutras and images of N. Buddhism were carried to Japan, as well as Chinese letters and ethics. Internecine wars were ended about 913 by Wang the Founder, who unified the peninsula under the name of Koral, made Song-do (Kaijo) its cap., and endowed Buddhism as the state religion. K. aided Kublai Khan as a vassal of China in his futile invasion of Japan in the 13th cent. In 1392 was founded the dynasty which reigned until 1910, and the country was named Chosen. During the 14th cent. Confucianism was estab. as the state religion instead of Buddhism. From 1592 to 1597 the Japanese occupied K., but were driven out by the Chinese. Christian missionary effort was begun at the end of the 18th cent., but until relations had been opened with foreign countries the missionaries were severely persecuted. There are now many Christian converts, but ancestor worship is still predominant. Treaties were made with Japan in 1876, with the U.S.A. in 1882, with Great Britain in 1883, and with most European countries subsequently. In 1894 the Japanese invaded the country to put an end to the unsettled conditions that prevailed. China intervened, and thereby precipitated the Sino-Jap. war in which the Chinese forces were crushed, and by the peace of Shimonoseki, 1895, K. was declared independent, the is. of Formosa being ceded to, and an indemnity of £35,000,000 exacted by, Japan. The king in 1897 changed the name of K. to Daihan, and assumed the title of emperor. By the treaty of Portsmouth, K. was formally made a dependency of Japan (see RUSSO-JAPANESE WAR). By the treaty of 22 Aug. 1910 the Emperor of J. made a complete and permanent cession to the Emperor of Japan of all rights and sovereignty over the country, which was renamed Chosen; the Jap. resident-general was given the title of governor-general. Japan guaranteed to make no change in the existing tariff for 10 years. An imperial rescript gave out in 1919 that K. was an integral part of Japan, and the Koreans were to be regarded as on exactly the same footing as the Japanese.

At an allied conference at Cairo (Nov. 1943), Churchill, Roosevelt, and Chiang Kai-shek agreed (*inter alia*) that K. was in due course to regain her independence. Russia declared war against Japan on 8 Aug. 1945, and shortly afterwards occupied N. K. down to the 38th parallel, Amer. troops occupying the remainder of the country. On 27 Dec. 1945 agreement between the four powers (U.K., U.S.A., U.S.S.R., and China) was reached at the Council of Foreign Ministers in Moscow that a provisional gov. in K. should be formed under '4-power trusteeship of K. for a period up to 5 years.' The Amer. and Soviet authorities failed to reach agreement on the form of gov. to be estab. In 1947 the U.S.A. brought the matter before the General Assembly of U.N., and a U.N. commission was sent to K., but the

Soviet authorities refused it permission to enter their zone, and early in 1948 the commission had to admit failure. A general election was held in S. K. in May of that year, and in Aug. the Rep. of K., with its cap. at Seoul, was proclaimed with Dr Syngman Rhee (q.v.) as its first president. In Sept. 1948 a Democratic People's Rep., on the Communist pattern, with its cap. at Pyongyang, was set up in N. K. The border between N. and S., at the 38th parallel, was a source of constant trouble. In Dec. 1948 the U.N. appointed a second commission to pave the way for the reunification of K., but it was of no avail, and on 25 June 1950 open warfare broke out when N. K. invaded the S. (see KOREAN WAR). The Geneva Conference of 1954, which discussed K. at length, failed to find any solution towards unification, and it remains a divided country. Pop.: N. K. approx. 7,000,000 (cap. Pyongyang, 342,000); S. K. approx. 21,000,000 (cap. Seoul, 1,300,000). See H. Hueng-Wo Cynn, *The Rebirth of Korea*, 1920; Yung-hill Kang, *The Grass Root* (in English), 1931; A. J. Grajdanzev, *Modern Korea*, 1944; E. K. Robertson Scott, *Old Korea, the Land of Evening Calm*, 1946; W. B. Honey, *Korean Pottery*, 1948; G. M. MacCune, *Korea To-day*, 1950; A. L. Grey, junior, 'The 38th Parallel,' *Foreign Affairs*, 1951; M. Beloff, *Soviet Policy in the Far East, 1944-1951*, 1953.

**Korea, Strait of**, channel between the S.E. extremity of the Korean peninsula and the Jap. is. of Kishiu. It is 102 m. in width. Near the centre is the is. of Tashushima (q.v.).

**Korean War**, term given (though there was never any official declaration of 'war') to the fighting which began 25 June 1950, when N. Korean forces crossed the 38th parallel into S. Korea. Fighting ended 27 July 1953, when U.N. and Communist military representatives signed an armistice at Panmunjon.

**Causes and preceding events.** The W. allies and Russia had agreed at Potsdam (1945) that when Japan was defeated Korea should be given back the independence she had lost in 1910 (see KOREA). It had also been settled that Russia would accept the surrender of Jap. troops N. of the 38th parallel, America those S. of it. The W. never intended the 38th parallel to become a permanent 'iron curtain' frontier, dividing Korea into 2 distinct states, one Communist and the other anti-Communist; but this is in fact what happened. While the U.S.A. was assisting in peaceful reconstruction in S. Korea, and fostering the growth there of Korean political groups on W. democratic lines, Russia was imposing Communism in N. Korea, and supervising the growth of a large N. Korean army, clearly intended to be far more than a defensive force.

From 1945 to 1948 efforts by the U.N. to establish a unified Korea failed. The matter was referred to the General Assembly of the U.N., but Russia refused to discuss it, claiming that it was outside U.N. jurisdiction. In 1948 a Korean

general election was held, supervised by a U.N. commission, but in S. Korea only. Syngman Rhee (q.v.) became president, and in Dec. his gov. was recognised as the lawful Korean Gov. by all but the Soviet bloc. U.S. forces left the country, leaving behind a handful of military advisers. The Communists then announced that after 'elections' in the N. the Korean People's Rep. had been formed. This was promptly recognised by the Soviet bloc. Russian troops withdrew from N. Korea, but left behind a number of technicians. N. and S. Korean soldiers now faced each other across the 38th parallel. Border incidents became numerous, provoked sometimes by one side, sometimes the other. Accusations and counter-accusations multiplied. Neither half of Korea was self-supporting: each cited the other as the cause of this. Both were fundamentally backward and unstable, politically and economically, and both used the border agitation to distract popular attention from the many serious domestic problems. In addition, Soviet Russia was always ready to exploit a troubled situation in order to extend her own sphere of influence, and it is inconceivable to suppose that the N. Korean act of aggression on 25 June 1950 did not have prior Soviet approval.

As late as June 1950 a U.N. commission met N. Korean representatives on the 38th parallel to discuss Korean unification, the N. Koreans insisting that they desired unification by peaceful means only. Two weeks later they invaded S. Korea without any prior ultimatum or formal declaration of war, alleging provocation by S. Korea. The Security Council of the U.N. at once met and demanded the immediate withdrawal of the N. Koreans to the 38th parallel. Only the Soviet bloc dissented, and as Russia herself was boycotting the council at the time (see UNITED NATIONS) there was no veto. The council asked all members to help it enforce its demands (27 June). Truman (q.v.) announced that Amer. troops were being sent to Korea at once, and Atilie (q.v.) promised all available Brit. support.

*First phase—S. Korean retreat to the Pusan perimeter.* The initial attack was extremely violent and had the advantage of complete surprise. The N. Korean People's Army (NKPA) comprised the equivalent of 7 full-strength divs. and 4 independent brigades. Their artillery units were well organised, and they were supported by Russian-built tanks and jet aircraft; 60,000 N. Koreans poured over the 38th parallel. Against them the Rep. of Korea Army (ROK) could offer 8 divs. of mostly only brigade strength, and they had virtually no artillery, armour, or aircraft. ROK troops fell back rapidly, inflicting heavy casualties as they did so, though their own losses were also substantial. But it was the civilian pop. which was to suffer most terribly in this war. S. Korea W. of Seoul was soon overrun; Seoul itself fell to NKPA on 30 June, the day that the first U.S. troops landed in Korea.

On 7 July MacArthur (q.v.) was named as Supreme Commander of the U.N. Korean forces. Soon Amer. troops and supplies were pouring into S. Korea. NKPA's initial air supremacy vanished, never to be regained throughout the war. A naval blockade of the Korean coast was enforced. On 29 Aug. the first Brit. troops landed in Korea.

Still the U.N. forces were pushed back until they were confined within what was little more than an enlarged bridgehead, based on Pusan, which became known as the 'Pusan perimeter.' It was essential that NKPA should be halted now, unless the U.N. forces were to be forced right off the peninsula. On 1 Sept. NKPA launched a violent offensive against the perimeter. The fighting was bitter and costly, but MacArthur's line held, and by mid Sept. the offensive was a spent force. NKPA was beginning to feel the strain of its swift advance and stretched communications.

*Second phase—Break-out from Pusan—U.N. advance to the Yalu.* This began with the landing of the 10th U.S. Corps at Inchon, on the W. coast of Korea, well inside enemy ter., on 15 Sept. The aim was to cut the N. Korean lines of communication and recapture Seoul, 20 m. away. This would mean that the N. Koreans besieging Pusan would be virtually cut off. The landing was a great success. The enemy was completely surprised, though evidence found later showed that had the attack been delayed only 4 weeks the N. Koreans would probably have been ready for it and the result might well have been very different. Seoul was actually recaptured by the 1st U.S. Marine Div. on 28 Sept., after heavy fighting. The day after the Inchon landings, 16 Sept., U.N. forces in the perimeter had launched a 'break-out' offensive, which was so successful that by 1 Oct. the N. Koreans were falling back over the 38th parallel. Their retreat had become a rout. Six NKPA divs. had been trapped in S. Korea, and the main strength of their army was shattered. Their casualties and supply losses were enormous. The mass surrenders indicated a collapse of morale. It seemed doubtful if they could continue the struggle alone.

MacArthur was anxious to press the war into N. Korean ter., and on 7 Oct. the General Assembly of U.N. authorised the continuation of the war into N. Korea if necessary. Two days later U.N. troops crossed the 38th parallel. Pyongyang, cap. of N. Korea, fell on 19 Oct. It was in ruins, having previously been heavily bombed by U.N. planes. U.N. troops advanced to the Yalu, and MacArthur called on the N. Koreans to surrender and end the war.

U.N. troops by now included contingents from Britain, Australia, Canada, Turkey, and the Philippines. By the end of the war the Eighth U.S. Army (q.v.) had the support of units from 21 different countries.

*Third phase—Chinese intervention.* In Oct., even before the U.N. forces had

crossed the 38th parallel, Chou En-lai (q.v.) had stated that the Chinese would not stand idle if N. Korea were invaded. About the same time vague reports began to reach the W. of large Chinese troop movements near the Chinese-N. Korean border. But MacArthur seems to have believed that China would not intervene unless the U.N. forces actually crossed the Yalu; he therefore risked dispersing his troops so that his army was strung out along a very long battle-line, with little defensive depth, extremely vulnerable to

Wonsan. Though surrounded and outnumbered many times (about 6 Chinese divs. were used in this sector alone) the 10th Corps eventually fought its way to the sea at Hungnam, whence it was evacuated to Pusan (11-24 Dec.). Possibly because they were hampered by administrative problems of communication and supply, the Chinese did not follow up their initial attack immediately, and the U.N. forces were able to disengage and retreat to the 38th parallel. But their supply losses were very heavy.

*Central Press Photos Ltd*

#### REFUGEES FROM BATTLE IN THE KOREAN WAR

any concentrated attack. U.N. air superiority began to be challenged by the appearance of sev. Russian-built MIG 15 jets, presumably with Chinese pilots, which attacked the U.N. bases from the safety of bases in 'neutral' Manchuria.

At first the Chinese confined themselves to limited patrolling. But on 26-27 Nov. at least 14 Chinese divs. launched a furious attack against the U.N. line, the main force being directed against the Tokchon sector. The U.N. line was pierced here, and the whole U.N. army was soon threatened. U.N. troops were heavily outnumbered, and the bad weather which had set in caused them great hardship and prevented U.N. aircraft from giving their usual support. The Chinese and N. Koreans recaptured Pyongyang on 4 Dec. Another spearhead of the Chinese attack had thrust at the 10th U.S. Corps, on the E. coast near

Meanwhile the U.N. were making new efforts to end the fighting. Chinese Communist delegates were invited to New York to explain their intervention in the war, but on arrival they insisted instead that the Security Council should discuss alleged Amer. 'aggression in Formosa,' and though some talks on Korea did eventually take place they proved quite fruitless.

In Dec. Ridgway (q.v.) became commander of the Eighth Army, succeeding Walker, who had been killed in a road accident.

A new Chinese offensive all along the new U.N. line began on 1 Jan. 1951. Three days later Seoul was once again in Communist hands. By mid Jan., when the offensive began to slow down, the Chinese were across the Han. R. and 70 m. into S. Korea.

*Fourth phase—Dismissal of MacArthur—Battle of the Imjin—Battle-line stabilised*

along 38th parallel. On 21 Jan. U.N. forces launched a counter-offensive. The Chinese were thrown back across the Han and Seoul was freed on 14 Mar. By 8 April all S. Korea E. of the Imjin R. was in U.N. hands. On 11 April MacArthur was relieved of all his commands by Truman, and succeeded as Supreme Commander by Ridgway. Van Fleet became commander of the Eighth Army. This was the climax to a series of events in which MacArthur had publicly defied the President, and Truman had little alternative but to dismiss him (see further MACARTHUR, DOUGLAS, and UNITED STATES OF AMERICA, *History*). But to MacArthur must fall the major share of the military credit for saving S. Korea from Communism.

The Eighth Army again started to form a defensive line along the 38th parallel, but before this could be completed the Chinese launched another offensive (23 April). This is memorable in Brit. military hist. for the 3-day stand on the Imjin R. by the 1st Batt. of the Glos. Regiment (q.v.), completely surrounded and ceaselessly attacked by overwhelming numbers of Chinese. The battalion held out until its fighting strength had fallen to scarcely 100 men: and its stand had prevented a rapid Chinese break-through. Though Seoul was temporarily threatened the offensive was slackening by early May, and a second Chinese attack on 16 May failed to break the U.N. line. On 21 May the U.N. army counter-attacked, and drove the Chinese back behind the 38th parallel.

By now Communist casualties numbered over 250,000. Their material losses had been enormous, and N. Korea, on whose industrial development large sums of Soviet money had been spent, 1945-50, was devastated. On 23 June the Soviet delegate to the U.N. indicated in a broadcast that the Communists would consider a truce, and talks opened at Kaesong on 10 July 1951.

From then until the final agreement, 2 years later, fighting continued sporadically, occasionally flaring up violently in limited areas, but the battle-line did not change substantially. In May 1952 Clark (q.v.) took over Supreme U.N. Command from Ridgway. In June 1953, after Rhee's declaration that S. Korea would never agree to the proposed armistice terms, the Chinese launched an offensive against the S. Korean sectors of the U.N. line, with the obvious intention of forcing the S. Koreans to agree to the terms. There were heavy casualties on both sides and fighting here did not end until the armistice was actually signed.

The truce talks—Cease-fire signed. Though these began on 10 July 1951, they were twice broken off in Aug., first by the U.N. command and then by the Communists, in each case on the grounds that the neutrality of the talks area was being infringed by the other side. In Oct. the talks were resumed at Panmunjon, and agreement was reached on a provisional demarcation line. Prisoner of war lists were exchanged in Dec.

The talks dragged on inconclusively through 1952, the main stumbling-block being the question of the repatriation of prisoners. The Communists insisted that all prisoners should be repatriated, although large numbers of N. Koreans and Chinese did not wish to return home. The U.N. were utterly opposed to forcible repatriation. A delicate situation was exacerbated by mass-revolt among pro-Communist N. Korean and Chinese prisoners in S. Korea. In Oct. 1952 the talks were adjourned indefinitely. Korea was debated in the General Assembly in Dec., but the Communists turned down an Indian compromise plan for a cease-fire. Eisenhower (q.v.) visited Korea in fulfilment of his election promises.

In April 1953 the Communists agreed to the exchange of sick and wounded prisoners, and later that month truce talks reopened. On 8 June agreement was reached on the repatriation issue. Prisoners not willing to be repatriated were to be handed over to a neutral commission which would try for 90 days to settle their future. Failing this, a political conference would try for a further 30 days. If this failed too, the prisoners would be released forthwith as civilians. Then Rhee announced unilaterally that S. Korea would not accept the armistice terms, and on 18 June about 25,000 N. Korean anti-Communist prisoners escaped from their camps, aided by their S. Korean guards, after Rhee had ordered their release.

Chinese reaction was a heavy military offensive (see above). On 20 June truce talks were again virtually suspended. On 25 June General Clark and Mr Robertson, Eisenhower's special envoy, began private talks with Rhee on the armistice question, and on 12 July it was announced that an understanding had been reached. The cease-fire was signed 27 July.

The terms laid down that a political conference within 90 days of the signing should settle troop withdrawals and permanent peace terms. Preliminary talks began on 26 Oct., and ended abruptly on 12 Dec., when the U.N. envoy walked out after Communist charges that the U.S.A. had been a party to Rhee's order to free anti-Communist prisoners in June.

The Geneva Conference discussed Korea April-June 1954, but failed to agree on measures for reunifying the country. Korea thus remains (1958) divided into a Communist and a non-Communist state, the frontier between them being roughly along the 38th parallel, very much as it was at the start of the fighting.

Amer. casualties in the fighting totalled approximately 142,000, including 33,600 killed. Brit. casualties of 4500 included nearly 1000 killed and missing. S. Korean casualties are not exactly known, but must have been relatively high. Chinese and N. Korean casualties have never been disclosed, but were certainly over 250,000 and probably much higher. Prisoner exchange was completed by 6 Sept. 1953. The U.N. handed over 75,000 prisoners. Over 22,000 refused

repatriation. The Communists handed over 12,500 prisoners. About 400 U.N. troops, chiefly S. Koreans, refused repatriation. In Jan. 1954 agreement was reached on the final disposal of prisoners refusing repatriation. The Communists agreed to keep the 400 pro-Communist U.N. prisoners; the U.N. Command handed over 7500 anti-Communist N. Koreans to S. Korea and the 15,000 Chinese anti-Communist prisoners were sent to Formosa.

**Conclusions.** The K. W. was remarkable in that it was fought by an international organisation, the U.N., to curb an act of aggression which threatened world peace. But the U.S.A. was undoubtedly the motive force, supplying the bulk of the effective troops and most of the supplies. The U.N. cause succeeded in that the aggression was indeed curbed, although early hopes that a united Korea would emerge from the fighting proved fruitless. But in failing to absorb S. Korea into the Communist orbit, Communism suffered its first set-back in the steady territorial expansion it had been enjoying since 1945. The war marked the emergence of Red China as a positive aggressive force in the Far E., with aims beyond her own borders.

The Chinese proved tough fighters; but the U.N. forces were their superiors in technical and engineering skill, qualities which counted for much in the difficult Korean conditions, and which told especially when lines of communication were stretched. Though the N. Koreans began the war with Soviet-supplied mechanised equipment which gave them immediate military superiority over the S. Koreans, once the U.S.A. began sending men and supplies to S. Korea their superiority vanished. The U.N.'s air superiority was maintained throughout the fighting, not even the appearance of the MIG 15s threatening it for very long. It was a war of 'conventional' weapons: its most original military feature was perhaps the use made by the U.N. forces of helicopters which were very useful in the mountainous Korean terrain.

The war brought great material devastation and much suffering to the civilian pop. of N. and S. Korea. Civilian casualties, including those who d. as the result of malnutrition or disease indirectly caused by the fighting, outnumbered military ones. Another dark feature was the calculated brutality shown to many U.N. prisoners by their Chinese and N. Korean captors.

**Koregaon (Corygaum)**, tn in Bombay state, India, 16 m. NE. of Poona. Here 800 of the E. India Co.'s sepoys under Capt. Staunton kept 25,000 Mahrattas, under the command of the peshwa himself, in check on 1 Jan. 1818.

**Koriaks**, see KORYAKS.

**Korin, Ogata** (c. 1657-1716), one of the most famous Jap. artist-craftsmen, b. Koto, son of a wealthy merchant. He was trained in the classic Jap. Kano school but broke away and developed a bold, simplified, and effective style of his own. This he employed in both paintings and lacquer-work. See S. Tajima, *Masterpieces selected from the Korin School*, 1903.

**Körner, Karl Theodor** (1791-1813), Ger. poet, b. Dresden. Owing to delicate health he was not sent to school, but was educ. privately. He studied at Leipzig and in 1811 went to Vienna, where he began writing poetry, and where he wrote 2 plays, *Die Braut* and *Der grüne Domino*. In 1813 he became a member of Lützow's famous volunteer corps, formed to resist the French, but was severely wounded at Kitzau and, later, killed near Schwerin at the age of 22. His fame rests on his war songs, entitled *Leyer und Schwert*, 1814, pub. after his death, the two most popular being 'Schwert-Lied' (Sword Song) and 'Männer und Buben' (Men and Cowards). See O. F. Scheuer, *Theodor Körner als Student*, 1924; also lives by his father, C. G. Körner, (Eng. trans.), 1845, and K. Berger, 1912.

**Korneuburg**, Austrian tn in the prov. of Lower Austria, on the Danube, 9 m. NW. of Vienna. It is a steamboat station, has a trade in salt and corn, and manufs. textiles. Pop. 16,500.

**Korngold, Erich Wolfgang** (1897-1957), Austrian composer, b. Brno, son of Julius K., music critic. He made a sensation at the age of 13 with the ballet *Der Schneemann*, though the music was orchestrated by Zemlinsky from a piano Suite by K. He also wrote 4 operas, incidental music for *Much Ado about Nothing*, a *Sinfonietta*, and 2 overtures, a piano Concerto, some chamber and piano music, and a few songs. He emigrated to the U.S.A., where he devoted himself chiefly to film music.

**Kornilov, Lavr Georgiyevich** (1870-1918), Russian general of half Kirghiz origin. He commanded a brigade in 1915, and was taken prisoner by the Germans but escaped. In 1917 he was commander of St Petersburg Military Dist. and arrested Nicholas II and his family. In Aug. 1917 he was commander-in-chief of all Russian forces; appreciating the danger of a Bolshevik coup, and considering the Provisional Gov. (q.v.) too weak to deal with it, he plotted—together with sev. generals and industrialists—to overthrow the gov. The attempt failed, and the practical result of the affair was further to weaken the gov. and to strengthen the Bolsheviks, who appeared as allies of the democratic elements in defeating the ghost of a right-wing dictatorship. K.

was arrested, but escaped in Dec. and, together with Gen. Alekseyev (q.v.), formed the first anti-Bolshevik volunteer units; he was killed in one of the first battles of the civil war. See KERENSKY and CIVIL WAR, RUSSIAN.

**Korolenko, Vladimir Galaktionovich** (1853-1921), Russian writer of Ukrainian-Polish origin, a leader of the Liberal Populists (see POPULISM) and co-editor of their main jour., *The Russian Wealth*, spent 6 years in banishment in Siberia. His novels (e.g. *The Blind Musician*, 1886) and stories, mostly devoted to 'the wronged and the humiliated,' are permeated with humanitarianism and optimism.

**Koroni**, see CORON.

**Körös, Alexander Csoma de**, see CSOMA.

**Körös** (Rumanian Crişul), riv. of Rumania and Hungary. It rises in the Bihor Mts (q.v.) in 3 head streams (the Rapid, White, and Black K.), which unite in the E. Alföld (q.v.) and join the Tisza (q.v.) at Csongrad (q.v.). Length about 350 m.

**Korosten'**, tn in Zhitomir Oblast of the Ukraine, 93 m. NW. of Kiev. It has been known since the 10th cent., and was the cap. of the Drevlyane tribe. Pop. (1956) 34,000, before the war half Jewish.

**Korsakov** (1905-45, Otomari), tn in S. Sakhalin, 25 m. S. of Yuzhno-Sakhalinsk, most important seaport of the is. There is some industry. Founded by Russians, 1876, as a fort. Japanese, 1905-45. Pop. (1934) 46,000 (1897, 300).

**Korsør**, seaport on the W. coast of Zealand, Denmark, 61 m. WSW. of Copenhagen. The harbour is formed by a bay of the Baltic. A train ferry to the is. of Fyn here crosses the Great Belt. Pop. 12,960.

**Kortrijk**, see COURTRAI.

**Korumburra**, tn of Victoria, Australia, situated in Mornington co., 68 m. SE. of Melbourne, a dairying and coal-mining centre. Pop. 3000.

**Korvey**, see CORVEY.

**Koryaks**, Paleo-Asiatic speaking people living in the N. of the Kamchatka Peninsula and the adjacent part of the mainland in the Russian Far East. They have been known since the 17th cent., and numbered (1926) 7000. They are mostly fishers and reindeer breeders, now collectivised. The Koryak Nat. Dist., formed in 1930, belongs to the Kamchatka oblast; it has oil and coal deposits. There are fishing and coal-mining for local use. The administrative centre is the vil. of Palana. Area 132,000 sq. m.; pop. (1956) 30,000. See W. Kolarz, *The Peoples of the Soviet Far East*, 1954.

**Korzeniowski, Teodor Józef Konrad**, see KONRAD, JOSEPH.

**Kos**, is. in the Aegean Sea. See COS.

**Kosciusko**, highest mt summit of Australia, with a height of 7338 ft. It is situated in the SE. of New S. Wales, and forms a part of the Australian Alps. In 1897 a meteorological station was estab. here.

**Kościuszko**, Tadeusz Andrzej Bonawentura (1746-1817), Polish soldier and patriot, b. Siechnowice in Lithuania. A

love affair drove him to the U.S.A. (1777), where he fought on the side of the colonists. Returning to Poland in 1786 he distinguished himself against the Russian invaders in 1792. When the revolution of 1794 broke out he put himself at the head of the national movement in Cracow, and was appointed dictator and commander-in-chief. At first victorious, he was hemmed in by Russians and Prussians at Warsaw, and, forced to take the field, he was defeated and taken prisoner at Maciejowice. Released 2 years later he made some further effort for the cause of

Polish independence without much success, and then retired to follow agric. pursuits in France and Switzerland. He d. in Switzerland, and was buried in Cracow. See M. M. Gardner, *Kosciusko*, 1942.

**Kosel**, see KOZLE.

**Kösen**, Ger. spa in the dist. of Halle, on the Saxonian Saale (q.v.), 28 m. SSW. of Halle (q.v.). Pop. 6000.

**Kosher**, or **Kasher**, Heb. word meaning fit, and therefore opposed to *pasul* (unfit). It is especially applied by Jews to meat which has been slaughtered according to Mosiac law as opposed to *treifah* (torn).

**Košice**: 1. Region (*kraj*) in SE. Czechoslovakia, bordering on Hungary, part of the former prov. of Slovakia (q.v.). It lies mainly in the Carpathians (q.v.). Area 2870 sq. m.; pop. 462,000.

2. (Ger. *Kaschau*; Magyar *Kassa*) Czechoslovak tn, cap. of the region of K., on the Hernád. It was formerly a royal free city of Hungary, and played a part in the Hungarian revolution of 1848-9 (see HUNGARY, History). K. is the seat of a Rom. Catholic bishop, and has a 13th-cent. cathedral. It has magnesite, textile, chemical, engineering, saw-milling,

and antimony industries, and is also a spu. Pop. 60,700.

**Köslin, see KOSZALIN 2.**

**Kosovo-Metohija** (or **Kosovo-Metohija**), autonomous prov. of Serbia, Yugoslavia, on the Albanian border, formed of the dists. of Kosovo and Metohija. It was the scene of many battles during the Balkan War (q.v.), and of the last stand of the Serbs in 1915 (see **SERBIA, History**). The prin. tns are Priština, Prizren, and Peć (qq.v.). Pop. 809,934. See also **BLACKBIRDS, FIELD OF THE**.

**Kosovo-Metohija, see KOSOVO-METOHIA.**

**Kossuth, Ferencz Lajos (Louis) Akos** (1802-94), Hungarian patriot, b. of good family at Monok. He studied law at Budapest, and practised for a time, but gave most of his life to the cause of Hungarian nationalism. After serving a sentence of 4 years for publishing reports of the debates of the National Assembly, head. for 3 years (1841-4) the *Pesti Hirlap*, the organ of the National party, and came to be recognised as one of the leaders of the National movement. He was minister of finance in the Hungarian ministry of 1848, and shortly afterwards, when a dispute arose with Austria over the revolt of the Croats, he declared the independence of Hungary, and practically took the gov. into his own hands. He ruled dictatorially, and was at least partially responsible for the tragic end of the revolution, for he refused to take advice from the military experts around him; but his personal magnetism, sincere patriotism, and popular appeal are unquestionable. His triumph was short-lived, and in 1849, after Görgei's surrender of Világos, he was forced to flee to Turkey where he was made a prisoner, but afterwards released. He then visited England and the U.S.A., living in England for sev. years in close connection with Mazzini (q.v.). He made further attempts against Austrian rule, but his activities in that direction ceased after the Austro-Hungarian reconciliation of 1867. He d. at Turin. See *Memories of my Exile* (autobiography), 1880, 1894, and O. Zanck, *Kossuth* (Eng. trans.), 1937.

**Kossya, see PANTELLERIA.**

**Kostroma:** 1. Oblast in central Russia, NE. of Moscow, situated N. of the Volga, and largely forested. There are textile, lumbering, and wood-processing industries, varied old crafts, flax-growing, and dairy farming (K. breed). Area 22,400 sq. m.; pop. (1956) 897,000, Russian.

2. Cap., economic and cultural centre of the above, on the Volga. There are linen-milling, engineering, and food industries, and the tn contains many interesting 16th-19th-cent. churches and other buildings. Founded in 1152, in the 13th-14th cents. it was the cap. of a principality. In 1364 it was conquered by the Muscovites, and from then onwards was an important commercial and manufacturing centre. A univ. was estab. in 1919, but later abolished. Pop. (1956) 156,000 (c. 1914, 67,000; 1920, 50,000; 1939, 121,000).

**Kostrzyn, see KÜSTRIN.**

**Koszalin:** 1. Prov. (*województwo*) of NW. Poland, with a coastline on the Baltic Sea. Its ter. was, until 1945, part of Ger. Pomerania (q.v.); the Ger. inhab. were expelled after the end of the Second World War. K., in general, consists of low, rolling uplands, with many small lakes; the chief riv. is the Prosnica. Livestock is raised, and cereals and potatoes are grown. Fishing is important on the coast, and there are wood and metal industries. Area 6780 sq. m.; pop. 600,000.

2. (Ger. **Köslin**) Tn of Poland, cap. of K. prov., near the Baltic coast, 235 m. NW. by W. of Warsaw (q.v.). It was badly damaged in the Thirty Years War. In 1648 it went to Brandenburg. During the Second World War it suffered severely; it was taken by the Russians on 4 Mar. 1945. There are textile, engineering, and foodstuff industries. Pop. 20,000.

**Kőszeg** (Ger. **Güns**), tn of Hungary, in Vas co., 11 m. NNW. of Szombathely (q.v.). It is near the Austrian border, has many beautiful old houses, and has a 13th-cent. citadel (rebuilt 18th cent.), the bells of which are still rung daily to commemorate a repulse of the Turks in 1532 (see **TURKEY, History**). It has textile, flour, and distilling industries, and manufs. of soap, candles, and bricks. Pop. 10,500.

**Kota Bharu**, seaport and cap. of Kelantan, Malaya. In the Second World War the Japanese began their attack on Malaya and Singapore by a landing near K. B. Pop. 33,000.

**Kota-Kota**, trade port in Nyasaland, on the W. shore of Lake Nyasa. It has a good harbour, and used to be the chief starting-place of Arab caravans to the interior. The natives are largely Mohammodan. Rice and cassava grow well. Lake fishing is carried on from K.-K.

**Kotalba, see QUTAIBA.**

**Kotanu, see COTANU.**

**Kotelnoi, see NEW SIBERIA ISLANDS.**

**Köthen, or Cöthen**, Ger. tn in the dist. of Halle, 18 m. N. of Halle (q.v.). It was formerly the cap. of the duchy of Anhalt-K., and has a palace, and sugar and textile industries. Pop. 40,000.

**Kotka**, seaport in the co. of Kymi, Finland, on the Gulf of Finland. It is a centre of the pulp and timber trade, and the chief port for the exports and imports of E. Finland. Pop. 29,000.

**Kotlas**, tn in the Archangel Oblast of N. Russia at the confluence of the N. Dvina and Vychegda. It has shipbuilding and wood-processing industries, and is a major transportation centre (riv. port, 3 railway lines). It is the head point of the forced labour camps along the railway K.-Vorkuta. It became a tn in 1917. Pop. (1936) 21,000, now much bigger.

**Kötum, Jóhannes úr, see JÓNÁSSON, JÓHANNES.**

**Kotokou Tenno** (reigned AD 645-654), Emperor of Japan, added lustre to his name by the many reforms he accomplished in the prov. administration. Also he appointed 3 ministers to advise and control a council of 8.

**Kotor** (It. Cattaro), port in Montenegro, Yugoslavia, at the head of the 20-m.-long, mountain-girt Gulf of K. It has been a naval station since Rom. times. Once cap. of a small independent state, it joined the Venetian rep. in 1420, and was ceded to Austria in 1814 by the Congress of Vienna (q.v.). In 1919 it was given to Yugoslavia. It is a most picturesque tn, built at the foot of a cliff, and was almost destroyed by earthquakes in 1563 and 1667. There is a splendid cathedral, and there are sev. fine churches and palaces. It is the seat of Rom. Catholic and Orthodox bishops. Pop. 7500. *See also* HERCEGNOVI.

**Kotow, see** KOWTOW.

**Kottayam**, tn in Travancore-Cochin state, India, 32 m. SE. of Cochin, noted as the main Christian centre in Travancore and the see of the Anglican bishopric of Travancore and Cochin.

**Kottbus** (or Cottbus): 1. Dist. (*Besirk*) of the Ger. Democratic Rep. (E. Germany), bordered on the E. by the Polish prov. of Zielona Góra; on the S. by Dresden; on the E. by Leipzig; and on the N. by Potsdam and Frankfurt-an-der-Oder (qq.v.). It was formerly part of Brandenburg (q.v.). Area 3190 sq. m.; pop. 788,000.

2. Ger. city, cap. of the dist. of K. and chief tn of Lower Lusatia, on the Spree (q.v.), 70 m. SE. of Berlin. It has medieval churches and ruined tn walls. There is an airport, an agric. market, and there are textile and foodstuff manufs. Pop. 50,000.

**Kotzebue, August Friedrich Ferdinand von** (1761-1819), Ger. dramatist, b. Weimar, held various public offices in the Russian service where he gained great fame. In 1795 he retired and devoted himself to literature. He was a prolific writer of plays, satires, tales, and historical works. His best-known dramas are *Menschenhass und Reue*, 1790, *Die Kreuzfahrer*, 1803, *Die Hussiten vor Naumburg*, 1803, and *Der arme Poet*, 1811. His plays are characterised by their sprightly dialogues and skilful delineation of character. K. was a great controversialist, and attacked Goethe as well as quarrelling bitterly with the Rom. school. In particular he ridiculed the *Burschenschaft* movement, and was on that account assassinated by a Jena student named Sand at Mannheim. His complete works appeared in 44 vols. (1827-29). *See* C. Rabany, *Kotzebue, sa vie et son temps*, 1893; L. F. Thompson, *August Kotzebue: a Survey of his Progress in France and England*, Paris, 1929; A. W. Holzmann, *Family Relationship in the Dramas of Kotzebue*, 1936.

**Kotzebue, Otto von** (1787-1846), Ger. explorer, son of August Friedrich K., b. Reval. He accompanied Krusenstern round the world (1803-6) and made 2 prolonged voyages to the Pacific, discovering in the first (1815-17) the Suvorov and Krusenstern is. and K. Sound, afterwards visiting in the second (1823-6) the is. of the Sandwich, Philippine, and Samoan groups. He wrote *Der Spanier in Peru* (1795; Eng. adaptation

by Sheridan, Pizarro, 1799), *A Voyage of Discovery into the South Sea* (trans., 1821), and *A New Voyage round the World* (trans., 1830).

**Kotzebue, Paul, Count** (1801-84), Russian general, brother of Otto K. After he had seen service in the Caucasus and Poland, he was given the command of the Caucasian Army. During the Crimean War (1853) he was attached to Prince Gorchakov, and from 1874 to 1880 acted as governor-general of Poland.

**Kouklia, see** PAPHOS.

**Koumiss, or Kumiss**, beverage made from mare's milk fermented and often served up with cooked grain. It was a common refreshment of the Arabs of Africa and some of the tribes of Asia, particularly the Tartars.

**Kouropatkin, see** KUROPATKIN.

**Kouyoumdjian, Dikran, see** ARLEN. MICHAEL.

**Kovalevsky, Alexander** (1840-1901). Russian embryologist, b. near Vitebsk; became a prof. at Odessa and St Petersburg. His research work includes the embryology of invertebrates, the life hist. of a simple ascidian (1866 and 1871), and the development of the *Amphioxus* (1867 and 1877), *Balanoglossus* (1876), the worm *Sagitta*, and the brachiopods. He prepared the way for Haeckel's Gastron theory.

**Kovalevsky, Sophie Vasilyevna**, better known as *Sonja Kovalevsky* (1850-91). Russian mathematician, b. Moscow, married in 1868 and went to Germany with her husband. In 1884 she was appointed lecturer in Stockholm, and in 1889 prof. Her greatest distinction was the winning of the Prix Bordin from the Academy of Paris (1888) for her memoir on the rotation of a solid body about a fixed axis. *See* studies by Anna Leffler, 1892 and 1894.

**Koven, Reginald de, see** DE KOVEN.

**Kovno, see** KAUNAS.

**Kovrov**, tn in the Vladimir oblast of central Russia. It is an important industrial and transportation centre: engineering (excavators) and food industries, 4 railway lines. It was a medieval vil. of Suzdal' principality, has been a tn since 1778, and its commercial and industrial development dates from the 19th cent. Pop. (1956) 90,000.

**Koweit, Kuwait, or Kuwait**, independent state in Arabia, situated between Iraq and El Hasa on the SW. shore of the Persian Gulf. It is the best harbour on the Persian Gulf and is the port for N. Arabia, importing guns, rice, coffee, grain, piece goods, etc., and exporting horses, pearls, dates, wool, dried fish, and ghee. It was famous for the building of sailing ships, some of which went as far as Bombay and Zanzibar. In 1914 Britain recognised the sheikh as an independent ruler under Brit. protection. Everything has been changed by the discovery of oil, of which nearly 54 million tons were produced in 1955. The sheikh uses much of his wealth to make life easier for the people; a port has been equipped to accommodate big tankers, and electric

light, schools, and hospitals have been introduced. Formerly drinking water was brought by sea from Basra (a pipeline would have left K. at the mercy of Iraq) but now condensers have been or are being erected. Oil is the only wealth as most of the area is barren. Area 5800 sq. m.; pop. 200,000, most of whom dwell in or near the cap. See H. R. P. Dickson, *The Arab of the Desert*, 1948.

**Kowhai** (*Sophora tetralpera*), shrub of New Zealand, which grows from 15 to 40 ft high, and has long, rich yellow, pendulous racemes shaped like a curved parrot beak. It is regarded as the national flower of New Zealand.

**Kowloon**, or **Kaulun**, peninsula of China, situated opposite the Is. and forming part of the Brit. colony of Hong Kong. It was ceded to the British in Jan. 1861, having been acquired by the Peking Convention of 1860. The tn of K. covers the entire peninsula and stretches without interruption northward into the New Ters. A railway runs from here to Canton, and the tn contains the colony's main industrial area, one of the 2 prin. commercial dockyards, the largest wharves for ocean-going ships, and a large residential suburb. See HONG KONG.

**Kowtow** (Chinese k'o, knock; t'ou, head), former Chinese method of obeisance before the emperors. On approaching the imperial throne a subject knelt and bowed until his forehead touched the ground. The word has come to be used of obsequious behaviour in general.

**Kozhikode**, or **Calicut**, tn and seaport of Kerala state, India, formerly chief tn of Malabar Dist., situated on the W. coast 130 m. from Mysore. K. was visited by Vasco da Gama in 1498, and a Portuguese factory estab. in 1513. An Eng. factory was estab. in 1616. Tea, coffee, coconuts, and spices are exported. There is a textile industry and K. has given its name to calico.

**Koźle** (Ger. Cosel), tn of Poland, in Opole prov., on the Oder (q.v.), near the W. end of the Gliwice canal, 25 m. SSE. of Opole (q.v.). Until 1945 it was in Upper Silesia (q.v.). There are sugar, flour, and metal industries. Pop. 10,000.

**Kozlov**, see MICHURINSK.

**Kra**, **Isthmus of**, situated about lat. 10° 20' N., connects the Malay Peninsula with the rest of Indo-China. A gap occurs here between the main mt range and the mts of the peninsula, and it has been proposed that this shall be the site of a new ship canal; this would shorten the route from Calcutta by nearly 700 m., and that from Burma to Bangkok by over 1000 m. The isthmus was crossed by Jap. invading forces in Dec. 1941, the entire Malayan Peninsula being conquered in 2 months.

**Kraepelin**, **Emil** (1856-1926), Ger. psychiatrist, b. Neu-Strelitz, and educ. at Leipzig and Würzburg, graduating in 1878. In 1886 he was appointed prof. of psychiatry at Dorpat, in 1890 at Heidelberg, and in 1904 at Munich, where he became director of the psychiatric clinic. In 1917 he founded the German institute of psychiatric research. K. was one of the

greatest of all psychiatrists and a pioneer of experimental psychiatry. He evolved a new classification of insanity and introduced the concepts 'dementia praecox' and 'manic-depressive insanity' as distinct disease entities. His works include *Compendium der Psychiatrie*, 1883 (8th ed., 1927), and *Einführung in der psychiatrische Klinik*, 1902.

**Kragujevac**, tn in Serbia, Yugoslavia, on the Lopenica. It was a centre of the Serbian struggle against the Turks, and became the seat of the Obrenović (q.v.) princes. It has a cathedral, a palace, and is the prin. industrial tn and railway junction in Serbia. K. has munition and metallurgical industries. Pop. 40,600.

**Krailsheim**, see CRAILSHEIM.

**Krain**, see CARNIOLA.

**Krait**, species of Indian cobra (q.v.).

**Krajova**, see CRAJOVA.

**Krakatoa**, or **Krakatau**, small volcanic is. in Sunda Strait, between Java and Sumatra, Indonesia. There was a phenomenal eruption here in Aug. 1883. The sound waves generated by the explosions travelled 3000 m. Stupendous waves, towering 50 ft high, overwhelmed shores and settlements, caused over 35,000 deaths, and actually reached Cape Horn (7818 m. away). On the is. itself the highlands, which had risen over 1000 ft above sea level, were replaced by an abyss of as many feet deep.

**Kraken**, fabulous sea-monster, measuring 1½ m. round, which, according to legend, lurks round the shores of Norway.

**Krakow**, **Krakau**, see CRACOW.

**Krakowiak** (Fr. Cracovienne), Polish country dance from the Cracow region. It is in moderate 2-4, like the polka, but distinguished by having syncopations in every other bar. Chopin's Op. 14 is an artistic elaboration of it.

**Královo Pole** (Ger. Königsfeld), NW. suburb of Brno (q.v.), Czechoslovakia.

**Kralovske Vinohrady** (Ger. Königliche Weinberge), E. suburb of Prague (q.v.), Czechoslovakia.

**Kramatorsk**, tn in Stalino oblast of E. Ukraine. It is the main centre of heavy engineering in S. Russia, and is an important railway junction founded in the late 19th cent. as a railway station; tn since early 1930's. Pop. (1956) 117,000 (1926, 12,000; 1935, 142,000; 1939, 93,000), mainly Russian.

**Krameria**, see RHATAN.

**Kramers**, **Hendrik Anthony** (1894-1922), Dutch physicist, b. Rotterdam. Studied at Leyden, and worked with Bohr at Copenhagen (1916-20), where he made theoretical estimates of the intensities of spectral lines. He later made various important contributions, including the prediction of the Raman effect, and the solution of mathematical difficulties in theoretical physics.

**Kranach**, **Lucas**, see CRANACH, LUCAS.

**Kraniska**, see CARNIOLA.

**Kras**, see KARST.

**Krasicki**, **Ignacy** (1735-1801), Polish priest and poet, b. Dubiecko, Galicia; studied under the Jesuits and in Rome. He became Bishop of Ermeland or Warmia

(1767), and Archbishop of Gnesen (Gniezno) (1795). When Poland was divided between Russia and Germany (1772) K. went to Berlin, and in 1780 consecrated the first Rom. Catholic church in Berlin, which had been erected through his influence. His works include *Myszeis*, or *Moustad*, a mock-heroic poem, in which mice take the chief parts (1778), and *Satires*, supposed to be unequalled in the Polish language (1778).

**Krasin, Leonid Borisovich** (1870-1926), Russian politician. As a student he joined in 1890 one of the first Social Democratic organisations in Russia. In 1900-3, working as an engineer, he was a leading member of Iskra (q.v.) and of the Bolshevik faction. In 1904-5 K. opposed Lenin's dictatorial methods within the party and had him expelled from the Central Committee, but later, together with Lenin and Bogdanov, led the Bolshevik faction in the 1905-7 revolution. He again broke with Lenin in 1909, and worked at the Siemens-Schuckert Co., first in Berlin, then as managing director of the St Petersburg branch. From 1918 he was chairman of the Council for Army Supply and People's Commissar for Trade and Industry and for Transportation in the Soviet Gov. He was a member of the Presidium of the Supreme Council of National Economy and later Commissar for Foreign Trade. Between 1922 and 1926 he was twice ambas. to England and once to France. K.'s outstanding technical and business ability played a considerable part in organising the Soviet economy, while his example and persuasion induced many technical specialists to work for the Soviet Gov. See life by his wife, 1929.

**Kraslice** (Ger. Graslitz), Czechoslovak tn in the region of Karlovy Vary (q.v.), near the Ger. border. It manufs. musical instruments and toys. Pop. 6300.

**Krasnodar:** 1. Kray in N. Caucasus (S. Russia), adjacent to the Black Sea and the Sea of Azov, traversed by R. Kuban', with rich black-earth soil. There are oil, gas, and cement marl deposits. It is one of the main agric. regions of the country: wheat, sunflower, rice, tobacco growing, extensive orchards and vineyards; livestock is raised. There are also food industries, oil extracting and refining, cement production, and agric. engineering. The prin. tns are K., Armavir, Novorossiysk, Maykop, and Sochi. The area N. of Kuban' belonged to the Crimean Khanate, annexed by Russia in 1783; the Black Sea littoral was annexed from Turkey in 1829, and the Circassians S. of Kuban' conquered by 1864 (many emigrated to Turkey). The first Russian and Ukrainian colonists were Don and Zaporozh'ye Cossacks. The Kuban' region was one of the strongholds of anti-Bolshevik resistance in 1918-20 and 1929-33 (see COLLECTIVISATION OF AGRICULTURE). There was much fighting in 1942-3. Area 32,800 sq. m.; pop. over 3,000,000 (Russians, Ukrainians, some Armenians, and Circassians).

2. (until 1920 Yekaterinodar) Cap.,

economic and cultural centre of the above on the Kuban'. It has varied food and light industries, engineering, and oil refining. It is an important railway junction (4 lines). Founded in 1794 by Cossack colonists from Zaporozh'ye. It became cap. of the Kuban' Cossack region in 1860. It was a centre of anti-Communist resistance in the Civil war. 1918-1920, and was occupied by Germans 1942-3. A univ. was founded in 1919, and abolished in the 1920's. Pop. (1956) 271,000 (c. 1914, 100,000; 1939, 204,000).

**Krasnogvardeysk**, see GATCHINA.

**Krasnovodsk**, major Caspian seaport in the Turkmen S.S.R. It is the terminus of the Transcaspiian railway and of pipelines from the Nebit Dag oilfields. It contains an oil refinery and is an important transshipment centre. Pop. 150,000.

**Krasnoyarsk:** 1. Kray in central Siberia, stretching along R. Yenisey from Sayan Mts to the Arctic Ocean; W. Siberian lowland W. of Yenisey, central Siberian plateau E. It is largely covered with coniferous forests, but there is tundra in the N. and fertile steppe 'oases' in the S. There are large coal, graphite, iron ore, gold, non-ferrous metals, and uranium deposits. K. has mining, timber, and food industries, engineering, grain-growing, cattle- and reindeer-breeding, and fur hunting. A large hydro-electric station (3,200,000 kw.) is under construction. The prin. tns are K., Noril'sk. It is an area of banishment, and there are labour camps and great construction projects. Area 928,000 sq. m.; pop. (without K. city) (1956) 2,146,000, Russians (since 17th cent.), also Khakas, Evenki, and smaller Siberian tribes.

2. Cap., economic and cultural centre of the above, on the Yenisey and the Trans-Siberian Railway, directly subordinated to the gov. of the Russian Federal Rep. It has heavy engineering, shipbuilding, light, and food industries. It was founded in 1628 as a Russian fort, became prov. cap. in 1823, and grew rapidly as administrative centre of a gold-mining area; its industrial development dates from the construction of the Trans-Siberian Railway and particularly from the Second World War. One of the chief organisational centres in the development of Siberia. Pop. (1956) 328,000 (fourth in Siberia; 1897, 27,000; c. 1914, 80,000; 1926, 72,000; 1939, 190,000).

**Krasnyy Lush** (formerly Krindachevka), tn in the Voroshilovgrad oblast of E. Ukraine, an important coal-mining centre. Founded as a workers' settlement, in since 1929. Pop. (1956) 69,000 (1939, 51,000; 1926, 12,500).

**Krasnin**, see KRASIN.

**Kraszewski, Józef Ignacy** (1812-87), Polish author, b. Warsaw, educ. at Wilna. A voluminous and versatile writer and author of numerous novels. His poems are also very popular, and include *Anafelas*, 1840-3, an epic of the traditions of Lithuania, and *Satan and Women*. Among his works on travel and hist. are *Recollections of Odessa and History of Wilna*. He was editor of the *Athenaeum*

at Wilna, 1841-52, and in 1863 migrated to Dresden. Suffered imprisonment from 1884 to 1886 for high treason.

**Kraus, Karl** (1874-1936), Austrian poet and satirist. He founded the jour. *Die Fackel*, 1899, in which he attacked the middle classes, and the press. He also pub. 7 vols. of essays, 6 of dramas, including *Die letzten Tage der Menschheit*, 1918, 9 vols. of verse, 1 of epigrams, and 3 of aphorisms.

**Kravchinsky, see STEPANYAK.**

**Kray**, territorial administrative unit in the U.S.S.R. similar to oblast (q.v.), but usually containing an autonomous oblast within its boundaries.

**Krefeld**, Ger. tn in the Land of N. Rhine-Westphalia (q.v.), 12 m. NW. of Düsseldorf (q.v.). It is the largest tn on the l. b. of the lower Rhine (q.v.). K. was a prosperous tn in the Middle Ages, but its great industrial importance dates from the founding in it of a textile industry by Huguenots (q.v.) in the 17th cent. The anct fortress of *Linn* now contains a folklore museum, and there are schools of textile engineering, dress design, and agric. science. Apart from its textile industries, K. has manufs. of iron, steel, rolling-stock, chemicals, and foodstuffs. There are frequent agric. markets. The tn of Urdingen, on the Rhine bank, was incorporated with K. in 1929. Pop. 195,300.

Karsh, Ottawa

FRITZ KREISLER

**Kreisler, Fritz** (1875- ), Austrian violinist, b. Vienna. Studied music in Vienna under Joseph Hellmesberger, junior, and also in Paris under Delibes and Massart. He gave concerts in Europe and in the U.S.A., and pub. numerous pieces for violin and pianoforte. In 1935 he revealed the fact that most of those to which he attached the names of more or less unknown 17th-18th cent. composers were really of his own composition. He also wrote a string Quartet, and shared with Victor Jacobi in an operetta, *Apple Blossoms*, New York, 1919. Elgar's violin Concerto is dedicated to him.

**Kremenchug** (Ukrainian Kremenchuk), tn on the Dnieper, in Poltava oblast of the Ukraine. Engineering, textile industries; transfer of timber from water to rail for Khar'kov. Founded 16th cent. as a fortress; cap. of New Russia (q.v.) 1765-89; until 1917 important centre of grain trade; suffered greatly in 1918-20 and 1941-3. Pop. (1956) 77,000 (1914, 100,000; 1926, 59,000; 1939, 90,000).

**Kremer, Gerhard, see MERCATOR.**

**Kremlin** (Russian Kremli'), citadel within a Russian tn. They were originally medieval fortresses, but in their present form most remaining K.s date from the 16th-17th cents. The best known is the Moscow K., which is a public museum of Russian architecture. It was built in 1156 of wood; white stone walls were built in 1367, and the present brick walls, roughly in the form of a triangle, in 1485-1495. There are 20 towers, built in the 15th cent. In the centre of the K. is the cathedral square, with the cathedral of the Assumption (built 1475-9 in the Vladimir style) where the tsars were crowned and patriarchs buried, which contains 12th-14th-cent. icons, 16th-18th-cent. frescoes, and Ivan the Terrible's throne (1551). Also in the square are the cathedral of the Annunciation (built 1484-9 in the Moscow style), with frescoes of 1508 and many old icons, and the cathedral of the Archangel Michael (1505-9), where tsars were buried.

The Moscow K. contains 15th-17th-cent. icons, the bell-tower of John the Great (1505-1600), the Hall of the Facets, former audience chamber of the tsars (1491), with the Belvedere Palace (1636) near by, and the Great K. Palace (1838-1849). Among other notable buildings are the former Senate House (built 1788, and now the gov. building) and the Armoury (1851), housing a rich museum of 14th-19th-cent. applied arts and crafts. There are also in the K. the enormous Tsar Cannon (1586) and the Tsar Bell (1735). Considerable restoration work has been carried out recently. During Stalin's rule it was closed to the public, but it was opened again in 1955.

**Kremnitz** (Hung. Kőrmöcsbánya), tn in Slovakia, 10 m. W. of Bańska Bystrica.

**Krema**, Austrian tn in the prov. of Lower Austria, on the Danube, at the E. end of the Wachau (q.v.). It has a 13th-cent. Dominican church, now a museum, other fine churches, and anct houses and courtyards. There is a trade in wines and fruit, and manufs. of preserves. Pop. 20,350.

**Kfenek, Ernst** (1900- ), Austrian composer, b. Vienna. Studied in Vienna and Berlin. Has composed symphonies, piano sonatas, etc., and achieved fame by a sensational opera *Jonny spielt auf* ('Johnny strikes up'), which shows jazz influences. It was produced at Leipzig in 1927 and also performed in New York (1929). His other operas include *The Leap over the Shadow*, 1925, *The Life of Orestes*, 1930, and *Charles V*, 1938. K. emigrated to the U.S.A. on Hitler's domination of Austria in 1938. His later music adapts the Schoenbergian 12-note system. His

large catalogue covers almost every category of music.

**Kreuger, Ivar** (1880-1932), Swedish industrialist and financier, the 'Match King,' b. Kalmar. After working in America and S. Africa he returned to Sweden to found the Swedish Match Trust, which obtained a virtual international monopoly of match-making. His financial operations placed various European govts. under obligations to him; but he committed suicide after the disclosure of his intricate network of fraud and forgery, involving immense losses in America, France, and Sweden. See life by E. Sterner, 1930.

**Kreutzer, Rodolphe** (1766-1831), Fr. violinist and composer, b. Versailles, to whom Beethoven dedicated his A major violin sonata (Op. 47). This sonata, the most brilliant of the 10 which Beethoven wrote for the violin, is always known as the K. sonata.

**Kreuzer**, small copper coin (100 K. = 1 guilder) formerly in use in Austria, so called from the cross (*Kreuz*) stamped upon it. It was first coined in the 13th cent., when it was of silver. K.s were also used in S. Germany before the founding of the empire (60 K. = 1 guilder).

**Kreuznaeh, Bad**, Ger. spa in the Land of Rhineland-Palatinate (q.v.), on the Nahe, 23 m. SW. by W. of Mainz (q.v.). It is picturesquely situated in a fertile valley, at the foot of a castle-crowned hill. It is a centre of the wine trade, and has salt and textile industries. Pop. 30,000.

**Kriegspiel** (war game) is a scientific game of Ger. origin, as its name denotes, in which the movements, etc., of war are imitated on a small scale. Marshal Keith in the 18th cent. invented a game which he called *Kriegs-schachspiel* (war chess), but the game in its modern form was invented in 1824 by the Prussian officer von Reisswitz. It was quickly adopted as a method of instruction in the Prussian Army, and thence spread to the armies of all countries. The materials for the game are blocks cut and moulded to scale to represent different units of an army, and coloured in two different colours, some pairs of dividers, and measures of the same scale, and maps. If a small number of troops is engaged large-scale maps are essential, more so than if large bodies are employed. Printed regulations are not of much service in K., and the decision of a competent umpire is more valuable. Three maps should be used, one for each of the contending armies and one for the umpire. The umpire's map shows the position of both the opposing forces, but each of the other maps reveals only the troops of one side, and as many of the enemy as the umpire decides would be visible in actual warfare. A general idea of the military position is first given to each commander; this is followed by a 'special idea,' which gives details as to the disposition of troops, the character of the country, etc. Each player then frames his orders, to which he is held. The time for a move is 2 min., and the troops can only be moved for

such a distance as would have been traversed in actual fact in such a time. Smaller units yield to larger ones when attacked by them, and when artillery is firing on infantry, the loss of the latter is determined by a table of odds in conjunction with a throw of the dice. Repulsed troops cannot come into action for 5 moves (10 min.), and defeated troops for 10 moves, whilst totally defeated troops are removed from the map. See *The Tactical War Game*, 1884, trans. by MacDonnell, and H. G. Wells, *Little Wars*, 1931.

**Krilium**, synthetic chemical used as a soil conditioning agent. Its main use is in glasshouse soils as the cost of field application is excessive.

**Krimmitschau**, or **Crimmitschau**, Ger. tn in the dist. of Karl-Marx-Stadt, on the Pleisse, 23 m. W. of Karl-Marx-Stadt (q.v.). It has textile and engineering industries. Pop. 30,000.

**Kris, Creese**, or **Crease**, Malay knife or dagger (q.v.), often with a wavy blade. The hilt, of ivory or wood, and the characteristically T-shaped scabbard may be richly ornamented.

**Krishna**, Hindu deity, the eighth incarnation of Vishnu. His worship has been much in vogue in modern times. He was the son of Vasudeva and Devaki, and his bp. is given as Mathura, between Delhi and Agra. He is represented as being brave and fearless, but crafty, while in the popular legends concerning him and in his worship as Vallabacharya one sees the most depraved side of modern Hinduism. He figures in the *Hariwansa-patran* and the *Bhagavata-puranas*, 2 additions to the great Indian epic, the *Mahabharata*. Early ideas of K. are mingled with myths of lightning and fire, heaven and the sun.

**Krishna**, or **Kistna**, riv. of S. India, rises in the W. Ghats, 40 m. from the Arabian Sea; at its source is an ancient temple, to which large numbers of pilgrims resort. From here the riv. flows through the Bombay State and drops steeply from the tableland of the Deccan, receiving its 2 chief tribs., the Bhima and the Tungabhadra. It formed the boundary between Hyderabad and the Madras State, and enters the Bay of Bengal by 2 mouths, an immense delta. Its total length is 800 m., but its course is too rocky and rapid for navigation.

**Krishnagar**, tn of W. Bengal State, India. It has a Church Missionary College, and is the seat of a Rom. Catholic bishop.

**Krishnamurti** (1897- ), Indian mystic, b. Madanapalle, Madras, son of Jiddu Naraniah, was an employee in the revenue dept. of the Brit. Gov. and a Theosophist. He was called K. after a custom in S. India that the eighth child, if a boy, should be named in honour of Krishna, a divine incarnation, who was an eighth child. In 1909 K. came to the notice of Annie Besant and her colleague, C. W. Leadbeater. They recognised in K. latent faculties which they believed would, when developed, make him a great spiritual teacher. The two Theosophist leaders offered K. the education necessary for his

mission, and his father, a poor man, gladly accepted, and gave Annie Besant the care of K. In 1911 Dr Besant took the boy with her to Europe, and announced publicly the spiritual greatness latent in K. Thousands of Theosophists all over the world banded themselves together into an organisation called 'The Order of the Star in the East,' to prepare the work which K. was expected to do when he reached manhood. In 1925 Nityananda, younger brother of K., d. From that moment K. came before the world of his own accord as a spiritual teacher, who desired to help all men to attain the supreme and lasting happiness which he had found within himself. Later he developed a deeply interesting and original philosophy of life, teaching that an organisation for spiritual purposes inevitably becomes a barrier in the individual search for truth, and creates distinctions which lead to spiritual domination and exclusiveness. As a result of this view, he dissolved in 1929 his own order of the Star, which had grown into an international movement. K. made no claim to be the world teacher in the sense in which this term is used by the Theosophists, nor had he any wish to found a religion. He repeatedly declared that he had no disciples, and desired none. In particular he repudiated all authority in spiritual matters and the div. of spiritual teaching into esoteric grades reserved for the few. See L. Heber, *Krishnamurti, the Man and his Message*, 1931, and *Krishnamurti and the World Crisis*, 1935.

**Kristiania**, see OSLO.

**Kristiansand**, seaport on the S. coast of Norway, co. tn of Vest-Agder, close to the Skagerrak, 175 m. SW. of Oslo by sea. Its scenery is still very picturesque, though there is considerable industry and trade, and fishing and shipping are carried on. K. lies on the S. Norway railway linking Oslo with Stavanger. Pop. 26,000.

**Kristianstad**, fortified cap. of the S. prov. of K., Sweden. It is situated near the Baltic (14 m. away), on the R. Helge, 265 m. SW. of Stockholm. It is noted for its fine church, and manufs. linen and woollen goods, besides gloves. Pop. 24,701; prov. 259,398.

**Kristiansund**, seaport tn of Norway, 85 m. WSW. of Trondhjem, on 4 is. in the Atlantic, which enclose its fine natural harbour, which has in recent years been extended. It was founded in 1734 by Christian VI of Denmark. It exports large quantities of dried cod and salt fish and has sev. modern fish-freezing plants. Pop. 17,000.

**Kristinehamn**, see CHRISTINEHAMM.

**Kristmundsson Adalsteinn**, see STEINARR, STEINN.

**Krithia**, Battles for, fought on 28 April, 6-8 May, 4 June 1915. See GALLIPOLI CAMPAIGN.

**Krivoy Rog** (Ukrainian Kryvyi Rih), city in Dnepropetrovsk Oblast of the Ukraine, 85 m. SW. of Dnepropetrovsk. It is the centre of K. R. iron-ore area, one of the richest in the world, and has large metallurgical, chemical, and engin-

earing (mining equipment) industries. It is also a railway junction and a local cultural centre. K. R. was founded in the 17th cent. by Zaporozh'ye Cossacks; its recent growth is partly due to the fusion of mining settlements stretching N. to S. for 40 m. Iron ore was mined here by Scythians sev. cents. BC; modern industry dates from 1881. The tn suffered greatly during the Russian civil war and Second World War (occupied 1941-4). Pop. (1956) 322,000 (c. 1914, 18,000; 1926, 38,000; 1939, 198,000), Ukrainians and Russians (before the war also Jews).

**Krk** (It. *Veglia*), Yugoslavian is. in the Adriatic, off the coast of Croatia. The cap., also called K. (pop. 2800), has a 13th-cent. cathedral and many other auct. buildings. The is. produces good wines, and is well known for its fruit. Area about 170 sq. m.; pop. 20,000. See ISTRIA.

**Krka**, see SLOVENIA.

**Królewska Huta**, see CHORZÓW.

**Krone**, unit of the monetary systems of Norway, Denmark, and Sweden (in the last, krona). Twenty Norwegian kroner equal £1 sterling.

**Kronstadt** (Russian transcription of *Kronstätt*), tn and naval fortress in Leningrad oblast of NW. Russia, on the is. Kotlin in the Gulf of Finland, 18 m. W. of Leningrad. It was founded by Peter the Great as a naval base in 1703, and was the commercial harbour of St Petersburg until the 1880's. K. sailors enthusiastically supported the Bolsheviks in 1917, but rose against Communist dictatorship in 1921 (*Kronstadt Rising*). Pop. (1956) under 50,000 (1897, 60,000; 1926, 31,000).

**Kronstadt, Father John of**, see JOHN OF KRONSTADT, FATHER.

**Kronstadt, Rumania**, see STALIN (tn).

**Kroonstad**, dist. and tn of Orange Free State (q.v.), S. Africa, 110 m. SSW. of Johannesburg. The dist. is separated from the Transvaal by the Vaal R. The tn of K., founded in 1855, is the centre of a prosperous maize-growing and dairy farming dist. It is the second largest tn in the prov., and a railway centre, while its commercial importance is enhanced by its grain elevator, a clothing factory, and engineering and motor assembly plants. The discovery of rich gold deposits at Odendaalsrust (q.v.), 30 m. away, has brought additional prosperity to K., which is the prin. educational centre for the N. Orange Free State. Pop. 57,580.

**Kropotkin**, Prince **Pétr Alekseyevich** (1842-1921), Russian geographer and revolutionist, one of the main theorists of anarchism. In 1862-7, while serving as officer for special duties to the governor-general of E. Siberia at Irkutsk, he travelled widely in Manchuria and E. Siberia, studying the orography of the area. K. proved that the main structural lines of Asia run from SW. to NE. Later he compiled the part on Russia for E. Reclus's *Universal Geography*. In 1872 K., while in Switzerland, joined the International Working Men's Association, in which he took Bakunin's side against

**Marx.** As a revolutionary propagandist he was imprisoned in Russia (1874-6) and France (1883-6) and expelled from Switzerland in 1881. He lived in England from 1886 until after the Feb. Revolution (q.v.), 1917, when he returned to Russia. K. developed the theory of Communist Anarchism based on the idea of mutual aid as the higher form of Darwin's 'struggle for life.' He opposed all state power and advocated the abolition of states and of all private property (including consumer goods) and the transformation of mankind into a federation of mutual-aid communities. The majority of his followers were in France. See his *The State, its Part in History*, 1898, 1943; *Fields, Factories, and Workshops*, 1899, 1919; *Memoirs of a Revolutionist* (2 vols.), 1899, 1906; *Mutual Aid, a Factor of Evolution*, 1902, 1939; *Modern Science and Anarchism*, 1903, 1943; *The Geography of Asia*, 1904; *Russian Literature*, 1905, 1916; *Ethics: Origin and Development*, 1924; and his article 'Anarchism' in *Encyclopaedia Britannica*; also R. N. Baldwin (ed.), *Kropotkin's Revolutionary Pamphlets*, 1927; and H. Read (ed.), *Kropotkin, Selections from his Writings*, 1942.

**Krosno Odrzańskie** (Ger. **Krossen**), tn of Poland, in Zielona Góra prov., on the Oder at the mouth of the Bobrawa (q.v.), 25 m. WNW. of Zielona Góra (q.v.). It passed to Brandenburg (q.v.) in 1482. During the Second World War it was severely damaged; after the war the tn was given to Poland, and the Ger. inhab. left. It is a riv. port, and has textile, metal, and wood industries. Pop. 5000.

**Krossen**, see **KROSNO**.

**Kroton**, Italy, see **COTRONE**.

**Krug, Wilhelm Traugott** (1770-1842), Ger. philosopher and writer, b. Radis, Prussia, the originator of the system called transcendental synthesisism, which endeavours to combine Idealism and Realism. He studied at Wittenberg, and was later appointed assistant prof. of philosophy in consequence of his *Letters on the Perfectibility of Revealed Religion*. In 1801 he was extraordinary prof. of philosophy at Frankfurt-on-the-Oder; ordinary prof. of logic and metaphysics at Königsberg (1804), and ordinary prof. of philosophy at Leipzig (1809). His prin. writings are *System der theoretischen Philosophie*, 1806-10 (Eng. trans., *A System of Theoretical Philosophy*), *Geschichte der Philosophie aller Zeit*, 1815 (Eng. trans., *History of the Philosophy of Ancient Times*), *System der praktischen Philosophie*, 1817-19 (Eng. trans., *System of Practical Philosophy*), and his autobiography, *Meine Lebensreise* (2nd ed.), 1840.

**Kruger, Stephanus Johannes Paulus** (1825-1904), 4 times president of the Transvaal rep., b. Colesburg, Cape of Good Hope. The founder of the family was Jacob K., who in 1713 was sent to Cape Colony by the Dutch E. India Co.; in the family on both sides Huguenot names are found. K. accompanied his parents in the great trek from Cape Colony to the country N. of the Orange R.

between 1835 and 1840. His education was primitive, and almost his only book was the Bible. The Dutch Reformed Church of the Transvaal was divided into 3 sects, and to the narrowest and most bigoted of these, the Dopper sect, the Kruger family belonged. All through his life he considered himself to be under special divine guidance and protection, and to this he owed much of his influence over his followers. At the age of 17 he was an assistant field cornet, at 20 a field cornet, and at 27 took command of an expedition against Sechele, the Bechuana chief. In 1852 the Transvaal was declared independent by the Sand River Convention, and from that time was in a very unsettled condition; K. entered freely into all the disputes of the factions. In 1856-7 he joined Marthinus Pretorius (q.v.) in an abortive attempt to compel a federation between the Transvaal and the Orange Free State. In 1864 Pretorius was made president of the Transvaal, and K. commander-general of the forces. In 1870 the public dissatisfaction over the Keate award in a boundary dispute caused the downfall of Pretorius's gov. K. acted with such bitterness and hostility to the new administration, under T. F. Burgers, that in 1877 the Transvaal was annexed by Great Britain. K. accepted office under the Brit. Gov., but was dismissed in 1878. In 1880 the Boer rebellion occurred, and K., with Gen. Joubert and Pretorius, negotiated the terms of peace. In 1883 he was elected president, and in the following year attended the London Convention. In 1886 he secured re-election as president. During all his terms of power he was bitterly hostile to Uitlanders, and this was one of the factors which brought about the Boer War. His policies were regarded as uncompromising in the extreme and the Uitlanders accused the K. gov. of unconscionable exploitation. In 1899, after a fruitless convention with Sir A. Milner, war was declared. K., after attempting in vain to influence the European powers on his behalf, fled to Europe and resided at Utrecht. He d. at Clarens, on the shore of Lake Geneva, whither he had gone for his health, and was buried at Pretoria. See J. F. van Oordt, *P. Kruger en de opkomst der Zuid-Afrikaansche Republiek*, 1898; F. H. Statham, *Paul Kruger and his Times*, 1898; *The Memoirs of Paul Kruger*, by himself, 1902; M. Juta, *The Pace of the Oer*, 1939.

**Krugersdorp**, tn in the Transvaal prov., S. Africa, 20 m. WNW. of Johannesburg. Founded in 1887, and named after President Kruger (q.v.), K. is the chief tn of the W. Rand, owing its prosperity largely to the gold-fields. Manganese deposits are found in addition to the gold-mines in the municipal area, and there are tanning, engineering, and paint industries. Uranium is also produced by some of the gold-mines. There is an ann. national pilgrimage to the Paardekraal monument, dedicated to the victory of the Boers over Dingaan (q.v.) in 1836. At Doornkop, 12 m. away, Dr Jameson (see **JAMESON**,

SIR LEANDER STARR) surrendered to Cronje in 1896, and in 1900 there was fighting there during Lord Roberts's advance to Johannesburg. At Sterkfontein, 8 m. away, are limestone caves. There is a pleasure ground at Coronation Park. Pop.: Whites, 26,806; Bantu, 46,315; Coloureds, 1734; Asiatics, 697.

Krumau, see ČESKÝ KRUMLOV.

Krummacker, Friedrich Wilhelm (1796-1868), Ger. preacher and religious writer, b. Mörs on the Rhine, son of Friedrich Adolf K., the author of *Die Parabeln*. He was preacher in the Reformed Church at Frankfurt, Ruhrort, Barmen, Elberfeld, and Berlin, and in 1853 court chaplain at Potsdam. Among his works are *Salomo und Sulamith*, (trans. 1838), *Elias der Tishbiter*, (trans. 1838), *Elisha*, 1835, *Das Passionsbuch*, 1870, *David*, 1867, and an autobiography, 1869 (trans. 1871).

Krung Kao, see AYUTHIA.

Krupp, Alfred (1812-87), founder of the celebrated iron and steel works at Essen in Germany, b. at that tn, and succeeded his father in possession of a small iron forge in 1848. His first efforts were in the direction of producing axles and tyres for railways. K. adopted the steam-hammer and the Bessemer process of manufacturing steel in 1857, and turned his attention to the production of large armaments. He had already in 1847 produced his first cannon, a three-pounder cast-steel muzzle loader. Studying especially the production of cast-steel blocks of great weight, he at length (1880) succeeded in forging a breech-loading gun of 100 tons, the largest of its kind at that date. He was also a pioneer in producing specially hardened armour for warships. Though at first ignored by the Ger. Gov., he at last received due appreciation, and was frequently visited by the first Emperor William. With the growth of his business he was able to acquire large mines and collieries, and the K. works at Essen, Kiel, Annen, and Gruson were employing some 70,000 persons in 1913. He was succeeded by his only son, *Friedrich Alfred K.* (1854-1902), by whom was constructed an immense 135-ton gun for the defence of Kronstadt, and who was in turn succeeded by his daughter, *Frau Bertha*, married to Baron K. von Bohlen und Halbach. (See W. Berdrow, *Friedrich Krupp*, 1915, and *Alfred Krupp*, 1926.)

At the outbreak of the Franco-Prussian war in 1870 the K. armament works at Essen covered 450 ac. of ground, and employed more than 8000 men. Around the factories were grouped 'K. colonies' of model vils. housing the workers, and complete with flour-mills and bakeries, provision stores, and schools. The works were then producing 9-in. guns at the rate of one a day. K. armaments were then establishing the new Germany as the foremost military power in the world. By 1914 the K. works covered more than 2000 ac., and gave employment to 80,000 workers, while exporting artillery of all sizes to almost every gov. in Europe. During the First World War K.s had practically the monopoly of armament

manuf. in Germany, and so acquired considerable *éclat* from the making of long-range guns for the artillery (see also BERTHA, Brg). At the close of the war the firm was employing well over 150,000 persons. Between the wars they turned their attention to the manuf. of agric. machinery, steam engines, etc., and extended their influence by acquiring the control of many Ger. iron and steel companies. After the advent of the Nazi regime and the rearmament of Germany K.s reverted to armament production, and did so on a scale unsurpassed elsewhere in the world. Their employees in 1938 numbered 123,000. The K. works at Essen were subjected on 11 Mar. 1945 to the heaviest air attack ever delivered up to that date by the R.A.F. bomber command. After the Second World War parts of the remaining works were dismantled, and a large steel plant was shipped to Russia. *Alfred Felix K.* (b. 1907) was arrested and sentenced to 12 years' imprisonment. But he was released in 1951 and though about three-quarters of the concern was split up by allied decree in 1953 he retained some engineering plants in Essen and a motor factory. In 1957 K. signed a contract to build a chemical factory in the Soviet Union at the cost of 17 million marks, this being his first venture into the Russian market since the war. See also ESSEN and WORLD WAR articles. See B. Menn, *Krupp, Deutschlands Kanonenkönige*, 1937; G. von Klass (trans. J. Cleugh), *Krupps: The Story of an Industrial Empire*, 1954.

Krusevao, tn in Serbia, Yugoslavia, on the Morava. Before 1389 it was the cap. of the Serbian princes. It is a mkt tn, and manufs. wine, tobacco, and munitions. Pop. 18,150.

Krušné Hory, see ERZGEBIRGE.

Krutch, Joseph Wood (1893- ), Amer. critic, b. Nashville, Tennessee. He was educ. at the Univ. of Tennessee and Columbia Univ., where he joined the staff of the Eng. Dept. in 1917 and subsequently became professor. From 1924 onwards he was dramatic critic of the *Nation*. His works include *Edgar Allan Poe, a Study in Genius*, 1926, *The Modern Temper*, 1929, *Five Masters*, 1930, *Experience and Art*, 1932, *The American Drama Since 1918*, 1939, *Samuel Johnson*, 1944, and *The Desert Year*, 1952. He also ed. the plays of Congreve and of Eugene O'Neill.

Krylenko, Nikolay Vasil'evich (1885-1940), Russian Communist. He was active as a Bolshevik (see BOLSHIEVISM) during the revolution of 1905 (q.v.), then became an Anarcho-Syndicalist (*In Search of Orthodoxy*), but later returned to the Bolshevik party. After the Feb. revolution (q.v.) in 1917 he took an active part in the seizure of power by the Bolsheviks (see OCTOBER REVOLUTION) and belonged to the first Bolshevik gov. as a commissar for war. Soon after the coup K., who was only a warrant-officer, was appointed C.-in-C. of the Russian forces. In 1918 he became public prosecutor in revolutionary tribunals, in

1922 deputy commissar (1931, commissar) of justice of the R.S.F.S.R. and chief public prosecutor at the Supreme Court, in which capacity he took part in the earlier show trials. In 1936 he was appointed commissar of justice of the U.S.S.R. but disappeared without trial during the Great Purge (q.v.) in 1937.

**Krypton** (Gk, 'hidden'), symbol Kr; atomic number 36; atomic weight 83.7. A gaseous chemical element found in the atmosphere. Isolated in 1898 by Ramsay and Travers from the residues left after distilling off the higher boiling-point constituents of liquid air. K. is present in air to the extent of about 1 part in 20,000,000. Its molecule consists of 1 atom only. K. can be detected spectroscopically. It can also be converted into a liquid and then into a solid, by cooling in liquid air. K. has a density of 3.71 gm. per litre, a boiling-point of  $-151.7^{\circ}\text{C}$ ., and a melting-point of  $-169^{\circ}\text{C}$ . See INERT GASES.

**Ktima**, see PARHOS.

**Kuala Lumpur**, cap. of the Malay state of Selangor, nearly opposite Port Swettenham on the W. coast of the Malay Peninsula and the heart of the Malayan rubber and tin-mining industries. With a good water supply and lit by electricity, it was remarkable before the Second World War for its easy, opulent way of life, due to the prosperity of the rubber and tin companies. The native quarters are within the city; the residential areas, where officials and business men live, in the outskirts. In these areas are spacious houses, with marvellous gardens, where cannaes and hibiscus shrubs bloom in profusion. When K. L. fell to the Jap. invaders in Jan. 1942 the city presented a tragic spectacle. Columns of black smoke rolled upwards as the stocks of rubber were destroyed by the Brit. authorities, and estates which had involved years of labour and expenditure were ruined. Occasional detonations marked the destruction of the machinery in the tin mines and the blowing up of numerous bridges round the city. Little, however, had been destroyed in the residency and administration buildings when the Brit. evacuated the city. K. L. is the cap. of the Federation of Malaya. Pop. 250,000.

**Kuanza**, see COANZA.

**Kuba**, Khanate in NE. Azerbaijan (q.v.), semi-independent from Persia, formed in the 18th cent. It was annexed by Russia and abolished in 1806.

**Kuban** (ancient Hypanis), navigable riv. in S. Russia. It rises at a height of 14,000 ft in Mt Elbrus in the main Caucasian range and flows NW., then W. into the Sea of Azov, which it enters through many arms, forming an extensive marshy delta. Length 600 m. The chief port is Krasnodar. Since the 18th cent. the K. area has been largely populated by Cossacks (q.v.).

**Kubango**, or **Okavango**, see CUBANGO.

**Kubelik**, Jan (1880-1840), Czech violinist, b. Miehle, near Prague, the son of a Bohemian gardener, who was an enthusiastic musician. He was sent to study under Sevcik in Prague in 1892, and

afterwards played all over the world, meeting everywhere with phenomenal success. Made his first appearance in England in 1900. He made a world tour in 1914. His compositions included 6 violin concertos. His son Rafael (b. 1914) is a distinguished orchestral and operatic conductor, appointed musical director of the Covent Garden Opera in London in 1955.

**Kublai Khan**, or **Kubla Khan** (1216-1294), grandson of Genghis Khan (q.v.), was the founder of the Mongol dynasty of China. Whilst his brother Mangu was on the throne, K. K. began the conquest of N. China. On the death of Mangu in 1259

he became the 'Great Khan,' and in the course of time added S. China to his empire, also Tartary, Tibet, Burma, and other countries. His empire was thus of great extent, but many of his foreign expeditions, particularly those against Japan, ended in failure. K. K. was a wise and just ruler; he encouraged trade and agriculture, and estab. Buddhism as the state religion. He delighted in pomp and display, as we see in Marco Polo's *Travels*. Chingkim, the son whom he had chosen to succeed him, predeceased him, dying in 1284, and Chingkim's son Teimur was his successor.

**Kuchean Languages**, see INDO-EUROPEAN LANGUAGES.

**Kuching**, see SARAWAK.

**Kudalur**, see CUDDALORE.

**Kudrun**, see GUDRUN.

**Kudu**, or **Koodoo** (*Strepsiceros strepsiceros*), one of the largest African antelopes; a handsome beast with reddish-brown coat marked with white stripes. The male has long spiral horns. The lesser K. (*S. imberbis*), which is only found in Somaliland and Kenya, is only about 3 ft in height.

**Kudymkar**, tn in the Perm' Oblast (Russia), cap. of the Komi-Permyak National Dist. (see KOMI-PERMYAKS), 90 m. NW. of Perm'. There is some industry and it is a local cultural centre. It was founded in the 16th cent., and became a tn in 1938. Pop. (1956) 20,000.

**Kueisui**, see HUEHOT.

**Kuen-lun**, see KUN LUN.

**Kufa**, vil. in Iraq, 90 m. S. of Bagdad. It was founded by the Arabs immediately after their conquest of the country and was for a short time the residence of the caliphs till they built their new cap.

**K.** lasted till about AD 1100, when its place was taken by Korbela (q.v.). The adjective kufi or kufic is the name of a style of writing used for early coins and Korans and on monuments.

**Kuhl**, see KOHL.

**Kuhn**, Franz Felix Adalbert (1812-81), Ger. mythologist, b. Königsberg, one of the founders of comparative mythology. Prin. works: *Märkische Sagen und Märchen*, 1842; *Zur ältesten Geschichte der indogermanischen Völker* (2nd ed.), 1850; *Sagen, Gebräuche, und Märchen aus Westfalen*, 1859; *Über Entwicklungstufen der Mythenbildung*, 1874; *Die Herabkunft des Feuers und des Göttertranks* (2nd ed.), 1886.

**Kuibishev**, see KUYBYSHEV.

**Kuijper**, Abraham, see KUYPER.

**Kulenburg**, or Culemborg, tn in the prov. of Gelderland, Netherlands, on the R. Lek. Its chief industries are the manuf. of furniture, metalware, cigars, and ribbon. Pop. 11,900.

**Kuitahia**, see KUTAIAH.

**Ku Klux Klan**. There have been 2 Amer. organisations of this name, one originating in the terrible reconstruction days in the S. after the Civil war, the other being started after the First World War and reaching the height of its power about 1922. The original K. K. K. was started in Tennessee in 1866 by a number of young men, who did it as much for amusement as anything else. They held secret meetings, had elaborate ceremonies, and wore white cloaks with hooded caps which hid all but their eyes. It was found that this uniform frightened the superstitious Negroes, and the Southerners at once recognised that they had a weapon in their hands. The K. K. K. was organised all over the S. under the leadership of the Tennessee cavalryman, Gen. N. B. Forrest. The K. K. K. rode by night, striking terror into the ex-slaves and into the carpet-bagger politicians from the N. But the Federal Congress enacted laws against it and by 1871 it was practically non-existent. The second K. K. K. was founded by W. J. Simmons in 1915 at a meeting near Atlanta, Georgia. Simmons, who had been a preacher and also an organiser for fraternal orders, knew how to organise an extensive 'selling' campaign. His order was chartered in Georgia, and thence began to spread rapidly, first all over the S. and then in the N. states, particularly in Indiana. Like the old K. K. K. it opposed Negroes. Also, like the old Know-Nothings and A.P.A.s (Amer. Protective Association), it opposed naturalised citizens and Rom. Catholics, adding to this a bias against the Jews. It stood for white native Protestant domination in politics and business. It became a power in politics, particularly

influencing the elections of 1922, 1924, and 1926. But some of its members soon began to commit lawless acts. The braver part of the Amer. press began a vigorous onslaught on the organisation. Internecine quarrels added to the troubles of the K. K. K. and in 1923-4 these led to the deposition of Simmons from the leadership, with a solatium of \$20,000, after which the K. K. K. soon became quiescent. Owing to a resurgence of terrorism against Negroes in 1949 the Alabama House of Representatives banned the wearing of masks.

**Kukri**, knife used in Nepal, particularly as a weapon by Gurkha troops. The blade is keen, single-edged, and doubly curved; it weighs about 4 lb. and is about 2 ft in length.

**Kuku-nor**, see KOKO-NOR.

**Kula**, famous trading cycle of the inhab. of the Trobriand Is. (q.v.) and the adjacent Is. of Melanesia. Red shell necklaces and white shell arm-bands are exchanged between trading partners on different Is., without haggling. The objects are the most prized possessions of the islanders, although they are rarely used for ornament. The possession of fine specimens gives the temporary owner high prestige in his community. See B. Malinowski, *Argonauts of the Western Pacific*, 1922.

**Kulak**, Russian word meaning a fist. Before 1917 it was used for avaricious merchants or for peasants who gained a hold over their fellows, e.g. vil. usurers. After the revolution it was used in Communist propaganda for all relatively well-to-do peasants, who were disfranchised and subjected to heavy taxation. During the Collectivisation of Agriculture (q.v.) it was a word of abuse for anyone refusing to join the collective farms. The policy of 'liquidating the K. as a class' resulted in the disappearance of over 5,000,000 peasant households.

**Kulbarga**, see GULBARGA.

**Küleli Bogaz**, see CILICIAN GATES.

**Kulja**, III, or Ningyuan, walled tn of Central Asia, in Sinkiang, on the R. III. It is one of the chief cities of the region, an important trade centre and the seat of the Russian consul. The 2 chief buildings are the Taranohi and Dungan mosques. Paper and vernicelli are manuf., and wheat, barley, poppies, and lucerne cultivated. From 1870 to 1881 it was in Russian hands. Pop. 10,000.

**Kulm**, see CHELMNO.

**Kulmbach**, Ger. tn in the Land of Bavaria, on the White Main (q.v.), in the foothills of the Fichtelgebirge (q.v.), 136 m. N. of Munich. It has anct fortifications and a massive 13th-cent Hohen-zollern (q.v.) fortress. Its breweries produce the famous Kulmbacher beer. Pop. 24,000.

**Kulu**, valley in E. Punjab State, India, renowned for its fruit, particularly apples and pears. It is a favourite holiday area and provides good trout fishing.

**Kulun Nor**, see DALAI NOR.

**Kulunda**, steppe area in SW. Siberia, between the R.s Irtysh and Ob', the

Altay Mts. and Baraba (q.v.), about 35,000 sq. m., divided between the Altay kray and the Kazakh Rep. (Pavlodar oblast). It is one of the main agric. areas of W. Siberia, with wheat-growing and sheep- and cattle-breeding. It is now included in the Virgin Land campaign.

**Kum**, see QOM.

**Kumamoto**, city of Kumamotoken, Kyushu, Japan, about 50 m. E. of Nagasaki (q.v.). Seat of the prefectural gov., it is a centre of education and commerce, especially of the rice trade, and is at the S. end of the Kyushu coal-field. Pop. 332,000.

**Kumania**, or **Cumania**, dist. of Europe at the time of the crusades, extending N. of the Danube and NW. of the Black Sea, comprising the present Moldavia, Wallachia, and part of S. Russia, W. of the Dnieper R.

**Kumaon**, area of Uttar Pradesh state, India, consisting of the 3 dists. of Naini Tal, Almora, and Garhwal. It lies mainly on the S. slopes of the Himalaya, and includes many of the prin. summits. The country was seized by the Gurkhas at the end of the 18th cent., but was annexed to Brit. India after the Gurkha war of 1815.

**Kumarila Bhatta**, known also as **Bhat-tacharya**, celebrated Brahmin teacher who lived c. AD 600. He was an exponent of the Mimamsa system of Hindu philosophy, and strenuously opposed the Buddhists, whom he is said to have extirpated. He annotated the *Sutras*, and was noted for his interpretation of the Vedic texts.

**Kumasi**, cap. of Ashanti Ter., Ghana, on the W. coast of Africa, and a city of some antiquity. Its port is Sekondi, on the Gulf of Guinea. It was taken in 1874 by a Brit. expedition under Sir Garnet Wolseley. It was again taken by the British in 1895-6 and 1900. It is situated in a clearing of the dense Ashanti forest. At one time 'blood-stained' K., it is now a tn of clean, straight streets and many modern buildings. There is electric light, and a piped water supply. There are sev. churches, hospitals, and schools. A gov. railway links K. with Sekondi (168 m.) via Tarkwa; and another line joins K. with Accra (192 m.). In 1900 K. was a mere fortress in the bush, though it was the most recent of the Gold Coast castles, having been built in 1897. This castle was the stronghold of the governor, Sir Frederick Hodgson, and his wife when they were besieged by the Kumasis (1900). Hodgson's small garrison had almost reached starvation point when they decided to cut their way out to the coast. Pop. about 50,000. For the part played by K. in the Ashanti wars see GHANA, *History*, and *GOLDEN STOOL*.

See W. W. Claridge, *History of the Gold Coast and Ashanti*, 1915, and W. M. Hall, *The Great Drama of Kumasi*, 1939.

**Kumbakonam**, tn of Madras State, India, in the Cauvery delta, 20 m. NE. of Tanjore. It was the anct. cap. of the Chola kings, and is a great centre for S. Indian Brahmins. There are many temples. One pagoda is 147 ft high with

11 storeys. One of the water-tanks in the tn is commonly said to be filled with water from the Ganges every 12 years by a subterranean passage 1200 m. long; and it consequently forms a centre of popular attraction. So vast a concourse of devotees enters the water that the surface rises some inches.

**Kumbum**, or **Gumbum**, important lamasery in the prov. of Kansu, China, 130 m. WNW. of Lanchow. It is a Buddhist pilgrim resort.

**Kumis**, see KOUMISS.

**Kümmel**, see LIQUEUR.

**Kumyks**, Turkic-speaking people in the Daghestan Autonomous Rep. of N. Caucasus, descendants of the Cumans (q.v.). The K. live in the lowland along the Caspian shore and number about 110,000. From the 15th cent. the K. had an independent state called after the cap. Tarki (now Makhachkala); they fell under Russian suzerainty in 1559, and were finally annexed in 1784. K. literature dates from the 19th cent. See W. Kolarz, *Russia and Her Colonies*, 1952.

**Kun**, **Bela** (1886-1939), revolutionary leader in Hungary; son of a Jewish notary at Szilágycseh. K. graduated in law at

*Topical Press*

BELA KUN

Kolozsvár. Captured by Russians early in the First World War, he was converted to Bolshevism, and was sent home as a propagandist. Károlyi (q.v.) handed over the gov. of Hungary, Mar. 1919, to Alex. Garbai, the mere tool of K., people's commissary for foreign affairs, who inaugurated wholesale communisation of property.

The country pop. was recalcitrant; and K.'s army, successful against the Czechs, was defeated by the Rumanians, upon whose advance K. fled to Vienna. He escaped to Russia but turned up in Vienna again in 1928 and was imprisoned. From 1921 he was a member of the international Communist executive and president of the Communist International, Moscow, Aug. 1928. He was reported shot in Aug. 1939 on Stalin's orders. *See also* HUNGARY. *See* life by C. Herczeg, 1928.

**Kun Long**, vil. in the Shan states, Burma (q.v.), and a ferry on the Salween.

**Kun Lun, Kwen Lun, or Kuen Lun Mountains**, term used to designate generally the mt ranges which run along the N. edge of the Tibetan plateau. In its widest sense the K. L. Mts stretch in a wavy line for nearly 2500 m. from E. to W. In the W. portion the ranges are 'squeezed' together more closely, having a breadth of 150-200 m. only, and the summits are correspondingly loftier. In the E. portion the breadth increases to 600 m. and the ranges are consequently less folded and flatter. The K. L. are the backbone of the tectonic structure of Asia. A peculiar feature of the Tibetan plateau is that the outermost border range is throughout double, as are the lake basins between the mts. The K. L. Mts are much older than either the Himalaya or the Tien-shan; the highest summits reach 21,500 to 22,000 ft, but there are no greatly outstanding peaks, as the general level is so high. The importance of the K. L. system was recognised from very early times, but K. Ritter was the first to recognise their true character; Baron von Richthofen still further defined them and represented them as a complex arrangement of sev. parallel ranges running in a wavy line from 76° to 118° E. His classification was sound in its general outline, but the details have been very considerably revised by the labours of Russian, Eng., Fr., Hungarian, and Swedish explorers, amongst whom Sven Hedin stands out pre-eminently. The K. L. are now generally divided into 3 main parts, the W., extending from 76° to 89° E., the Middle to 104° E., and the E. K. L. to about 112° E.

**Kunar**, riv. of Afghanistan which gives its name to a very beautiful valley. It rises in the Hindu Kush Mts, and is known by the various titles of Yarkhun, Chitral, Kashkar, and Kunar; it joins the Kabul R. a little below Jalalabad. The ancient names of K. and Pashat lie upon its banks.

**Kunchinjinga**, *see* KANGCHENJUNGA.

**Kundt**, August Adolph Eduard Eberhard (1839-94), Ger. physicist, b. Schwerin, Mecklenburg. He is best known for his researches in sound, and his name has been given to the method of determining the velocity of sound vibrations by dust figures. He also determined the ratio of the 2 specific heats of a gas and did some valuable work in optics, dealing with the anomalous dispersion of light and the optical characteristics of metals.

**Kunduz, or Qunduz**, tn in Kataghan prov. of NE. Afghanistan. It is the centre of an oasis irrigated by the Kunduz R. and of a cotton industry. Pop. 10,000.

**Kunene**, *see* CUNENE.

**Kunersdorf**, *see* KUNOWICE.

**Kunkel, or Kunkel, von Lowenstjern, Johann** (1630-1703), Ger. chemist. He shares with Boyle (q.v.) the credit for discovering the process by which Brandt of Hamburg had succeeded in 1669 in preparing phosphorus. This was by distilling concentrated and putrefying urine with sand. He was also a skilful manufacturer of glass.

**Kunming, or Yunnanfu**, cap. of Yunnan prov., SW. China, a city of great importance as a trade centre between the far W. and central and S. China. During the Second World War many industries were transferred to K. from the E. provs., and the city was also the Chinese terminus of the Burma Road and the K.-Haiphong railway, restored in 1957. The Yunnan Univ. and many colleges are situated in K. In 1949 the Governor of Yunnan went over to the Communists and spared the prov. a civil war. Pop. 250,000.

**Kunowice** (Ger. **Kunersdorf**), vil. of Poland, in Zielona Góra prov., 44 m. NW. of Zielona Góra and 4 m. E. of Frankfurt-an-der-Oder (q.v.). During the Seven Years War (q.v.) Frederick the Great was defeated here by an Austrian and Russian army.

**Kunti**, in Hindu mythology a heroine of the *Mahabharata*, daughter of the Yadava prince Shura. She was the mother of Karna by the sun, and afterwards became the chief wife of Pandu, and bore 3 sons, Yudhishthira, Bhima, and Arjuna, central figures in the great epic.

**Kuntsevo**, tn in the Moscow oblast of central Russia, 7 m. W. of Moscow, of which it is an industrial (aircraft, textile industries) and residential suburb. It has been known as a vil. since the 15th cent. Pop. (1956) 111,000 (1939, 61,000).

**Kuomintang**, Chinese Nationalist party, formed originally by the followers of Sun Yat-sen (q.v.). Its executive committee promulgated, on 4 Oct. 1928, the 'Organic Law' (or Law Governing the Organisation) of the Nationalist Government of the Republic of China, though in Dec. of 1931 this law was considerably amended. The Chinese National Gov. at Nanking was appointed by the K., to the congress of which it was responsible. When the Nationalist gov. was defeated by Chinese Communists in 1949, the members of the K. formed a Revolution Committee in Peking, under the leadership of Gen. Li Chi-shen and Madame Sun Yat-sen. *See further under* CHINA, *History*. *See* P. M. A. Llibreberger, *Government in Republican China*, 1938.

**Kuopio**: 1. Co. in the E. part of Finland, including N. Karelia. The surface is hilly, and large lakes cover about 17 per cent of it. The soil is of moderate fertility but very little of it is cultivated. There are engineering and chemical works, iron and steel industries, plywood manuf.,

shipyards, tanneries, and saw-mills; carts and sledges are also made, and timber, butter, furs, and game exported. Dairy farming and cattle-breeding are extensively carried on and a large quantity of iron is mined. Area 14,600 sq. m.; pop. 424,000.

2. **Tn** and cap. of the above, on Lake Kallavesi, is a commercial trading centre of considerable importance, and has communication with middle Finland. Pop. 50,000.

**Kupfernickel**, mineral from which nickel is extracted. It is a compound of nickel and arsenic, NiAs.

**Kurdee Seed Oil**, see SAFFLOWER OIL.

**Kurdistan**, prov. of Persia, bounded on the N. by Azarbaijan, on the S. by Kermanshah, on the E. by Hamadan, and on the W. by Iraq. Main tn Sanandaj, formerly called Senneh. Area about 54,000 sq. m.; pop. about 700,000.

**Kurds**. Since the 7th cent. AD the name Kurd has been applied to the W. Iranians and other Iranicised mountaineers estab. astride the Zagros. The brigand Kurtiol of Atropatania Media (Persian Azarbayjan) mentioned by Strabo (64 BC-AD 20) were almost certainly K., as were possibly the Kardouchoi who attacked Xenophon and the Ten Thousand (400 BC) near modern Zakhō.

At the present time the ter. occupied more or less continuously by the K. as a homogeneous community is divided between E. Turkey (where it extends W. to about long. 38° E.), NE. Iraq and NW. Persia, with small enclaves in Soviet Transcaucasia and Syria; isolated groups are found as far W. as Ankara, in the E. provs. of Persia, and elsewhere. The Kurdish pop. of Iraq is about 1,000,000; more conjectural estimates are 2,000,000 for Turkey and 1,200,000 for Persia, making with the isolated groups a total of about 4,750,000. The religion of the great majority is Sunni Muslim; the mystical dervish orders, some accepted as orthodox, others heterodox, have numerous adherents in all dists.; the Yazidi minority numbers perhaps 30,000.

Kurdish belongs to the NW. group of Iranian languages as distinct from the SW. Persian; as would be expected in a mountainous land that has had no political unity for cents. the dialects vary considerably, but certain distinguishing characteristics present in them all indicate descent from a common original language, perhaps the Median. Dialects of another group related rather to the central Iranian are spoken in the extreme NW. (Zaza) and towards the SE. (Gorani). In Iraq there has been lively and uninterrupted literary and journalistic activity since 1920. A few pubs. appeared at Mahabad (Persia) in 1941-5; interesting experiments in the use of the Rom. alphabet have been made by a group of intellectuals in Syria; a modified Cyrillic is being used in Soviet Transcaucasia.

The Kirkuk oilfield lies on the SW. edge of the Kurdish country, but the economy of the K. is still primarily agric. and pastoral. Nomadism is diminishing and

the rural pop. consists chiefly of settled villagers. Though not all are tribesmen the organisation of society outside the tns is still essentially tribal with groups of vils. owing a kind of feudal allegiance to a landlord, a dervish shaiikh, or a tribal chief. With the progressive consolidation of the authority of the central administrations the old social organisation is breaking down in many parts. The K. have not remained unaffected by nationalism. The first Kurdish newspaper was pub. in 1897. The first political club was founded at Constantinople in 1909. The treaty of Sèvres (1920) provided for the creation of a Kurdish state, but owing to the military revival of Turkey it remained a dead letter. Since 1920 armed nationalistic movements of varying importance, but all short-lived, have occurred in all 3 countries; in 1922-3 Shaikh Mahmud of Sulaimaniya (Iraq) proclaimed himself 'King of Kurdistan'; in 1944-5 a 'Kurdish Republic' was set up, with Russian support, at Mahabad. In Iraq the existence of the K. as a national minority is recognised by law, which specifies the dists. where the language is to be used for local administration, elementary education, and legal proceedings. See C. J. Rich, *Narrative of a Residence in Koordistan*, 1836; F. Millingen, *Wild Life among the Koords*, 1870; E. B. Soane, *To Mesopotamia and Kurdistan in Disguise*, 1912; W. R. Hay, *Two Years in Kurdistan*, 1921; W. A. and E. T. A. Wigram, *The Cradle of Mankind* (2nd ed.), 1922; A. M. Hamilton, *Road through Kurdistan*, 1943; B. Nikitine, *Les Kurdes*, 1956; C. J. Edmonds, *Kurds, Turks, and Arabs*, 1957.

**Kurgan**: 1. Oblast in W. Siberia, situated in the W. Siberian lowland, and traversed by the R. Tobol, an affluent of the Irtysh. It is a region of wooded steppe with black-earth soils. K. has wheat-growing, dairy farming (K. breed), sheep-raising, extensive food industries, and varied engineering. Area 27,500 sq. m.; pop. (1956) 982,000 Russians (since 17th cent.), and some Tartars.

2. Cap., economic and cultural centre of the above, on the Tobol and the Trans-Siberian Railway. It has engineering (agric. machinery) and various food industries, and is an important railway junction (4 lines). K. was founded in 1653 and became a tn in 1782; prior to 1917 flourishing trade in cattle, and since 1893 large-scale butter production and export. Pop. (1956) 106,000 (c. 1914. 25,000; 1939, 53,000).

**Kurhessen**, see HESSE-KASSEL.

**Kuria Muria**, group of rocky is. in the Arabian Sea, which have been in Brit. possession since 1854. They are 5 in number, and have a total area of 28 sq. m. They are chiefly used as a cable station, but guano is obtained.

**Kuriles**, or Kurile Islands (Jap. Chishima), chain of 36 is. in the N. Pacific between Kamohatka and Hokkaido, belonging to the Sakhalin oblast of the Russian Federated Rep. Total area 5700 sq. m., pop. c. 15,000, Russians and some Ainu (before 1945 Japanese),

engaged in fishing and sea-animal hunting. The main settlement is Kuril'sk on Iturup Is. The K. were Russian from the 18th cent., Japanese from 1875, and again Russian in 1945 according to the agreement reached at the Yalta Conference (q.v.; see also Cmd. 6753, 1946).

**Kurisches Hafn**, bay of the Baltic Sea off the coast of the Kaliningrad oblast (former E. Prussia) and Lithuania. It extends along the coast S. of Klaipeda for more than 50 m. and is separated from the open sea by the Kurische Nehrung, a narrow sandy ridge. In the N. it opens into the sea by a narrow channel.

**Kurland**, historical name of a part of Latvia (q.v.) S. of the R. W. Dvina. The area belonged to the Livonian Knights, was a duchy under Polish suzerainty from 1561, and Russian 1795-1918. See also **BALTIC PROVINCES**.

**Kuroki**, Tamemoto Tamasada, Count (1844-1923). Jap. general, b. Satsuma. He figured prominently in the later stages of the China-Jap. war (1894-95) and was made baron for his services. In the Russo-Jap. war (1904-5) he commanded one of the armies in Manchuria, won the battle that isolated Port Arthur, and was present at Liao-Yang, Chahlo, and Mukden. He was created count for his services in this war.

**Kuropatkin**, Alexei Nikolaievich (1848-1925), Russian general, b. Chemchurin, Pskov, entered the army in 1864, and distinguished himself in the Kashgar campaign. In the Russo-Turkish war of 1877-78 he was chief-of-staff to the younger Skobelev and laid the foundation of his great reputation as a soldier. After the death of Skobelev in 1882 he reorganised the Russian Army. He was commander-in-chief in Caucasasia in 1897, and minister of war in 1898. On the outbreak of the Russo-Jap. war (1904-5) he was appointed to the chief command in Manchuria, but met with a series of reverses culminating in the disastrous battle of Mukden. His failure may have been partly due to not having an entirely free hand. After Mukden he resigned in favour of Gen. Linievich. He wrote a hist. of the war (1909), in which he candidly admitted his own mistakes. He had previously pub. works on the Balkan and central Asian wars. In the First World War he was commander-in-chief on the N. front until his appointment as governor of Turkestan in 1916. After the revolution he sank into obscurity.

**Kursaal**, see CASINO.

**Kursk**: 1. Oblast in central Russia, S. of Moscow, situated on the central Russian upland, in the 'black earth' belt. It has large iron ore deposits. Wheat, sugar-beet, hemp, and sunflowers are grown and there is dairy farming, hog- and poultry-raising, and bee-keeping. The area also has engineering and food industries. In the Middle Ages K. belonged to Chernigov, then to Novgorod-Severskiy, becoming Lithuanian in 1362, and Muscovite in 1503. It was occupied by the Germans, 1941-3, and was the scene of a big battle in 1943. Area 11,900 sq. m.; pop. (1956) 1,464,000, Russian.

2. Cap., economic and cultural centre of the above, the oldest tn in the central 'black earth' region, 125 m. W. of Voronezh. It has engineering, chemical, and light industries and is an important railway junction (4 lines). K. has been known since 1095, was the cap. of a small principality in the 12th cent., was destroyed by the Tatars in 1240, fortified as a part of the Muscovite S. defence line in the 16th cent., and became the prov. cap. in 1797. It was an important commercial centre before the 1930's, then industrial development took place. Pop. (1956) 179,000 (c. 1914, 83,000; 1926, 82,000; 1939, 120,000).

**Kuruman**, tn in Cape Province, S. Africa, an important mission station. A remarkable spring yielding 4,000,000 gallons daily provides the source of the R. Kuruman. Pop.: Whites, 2000; Bantu, 1114; Coloureds, 640.

**Kurume**, city of Fukuoka, Kyushu, Japan, 50 m. NE. of Nagasaki. Noted for its cotton industry. Pop. 139,000.

**Kurunegala**, chief tn in the W. prov. of Ceylon, was the seat of a royal residence in the 14th cent.; it is 59 m. from Colombo. Near by are some famous Buddhist monasteries. Pop. 13,500.

**Kus**, see KIHONDS.

**Kushiro**, city on the SE. coast of Hokkaido, Japan, cap. of K. prov. It is the nearest port to the coal-mines of K. dist. Pop. 120,000.

**Kuskovo**, former tn in the Moscow Oblast of central Russia, a suburb of Moscow. In the 1930's it was fused with Perovo (q.v.). Originally (from the early 16th cent.) an estate of the Counts Sheremetev, it has an 18th-cent. summer residence (now a museum) with a palatial manor house, a park, and a church.

**Küssnacht**, vil. of Switzerland, 7 m. NE. of Luzern, at the N. end of Lake Luzern. Near K. Win Tell (q.v.) is said to have escaped Gessler, the tyrannical Austrian bailiff of Uri, whom he then shot dead with his cross-bow.

**Kustanay**: 1. Oblast (prov.) of the Kazakh S.S.R. of the Soviet Union. Cereals are cultivated extensively N. of the Kartaly-Akmolinsk railway. Pop. 560,000.

2. Tn and cap. of the oblast. An agric. centre. Pop. 60,000.

**Kustendil**, see KYUSTENDIL.

**Kustendje**, see TOMI.

**Kustenji**, see CONSTANTA.

**Küstenland** (coast-land), former prov. of Austria-Hungary at the head of the Adriatic, which embraced Görz-Gradisca, Istria, and Trieste (qq.v.). It is now divided between Italy and Yugoslavia.

**Küstrin**, or Kostrzyn, tn in Zielona Góra (q.v.) prov., Poland, at the confluence of the R.s Oder and Warta (qq.v.), about 50 m. E. of Berlin. The old tn was within the strong fortifications of the circle of Königsberg-in-der-Neumark, in the dist. of Frankfurt, Prussia, while its suburbs were on the l. b. of the Oder and the r. b. of the Warta. About 1250 a tn was erected on the site of K., formerly a fishing vil. From 1535 till 1571 it was the

residence of the margrave of Brandenburg-Küstrin. Frederick the Great, as crown prince, was imprisoned at K. by his father; after the Seven Years War he was responsible for rebuilding the tn. During the Second World War K. was an important Ger. stronghold; it was captured by the Russians under Zhukov in Mar. 1945. For an account of the campaign, in which K. was razed almost to the ground, see EASTERN FRONT, or RUSSO-GERMAN CAMPAIGNS IN SECOND WORLD WAR. Pre-war pop., 23,700; 1946 pop. about 650.

**Kut al Amara**, tn in the *liwa* or prov. of Kut in Iraq, situated on the Tigris, 32° N. lat., 47° E. long., some 200 m. below Bagdad. Pop. (tn) 14,000; prov. 180,100. It was the scene of the only protracted siege (except that of Przemyśl) in the First World War. In this historic siege a Brit. force, reduced during the siege from 15,000 to less than 7000, under the command of Maj.-Gen. Sir Charles Townshend, surrendered to the Turks on 29 April 1916, after holding out for 143 days. Townshend's troops formed part of a small Brit. expeditionary force commanded by Gen. Sir John Nixon, which had rashly proceeded some 200 m. up-country in the hope of achieving some spectacular success to counteract the Gallipoli failure. K. was occupied by Brit. forces on 29 Sept. 1915, and Townshend was then ordered by Nixon to march on Bagdad. He attacked Ctesiphon (q.v.) on 22 Nov. but was heavily defeated with the loss of over 4000 men of his div., and then fell back on Kut, which the Turks at once surrounded and invested. Reinforcements were ordered from India, and Russian forces pressed along the Hamadan road through Persia to his relief. A Brit. relief force, which made great efforts to pierce the powerful Turkish line at Sannaiyat, 16 m. E. of K., was repulsed. By April 1916 Townshend's force was in dire straits, only scanty food supplies reaching him by aeroplane, while by now the full weight of the Turkish Gallipoli armies was being used against Mesopotamia and Armenia. The fall of K. enabled the Turks to concentrate practically their whole strength against the Russians in Armenia, besides involving repercussions throughout the Middle E. damaging to Brit. prestige. Of 2680 Brit. non-commissioned officers and privates taken at K., 1306 d. and 449 were never traced, so that over 65 per cent of them perished. K. was again in Brit. possession in 1917 when it was taken by Sir Stanley Maude, together with 1730 prisoners, including 4 Ger. regimental commanders. The responsibility for the K. capitulation is not easy to assign; the popular press for long spoke of Townshend as the hero of K., but in official circles he was strongly criticised. His force, however, was quite inadequate to the task laid upon it by higher authority, being indeed less than one-fifth the size of that of Gen. Maude. See C. W. S. Sandes, *In Kut in Captivity*, 1919; Sir C. Townshend, *My Campaign in Mesopotamia*, 1920; Sir A.

Wilson, *Loyalties: Mesopotamia, 1914-1947*, 1931.

**Kütahya**, anct **Cotiaesum**, tn of Asiatic Turkey, in the ll of the same name. There are sev. Christian churches, and a large anct fortress. Carpets and pottery are made, and meerschaum is found near by. Pop. 19,500 (tn), 419,000 (ll).

**Kutaisi**, tn in Transcaucasia, the industrial and cultural centre of W. Georgia, on R. Rioni. It has engineering (mining equipment, lorries), textile, and food industries, and a hydro-electric station. There are a theatre (founded 1861) and medieval architectural monuments. K. was founded in antiquity, and since the 8th cent. has been almost continuously cap. of W. Georgia (see **IMERETIA**); it became Russian in 1810, and is the cap. of K. prov. and (1951-3) oblast (abolished). Pop. (1956) 114,000 (c. 1914, 57,000; 1926, 48,000; 1939, 81,000), mostly Georgians.

**Kutch**, see **CUTCH**.

**Kutenai Language**, see **NORTH AMERICAN NATIVE LANGUAGES, Pacific Areas**.

**Kutná Hora** (Ger. **Kuttienberg**), Czechoslovak tn in the region of Prague (q.v.). It has a 13th-cent. castle, and tobacco and sugar industries. Pop. 12,200.

**Kutno**, tn of Poland, in Łódź prov., 33 m. N. of Łódź (q.v.). There was severe fighting near by during the Ger. invasion of Poland at the beginning of the Second World War. The dist. has lignite mines, and there are engineering, soap, cement, sugar, and flour industries. Pop. 21,000.

**Kuttienberg**, see **KUTNÁ HORA**.

**Kutuzov**, Mikhail Ilarionovich (1745-1813), Russian field-marshal. He commanded the Russian forces in the Russo-Turkish war of 1811 and in the Patriotic war against Napoleon in 1812-13. He surrendered Moscow but later drove Napoleon from Russia. K. was disliked by Alexander I but extremely popular in the country.

**Kuurne**, tn in the prov. of W. Flanders, Belgium, situated on the R. Lys, 2 m. N. of Courtrai, engaged in agriculture, cultivation, and retting of flax and manuf. of lace. Pop. 10,000.

**Kuwait**, or **Kuweit**, see **KOWEIT**.

**Kuwana**, industrial city of Miken, Japan, situated at the mouth of R. Nagara, 14 m. SW. of Nagoya. It produces woollen and chemical textiles, chemicals, fertiliser, and cast iron. Pop. 59,000.

**Kuybyshev** (until 1935 **Samara**): 1. Oblast in the E. of European Russia, situated largely on the flat l. b. of the middle Volga, in the Black Earth belt. It has large oil, natural gas, oil shale, phosphorite, and sulphur deposits. There are engineering, metal-working, oil, and food industries; wheat and sunflowers are grown, and there is cattle and sheep breeding (local breeds). A powerful hydro-electric station, the largest in Europe (2,100,000 kw.), was built 1950-6. The prin. tns are K. and Syzran'. The area was annexed by Muscovy in 1552 as part of the Kazan' Khanate. Area 20,800 sq. m.; pop. (without K. city) 1,436,000, mostly Russians (since the 16th cent.).

2. Cap. of the above, directly subordinated to the gov. of the Russian Federal Rep. It is a major industrial centre with large engineering industries (machine tools, automobile and tractor parts, boilers, cables, precision instruments, equipment for food, light, chemical, and shipbuilding industries) as well as oil-processing, saw-milling, food, and light industries. It is also an important transportation centre on the Volga and the Moscow-Siberia railway. There are sev. higher education establs., and a theatre (founded 1851). Founded in 1886 as a fortress, K. became a tn in 1888, prov. cap. in 1851, and the seat of the anti-Bolshevik Committee of Members of the Constituent Assembly (see CONSTITUENT ASSEMBLY) in 1918, and of many Soviet gov. depts and foreign diplomatic missions during the Second World War. Industrial development dates from the late 19th cent., when Samara became an important centre of the flour-milling and grain trade; the metal-working industry dates from the First World War. Rapid industrial expansion took place in the 1930's, and particularly during the Second World War when many factories were evacuated to K. from W. parts of the country. The building of the K. hydro-electric station further enhanced the tn's industrial eminence. The univ., founded 1918, was abolished in 1927. Pop. (1956) 760,000 (second on the Volga and seventh in U.S.S.R.; c. 1914, 146,000; 1920, 176,000; 1939, 390,000).

Kuyper, or Kuiper, Abraham (1837-1920), Dutch theologian and politician; violently opposed 'modernism' and defended Calvinism. He was elected to Parliament (1874-7). K. founded the Free Univ. of Amsterdam (1880) and Reformed Free Churches (1886). After allying the orthodox Protestants and the Catholic party, he became Prime Minister (1901-5). His works include the editing of the *Encyclopaedia Sacrae Theologiae*, 1898-1901, and of *Joannis à Lasco Opera*, 1886, *Lectures on Calvinism*, 1898, *The Incarnation; Socialism and Christianity*, and *The South African Crisis*.

Kuznetsk Basin (abbrev. Kuzbas), coal-mining basin in the Kemerovo oblast of S. Siberia, the largest in the U.S.S.R. and one of the largest in the world. It lies between the 2 ranges which branch off N. and NW. from the highlands of N. Altay—the Kuznetsk Alatau in the E. and the Salair range in the W.—and is traversed by the R. Tom'. The area of the coal-bearing deposits is 10,000 sq. m., the whole industrial area of the K. B. 27,000 sq. m. The coal deposits of the K. B. are estimated at 450,000,000,000 tons, and there are also iron ore deposits in Shoria (see SHORIANS) and non-ferrous metals in the Salair range. Iron smelting in the K. B. was first introduced by the Russians in 1697, and lead and silver smelting was begun in the 1780's. Coal deposits were found in 1721, and first used for iron smelting in 1827; industrial coal-mining began in 1851 and was stimulated by the construction of the Trans-Siberian

Railway and the First World War. Great industrial development began in 1930 when the K. B. became a part of the Ural-Kuznetsk combine (q.v.); large iron and steel, zinc, and chemical plants and power stations were built in the 1930's, and the K. B. became the second coal-supplier of the country, next to Donbas. During the Second World War the K. B. was the second industrial base of the nation's war effort (after the Urals); old industries were greatly expanded and new ones (aluminium, engineering) developed. Since the war industrial expansion has continued, the iron and steel industry being gradually based on the Shorian and nearby Khakas ores instead of the Ural. See also KEMEROVO (1).

Kvaran, Einar H. (1859-1938), Icelandic journalist, publicist, poet, and novelist. After 4 years at the univ. of Copenhagen he went to Canada, where he was for years editor of various Icelandic newspapers before returning to Iceland. Anglo-Saxon culture became his life's ideal, and his influence upon the Icelandic people during his lifetime was felt in every sphere. With Prof. Haraldur Nielsson (q.v.) he introduced spiritualism into Iceland, their interest in the subject having been aroused by Myers's *Human Personality*. Their co-operation was close, and soon Björn Jónsson (q.v.) joined them. Under the leadership of these men the movement in Iceland became rationalistic and investigatory and had a strong influence upon religious thought. K.'s poetry is small in bulk, but of a high quality; his novels and short stories, animated by his lofty ideals, still enjoy great popularity.

Kvarner, Bay of (It. Quarnero), bay at the head of the Adriatic Sea, between the peninsula of Istria (q.v.) and the main Croatian coast. Rijeka (q.v.) stands on it, and it contains the is. of Krk and Cres (q.v.).

Kwakiutl, N. Amer. Indian tribe of the Wakashan linguistic family. They live on the NW. coast of America and have become famous for their institution of the Potlatch (q.v.). To-day they number about 2000, living on and near Vancouver Is. They have been described at length in many works by F. Boas (q.v.); see also C. S. Ford, *Smoke from their Fires*, 1941.

Kwala-Lumpur, see KUALA LUMPUR.

Kwangchow, Chinese name for Canton (q.v.), the port and cap of Kwangtung.

Kwangchowwan, or Tsamkong, Chinese port situated on a bay in the Leichow Peninsula, S. China. It was leased to France in 1898-9, but returned to China after the Second World War. A railway from Litang in Kwangsi to K. was built in 1955 (207 m.), thus linking the port with the main network of Chinese railways. Area 190 sq. m.; pop. 206,300.

Kwang-hsu, Emperor of China (1875-1908), b. 1871. Although he was nominally the ruler, the empress dowager Tze-hsi really had the power, and constituted herself regent, after having succeeded in putting him on the throne. In 1898, although she had retired from power, she

compelled him to issue an edict again making her regent, and this influence she exercised until the end of his reign.

**Kwango**, *see* CONGO.

**Kwangsi**, inland prov. of China, bounded on the N. by Kweichow, on the SE. by Kwantung, and on the S. by Indo-China. It is almost entirely in the basin of the Sikiang, the main stream of which traverses the centre of the prov. from W. to E. The surface is mountainous, and valuable timber is obtained, and cinnamon of excellent quality. Silver, gold, copper, lead, tin, and coal are all mined, the latter especially in the country round Po-se.

and Tungkiang. There are great facilities for internal navigation and coasting trade. Kwangchow (Canton) is the cap. Its ports include Pakhoi and Samshui. Fruits, grains, vegetables, tea, copper, mercury, coal and other minerals, indigo, cassia, and betel are produced, and silk, embroidery, and lacquered wares manu. There are fishing and salt industries. Since 1951, sugar and paper factories have been built. K. was occupied together with much other Chinese ter. by the Japanese in 1937, but in 1945 the prov. reverted to China. Area 82,565 sq. m.; pop. 34,770,059.

E.N.A.

THE KWEI RIVER, KWANGSI

A group of limestone peaks which lie between Kweilin and Yangso.

The chief articles of commerce are timber, indigo, sugar, and tea. The prov. has 4 railways leading to Hunan, Kwangtung, Kweichow, and Indo-China. The last 3 were built by the People's Gov. Nanning on the West R. is the present cap. (the old cap. was Kweilin). Area 84,894 sq. m.; pop. 19,560,822 (1954).

The prov. was invaded and occupied by the Japanese in 1944. On 31 Jan. 1940 the Japanese opened an offensive from Nanning to the NE. and NW. and took Pinyang, 25 m. NE. of Nanning. A Chinese counter-offensive was launched on 12 Feb. and after hard fighting, with heavy casualties on both sides, the Japanese evacuated Nanning (18 Mar.).

**Kwangtung**, maritime prov. of SE. China, bounded S. and E. by the China Sea. It includes Hainan Is. The chief riv., Chukiang, or Pearl R., is formed of 3 branches, Sikiang (the largest), Pekiang,

**Kwantung**, name given by the Japanese to the ter. of S. Manchuria at the S. end of the Liaoting Peninsula, seized by Japan after the 'Mukden incident' on 18 Sept. 1931. It was returned to China in 1945 and, as before 1931, is now part of Liaoning Prov. It has an area of 1438 sq. m. and a total pop. (i.e. including the S. Manchuria railway zone) of 656,700. There are valuable agric. and fishing industries, and salt is mined. Its main tn, Dairen (q.v.), and Port Arthur (q.v.) are Chinese navy bases.

**Kwanza**, *see* COANZA.

**Kweichow**, interior prov. of China, bounded on the S. by Kwangsi, on the E. by Hunan, and on the N. by Szechwan. It is mostly a mountainous region, and the chief riv. is the Wu, a trib. of the Yangtse. The climate is overcast most of the year and unhealthy. Wheat and maize are the prin. crops, with tea and

tobacco, but the agric. products of the prov. are limited, its chief wealth lying in its minerals. Iron is extracted in the valley of the Wu, which is also rich in coal, and copper is obtained in the vicinity of Kanchui. There is also a considerable amount of mercury, which was formerly a prin. article of commerce; and gold, silver, tin, and lead exist. The prov. is also noted for its horses. Kweiyang (q.v.) is the cap. Area 68,139 sq. m.; pop. 15,037,310 (1954), including a considerable number of national minorities, chiefly the Miao and the Puyi.

**Kweihwa**, see HUEHOT.

**Kwellin**, Chinese city in the prov. of Kwangsi, on the R. Kwei and the Hsiang-Kwei railway. During the Second World War it was cap. of Kwangsi and the mid-way air station between Hong Kong and Chungking. The pop. increased from 50,000 to half a million between 1936 and 1943. The city wall is built of white stone, and the neighbouring scenery is said to be the most beautiful in China. One of its numerous stalactite grottoes served as an air-raid shelter for 100,000 persons, as well as housing a cinema and a school. Among K.'s products are rice, paper, vegetable oil, and cinnamon.

**Kweiyang**, cap. of the prov. Kweichow, China, lies near a coal dist., and from its position is of great importance commercially. Road communication with neighbouring provs. was greatly developed during the war, and a univ. and sev. colleges have been founded in K. A railway to Chungking was built in 1957; another is connected with Kwangsi. Pop. 250,000.

**Kwen Lun**, see KUN LUN.

**Kwidzyn** (Ger. *Marienwerder*), tn of Poland, in Gdańsk prov., near the Vistula (q.v.), 45 m. SSE. of Gdańsk (q.v.). It was formerly in E. Prussia (q.v.). In the Middle Ages the tn was a stronghold of the Teutonic Knights (q.v.), and it was the seat of the bishops of Pomerania (q.v.), 1254-1526. Until 1919 it was the cap. of the prov. of W. Prussia (q.v.). In the Second World War there was very severe damage. There is a fine Gothic church and a castle. Pop. 8000. See K. H. Clasen, *Marienburg und Marienwerder*, 1931.

**Kwinana**, tn of W. Australia, 14 m. S. of Fremantle in an industrial area, with an oil refinery, a steel mill, a cement factory, and harbour installations on Cockburn Sound. Pop. 3800.

**Kyakhta**, tn in Siberia, in the Buryat-Mongolian Autonomous Rep., 144 m. S. of Ulan-Ude, and close to the Mongolian frontier. Founded 1728 as a suburb of Troitskosavsk, which was also later named K.; centre of Russo-Chinese tea trade till 1860's. Pop. (1936) 12,000.

**Kyanite** (Cyanite, or Disthene) ( $\text{Al}_2\text{O}_3$ ,  $\text{SiO}_2$ ), mineral having the same formula as andalusite, that crystallises in thin, blue or white anorthic blades showing perfect cleavage. Lustre vitreous; birefringence strong; fracture rather fibrous. It is remarkable in exhibiting varying degrees of hardness in different directions

—the lowest being 4½ and the highest 7 on Mohs's scale. K. is insoluble in acids. When heated to a high temp., it is converted into a mass of sillimanite fibres. Perfect, well-coloured specimens are sometimes cut for use in jewellery. The mineral is a product of the thermal metamorphism of arenaceous rocks. Notable localities: St Gothard, Tyrol, Brazil, and India.

**Kyaukpnyu**, seaport of Arakan, Lower Burma, at the N. end of Ramri is. K. is the chief tn of the dist. of the same name, and has a small trade with Calcutta and Rangoon. It has an Intermediate College and a State Training Institute for Teachers. The harbour extends for many miles, but is rendered dangerous by numerous sunken rocks. Pop. (dist.) 252,000.

**Kyaukse**, northernmost dist. of the Molktila div., Upper Burma, is irrigated by numerous rivs. and canals, and the chief product is rice. K. tn, the H.Q. of the dist., is on the r. b. of the Zawgyi R. Pop. (dist.) 152,500; (tn) 5900.

**Kyd**, or **Kid**, **Thomas** (1558-94), dramatist, b. London, son of a scrivener. He was a schoolfellow of Edmund Spenser at Merchant Taylors', but little is known of his life. He became one of the Bohemian literary set of his day, was a close associate of Marlowe in his last years, and like him was charged with atheism; after being imprisoned for this he spent his last years in poverty. His Senecan play *The Spanish Tragedy*, which piles horror on horror, is well constructed and was extremely popular in its day, being trans. into Dutch and German. His *Pompey the Great*, 1594, is a trans. from the French. He probably wrote *Solyman and Perseda*, 1592, and may also have been the author of an old lost play on the subject of Hamlet which served as a basis for Shakespeare's great tragedy. His works were ed., with a life, by F. S. Boas, 1901; see also R. S. Forsythe, *Notes on the Spanish Tragedy*, 1926, and bibliography by S. A. Tannenbaum, 1941.

**Kyendwin**, see CHINDWIN.

**Kyffhäuser**, name of a double line of hills in central Germany, separated from the Harz Mts (q.v.) by the Goldene Aue. The highest point is Kuppenburg (1560 ft). There are 2 ruined castles. According to legend, Frederick Barbarossa (see FREDERICK I) sleeps in a limestone cave in the hills and will one day arise to restore the greatness of Germany. See F. Brather, *Die Kyffhäuser und seine Umgebung*, 1925.

**Kyles of Bute**, straits between the Argyll coast (Cowal dist.) and the is. of Bute, Scotland, noted for their beautiful scenery. They are about 15 m. long.

**Kyōsai**, **Sho-fu** (1831-89), Jap. artist, b. Koga. He became famous during the great revolution of 1867 for his political caricatures. On more than one occasion these brilliant drawings led to his imprisonment by the party whose susceptibilities he had offended. K. illustrated many books, including *Fehon Takakagami*, 1870, and *Kyōsai Gwaden*, 1887.

AD 18), famous Rom. jurist, whose father figured in the conspiracy against Julius Caesar, and after the battle of Philippi committed suicide. He entered public life at an early age as a member of the plebeian nobility, and before long rose to the praetorship. He was an ardent republican, and for that reason failed to find favour with Augustus, who did not promote him to the consulate in the year he should have held office. It is probable that the *Labone insanior* of Horace was levelled against the jurist in order to please the emperor. L. was the founder of the so-called Proculian school of jurisprudence. See *CAPITO*.

**Laberius, Decimus** (c. 106-43 BC), Rom. knight, who, with his contemporary Publius Syrus gave literary shape to the mime, or burlesque drama. Fragments of his work survive, and justify the opinion of Horace who admired him for having lent style to a normally indecent form. In 46 BC, at the command of Julius Caesar, L. appeared in one of his own mimes in a public contest with Syrus. Though he dared on this occasion to point his satire at the dictator, he came to no worse harm than to be declared the loser. See O. Ribbeck, *Comicorum Romanorum Fragmenta* (3rd ed.), 1898, and W. Beare, *The Roman Stage*, 1950.

**Labiateae**, family of dicotyledonous herbs and shrubs, about 3000 species, cosmopolitan in distribution. Stems are usually square, leaves opposite or whorled, flowers in the leaf axils or bracts, single, double, or in clusters, with 5-lobed or 2-lipped calyx, 4- or 5-lobed corolla, 4 stamens, superior carpels and fruit of 4 one-seeded nutlets. Many yield aromatic oils. Chief genera are *Ajuga*, *Anisomela*, *Ballota*, *Calamintha*, *Cedronella*, *Coleus*, *Collinsia*, *Cunila*, *Dracocephalum*, *Elsholtzia*, *Hyssopus*, *Lamium*, *Lavandula*, *Leonotis*, *Melissa*, *Mentha*, *Monarda*, *Nepeta*, *Origanum*, *Phlomis*, *Rosmarinus*, *Salvia*, *Stachys*, *Teucrium*, *Thymus*, *Tinnea*.

**Labiche, Eugène Marin** (1815-88), Fr. dramatist. In 1838 he pub. a novel entitled *La Clef des champs*, and in the same year he made a double venture on the stage with a drama, *L'Avocat Loubet*, and a vaudeville, *Monsieur de Coislin ou l'homme infiniment poli*, both of which found popular favour. In 1851 appeared his farce, *Le Chapeau de paille d'Italie*, a fine specimen of Fr. imbroglia, followed by *Embrassons-nous*, *Folleville*, 1857, *Le Voyage de M. Perrichon*, 1860, *La Cigale chez les fourmis*, 1876, and others, his complete plays numbering over 100. See preface to the *Théâtre complet*, 1878, by Émile Augier, and P. Soupault, *E. Labiche, sa vie et son œuvre*, 1945.

**Labienus, Titus Atius**, Rom. general, tribune of the plebs, 63 BC. He distinguished himself as Caesar's legate in the Gallic war, twice defeating the Treviri (54 BC), and taking part in the campaign against Vercingetorix. At the outbreak of the civil war he sided with Pompey; went to Africa after Pharsalus (48); and finally fought against Caesar

(q.v.) at Munda in Spain, where his troops were routed and he was killed (45 BC).

**Lablache, Luigi** (1794-1858), Franco-It. operatic singer, b. Naples, where he studied at the Conservatorium under Gentili and Valesi. At the age of 18 he had developed a magnificent bass voice, and made his first appearance at Naples in Fioravanti's opera, *La Molinara*. In 1817 he was engaged at the Scala of Milan, and in 1824 he appeared in Vienna. He appeared with great success in London and Paris in 1830, being engaged to appear annually in both these cities. He taught Queen Victoria singing for a time. On the operatic stage he was equally successful in tragic and comic parts, among his prin. roles being Leporello in *Don Giovanni* and Don Bartolo in *Il Barbiere*.

**La Boétie, Etienne de** (1530-63), Fr. writer, b. Sarlat, Dordogne, and friend of Montaigne. His *Discours de la servitude volontaire*, or *Contr'un*, 1548, a youthful criticism of tyrants, was written under the influence of revolutionary ideas which were current in the early part of the 16th cent. In his *Essays*, Montaigne, after La B.'s death, tried to protect the memory of his friend as a model and peace-loving citizen, but even he implies that La B. was at heart a republican: 'Eust mieux aymé estre nay à Venise qu'à Sarlat.'

**Labor, Department of (U.S.A.)**, was created as a separate executive dept in 1913. It has jurisdiction over matters relating to the welfare of wage earners, improving their working conditions, and advancing their opportunities for profitable employment. It also directs investigation of matters pertaining to child welfare. The prin. bureaux and divisions of the dept are Bureau of Labor Statistics, which collects statistics on labour, earnings, hours of labour, and moral welfare of wage earners; Children's Bureau, which investigates and reports on child life and welfare, including infantile mortality, juvenile courts, employment, etc., and administers the child-welfare services under the Social Security Act of 1935 and the provisions of the Fair Labor Standards Act of 1938 relating to child labour; Div. of Labor Standards, which develops labour standards in industrial practice, labour law, and labour legislation; Public Contracts Div., which administers the Walsh-Healey Act requiring gov. supply contracts to contain maximum hour, minimum wage, child labour, safety, and health stipulations; United States Conciliation Service, which deals with industrial controversies; Wage and Hour Div., which enforces the wage and hour provisions of the Fair Labor Standards Act of 1938: its duty is to see that employers engaged in inter-state commerce or producing goods for inter-state commerce conform to the wage and hour standards; and Women's Bureau, which is charged with formulating standards and policies for promoting the welfare of wage-earning women, increasing their efficiency, improving their working conditions, and

advancing their opportunities for profitable employment.

**Laborde, H. F. de**, see **DELABORDE**.

**Labori, Fernand Gustave Gaston** (1860-1917), Fr. advocate, b. Rheims, where he was educ. Subsequently he spent 2 years in Germany and England. He was called to the Bar in 1884 and won celebrity in many famous cases, notably in his defence of Zola, accused of libelling the Fr. executive and army; in the Dreyfus appeal; and in the Humbert case (1903). He pub. the *Répertoire encyclopédique du droit français*, and was editor-in-chief of the *Grande Revue*.

**Labouchère, Henry Dupré** (1831-1912), journalist and politician, b. London. Educ. at Eton, he entered the diplomatic service in 1854, being attached to the embassies of St Petersburg and Dresden. In 1864 he entered Parliament on the Liberal side, being one of Gladstone's most faithful supporters, and from 1867 to 1868 represented Middx; he was a member for Northampton from 1880 to 1905, when he retired. He was editor and proprietor of *Truth*, a paper founded in 1876, successful in the exposure of scandals of various natures. Also part proprietor of the *Daily News*, he contributed a series of letters to that paper during the siege of Paris in the Franco-Ger. war, as 'A Besieged Resident.' In 1896 was a member of the Jameson Raid Commission. See *lives* by A. L. Thorold, 1913, and E. Jenningsham, 1913; also H. Pearson, *Labby*, (new ed.), 1946.

**Labour**. In economics L. is one of the 'factors' of production, the others being, in Mill's words, 'appropriate natural objects.' In short, L. is the motive power of man upon the objects of the physical world, for, as Mill points out, all the L. of the world could not produce one particle of matter; e.g. to weave broad-cloth is but to rearrange in a peculiar manner the particles of wool. Jevons's thesis of the 'period of production' (on which see R. G. Hawtrey's *Capital and Employment*, 1937) implies that 'land and labour,' or, more comprehensively, human effort and natural resources, are the only original factors of production. L. is said to be either productive or unproductive. By the latter is meant that L. which does not augment the material wealth of the community. The former is further subdivided into directly and indirectly productive L., the former comprising all that manual work which is especially employed on material processes, the latter 'nervous' or mental work. In common parlance the term has been generally applied to manual work, a limitation of meaning which, taken with the fact that the Socialist schools of thought ordinarily use the term worker as a synonym for manual worker, has not only resulted in bringing into sharp political juxtaposition those who work with their hands and those who do not, but has also fostered a very general sympathy with the former on the ground that though they are the physical producers

of utilities, they receive often a small share of them. The orthodox economist regards unproductive L. as L. that fails to render the community richer in material products, and makes it poorer by all that is consumed by the labourers while so employed; but, as Mill points out, unproductive L. may well be as useful as productive, or more so, even in point of permanent advantage, for not all utility can be measured by material embodiment.

Economically the most striking feature of L. is that as society progresses it becomes increasingly divided, a fact which really renders the actual operation of a worker on a single process a less valuable factor in the final result (see also **DIVISION OF LABOUR**). Div. of L., or specialisation, makes necessary co-ordination of the specialists. There are two kinds of co-ordination of L.: (a) simple, or that which takes place when sev. persons assist each other in the same employment, and (b) complex, when they assist each other in different employments, e.g. one set of persons may sow cotton-seed, another pack it, and others manuf. it into cloth.

As regards technological progress in relation to L., it is to be noted that, for any product, as cost declines and output is increased, demand must eventually become inelastic, and cost-saving inventions tend ultimately to displace L. Only if the new process offers such attractive prospects of gain that it invites speculative borrowing and supplements the resources of the investment market with a creation of credit will additional employment be given. The adaptability of L. to new occupations and its willingness to move into them depend on circumstances. But experience in wartime shows that an enormous amount of skilled and semi-skilled L. is rapidly made available for the purposes of war industries; and even under more normal conditions every new industry and in great part any rapidly expanding industry must be supplied with L. by transfer from other industries. Mobility of L. is a necessary condition of a free and progressive economy. One of the unexpectedly difficult problems of a condition of full employment, as experience since the end of the Second World War shows, is that it renders L. immobile.

**Labour, Ministry of** (since 1939, the M. of L. and National Service, with H.Q. at 8 St James's Square, London, S.W.1), set up in 1916 to deal with questions of L. administration, wages disputes, and other matters hitherto under the direction of the L. Dept of the Board of Trade (q.v.). The ministry has general responsibility for manpower questions. Through the Employment Exchanges, it provides an employment service for assisting those who are looking for work, and for helping to meet employers' L. requirements. A settlement service, including facilities for industrial rehabilitation and vocational training, is provided for disabled persons. The ministry is responsible for the administration of the Factories Acts which contain provisions for the safety, health, and welfare

of work-people in establs. covered by the Acts. In the industrial relations field the ministry provides a conciliation service to help in the prevention and settlement of trade disputes, and is responsible for the appointment of arbitrators, Courts of Inquiry, etc., under the Industrial Courts Act, 1919, and the Conciliation Act, 1894; it is also concerned with the regulation of wages and conditions of employment under the Wages Council Acts and the Catering Wages Act. Under the National Service Acts, the ministry arranges for the registration, medical examination, deferment, and call-up of men for military service. The ministry maintains close relations with the International L. Organisation (q.v.) and other international organisations with an interest in L. matters. It is also responsible for the Youth Employment Service, which provides for the vocational guidance and placing in employment of young persons.

**Labour, Wages and Hours of.** A study of wages and L. requires examination not only of *money* wages but also of *real* wages, i.e. the commodities and services that money wages buy; this is a measure of the standard of living of the wage-earners. If prices generally were stable the two would coincide. Over the cents. there have been great fluctuations in prices and in the value of money, and movements in money wages are no necessary guide to movements in real wages. Money wages are trans. into real wages by adjustment for movements in prices. For various periods there have been studies of money wages and prices by social scientists—Thorold Rogers (q.v.), Beveridge (q.v.), and many others. Their work was collated in 1956 and added to by original research by two economists, Phelps Brown and Hopkins (*see below*). They constructed a continuous series of index numbers for the wages of building craftsmen in the S. of England from 1264 to 1954, and a parallel series for the prices of a composite unit of food, drink, clothing, fuel, and light, and were thus able to derive the trend of real wages.

Their findings revealed the following broad picture. Real wages rose by about a half between 1264 and 1500. By 1580 they had fallen back to the 1264 level. From 1580 to 1625 they fell still further, and then rose until by 1750 they were again at the 1264 level. From 1750 they again fell, and by 1800 were back at the 1625 level. From 1800 to 1900 they rose spectacularly  $3\frac{1}{2}$  times in consequence of the industrial and social revolutions of the times. There was then little change until the outbreak of the First World War in 1914, during which they fell by 40 per cent, but recovered to the pre-war level by 1919. After that they began to soar again, and, despite the trade depression and heavy unemployment of the early 1930's, they had increased by two-thirds by 1939. The Second World War reduced them again—by about a quarter—but they recovered part of the lost ground by 1947. After that they fell again some-

what but by 1954 were again approaching the 1947 level.

These figures referred to only one, although a major, trade, and to one part, although an important part, of the country, and they measured real wages in terms of a composite unit of consumable goods. They could not cover the whole range of commodities produced throughout the 7 cents. Nevertheless they were probably a rough guide to the trend of real wages, and therefore to the standard of living of a large part of the wage-earners over sev. cents.

Greater details of the trend in money and real wages since before the Second World War are available from surveys made by the Ministry of L. These have estab. that the average weekly earnings of all workers in 1938 were £2 13s. 3d., and by 1956 they had increased to £9 17s. 9d. This means an increase from 1938 to 1956 of 270 per cent.

The earnings of men only (aged 21 and over) increased during this period from £3 9s. to £11 15s. 4d., or 240 per cent, and of women only (aged 18 and over) from £1 12s. 6d. to £5 19s. 9d., or nearly 270 per cent. The increase in the earnings of young people were even more spectacular. Those of youths and boys rose from £1 6s. to £5 0s. 6d., or 285 per cent, and of girls from 18s. to £3 18s. 4d., or 323 per cent.

These increased earnings reflect the combined effects of changes in 6 main factors: first, rates of wages; second, the number of hours worked per week; third, the proportion of hours paid for on overtime, week-end, night-shift, and other special rates; fourth, the amount of work paid by results (a system which generally produced greater effort of output than payment by time); fifth, the proportion of men, women, boys, and girls employed; and sixth, the proportion of workers employed in different industries.

The average *wage rates* for a full ordinary week's work, excluding overtime, were 165 per cent higher in 1956 than in 1938.

The average *hours worked* in all industries were little changed over this period. In 1938 they were 46·5 for all workers; in 1956, 46·7. Soon after the Second World War they were 45 hours, but they rose gradually in the following years. The hours of men only rose slightly from 47·7 to 48·6; women's hours fell from 43·5 to 41·5; boys' from 46·2 to 45·0; and girls' from 44·6 to 42·4. (For the hist. of hours of work *see* FACTORY LEGISLATION.)

The proportion of men, women, boys, and girls changed markedly between 1938 and 1956. The proportion of men has, since 1947, been much higher than in 1938, but the proportion of juvenile L. was less than half what it was in 1938. The increase in the proportion of men and the great decrease in the proportion of juveniles was due mainly to the rise in the school-leaving age.

**Labour, or Farm, Colonies** existed, mainly on the Continent, for the purpose of reforming or punishing vagrants. The more important L. colonies on the Continent were those in the Netherlands, Belgium, Germany, and Switzerland. In Holland L. colonies were divided into (a) free colonies for indigent persons, and (b) beggar colonies for the repression of mendicancy. The free colonies were not successful, as the original entrants remained in the colony and few fresh cases were received. The beggar colonies were penal rather than reformatory, and a severe discipline was maintained by the society.

In Belgium, under the law of 27 Nov. 1891, state institutions of 2 kinds were estab.: (1) *Dépôts de Mendicité*, and (2) *Maisons de Refuge*. The former were intended for the reception of able-bodied professional beggars, vagrants, and certain other classes of people, such as inebriates and persons convicted of immoral offences. The intention of the Act was to treat habitual vagrants and beggars not as criminals requiring punishment, but as persons requiring treatment on account of their mode of life. The purpose of a *Maison de Refuge* was to receive men too old or infirm to work, or who through want of work or misfortune had been driven to begging or vagrancy. It was in most respects similar to the Eng. workhouse.

In Germany there were some 30 L. colonies. There was no compulsion to remain in the colony, and admission was voluntary. The bulk of the inmates appear to have been unemployed workmen and tramps. Habitual vagrants and persons who neglected to maintain themselves were far more effectively dealt with in the *Arbeitshäuser* which corresponded to the forced L. farms of Switzerland and the compulsory L. colonies of Belgium and the Netherlands. They were penal in character and intended for the detention of persons after imprisonment for certain specified offences.

In Switzerland from 1906 there were both voluntary and compulsory L. colonies. The voluntary numbered only three and were managed by philanthropic societies. Nearly every canton had a compulsory colony or forced L. farm, managed by a cantonal council, the federal gov. neither taking any share in the management nor inspecting the farms.

In England the closest approach to the continental forced L. colonies was the old houses of correction. In more recent times there have been certain institutions estab. by charitable agencies for vagrants. The largest of these latter institutions was the farm colony of the Salvation Army at Hadleigh in Essex, with accommodation for sev. hundred inmates. The Eng. colonies differed from the continental in

that there was no power of compulsory detention. The Majority Report of the Poor Law Commission recommended the institution of L. penal colonies for such persons as were unemployed and vagrants who accepted relief while refusing to fulfil the conditions of work attached to such assistance. The recommendation was not proceeded with.

**Labour Day**, legal holiday in all the states and ters. of Canada and the U.S.A. which is observed on the first Monday in Sept. It is observed by labour processions and organisations which parade the streets and hold meetings, and all banks and gov. offices are closed. Outside the U.S.A., Canada, and Italy L. D., or the day generally fixed on by all Socialist and Labour organisations for a public holiday, is celebrated on 1 May. In New Zealand L. D. is observed on the third Monday in Oct.

**Labour Disputes** between employers and workers arise chiefly from dissatisfaction of the workers with their conditions of employment, or from dissatisfaction of the employers with their work-people. A dispute originating in one trade sometimes spreads to others whose members have no grievance, but who 'come out' in sympathy with their fellows. When stoppage of work is on the initiative of the workers a strike results, but where the employers close their works the stoppage is called a 'lock-out.' Disputes are settled by arbitration, when a third party is mutually appointed to decide the issue, or by conciliation (q.v.), where discussion under an impartial chairman takes place, or by the final defeat through lack of resources of one of the disputants. The gov. sometimes intervenes where the stoppage threatens to endanger civil welfare. During the First World War the outstanding dispute was that of the Clydeside workers, who demanded an increase in wages because of the increased cost of living. Gov. intervention took place, and the increase was secured. Thereafter munition workers were controlled by the Munitions of War Act of 1915, and compulsory arbitration was applied to all future disputes. Under the chairmanship of J. H. Whitley, an attempt was made to reorganise the relationship between employer and workers by co-operation through Standing Joint Industrial Councils. The scheme is known as 'Whitleyism,' and has since been found to be inadequate. In 1921 a great lock-out of miners ended in defeat, though the famous Sankey Coal Commission was

appointed. Its recommendations, which included nationalisation of coal-mines, were favourable to the miners, but were not acted upon by the gov. until after the Second World War. The strike of 1926 is dealt with in detail under STRIKE, THE GENERAL (1926). The outcome of this strike was the passing of the Trade Disputes and Trade Unions Act, 1927, which

#### THE GENERAL STRIKE, 1926

Police escort a petrol lorry through a road in Southwark, London.

declared general and sympathetic strikes unlawful, restricted picketing, and made the law courts the arbiters of legality or illegality of strike activities. The 'contracting-in clause' stipulated that only those trade unionists might contribute to the political funds of the unions (that is to the fund of the Labour party) who declared in writing their willingness to be levied for that purpose. The T.U.C. repeatedly pressed for the amendment of this Act, but in 1940 Neville Chamberlain (the Prime Minister) pointed out to a T.U.C. deputation that it would be impracticable to introduce amending legislation during war-time. The Labour Gov. which came into power in 1945 passed a 2-clause Act repealing the Act of 1927,

which received the royal assent on 22 May 1946. 'Unofficial' strikes became prevalent in 1943, but though they were not important individually they seemed to indicate that something was amiss with industrial relations. Some of these strikes were organised for political reasons and in order to impede the nation's war effort. But considering the difficulties that had arisen from the transference of labour and the entry into industry of new people, who were unaccustomed to discipline and to trade union negotiations, it was remarkable that there had been so few disputes up to that time. But public confidence in the ultimate issue of the war undoubtedly emboldened some to launch unofficial strikes. In 1944 there was discontent in the minefields, whose workers exposed themselves to the charge of placing their own sectional interests before the national welfare. It was always difficult to decide whether, for securing the smooth working of industry in war-time, it was necessary to introduce military control or whether the joint industrial relations machinery could be relied upon. The General Council of the T.U.C. issued a statement in 1944 that unauthorised stoppages of work had gravely impeded the preparations for the attack on Europe and if continued might produce a national disaster and imperil victory. As a precaution against the outbreak of industrial trouble the Minister of Labour, after consultation with the T.U.C. and the Brit. Employers' Confederation, issued a defence regulation giving him strong powers for dealing with persons responsible for inciting strikes or lock-outs which interfered with essential services. This was aimed, however, solely at promoters of so-called 'unofficial' strikes. A petty dispute in 1945 at Birkenhead docks led to an extended strike of dock workers in most of the large ports. This strike was entirely unofficial: 40,000 were on strike and 20,000 soldiers had taken their places. The refusal of the Ministry of Labour to intervene until the men went back to work proved effective, and the men returned to work, accepting, after prolonged negotiations, terms very little higher than those offered *ab initio* by the employers. After the war there were numerous demands for wage increases, sometimes leading to strikes, official or unofficial, and mostly the latter. Most unrest prevailed among the dockers, and in 1948 an unofficial strike began in the Port of London owing to the suspension of 11 men after a dispute over payment for handling 'dirty cargo.' During the fortnight of the strike in the London docks service men unloaded food-stuffs. This had its sequel in 1949 when 8000 men of the Port of London went on strike in a fight which was represented by their unofficial leaders as one to 'resist the employment of blackleg labour.' The Labour minister, in the House of Commons, described the dockers' claim that the stoppage was in fact a lock-out as nothing but a Communist manoeuvre, and emphasised that the men were acting in

breach of their agreements. The continuance of the strike, and an increase in the numbers of men involved, forced the gov. to employ troops for loading and unloading cargo, and the king declared a state of emergency. The course of L. D. cannot be understood without reference to the state of the labour market. Overfull employment greatly increased the workers' bargaining power. Strikes, often unofficial but sometimes official, were called for trivial reasons or because of inter-union rivalry (e.g. a strike in a shipyard to decide which of 2 unions' members should bore a hole). Wages were forced up faster than output, so that inflation was intensified. *See also* INDUSTRIAL RELATIONS and TRADE UNIONS.

*United States of America.* Labour disputes in America are examined by a Board of Mediation formed under an Act of Congress passed in 1926. Individual unions appear to have freedom of action, and most disputes are settled by the states concerned. Between 1921 and 1928 stoppages involving 4,500,000 workers were settled by the Congress Board of Mediation, under whose powers the secretary of labour is authorised either to mediate himself or to appoint special commissioners. Mediation boards have also been set up by individual states, and disputes are usually settled either by conciliation or voluntary arbitration. In the 5-year period 1935-40 strikes averaged about 2875 annually. But when the threat of war became obvious, the shipbuilding and other strikes, which occurred about the time of the presidential election, were soon settled and the return of Roosevelt for his third term indicated that Amer. labour appreciated the fact that it was the Democratic Gov. that had guaranteed collective bargaining and the minimum wage and fixed a maximum work week of 40 hours.

The best known example of compulsory arbitration is the system in New Zealand, where such a scheme has existed since 1897. Recourse must be had to a specially appointed conciliation board under an impartial chairman, who, on failure to reach an agreement, refers the dispute to the courts. New S. Wales and Victoria have similar systems. *See* G. D. H. Cole, *A Short History of the British Working-class Movement* (3 vols.), 1927, and Margaret Cole, *Makers of the Labour Movement*, 1948.

**Labour Exchanges, see EMPLOYMENT EXCHANGES.**

**Labour Legislation** is the outcome of the wish to regulate conditions of contract between employers and workers and to secure for the worker 'reasonable' standards of remuneration, health, and safety. Until the advent of machine production in the 18th cent. there were protective regulations enforced by the craft guilds (q.v.) in co-operation with the gov. Machinery needed plentiful labour, and workers combined to demand better terms. In 1799 the Combination Act threatened with imprisonment workers who combined to increase wages. Lord

Shaftesbury (q.v.) took up the cause of children in factories, and in 1842 procured a Bill to abolish female and child labour in mines. In 1867 the Employers and Workmen Act removed concerted stoppages of work from the list of criminal actions.

In the early years of the 20th cent. the chief measures passed affecting labour questions were the Workmen's Compensation (q.v.) Acts; the Coal Mines Eight Hours Act of 1903, which ended a long struggle by the miners; the Trade Boards Act of 1909, resulting from agitation to combat sweated labour; the Labour Exchanges Act, the precursor of Unemployment Insurance; the Coal Mines Regulation Act; the National Insurance Act; and the Shops Acts. The First World War period brought problems, to meet which the Munitions of War Act, 1915, made arbitration compulsory in the settlement of industrial disputes. The Act was repealed in 1918. In an attempt to keep pace with the increased cost of living, the Trade Boards Act of 1918 extended the Act of 1909, bringing many millions of workers into the protective scope of a legalised minimum wage. In the same year the Wages (Temporary Regulation) Act was passed to cope with the situation created by the change from war to peace conditions. The Act was passed originally for 6 months, but certain sections were continued under the Industrial Courts Act of 1919, which stabilised the existing rates of wages as a minimum until 1920. Many of the conventions drafted by the International Labour Conference of the League of Nations dealt with legislation to govern hours of labour. A recommendation to adopt universally a 48-hr week was not ratified by the Brit. Gov. on account of its excessive scope. The miners' dispute of 1920 resulted in the passing of the Emergency Powers Act, which enabled the gov. to take necessary steps to enforce peace and maintenance of essential supplies and transport. The Act was applied during the disputes of 1921, 1926, and 1949. Following the General Strike (*see* STRIKE, THE GENERAL) the gov. repealed the Seven Hours Act of 1919, and the Trade Disputes and Trade Unions Act of 1927 proclaimed illegal general strikes, sympathetic strikes, and most forms of 'picketing'. Labour conditions in the 2 decades following the First World War seriously deteriorated in the N. of England in what became scheduled as special areas; and towards the close of 1934 an Act provided for the economic development and social improvement of these distressed areas. Training schemes were also part of the general plans for recovery. But it was the conditions imposed by the Second World War that solved that problem.

The war closed the ranks of the people and, while many trades—engineers, miners, shop assistants, etc.—demanded and obtained higher rates of pay in 1939-1940 as a consequence of the increased cost of living, the peace-time advantages in hours and other conditions were sacrificed to some extent to the national needs.

In 1940 (after the Fr. resistance had collapsed) the Employers' Confederation and T.U.C. General Council agreed to the minister of labour's appeal to suspend rules and regulations so as to throw their whole force into the national effort. But the National Union of Railwaymen in 1940 demanded the repeal of the Trade Disputes Act of 1927, and the T.U.C. later urged the removal of restrictions imposed by the Act on unions. The gov., however, considered it impracticable to amend legislation in war-time and the Act was

organisation to be found in modern times in many countries which, very broadly speaking, represents, or claims to represent, the interests and aspirations of Labour (i.e. the working class) as against the interests and ideals of Capital (i.e. the employing, or master, class). The L. P. in Great Britain, which must be distinguished from the Independent L. P. (the I.L.P.) (q.v.), is a purely Socialist body, consisting of trade unions, co-operative societies, and various Socialist bodies banded together to secure political repre-

not repealed until 1946, under the Labour Gov. After the Second World War, strikes provoked by inter-union rivalries (e.g. on demarcation rules) and the 'closed shop', and the increasing public criticism of monopoly, focused attention on the restrictive practices of the trade unions. But both major political parties showed no disposition to tackle such a politically difficult problem. See also FACTORY LEGISLATION; SHOPS ACTS; TRADE UNIONS; WORKMEN'S COMPENSATION. See H. Slessor and A. Henderson, *Industrial Law*, 1924; G. D. H. Cole, *A Short History of the British Working-class Movement* (3 vols.), 1927, and *Organised Labour*, 1928; *International Labour Review* (monthly), Geneva; *Legislative Series of the International Labour Office*, Geneva. **Labour Office, International**, see INTERNATIONAL LABOUR ORGANISATION.

**Labour Party**, The, name of a political

sentation. The first secretary of the L. P. was James Ramsay MacDonald (q.v.). For the first 6 years of its existence the L. P. was known as the Labour Representation Committee (the L.R.C.). When formed in 1900 the membership was 375,000, and it succeeded in returning 2 members to the Commons in that year. As a parl. force it dates from the 1906 election, when its membership was 998,000, and when out of 50 parl. candidates 29 were elected. The L. P. strongly supported the First World War, and its then leader, Arthur Henderson (q.v.), with 2 other L. P. representatives, was included in the Coalition Gov. of 1915, and, when the new Coalition Gov. of 1916 was formed, Henderson continued in the Cabinet until Aug. 1917, when he resigned over the proposed Stockholm Socialist International Conference. At the conclusion of the armistice the L. P. withdrew its support from the gov. Up to 1918 it had been practically a federation of trade

unions and Socialist societies, but the war had changed the national outlook, and in order to keep pace with the extended organisation of the trade unions, as well as to widen its field of recruitment, the L. P. revised its constitution, admitting individual members of all social grades. It increased its membership so considerably as a result that by 1924 it had achieved a brief period in office, with Ramsay MacDonald as Prime Minister. Dependence upon Liberal support, which was never reliable, caused its defeat after 10 months as a gov. Meanwhile the party had begun to realise the significance of municipal elections, and an attack was accordingly made upon municipal seats throughout the country, especially in mining and industrial areas, with marked success. Its membership in 1920 was well over 4,000,000, though this figure fell to 1,900,000 during the trade slump which followed. In 1926 the General Strike (q.v.) severely tested the organisation of the L. P., and indeed the whole Labour movement was shaken. The storm, however, was weathered so successfully that the party found itself again in office in 1929, when it secured the return of 287 members. Ramsay MacDonald again became Prime Minister in a minority gov. and continued in office even though, in Aug. 1931, the Labour Gov. resigned and was replaced by a National Gov. Labour M.P.s next took office during the Second World War, in Churchill's Coalition Gov., 1940-5.

It has been said that the L. P. is more of a 'class' party than the Liberal party was under Gladstone or Asquith. This may be said to be true in the sense that to-day (1958) it is estimated that a majority of what can loosely be called 'working class' voters generally support the L. P., and that the party gets only a low percentage of support from the middle and upper classes; but it remains equally true that a fairly large percentage of working-class voters regularly vote Conservative and that the L. P. relies increasingly on the middle classes, both for votes and for leaders. The rise of the L. P. shows that it is possible to achieve a large measure of support even with a largely hostile press. But the L. P. has in the past made up for this deficiency by maintaining close contacts with the trade unions, which, in their turn, have sev. complete series of national and local organisations. The representative character of the L. P. to-day is shown by the fact that a great variety of interests are represented—engineers, the medical and legal professions, teachers, journalists, farmers, the fighting services—though by far the largest group of members, comprising more than all the others combined, is still the 'workers' group.' The rise of the L. P. since the Second World War has been phenomenal, and between 1945 and 1951 the legislation passed by the Labour govts. accomplished what was virtually a social revolution by peaceful parl. means. In 1935 the L. P. had approximately 154 representatives in the Commons as against 387 Conservative

members; in 1945 the positions were reversed, the L. P. having 393 members and the Conservative party and associates only 213, the Labour majority in the House in 1945 being about 146. The L. P. won the 1950 election with 315 members to the Conservatives' 298 but were defeated in 1951 by a Conservative majority of about 18 seats. In the 1955 general election the L. P. representation fell to 277 seats. C. R. Attlee (q.v.) was leader of the party, 1935-55, the present leader being Hugh Gaitskell (q.v.). See SOCIALISM, etc.

See G. D. II. Cole, *The World of Labour*, 1919, and *Short History of the British Working-class Movement* (vol. III), 1927; C. R. Attlee, *Labour Party in Perspective*, 1937; Margaret Cole, *Makers of the Labour Movement*, 1948; F. Williams, *Fifty Years' March of the Labour Party*, 1949; R. Jenkins, *Pursuit of Progress*, 1953.

**Labours, Catherine** (1806-75), b. Côte d'Or, a Sister of Charity of St Vincent de Paul. As a result of one of her visions the first 'miraculous medal' was struck. Beatified, 1933.

**Labourers, Statute of.** The Black Death caused a great dearth of agric. labour and wages went up, with the result that the Ordinance (see LEGISLATION AND LEGISLATIVE PROCESSES) of Labourers was issued in 1349 and re-enacted in 1351 as the S. of L., with the object of securing an adequate supply of field labour at the wages current prior to the plague. It provided that able-bodied persons should work in their own dist. at the accustomed rate of wages, while those who gave aims to 'sturdy beggars' should be punished with imprisonment. The consequence, however, was the rise of a class of really free labourers, in spite of the low rate of wages.

**La Bouverie**, tn in the prov. of Hainaut, Belgium, 5 m. SW. of Mons. It has important coal-mines and manuf. of Davy lamps. Pop. 7600.

**Labrador**, part of the prov. of Newfoundland, Canada, forming the most easterly part of the N. American continent and extending from Blanc Sablon at the SW. entrance of the straits of Belle Isle to Cape Chidley at the E. entrance of Hudson Strait. The name is also applied to the peninsula of which L. proper forms merely a coastal strip (1100 m. in length), with an area of about 110,000 sq. m. The greater part of the peninsula, representing the territory of Ungava (351,780 sq. m.), was annexed by Quebec in 1912 under the Quebec Boundaries Extension Act. By the decision of the Privy Council, 1 Mar. 1927, settling the boundary between Canada and Newfoundland in L., the Atlantic watershed of the L. peninsula, including the basin of the Hamilton or Grand R., was awarded to Newfoundland. The accession of Newfoundland to the dominion of Canada, 31 Mar. 1949, brought all L. automatically under the confederation, but the dependency or coastal strip of L., or L. proper, is still administered from St John's, Newfoundland, so far as prov. relations are concerned.

L., regarded as part of Vinland or Wine-land (q.v.), was probably visited by the Vikings in the 10th or 11th cents. Many traces of stone houses and stone-protected tombs, such as the Norsemen built and which the indigenous Eskimo never did, have been found on the L. coast. According to Norse sagas the voyages of Bishop Eric Gnuþsson and his sons in the early 12th cent. concern L., but these are all songs glorifying the deeds of chiefs rather than satisfactory evidence of visits to the coast of what may have been L. It is

ordered Cortereal and Fernandez to follow Cabot's route and claim all that Cabot had found (including L.) as part of the legitimate property of Portugal. They sailed in 1501, but explored only the E. Greenland coast, which was named 'Labrador,' presumably after João Fernandez the *llavrador*. However this may be, Greenland for many years afterwards was called on the maps of the period Terra Labrador. Cortereal, however, on a second voyage a year later, evidently sailed further S., and all that is known of this

*High Commissioner for Canada*

#### LABRADOR: INDIAN HARBOUR

commonly supposed that John Cabot sev. cents. later sighted the coast and even visited it, though there exist no real records of his voyages. Cortereal, the Portuguese navigator, visited the country only 12 years after Cabot's voyage of 1498. Cortereal states that in Hamilton Inlet he found an old Venetian sword, some gold earrings, and other 'small truck' which Cabot had very probably traded with the Indians. The story goes that the voyage of João Fernandez (a *llavrador* or yeoman farmer) of the Azores, who signed on as pilot for Cabot, so interested King Mañuel on his return that the king granted letters patent for a Portuguese voyage—the letters, however, being granted to Gaspar Cortereal, who had greater social standing than Fernandez. It is assumed that the king

voyage accords well with the description of S. L., which for many years appeared on maps as Terra Corterealis. Jacques Cartier, some 40 years later, cruised the W. coast of Newfoundland and the L. shore of the gulf in the search for the NW. passage. After this L. (with the rest of explored Canada) fell under Fr. rule, but the peninsula was ceded to England in 1763 by the treaty of Paris.

Little is known about the geology of L. The archæan bedrocks belong to the continental foundation of N. America known as the 'basement complex,' composed mostly of metamorphic rocks and containing no fossil remains of animals or plants. This is overlaid at some places with a veneer of limestones, sandstones, and shales, some of which bear fossils of some of the earliest known organisms;

but over 75 per cent of the L. peninsula this veneer has been eaten away by rain and ice, so that the anct and remarkably flat surface has been restored. The basement rocks were originally molten, but froze into crystalline masses containing granite, lava, limestone, syenite, diorite, and other minerals. Gabbro (q.v.), as dark as basalt, dominates the is. cliffs and mainland mts all round Nain; but these high lands are bare of soil and vegetation. Most of the gabbro is a beautiful variety of felspar, called labradorite, one of the abundant constituents of the world's crust. In Square Is. and on Mt Pikey there are other considerable masses of the mineral. L. is very mountainous and very rugged, the mts becoming highest in the N. It has many short, rapid rvs., Hamilton R., on which are the magnificent Grand Falls, being the most notable. A recent power survey here indicates that the minimum hydro-electric energy available is 2,500,000 h.p. The coast is rocky, broken up with narrow inlets, and fringed with numerous small is.

The flora and fauna are alike varied. Among the prin. trees are white birch, larch (or tamarack), reaching 60 ft, balsam fir, black spruce—the best all-round tree in L. and growing to 70 ft—balsam poplar, willow, alder, and mountain ash. Plants include reindeer, sphagnum, and other mosses, besides gentians, bluebells, wild rosemary, sundew, and also numerous edible wild fruits. The husky dog, most useful to traders, the caribou, and the reindeer are among the chief animals. Others are wolf, otter, beaver, musk-rat, black and polar bear, white fox, karkajou or wolverine, lynx, mink, martin, and weasel or ermine. Among the birds are numerous water-fowl, which, however, migrate in winter. There are also Arctic tern, golden plover, snow bunting, snipe, puffin, phalarope, merganser, and savannah sparrow, besides such birds of prey as hawk, eagle, owl, gull, gannet, shrike, and geryalcon. L. is noted for its fisheries. The waters near the coast are the resort of countless schools of cod. There are also valuable herring, trout, and salmon fisheries. The cod fishery employs about 1000 men and 30 vessels from Newfoundland. Other fish are many types of whale, halibut—a halibut bank covering hundreds of miles was discovered in recent years all along the middle L. coast—haddock, hump-fish, trout, and lump-fish. The rvs. are stocked with salmon. The record cod caught was 102 lb. in weight and 5½ ft long. There are numerous seal, the chief kinds being the harp and hood seal.

The fisheries are an important industry. Other industries are fur trapping (beaver, otter, mink, seal, etc.) and agriculture on a minor scale, but showing signs of improvement. At the headwaters of the Hamilton R. an investigation is being carried out on an area geologically of the same age as part of the Lake Superior iron ore where the geological formations are structurally similar. Many deposits of high-grade iron ore are known to exist

in the area and preliminary estimates indicate a minimum of a million tons of iron ore per vertical foot.

The climate is rigorous and the indigenous peoples suffered much from hardship and disease before the advent of the Moravian missions and the medical mission of Sir Wilfred Grenfell. There are Moravian mission stations at Nain, Okkak, Hopedale, Hebron, and other spots, which have been taken over by the Hudson's Bay Co. The labours of Sir Wilfred Grenfell in establishing hospitals, encouraging agriculture, and improving education in Newfoundland for the benefit of the fishermen and other inhab. of L. have been the dominant feature in the life of modern L. (see GRENFELL, SIR WILFRED). Goose Bay in Hamilton Inlet has a pop. of 2800 and Happy Valley 1136. The total pop. is estimated at 8500, and is made up of Indians, Eskimos, and some whites. There is a model settlement in the basin of St Mary's R., with a cottage hospital, boarding school, gardens, water reservoir, and splendid salmon-fishing. At the beginning of the 18th cent. the Eskimos were estimated at 30,000. When the English took possession there were only 5000-8000. Now, nearly 200 years later, the only Eskimos left on the whole coast are about a thousand, all on the reservations of the Moravian Brethren (q.v.) whose work began with the mission of the Christian Society of the Unitas Fratrum. To-day the hospitable centres of the Unitas Fratrum are in every way oases in the desert to the traveller' (Grenfell). In 1921 a new church was built at Nain to celebrate the 150th anniversary of the Moravian Mission in L. See W. G. Gosling, *Labrador, 1910*; W. Grenfell, *Labrador: The Country and the People, 1922*, and *The Romance of Labrador, 1934*; V. Tannor, *The Geography, Life, and Customs of Newfoundland-Labrador* (a systematic survey of the E. part of the L. peninsula), 1947.

**Labrador Retriever**, powerful game-dog, having a wide head with a square muzzle, ears set high and hanging close to the cheeks, wide deep chest, muscular body, and tapering tail. The coat is short and thick, generally black, though a yellow sub-variety exists. Brought from Labrador over a cent. ago, its value as a gun-dog was quickly appreciated, and it is now the most popular of all retrievers, being strong, easily trained, and of exceptional intelligence. The curly and flat-coated types were formed by crossing the Labrador with other breeds.

**Labradorite**, soda-lime felspar of the plagioclase group, mostly bluish and greenish in colour, abundant in St Paul's Is., Labrador. Used in jewellery.

**Labrit**, see ALBRET.

**Labrunie, Gérard**, see NERVAL, GÉRARD DE.

**La Bruyère, Jean de (1645-96)**, Fr. writer and moralist, b. Paris, his father being controller-general of finance to the *hôtel de ville*. He was educ. at the univ. of Orleans, and called to the Bar in 1673.

He abandoned this for a post in the revenue dept at Caen, which he sold in 1686. He was then introduced by Bossuet to the household of the great Condé, to whose grandson, Henri Jules de Bourbon, he became tutor, and passed the remainder of his life in the household of the prince or at court. This gave him the occasion to exercise his great gift of observation, and ample material for his masterpiece *Les Caractères*, a penetrating study of human behaviour by a series of pen-portraits of typical figures. The first ed. of the *Caractères* appeared in 1688, and from the 4th to the 9th ed. he augmented and improved this work. His work deserves a high place in Fr. literature: he excels in bringing out individual and picturesque traits of the innumerable persons portrayed, and always finds the significant gesture which reveals the whole character. The *Caractères* are remarkable also for La B.'s sympathy with the suffering of the poor; although he is a pessimist, there is no systematic doctrine in his work. The style too is remarkable for its rich vocabulary and the infinite variety of his turns of phrase. Many famous men and women figure amongst the *Caractères*, including Cornelle, Fontenelle and, Renseraide, and immediately after its pub. a vol. of keys was circulated. See E. Fournier, *La Comédie de La Bruyère*, 1866; M. Lange, *La Bruyère critique des conditions et des institutions sociales*, 1909; and studies by A. Gide (in *Divers*), 1932, and G. Michaut, 1936.

**Labuan**, is. 6 m. off the NW. coast of Borneo, with an area of 35 sq. m. Ceded to Britain in 1846 by the Sultan of Brunei; from 1890 to 1906 it was governed by the Brit. N. Borneo Co. It was then annexed to the Straits Settlements and became a separate settlement in 1912. The Japanese occupied it in 1942, and it was liberated by the Australian 9th Div. in June 1945. It is now part of the Brit. colony of N. Borneo. It has a fine harbour, which affords good anchorage for ships, and possesses extensive coal-beds and a railway. It is flat and thickly wooded and possesses a good supply of water. L. is an active market for the products of the neighbouring is. of Borneo and the Sulu archipelago—edible birds'-nests, camphor, india-rubber, wax, sago, hides, etc. The chief product is sago-flour. The is. is connected with Singapore, Hong Kong, and Jesselton by telegraph cables and by frequent steamship service. There is an international airport. Pop. (1938) 8600 (Malays 5200; Chinese 3000).

**Laburnum**, family Leguminosae, genus of 3 deciduous shrubs or trees: *L. anagyroides*, Common L., or Golden Chain, and *L. alpinum*, Scotch L., and varieties, of S. Europe being grown for their yellow racemous flowers in spring. *Laburnocytisus × adamii* is a curious graft hybrid of *Cytisus purpureus* × *L. anagyroides* that produces purple-pink as well as yellow flowers. L.s are poisonous in all parts.

**Labyrinth**, word applied in Gk legend to the so-called Palace of Minos at Knossos (q.v.), supposed to have been designed by

Daedalus (q.v.). It is also used by Herodotus (ii. 148) to describe a large and partly subterranean complex of buildings at Crocodilopolis (afterwards Arsinoë) dating from the late 3rd millennium BC. Modern L.s or mazes in gardening include the celebrated maze at Hampton Court (q.v.); and the word is now used generally of any complicated network of winding passages.

LABURNUM

**Labyrinthodonts**, large and varied group of primitive Palaeozoic amphibians, with characteristic 'arch vertebrae' and labyrinthine teeth, probably descended from crossopterygian fishes (q.v.). Many were large in size, with heavy flattened skulls, and a straddling gait. They range from Devonian to Triassic, but are dominantly Carboniferous and Permian in age.

**Lac**, see LAKH.

**Lac**, insect Lucifer, one of the *Coccidae*, which produces L. dye and L. resin, excreting the latter to form a crust on twigs and leaves. The dye is similar to that produced by the cochineal insect. The insect is cultivated in India. See DYE and RESIN.

**Lacaille, Nicolas Louis de** (1713–62), Fr. astronomer, was b. Rumigny in the Ardennes. In 1739 he remeasured the Fr. arc of the meridian, an operation lasting 2 years. For this service he was admitted to the Academy, and obtained the mathematical professorship at Mazarin College. In 1750 he undertook a successful astronomical expedition to the Cape of Good Hope to determine the lunar and solar parallaxes. He wrote *Coelum australe stelliferum*, *Astronomiae Fundamenta*, 1751, and *Tabulae Solares*, 1758, etc.

**La Calprenède**, Gautier de Costes, Seigneur de (1614–83), Fr. novelist and dramatist, b. near Cahors, Lot, prominent among Fr. writers of the 17th cent. He wrote sev. long romances: *Cassandre*, 1642–50, *Cléopâtre*, 1648, *Faramond*, 1661, and sev. plays including *Bradamante*, *Jeanne d'Angleterre*, and *Le Comte d'Essex*, 1658. His works are set in a pseudo-historical

background, his heroes and heroines being mere idealisations of the lords and ladies he had met in the Parisian salons. Like all such prolix romances those of La C. are unreadable now, though his reputation endured till the 18th cent. See E. A. Scyllière, *Le Romancier du Grand Condé*, 1921, and S. Pitou, *La Calprenède's 'Faramond'*, 1938.

**La Carlota**, see CARLOTA, LA.

**Laccadive Islands**, group of 14 low coral is. in the Indian Ocean (9 inhabited), 200 m. W. of the Malabar coast, included in the Madras state. A coral reef extends round each of the is. and forms a lagoon where *coir* (coco-nut fibre), the staple product, is soaked. Vasco da Gama discovered the group in 1499.

cloths, eccles. vestments, and jabots. The art of L. making spread through Italy into France, where Alençon became the chief centre (see Despierres, *Histoire du Point d'Alençon*, 1886). A robe of Alençon L. made for the Empress Eugénie took 36 highly skilled L. makers 1½ years to make. It is now in the museum at St Gall. Colbert, a king's minister in the 17th cent., is considered the founder of the Fr. L. industry. One of the earliest pattern books was pub. in 1527 by Pierre Quintz of Cologne, under the title of *New and Subtle Book concerning the Art and Science of Embroidery, Fringes, Tapestry making, as well as other Crafts done with the Needle. Point de France* was first produced in imitation of the

NEEDLE-POINT LACE: SEVENTEENTH CENTURY

**Laccolith**, or **Laccolite**, intrusion of igneous rock between 2 strata. The characteristic shape is that of a plano-convex lens, being flat underneath and arched above. Ls were probably formed by intrusion of molten rock of a fair degree of viscosity, with sufficient internal pressure to cause arching of the superincumbent strata.

**Lace**, ornamental textile fabric with an openwork pattern produced by means of cotton, linen, silk, nylon, or gold threads. There are three distinct varieties of L., needle-point, pillow, and machine made.

**Needle-point or point lace** dates from the 16th cent. L. is mentioned in early Eng. documents prior to that date, but it was probably cord or braid twisted or plaited together and used as a strap or tie. Point L. made by the needle is associated with Venice, where the earliest point L. (*Punto in Aria*) was made. The designs used in this kind of L. were generally stiff and geometrical in form. Rose point (*Gros Point de Venise*) dates as far back as 1640, and was done in relief. The main pattern was held together by bridges and bars or ties, while solid knots, stars, and flowers were worked into the design. This kind of L. was used principally for altar

Venetian designs, but later distinctive patterns came to be used in France, Spain, and Flanders. Point L. made in Brussels differed in that the flower or star ornament was made separately and sewn on to the réseau or ground work.

**Pillow lace** is made by hand with bobbins and thread on a pillow. It is supposed to have been invented by Barbara Uttman of St Annaberg, Saxony, in the mid 16th cent., but it must have been known in Flanders by the end of the 15th cent., according to a picture painted in 1495 by Quentin Matsys. As many as 1000 bobbins may be employed at a time for the more elaborate patterns. Mechlin, Valenciennes, Brussels, Torchon, Honiton, Buckingham, and Bedford are all known for their own kinds of pillow L. A beautiful Honiton flouncing was made for Queen Victoria at a cost of £1000. Irish L. has its own distinctive patterns and Limerick L. is similar to a Belgian type.

**Machine-made lace** dates from the latter half of the 18th cent., when many attempts were made in Nottingham to manuf. a net on the stocking frame which could be used as a background for pillow L. The net made on this machine was not

Argolis, and terminated southwards in the twin promontories of Taenarum (Cape Matapan) and Malea. In the E. part of the dist. stood Sparta (q.v.) otherwise known as Lacedaemon, on the R. Eurotas. Off the coasts of L. there was caught a shell-fish which yielded a purple dye inferior only to that of Tyre (q.v. and see MUREX). In modern Greece L. is a dept with a pop. of 131,000.

2. City in New Hampshire, U.S.A., co. seat of Belknap co., on the Winnepesaukee R., 24 m. N. by E. of Concord. Mt Belknap is 5 m. distant. L. has extensive manufs. of machinery, hosiery, woollen goods, metal products, skis, and boats. It is a resort area. Pop. 14,575.

**Lacordaire, Jean Baptiste Henri Dominique** (1802-81), Fr. preacher, b. Recoy-sur-Ouise, Côte-d'Or. He was ordained priest in 1827, and was chaplain to a convent and to the Collège Henri IV. He began his Christian 'conferences' at the Collège Stanislas (1834), which paved the way for his eloquent sermons delivered at Notre Dame (1835-6). In 1838 he joined the order of Friars Preachers or Dominicans; was clothed with the habit of that order at the Minerva in Rome, assuming the name Dominique; prepared his *Mémoire pour le rétablissement en France de l'ordre des frères prêcheurs*, 1838, and collected materials for his *Life of St Dominic*, 1841. From 1843 to 1851 he continued his 'conferences' at Notre Dame, his funeral orations being especially famous. But the best of his sermons were his last, delivered at Toulouse in 1854, a series on the Christian life. In 1860 he was elected a member of the Academy, succeeding De Tocqueville. His works include *Considérations sur le système Philosophique de M. de Lamennais*, 1834, *Conférences de Notre Dame de Paris*, 1835-51, *Conférences de Toulouse*, 1854. His complete works were pub. in 1872. See lives by C. de Montalembert, 1862 (Eng. trans. 1863); B. Chocarné, 1866, and J. Honnet; also G. Ledos, *Morceaux choisis et bibliographie de Lacordaire*, 1923.

**Lacquer and Lacquering**, originally used to describe the composition used in China, Japan, and other E. countries for the preservation and ornamentation of such substances as metal, wood, leather, etc. The famous lacquerware of the Japanese consists of wood which has been treated with the sap of *Rhus vernicifera*, which provides a very hard, tough, and durable finish of great brilliance and permanence. The process was very tedious, owing to the number of coats of the L. or varnish (q.v.) which were needed to produce the desired degree of finish. In recent times the term L. has ceased to have a precise meaning. The term is sometimes applied to such materials as solutions of shellac and other resins, but in the main is taken to refer to the nitrocellulose finishes. The main ingredients of nitrocellulose finishes are nitrocellulose (or nitro cotton, pyroxylin, or collodion cotton as it is variously known), resin, plasticiser, solvent, and pigment. The nitrocellulose provides a tough, hard film;

resin improves the gloss and adhesion; plasticisers provide flexibility; solvents reduce the viscosity to a point where the L. can be brushed or, more usually, sprayed; whilst the pigment gives colour and opacity. Clear L.s are made in a similar manner except that the pigment is omitted. The resin most frequently employed is ester gum (rosin, esterified with glycerine), but other resins, including the natural resins, can be used. The plasticisers mostly used are dibutyl phthalate, tricresyl phosphate, castor oil, and certain alkyl resins. A very wide range of solvents and partial solvents is used, particularly the esters, ketones, coal-tar hydrocarbons, and the alcohols. The pigments used are similar to those used in paints (q.v.) but owing to the low solids content of nitrocellulose L.s, only the strongest are employed. Ball mills are used for manuf.

**Lacretelle, Jacques de** (1888-), Fr. novelist and essayist, b. Château de Cormatin in Burgundy, of distinguished literary forbears, and educ. at the Lycée Janson. He studied Eng. literature at Cambridge. His chief novels are *Silbermann*, 1922, an objective study of a Jewish boy in conflict with his Aryan schoolfellows; and *La Bonifas*, 1925, a study in introspective psychology. He shows a preference for solitaires, whose psychological constitution he acutely analyses; this is exemplified in his *La Vie inquiète de Jean Hermelin*, his first novel, 1920, and, much later, in *Le Retour de Silbermann*, 1939, a story showing the influence of Gide. Other works: *Les Hauts-Ponts*, a novel in 4 parts, 1932-3; *Quatre nouvelles italiennes* and *L'Âme cachée*, short stories, 1928; *Lettres espagnoles*, 1926; *Les Auteurs étudiés*, essays 1934; *L'Écrivain public*, 1936; *Liberations*, 1945. He was made a member of the Fr. Academy, 1938. See E. Bendz, *Visages d'écrivains*, 1947.

**Lacretelle, Jean Charles Dominique de** (1766-1855), Fr. politician and historian, b. Metz. In 1809 he was made prof. of hist. in the Paris Faculté des Lettres; in 1810 censor of the press; in 1811 a member of the Fr. Academy, and in 1816 its president. His works include *Précis historique de la Révolution française*, 1801-1806, *Histoire de France pendant le dix-huitième siècle*, 1808, and *Histoire de France pendant les guerres de religion*, 1814-16.

**Lacroix, Paul** (1806-54), Fr. author, b. Paris. He was a prolific writer, one of his chief works being *Le Moyen Âge et la Renaissance* (produced 1847, with Séré), a book on the manners, customs, and dress of those times. Besides his numerous historical romances, he also pub. elaborate works, *Histoire de la prostitution*, 1851-1852, *Histoire du XVI<sup>e</sup> siècle en France*, 1834-5, and *Histoire politique, anecdotique et populaire de Napoléon III*, 1853-4. He is best known as 'P. L. Jacob, Bibliophile', a name suggested by his constant interest in libraries. In 1855 he was keeper of the Arsenal Library.

**Lacroma**, small is. off Dubrovnik (q.v.). **La Crosse**, city, co. seat of La C. co.,

Wisconsin, U.S.A., on the Mississippi R. (bridged) at the mouths of the La C. and Black R.s, 125 m. WNW. of Madison. It is the shipping, manufacturing, and distributing centre for a rich agric. region. It has lumber-mills, quarries, and manufs. farm implements, machinery, and air-conditioning equipment. La C. is the seat of Viterbo College, and a Wisconsin state college. Pop. 47,500.

**Lacrosse**, national ball game of Canada, derives its name from the resemblance of the curved netted stick, with which the

1881, and inter-varsity matches were instituted in 1903. L. matches were played at the Olympic Games of 1908, 1928, and 1948; teams from the U.S.A. toured Britain in 1948, 1950, and 1954.

The object of the game is the same as that of football and hockey, to score goals. The goals must be at least 90 and not more than 110 yds apart; they are 6 ft by 6 ft, and are set up in the middle of the goal crease, a circle of 3 yds radius marked out with chalk. A net is drawn from the top rail and sides of the goal posts to a point

*Sport and General*

**WOMEN'S LACROSSE AT PARK ROYAL: ENGLAND v. UNITED STATES OF AMERICA**

game is played to a bishop's crosier. The game has its origin in a similar pastime of the N. Amer. Indians, in which whole tribes used to take part. In 1867 Governor Beers suggested the adoption of L. as the national game of Canada, and the National L. Association of Canada was formed; since then the game has flourished greatly in Canada and to a less extent in the U.S.A. L. was first seen in England in 1867. The Eng. L. Union was formed in 1868, but the game was very little played in England until 1902. In that year the Toronto L. Club sent a team over to play the representative clubs of England and Ireland. The club's visit and that of the Ottawa club in 1907 have done a great deal to popularise the game. Matches between the N. and S. of England have been played since 1882 and a co. championship was started in 1905. England played Ireland for the first time in

6 ft behind the middle of the line between the posts. The side boundaries are agreed on by the captains. No spikes may be worn on the shoes. The ball is made of solid indiarubber, and must weigh between 4½ and 5 oz., and be between 7½ and 8 in. in circumference. The 'crosie' is a light staff of hickory wood, with the top bent in the form of a hook, from the tip of which a thong is drawn down and fastened to the shaft about 2 ft from the handle. It may be of any length, but must not be broader than 1 ft in any part, and no metal may be used in its manuf. Across this frame is a loose network of gut or rawhide. A team consists of 12 players—a goalkeeper, point, cover-point, third man, right and left defence fields, a centre, right and left attacks, and 3 home fields. Each player, save the goalkeeper, is directly marked by an opponent. The game is opened by the 2 opposing centres

'facing' the ball. In the men's game each centre stands with his left shoulder to his opponent's goal and his crosse held wood downwards on the ground; the ball is placed between the backs of the crosses which are drawn smartly apart along the ground to bring the ball into play. In the women's game, the crosses are held in the air at hip level, parallel to the centre line, wood downwards, with the ball held between them; to bring the ball into play the crosses are drawn up and away from each other. No player may handle the ball save the goalkeeper, and he only when saving a shot. For a foul the player is either suspended until a goal is scored or until the termination of the game, or a 'free position' (a free kick at football) is given. No charging is allowed, but a player may stand in front of an opponent without touching him. If the ball crosses the boundary line it is 'faced' by the 2 nearest players, the rest remaining where they were. There is no 'offside' rule. The ball is carried on the crosse with a peculiar rocking motion, which is only learnt by practice. The men's game is played for 2 periods of 45 min., the women's for 2 periods of 25 min. See M. Boyd, *Playing Lacrosse*, 1950.

**Lactantius, Lucius Casellius Firmianus** (c. 250-317), Christian writer and teacher of Lat. eloquence, was probably a native of Italy, but studied in Africa. About 301 he settled at Nicomedia at the invitation of Diocletian, and about 13 years later went to Gaul to superintend the education of Crispus, son of Constantine. His chief work is *Divinarum Institutionum Libri VII*. His other works include *De Mortibus Persecutorum*, *De Ira Dei*, and *De Opificio Dei*. The purity of L.'s style is often marred by an inadequate grasp of philosophy and theology. The complete works are printed by S. Brandt and G. von Laubmann in *Corp. Script. Eccl. Lat.*, xix and xxvii, 1890-5. See R. Pichon, *Lactance*, 1901.

**Lacteal**, any one of the lymphatic vessels that take up the chyle absorbed from the mucous membrane of the intestines and carry it to the thoracic duct (q.v.). Chyle, the product of fat-digestion, has a milky-white appearance, and this appearance is communicated to these vessels when full; hence the name.

**Lactic Acid**, molecular formula  $C_3H_5O_3$ , organic acid occurring in sour milk. The names ethylidenelactic acid and ethylene-lactic acid are sometimes applied to the isomers  $\alpha$ -hydroxypropionic acid and  $\beta$ -hydroxypropionic acid respectively. The former, whose structural formula is  $CH_3\cdot CH(OH)\cdot CO_2H$ , is the one formed by lactic fermentation of sugars, starch, etc., and is more particularly entitled to the name L. A.; the latter,  $CH_3(OH)\cdot CH_2\cdot CO_2H$ , is not formed during lactic fermentation, but behaves in many respects like L. A.; it is otherwise known as hydracrylic acid. There are still 2 more isomers of formula  $C_3H_5O_3$ : sarcosic acid, which occurs in extract of meat, and an acid of similar constitution formed in the lactic fermentation of cane-

sugar; these are mainly to be distinguished by their optical properties. L. A. is a sour, syrupy liquid, miscible with water and alcohol in all proportions. It cannot be distilled, as it decomposes at a moderately high temp. It forms metallic salts, which are known as lactates, some of which are used in mordanting cotton, wool, and calico. L. A. is important in tanning, in medicine, and in the perfume industry. Esters of L. A. are used as plasticisers. It is manuf. by the fermentation of starch, maize, etc., by organisms such as *Bacillus aceti lactici*. The commercial acid contains 80 per cent L. A.

**Lactic Acid Therapy**, system of treating intestinal disorders and general weakness by the administration of sour milk, or of preparations containing lactic acid. The sour milk theory owed its popularity to the writings of Elie Metchnikov of the Pasteur Institute at Paris. Many digestive troubles are due to the action of bacteria in causing putrefaction within the intestines, thus giving rise to changes which in the main are detrimental to health, though some of them undoubtedly assist the absorption of food material. Metchnikov proposed to fight the noxious bacilli with other bacilli whose action is conducive to good health. The precise manner in which the lactic bacillus or its products aids digestion is a matter of doubt, and the treatment cannot be unreservedly recommended in all cases. The marvellous longevity among peoples to whom sour milk is an everyday article of food, and the testimony of many patients who have experimented with the treatment, brought Metchnikov's theories into good repute. Many preparations are now produced from soured skim milk under various trade names. The bacteria concerned are *Lactobacillus acidophilus* and *Bacillus bulgaricus*; they are usually obtained from pure cultures, and are introduced into the skim milk when it has cooled after boiling. The souring is then allowed to go on until the casein in the milk is on the point of coagulation. More recent work does not confirm all of Metchnikov's claims that *Lactobacillus acidophilus* is the only bacterium capable of producing beneficial results, and must be directly introduced into the intestine in specially inoculated soured milk. This is efficacious in curing constipation, diarrhoea, and some other intestinal disorders. See E. Metchnikov, *The Prolongation of Life* (trans.), 1907, and N. Kopelov, *Lactobacillus acidophilus*, 1926.

**Lactose, or Milk-sugar** ( $C_{12}H_{22}O_{11}$ ), sugar found in the milk of all mammals to the extent of about 4 per cent. It may be prepared by separating the casein of milk with rennet, and evaporating the remainder; crystals of L. are formed and may be purified by recrystallising from water. L. is not so sweet as sugar-cane, but is much more easily digested by infants, so that cow's milk adapted for use in babies' feeding bottles is commonly sweetened with it.

**Lacus Verbanus**, see MAGGIORE, LAKE.

**Lacy, Franz Mauritz** (1735-1801), Austrian soldier. *b.* St Petersburg, the son of Peter L. (q.v.), he entered the Austrian service and in 1758 became chief of staff to Daun, directing much of Austrian strategy in the Seven Years War. After peace-time work in army reform L. commanded Austrian troops in the War of the Bavarian Succession, and against the Turks.

**Lacy, Peter, Count** (1678-1751), Irish soldier and Russian field-marshal. *b.* Limerick. He entered the Russian service in 1697, and in 1725 was appointed commander-in-chief in St Petersburg, Ingria, and Novgorod. He took part in the war for the estab. of Augustus of Saxony on the throne of Poland (1733-5), and was made field marshal (1736). The same year he succeeded in reducing Azov, then in the hands of the Turks, and in 1741, being appointed to command against the Swedes in Finland, seized the important Swedish post of Wilmanstrand. L. has been called the 'Prince Eugène of Muscovy.' He did much to reform the Russian Army.

**Ladakh**, mountainous prov. in the valley of the upper Indus lying about 13,000 ft above sea level, between the Karakorum and the Himalayas. It now forms part of Kashmir, but was originally a div. of the Tibetan empire. The cap. is Leh. The chief riv. is the Indus.

**Ladas:** 1. Famous Gk runner in the time of Alexander the Great, native of Laconia, who gained the victory at Olympia in the *dolichos* (long course of 20 stades). A monument was put up to his memory on the banks of the Eurotas, and there was also a fine statue of him by Myron (c. 430 bc) in the temple of Apollo Lycius at Argos.

2. Native of Aegium in Achaea, who gained a victory in the foot race at Olympia in 280 bc.

**Ladd, George Trumbull** (1842-1921), Amer. philosopher, *b.* Painesville, Ohio. He held the chair of philosophy in Bowdoin College in 1879, and was Clark prof. of metaphysics and moral philosophy at Yale, 1881-1901, becoming prof. emeritus in 1905. Among his works are *Elements of Physiological Psychology*, 1887, *Primer of Psychology*, 1894, *Psychology, Descriptive and Explanatory*, 1894, *Philosophy of the Mind*, 1895, *A Theory of Reality*, 1899, *Philosophy of Religion*, 1905, and *Knowledge, Life, and Reality*, 1909.

**Ladders**, see SCALING LADDERS.

**Ladin**, or **Ladino:** 1. Romance dialect known as Romansch (q.v.) or Rumanash; it is found in its purest form in the Grisons, Switzerland, particularly in the Engadine and neighbouring valleys. It took its origin from the 'lingua rustica Romana' of the later empire. It has little literature, but among the writers in it have been Johann von Travers, Conrad von Fugl, and S. F. Caderes. An excellent L. dictionary by Zaccaria Pallioppi appeared in 1895. See C. Battisti, *Popoli e lingue nell'Alto Adige*, 1931.

2. The vernacular speech of Jews of Sp. and Portuguese origin, also known as

Judezmo or Judaeo-Spanish, which is mainly based on Old Castilian.

3. The Old Castilian language.

**Lading**, Bill of, see BILL OF LADING.

**Ladsmith**, tn of Cape Prov., S. Africa, in the Little Karroo, 1767 ft above sea level, in the midst of fine mt scenery. It is a farm centre, producing grain, fruit, feathers, and brandy. Like Ladysmith (q.v.) L. was named in honour of the wife of Governor Sir Harry Smith. Pop.: Whites, 1315; Others, 2309.

**Lado Enclave**, region W. of the Upper Nile and NW. of Lake Albert. Originally administered by the Congo Free State, being leased in 1894 to Leopold II, King of the Belgians for his life (he d. 1909). Now included in the Mongalla dist. of Sudan, part in N. Uganda, to which it was transferred in 1914. Lado, on the Nile, 11 m. S. of Mongalla, was the cap. It was named from Mt Jebel Lado (2500 ft), and had an area of 15,000 sq. m.

**Ladoga, Lake**, largest lake in Europe (except the Caspian Sea), situated in NW. Russia, lat. 59° 56' to 61° 46' N. long. 29° 53' to 32° 50' E., bordering upon the Leningrad oblast and the Karelian Autonomous Rep. Area 7230 sq. m. The main inflowing rivs. are the Volkhov, Svir', and Vuoksa, and the outlet is by way of the Neva into the Gulf of Finland. Maximum depth, 780 ft. L. is subject to violent storms, and therefore a chain of navigable canals has been constructed round the S. shores. There is a famous monastery on the Valaam is. (q.v.). Much fighting for the lake took place between Russia and Finland, 1939-40, and again in 1944.

**Ladrones**, or **Marianne Islands** (**Marianas**), group of is. in the Pacific Ocean. They are 15 in number, 10 of which are of volcanic origin, and of these only 4 are inhabited, while the other 5 are coralline limestone is. All of them are densely wooded and the vegetation is luxuriant, the chief productions being coco-nut and areca palms, yams, manioc, coffee, cocoa, and sugar. The is. were discovered by Magellan in 1521, and called 'Islas de los Ladrones' by his crew on account of the thieving propensity of the inhab. They were originally the property of Spain, but Guam (q.v.), the largest, was ceded to the U.S.A. in 1898, and the rest were sold to Germany in 1899. In 1914 they were occupied by the Australians, but after the First World War were put under Jap. mandate. In the Second World War their strength and geographical position made the Marianas a highly strategic part of the Jap. system of is. fortresses, and formed one of the main barriers defending the seas between Japan and the Philippines. In 1944 they were captured by the U.S. forces. (See further PACIFIC CAMPAIGNS, OR FAR EASTERN FRONT, IN THE SECOND WORLD WAR.) On 19 July 1947 the U.S.A. formally took over the rule of the former Jap. mandated is. in the Pacific under U.N. trusteeship. All these is. had been administered by the Amer. Navy since their capture. Area 370 sq. m.; pop. 30,000. See L. M.

Thomson, *Archaeology of the Marianne Islands, 1922, and Guam and its People, 1942*, and T. Janahara, *Pacific Islands under Japanese Mandate, 1940*.

**Lady**, term used as the feminine of gentleman, or in a more confined sense as a title corresponding to lord. It is borne by the wives of peers and the daughters of dukes, earls, and marquesses, who are designated by the title L. prefixed to their Christian name. The wives of baronets and knights are also called L., but the title is prefixed to the surname only.

**Lady Chapel**, chapel dedicated to the Virgin Mary, usually a prolongation of the choir, built eastward of the high altar and projecting from the main building, but often an extension of a side aisle.

**Lady Day** (25 Mar.), festival of the Annunciation of Our Lady, the Blessed Virgin Mary. It is one of the four Eng. quarter days.

**Lady Margaret Hall**, college at Oxford for women students, named after the Countess of Richmond and Derby, mother of Henry VII. It was founded in 1878 according to the principles of the Church of England, but with full religious liberty for the members of other denominations.

**Ladybank**, burgh, par., and tn of Fifeshire, Scotland, 5 m. SW. of Cupar. It is an important railway junction, and a picturesque summer resort. There are malting works, farm mechanisation distributors, and repair shops. Pop. 1200.

**Ladybird**, popular name of the numerous species of polymorphous Coleoptera belonging to the family Coccinellidae, and remarkable for their beautiful variety of colouring. Their chief characteristic is the curious formation of the tarsi, of which only 3 of the 4 segments are visible, the third being sunk in the second; the antennae are short and slightly clubbed, and the head is largely concealed by the thorax. There are 2000 species, generally of a bright red or yellow colour, with black or coloured spots.

**Ladybrand**, tn of the Orange Free State, named after the wife of President Brand. Because of its extremely bracing climate it is much frequented as a health resort. Remarkable Bushmen paintings are found in nearby caves depicting Bushmen repelling non-Bantu invaders. Pop.: Whites, 2322; Bantu, 3991; Others, 143.

**Lady's Mantle**, see *ALCHEMILLA*.

**Lady's Smock**, see *CARDAMINE*.

**Lady's Tresses**, see *SPIRANTHES*.

**Ladysmith**, tn in Natal, S. Africa, founded in 1851 and named after the Sp. wife of Sir Harry Smith, governor of the Cape 1847-52. L. was besieged by the Boer forces from 1 Nov. 1899 until relieved on 28 Feb. 1900. During the siege 3200 Brit. soldiers were killed or d. of disease. The Boers under Gen. Joubert agreed to the evacuation of the women and children to Ntombi Camp which was regarded as neutral ground. L. is a good centre for touring and is within easy reach of the Drakensberg Mts. Pop.: Europeans, 5439; Bantu, 12,000.

**Lae**, seaport and former cap. of the

Australian mandated ter. of New Guinea. It is situated in the Morobe dist. at the head of Huon Gulf at the mouth of the Wussi (Markham) R. After the volcanic eruption of 1937 in Blanche Bay, it was decided to move the seat of gov. from Rabaul (in the is. of New Britain) to L. L. remained the seat of administration until it was evacuated after the Jap. attacks in Jan. 1942. It was recaptured by Australian forces on 18 Sept. 1943. (For an account of the fighting for L. and Salamana see *PACIFIC CAMPAIGNS IN SECOND WORLD WAR*.) Little remained of L. after the war, and, except for the aerodrome there, L. has nothing to-day, not even a good harbour.

**Laelia**, genus of Orchidaceae, of about 35 species, all of which occur wild in tropical America, and many of which are epiphytes. The leaves are fleshy and the flowers very beautiful, for which reason they are often cultivated in Britain. *L. anceps*, bearing lilac-coloured flowers, *L. cinnabarina*, cinnabar-red flowers, and *L. pumila*, rose-purple, are popular species. *Laeliocattleya*, hybrids of the orchid genera *Laelia* × *Cattleya* which are found in nature, as well as being propagated. Their numbers exceed 2000.

**Laennec, René Théophile Hyacinthe** (1781-1826), Fr. doctor, b. Quimper in Brittany. He is famous as the inventor of the stethoscope, as well as for his numerous writings, among which may be mentioned *De l'Auscultation médiate*, 1819, which revolutionised the study of diseases of the chest and has been trans. into many languages; *Histoire d'inflammations de poitrine*, 1801, and *Observations sur les fièvres intermittentes*, 1807. L. also ed. the *Journal de Médecine*, and was physician to the Hôpital Necker for some years. He occupied the chair of medicine at the Collège de France in 1822, and was a member of the Royal Academy of Medicine. See life by R. Kervran, 1956.

**Laer, Pieter van**, see *BAMBOCCIO*.

**Laërtes**: Legendary King of Ithaca

and father of Odysseus, son of Acrisius and Chalcomedusa and husband of Anticleia. In youth he conquered Nericum and joined in the Calydonian hunt and the expedition of the Argonauts. While Odysseus was at Troy he lived in retirement, but after his return was rejuvenated by Athena.

**Laërtius, Diogenes**, *see* **DIOGENES**.

**Laess**, Dan. Is. in the Cattegat. The inhab. are engaged chiefly in the production of salt. There is little good soil, for the surface of the is. has been denuded of trees to provide fuel for the boiling of sea-water for the salt industry. Area 44 sq. m.: pop. 3250.

**Laetare Sunday**, name given in the Rom. Catholic Church to the fourth Sunday in Lent, so called from the opening words of the Introit in the mass on that day. *See* **GOLDEN ROSE**.

**Laevulose**, *see* **FRUCTOSE**.

**La Farina, Giuseppe** (1815-73), It. his. torian, who pub. sev. Liberal newspapers. In Florence he estab. in 1847 *L'Alba*, a democratic jour. advocating It. freedom and unity, but went back to Sicily on the outbreak of the revolution, and was exiled in 1849. In 1850 he pub. his *Storia documentata della Rivoluzione Siciliana del 1848-49*, 1850, and *Storia d'Italia del 1815-1848* (6 vols.), 1851-5.

**La Fayette, Gilbert Motier de** (c. 1380-1402), marshal of France, was descended from an anct family of Auvergne. In 1420 he was created marshal of France for his successes over the English and Burgundians on the Loire. He was in command of the troops at Bauge in 1422, and fought with Joan of Arc at Orleans 1429.

**La Fayette, Marie Joseph Paul Roch Yves Gilbert Motier, Marquis de** (1757-1834), Fr. general and politician, b. in the château de Chavagnac in Auvergne. He inherited his estates at the age of 13, and having served as sub-lieutenant under Noailles for a period, quitted France and sailed for America in 1777 to aid the colonists. He distinguished himself on the side of Washington, especially at the defence of Virginia in 1781 and at the battle of Yorktown in 1782. He had been made a major-general in the Fr. Army (1781), and in 1787 took his seat in the Assembly of Notables and demanded the convocation of the States-General, thus becoming a leader in the Fr. Revolution. In 1789 he was elected to the States-General, and being made vice-president of the National Assembly laid on the table a declaration of rights based on the Amer. Declaration of Independence. The same year he was chosen colonel-general of the new National Guard, and it was he who proposed the combination of colours now in the tricolour cockade of France. His position was difficult; although he struggled for order and humanity, the Jacobins detested his moderation, and the court hated his reforming zeal. He supported the abolition of title and all class privileges, but the hatred of the Jacobins increased and he was compelled to take refuge in Liège. He was imprisoned by

the Austrians for 5 years, but released by Napoleon, and again was a leader of the opposition (1825-30). During the revolution of 1830 he resumed his leadership of the National Guard, but was as unsuccessful as before. *See* *Mémoires, correspondances et manuscrits du général La Fayette*, pub. by his family, 1837-8; P. Guedalla, *Father of the Revolution*, 1926; M. de la Bedoyère, *Lafayette, a Revolutionary Gentleman*, 1933; M. de La Fuye, *Apostle of Liberty*, 1956. The life by A. Lutzko, 1933, contains a bibliography.

**La Fayette, Marie Madeleine Pioche de la Vergne, Comtesse de** (1634-93), Fr. author. b. Paris. She studied Greek,

Garnier

MME DE LA FAYETTE

Latin, and Italian, one of her tutors being Gilles de Ménage. She was friendly with Mme de Sévigné and intimate with La Rochefoucauld, this liaison lasting until his death. Her first novel, *La Princesse de Montpensier*, appeared in 1662, *Zayde* in 1670, *La Princesse de Clèves* in 1678. The last, her *chef-d'œuvre*, which gives a vivid picture of the court life of her day, bears a striking contrast in its simplicity to the lengthy and extravagant romances of the time. With its subtle study of emotions, it is one of the earliest psychological novels, and an important event in the hist. of the Fr. novel. In 1724 she wrote her last novel, *La Comtesse de Tende*. She also wrote *Histoire de Madame Henriette d'Angleterre* (pub. 1720). *See* C. Sainte-Beuve, *Portraits des femmes*, 1869; D. Haussenville, *Madame de La Fayette*, 1891; H. Ashton, *Mme de La Fayette, sa vie et ses œuvres*, 1922; F. Stryer, *Essai sur l'œuvre de Mme de La Fayette*, 1944.

**Lafayette:** 1. City, co. seat of Tippecanoe co., Indiana, U.S.A., on the Wabash R., in grain, live-stock, and coal area, 53 m. NW. of Indianapolis. It has meat-packing plants and foundries, and manufs. rubber, paper, electrical appliances, etc. It is the seat of Purdue Univ (14,000 students). Pop. 35,600.

2. City of Louisiana, U.S.A., on the Vermillion Bayou, 145 m. W. of New Orleans. It is an important shipping centre, and has railway shops, canneries, sugar refineries, and other plants. Pop. 33,500.

'Lafayette' (Fr. liner), see 'NORMANDIE.'

La Ferté, see FERTÉ-SOUS-JOUARRE.

Laflite, Jean, see BARATARIA.

La Follette, Robert Marion (1855-1925), Amer. politician, popularly known as 'Fighting Bob.' b. Dane co., Wisconsin, and educ. at Wisconsin Univ. He entered politics as a Republican, and served 3 terms in Congress from 1885 to 1891, after which he was governor of the state for 2 terms from 1901 to 1905. In the latter year he was elected to the U.S. Senate, serving in it until his death. In 1912 he and his friends founded the Progressive party, bitterly assailing President Taft for signing the Payne-Aldrich Tariff Bill, which revised the tariff upwards. In 1924 he and his friends formed a new Progressive party, and he was nominated as president but only succeeded in capturing the electoral votes of his own state.

La Fontaine, Jean de (1621-96), Fr. poet, b. at Château-Thierry in Champagne. On both sides his family was of the highest prov. class, but was not noble. His father was *maître des eaux et forêts* and was well-to-do. Jean, who was the eldest child of his parents, was educ. at the local grammar school of Château-Thierry, and at the close of his schooldays entered the oratory and seminary of St Magloire, with a view to taking holy orders, but quickly found that he was entirely unsuited to that calling. He then studied law and was admitted *avocat* but did not practise, for about that time his father assigned his rangership to his son and arranged a marriage for him with a pretty girl of 15, Marie Héricart, of whom La F. soon grew tired. One son was born to them and was taken care of wholly by his mother. In 1659 La F. agreed to a div. of property and left his wife. He settled in Paris where he came under the influence of different patrons belonging to the nobility—the Duchesse de Bouillon, the Prince de Condé, Mme de la Fayette, and the beautiful Mme de la Sablière, a woman of high character and considerable intellectual power, who invited La F. to make his home in her house. Here he worked and lived for 20 years, drifting into that careless and easy-going existence which lasted till his conversion, just before his death, after an energetic young priest, M. Poucet, had brought La F. to realise and to acknowledge the impropriety of the *Contes*. Although Mme de la Sablière later had given herself up almost entirely to good works and religious exercises, La

F. still remained as an inmate of her house till her death in 1693. He himself only survived her about 2 years, and was buried in the cemetery of the Holy Innocents. From childhood he began to write verses, and in 1654 pub. a verse trans. of the *Eumuchus* of Terence. This got him an introduction to Fouquet, the *Mæcenas* of Fr. literature at the time, who awarded him a pension of 1000 francs for a piece of verse quarterly. After this he took up writing seriously for a time, and produced *Le Songe de Vaux*, 1659, a medley of prose and poetry on Fouquet's country house, and *Les Rieurs du Beau-Richard*, a ballad, the same year. But La F., though a charming and gifted writer, was dissipated and idle, and it was not until 1684 that he

LA FONTAINE

produced anything of importance. In this year the first book of his *Contes* appeared, the subjects of which are taken from Boccaccio, Ariosto, Machiavelli, and other writers. The stories are admirably told, but the book is coarse. In 1668 his *Fables choisies mises en vers* appeared, and in 1669 *Les Amours de Psyché et de Cupidon*. The *Fables*, which are free from the impropriety of the *Contes*, are known universally, and are generally regarded as his masterpiece. They exhibit the fecundity and versatility of the author, and what perhaps is the greatest praise, given by De Sacy, they give delight to 3 sev. ages—to the child by their freshness and vividness, to the student on account of their perfect art, and to the man of the world on account of the subtle reflections on character contained therein. In his *Fables* La F. invented nothing. He found his subjects in numerous sources—Aesop, Phaedrus, Babrius, and other ancient, or in 18th-cent. writers such as Des Périers, Rabelais, and Marot; but, having taken his subject, he transformed it by his wonderful gifts as a poet and psychologist. La F. was received into the Academy in 1684. See C. Walckenaer, *Histoire de la vie et des ouvrages de La*

*Fontaine*, 1820; H. Taine, *La Fontaine et ses fables*, 1853, and many later eds.; R. Bray, *Les Fables de La Fontaine*, 1929; J. Vianey, *La Psychologie de La Fontaine*, 1939; E. Baudin, *La Philosophie morale des Fables de La Fontaine*, 1951; lives by G. Michaut, 1912-14, and A. Bally, 1937; also Eng. trans. of the *Fables* by Sir E. Marsh, 1931.

**Lafontaine**, Sir Louis Hyppolyte (1807-1864), Canadian statesman, b. Lower Canada. Educ. at Montreal, he became a barrister. In 1830 he became a member of the Legislative Assembly, and about 1839 leader of the *parti prêtre*. He was opposed to the union of Upper and Lower Canada in 1840. He was an M.P. in 1841. In 1842 he joined with Robert Baldwin in forming the first Baldwin-L. administration, holding the portfolio of attorney-general for Lower Canada, but, disagreeing with Sir Charles Metcalfe, he resigned in 1843. In opposition until 1848, he was then called upon by Lord Elgin to form the so-called second Baldwin-L. administration, in which he was again appointed attorney-general; it was he who introduced the Rebellion Losses Bill of 1848, the passing of which finally estab. the triumph of responsible or parl. gov. in Canada. This marked the height of his parl. career and thenceforth he was more conservative in his outlook, particularly on the controversial questions of the abolition of seigniorial tenure and the secularisation of the clergy reserves. Resigned 1851 and withdrew from public life; but in 1853 became chief justice of Lower Canada, which position he held until his death. Baronet, 1854. He collaborated with Jacques Viger in *De l'esclavage en Canada*, 1859. See S. Leacock, *Baldwin, Lafontaine, Hincks*, 1907.

**Laforgue**, Jules (1860-37), Fr. poet, sometimes called by his enthusiastic friends the Fr. Heine, b. Montevideo, of Fr. parents originally from Brittany. When a mere boy he returned to Tarbes, where he was educ., and afterwards lived in Paris, where he studied at the Lycée Condorcet. Through Paul Bourget he obtained the post of Fr. reader to the Ger. Empress Augusta. He held this post from 1881 to 1886. In his leisure moments he studied English and German and wrote verses. He married Leah Lee, a young Eng. girl, and settled in Paris, but succumbed to tuberculosis in a few months. He was one of the first to use the 'vers libre.' His work is often marked by a bitter irony, the result of his foreknowledge that all things were to be brief for him. His best books of verse are *Les Complaintes*, 1885, and *Imitation de Notre-Dame la lune*, 1886. His most famous prose work is his short stories in *Mes moralités légendaires*, 1887. See life by J. Cousinier, 1925, and M. J. Durry, *J. La Forgue*, 1952.

**Lagarde**, Paul Anton de (1827-91), Ger. orientalist, b. Berlin, his real name being Böttcher, and L. being assumed in 1854. He studied Semitic languages, Coptic, Persian, Armenian, and other oriental tongues. He was prof. at Göttingen

Univ. from 1869 to his death. His works deal with Semitic philology, with the versions of the Bible, and with the hist. and geography of Persia and Armenia. He also wrote poetry, pub. the It. works of Giordano Bruno (q.v.), and took an active part in the Ger. Nationalist movement, being in favour of a Ger. national Church. His minor pubs. are collected in the following works: *Gesammelte Abhandlungen*, 1866; *Semitica*, 1878-9; *Orientalia*, 1879-80; *Mitteilungen*, 1888; *Deutsche Schriften* (4th ed.), 1903.

**Lagemann**, see LAYAMON.

**Lagenaria Vulgaris**, single species of its genus, is the Bottle Gourd of Asia and tropical Africa; an ann. climber, grown as a summer ann. in Britain.

**Lager Beer**, see BREWING, *Lager*.

**Lagerkvist**, Pär (1891- ), Swedish poet, playwright, and novelist, b. Växjö. At first influenced by expressionism, notably in his poems *Angest*, 1916, and *Kaos*, 1918, he later matured towards a critical humanism, already evident in his play *Han som fick leva om sitt liv*, 1928. He bitterly opposed the injustice and violence of the Hitler régime in his drama *Bödeln*, 1934, and the historical novel *Dödgräset*, 1944. He was awarded the Nobel prize for his moving novel *Barabbas*, 1951. His works have been trans. into many languages, and his influence on the writers of his generation has been considerable. See E. Hörnström, P. Lagerkvist, 1946; J. Möjberg, *Livsproblemet hos Lagerkvist*, 1951.

**Lagerlöf**, Selma (1858-1940), Swedish novelist and poet, b. Mårbacka. She taught at Landskrona, 1885-95. In 1890 she received a prize in a magazine for some chapters of *Gösta Berlings Saga* (pub. in 1891), and took up literature in earnest after 1895. In this, as in all her best work, there is a happy combination of past and present, myth and reality, faith and uncertainty, which has made her one of the most popular novelists of her time. She received a doctor's degree from Upsala Univ. in 1907, and gained the Nobel prize in 1909. Her works, trans. into many languages, include *Invisible Links*, 1894, *Miracles of Antichrist*, 1897, *From a Swedish Homestead*, 1899, *Jerusalem*, 1901, *The Adventures of Nils*, 1906, *Charlotte Lövensköld*, 1925, and *The Diary of Selma Lagerlöf*, 1937. She was the first woman to be elected a member of the Swedish Academy (1914). See W. A. Berendsohn, S. Lagerlöf, 1927; E. Wagner, S. Lagerlöf (2 vols.), 1942-3; J. Bäckmann, *Mitt liv med S. Lagerlöf*, 1944; B. Ek, S. Lagerlöf efter Gösta Berlings saga, 1951.

**Lagetta**, family Thymelaeaceae, genus of W. Indian evergreen trees, of which *L. linearis* is the source of the beautiful Lace Bark of commerce, a fabric of many uses.

**Laggen**, Loch, lake in Inverness-shire, Scotland, situated 800 ft above sea level and surrounded by deer forests. The shore is sandy and the dunes formed by SW. winds give L. the appearance of a sea loch on the W. coast. Goosander abound, and the waters, which receive

Pattack R., are the haunt of the ferocious trout.

**Laghouat**, or **El Aghuat**, military cap. of Algerian Sahara, 200 m. SW. of Algiers, an important mart. Pop. 7000.

**Lagny**, Fr. tn in the dept of Seine-et-Marne, on the Marne. It has ruins of an ancient monastery and church. At Pompoane, near by, 200 persons were killed in a railway accident in 1933. It has tanneries, and manufs. fine brushes. Pop. 7600.

**Lago Maggiore**, see MAGGIORE.

**Lagoon** (Fr. *lagune*; Lat. *lacuna*, a pool): (1) Shallow stretch of salt water near the sea. Such L.s have been formed by the gradual raising of a sand-bar on the extension of a spit on a low shore, so that a sheet of water is isolated from the sea. (2) Sheet of fresh water at some distance inland, usually shallow and of small extent. Such are found in the old lake plains of Australia, and are the haunt of numerous aquatic birds. (3) The expanse of smooth sea-water enclosed by a coral reef or atoll in the S. Seas, etc.

**Lagos**: 1. Former Brit. crown colony of W. Africa, on the Slave Coast, and after 1906 a W. prov. of S. Nigeria. In 1886 a separate colony and protectorate of L. was constituted; and in 1908 L. and S. Nigeria were united as the colony and protectorate of S. Nigeria; in 1918 the protectorate was united with that of N. Nigeria to form the colony and protectorate of Nigeria. It is now part of the W. Region of the Federation of Nigeria. It is the centre of the W. African palm-oil trade, and also exports oil nuts, rubber, cotton, timber, cacao, and gum copal. Area 29,000 sq. m.; pop. 1,500,000 (4500 non-Africans).

2. Tn and seaport of Nigeria, of which it is also the cap. At L. are the residence of the governor-general and the Federal Gov. H.Q. It stands on an is. near the N. shore of the bight of Benin, and is joined to the mainland by a bridge. It has large docks, floating docks, and wharves, and is connected by rail with Kano, 700 m. to the NE. It does a large and lucrative trade with all parts of Nigeria, especially in exporting palm oil and palm kernels, cocoa, ground nuts, hides, etc. L. is included in the old colony of Nigeria, but it is the H.Q. of the whole protectorate. An attempt is being made to develop an African municipal corporation on the European model, but corruption and lack of administrative experience militate against any marked degree of success. Town-planning and slum clearance are being carried out. There is a wireless station under the control of Cable and Wireless Ltd. L. has secondary schools for boys and girls. Pop. 137,400 (500 Europeans).

**La Grande-Combe**, see GRAND-COMBE, LA.

**Lagrange, Joseph Louis, Comte de** (1736-1813), Fr. mathematician, b. of Fr. parents at Turin. At an early age he became prof. of mathematics in the Royal School of Artillery, and there formed an association which rose to the status of The Twin

Academy of Sciences. He contributed largely to the *Memoirs of the Academy of Turin*, investigating the propagation of sound, the vibration of chords, and the motion of fluids. In 1764 he gained a prize offered by the Fr. Academy of Sciences for a *Theory of the Liberation of the Moon*. In 1766 he became a director of the Berlin Academy of Sciences, in 1772 a foreign associate of the Academy of Paris, and in 1787 settled in Paris, where he became in 1794 prof. of geometry at the Polytechnic School. Author of *La Mécanique analytique*, 1788, *Théorie des fonctions analytiques*, 1798, *Traité de la résolution des équations de tous degrés*, 1798, and *Leçons sur le Calcul des Fonctions*, 1806. His great discovery was the method of variations. See memoir by J. B. J. Delambre, 1876-7.

**La Grange**: 1. Co. seat of Troup co., Georgia, U.S.A., 60 m. SE. of Atlanta. It has cotton mills and manufs. of tire-cord fabrics, yarns, overalls, cloth, also saw-mills. La G. College is here. Pop. 25,025.

2. Residential vil. in Illinois, U.S.A., on the W. of Chicago, with manufs. of Diesel locomotives, aluminium products. Pop. 12,000.

**La Guaira**, chief seaport of Venezuela, on the Caribbean Sea, 10 m. N. of Caracas, of which it is the port. It is connected with Caracas by the La G. and Caracas railways, one of the most picturesque mt railways in the world, and by a specially built road, for automobiles only. It is closely surrounded by mts except to seaward. There is an excellent harbour of 90 ac., with a depth alongside the quays of 10 to 40 ft., formed by a breakwater constructed in 1885 by a Brit. company. A large export trade is done in coffee, cacao, indigo, cotton, sugar, and hides, and there are rich oilfields in the vicinity. There is a busy modern airport and wireless station. The tn was founded in 1588 by Diego de Osorio. It was the scene of much fighting during the War of Independence. Pop. (including the suburb of Maiquetía) 10,000 (70,000 in nearby coastal townships, such as the resort of Maracaibo).

**La Guardia, Fiorello Henry** (1882-1947), Amer. lawyer and politician, b. New York and educ. at New York Univ. He was deputy attorney-general of New York, 1915-17, and a member of Congress, 1917-21, 1923-33. In the First World War he commanded the 8th Central Aviation School and the Amer. Flying Force on the It. front. He was the first Republican for 20 years to be elected president of the Board of Aldermen of New York City (1920). Elected mayor of New York City, 1933, and 3 times re-elected, he initiated a federal housing scheme and measures for safeguarding labour interests. He was also a successful mediator in labour disputes. His address (Mar. 1937) before the Amer. Jewish Congress, in which he attacked Hitler's anti-Semitic policy, induced Germany to make diplomatic protests. From 1940 he was chairman of the U.S. section of the Canada-U.S.

Defence Board, and director of U.S. civil defence from 1941 to 1942. He was director-general of U.N.R.R.A. from 31 Mar. 1946 until the end of that organisation on 31 Dec. 1946. See *The Making of an Insurgent: an Autobiography, 1882-1919, 1948*, and Ernest Cuneo's *Life with Fiorello*, 1955.

**Laguna:** 1. Prov. of Luzon, Philippine Is., on the lake known as L. de Bay, which extends almost across the is. The dist. is mountainous (chief peaks Banahao, 7177 ft. and Maquilang, or Makiling, 3750 ft.) with fertile valleys, and rice, sugar, and

Lahn, riv. of Germany, a trib. of the Rhine (q.v.). It rises in the Rothaargeb., 10 m. E. of Siegen (q.v.), and flows E., and then S. and SW. to join the Rhine 6 m. above Koblenz (q.v.). The prin. tns on its banks are Marburg, Giessen, and Limburg. Length 135 m.

**Lahnda Dialect** (of Punjabi language), see INDO-EUROPEAN LANGUAGES.

**La Hogue, Battle of**, sometimes called Barfleur, fought between the Eng. and Dutch fleets, numbering in all 99 ships, on the one side, and the French under Tourville with 44 ships, on 14-16 May

INTERIOR OF THE  
BADSHAH MOSQUE,  
LAHORE

Government of Pakistan:  
Information Service

coconuts are produced. The cap. is Santa Cruz. Area 465 sq. m.; pop. 321,247.

2. (or **La Laguna**) Sp. tn in the Canary Is. (q.v.), formerly the cap. of Tenerife (q.v.). It has fine streets of balconied houses, a cathedral, and a univ. college. Pop. 35,000.

**La Habana**, see HAVANA.

**Laharpe, Jean François de** (1739-1803), Fr. dramatist and critic. b. Paris, educ. at the Collège d'Harcourt. In 1766 he became a member of the Fr. Academy, and in 1786 began to lecture on literature at the Lycée de Paris. He supported the revolution, but came under suspicion in 1794 and was imprisoned. His works include the tragedies *Warwick*, 1763, *Timoléon*, 1764, *Pharamond*, 1765, *Gustave Vasa*, 1766, *Mélanie*, 1770, *Eloges* (of Henry IV, Fénelon, Racine, etc.), 1779, *Cours de littérature* (18 vols.), 1799. See life by A. Boehlingk, 1925.

1692. The English and Dutch advanced towards La H. to destroy the armament which was being prepared to invade England. Tourville was unaware of the union of the allied fleets, and left Brest confident that treachery would prevail in the Eng. ships, through supposed Jacobite sympathies in England. Off Barfleur he was deceived, when he came in sight of the allied fleets under Russell. A running fight ensued for 3 days, during which the French lost 25 ships, 18 of them running aground near the camp of the 'Irish Brigade' and Fr. troops concentrated for transport across the Channel. These 18 ships were followed up by the Eng. sailors in boats, and were burned under the eyes of the exiled James II.

**Lahore**, city of N. Pakistan, situated on a trib. of the R. Ravi, 32 m. W. of Amritsar (India). Traditionally the chief tn of the Punjab, L. is now uncomfortably close to

the border between India and Pakistan. L. is an old city and in AD 1013 was the seat of a Brahmin king of Kabul, before being captured by Mohammed of Ghazni. The old city reached its peak under the Mogul emperors when Akbar extended the fort and walled the tn, Shah Jahan built the palace and Aurangzeb the large Badshahi mosque. From 1775 L. became largely a Sikh tn, and Ranjit Singh did much to expand its importance. It came under Brit. rule in 1849. The old buildings of greatest interest are the mosque of Wazir Khan (early 17th cent.), the fort wall, especially the N., and the Badshahi mosque which, though unadorned, is of remarkable extent. The Shalimar Gardens, 5 m. E., are famous.

L. is now a large railway, commercial, and political centre. It has fine modern buildings and gardens and a museum with a particularly fine and varied collection of exhibits. It remains the H.Q. of the Muslim League, and many of their most important decisions were taken here. Being so close to the Indian border upon partition L. was the scene of much communal violence, bloodshed, and destruction. To-day, as elsewhere in Pakistan, it is the scene of energetic reconstruction, development, and planning for the future. Pop. 850,000.

**Lahr**, Ger. tn in the *Land* of Baden-Württemberg (q.v.), 67 m. WSW. of Stuttgart (q.v.). It has a 13th-cent. abbey church and other auct buildings. The prin. industries are lithography and printing, and the manu. of textiles and leather goods. Pop. 20,000.

**Lalbach**, see LJUBLJANA.

**Laidlaw**, William (1780-1845), poet, b. Blackhouse, Selkirk. After unsuccessful farming ventures he became in 1817 a kind of steward at Abbotsford, acting as Walter Scott's amanuensis and general adviser. He wrote sev. lyrics and ballads, notably 'Lucy's Flittin', and compiled part of the *Edinburgh Annual Register* under Scott's direction. After Scott's death he was factor on 2 Ross-shire estates, and d. at Contin. See the selection from his prose writings with a biographical sketch by Sir G. B. Douglas, 1901.

**Laigle**, Fr. tn in the dept. of Orne, on the R. Risle. There is a 12th-cent. clock tower. The S. wing of the castle, built in 1690 by Hardouin Mansard (q.v.), was destroyed during the Second World War, when the tn itself was badly damaged. Needles and pins are manu. Pop. 5900.

**Lainsnek**, pass through the Drakensberg, Natal, S. Africa. Altitude from 5400 to 6000 ft. The railway, opened in 1891, pierces it, and previously the road over it was the chief means of communication between Durban and Pretoria. It figured in the Boer War of 1880-1.

**Lais**, name of 2 famous courtesans of ant. Greece: 1. Native of Corinth (b. c. 480 bc), famous for her greed and heartlessness; among her lovers were the philosophers Aristippus and Diogenes.

2. Native of Hyccara, Sicily (b. c. 420 bc), taken to Corinth after the Athenian expedition to Sicily. She was the rival of

Phryne, and numbered the painter Apelles among her lovers. She was stoned to death by some jealous women of Thessaly.

**Laissez-faire**, Fr. phrase meaning 'let alone,' an axiom of some political economists deprecating state attempts to regulate or restrict trade competition. Its origin is attributed to Legendre about 1680, who, in an interview with Colbert respecting gov. interference with commerce, remarked: 'Laissez-faire, laissez-passer.' See CLASSICAL ECONOMISTS and INDIVIDUALISM.

**Laity**, **The**, strictly speaking, means all persons who are not clergy, but the term has been extended to mean all persons who are not of a certain profession, such as law or medicine, as distinguished from all belonging to it.

**Lai-yang**, city in the prov. of Shantung, China, 60 m. WSW. of Weihaiwei. It has manu. of silk and a peculiar type of wax. Pop. (estimated) 50,000.

**Lake**, still sheet of water lying in a hollow of the ground and not in direct communication with the sea. Ls are almost universally distributed, although most common in high lats., and are due to various causes. Crater Ls occupying volcanic craters are found in Italy, France, Oregon, U.S.A., and in many places where there are dormant volcanoes, while Ls formed by the subsidence of the roofs of subterranean limestone caves are found among the Jura Mts. The gradual movement of the earth's crust in the formation of mts is responsible for such Ls as that of Geneva, while a landslip damming up the course of a riv. is the cause of such L. basins as the Gohna, formed in the Himalayas in 1894. Ls Nyasa, Tanganyika, Rudolph, etc., in E. Africa lie in rift valleys formed by subsidence of narrow troughs along faults. In N. lats. and in the Alps a glacier occasionally forms a dam in a riv. valley, and the deposit of glacial drift left by a retreating glacier is a very common cause of L. formation, especially in N. America, while glacial erosion is probably the cause of many of the Ls of Switzerland and Scotland. The L. waters are either fresh or salt. Salt and bitter Ls abound in regions where there is small rainfall and no draining riv. Such Ls as the Dead Sea and Great Salt L. are descended from fresh-water Ls, only becoming saline when the rate of evaporation exceeded the rate of the inflow. The Caspian and Aral Seas are really only isolated portions of the ocean. When the rate of inflow exceeds that of evaporation the L. grows gradually fresher. The greatest group of fresh-water Ls in the world consists of Ls Superior, Michigan, Huron, Erie, and Ontario on the E. border between the U.S.A. and Canada. Usually referred to as the Great Ls, they are really inland seas of fresh water. Steamships of ocean-going size traverse them, carrying huge cargoes of wheat and iron ore. L. Superior is 350 m. long and 160 m. wide, with a total area of 31,820 sq. m.; Michigan is 307 m. long and 118 m. wide, with an area of 22,400 sq. m.; Huron is 206 m. long and 101 m. wide, with an area of

23,010 sq. m.; Erie is 241 m. long and 57 m. wide, with an area of 9940 sq. m.; Ontario is 193 m. long and 53 m. wide, with an area of 7540 sq. m. Deepest soundings in L. Superior are 1290 ft. See F. A. Forel, *Handbuch der Seenkunde*, 1901; L. W. Collet, *Lacs*, 1925; P. T. Jones, *The English Lakes*, 1933. For movements of L. water see SEICHES, and for the forms and biology of fresh-water L.s, see GEOGRAPHICAL DISTRIBUTION.

**Lake**, in dyeing, an insoluble coloured compound deposited in the fibres of a fabric, soaking the latter first in a solution of a mordant (e.g. alum) and then in a solution or suspension of a dye. Different

deepest lake), and to the E. of Windermere lie Kentmere and Langdale. In the NE. is Swindale, and thence W. lie Mardale (with Haweswater), Patterdale with Ullswater (the 'English Lucerne'), Thirlmere, Borrowdale (with Derwentwater), Bassenthwaite Lake Buttermere, and Crummock Water, Loweswater and Ennerdale (with Ennerdale Water). Thirlmere and Haweswater are reservoirs for Manchester. There are sev. waterfalls, the most famous being Lodore; Scale Force, Buttermere, is the highest (125 ft.). Keswick, Ambleside, Bowness (Windermere), and Hawkshead (Esthwaite) are places of importance. The chief mts are Scafell

Photo by Valentine, Dundee

#### DERWENTWATER AND BASSENTHWAITE IN THE ENGLISH LAKE DISTRICT

mordants often give L.s of different colour with the same dye; thus alizarin with alum gives the L. known as Turkey red, while with a ferric salt instead of alum the alizarin L. is violet. See DYE and PIGMENTS.

**Lake Charles**, city, cap. of Calcasieu par., Louisiana, U.S.A., 190 m. W. of New Orleans. It is the centre of a big lumber trade and rice-producing dist., and has rice-mills, car shops, and a large woollen industry. There are sulphur mines and oilfields in the neighbourhood. Pop. 41,000.

**Lake District National Park**, The, of England, lies in Cumberland, Westmorland, and the Furness dist. of Lancs., and embraces all the prin. Eng. lakes, although its area is only 866 sq. m. The scenery and character of the lakes are very varied, ranging from wild, picturesque, rocky precipices to flat or softly sloping wooded banks. Windermere, the largest of the lakes (11 m. by 1 m.), lies in the SE. corner of the dist. and is connected with Rydal Water, Grasmere, Elterwater, and Esthwaite. To the W. lies Conistone Water and the high fells of the Conistone Old Man range. Further W. lie Dunnerdale, Eskdale, Wasdale (with Wastwater, the

Pike (3210 ft), the highest summit in England; Scafell (3162 ft); Helvellyn (3118 ft); Skiddaw (3054 ft); and Great Gable (2949 ft). Rock climbing is practised chiefly on the Scafell rock fells, the Pillar rock, Great Gable, and the Langdales (see special guides issued by the Fell and Rock Club). Large tracts of mt. country have been acquired for the public through the National Trust, who now own about 47,000 ac. with common rights over a further 56,000 ac. The L. D. became a national park in 1951 and is administered by the L. D. planning board from offices at Kendal. See Wordsworth's *Descriptions of the Scenery of the English Lakes*, 1823; A. Bradley, *The Lake District*, 1901; W. G. Collingwood, *The Lake Counties*, 1902, 1949; M. J. B. Baddeley, *The Lake District*, 1913; G. Home, *English Lakes*, 1922; H. H. Symonds, *Walking in the Lake District*, 1935, 1948; J. H. B. Bell, E. F. Bozman, and J. Fairfax Blakeborough, *British Hills and Mountains*, 1940; N. Nicholson, *Cumberland and Westmorland*, 1949, and *The Lakes*, 1955; W. A. Poucher, *Lakeland Scrapbook*, 1950, and *Escape to the Hills*, 1952; W. Heaton Cooper, *Lakeland Portraits*, 1954; F. Singleton, *The English Lakes*, 1954.

**Lake Dwellings**, houses, etc., built on a platform or framework of timber and often supported on piles. Similar constructions are sometimes found on marshy ground. While most of them are of prehistoric age, some were constructed early in the medieval period. *See also* CRANNOG and PILE DWELLINGS.

**Lake Fisheries**, *see* FISHERIES.

**Lake Geneva** (Switzerland and France), *see* GENEVA.

**Lake Geneva**, resort and residential city in Wisconsin, U.S.A., on the lake of the same name 40 m. SW. of Milwaukee. Yerkes Observatory of the univ. of Chicago is 6 m. away at Williams Bay. Pop. 4300.

**Lake of the Woods**, lake in the SW. of the prov. of Ontario, Canada, situated between Lakes Winnipeg and Superior. It is 70 m. in length, and owing to its irregular shape the breadth varies from 10 to 50 m. The total area is 1500 sq. m. and the lake contains numerous is., on many of which summer residences have been built. The chief riv. flowing into the lake is Rainy R. from the E., and it discharges into Lake Winnipeg by Winnipeg R. on the NE.

**Lake School of Poets**, name given to the group of poets comprising Wordsworth, Coleridge, and Southey. It was used first by the *Edinburgh Review*, Aug. 1817, in a criticism of Wordsworth's preoccupation with the wilder aspects of nature in the Eng. lake dist. Later it was generally accepted as a convenient label marking the associations of the group with that area—Wordsworth with Hawkshead, Grasmere, and finally Rydal, Coleridge with Rydal and Keswick, and Southey with Keswick. The term has no real literary significance, for these 3 poets had little in common beyond the fact that they all played a part in the Romantic Movement.

**Lakeland Terrier**, wire-haired terrier of medium size, weighing about 16 lb. The skull is moderately broad, the ears small and V-shaped, the eyes dark; the body is short, and the tail docked. Evolved as an attendant to the packs of foxhounds in the Fell country, the breed makes a good sporting companion, as well as a house-dog, being hardy and easily trained.

**Lakes**, *see* PIGMENTS.

**Lakewood**, city of Ohio, U.S.A., 7 m. SW. of Cleveland, of which it is a residential suburb, with some manufacturing. Pop. 68,000.

**Lakh**, or **Lac**, derived from a Sanskrit word *laksha*, meaning 'one hundred thousand.' Generally used in India to signify 100,000 rupees, the current exchange value of which, at 1s. 6d. to the rupee, is £7500.

**Lakshmi**, in Hindu mythology, the goddess of fortune, and the wife of Vishnu, representing his creative energy. She was the mother of Kama, the god of love. The festival of L. is celebrated by the writer caste in Bengal, who, in her honour, purify all writing materials and abstain from using them during the feast.

**La Laguna**, *see* LAGUNA.

**Lalande, Joseph Jérôme Lefrançois de** (1732–1807), Fr. astronomer, b. Bourg, Ain. He was sent to Berlin in 1752 to make observations on the lunar parallax there, and on the successful completion of his task was appointed adjunct-astronomer to the Academy of Paris. In 1762 he succeeded Delisle at the Collège de France. In 1802 he instituted the L. prize for the chief astronomical performance of each year. Among his pubs. are *Traité d'astronomie* (2 vols.), 1764, *Histoire céleste française*, 1801 (containing the places of 50,000 stars), and *Bibliographie astronomique*, 1803.

**La Libertad**, *see* LIBERTAD.

**Lalin**, Sp. tn in the prov. of Pontevedra. It is the centre of a highland agro. dist., and has tanneries and paper mills. Pop. 18,500.

**La Línea**, *see* LÍNEA, LA.

**'Lalita-Vistara'**, one of the most celebrated works in the literature of Buddhism, being an account of the life and doctrines of the Buddha, partly in prose and partly in verse, and dating, probably, from about the time of Christ. A Tibetan version has been trans. into French by P. E. Foucaux, and there is an Eng. trans. of the Sanskrit version. *See Transactions of the Bengal Asiatic Society* and E. Burnouf, *Introduction à l'histoire du buddhisme indien*, 1844.

**Lallans**, Scottish variant of 'Lowlands,' is a term applied to the Lowland Scottish tongue, especially in its use as a literary language by Scottish poets since the days of Burns, who writes in the postscript to his *Epistle to W. Simpson* of those who 'spak their thoughts in plain, braid Lallans.' The word has been popularised by writers of the Scottish Literary Renaissance which dates from the end of the First World War.

**Lally-Tollendal, Thomas Arthur, Comte de** (1702–66), Fr. general, b. Romans, Dauphiné. He inherited his title from his mother, his father being an Irish Jacobite, Sir Gerard O'Lally. He entered the Fr. Army in 1721, served in the war against Austria (1734), and took part in the battles of Dettingen (1743) and Fontenoy (1745). He accompanied Prince Charles Edward Stuart to Scotland in 1745, and was present at the battle of Falkirk. When war was declared between France and England (1756) L. was sent as commander of the Fr. expedition to India. At first he met with some success, but, deserted by the fleet, under Laché, was forced to retire from the siege of Tanjore and of Madras (1758). He was defeated at Wandiwash (1760) and forced to surrender Pondicherry in 1761. As an Eng. prisoner on parole he returned to France to answer charges of treachery, was imprisoned in the Bastille for 2 years, and finally tried and executed in 1766.

**Lally-Tollendal, Trophime Gérard, Marquis de** (1751–1830), Fr. politician and author, son of the above, b. Paris. After his father's execution he devoted himself to proving his innocence, but without complete success. In 1789 he was deputy to the States-General for the noblesse of

Paris and in 1791 fled to Switzerland and later to England. He returned to Paris during the Consulate, and was created a peer by Louis XVIII. In 1816 he became a member of the Academy. He pub. *Plaidoyer pour Louis XVI*, 1793, *Défense des émigrés français*, 1794, and *Le Comte de Stafford*, 1795.

**Lalo, Edouard** (1823-92), Fr. composer, b. Lille. He studied at the Lille and Paris Conservatoires and, failing to get his first opera produced, made his first success with 2 works for violin and orchestra written for Sarasate, the Concerto in F, 1874, and the *Symphonie espagnole*, 1875. The ballet *Namouna*, 1882, and the opera *Le Roi d'Ys*, 1888, are his only notable stage works, and even they are now almost forgotten; but of his orchestral music the 2 *Arabes* and the *Rapsodie norvégienne* are still remembered. He was gifted with remarkable novelty in orchestration and warm vivid melody, and his music excited enthusiasm among the younger generation, including such men as Debussy and d'Indy. L. is considered precursor of the modern Fr. school, and his influence on Debussy and Dukas is unmistakable. See studies by O. Séré (in *Musiciens français*), 1911, and G. Servières, 1925.

**La Louvière**, industrial tn in the prov. of Hainaut, Belgium, 11 m. E. of Mons. It has collieries, blast furnaces, and stone, lime, and moulding-clay quarries. The chief manufs. are iron, steel, glass, ceramics, and fireproof products. The second hydraulic lift on the Canal du Centre is at La L. (see HOUDENG-AIMERIES). Pop. 23,400.

**Lama** (priest), see LAMAISM; (animal of Peru), see LLAMA.

**Lama-Miao** (Mongolia), see DOLON-NOR. **Lamachus**, Athenian general during the Peloponnesian war and the son of Xenophanes. He was sent into Sicily with Nicias and Alcibiades, and displayed great courage and ability throughout the campaign, but was killed before the walls of Syracuse (414 BC). See Thucydides vii, Aristophanes' *Acharnians*, and Plutarch's *Nicias*.

**Lamaism** (Tibetan *lama*, spiritual teacher), corrupt form of Buddhism, the religion prevalent in Tibet and Mongolia. Its H.Q. are at Lhasa, the cap. of Tibet, where the Dalai Lama ('ocean priest' or 'sea of wisdom') resides. Everyone who has taken a vow to attain Buddhahood is a bodhisattva and is repeatedly reborn in order to teach others. The Dalai Lama is the reincarnation of the great bodhisattva Avalokitesvara, the ancestor of the Tibetans, and enjoys supremacy in all temporal affairs. The Tashi Lama, or Panchen Lama, the incarnation of Amitabha, is regarded as the great spiritual teacher, and though in theory he holds the same rank as the other grand lama, virtually he is less powerful. On the death of either his spirit passes into the body of a male child, who is ascertained by means of the oracles, prayer, and the drawing of lots. Next in rank to the grand lamas are the Chutuktus, who correspond to the cardinals of the Rom.

Catholic Church. The Chubul Khans, or priests, are also incarnations, and have under them 4 orders of lower clergy. There are numerous lamaseries which are the educational as well as the religious institutions of Tibet. At the head of each is a living Buddha in the person of a Chubul Khan. The worship of Buddha and of spirits and saints takes the form of incantations and the beating of diverse musical instruments. A person who is dying must be attended by a lama, so that his spirit may not wander restlessly, but find a happy dwelling-place in some other human form. See C. F. Köppen, *Die Lamaische Hierarchie und Kirche*, 1859; L. A. Waddell, *The Buddhism of Tibet, or Lamaism*, 1895; P. Landen, *Lhasa*, 1906; A. H. Francke, *History of Western Tibet*, 1907; E. Amundsen, *In the Land of the Lama*, 1910; C. Bell, *Tibet Past and Present*, 1924, and *The Religion of Tibet*, 1932; A. K. Gordon, *Iconography of Tibetan Lamaism*, 1939.

**La Mancha**, see MANCHA, I.A.

**Lamarck, Jean Baptiste Antoine Pierre de Monnet, Chevalier de** (1744-1829), Fr. naturalist, b. Bazentin, Picardy. In 1760 he entered the army and won great distinction, but owing to illness he was obliged to leave the service, and subsequently devoted himself to the study of natural science. In 1778 he pub. his *Flora française*. In 1781-2, as tutor of Buffon's son, he visited most of the famous botanical gardens of Europe, and on his return began his elaborate series of contributions to botany, i.e. the *Dictionnaire de botanique* and *Illustrations de genres* (pub. in the *Encyclopédie méthodique*, 1785). In 1788 he became custodian of the Jardin du Roi, and, on its reconstruction in 1793, was appointed prof. of zoology. In 1809 he pub. his *Philosophie zoologique*, and between 1815 and 1822 his *Histoire des animaux sans vertèbres* (7 vols.). See also LAMARCKISM. See A. S. Packard, *Lamarck, the Founder of Evolution*, 1902; lives by G. F. Kühner, 1913, and E. Perrier, 1925.

**Lamarckism**, philosophical concept of evolution in which is postulated the theory that evolution is a direct result of such causes as heredity, adaptation, and change of environment. In 1809 Lamarck in his *Philosophie zoologique* stated that nature in bringing forth all kinds of animals improved their organisation gradually, and that these animals were subject to the influence of their environment and were modified in form and habits by this influence. Lamarck assigns as the chief causes of such transformation the use and disuse of particular organs during long periods and the transmission by heredity of such changes. He alleges, for example, that birds which were forced to seek food from water gradually adjusted their forms to the necessity. He rejected the explanation of change of type by great geological changes, and likewise denied the truth of such statements common up to the time of Lyell that some 'vital force' was responsible for the gradual development of type. Instinct, he claimed, was a result of inherited characteristics of

habit, proceeding to the conclusion that cellular tissue is the parent of all organic things and the nervous system is the *vera causa* of all acts of intelligence, and that the will is therefore never wholly free. His theories were attacked vigorously at the time of their pub., though prejudice rather than science informed such opposition; but, with the great interest aroused by Darwin's later discoveries, a mass of support was brought to his teaching, particularly in America, and it is now claimed that Darwin's doctrine of natural selection is strengthened more by Lamarck's conclusions than by Darwin's own collected evidence, which is trans. as manifestations of chance as opposed to cause and effect. In 1876 Darwin himself admitted that further research led him to identify himself with Lamarck's earlier statement that evolution was a result of environment, and it seems there is some justification for the claims of Lamarck's disciples that, whilst Darwin revealed only one aspect of evolution, Lamarck revealed the formations which bear the structure of natural selection. If recent work by the Russian school of plant breeders under Lysenko (q.v.) were confirmed, it might provide support for L. It is clear that the theory of heredity known as Mendelism (q.v.), and BREEDING AND HEREDITY is based on very firm ground, and there seems no place in it for L. See F. Buchner, *Last Words on Materialism*, 1901; E. Haeckel, *Das Weltbild von Darwin und Lamarck*, 1909; S. Butler, *Evolution, Old and New*, 1911; C. E. M. Joad, *Mind and Matter*, 1925. See also bibliography for LAMARCK.

**La Marmora, Alfonso Ferrero** (1804-78), lt. general and statesman, b. Turin. He entered the Sardinian Army in 1823, and distinguished himself during the Sardinian war of independence (1848). In that year, and again from 1849 to 1855, he held the portfolio of war, during which period he reconstructed the Sardinian Army. In 1855 he was in command of the Sardinian forces during the Crimean War, and on his return again became minister of war. In 1866 he concluded an alliance with Prussia against Austria, but was defeated by the latter at Custozza, after which he was accused of treason. He wrote in self-defence, *Un po' più di luce sugli eventi militari e politici dell'anno 1866*, 1873, which irritated Blomack, who charged him with having revealed state secrets, and *Un episodio del risorgimento italiano*, 1876. See G. Massani, *Il generale La Marmora*, 1880; M. Straganz, *Zur Geschichte der 'Stossins-Herr'*-Depeche, 1922.

**Lamartine, Alphonse Marie Louis de Prat de** (1790-1869), Fr. poet, b. Mâcon. L. followed the family traditions by entering the bodyguard of Louis XVIII in 1814. The success of his *Premières Méditations poétiques*, 1820, led to his being appointed attaché to the Fr. embassy at Naples, and during the supremacy of the Bourbons he occupied sev. important diplomatic posts. His *Nouvelles Méditations poétiques*, 1823, *La Mort de Socrate*, 1823, *Le Dernier Chant du Pèlerinage de*

*Childe-Harold*, 1825, and *Harmonies poétiques et religieuses*, 1829, led to his being admitted a member of the Academy (1829). L. was the first to sound a more personal note in his poetry, and to establish a direct bond between himself and his public. In such masterpieces as *Le Lac*, *L'Isolément*, *L'Automne*, the background of nature is in perfect harmony to the mood evoked. A long-projected voyage to the E. led to the *Voyage en Orient*, 1835 (in prose). His *Jocelyn* (hist. of a country parson) was pub. in 1836, *La Chute d'un ange* in 1838, and *Les Recueils poétiques* in 1839; but during this period it was as an orator, not as a poet, that he enjoyed the greatest popularity. In 1835 he was elected 'député' for Bergues, from 1837 to 1848 he was 'député' for Mâcon, and at the revolution of Feb. 1848 he was considered 'the man of France,' as the defender of the 'tricolour' against the 'rouges.' In the provisional gov. he wished to play the role of a Moderate, and lost his popularity, securing very few votes in his candidature for the presidency of the rep. After the *coup d'état* of Dec. 1848 he retired permanently from public life. In his retirement he wrote a series of novels: *Raphaël*, 1849, *Les Confidences*, 1849, *Les Nouvelles Confidences*, 1851, and *Graziella*, 1852. Under the empire he fell into great poverty and wrote such prose works as *Cours familier de littérature*, 1856, and inferior poetry, *Les Visions*, 1854, to support himself. In 1868 he was voted a generous pension by the gov., but his privations had worn him out, and he did not long enjoy it. In addition to the works already mentioned, he wrote *Histoire des Girondins*, 1847, *Trois mois au pouvoir*, 1848, *Histoire de la révolution de 1848*, 1849, *Geneviève*, 1850, *Le Tailleur de pierres de Saint-Poinc*, 1851, *Histoire de la restauration*, 1851-2, *Histoire des constituants*, 1854, *Histoire de la Turquie*, 1855, *Histoire de la Russie*, 1856, all in prose, and the tragedy *Toussaint Louverture*, 1856. His *Œuvres complètes* were pub. by Didot in 14 vols., 1849-50. See P. Hazard, *Lamartine*, 1925; J. Baillon and E. Harris, *État présent des études Lamartines*, 1933; M. Bouchard, *Lamartine ou le sens de l'amour*, 1940; A. J. George, *Lamartine and Romantic Unanimism*, 1940; H. Guillemin, *Lamartine, l'homme et l'œuvre*, 1940; J. Lucas-Dubreton, *Lamartine*, 1951. See also Mme Lamartine, *The Heart's Memory*, 1951.

**Lamb, Charles** (1775-1834), essayist, b. Crown Office Row in the Temple, London. He was educ. at Christ's Hospital, and the best record of his school-days will be found in his own essays, 'On Christ's Hospital and the Character of the Christ's Hospital Boys' and 'Christ's Hospital Five and Thirty Years Ago.' He was happy there, where he made the acquaintance, which ripened into friendship, of Samuel Taylor Coleridge. L. left the school in the winter of 1789, and in 1792 was appointed to a clerkship in India House, where he was employed for 30 years. His salary was small, and he had to contribute to the

maintenance of his family, with whom he lived, but he seems to have been fairly contented. The serenity of his mind was, however, rudely disturbed in 1796, when his sister Mary, in a fit of ungovernable temper, killed her mother with a carving-knife. A verdict of temporary insanity was brought in, and, by the exercise of much kindly influence, the girl was not sent to an asylum, but was mercifully

CHARLES LAMB (1798)

handed over to the custody of her brother Charles, who lived with her for the whole of his life. Insanity was in the blood of the family, for in the winter of 1795-6 L. himself was confined for 6 weeks.

The first appearance of L. in print was in the latter year, when Coleridge, in the *Poems on Various Occasions*, included 4 of his sonnets. In 1798 was issued *Blank Verse*, by Charles L. and Charles Lloyd. His next pub. was *A Tale of Rosamund Gray and Old Blind Margaret*, 1798. Soon L. began to augment his income by contributing to the periodicals and newspapers, and in 1802 he printed his blank-verse play, *John Woodvil*, a tragedy. He was now living with his sister in King's Bench Walk; there, and afterwards in Inner Temple Lane, they resided for 18 years. In 1805 the farce, *Mr H.*, was produced, and damned, at Drury Lane; but 2 years later Godwin brought out the famous *Tales from Shakespeare*, written by L. and his sister, which was at once successful, and brought in its train many welcome offers of hack-work. L. gradually began to develop the vein that

reached its greatest heights in the *Essays of Elia*, 1823, and he wrote in this style for Leigh Hunt's *Reflector* and for the *Gentleman's Magazine*. A new periodical, the *London Magazine*, was started in 1820, and L. was an early contributor, his first paper, 'Recollections of the South Sea House,' being signed 'Elia.' He wrote for the *London Magazine* regularly, and in 1823 collected these essays. In Mar. 1825 he was retired with a pension from India House on the grounds of ill health. 'After thirty-three years' slavery,' he wrote to Wordsworth, 'here am I, a freed man, with £441 a year for the remainder of my life.' He did various miscellaneous work during the next years. In 1830 appeared *Album Verse*, in the following year *Salon in Search of a Wife*, and in 1833 *The Last Essays of Elia*. His health now failed, erysipelas supervened, and he d. on 27 Dec. 1834. One of the brightest features in these last years was the friendship and companionship of Emma Isola, whom L. and his sister Mary had adopted, and whose marriage in 1833 to Edward Moxon, though welcomed by L. with characteristic unselfishness, left him more than ever alone. L. was buried in Edmonton churchyard. His sister survived him for 13 years.

The essays of L.—and it is by his essays that he takes the high place in literature that is his—are universally read and admired. Their humour, their literary finish, which never suggests the burning of midnight oil, their individuality, each and all endear them to countless thousands, for if L. is one of those writers who peculiarly appeal to their brother-authors, he is one of such writers who appeal also to the larger public—a combination rare among essayists. In all his best writings his personality can be detected, and his personality is very attractive. The hard-working clerk who devoted his life to the care of his deranged sister is one of the most pathetic pictures in the annals of literature, and it is small wonder that Thackeray spoke of him as 'Saint Charles.' His personal charm is undoubted, and he numbered among his friends and correspondents men so various as Wordsworth, Southey, Coleridge, Hazlitt, Hood, Leigh Hunt, and Procter. Indeed to know him was to love him, and the circle of those who delighted in him was bounded only by the limits of his gregariousness. The most human of men, he was a looker-on at the life that was everywhere around him. He was in the world, but never quite of it. He was always detached from reality, and had a curious rich vein of fantasy that often revealed itself both in his essays and in his delightful, intimate letters. Of his poems, the best known are 'The Old Familiar Faces,' 'Hester,' and 'Parental Recollections.'

There is an authoritative ed. of L.'s works in 7 vols., 1903-5, by E. V. Lucas, who also ed. the *Letters* in 3 vols., 1935, and wrote a life, 1921. Other eds. of the works are by T. N. Talfourd, 1840, E. T. Purnell, 1870, P. Fitzgerald, 1875, Canon A. Ainger, 1899, W. Macdonald, 1902-3,

and H. T. Hutchinson, 1908. See *Lives and studies* by B. W. Procter, 1866; P. Fitzgerald, 1866; W. C. Hazlitt, 1874; F. Masson, 1913; E. Blunden, 1933; E. O. Johnson, 1935; K. Anthony, 1945; also A. C. Ward, *The Frolic and the Gentle*, 1934; J. S. Iseman, *A Perfect Sympathy*; *Charles Lamb and Sir Thomas Browne*, 1937; R. L. Hine, *Charles Lamb and his Hertfordshire*, 1949.

**Lamb, Sir Horace** (1849-1934), mathematician and physicist, b. Stockport, and educ. at Stockport Grammar School, Owens College, Manchester, and Trinity College, Cambridge, where he was second wrangler and a Smith's prizeman, 1872. He was prof. of mathematics at the univ. of Adelaide, 1875-85, at Owens College and the univ. of Manchester, 1885-1920, and a member of the council of the Royal Society at different periods between 1894 and 1922. He was knighted in 1931. He wrote on hydrodynamics, the infinitesimal calculus, sound, higher mathematics, etc.

**Lamb, Mary Anne** (1764-1847), writer, b. London, elder sister of Charles L. (q.v.). Mentally unbalanced, she first gave signs of her desperate condition when in 1796, in a fit of fury, she mortally wounded her mother by stabbing her with a knife. She was tried, and a verdict of temporary insanity was brought in; but instead of being consigned to an asylum, she was so fortunate as to be handed over to the custody of her brother, who took charge of her so long as he lived. They stayed always together, went about together, and were devoted to each other. Charles, if sometimes he found the task of looking after her irksome, never repined. In 1807 she assisted him in the preparation of the *Tales from Shakespeare*, and while he wrote about the tragedies, she dealt with the comedies. She helped her brother to educate his ward, Emma Isola, who made her home with them until 1833, when she married Edward Moxon, the publisher. Mary L. survived her brother about 13 years, and d. in St. John's Wood, London. See life by Mrs A. Gilchrist, 1883; also G. G. Frend, *The Lambs, Fanny Kelly, and some Others*, 1926; W. R. Riddell, *The Tragedy of Mary Lamb*, 1928; E. V. Lucas, *The Letters of Charles Lamb, to which are added those of his Sister, Mary Lamb*, 1935.

**Lamb, William**, see MELBOURNE, 2nd VISCOUNT.

**Lamb, see FUR.**

**Lamballe, Marie Thérèse Louise, Princesse de** (1749-92), daughter of the Prince of Savoy-Carignano, b. Turin. In 1767 she married Stanislaus, Prince of L. who d. the next year. She was the devoted companion of Marie Antoinette, and was appointed by her superintendent of the royal household. In 1792 she was imprisoned with her mistress in the Temple for a week, then removed to La Force and beheaded, and her head, on a pike, was placed in front of the queen's apartments.

**Lamballe**, tn in the dept of Côtes-du-Nord, France. It has a 12th-cent. church and an anct abbey. Pop. 5600.

**Lambarde, William** (1536-1601), jurist and antiquary, b. London. In 1556 he was admitted into the Society of Lincoln's Inn, and in 1568 he pub. a collection and trans. of Saxon laws. In 1570 he was living near Greenwich, where he founded a hospital for the poor in 1574. His best-known book, *A Perambulation of Kent*, 1576, was the first co. hist. pub. in this country. In 1578 he became a bencher of Lincoln's Inn, and in 1579 a magistrate of Kent, publishing in 1581 a manual for justices of the peace entitled *Eirenarcha*. In 1600 he became keeper of the Tower records.

**Lambart, Frederik Rudolph**, see CAVAN. **Lambaysaque**: 1. Dept of NW. Peru, with an area of 4614 sq. m. It is very dry, and a large portion is desert waste, but the L. and other rvs. permit seasonal irrigation. Cap. Chiclayo. Pop. 238,000. 2. Tn in the above dept, 7 m. from the mouth of L. R. It contains a fine cathedral and college. It is an important centre for rice, sugar, and cotton. The chief manufs. are textiles and soap; quinine is also exported. Pop. 7000.

**Lamber, Juliette**, see ADAM, JULIETTE.

**Lambert, Constant** (1905-51), composer, conductor, and critic, b. London, son of G. W. Lambert, A.R.A., educ. at Christ's Hospital and the Royal College of Music. He early became one of the most promising of the younger school of Eng. composers of the time. His *Romeo and Juliet* ballet was produced for Diaghilev at Monte Carlo in 1926, and was followed by *Pomona* at Buenos Aires in 1927. He became musical director of Vic-Wells ballet and was an excellent concert and operatic conductor. His best known work, *Rio Grande*, 1929, is an adaptation of jazz idiom to serious music for chorus, pianoforte, and orchestra. Other compositions include *Music for Orchestra*, 1931, *Summer's Last Will and Testament*, 1936 (masque for chorus and orchestra), *Horoscope*, 1937 (a ballet for Sadler's Wells), also piano sonata, piano concerto, Chinese songs, etc. He wrote *Music Ho! A Study of Music in Decline*, 1934.

**Lambert, Johann Heinrich** (1728-77). Ger. physicist, mathematician, and astronomer, son of a tailor, and educ. at a free school in Mulhausen, where he was born. Editor of *Ephemeris*. Much favoured by Frederick the Great. He d. early of tuberculosis. Conducted researches in heat and light and discovered a method of measuring the intensity of light, the 'lambert,' a unit of brightness, equal to 1/4 candles per sq. cm., being named after him. (See his *Photometrie*, 1760; *Pyrometrie*, 1779.) His mathematical researches were also useful, but were carried much further by his contemporaries; thus he demonstrated the irrationality of  $\pi$ , but the method of proof given by Legendre was simpler. His geometrical researches are valuable, notably the conception of hyperbolic functions in trigonometry. See on this his work *Die freie Perspective*, 1759-1774. His research in astronomy is reflected mainly in his theorem on the

motion of the planets. See M. Steck, *Johann Heinrich Lambert: Schriften zur Perspektive*, 1943.

**Lambert, John** (1619-94), general, b. Calton Hall, Kirkby Malham, Yorks. At the outbreak of the Civil war he joined the army of the Parliament, took part in the battles of Nantwich and Bradford, and greatly distinguished himself at Marston Moor (1644). He was major-general and second in command of the army during the war with Scotland, 1650-1. He fought at Preston and Dunbar, and commanded the right wing at Worcester (1651). He supported Cromwell's assumption of the Protectorate in 1653 and was responsible for the constitution on which it was first based—*The Instrument of Government*. But he opposed the extension of the Protector's powers in 1657 and was deprived of his commands. He took a leading part in the overthrow of the Protector Richard in 1659. He was mainly responsible for the army's expulsion of the recalled Rump parliament in the autumn of that year and served on the committee of safety through which the army ruled for a short period until Monck restored parliament. He was suspected, probably justifiably, with aiming at supreme power himself. At the Restoration he was arrested and banished to Guernsey. See life by W. H. Dawson, 1938.

**Lambeth** (meaning 'harbour where lambs were shipped'), parl. and metropolitan bor. of London, on the S. bank of the Thames, opposite Westminster. It includes the dists. of Brixton, Kennington, and Vauxhall (q.v.). L. Palace, on the riv. front, has been the residence of the archbishops of Canterbury since c. 1197, and the remarkable group of buildings exhibits styles from about that date to the early 19th cent. The late 17th-cent. Great Hall, housing the valuable library, has a fine hammer-beam roof. E. of the palace is St Thomas's Hospital, erected 1868-71, and beyond, on the E. side of Westminster Bridge, is County Hall (q.v.). The riv. frontage between County Hall and Waterloo Road was chosen as the site of the Festival of Britain exhibition in 1951. The permanent feature of that festival, the Royal Festival Hall, was a concert hall in a contemporary style with seating for about 3000. Near the hall the National Film Theatre was inaugurated in Oct. 1957. The W. part of the site was used as the London Airport Terminal until 1957, when a new terminal was opened in Kensington. Industrialisation in L. began in the 1670's with glassworks, and in the 19th cent. had slums grew up, but much rehousing has been carried out since the Second World War. The chief industries are soap, chemicals, pottery, and earthenware. L. returns 3 members to parliament. Area 4083 ac.; pop. 236,200.

**Lambeth Conferences**, assemblies of Anglican bishops of the U.K., the Brit. dominions and colonies, America, and certain Anglican dioceses in foreign ter., held periodically at Lambeth Palace. The

idea was suggested by Bishop Hopkins of Vermont in 1851. The first assembly met at the invitation of Archbishop Longley in 1867. Out of 144 bishops of the Anglican Communion, 76 attended the conference. Many Anglican bishops, including the Archbishop of York, refused to attend on conscientious grounds, and Dean Stanley declined to allow the closing service of the conference to be held in Westminster Abbey. At the fifth conference, convened (1908) by Archbishop Davidson (see DAVIDSON, RANDALL, LOUN), 242 bishops were present. At the eighth, of which Archbishop Fisher was president, in 1948, 326 bishops were present. Matters of urgent and practical interest are discussed, but the conference has not the functions of a synod. See Archbishop R. T. Davidson, *The Lambeth Conferences of 1867, 1878, and 1888, 1896, and Conference of Bishops of the Anglican Communion, Encyclical Letter, etc.*, 1897, 1908, and *Report of the Lambeth Conference*, 1920, 1930, 1948, 1958.

**Lambrequin**, see MANTLING.

**Lambton** (afterwards Meux), Sir Hedworth (1856-1929), admiral, third son of the second Earl of Durham. Joining the navy in 1870, he was present at the bombardment of Alexandria and the battle of Tel-el-Kebir, 1882, and became private secretary to the first lord of the Admiralty, successively Earl Spencer and Lord Goschen, 1894-7. He commanded the naval brigade in the defence of Ladysmith during the Boer War. He contested Newcastle in the Liberal interest in 1900; was in command of the royal yacht, 1901-3; second in command of the Channel fleet, 1903; rear-admiral of the cruiser div. of the Mediterranean fleet, 1904-6. He was awarded the K.C.V.O., 1906, and the K.C.B. in 1908, being appointed to command the China station in that year. He became vice-admiral 1911 and commander-in-chief at Portsmouth, 1912-16. In 1911 he assumed the name of Meux. He became admiral of the fleet, 15 Mar. 1915, and was one of the few to hold that high rank in active command. M.P. 1916-18.

**Lambton, John George**, see DURHAM, 1st EARL OF.

**Lamellibranchiata**, see BIVALVES.

**Lameness, Groggy**, see NAVICULAR DISEASE.

**Lamennais, Hugues Félicité Robert de** (1782-1854), Fr. abbé and philosophical writer, actually named La Mennais, b. St Malo, Brittany. His horror at the revolution was occasioned less by his monarchic leanings than by his dismay at the overthrow of religion, and is expressed in his *Réflexions sur l'état de l'église en France pendant le 18<sup>ème</sup> siècle et sur sa situation actuelle*, pub. anonymously in 1808. At the commencement of the 'Hundred Days' he fled to London, where he fell under the influence of the Abbé Carron, who induced him to take Holy Orders on his return to Paris. The first vol. of his great work, *Essai sur l'indifférence en matière de religion*, 1817, stirred all Europe by its violent denunciation of

religious indifference. After the revolution of 1830 he founded, in conjunction with Montalembert and Lacordaire, the paper *L'Avenir*, with its motto 'Dieu et Liberté,' advocating an aggressive democracy. His appeal to the Pope to support the paper against the Conservative bishops failed, and L. completely severed himself from the Church, and was condemned by the encyclical *Mirari Vos* in 1832. His remarkable *Paroles d'un croyant*, 1834 marked his new attitude, and henceforward he belonged to the extreme Democratic party, attacking all the opinions which he had hitherto upheld. At the revolution of 1848, after a period of imprisonment for his republican activities, he sat as a representative on the extreme left in the assembly until the *coup d'état* of Napoleon III in 1851 finally crushed his hopes for the sovereignty of the people. Among his later writings were *Le Livre du peuple*, 1837, and *Esquisse de philosophie*, 1840. Two so-called *Oeuvres complètes de Lamennais* appeared in 1836 and 1844 and *Le Portefeuille de Lamennais*, 1816-36, in 1930. See C. Sainte-Beuve, *Portraits contemporains*, 1846; and lives by P. Mercier, 1894; C. Boutard, 1905; F. Duine, 1922; C. Maréchal, 1925; R. Valléry-Radot, 1931; also L. Ahrens, *Lamennais und Deutschland*, 1930, and G. Goyan and P. de Lallemand, *Lettres de Montalembert à Lamennais*, 1933.

**Lamentations**, *The Book of* (Heb., 'Echah—its first word), consists of 5 poetical laments dealing with the various calamities which the Jews underwent after the capture of Jerusalem by the Chaldeans in 586 bc. The first 3 dirges are alphabetical acrostics, each containing 22 verses. The fourth is constructed on the same plan, but with the verses arranged in groups of three, each having the same initial letter. There are thus 66 verses in all. The fifth lament, which takes the form of a prayer, is not acrostic, but contains the same number of verses as each of the first three. Late tradition (e.g. LXX) ascribes Lamentations to the prophet Jeremiah. See commentaries by J. Chapman, 1908; A. S. Peake, 1911; Goldman (in *The Five Megilloth*, ed. A. Cohen), 1946.

**Lamia**, legendary queen of Libya loved by Zeus, whose jealous wife, Hera, robbed L. of her children, in revenge for which L. seized and killed every child she could find. In later Gk legend she was a female bogy, and passed into Rom. mythology, where the Lamiae were vampires, in the form of beautiful women who enticed young men to their arms and fed on their blood. So L. is represented by Goethe in *Die Braut von Corinth* and by Keats in *Lamia*. See Plutarch, *De Curiosis*; G. F. Abbott, *Macedonian Folklore*, 1903; J. C. Lawson, *Modern Greek Folklore and Ancient Greek Religion*, 1910.

**Lamia**, L. Aelius (d. AD 33), Rom. magistrate, consul in AD 3 and prefect of Rome in AD 32. He was a friend of Horace, who dedicated an ode to him (l. 26). See A. W. Verrall, *Studies in Horace*, 1884.

**Laminaria**, genus of large brown seaweeds of the family Laminariaceae, some of which (*L. digitata*, *L. cloustoni*, and *L. saccharina*, called tangle-weeds) are edible, but more generally useful in the manuf. of kelp (g.v.) and manure. The ribbon-like *L. digitata* attains to a great length. These seaweeds provide the kelp and manure from which are derived chemical salts by burning, the ash yielding soda, iodine, and potash.

**Lamination**: 1. Term in geology for a special formation in the beds of clay or shale strata, in which the bed is formed of thin layers or plates, called laminae, lying parallel to its plane and separating easily when exposed to the weather. They may be the result of separate layers of deposit being placed one on top of the other in successive periods, or they may be due to the pressure of the later deposits.

2. Industrial process by which successive layers of thin materials—paper, glass, wood veneers, etc.—are banded together by adhesives (q.v.).

**Laminitis**, see HOISE (DISEASES).

**Lamlash**, vil. of Arnan Is., Bute co., Scotland, 3 m. S. of Brodick, a holiday resort. Pop. 1000.

**Lammas Day**, or *The Feast of the Wheat Harvest*, one of the oldest of church festivals, occurring on 1 Aug. The name is probably derived from the A.-S. *hlaf-maesse*, or 'loaf mass'; it was customary to offer loaves of bread made from the first fresh wheat.

**Lammas Lands**, lands which were enclosed during the growth of corn and grass, but open for pasture during the rest of the year. Upon Lammas Day (1 Aug.) the fences were taken down from the corn fields and on Old Midsummer Day (6 July) from grass fields.

**Lammermuir Hills**, or *Lammermoors*, range of hills in E. Lothian and Berwickshire, Scotland, extending in an ENE. direction from the vale of Gala Water to St Abb's Head on the N. Sea. The chief summits are Melkie Says Law (1749 ft) and Lammer Law (1733 ft).

**Lamond, Frederic** (1868-1948), Scottish pianist, b. Glasgow. He received lessons from Liszt and Bülow in Germany, where he spent most of his life, teaching in Berlin. But he toured extensively as a concert pianist, being especially a thoughtful interpreter of Beethoven. He was prof. at The Hague Conservatory in 1917, and at the Scottish National Academy of Music from 1939.

**Lamont, Johann von** (1805-79), Ger. astronomer and magnetician, b. Braemar, Aberdeenshire. He was sent to be educ. at the Scottish monastery in Regensburg and never returned to Scotland. In 1840 he estab. a magnetic observatory at Bogenhausen. He executed comprehensive magnetic surveys of Bavaria, France, Spain, N. Germany, and Denmark (1849-58), the results of which were pub. in 3 vols. (1854-9). He announced the discovery of a magnetic decennial period in 1850, and his discovery of earth currents in 1862, of which his *Handbuch des Erdmagnetismus*, 1849, is the standard

text-book. He was appointed prof. of astronomy at the univ. of Munich in 1852, and prepared his 11 zone catalogues of 34,674 stars (1866-74).

**Lamoricière, Christophe Léon Louis Juchault de** (1806-65). Fr. general and politician, b. Nantes. He distinguished himself at Isly (1844), and effected the capture of Abd-el-Kader in 1847. He was minister of war under Cavaignac. L. was a leading opponent of Louis Napoleon, who exiled him in 1851. In 1860 he accepted the command of the papal army,

the earliest (c. 20,000 bc). It is made of yellowish-grey limestone, while the L. of the Magdalenian period (c. 12,000 bc) found in the S. of France, and now in the museum of St Germain-en-Laye, near Paris, has a definite spout and the head of an ibex engraved on the base, and is made of sandstone. In Britain the well-known Chisbury, Worthing, Sussex (now in the museums of Lewes, Brighton, and the Brit. Museum), date from about 2000 bc.

In the Near E. the L. had an indepen-

but was completely defeated by the Italians at Castelfidardo. His sentence of exile was revoked in 1857, and he d. in retirement near Amiens. See lives by E. Keller, 1873; Flornoy, 1903; P. J. L. Azan, 1925.

**La Motte, Antoine Houdar de** (1672-1731), Fr. poet and dramatist, b. Paris. His first comedy, *Les Originaux*, 1693, was a failure, and he contemplated entering a monastery, but the success of his ballet, *L'Europe galante*, 1697, led to a series of successful operas and tragedies, of which the most famous is *Inès de Castro*, 1723. Other works are a verse trans. of the *Iliad*, 1714, founded on Mme Dacier's trans., 1699, *Odes*, 1707, *Réflexions sur la critique*, 1715, and *Fables*, 1719. He played an important part in stimulating literary reform in the 18th cent., and in the quarrel of the Ancients and Moderns he was, with Fontenelle, one of the foremost to side with the Moderns. He was elected to the Fr. Academy in 1710. See P. Dupont, *Un poète philosophe*, Houdar de la Motte, 1898.

**La Motte Fouqué, see FOUQUÉ, FRIEDRICH HEINRICH KARL DE LA MOTTE.**

**Lamoureux, Charles** (1834-99). Fr. violinist and conductor, b. Bordeaux. He studied at the Paris Conservatoire, and in 1873 began to give exceptionally enterprising concerts of choral and orchestral music. In 1881 he inaugurated the *Nouveaux Concerts*, better known as *Concerts Lamoureux*, in continuation of the work begun by Colonne. See H. Imbert,

**Lamp.** The Eng. word L. is derived from the Gk *lampas*, a torch, which in its turn is connected with *lampein*, to shine. As early as the Stone Age man appears to have discovered that a wick soaked in and fed by fat would provide a lasting light, and by the hollowing out of a stone to hold the fat and the wick the first L. was created. The earliest stone L.s are crude and difficult to identify with certainty, but the bowl-shaped example found at Istaritz, in the Lower Pyrenees (now in a private Fr. collection), is probably among

the earliest (c. 20,000 bc). It is made of yellowish-grey limestone, while the L. of the Magdalenian period (c. 12,000 bc) found in the S. of France, and now in the museum of St Germain-en-Laye, near Paris, has a definite spout and the head of an ibex engraved on the base, and is made of sandstone. In Britain the well-known Chisbury, Worthing, Sussex (now in the museums of Lewes, Brighton, and the Brit. Museum), date from about 2000 bc. In the Near E. the L. had an independent origin, in the sea-shell. Though the shell's first use as a L. cannot be traced back at present beyond c. 5000 bc, the discoveries at Ur (q.v.), Mesopotamia (now in the Brit. Museum), prove that conch shells were used as L.s and by 4000 bc L.s carved in alabaster, a local stone, were made in the shape of these shells. The earliest metal L.s were also found at Ur, made of gold, silver, and copper, some of them being derived from the shell-L.s. One bronze L. from Ur, in the shape of a crocodile, foreshadows the late Rom. idea of making metal L.s in animal forms. Copper L.s shaped like a kind of shell were found beneath a Sargonid palace at Eshnunna and dated c. 2700 bc.

**Pottery L.s** found at Tell Duweir, Palestine, by the Wellcome expedition in 1937-8, belonged to the third millennium bc and were extraordinary because not only were they made of finer pottery than the later examples found but they were almost square, with four spouts (for four wicks) and flat bases; the later examples are in the form of a shell, usually the scallop, with rounded bases as in shells. The later Phoenician pottery L.s of the middle of the second millennium bc are of shell form, and in Palestine the pottery L.s of the Canaanite period (second millennium bc) closely follow the Phoenician type, but from the time of Solomon onwards they developed flat bases, a deeper shape, and a nozzle for the wick. How early L.s were made in Egypt is entirely conjectural, but they were probably a simple open saucer type in which the wick floated, and are consequently scarcely recognisable as L.s even where they have survived; particularly if, as is probable, they were only sun-baked clay. The Chinese bronze examples of the late Chou dynasty (4th cent. bc) are saucer shaped or box shaped and in some cases have short legs. The early stone L.s of the Minoan culture on Crete (c. 2500-1400 bc) show a technique all their own. They are shallow decorated bowls of considerable size set on pedestals; a

rod gypsum example over 2 ft high is in the Brit. Museum. Minoan open saucer pottery L.s also exist, some with a lip or spout, others with a separate nozzle, and the earliest L.s with handles are also products of this remarkably developed and artistically advanced Minoan culture.

The Gk L. was not derived from the Phoenician shell type but from the open saucer type; whether it was a local development from the stone L.s of the Gk 'Dark Ages' is still uncertain. It quickly improved after the 6th cent. BC;

Ashmolean Museum

A LAMP IN TERRA-COTTA OF THE FIRST OR SECOND CENTURY A.D.

The decoration shows basilica and boatmen in relief; conjectured Roman.

it was thrown on the potter's wheel, the rim was curved inwards to prevent spilling, a handle was added, the nozzle was bridged, and eventually the 'saucer' became totally enclosed as in the late Gk and Rom. L.s. From the 6th to 4th cents. BC these L.s were mostly glazed on the outside, but from the 3rd cent. BC a coating of slip took its place. In the 2nd cent. BC the method of production changed to moulding and by the following cent. makers' names began to appear, though names are predominantly a feature of the Rom. period.

The Rom. pottery L. derives from the Gk and, though it developed distinctive features, such as the concave top and the moulded ornamentation, it is basically the same. Although Hellenic bronze L.s survive it was not until the Rom. period,

especially from the 1st cent. AD, that the use of metal L.s became common, employing a variety of forms (animals, fishes, figures, etc.). Many of the surviving examples belong to the early Christian and early Byzantine eras (4th to 7th cents. AD) and have Christian symbols and emblems as decoration. Another Byzantine type of pottery L. appearing about the 8th cent. seems to derive from the Assyrian (722-626 BC) and Parthian (200 BC-AD 200) L.s. They are all more like small tea-pots, with globular bodies and nozzles (or spouts) projecting from near the base on one side. This type continues in the early medieval Arab L.s with a blue or green glaze.

Examples of glass L.s of the 4th and 5th cents. AD found in the Fayum, in Egypt, seem to be among the earliest made in this medium. They are of the float-wick type (like the saucer-shaped pottery L.s) and as early as the 6th cent. were developed into a chandelier device. The glass L. spread through the Byzantine world, both in the E. parts (e.g. finds from the sites of Syrian churches) and the W. areas, where its spread was undoubtedly aided by its adoption by the early Christian Church for a 'sanctuary L.' in front of the Sacrament. Anglo-Saxon glass bowls found at Faversham (now in the Brit. Museum) were almost certainly float-wick L.s in the same tradition. Medieval MS. illuminations of the 11th to 14th cents. depict the same type of glass L.s, and in the Renaissance the metal pendant holders for these L.s reach their height of artistic ingenuity.

See H. B. Walters, *Catalogue of the Greek and Roman Lamps in the British Museum*, 1914, and F. W. Robins, *The Story of the Lamp*, 1939.

**Lamp Black**, black pigment consisting of finely divided carbon produced by the incomplete combustion of coal-tar creosote or petroleum fuel oil; the finest being obtained from the former material. It is used mainly in the manu. of printing inks and as a pigment for oil painting.

**Lamp-shell**, genus of Brachiopods.

**Lampedusa**, It., largest of the Pelagian Is. (q.v.). Its centre is the tn. of L. (pop. 4100) on the S. coast. In the Second World War the Is. surrendered to the Allies on 12 July 1943, after a bombardment from air and sea (see ITALIAN FRONT, SECOND WORLD WAR CAMPAIGNS ON). Area 11½ sq. m.; pop. 3146.

**Lampeter**, or **Lampeter Pont Stephen**, municipal bor., assize, and mkt. tn. of Cardiganshire, Wales, situated on the R. Teifi. The name Pont Stephen is derived from an ant. stone bridge over the riv., which was constructed for King Stephen. St David's College (1822-7) is affiliated to the univs. of Oxford and Cambridge. Pop. 2200.

**Lampman**, Archibald (1861-99), Canadian poet, b. Morpeth, Ontario. Educ. at Trinity College, Toronto, he entered the gov. post office service. His prin. poetical works are *Among the Millet and other Poems*, 1888, *Lyrics of Earth*, 1895, and *Alcyone*, 1899. See memoir by D. C.

Scott, 1900, and life by C. Y. Connor, 1929.

**Lamprey**, species belonging to the group Hyperartili of the Cyclostomata (q.v.), the other group comprising the hagfishes (q.v.). L. are fish-like vertebrates with median, but not paired, fins and with a round, jawless mouth armed with a muscular, tooth-studded tongue. There are 7 pairs of gill pouches and the single, median nasal opening is on top of the head near the eyes. The fertilised eggs hatch into small, worm-like larvae known as prides or ammocoetes, these living in burrows in the mud. After 3 or 4 years this larva changes into the adult form. All L.s pass this early part of their lives in freshwaters, the marine species, such as *Petromyzon marinus* of the N. Atlantic, migrating into the rivs. to spawn. About half the species of the main L. family, Petromyzonidae, live permanently in fresh waters and are dwarfed, non-parasitic types with weak teeth. The larger, parasitic species attach themselves to other fishes and rasp off pieces of flesh by the piston-like motions of their muscular, toothed tongues. The species found in Brit. waters are the sea L., *Petromyzon marinus*, which grows to a length of about 3 ft., and the smaller riv. L., *Lampetra fluviatilis* and brook L., *L. planeri*.

**Lampsacus**, anct Gk colony in Mysia, Asia Minor, on the Hellespont and opposite the modern Gallipoli. It was celebrated for its wine, and was the chief seat of the worship of Priapus. The modern vil. of Lapsaki probably stands near its site.

**Lampyrus**, see GLOW-WORM.

**Lanark**, royal, municipal and police burgh, and co. tn of Lanarkshire, Scotland, situated on high ground near the r. b. of the Clyde, 31 m. SE. of Glasgow by rail. It is a holiday centre for the falls of Clyde, and has associations with Wm Wallace. There is a golf-course and a racecourse; near by is the Glasgow sanatorium. The chief industries are cotton spinning, druggery and winery weaving, and nail making, and there are cattle and sheep markets. One and a half m. S. is New L., founded by David Dale and Richard Arkwright in 1785, as a cotton-spinning centre. Robert Owen, the social reformer, was manager of the mill from 1799 to 1828. Pop. (inclusive) 8000.

**Lanarkshire**, SW. inland co. of Scotland, bounded N. by Dunbartonshire and Stirlingshire, E. by W. Lothian, Midlothian, and Peebles, S. by Dumfries, and W. by Ayr and Renfrew. Originally part of the ter. of the Celtic tribe of the Dumnonii. L. was never totally annexed by the Romans. It has associations with the patriot Wm Wallace, and Mary Queen of Scots was defeated at Langside in 1568. Claverhouse was defeated by the Covenanters at Drumclog (1679) who in their turn were defeated at Bothwell Brig in the same year. The co. is divided into 3 wards: the Upper (which lies to the S. and includes more than half the co.), the Middle, and the Lower. The greatest elevations are to be found in the

S., Culter Fell (2454 ft) being the highest on the borders, and in L. itself Green Lowther (2403 ft). The valley of the Clyde runs through the co., and the surface slopes gradually from the heights in the S. to the Firth of Clyde in the N.—this riv., with its numerous tribs., drains the co. There are a few small lochs in the N., but the falls of the Clyde at Bonnington, Corra Linn, and Dundaff are famous. Oats are the main crop, and cattle and sheep are reared extensively, also pigs, and the fine breed of draught horses known as Clydesdales. Dairy farming is productive, especially certain kinds of cheese, and fruit farming is carried on in the Clyde valley, strawberries being grown in great quantities. In the N. market gardening flourishes (a considerable amount of glass is used). The main industries are in the coal- and iron-fields, of which Glasgow (Scotland's largest city) forms the centre; shipbuilding at Glasgow, Govan, and Partick; cotton, woollen, and linen manuf. at Glasgow, Rutherglen, Hamilton, and Lanark; engineering at Coatbridge, Kinning Park, and Wishaw; and steel at Cambuslang, Motherwell, and Wishaw. Canals include the Monkland Canal in the N., and the Forth and Clyde Canals in the N. and NW. The co. returns 6 M.P.s, and there are also 16 burgh constituencies (Coatbridge and Airdrie return 1 member; Glasgow returns 15). Area 882 sq. m.; pop. 1,614,363.

**Lancashire**, maritime co. in the NW. of England, bordering on the Irish Sea. The coastline, though flat, with fine stretches of sand, is broken by inlets, of which the largest are Morecambe Bay and the estuaries of the 3 rivs., the Duddon, the Ribble, and the Mersey. Morecambe Bay also divides the dist. of Furness with the is. of Walney from the rest of the co. There are many popular seaside resorts on this coast, the chief of which are Blackpool and Southport. The most important rivs. are the Mersey, into which flow the Irwell and Sankey, and the Ribble, rising in Yorks. and flowing down to Preston, into which flow the Hodder, Calder, and Darwen. The surface of the co. is varied, the N. being hilly, except near the coast, and including part of the beautiful Lake District, Conistown and part of Windermere being in L. The E. boundary is also hilly, taking in part of what is known as the Pennine uplands, the highest point being Pendle Hill (1831 ft). In the N. there are some beautiful stretches of moorland, and along the coast and the R. Mersey there is a plain, once peat mosses, but now partly reclaimed; the largest of these is Chat Moss (q.v.) between Liverpool and Manchester.

L. contains one of the largest of England's coal-fields, covering about 400 sq. m. in its area are included all the big cotton-manufacturing tns., Manchester, Burnley, Blackburn, Wigan, Bolton, and Preston, etc. Fire-clay, sandstone, limestone, slate, particularly a fine blue slate, and salt are quarried. Fire-clay, clay, and stoneware are worked. In Furness red hematitic iron is found. Cattle are

reared in considerable numbers, cows being kept to supply the large demand for milk, and the hill pasturage is good for sheep; oats and wheat are the chief crops. L. is one of the centres of the cotton trade for the world. The industry dates from the 17th cent., though it is not until 1789 that we find steam first used at the mills in Manchester, and a rapid development followed (see CORTON, *The British Cotton Industry*). There is a large manuf. of all implements and machines used for the weaving industry; iron and steel are manuf. at Barrow-in-Furness; there are glass works at St Helens, electrical goods

THE TOWER AT BLACKPOOL, LANCASHIRE

and aircraft at Preston, and leather works at Warrington. There are also numerous alkali, soap, candle, oil, and other chemical works. L. contains the great seaport of Liverpool with its vast shipping trade, and the lesser ports of Manchester, connected with the sea by means of the Ship Canal (1894), Barrow-in-Furness, Preston, and Fleetwood. The co. is one of the cos. palatine, and is part of the Duchy of Lancaster, the office of chancellor of the duchy and co. palatine dating back to 1351. It is divided into 6 hundreds, and returns 64 members to Parliament. It contains some fine ruins and anct churches and is famed for the number of its old co. families. The area is 1887 sq. m.; pop. 5,234,000. See H. Fishwick, *A History of Lancashire*, 1894; *Victoria County History: Lancashire*, 1906-12; J. C. Walters, *Lancashire Ways*, 1932; W. Smith, *Lancashire*, 1941; A. Mee, *Lancashire*, 1942; H. C. Collins, *The Roof of Lancashire*, 1950.

**Lancashire Fusiliers.** The. Raised in 1688 to support William III the regiment

early saw service in the W. Indies, and later at Dettingen (1743), Fontenoy (1745), and Culloden (1746). Wolfe was lieutenant-colonel for a time. It distinguished itself at Minden (1759). It served in the Amer. war, and in 1782 was styled the E. Devon Regiment. It served in Egypt in 1801 and in 1806 it took part in the battle of Maida; it then went to the Peninsula, where it served under Wellington from 1808 (Vimiera) to the end of the campaign in 1814. It formed Napoleon's guard during the last 2 years of his captivity (1820-1), furnished the guard at his residence on the night of his death, and its grenadiers bore him to his grave. Further honours were won in the Crimea, at the battles of Alma and Inkerman, and at the siege of Sevastopol. It went to India in 1857, and took part in the siege and capture of Lucknow during the mutiny. A battalion served in China and Japan during the occupation of the treaty ports after 1863. It took part in Kitchener's advance on Khartoum and his victory at Omdurman. During the S. African war, 1899-1902, it took part in the relief of Ladysmith. During the First World War it raised 30 battalions, which served in France, Flanders, Macedonia, Gallipoli, and Egypt. The name 'Lancashire Landing' in Gallipoli commemorated its bravery in that historic campaign (see also GALLIPOLI CAMPAIGN). During the Second World War 8 battalions were in service in various theatres. At the outbreak the 2nd Batt. went to the W. front with the 4th Div. Three Territorial battalions, the 1st/5th (Bury), 1st/6th (Rochdale), and the 1st/8th (Broughton), soon followed. The 1st/8th and the 10th (Exeter) Batts. sailed to India, where the 1st Batt. had been stationed since the beginning of the Sino-Jap. war. Meanwhile the 2nd Batt. took part in the invasion of N. Africa in 1942. After serving also in the invasion of Sicily and the whole of the It. campaign this battalion was selected from the famous Eighth Army (q.v.) to be the Brit. garrison force in Vienna. It was during the storming of the Gustav line that Fusilier Frank Jefferson won the V.C. The 1st, 1st/8th, and 10th later served in India or Burma; the 11th in Italy; and the 2nd/5th in the battle of Normandy.

**Lancaster, Sir James** (d. 1618), Eng. navigator and statesman, first sailed in an expedition to the E. Indies in 1591, the very lucrative outcome of which resulted in the formation of the E. India Co. In 1600 he commanded the first and very successful fleet of the company to Acheen, etc. L. Sound, a channel 50 m. wide in the Arctic regions, leading from Baffin Bay, between N. Devon and Cockburn Land, and continued W. by Barrow Strait, was named after him by Baffin on account of L.'s voyages in search of the NW. Passage. See *Voyages of Lancaster*, ed. by Sir Clements Markham for the Hakluyt Society, 1877.

**Lancaster, Joseph** (1778-1838), b. London, Quaker educationist, founder of a school in Borough Road where he educ. children free of charge by using older

pupils to instruct groups of younger ones. His flair for organisation was such that he ran a school of 1000 children and claimed that, with properly trained monitors, he could train 10,000 pupils to read fluently in a period of 3 weeks to 3 months. His first pamphlet (1803) on *Improvements in Education* outlined his methods of maintaining discipline (which were elaborate) and the teaching of the 3 Rs. His relations with Bell (q.v.) were at first cordial, but the two men and their supporters disagreed on the role the Church should play in education. L. claimed that schools should not be used for the purpose of indoctrination and wished to make education widely available to the poor. An active propagandist, he gained the support of royalty, became intoxicated by success, and aroused the hostility of the estab. Church. Influential Quakers came to his assistance financially and raised funds to found the Royal Lancastrian Society. When its name was changed to the British and Foreign Society, L. objected and soon afterwards, again financially embarrassed, left for the New World. In the U.S.A., S. America, and Montreal, Canada, he tried to establish schools with varying degrees of success. His monitorial system, however, became widely used during the first half of the 19th cent. in the States and to some extent on the continent of Europe. Through encouraging his able pupils to become schoolmasters L. might rightly be regarded as a pioneer of teacher training, and Borough Road Training College for men remains to remind us of his first school of Southwark. L. d. in poverty and obscurity.

**Lancaster:** 1. City, mkt tn, and riv.-port of Lanes, England, and also the co. tn. At the head of the Lune estuary, 7 m. from the sea, 52 m. NW. of Manchester, and 230 m. from London by rail. Situated on rising ground, crowned by its old castle and church, it commands a fine view of the surrounding country and of Morecambe Bay some 3 m. below. The riv. is crossed here by a 5-arched bridge built in 1788, and to the N. of the city a canal is carried over the riv. by an aqueduct.

**History.** L. has a long hist., and even before the Rom. occupation the tn was of some importance. As *Loyn-caestre*, *Lone-castrum*, or *Lunecastrium*, it was fortified by the Romans and traces of their walls are still to be seen. Rom. remains in the shape of Samian ware and tombs leave no doubt that it was a Rom. station of great importance. Before the union of England and Scotland L. was often the quarry of Scots raiders, who on sev. occasions (1314, 1322, and 1389) destroyed the tn. It suffered also in the Wars of the Roses, when it was more or less depopulated, and in the Civil war, when it was captured by Cromwell in 1643, retaken by the Earl of Derby in the same year, and again taken by the parl. troops in 1648. In both Jacobite rebellions, the 'Fifteen and the 'Forty-five, the rebels occupied the tn. L. received its first charter in 1193 from

King John, then Earl of Mortain, and the second in 1199, also from John. Henry II granted the ownership of the tn and castle to his son Edmund, first Earl of Lancaster, in 1267, and they have been part of the Duchy of L. since its creation. The castle devolved by marriage on John of Gaunt and, from the reign of his son Henry IV, it has been vested in the Crown, all the subsequent holders of which have been dukes of L.

The castle which, with the adjacent priory and par. church of St Mary, is the

JOHN O' GAUNT'S GATEWAY,  
LANCASTER CASTLE

dominating feature of L., stands high above the city. Beneath Hadrian's Tower there is evidence of Rom. construction. But the castle as it exists to-day was begun by Roger de Poitou (c. 1094), though the only Norman work remaining is the Lungess Tower, used as a beacon at the time of the Sp. Armada. The gateway, with its massive towers and 9-ft-thick walls, is one of the finest medieval gatehouses in existence. The Gateway Tower was planned by John of Gaunt and, in 1322, a statue of him was erected over the gateway. The gatehouse gives access to what was for some years, and now is again, a prison. The castle contains a court-room in which are held the assizes, quarter sessions, and co. court. The famous 'Lancashire witches' were tried here in 1612, when 17 persons were condemned for witchcraft on the evidence of one boy. In the museum in Hadrian's Tower is a Rom. altar and a varied collection of instruments of torture. The

priory church stands on the N. side of Castle Hill. Although the present edifice is mainly Perpendicular (15th cent.) there has been a Christian shrine here for 13 cents., and it also incorporated the anct Rom. basilica of the Rom. camp. The tower of the priory was built in 1759. The delicately carved canopies of the chancel stalls, dating from about 1340, are probably the finest of their kind in the country. Notable too are the old font cover, the pulpit, the Saxon doorway, and a wealth of monuments, brasses, and stained-glass windows. A striking feature of the church is the memorial chapel of the King's Own Royal Regiment, one of the earliest regimental chapels to be erected. The imposing Rom. Catholic cathedral of St Peter in E. Road was erected in 1859, the estab. of the Rom. Catholic diocese of L. dating from 1924. Remarkable for colouring and workmanship are its chancel roof, frescoes, and canopies.

The tn hall and its surroundings were presented to the tn by Lord Ashton (q.v.) at a cost of £155,000, the architect being E. W. Mountford, designer of the Central Criminal Court, Old Bailey. In the group of buildings known as Storey Institute (after the donor Sir Thomas Storey) are the school of arts and crafts, the technical college, and the art gallery. The L. Royal Grammar School (accommodating 670 boys) was founded as an old 'free grammar school' under the will of John Gardynor of Bailrigg, dated 1472, and was rebuilt in 1682, though it probably existed long before this, perhaps as early as 1235. In 1881 the school was moved to its present site on the outskirts of the city. The public library in Market Square is a modern building opened in 1932. Also in Market Square is the L. museum, once a tn hall, erected in 1781. In the elaborate domed Ashton Memorial in Williamson Park, designed by John Belcher at a cost of £87,000, are a natural hist. collection, palm house, and observatory. Another public park is Ryelands (45 ac.), including a former residence of Lord Ashton. Although still engaged to a certain extent in shipbuilding and repairs, the prosperity of L. to-day mainly depends on oilcloth and linoleum manufs., cotton spinning, furniture and cabinet making, textile manufacturing and dyeing, rayon, plastics, and engineering. L. is not, however, wholly industrial, although in recent years new and important industries have been estab. in the city. There can, however, still be found many of the attributes of an old Eng. mrkt tn and L. itself is the centre of a large agric. community. In 1937 the title and dignity of a city were conferred on the bor. by King George VI on the occasion of his coronation. Pop. 49,910. See S. Clarke, *Lancaster*, 1811; S. C. Hall, *Lancaster Castle*, 1843; R. Simpson, *History and Antiquities of Lancaster*, 1852.

2. City in New Brunswick, Canada, on the opposite side of the St John R. to St John, formed by the amalgamation of the municipalities of L. and Fairville. It is the site of the Prov. Hospital and

has an important brush and broom industry and a pulp- and paper-mill. Pop. 10,000.

3. Co. seat of L. co., Pennsylvania, U.S.A., on the Conestoga R., 69 m. W. of Philadelphia. It is a thriving industrial tn for one of the richest agric. areas in the U.S.A., with large tobacco warehouses, cotton mills, breweries, tanneries, iron works, machine works, silk-mills, and chocolate factories. There are also cork and linoleum works, umbrella factories, and plants for making watches, clocks, etc. Franklin and Marshall College is here. Pop. 63,780.

4. City, co. seat of Fairfield co., Ohio, U.S.A., on the Hocking R., 26 m. SE. of Columbus. It manufs. flint glass, farm machinery, etc. Pop. 24,200.

**Lancaster, House and Duchy of.** The house of L. originated in the second son of Henry III, Edmund Crouchback, who was created Earl of L. and Leicester in 1267. The Duchy of L. was created by royal charter in 1351 for Henry, son of Edmund Crouchback, and again in 1362, when John of Gaunt, who married Blanche, the sole heiress of the Lancastrian estate, was made Duke of L. in default of male heirs. Their son, Henry IV, seized the throne from Richard II, reigned from 1399 to 1413, and was succeeded by Henry V (1413-22). During the reign of Henry VI (1422-61 and 1470-1), the Wars of the Roses broke out, in which the Lancastrians were opposed by the house of York, descended from Lionel, Duke of Clarence, elder brother of John of Gaunt. The Duchy of L. was annexed to the Crown by Edward IV in 1461, but up to the present time the revenues are held separately from the hereditary revenues of the Crown. Formerly the chancery court of the co. palatine was held at Preston and the duchy court at Westminster, but since 1873 the administration of justice has been assimilated to that of the rest of England, though the chancery court of the palatinate still functions separately. The office of chancellor of the duchy, being a political appointment, is generally held by a member of the Cabinet, and the stipend is £4000 per annum. See T. Taswell-Langmead, *Constitutional History*, 1875; W. Stubbs, *Constitutional History*, 1875; J. Gairdner, *The Houses of Lancaster and York*, 1886; Sir J. H. Ramsey, *Lancaster and York*, 1892; J. E. A. Jolliffe, *Constitutional History*, 1937.

**Lancaster Regiment**, see KING'S OWN ROYAL REGIMENT.

**Lance, George** (1802-64), painter, b. Little Easton, Essex. He studied under Haydon, intending to produce historical pictures, but discovering where his real bent lay by the copy of a group of fruit merely as a study of colour, he afterwards devoted himself entirely to still life and fruit studies, sev. of which are in the Tate Gallery.

**Lance**, see SPEAR.

**Lance-corporal**, in the Brit. infantry, a non-commissioned officer below the rank of corporal, or an acting corporal; those

on the estab. of a battalion wear a single chevron on each sleeve.

**Lancelet**, see AMPHIOTUS.

**Lancelot du Lac**, famous knight of the Round Table, and secret lover of Queen Guinevere. He was the son of King Ban of Benoic and Queen Elaine, who were driven out of their kingdom by Claudas. L. was brought up at the court of a water-fairy, the Lady of the Lake, and when he reached manhood he offered his services to King Arthur, who made him a knight. His love for Guinevere was disclosed to Arthur by the sons of Lot, and at the end of the ensuing war he retired to a monastery. He was, by Elaine, the father of Sir Galahad. The story of L. du L. belongs to the later romance of the Arthurian cycle. See eds. of the prose *Lancelot*, 1488 and 1533; H. Hahn (ed.), *Lancelot*, 1845; J. L. Weston, *The Legend of Sir Lancelot du Lac* (vol. xii. of Grimm Library), 1901; J. Boulenger, *Romans de la Table ronde*, 1922-3.

**Lancers**, cavalry regiments so named from their prin. arm being, or having been, the lance. In the days of chivalry the long lance was the chief weapon of offence, but in 1597 it declined in importance, owing to the introduction of a serviceable firearm, with which Dutch and Eng. carabiniers defeated the Spaniards in the Netherlands. At the battle of Dunbar, 1650, however, Cromwell's troops suffered severely from Scottish L. Frederick the Great included a lancer troop in each of his hussar regiments, the men of which were armed with a long pistol, sword, and lance. At this time there was no pennon on the lance. During the Napoleonic period the lance was seen on many battlefields in the hands of Poles, Cossacks, and Arabs. After Wagram L. began to appear in the Fr. ranks. A regiment of Polish L. was raised in 1807 in the Fr. service, and in 1811 Napoleon converted 9 dragoon regiments into L. The Fr. L. in the Peninsular war were very prominent at Albuera, and again at Waterloo they sorely tried the Brit. dragoons and hussars. Soon after Waterloo a few regiments of Brit. dragoons were converted into lancer regiments.

The lance, though a good weapon of offence, is very difficult for parrying. The long lances of the Cossacks proved a hindrance to them in the Moscow campaign of 1812 for this reason. During the first half of the 19th cent. the 16th L. distinguished themselves in India by their work with the lance. The 9th and 12th L. also gained fame in India and on S. African fields. In the Khartoum expedition, under Lord Kitchener, the 21st L. charge was a notable feature of the campaign. During the S. African war, 1899-1902, the 5th L. made a very effective charge at Elandslaagte in 1899. In spite of these achievements the lance declined in favour soon after this campaign. The lance found little scope in the First World War. During Aug. and Sept. 1914 in France the 12th L. at Cerizy and the 9th L. at Moncel afforded the only instances of effective charges. The 21st

L. also found employment on the NW. frontier of India against the Mohmands, and the 2nd Indian L. under Allenby in Palestine wrought havoc amongst the Turks with their charges. Later the lance was retained solely for ceremonial purposes. But to-day it has disappeared with the conversion of lancer regiments into armoured units. As armoured troops or armoured car units the L. fought in many great battles of the Second World War, notably in the heavy fighting in Normandy in the difficult bocage country. The regiments of the Brit. Army still bearing a lancer title are: 9th Queen's Royal L., 12th Royal L. (Prince of Wales's), 15th/19th The King's Royal L., 16th/5th L., and 17th/21st L.

See Joan Bright (ed.), *The 9th Queen's Royal Lancers, 1936-1945*, 1951; see also R. M. Barnes, *History of the Regiments and Uniforms of the British Army*, 1950.

**Lancers**, square dance of Fr. origin (*lancières*). The name of this dance was given originally to a set of quadrilles, known as 'A Second Set of Quadrilles,' often referred to as the L. Quadrille. The Quadrille was first introduced to Eng. society in 1818, and won immediate favour. The following year an 'entirely new' set of figures was claimed for the L. being launched by the nobility and gentry of fashionable circles. Its prominence in the Eng. ballroom for so many years probably was due, in part, to its inclusion in all the state balls of Queen Victoria. Throughout the remainder of the 19th cent., and into the early years of the 20th cent., it remained a firm favourite. As in the Quadrille, the L. contained 5 figures, danced by 4 couples in square formation. 'Double Lancers' were for 16 dancers.

'**Lancet**, **The**,' leading Brit. medical jour., founded in 1823 by a surgeon named Thomas Wakley, who used it to attack the gross abuses then existing in the administration of hospitals. Wakley was assisted by Cobbet, Wardrop, Sir Wm Lawrence, and Dr Arthur Hill Hassall, and was succeeded as editor by his son and grandson.

**Lancet Window**, see ARCH and ENGLISH ARCHITECTURE.

**Lancewood** (*Oxandra lanceolata*), hard, heavy, fine textured wood from the W. Indies, used for bows, fishing rods, billiard cues, and turnery. The sapwood is clear lemon yellow in colour; heartwood when present is dark in colour—the sapwood is most used. The wood weighs about 62 lb. per cu. ft, splits readily, is easy to work and is strong and elastic. Once widely used by coach builders for the shafts of traps. See **TIMBER**.

**Lanchester**, Henry Vaughan (1863-1953), architect and tn-planner, b. London, came into prominence in 1899 when, with his partners E. A. Rickards (d. 1920) and James Stewart (d. 1904), he won the important competition for the City Hall and Law Courts at Cardiff. His firm, which included other partners during the next 50 years, had other sensational successes in competitions, which accounted for much of their work. L.'s most

notable buildings after 1899 were Deptford Tn Hall, 1901; the Wesleyan Central Hall, Westminster, 1905; Third Church of Christ Scientist, London; extensions of Leeds Univ. (competition), 1926; Birmingham Hospital Centre; Birmingham Technical College; sev. other technical colleges; extensions of St Bartholomew's Hospital; science buildings at Oxford, Cambridge, and Belfast; numerous research stations; tn halls at Hackney and Beckenham; Esso refinery at Fawley; Bovril factory, London. In India L. planned 20 tns, including Madras, reported on the site for New Delhi, and built a colossal palace for the Maharajah of Jodhpur. He ed. *The Builder*, 1910-1912, and pub. an excellent book, *The Art of Town Planning*, 1925.

**Lancaster**, rural dist. and vil. of co. Durham, England. In the neighbourhood are remains of a Rom. station, and Rom. relics have been found. The tn, situated near Durham, is industrial, and contains a cosmetic factory, steam saw-mills, and timber yards. Pop. (rural dist.) 15,100; (vil.) 2100.

**Lanchow**, cap. of Kansu prov., China, main railway centre between China and Europe, on the Yellow R., situated in a country of red loam hills from which the wind and rivs. have for cents. carried the soil which now covers most of N. China. Its natural potentialities are almost unlimited. Industrial co-operatives are gradually opening up the heart of the country from L. as centre. L. had no railway until 1952, since when 5 trunk lines have been started, radiating from this hub. (See CHINA, *Communications* and KANSU.) L. is also the biggest oil centre in China, owing to its proximity to the Yumen oilfield. Other industries too are being built up. L. is also an important air station between China and E. Europe. Pop. 650,000 (1957).

**Lanciano** (anc. Anxanum), It. tn in Abruzzi e Molise (q.v.), 15 m. SE. of Chieti (q.v.). Together with Ortona (q.v.) it forms an archbishopric; the façade of the cathedral was damaged by a bomb during the Second World War. The tn has Rom. remains, linen and hemp industries, and a trade in agric. produce. Pop. (com.) 20,000.

**Landing College**, public school for boys near Brighton, Sussex, founded in 1848 by the Rev. Nathaniel Woodard as the chief school in a scheme of Church of England education which now embraces 16 other schools.

**Lancisi, Giovanni Maria** (1654-1720), It. physician, b. Rome, educ. at the Colegio Romano and the Univ. of Rome, graduating in medicine at the age of 18. In 1688 he was appointed physician to Pope Innocent XI and subsequently to Clement XI and Innocent XII. L. was the foremost It. clinician of his day, eminent as anatomist, physiologist, pathologist, and botanist. His posthumous *De Motu Cordis et Aneurysmatibus*, 1728, was a landmark in the hist. of heart disease and his *De Subtaneis Moribus*, 1707, a classic on the causes of sudden

death. *See* also *De Malaria*, 1711, in which he suggested that malaria might be caused by the bites of mosquitoes. In 1714 he pub. the anatomical plates executed by B. Eustachio (q.v.) in 1552, which had remained in the Vatican Library, forgotten until rediscovered by Clement XI. *See* life by A. Bacchini, 1920.

**Lancret, Nicolas** (1690-1743), Fr. painter of *ftes galantes*, b. Paris. He studied under Pierre Dulin, as Academy prof., but left him for Claude Gillot as the latter was the master of Watteau (q.v.) whom he met and whose style very strongly attracted him. The friendship between L. and Watteau does not, however, seem to have endured; it is said that the success L. achieved with 2 works which he exhibited and which were attributed to Watteau caused the rift. L. was prolific, and his pictures numbered about 800. His first important works were 'Le Bal champêtre' and 'Une Dame dans un bosquet', 1714. His 'Four Ages of Man' is in the National Gallery and the Wallace Collection has his 'Une Conversation galante.' L. has grace and charm, but lacks the peculiar power of his exemplar Watteau. *See* G. Wildenstein, *Lancret*, 1924.

**Land**, as the ultimate source of all wealth, has necessarily, throughout all time, been the most coveted kind of property. It has the characteristic of immovability which no other species of property possesses, and with the guarantee of state protection for all individual rights affords its owners an element of security and permanence in their proprietary estate altogether unique. And the more modern inventions increase the productive power of L., and the further the margin of cultivation is pushed by inventiveness and enterprise beyond its old limits, the keener becomes the desire to hold it. Conversely the further back the hist. of L. is traced the less valuable will it appear to have been to those who occupied it, more especially seeing that in primeval times there was ample for all. The hist. of every civilisation is that of the subordination of crude nature to human art, and it is clear from such records as are extant (chiefly Caesar and Tacitus) of the manners of tribal organisations that these quickly learnt the value of such L. as was capable of producing natural food for their subsistence. Even with tribes whose sole occupation was the chase, we see the germ of territorial property in the defence of hard-won L. against hostile aggression by less fortunate adventurers. In the pastoral stage that germ had developed into the tenure of the vil. community, the more civilised and developed organisation of which is to be found even at the present day, especially among Slavonic and Hindu peoples. In general the common field system of cultivation obtained as the most advantageous system of husbandry, i.e. the system by which fields were divided into 3 narrow strips, owned in severalty but cultivated by co-operation.

In primitive societies both the arable and pasturo L.s have remained the joint property of the community, and in an ideal state when those appointed to cultivate the L. or tend the cattle had been respectively best fitted for those purposes, and willing to perform the duties for the general benefit, the need for private ownership might not have been felt. The change comes with the apportionment of the arable L. among the households comprising the vil., while the pasture, woods, and forests remain common property. The principle of joint ownership, however, survives in the system of cultivation of crops by rotation, the L.s apportioned for culture lying fallow for a succession of years, other L.s being assigned by the vil. rulers for cultivation. This immature system becomes definitely that of private property as soon as L. is appropriated permanently to separate families, the less fortunate or more idle villagers being relegated to the waste L.s, or forced to labour for the landowners. From this appropriation springs all wealth, and the very notion of money, which in the Lat. word *pecunia* is cognate with *pecus*, cattle (see on this Sir F. Pollock and F. Maitland, *History of English Law down to the Thirteenth Century*, 1895). The general result of this course of evolution, where the vil. community has not become a permanent institution, is the tendency everywhere for huge landed estates to become concentrated in the hands of a few powerful families, and, indeed, for most of the rest of the L. occupied by any particular nation to fall into the hands of comparatively few of the people, with the consequence that political control falls to the owners of L., and the very qualifications for office are based upon the possession of a certain amount of L. It is then that ownership or tenure of L. is regulated by legislation, and, whether we are dealing with the agrarian reforms of the Gracchi or the fiscal proposals of our own times, it is not difficult to appreciate why laws relating to L. must almost inevitably be at the same time laws that vitally affect the very polity and constitution of the State, and inevitably rouse the angriest passions. It is not, however, to be assumed that the same course of evolution is traceable in the hist. of the L. of all existing nations, though there may well be certain fundamental similarities in the earliest stages. But unquestionably feudalism lies at the root of L. tenure in most European nations, although in practically every case nothing but faint traces still remain, e.g. in Scotland, where the Scots L. law still speaks of *feu duties* being payable by a *vassal* to his *superior* or *lord*, while in England we still speak of a lord of the manor. (For the relation between the Rom. tenure of L. and continental feudalism, see under LAND LAWS.) The break-up of feudalism may be said to have begun from the time knight service became commuted for a money rent, and practically completed when terms of years or leases were granted by landowners; for these were indications of speculation in L.

as a source of profit—a state of things entirely opposed to the spirit of commendation. The whole hist. of Eng. L. during the Middle Ages is that of a struggle between feudal overlords and their tenants, the former endeavouring to exact to the letter all the aids, reliefs, and other burdens imposed on the tenants by the L. laws, the latter endeavouring to evade all such quasi-public obligations and consolidate their holdings into private property in the fullest sense of that term, an endeavour which was partly accomplished by the devices of conveyancers in frustrating the common law rules as to tenure, and partly through alienations in mortmain (q.v.), and the doctrine of uses and trusts (see EQUITY). The idea that L. in England was merely held or loaned of a superior lord on certain conditions practically received its death-blow by the rule of primogeniture—at first a mere corollary of feudalism—and the judicial interpretation of words of grant (see DE DONIS). The later concession that L. might be disposed of by will completed the conception of a tenure of L. as a species of private property. As to the effect of marriage settlements, and wills customarily made in the manner of settlements, in keeping estates in the hands of wealthy families, see under LAND LAWS and ENTAIL.

In France there is a system of petty entails in vogue which, taken with the conformity of landowners to the spirit of the rule of succession of all the issue equally, results in the existence of a great number of private estates of no great size; whereas in England the effect of primogeniture and settlements made conformably to that doctrine is the aggregation of huge landed estates in the hands of comparatively few.

The social and economic developments of the last 100 years have substantially altered the pattern of land ownership in Britain. Urb. expansion, taxation, and death duties have broken up most of the large country estates. The substantial landowner of the mid-20th cent. is no longer the aristocrat or the industrial magnate turned squire. The commercial centres of our large cities are owned by prosperous property and insurance companies; nationalised and private industries control large areas of land used for factories, railways, mines, docks, power-stations and gas-works; local authorities have become the biggest landlords of residential property. On the other hand, redistribution of the national income and the growth of building societies have helped millions of wage earners to buy their own homes. Industry and the speculative builders share responsibility for reducing large tracts of land to grimy manufacturing tns, and those characterless suburbs which Sir Hugh Casson has called 'subtopia.' Modern tn planning legislation is designed to halt the wasteful and unplanned use of land. The industrialist is no longer free to build a new factory in a residential neighbourhood. The laying out of new housing estates is closely scrutinised by local authorities.

The builder with a fancy for 'stockbroker Tudor' or mock Gothic is likely to be thwarted. Although L. is frequently acquired by the gov. and local authorities, or its resources and development controlled, its nationalisation has never been seriously entertained. At a public inquiry in 1954 the Crown was severely criticised for having retained Cricheol Down after it was no longer used for the purpose for which it had been compulsorily purchased, without giving the former owner an opportunity of buying it back. The Land Clauses Consolidation Act, 1845, standardised the procedure for compulsory acquisition (see LAND LAWS). See also GARDEN CITIES; GREEN BELTS; LAND COMMISSIONERS; LAND FOR MILITARY PURPOSES; LAND LEAGUE; LANDLORD AND TENANT; LAND, NATIONALISATION OF; NEW TOWNS; TOWN AND COUNTRY PLANNING.

See Sir H. Maine, *Village Communities*, 1871; E. Jenks, *Modern Land Law*, 1899; Barbara Hammond, *The Village Labourer, 1760-1832*, 1911; J. S. Venn, *Foundations of Agricultural Economics*, 1923; F. Geary, *Land Tenure and Unemployment*, 1925; Lord Ernle, *The Land and the People*, 1925, and *English Farming*, 1927; Sir W. Hildsworth, *History of English Law*, 1927; G. C. Cheshire, *Law of Real Property* (7th ed.), 1954.

**Land, Nationalisation of**, abolition of all private ownership in land and the vesting of landed property in the State. Socialists argue that the N. of L. or state ownership of land differs from state ownership of movables or 'created commodities,' because land is the ultimate source of supply of man's entire material needs, and therefore a land monopolist is a potential danger to the community. The assumption that no man has the moral right to private ownership of nature's resources is the chief inspiration of those who advocate state ownership. Most arguments for the N. of L. spring from the theories of J. S. Mill, Henry George, and Herbert Spencer, and proposals for nationalisation (as distinguished from socialism) have attracted only small attention outside the U.S.A. and Great Britain; they have won favour only in those conditions where land values, owing to the rapid economic progress of the past cent., have risen phenomenally, while remaining in the hands of relatively few owners. This condition favoured arguments founded on Mill's proposals for the taxation of unearned increment but going further, since Mill did not advocate more than the nationalisation of a proportion of the increment. In Russia, where all land was confiscated under the regime of the U.S.S.R., small holdings are let out to peasant agric. workers.

**Land Army**, see WOMEN'S LAND ARMY.

**Land Banks** are conducted for the purpose of lending money to farmers who wish either to buy land or to embark upon development of land already owned by them. In Great Britain there are no L. B. exclusive to that class of business, the farmers conducting their business through

the ordinary joint-stock banks, most of which advance money on mortgage, holding the title-deeds as security, or by local credit societies affiliated to such concerns as the Farmers' Land Purchase Co. and the Lands Improvement Co. But there are agric. banks, whether called by that name or some other name indicative of their function, in sev. Brit. colonies, notably in Barbados (ordinances of 1907 and 1936); Cyprus (ordinances of 1890 and 1925); Kenya (ordinances of 1931); Mauritius (ordinance of 1936); Seychelles (ordinance of 1937); S. Rhodesia (ordinance of 1924); Trinidad (revised laws, cap. 132); Transjordan. Germany had the *Landschaften Credit Union* of Germany and the *Raiffeisen Bank*, which controlled a great number of credit societies. L. B. operate extensively, however, in the U.S.A., where the Federal Land Bank is the most prominent. In 1923 gov. control was imposed over the movement, and the capital was subscribed by the Treasury. Intending borrowers are required to take up 5 per cent of the loan in Federal L. B. stock, such facilities being available only to farmers. There are, too, many privately owned joint-stock L. B. authorised by the Federal Farm Loan Act. Borrowers from these banks are under no obligation to make a subscription, and advances are made for the purpose of development, including expenditure upon seeds, machinery, etc., as well as for the purchase of land.

**Land-bridges**. Some species or groups of land animals and plants, both fossil and living, are found to occur at a number of widely distant localities which are now separated from each other by great stretches of sea. If each species or group is considered to have arisen by evolution, then their distribution becomes difficult to explain, since it is necessary to assume that members of the group migrated from the place where they first appeared across wide areas of what is now the sea. Some geologists have attempted to get round this difficulty by postulating the existence at various times in the past of L.—narrow tracts of land or chains of is.—which connected 2 continents and which were subsequently submerged. An alternative solution of the problem is provided by the hypothesis of continental drift (q.v.).

**Land Commissioners**. On the passing of the Tithe Act, 1836, commissioners were appointed to administer its provisions, and when the Copyhold Act, 1841, was passed, the tithe commissioners were entrusted with the duty of administering that Act as well. When later additional duties, relating to the enclosure of commons and land drainage, devolved upon them, they became styled tithe, copyhold, or enclosure commissioners according to the particular functions they happened to be exercising at the moment. On the passing of the Settled Land Act, 1882 (see LAND LAWS), they received the name of L. C. for England. Finally, in 1889, the commission became merged in the Board of Agriculture.

**Land-crab**, popular name given to the

species of *Gecarcinidae*, a family of malacostracan crustaceans which only occasionally visit the sea or fresh waters. They have a square, convex carapace and moderately large eyes. The species of *Uca* are found in the mangrove swamps of S. America, and those of *Gecarcinus* inhabit the forests of the W. Indies.

LAND-CRAB (*GEOCARCINUS ARMATUS*)  
FROM THE GABOON  
One-sixth natural size.

**Land Drainage, see DRAINING AND DRAINAGE AND LAND RECLAMATION.**

**Land for Military Purposes.** Under various statutes the Crown has power to interfere with a landowner's rights, or acquire his land by compulsory purchase for purposes relating to military administration. There are a number of provisions to be found in the Military Forces Localisation Act, 1872; Ranges Act, 1891; Military Lands Acts, 1892, 1900; and the Military Manoeuvres Act, 1907, for the purchase of land for ranges, for volunteers, military manoeuvres, barracks, or otherwise for the localisation of the military forces, and generally for military purposes. Under the Defence (Barracks) Act, 1935, land may be acquired compulsorily for barracks for any of the 3 services. There are ancillary provisions in these Acts authorising the taking, closing, or diversion of highways, the making of by-laws relative to practice ranges, and the assessment of compensation for damage done in the course of military manoeuvres. Also the secretary of state for war has power, under the Military Tramways Act, 1887, to purchase land for military tramways (as to acquisition of land in case of invasion *see* DEFENCE ACT, 1842). The procedure for the acquisition of land and the mode of assessment and payment of compensation is for the most part to be found in the Defence Act, 1842. Generally speaking, assessment is either by jury or 2 justices, but in the case of land acquired under any Act which incorporates the Lands Clauses Acts (q.v.), the authority acquiring the land may require the assessment to be settled not by jury but by arbitration. *See also* LAND LAWS as to compensation for 'injurious affection.'

**Land Laws.** Most legal systems have special rules relating to the ownership of

land which differ substantially from those affecting other forms of property (e.g. stocks, shares, money, chattels). The L. L. of a country more than any other branch of law reflect the social and economic organisation of the community. The development of Eng. L. L. throughout the cents. indicates the transition from a feudal society to a property-owning democracy. In many continental countries, an agrarian economy of small farms is perpetuated by the laws of inheritance which require the land of a deceased to be divided among his children.

**Historical development of English land laws.** At the time of the Norman Conquest all land belonged to the king. He rewarded his prin. supporters and nobles by granting them land which they held of him as 'tenants in fee.' In return for their lands, they swore fealty and were obliged to perform certain services (usually military) or pay dues. These great landowners (tenants in chief) would in turn parcel out part of their land among their own prin. supporters in return for similar services and payments. This process which would be repeated sev. times right down the scale was called subinfeudation. The smaller landowners who held their land on what was termed socage tenure, would perform agric. services. Church dignitaries and religious orders held their land on spiritual tenure, being obliged to perform religious duties for their immediate overlord. This pyramidal ownership of land reflected the stratified pattern of feudal society. In 1292 the Statute Quia Emptores which abolished subinfeudation and simplified land tenure also checked the influence of the more powerful landowners whose personal ambitions had weakened the Crown's position in the 13th cent. Even so, it was not until the Tenures Abolition Act, 1660, that such duties as grand serjeanty and knight service (q.v.) incident to feudal tenure were formally abolished. The conception of England as the hereditary fief of the king and the principle of primogeniture in succession to land which served to keep great landed estates in the same families for generations were the particular features of Eng. land law. Between the 16th and 19th cents. the enclosure movement concentrated land ownership in most parts of the country in the hands of the great landowners. The ownership of land was kept in the same families for generations by means of strict settlements (*see* SETTLEMENT). As other forms of wealth were created by industry and commerce, the possession of landed property became less attractive. Many landowners were mere life tenants of estates which had to be kept up out of income which became increasingly insufficient to meet maintenance costs. The Settled Land Act, 1882, offered some relief by extending the powers of the tenant for life who could resort to capital monies for improvement. The Settled Land Act, 1925, further increased his powers. Even so heavy death duties and taxation have accelerated the

break-up of large landed estates. The rise of large towns has been assisted by the grant of long leases at a small rent of land on which builders and property companies could build houses, factories, and shops. This accounts for the great number of properties held on ground leases. In the 20th cent. the transfer of house properties rather than the settlement of great landed estates form the most important part of conveyancing work. The L. L. were revolutionised and simplified by the Law of Property Act, 1925. A knowledge of pre-1926 state of L. L. will with the passage of time, become increasingly unnecessary. The scarcity of land in Britain and the permanent effects of industrialisation have necessitated controlled planning of the use of property and the preservation of amenities. The real property lawyer is now less concerned with the technicalities of deducing and investigating titles to land than with the increasing restrictions imposed by town and country planning law. A solicitor for a prospective purchaser must satisfy himself that the property is not liable to be affected by any town development plans, road widening schemes, or any restrictions as to its use. The possession by local authorities and new town development corporations of wide powers of compulsory purchase has made considerable inroads into the comfortable notion that an Englishman's home is his castle. The realisation that Britain must grow more food has resulted in legislation to secure the most efficient use of agric. land. The inefficient farmer is liable under the Agriculture Act, 1947, to be directed by a supervision order to improve his standards of husbandry or even to be evicted by a dispossession order of the Ministry of Agriculture. The competent tenant farmer, however, enjoys some security of tenure (see AGRICULTURAL HOLDINGS). Before the present cent., L. L. were primarily concerned with the ownership of land. As most occupiers of property are mere tenants, Parliament has done much to protect their rights. The control of rents and the protection of residential and business tenancies is discussed under LANDLORD AND TENANT.

**Estates and interests in land.** In Eng. law sev. estates and interests can be created out of one piece of land. An estate in land denotes the length of time for which it is held. Crown's ownership of all land is now theoretical. In modern L. L. the owner of the land itself is said to have the freehold or an estate in fee simple (q.v.). Subject to the limits of respect for the property and possessions of others (see NUISANCE) and planning restrictions, a freeholder has unfettered rights of absolute ownership in perpetuity. He can dispose by deed or will of his whole interest (i.e. freehold) or any part of it, or for a term of years (see CHATTEL REAL; LANDLORD AND TENANT), provided that such disposition is not a voluntary assignment to defraud creditors (see BANKRUPTCY). His ownership in the soil extends without limit above and below

(*cujus est solum, ejus est usque ad coelum et ad inferos*). A right to air above the land which merely expresses his right to erect buildings of whatever height he pleases is subject to (1) any covenants made with owners of adjoining land to restrict this right; (2) any prescriptive rights of light gained by other persons; (3) any local planning regulations. The right to the actual soil in a highway is subject to the public right of way (see HIGHWAYS), unimpaired, though the highway must not be broken up by mining operations. The freeholder has mineral rights subject to the Crown's claim to any gold or silver mines ('royal mines') and the National Coal Board's ownership of coal. Water is technically land covered with water (see LAND) but the owner's right to it depends on whether it is percolating, or running through a defined stream or channel. If the former, he may use it as he pleases although in doing so he may deprive his neighbours of essential water supplies or by drainage operations, cause subsidence of adjoining land (see DAMNUM ABSQUE INJURIA). But if the latter, he has no right to exhaust the supply or exhaust the stream, or divert or pollute the water, unless the diversion causes no material injury to other land-owners over or through whose land the stream also flows, unless he has obtained a right to divert or pollute by prescription (uninterrupted user for 40 years). If the water is tidal, whether or not navigable, every riparian owner has an equal right to take a reasonable quantity for domestic or business purposes. The freeholder may grant lesser estates and interests in his land some of which are described hereafter. (2) **Leaseholds.** He may grant a lease for a term of years. The lessee (leaseholder) may himself use the land as he wishes, subject to any conditions in the lease. He may grant underleases of the whole or part of the land. See also LANDLORD AND TENANT. (3) **Mortgages.** Freeholders and the holders of long leases may raise money on their land by mortgages. The mortgagee (the lender) under the mortgage acquires certain rights in the land (e.g. the right to sell it if the mortgage debt is unpaid). See also MORTGAGES. (4) **Easements and profits.** A landowner may grant the owners of adjacent land rights (easements) over his land (e.g. rights of way). He may also grant other persons the right to take certain things from the soil of his land (*profits à prendre*). See also INCORPOREAL HEREDITAMENTS; COMMONS; EASEMENTS). Various rights against an owner of land may be acquired by prescription. A right of way is gained in 20 years (subject to the right having been enjoyed by some consent or agreement expressly given in writing). Where the owner of a house and adjoining vacant land sells his house, a right to light over the land arises by implication, but if he sells the land such easement arises only where he expressly reserves the right to light over the land sold. (5) **Settlements.** A landowner can create by deed or will a settlement under

the Settled Land Act, 1925, providing for various successive interests in his land (e.g. tenancy for life and successively entailed interests in remainder (q.v.)). A settlement may charge part of the land to provide pin money or jointures (q.v.) or portions (see also *HOTCHPOT*) for widows and younger sons. Land must not be settled in such a manner that it is capable of operating in perpetuity (see *PERPETUITIES AND LIMITATIONS*). The fee simple is vested in the tenant for life (called the protector of the settlement, who may sell the settled land, the proceeds of which (capital monies) are paid to the trustees who must reinvest them (see *SETTLEMENTS*)). (6) *Trusts for sale* exist where a settlor or testator gives land to trustees on trust for the beneficiaries. The legal estate in the land is vested in the trustees who make title, the beneficiaries having mere *equitable* interests. A purchaser of land forming part of a settlement or trust for sale is not concerned with the rights of the beneficiaries and need only satisfy himself that the title to the land is in order.

*Title to land.* The purchaser of land must be satisfied that the vendor has a good title to it. If the land is in England and Wales, he will trace the ownership of the land through the title deeds for the last 30 years to obtain a 'good root of title.' Title may be traced through conveyances, grants of probate, or letters of administration and mortgages. If the title to the land is registered at H.M. Land Registry, he will be spared detailed investigation, as a simple land certificate will indicate that the vendor is entitled to ownership of the land. See *LAND; LAND COMMISSIONERS; LAND FOR MILITARY PURPOSES; LAND LEAGUE; LANDLORD AND TENANT; LAND NATIONALISATION*. See G. C. Cheshire, *Modern Law of Real Property*, 1954; R. E. Megarry, *A Manual of Real Property Law*, 1955; Hargreaves, *Introduction to the Principles of Land Law*, 1956.

**Land League.** The association formed by Michael Davitt (q.v.) and other Irish politicians in 1879 for the purpose of promoting reforms of land tenure in Ireland. The agitation of its members resulted in Irish tenants forming a kind of trade union, by the rules of which they were bound to refuse dealings with any tenant who had taken land from which its former occupier had been evicted. One of the first victims was Capt. Boycott (q.v.), whose name has ever since been a synonym in the Eng. language for shunning a person. According to modern historians of Irish affairs, the L. L. did its utmost to warn the peasantry against deeds of actual violence, but the gov., fully believing that its members had encouraged and incited tenants to commit outrages, instituted a prosecution against Parnell (q.v.), Biggar, Sexton, Dillon (q.v.), and the entire executive body of the L. L. The prosecution produced no result, for, as Justin McCarthy (*History of Our Own Times*, 1892-7, 1905) points out, the Crown could never have found a jury in Leinster,

Munster, or Connaught to convict Parnell of seditious, unless it had 'packed' the jury. The L. L. was a great factor in the hist. of agrarian reform in Ireland, and one of the first legislative fruits resulting from it was the concessions in Gladstone's Land Bill, 1881, though Parnell himself did not deem it politic to accept the Bill in the name of his revolutionary followers as anything more than a small instalment of their just demands. The L. L. through Parnell then advised Irish tenants generally to abstain from litigation against landlords until certain test cases had been decided. The result was that the gov. interpreted Parnell's advice as an attempt to thwart its legislation, and promptly imprisoned him under the Coercion Act. Later, when other prominent members of the L. L. were imprisoned, the league was dissolved. '*Land of Enchantment*,' see *NEW MEXICO*.

'*Land of Steady Habits*,' see *CONNECTICUT*.

**Land Reclamation.** The hist. of L. R. goes back to the anc. Egyptians, who are believed to have drained the Nile valley. The Romans had extensive drainage systems, from which some countries still benefit. In more recent years the Netherlands is the outstanding example of a country's enterprise in L. R. In 1853 the Lake of Haarlem was drained, and in 1831 an ambitious scheme was launched for the reclamation of the Zuider Zee by means of dykes. Under this scheme large portions of the Zuider Zee, which was transformed into a fresh-water lake called IJsselmeer, were reclaimed before the Second World War, for agric. purposes. In April 1945 the Germans flooded the land behind the Grebbe in the hope of holding out behind the water barriers, but after an allied warning to their commander (Gen. Blaskowitz) that the opening of the dykes would constitute an indelible blot on his military honour while in no way impeding the coming collapse of Germany, there was no further flooding. In 1949 Marshall Aid was granted to the Dutch to pay for projects begun in 1948. These projects included the reclamation of no less than 120,000 ac. of farmland in the IJsselmeer to be added to the area of the Netherlands, and the redistribution of farmland on Walcheren. The Allies had flooded Walcheren at the end of the war because it was a strategic point held by the Germans. Its flooded fields were drained by 1949 and were once more in production. Reclamation for a new polder in the SE. of the IJsselmeer (q.v.) started in 1950. The 'en lands in the E. of England are another example of L. R. by drainage. It has taken 100 years to reclaim this dist., consisting of 1000 sq. m. or more of marshland, from fresh and sea water. Other countries in which vast areas of land have been reclaimed by drainage are Italy and America. In 1925, 592,455 hectares of land in Italy were estimated to require urgent drainage, and more than 300,000 hectares of this land were reclaimed by 1951 and the rest not long afterwards. Land is also made more fertile by irrigation, and desert land

one likely to pique public curiosity. Pop. 11,000.

**Landes:** 1. Name given to the sandy and marshy region of SW. France between the Bay of Biscay, the Garonne, the Armagnac hills, and the Adour.

2. Dept of SW. France, on the Bay of Biscay, formed of part of the ant. prov. of Gascony. It is divided into 2 parts by the R. Adour; the portion to the N. includes three-fifths of the dept, and is composed of tracts of heath and sand, interspersed with forests of pines and cork-trees and numerous marshes, which are being gradually drained into the shallow lagoons which fringe the sea-coast; the S. part is hilly and covered with oak plantations and vineyards. The mining of iron ore and bituminous coal is an important industry. There are mineral springs at Dax, and rock salt is obtained there and at Lescourre. The prin. tns are Mont-de-Marsan (the cap.) and Dax (q.v.). Area 3604 sq. m.; pop. 248,950.

**Landeshut,** see KAMIEŃNA GÓRA.

**Landgrave,** old Ger. title of nobility. After the time of the Carolingian kings the term was used for a governor in the interior, under a duke, in contradistinction to a margrave, or keeper of the frontier. But the L.s soon made themselves independent and all such distinction was lost. In the 11th cent. the margraves of Thüringen assumed the title of L.s, and in the next cent. the Graves of Hesse obtained the title.

**Landlord and Tenant.** Technically an owner in fee simple (see ESTATE; INHERITANCE; HEREDITAMENTS) who leases his land to another for 999 years at a nominal rent stands to that other in the relation of L. and T. In this article the relationship L. and T. will be restricted to its popular connotation of a grant so limited in duration, and so burdened with reciprocal obligations or covenants (q.v.) for rent, repairs, and the like, that the grantor or landlord retains an appreciable or substantial interest in the land leased. Any landowner may grant a lease to another for a term not exceeding in duration the interest or estate he himself holds in the land; but a tenant-for-life under the Settled Land Acts can, under certain conditions, grant building leases for 99 years, mining leases for 60 years, and occupation leases for 21 years, and such leases will stand good even though they may endure beyond the life of the lessor, for they are made for the benefit of the inheritance rather than that of the tenant-for-life, and the latter will have to set aside a certain portion of the rents from mining leases and fines reserved on those and building leases as capital moneys. Under the Settled Land Act, 1925, leases of settled land may be made and leases accepted by the tenant-for-life or by trustees of the settlement. With certain exceptions any one may become a tenant; but an infant (see INFANCY) may, on coming of age, repudiate within a reasonable time leases taken by him while under

age.

Tenancies are either for a fixed term of

years, commonly called a leasehold (see LEASEHOLD), from year to year (yearly tenancy), or for a shorter term than a year, including the tenancy of a lodger. No precise or technical form of words is required to constitute a leasehold, but it is unwise, especially from the tenant's point of view, not to be guided by precedent, for omissions almost inevitably throw further burdens upon him and not on the landlord. A lease for a term not exceeding 3 years, taking effect in possession at the best rent which can be reasonably obtained without taking a fine, may be by parole or in writing under hand only; but leases without a saving clause for the doctrine of part performance (see FRAUDS, STATUTE OF) must be under seal by deed, and also leases for a term over 3 years. Agreements for a lease are not enforceable by action unless evidenced by a memorandum in writing (Law of Property Act, 1925), though this does not apply in certain cases of leases by persons under disability; but if the tenant enters into possession it takes effect as a tenancy at the will of the landlord, and if he pays rent it becomes a yearly tenancy. If in writing, though not under seal (i.e. not a deed), the tenant can get the agreement to grant a lease enforced by a court of equity (q.v.). The advantage of a deed is that it gives the *legal estate*, and where 2 innocent persons are defrauded by a landlord purporting to grant the same land to 2 persons at once, he who has the legal estate prevails. If both have deeds, the first in date prevails; otherwise a deed is now of no great importance. As to building leases granted in consideration of a ground rent, see GROUND RENT. By the Law of Property Act, 1922, perpetually renewable leases are convertible into leases for 2000 years; and by the Act of 1925 leases for lives are converted into leases of 90 years determinable by notice on the cesser of the life. Leases are generally prepared by the landlord's solicitor, who submits a draft lease to the tenant's solicitor for approval or amendment. The lease is then engrossed (formally written out) in duplicate, the *counterpart* being retained by the landlord and the *lease* delivered to the tenant. The latter, if he does not employ a solicitor, should see that the engrossed lease contains all the amendments or alterations agreed upon. The tenant pays the expenses of the landlord's solicitor according to a fixed scale (see FEES). Leases usually contain covenants (q.v.) by the tenant to pay rent, rates, and taxes (except landlord's property tax); to keep the premises in tenantable repair, and at the end of the term to deliver up the premises in good repair; to insure the premises against fire; to permit the landlord on giving notice to enter and view the state of repair; and not to assign or underlet without the landlord's consent; and a covenant by the landlord that the tenant shall have quiet possession. Under the Landlord and Tenant Act, 1927, a landlord may not unreasonably withhold consent to assignment; and the Law of

Property Act, 1925, provides against the exaction of a fine for the landlord's consent save where the lease expressly provides for such payment. In any event, a reasonable sum for legal or incidental expenses must be paid by the tenant. An agreement to assign must be in writing. In the absence of express agreement the tenant and not the landlord is bound to do repairs. Most leases also contain a proviso for re-entry by the landlord on the tenant failing to perform his covenants; but this is not to be interpreted literally, as the landlord must first give the tenant notice of the breaches (q.v.) complained of, and reasonable time to remedy them, and then, if the tenant continues to make default, take proceedings in ejectment (q.v.). As regards 'decorative repairs,' when a landlord seeks to forfeit a lease on the ground of the tenant's failure to execute such repairs, the court may in certain cases give relief to the tenant; but no relief will be granted when the covenant to put in repair has never been performed nor when the tenant has covenanted to yield up the premises in a specified condition, nor again when sanitary considerations apply (Law of Property Act, 1925). The Leasehold Property (Repairs) Act, 1938, and Landlord and Tenant Act, 1954, restrict the enforcement by lessors of repairing covenants in tenancies granted for at least years (other than agric. holdings). The Act applies to any property comprised in a lease with 3 or more years unexpired, and is invoked where the lessor serves a notice under the Law of Property Act, 1926. The lessor can defeat the restriction by proving that the breach of the repairing covenant substantially diminishes the value of his reversion or on various other grounds specified in the Act, as that he cannot otherwise give effect to some enactment or by-law providing for the safety or sanitary condition of the house. Forfeiture for a breach of conditions other than by non-payment of rent is regulated by the Act of 1925. With certain exceptions, the landlord may give the tenant notice of the breach and demand compensation, calling upon the tenant to remedy a remediable breach; but a tenant who has tried to comply with the notice may get relief in the courts.

In practice the above covenants are often varied by agreement, and of course it is to each party's interest to throw as many of the burdens as possible on the shoulders of the other. The principle of contention is the repairing covenant; a covenant to yield up in a good state of repair does not mean that the tenant is under an obligation to renovate the premises, for the nature and age of the premises and the class of neighbourhood will be taken into account by a court of law in deciding what repairs the tenant was bound to execute. If the premises are burnt down, the tenant will still be liable to pay rent in the absence of express stipulation in the lease to the contrary; and if he is under a repairing covenant, he will also have to pay so much of the

expenses of repair as are not covered by insurance moneys.

A yearly tenancy is one which is expressed to be from year to year, or in respect to which the tenant pays a yearly rent. A clear 6 months' notice is necessary to determine a yearly tenancy. A tenancy for 1 year certain, and thereafter from year to year, is not a yearly tenancy, but operates as a tenancy for 2 years at least, and the earliest moment at which it can be determined is at the end of 2 years by notice given at the end of the first year. Quarterly tenancies may be determined by a clear quarter's notice, and monthly and weekly tenancies by a month's notice. The liability for repairs in the case of a yearly tenancy is usually a matter of express agreement, in the absence of which neither landlord nor tenant is liable, though the tenant must make good actual damage caused by him.

Lodgers have the same rights, and are under the same liabilities as other tenants, except that in the absence of contract the estab. custom of the locality determines what notice to quit must be given. Generally speaking, if the hiring is from year to year, 6 months' notice must be given, if quarterly a quarter's notice, and so on; and a lodger who quits without giving notice is liable for 6 months', a quarter's, or a week's rent according to his contract.

Tenancies at will (apart from the case of verbal contracts noticed above) arise where a tenant is let into possession of land on the terms that he is either bound to quit at the will of the landlord, or entitled to go at his own will. At law the payment and acceptance of rent will convert such precarious tenancy into a yearly tenancy. Tenancies at will do not often occur in practice, any more than tenancies by *sufferance*, i.e. where the tenant holds over after expiry of his lease. Most lawyers regard the tenancy by *sufferance* as a legal fiction to explain feudal archaisms, and in practice it may be safely assumed that the law will construe a tenancy of holding over to be continued on the same terms as the expired tenancy, or else as a yearly tenancy, subject, of course, to there being clear evidence of a merely contumacious holding over against the will or knowledge of the landlord, in which case the tenant will be liable for double rent where he has himself determined the tenancy by notice; and for double the ann. value if the landlord gave the notice. Except in the case of furnished houses and dwellings under the Housing of the Working Classes Acts, there is no implied warranty on the part of the landlord that the premises are fit for occupation. Under the Housing Act, 1925, the landlord covenants that the premises are and shall throughout the term remain in a state fit for human occupation and he may not contract out of this obligation (see also *Housing*), and it is to be noted that a person who knowingly lets for hire premises in which any person has been suffering from any infectious disorder without having duly

give his landlord 3 months' notice of his intention to make the improvements. The landlord may object to the improvements being made or make them himself in return for an increased rent. The claim must be made not more than 6 months before nor 3 months after the termination of the tenancy.

AGRICULTURAL TENANCIES. See AGRICULTURAL HOLDINGS ACT.

STAMP DUTY. The stamp duty on a lease or tack (q.v.): (1) For any definite term not exceeding a year: of any dwelling-house or part of a dwelling-house at a rent not exceeding the rate of £40 per annum is 2d. (2) For any definite term less than a year: (a) of any furnished dwelling-house or apartments where the rent for such term exceeds £25, is 10s.; (b) of any lands tenements, or heritable subjects otherwise than as above, the same duty as a lease for a year at the rent reserved for the definite term. (3) For any other definite term or for any indefinite term: of any lands, etc.: Where the consideration (q.v.), or any part of the consideration, moving either to the lessor, or to any other person, consists of any money, stock, or security: in respect of such consideration the same duty as a conveyance on a sale for the same consideration (Revenue Act, 1911, s. 15); where the consideration or any part of the consideration is any rent: in respect of such consideration, if the rent, whether reserved as a yearly rent or otherwise, is at the rates in the table set out opposite, the duties are as there set forth. (4) Of any other kind whatsoever, 40s. (Note: Where the agreement for lease is fully stamped *ad valorem*, the lease itself requires 6d. only, but the denoting stamp is necessary.) (5) Building lease: *ad valorem* on the rent.

To come under the provision of the Stamp Act, 1891, and of the Finance Act, 1924, the document must operate as a lease or a tenancy agreement.

Landnámabók, or the Book of Settlements. It is the earliest historical record of Iceland, and is written in the Norse tongue. The first part tells of the discovery of the is., and the other 4 parts are detailed and faithful accounts of the settlers in its 4 quarters, with mention of their dwellings, palaces, temples, and descendants. Eng. trans. by T. Ellwood, 1894.

Landon, Letitia Elizabeth (1802-38), poetess, b. Chelsea. Many of her poems appeared in the *Literary Gazette* and similar pubs. over the initials L. E. L. She pub. separately *The Fate of Adelaide*, 1821, *The Improvisatrice*, 1824, *The Troubadour*, 1826, and *The Venetian Bracelet*,

1829. She also wrote a few novels, of which *Ethel Churchill*, 1837, was the best, and a tragedy, *Castruccio Castracani*, 1837. In 1838 she married George Maclean, governor of Cape Coast Castle in W. Africa; shortly after her arrival there she was found dead from an overdose of poison. Her *Life and Remains* were ed. by L. Blanchard, 1841; see also D. E. Enfield, *L. E. L., a Mystery of the Thirties*, 1928.

Landon, Walter Savage (1775-1864), author, b. Warwick. He was educ. at Rugby and Trinity College, Oxford. He declined to be called to the Bar, and preferred to live on a small allowance from his father. He stayed for 3 years in the country, and in 1798 pub. his first poem, *Gebir*, which, though highly praised by the few, including Southey, Shelley, and Coleridge, did not attract the many. He spent a wandering life for many years, staying at Bath and other Somerset tns, and visited Paris in 1802. On the death of his father in 1805, he came into a handsome competence, and 3 years later went to Spain and served as a volunteer against the French. In 1811 he pub. his second book, *Count Julian*, a tragedy, which met with the same fate as its predecessor. He now bought the estate of Llanthony Abbey, married, and settled down as a country gentleman, but in 1814 he went abroad, where he resided until 1835. In 1824 he issued 2 vols. of *Imaginary Conversations*, and 3 more in 1828-9. This was his chief work, and in the 'conversations' a great procession of noble and gracious forms, of olden times and of a later day, pass sweetly or sadly before us. If the characters have little individuality, many of the dialogues show L.'s unfailing instinct for the heroic or tender; yet beneath every mask—Cicero, Diogenes, Lucian—the great solemn, flexible, and harmonious voice of 'that deep-mouthed Boeotian Savage Landon' is plainly heard. From 1835 until 1858 he lived at Bath, and then went abroad, where he d. 6 years later. He was hopelessly irascible, but he contrived, by some happy chance, to remain on good terms with Dr Parr, and, later, with Browning. His poems are little read, but his prose has survived. He cared nothing for popularity or popular feeling, and was always convinced that his great merits as a writer would be recognised, as indeed they have been, by posterity. In his prose L. certainly found the manner most suited to his thoughts—in itself a rare achievement. Where he fails in prose it is not in style but in temper and in discretion, by harping too much on one point without at the same time revealing any critical power, though criticism was essentially a part of his *métier*. In style, however, as distinct from treatment, he was a prose master, and his individual stamp is at once easily recognisable in any detached passages.

With his verse the case is different. He never attained that mastery over verse which would have made it the fitting medium of his creative thought. Indeed he was himself sensible of this deficiency,

and never spoke of his verse so confidently as he did of his prose, of which, in fact, he was not a little vain-glorious; for he ranked himself as the best of contemporary prose writers. But if he mistrusted his hand in verse, it is admitted that he is above the second rank of poets; there are not many Eng. poets capable of the perfection and force he shows in his shorter poems, and, since Milton, few have written blank verse of so majestic and harmonious a tone. In this respect his *Gebir*, 1798, is to be ranked with Keats's *Hyperion*, while his *Count Julian* is wellnigh unsurpassed

W. S. LANDOR

In its own vein. In the same style as *Gebir* is *From the Phocaeans*, but far behind it, for it is involved in style and narrative, is generally obscure and often unnatural. L.'s real powers as a poet lay rather in the short poem—much the more appropriate instrument for the expression of his turbulent and rugged thoughts. He wrote a large number of brief poems and some of the best known of these have one source in common, his love for Ianthe, the most enduring feeling of his life. L. wrote a lot of Lat. verse, especially epigrams in the style of Martial and Catullus. His *Hellenics*—a group of narrative poems—in treatment sometimes recall the work of Ovid. Other works were *Pericles and Aspasia*, 1836, *Pentaméron*, 1837, and *Poemata et Inscriptiones*, 1947. His complete works were ed. by T. E. Welby and S. Wheeler in 16 vols., 1922–36. See R. Bulwer-Lytton, *Reminiscences of Walter Savage Landor*, 1883; A. H. Mason, *Walter Savage Landor, poète lyrique*, 1924; G. J. Becker, *Landor's Political Purpose*, 1938; and lives by J. Forster, 1869; S. Colvin, 1981; H. C. Minchin, 1934; M. Elwin, 1942; R. H. Super, 1955.

Landrail, see CORNCRAKE.

**Landrécies**, Fr. tn in the dept of Nord, on the canalised Sambre. It is an anct fort. tn, and the bp. of Duplex (q.v.). Pop. 3500.

**Lands Clauses Acts**, see COMPULSORY ACQUISITION OF LAND.

**Land's End**, promontory of SW. Cornwall, England, which forms the most westerly point of the country. It is 9 m. SW. of Penzance. The End is a turf slope ending in a granite cliff about 60 ft. high. A natural tunnel pierces the headland, and there are interesting caves which can be visited at low tide. Dangerous rocks lie off the point; the Longships lighthouse (erected 1793) is situated about a mile out.

**Landsberg**, Ger. tn in the Land of Bavaria (q.v.), on the Lech, 33 m. W. by S. of Munich (q.v.). It has fine old walls and Gothic and rococo churches. During his imprisonment in the fortress of L., after the abortive *putsch* of 1923, Hitler (q.v.) wrote the first vol. of *Mein Kampf* (q.v.). Pop. 13,000.

**Landscape** (O.E. *landschap*, *landscape*; Dutch *landschap*), term in art applied to a picture representing a view of a country as seen by the artist. Among the most famous of L. painters are Hobbema and Ruysdael of the Dutch school, Claude, Corot, Rousseau, and Cézanne of the Fr. school, and the Eng. artists Constable, Turner, Richard Wilson, Crome, Bonington, and Gainsborough. The water-colour school, from Paul Sandby to Cotman, was strong and original mainly in landscape. The progress of L. from the late 18th cent. was towards the study of effects of light and atmosphere in the open air, from the sunny breadth of Wilson to the fleeting effects caught by Constable, and Turner's great range of view. Fr. impressionism may be looked on as the completion of this development and the last great phase of L. See also PAINTING, etc.

**Landscape Gardening** is gardening on a large scale, its aim being to produce a beautiful effect by means of the right juxtaposition and combination of open space, trees, water, and buildings. Such gardening was practised in early times by the Assyrians, Jews, and anct Greeks, but little authentic information is available with regard to the style of their gardens. It is possible that they paid greater attention to architecture, to the external appearance and internal comfort of a house than they did to the artistic arrangement of an estate. The Romans of the Augustan period and later built their luxurious villas amid a garden of shady trees, with cool porticoes, fountains, and marble terraces. They probably introduced the art of L. G. into Great Britain. The ruins of a Rom. villa were discovered over a cent. ago on the Blenheim estates, and it is conjectured that it was the central feature of Henry I's magnificent park at Woodstock. The Italians of the 15th cent. cultivated the art of L. G. Marble, which needs the background of an it. sky to set off its beauty, was used to great effect in terraces, fountains, and

steps. The gardens of Fontainebleau, set out by Francis I in direct imitation of those he had seen in Italy, were subsequently altered by Henry IV and Napoleon. Dutch gardening is characterised by its prim neatness, its smooth, carefully kept lawns, and trim hedges and bushes out into fantastic shapes designed to represent animals. In Great Britain the gardens of Hampton Court and St James's were made by William III in emulation of the beautiful gardens of Versailles. Of modern Eng. landscape gardeners the

exhibiting. He passed through the Academy schools, took lessons from Haydon, became an associate of the Royal Academy at the earliest age possible (24), was an A.R.A. in 1826, and in 1830 a full member. His early work, as, for example, 'Dogs of St Gothard discovering a Traveller in the Snow,' 1820, and the diverting 'Cat's Paw,' is highly finished and shows his great knowledge of animal form, but the pictures of his maturity are tinged with sentiment which sometimes sinks to sentimentality, and he carried the habit of

LANDSCAPE GARDENING: REDLEAF, PENSURST, ABOUT 1850

The gardens made by Mr Wells in the early nineteenth century. From Loudon's *The Villa Gardener*.

A, the house; B, the English garden and summer-house, set in an old quarry; C, the Dutch garden with rustic orangery, Chinese dairy, and billiard room; D, an aquarium set in rock-work; E, the experimental garden; F, kitchen garden; G, conservatory, stores, and vinery; H, rock-work garden; I, wood, with exotic trees; J, pasture lawn, with ancient trees; WF, wire fence.

greatest have been Wm Kent (q.v., 1684–1748), who planned Richmond Park, and Lancelot Brown (q.v., 1715–83), commonly known as 'Capability Brown,' who remodelled Blenheim. See also GARDEN ART. See J. C. Loudon (q.v.), *Hortus Britannicus*, 1839, *Self-instruction for Young Gardeners and Foresters*, 1845, and *Encyclopaedia of Cottage, Farm, and Villa Architecture and Furniture*, 1846; H. Repton, *On Landscape Gardening*, 1840; F. R. Elliott and H. E. Milner, *Landscape Gardening*, 1890; T. H. Mawson, *The Art of Garden Making*, 1912, 1926; R. Sudell, *Landscape Gardening*, 1933; C. Tunnard, *Gardens in the Modern Landscape*, 1954.

Landseer, Sir Edwin Henry (1802–73), animal painter, b. London, was already sketching cows and horses from life at the age of 6, and 8 years afterwards began

crediting his animals with quasi-human feelings to an extreme. He developed, however, an amazing facility; the much-admired 'Cavalier's Pets,' 1845, was begun and finished in 2 days. In 'High Life' and 'Low Life,' 1829, and the splendid 'Drover's Departure,' 1835, L. carefully interweaves a human with the animal interest, whilst 'Jack in Office,' 1833, and 'Dignity and Impudence,' 1839, afford typical illustration of his humorous vein. 'The Monarch of the Glen,' 1851, nobly evinces his sense of the dramatic, and 'The Old Shepherd's Chief Mourner,' 1837, his sense of pathos. It is said that L. was a neurotic and that in 1840 he had a severe breakdown, from which he seemed to make a complete recovery; but 20 years later his mind again became seriously disordered and there were seasons when his depression was so extreme that he

became the victim of hallucinations and delusions that bordered on actual dementia. It may be mentioned that in 1866 he refused the position of president of the Royal Academy. He was buried with considerable ceremony at St Paul's Cathedral and a special L. sermon was preached the day after his funeral.

L. emerges out of almost any drawing test as a good artist. But handling of paint is his really strong point, and in fact his colour has a much underestimated vitality and charm. His chief defect as a painter lies in his inadequate grasp of large-scale structure, and usually his landscape background has an unsatisfactory wooliness of form. But landscape was only an accident of his work, which was mainly concerned with dogs and stags, and here sometimes he distorts the forms of his animals for sentimental, non-aesthetic reasons and as if to give expression, not to the animal's emotions, but to his own or his public's favourite emotions. Yet for most of his life L. was the most popular animal painter in Europe. His reputation was to some extent helped by his coming from a family of engravers who could popularise his work, and partly to his great vogue with Queen Victoria and Prince Albert. His real ability must be set against an occasionally mawkish sentimentalism which was one of the objects of Pre-Raphaelite attack in 1848. His famous lions in Trafalgar Square were uncovered in 1869. See lives by F. G. Stephens, 1880, and J. A. Manson, 1902. See also *Landseer and Animal Painting in England*, 1891.

**Landshut**, 1. Ger. tn in the *Land* of Bavaria (q.v.), on the Isar (q.v.), 38 m. NE. of Munich. In the 14th cent. it was the seat of the dukes of Bavaria-L. It was ravaged by plagues in the 15th cent., was sacked twice during the Thirty Years War (q.v.), and was occupied by the Austrians, 1704-15, and again in 1742. In 1809 the Austrians defeated the Bavarians here, but were themselves defeated 5 days later by Napoleon I (q.v.). L. was a univ. city, 1800-25. There are sev. fine Gothic and Renaissance churches, a Renaissance palace, and a 13th-cent. convent. Machinery, rope, chemicals, and beer are manuf. Pop. 50,000.

2. See KAMIENNA GÓRA.

**Landskrona**, seaport on the E. side of the Sound, in the prov. of Malmöhus, 15 m. NE. of Copenhagen, in Sweden. It has an excellent harbour, and is engaged in sugar-refining, tanning, and other industries. It has large dockyards and an important bacon-exporting industry. It also makes tobacco and iron-castings. Many battles took place in its neighbourhood during the 16th and 17th cents., and in 1667 it was the scene of a great naval victory of the Swedes over the Danes. Formerly it was called Landor and was strongly fortified. Its old castle has been transformed into an arsenal and prison. Pop. 26,237.

**Landlips**, falls of rock or large portions of land which have become detached from their original position. L. occur where

the relief is high, as in mountainous country, on sea cliffs, and steep riv.-banks. There are 2 prin. kinds: the slip of a uniform mass of material which has become charged with water and thus weakened, and the slip of a readily permeable rock such as a sandstone or fissured limestone along the junction with an underlying impervious layer such as a clay which holds up the water. L. occur along curved slip planes and leave the land surface in a characteristically uneven condition. The slip of Chalk on the underlying Gault clay can be seen on sev. of the cliffs of SE. England, notably near Folkestone and on the Is. of Wight. L. are particularly likely to occur after heavy rain or during a thaw.

**Landsteiner, Karl** (1868-1943), pathologist, b. Vienna, where he studied at the univ. and was M.D., 1891. He worked as a pathologist in Vienna (1898-1919) and at The Hague before going in 1922 to the U.S.A., where his early work on serology and immunology came to its fruition at the Rockefeller Institute. His work on human blood groups was the foundation of the great progress made in this field. His classification of blood groups (1900) made blood transfusion safe. He was co-discoverer of the Rhesus factor in human blood (1940). He also made important contributions to treatment of infantile paralysis. His Nobel prize (1930) was only the most famous of the many honours conferred on him by scientific foundations in Europe and America, including the Paul Ehrlich medal of the Ger. Academy of Natural Science; he was elected a foreign member of the Royal Society in 1941.

**Lane, Sir Allen Lane Williams** (1902- ), publisher, b. Bristol, educ. at Bristol Grammar School. In 1919 he was apprenticed to the publisher John Lane at The Bodley Head, and continued there until 1936 when he resigned and founded Penguin Books (q.v.) Ltd. He was knighted in 1952.

**Lane, Edward William** (1801-76), Eng. Arabic scholar, began life as an engraver, but finding this profession too much for his health went to Egypt (1825-8). On this occasion he explored the Nile, making many sketches. During his second visit (1833-5) he made Cairo his centre. Later (1842-9) he spent 7 years in Egypt, where, under the name of Mansur Effendi, he lived like an oriental scholar. Most of his time was spent in laborious research, of which the chief fruit was his monumental Arabic lexicon (1863-74), which was unfinished when he d. It is based on the careful compilation of Sheikh Murtada, who lived in the preceding cent. Others of L.'s works are *An Account of the Manners and Customs of the Modern Egyptians* (2 vols.), 1836, (5th ed., 2 vols., 1871), *Arabian Nights* (3 vols.), 1839-41 (ed. by S. Lane-Poole, 4 vols., 1906), *Selections from the Kur-an*, 1843 (2nd ed., 1879), and *Cairo Fifty Years Ago* (ed. by S. Lane-Poole), 1896.

**Lane, Sir Hugh Percy** (1876-1915), art connoisseur and collector; b. Ballybrack, co. Cork, son of Rev. James Wm L.,

rector. Entering Colnaghi's, Pall Mall, in 1893, he set up for himself as art dealer in 1898, and his acumen made him a fortune. In 1903 he exhibited pictures in Dublin, and bought most of them as nucleus of a gallery. Failing an arrangement for a Dublin gallery, he deposited the pictures in the National Gallery, London. They have provided the nucleus for the Tate Gallery's collection of Modern Foreign art, though argument has persisted as to whether, morally, if not legally, they should go to Ireland. Knighted in 1909, in that year L. advised Johannesburg Corporation on the formation of their gallery, and collected for Cape Town gallery. Director, Irish National Gallery, 1914. Returning from America in the *Lusitania*, he was drowned in the torpedoing of that ship.

**Lanercost**, par. of NE. Cumberland, England. Traces of the Rom. wall are to be found. L. Priory, founded in 1169 by Robert de Vallibus, governor of Carlisle, now forms part of the church of St Mary Magdalene. The *Chronicle of Lanercost*, 1201-1346, an important historical authority, was composed at Carlisle. Pop. about 1000.

**Lanesborough**, mkt tn of co. Longford, Rep. of Ireland, at the N. end of Lough Ree (q.v.). Pop. 350.

**Lanfranc** (c. 1005-89), Archbishop of Canterbury, b. Pavia, where he studied civil law. In 1039 he founded a school at Avranches, but 3 years later entered the Benedictine monastery at Bec and was chosen prior in 1045. He defended the doctrine of transubstantiation in the controversy raised by Berengar, afterwards publishing his theories in a tract *De corpore et sanguine Domini*, 1079. William of Normandy appointed him prior of an abbey at Caen (1063), and after the Conquest created him primate of England (1070). L. was a superb administrator, and under his primacy the Eng. Church was reformed in many aspects and brought into closer unity with Rome and the Continent. In internal church affairs William appears to have allowed L. complete authority. L. campaigned against clerical marriage, and his selection of Norman abbots for Eng. monastic estab. did much to revitalise Eng. monasticism. He began the rebuilding of Canterbury Cathedral in Norman style. L.'s works were pub. by Luc d'Archery in 1648, and there is a later ed. by J. A. Giles (1844). See life by A. J. Macdonald, 1926. See also Z. N. Brooke, *The English Church and the Papacy*, 1931.

**Lanfrey, Pierre** (1828-77), Fr. historian, studied law at Grenoble and Turin. His *L'Eglise et les philosophes au XVIII<sup>e</sup> siècle*, 1855, and his *Essai sur la révolution française*, 1857, at once gave him a position among contemporary men of letters. But his *magnum opus* was his *Histoire de Napoléon I<sup>er</sup>*, 1867-75.

**Lang, Andrew** (1844-1912), scholar, folklorist, poet, b. Selkirk. Educ. at Edinburgh Academy, St. Andrews and Glasgow Univs., and Balliol College, Oxford, he was elected a fellow of Merton. He then entered on a literary career, and

soon estab. a reputation of being one of the most versatile of modern writers. His earliest pub. was a vol. of dainty and graceful verse, *The Ballads and Lyrics of Old France*, 1872, which were followed by *Ballads in Blue China*, 1880, *Helen of Troy*, 1882, *Ballads and Verses Vain*, 1884, *Rhymes à la Mode*, 1884, *Grass of Parnassus*, 1888, and *New Collected Rhymes*, 1905. His delightful selections of fairy-tales began in 1889 with the pub. of the *Blue Fairy Tale Book*, followed by others, all tastefully bound and illustrated, and written with classic simplicity, down to the *Olive Fairy Book*, 1907. In the realm of folklore L. produced sound scholarly work in his *Custom and Myth* 1884, and *Myth, Literature, and Religion* (2 vols.), 1887; and contributed to the study of primitive religion and anthropology in *The Making of Religion*, 1898, *Magic and Religion*, 1901, *Social Origins*, 1903, and *The Secret of the Totem*, 1905.

As an historian L. was keenly interested in mysteries, to the unravelling of which he brought great ingenuity as well as a scholarly accuracy in detail. He brought fresh light to bear upon Mary of Scotland in *The Mystery of Mary Stuart*, 1901, and *Portraits and Jewels of Mary Stuart*, 1906. Mention may also be made of his *History of Scotland from the Roman Occupation*, in 4 vols., 1900-7. He also contributed to the controversy on the 'Man in the Iron Mask' (q.v.) in his *The Vale's Tragedy*, 1903, and interested himself on behalf of the Young Pretender in *Pickle the Spy*, 1897, *The Companions of Pickle*, 1898, and *Prince Charles Edward*, 1900. L. was also a classical scholar of high standing, which is testified in his Homeric studies, *Homer and the Epic*, 1893, and *Homer and his Age*, 1906; in his trans. of Theocritus, Bion, and Mochus, 1880, *The Homeric Hymns*, 1899; in collaboration with S. H. Butcher, of the *Odyssey*, 1879, and, with E. Myers and Walter Leaf, of the *Iliad*, 1883. In 1888 he was elected the first Gifford lecturer of the univ. of St. Andrews. He ed. the Eng. Worthies Series, the works of Scott, Burns, and Dickens, and the life and letters of J. G. Lockhart and of Sir Stafford Northcote. He was at one time literary editor of *Longman's Magazine*, and up to the time of his death contributed to the *Morning Post* and various other papers. His other writings, of a miscellaneous character, each in its particular way of real merit, are too numerous to mention. See G. Saintsbury, *Andrew Lang*, 1923, and *Andrew Lang in the Seventies—and After*, 1929; M. Beerbohm, *Life and Letters of Andrew Lang*, 1929; R. S. Rait, *Andrew Lang as Historian*, 1930; A. B. Webster, *Andrew Lang's Poetry*, 1937; R. L. Green, *Andrew Lang, a Critical Biography*, 1946.

**Lang, Cosmo Gordon** (1864-1945), archbishop, son of Very Rev. John Marshall L., D.D., principal of Aberdeen Univ. and sometime moderator of the Church of Scotland; b. Fyvie, Aberdeenshire. Educ. at Glasgow Univ. and Balliol College, Oxford, he became a law student of the Inner Temple; but, undertaking social

work in the E. End, he became increasingly aware of a vocation for the Church and on the eve of his call to the Bar he withdrew his name. He entered Cuddesdon Theological College and was ordained priest in 1891. He was curate at Leeds from 1890 till 1893, when he returned to Oxford, and was successively fellow and dean of Magdalen and vicar of St Mary's. He then became vicar of Portsea, where he laboured till 1901, when he was appointed Bishop of Stepney and canon of St Paul's. He was now recognised as one of the great preachers of the day. His experiences as the suffragan of the Bishop of London in Stepney were to stand him in good stead

*Topical Press*

COSMO GORDON LANG

when, at the age of 44, he was translated to the archiepiscopal see of York, where he succeeded Dr MacLagan. From 1909, when he was installed at York, the story of his activities is the story of the Church of England. His work was at the heart of every movement in the Church. As vice-president of the Church Assembly he showed a balance of mind which proved of immense value in what had become the legislative body of the Church. The enrichment of the liturgical portion of the revised Book of Common Prayer, its adaptation to modern usage and thought, and its preservation of the Catholic interpretation of the Church's standards, was largely attributable to his moderating influence. His sympathies were with the High Anglican section, but he held that a national Church must be wide enough to embrace all varieties of thought consistent with the belief in the essential dogmas of the Apostles' Creed. Only twice previously, in nearly 2 cents., had a primate been translated from York to Canterbury; but when in 1923 Dr Randall Davidson resigned, L. became his successor. National anxiety over the illness and death of King George V brought him

much before the public with his impressive broadcasts. The abdication of King Edward VIII made the position of Archbishop L. one of extreme difficulty. Many resented his attitude, but public opinion has shown that in the judgment of the majority L. took the right course in his support of the standards of the Church and in his interpretation of his function as primate thereof. L. was deeply interested in politics and he served on the joint committee on Indian reforms, besides working strenuously to promote closer relationships between the Eng. and Presbyterian Churches. An outstanding incident of his career when Archbishop of York was a highly successful visit he paid to the U.S.A. early in 1918 to emphasise the spiritual issues of the First World War. He was an ardent supporter of the alternative prayer book, which was ultimately rejected by Parliament in 1928. His hold on the Church Assembly was remarkable, his incisiveness and devastating criticism always winning the day and provoking the defeated minority to complain that the archbishop ought not to double the roles of Speaker and Prime Minister. In 1942, feeling that great tasks of reconstruction in Church and State must follow the Second World War, when the Lambeth Conference would meet, and that such work needed a younger man, he resigned and was created Baron L. of Lambeth. His pubs. include *The Miracles of Jesus as Marks of the Way of Life*, 1900, *The Parables of Jesus*, 1906, and *The Opportunity of the Church of England*, 1906. See life by J. G. Lockhart.

Lang, John, see AUSTRALIAN LITERATURE.

Lang, John Thomas (1876- ), Australian statesman, b. Sydney. He entered politics as member of the legislative assembly of New S. Wales in 1913, and in 1923 became leader of the New S. Wales Labour party. Premier and treasurer, 1925-7, and 1930-2, he was determined to push on with the programme of social welfare. During the depression L. became the spokesman for the more militant section of the Labour party and launched a powerful offensive against economy, retrenchment, and deflation. He came into conflict with the federal gov. on the issue of repudiation, and the governor of New S. Wales, Sir Philip Game, dismissed him from office on constitutional grounds. He resigned as member of the legislative assembly in 1946 to contest a federal seat and was member of the House of Representatives for Reid, New S. Wales, 1946-1949. See his *Why I Fight*, 1934.

Langdale Pikes, 3 fells at the head of Great Langdale in Westmorland, England, known as Harrison Stickle (2401 ft), Pavey Ark (2351 ft), and Pike o' Stickle (2323 ft).

Langdon, John (1741-1819), Amer. merchant and politician, b. Portsmouth, New Hampshire. After leading a seafaring life he became a merchant, and took part in the first overt acts against the Brit. Crown committed in his native colony. He became a member of the

Continental Congress, and in 1776 was made an agent of prize money for New Hampshire, and also naval agent for the Continental Congress, securing the building of some of the ships used by the famous John Paul Jones. He served for a time in the War of Independence, took part in the Constitutional convention, was in Congress for sev. terms, and then U.S. Senator from New Hampshire, being at one time president *pro tem.* of that body. In the latter part of his life he served as governor of his state.

**Lange, Christian Louis** (1869-1938), Norwegian pacifist and historian, *b.* Stavanger. L. was secretary of the Nobel Commission of the Storting from 1900 to 1909, and also a member of the Nobel prize committee. In 1907 he was Norwegian delegate to the International Peace Conference at The Hague. He represented Norway at the League of Nations from 1920, and was awarded the Nobel peace prize in 1921. His most outstanding pub. was *History of International Relations from 1814*, 1919 seq.

**Langeland, or Long Island, Dan. is.** in the Great Belt between the is. of Fyn and Lolland, is 33 m. long; area 106 sq. m. It is cultivated, and exports corn, flax, and timber, dairy produce, and fish. Rudkøbing on the W. coast is the chief tn. Pop. 19,520.

**Langensalza, Ger. tn** in the dist. of Erfurt (q.v.), near the confluence of the Salza and the Unstrut, 18 m. WNW. of Erfurt (q.v.). It was an important tn. of the Teutonic Knights, and passed to Prussia in 1815. The Prussians defeated the Hanoverians here (1866) in the Seven Weeks War. There are engineering and textile industries. Pop. 17,000.

**Langenscheidt, Ger. publishing house**, founded by Gustav L. in Berlin, 1856, by issuing correspondence courses in French and, later, in English, introducing phonetic spelling. In 1867 the founder estab. his own printing-office, and in association with Charles Toussaint pub. a Fr. dictionary. After Gustav L.'s death, 1895, the business was carried on by his son, Carl L., and various new dictionaries were pub., notably the *Muret-Sanders* for English, and books for commercial correspondence. The *Lilliput* dictionaries in miniature format were introduced in 1930. The house was completely destroyed by bombs in 1944, but started business again 3 years later, when the founder's great-grandson became the head of the firm, and it soon regained its international pre-war renown. It now publishes over 250 dictionaries and text-books in 23 foreign languages, and issues monthly instructional reviews in German, French, and English.

**Langenthal, small tn** in the canton of Bern, Switzerland. Pop. 9000.

**Langerhans, Paul** (1847-1888), Ger. anatomist, *b.* Berlin. He was educ. at Jena and Berlin, qualifying in medicine in 1869 with a thesis, *Beitrag zur mikroskopischen Anatomie der Bauchspeicheldrüse*. Berlin, 1869, which gave the first description of the islets in the pancreas

now named after L. A reprint of the book with Eng. trans. was pub. 1937. L. became demonstrator of anatomy at Freiburg-im-Breisgau, but a lung injury caused him to leave and take up general practice at Funchal, Madeira, where he *d.* Besides his work on the pancreas he discovered (1869) cells in the epidermis ('L.'s cells') and (1873) the stratum granulosum of the skin ('L.'s layer').

**Langevin, Paul** (1872-1946), Fr. physicist, *b.* Paris. Joining the Curies (q.v.) in research work, he was made assistant prof. in the Collège de France in 1902, and appointed to the chair of general and experimental physics in 1909. In 1925 he became director of the school of physics and chem., succeeding Curie. He discovered the secondary rays of X-rays and introduced Einstein's (q.v.) theory of relativity into France, also doing research into supersonic waves and applying the results to the detection of submarines. Later he became scientific adviser to the Fr. atomic energy commission.

**Langham, Simon de** (c. 1310-76), Archbishop of Canterbury; *b.* Rutland. He became prior and abbot of Westminster in 1349, and carried out important works in the abbey, including the completion of the cloisters. In 1360 he was appointed treasurer of England, in 1361 he became Bishop of Ely, and in 1363 became chancellor. In 1366 he was chosen Archbishop of Canterbury, and in 1386 he was made cardinal, leaving England in 1389 for Avignon, where he *d.* His tomb is the oldest eccles. monument in Westminster Abbey.

**Langholm, burgh and mrkt tn** of Dumfriesshire, Scotland, 22 m. N. of Carlisle on the R. Esk. The sheep fairs are famous; L. has tanneries and a distillery, and is noted for tweed. The ancient ceremony of riding the marches (the Common Riding) is held annually on the last Friday of July. Pop. 2500.

**Langhorne, John** (1735-79), clergyman, poet, and translator, *b.* Kirkby Stephen, Westmorland. He was educ. at Appleby and Cambridge, and after filling sev. curacies became rector of Bladon, Somerset, in 1766. He wrote for the *Monthly Review*, and pub. sev. vols. of popular poetry including *Genius and Valour*, 1764. His most important work is the trans. of Plutarch's *Lives*, written in conjunction with his brother, Wm L. (1771-2).

**Langland, William** (c. 1332-c. 1400), poet, *b.* probably in the W. Midlands. Scanty details of his life are gathered from the poem attributed to him. Educ. at the Benedictine monastery at Malvern, he became a clerk in minor orders, went to London and lived with his wife and daughters in Cornhill, making a precarious living as a scrivener, by singing requiems for the dead, and sometimes by begging. His experience of poverty and hardship comes out in the vivid sincerity of the pictures he draws in his work. The first version of the great poem generally taken as his, *The Vision of William Concerning Piers the Plowman*, was written about

1362; about 1377 a greatly expanded version was produced, a third about 1392, and he went on revising and adding to it till his death. The 3 versions are distinguished as the A, B, and C texts, and some scholars have maintained that they are the work of sev. hands, but this theory of multiple authorship is not now generally accepted. The poem takes the form of an allegory, the author having a vision of 'a fair field full of folk' (the world), in which Reason, Theology, Conscience, the Seven Deadly Sins, and other abstractions are depicted as living and moving. In a second section a search is made for Do-well, Do-bet, and Do-best (the good, better, and best ways of life), with the help of Thought, Wit, and Study. Later additions are concerned with the corruptions of the Church, for L., though a good Catholic, was an earnest reformer, and his poem is a powerful though confused satire. Apart from its literary value, it is of the first importance for the light it throws on the social hist. of the time. Almost exactly contemporary with Chaucer, L. forms an interesting contrast to him, for he represents the close of the old Eng. tradition of alliterative verse, which was superseded by the Fr. rhyming measures that Chaucer popularised. The standard ed. of *Piers Plowman* is that of W. W. Skeat, 1886; there are modern renderings by N. Coghill, 1949, and D. and R. Attwater, 1957. See E. Bernard, *William Langland, a Grammatical Treatise*, 1874, and A. Bright, *Langland and the Seven Deadly Sins*, 1930.

**Langley, Samuel Pierpont** (1834-1906), Amer. physicist and astronomer, b. Roxbury, Boston, Massachusetts. He was prof. of mathematics at the U.S. Naval Academy (1866), director of the Allegheny Observatory, Pittsburgh (1867-87), and secretary to the Smithsonian Institution, Washington (1887-1906). He made a special study of aeronautics and succeeded in showing the feasibility of mechanical flight. He carried out his experiments on the Potomac R., and, after making sev. attempts with various machines, flights of over half a mile were made in 1896. L. invented the bolometer, with which he discovered, in 1881, the new spectrum, an extension of the invisible infra-red rays. He also observed the total solar eclipses of 1869, 1870, and 1878.

**Langmuir, Irving** (1881- ), Amer. physicist, b. Brooklyn, New York. He has carried out researches on the nature of valency, the structure of the atom, atomic hydrogen, surface chem., etc. His invention of the atomic hydrogen blowpipe has proved of great commercial and industrial importance as a means of obtaining very high temps. He also invented the gas-filled tungsten filament lamp. He was awarded the Hughes medal of the Royal Society in 1918 and the Nobel prize in chem. in 1932.

**Langnau**, com. in the canton of Bern, Switzerland. It manufs. cheese, thread, and all kinds of woodwork. It is the agric. centre of the Emmental (q.v.). Pop. 9000.

**Lango**, Nilotic people of central Uganda, cultivating and herding cattle on the grasslands N. of L. Kioga. To-day they number about 300,000, and are progressive cotton farmers. See J. H. Driberg, *The Lango*, 1923.

**Langon**, Fr. tn., cap. of an arron., in the dept of Gironde, on the Garonne. It has a trade in wines. Pop. 5200.

**Langport**, mrkt tn. of Somerset, England, on the R. Parret. It was the scene of a Parliamentarian victory on 10 July 1644. About 4 m. N. of L., near High Ham, is Turn Hill, from which a view is obtained across Sedgemoor (q.v.) to the Quantock Hills. Priest's House, Muchelney, 1½ m. S. of L., was acquired by public subscription in 1911. Pop. 800. L. Beds is the name given to a local facies of the white lias, about 20 ft in thickness, of white or grey or cream-coloured limestones, with marl.

**Langreo**, Sp. tn in the prov. of Oviedo. It has coal- and iron-mines, has iron manufs., and is a mrkt tn. Pop. 49,000.

**Langres** (ancet Andematunum), Fr. tn in the dept of Haute-Marne, cap. of an arron., situated on a spur of the L. plateau near to the source of the R. Marne. There are remains of a Rom. tn. L. is the seat of a bishop, and the fine cathedral dates from the 12th cent. Diderot (q.v.) was b. here. High quality cutlery is manuf., and there are breweries. Pop. 1200.

**Lang-son**, cap. of prov. of same name in NE. Tonking (q.v.) situated in a small plain 1000 ft above sea-level on the l. b. of R. Ky-cung. It is close to the Chinese frontier and has been the scene of a number of battles, the best known being that between the French and Chinese in 1885. The inhab. are Tho, Nung, Man, and Vietnamese.

**Langton, Stephen** (c. 1150-1228), Eng. statesman and Archbishop of Canterbury. Little is known of his early life, but he was an outstanding scholar at Paris Univ., and in 1207 was consecrated to his archbishopric by Pope Innocent III. It was not till 1213 that L. was formally recognised by King John. In 1214 he urged the confirmation of Henry I's charter, a suggestion which probably directly inspired certain of the barons to draw up the Great Charter, and in the following year was suspended from his see for not enforcing the papal censure of the barons. He was a fearless opponent of royal or papal authority where they conflicted with his convictions, but his political career was thrust on him by the pressure of events. L. was an outstanding theologian. See F. M. Powicke, *Stephen Langton*, 1928.

**Langtry, Lillie** (1852-1929), actress, b. Jersey, Channel Is., daughter of the Dean of Jersey. Her maiden name was le Breton and her surpassing loveliness gained her the title of the Jersey Lily. She married Edward L. of the Diplomatic Service in 1874 and made a sensation in Eng. society, becoming an intimate friend of the Prince of Wales, afterwards Edward VII. She went on the stage under the management of Sir Squire and Lady Bancroft at the Haymarket Theatre

in 1881. Her success was then due more to her beauty and position in society than to her acting, but her acting improved and she worked hard. She became an actress-manageress and built the Imperial Theatre in Westminster. She was especially good in the part of Rosalind. She married as her second husband Sir Hugo de Bathe and went in for horse-racing, maintaining a large and successful stable. She was also successful in America, and *d.* there in 1929.

**Language.** This term indicates a highly symbolical method of articulate utterances for conveying ideas. Some scholars define *L.* as a system of arbitrary vocal symbols by which members of a social group co-operate and interact. There are other means of expressing ideas, such as signs and inarticulate sounds. The former may take the place of articulate speech, or, more commonly, emphasise or modify the sense of the uttered word. The latter belong principally to animals, and in the human species express the simple ideas of infants and of those under stress of emotion preventing more deliberate utterance, but neither of them is as complete as *L.* It will suffice to point out the contrast of the immense variability of human speech with the simplicity, the invariability, and monotony of animal cries.

Schlauch, *The Gift of Tongues*, 1943; E. H. Sturtevant, *An Introduction to Linguistic Science*, 1948; M. Cohen, *Le Langage: Structure et Évolution*, 1950.

**Language, Origin of.** Since ancient times various theories have been advanced as to the origin of *L.* It was formerly assumed, and it is still believed by some people, that ready-made speech was a direct gift from the Creator to the first man (Gen. xi. 1-9). This theory, upheld for instance in 1766 by Stäsmilch, has been accepted as recently as in 1948 by H. Homeyer. The ancient Egyptians attributed the creation of speech to Thoth; the ancient Indians to the god Indra; Chinese myths to a demigod who first gave names to animals and plants; Greek tradition to Hermes; the ancient Scandinavians to the 'third son of Borr,' who gave men 'form, speech, hearing, and sight.' Another theory, the 'conventional' one, suggested that *L.* was a conscious invention of man; far from being a gift from the Creator to mankind, it was a gift from mankind to the Creator. It is interesting

to note that some scholars found in Gen. ii. 19-20 'an adequate and straightforward account of the human invention of speech': '... and whatsoever the man called every living creature, that was the name thereof. And the man gave names to all cattle, and to the fowl of the air, and to every beast of the field....' On the other hand, in the opinion of the eminent linguist Richard A. Wilson, the emergence of consciousness in human beings freed man intellectually, via the process of language, from space and time and set him apart from other animals.

The third main theory, that of the 'naturalist' school, is that *L.* was a spontaneous product of human nature. When Darwin pointed out the biological kinship of man with lower animals, it became the intellectual fashion to look for 'evolution' in all matters concerning living things, including *L.* There was the *bow-wow* theory (derisively so called by Max Müller) suggesting that primitive words imitated natural sounds, especially those made by animals. This is also known as the 'onomatopoeic' theory and is exemplified by such words as lullaby. There was the *pooh-pooh* theory (also Müller's term), propounding that the primitive words were ejaculations called forth by strong emotions, such as surprise, joy, grief, pain, dread. This theory is also known as 'interjectional.' Some scholars suggested that the expression of fear was connected with a high sound like Eng. *ee*, lament by a deep one resembling Eng. *oo*, joy by a series of repeated *ah*. Müller himself at first suggested (but soon abandoned) the 'nativistic' or 'echo' theory, called derisively by his friends the *ding-dong* theory. It is the theory of typical sounds, according to which there is an inner harmony or agreement between sound and sense: an 'instinct of speech' led to the first utterance, which was a 'sonant sign' of the consciousness of some common act. 'There is a law which runs through nearly the whole of nature, that everything that is struck rings. Each substance has its peculiar ring.' Similar is the *yo-ho* or *yo-he-ho* theory. 'Under any strong muscular effort it is a relief to the system to let breath come out strongly and repeatedly, and by that process to let the vocal chords vibrate in different ways....' The sounds 'would come to be associated with the idea of the act performed and stand as a name for it; the first words would accordingly mean something like "heave" or "haul."'

Other scholars suggest the 'gestural' or 'gesture' theory, which 'cannot explain many particular points of various languages, but it does clearly show the principle at work in the creation of languages.' In Sir Richard Paget's opinion, 'the original form of expression of all human ideas must be supposed to be that of bodily pantomime.... As he acted with his body, and more particularly with his hands, his tongue followed suit without his knowing it.... The combination of mouth gesture and air current then produced speech.' Finally Jespersen's

'inductive' theory suggests the inferring of a general law from a number of particular instances. He traces the modern L.s as far back as possible, until he reaches 'uttered sounds of such a description that they can no longer be called a real language.' This may be regarded as scientific, but it is far from providing a solution of the vexed problem.

All these theories indeed explain only a very small part of L.; they hardly touch the core. Linguists now agree that the data at our disposal do not provide sufficient material for the solution of the problem of the origin of human speech; but during recent decades much knowledge has been gained of the prehistoric stages of the linguistic families (q.v.). Jespersen has suggested the following 3 main fields of investigation which, in his opinion, may help to solve the problem; but none of them has, so far, yielded any positive results. (1) *The language of children*: 'Here, in the child's first purposeless murmuring, crowing, and babbling, we have real nature sounds; here we may expect to find some clue to the infancy of the language of the race.' However, as Eric Partridge pointed out, 'mankind started from scratch, mankind had no words and no teacher: a child learns an already existing language, hears words all around him, has several teachers.' (2) *The language of primitive races*: Prof. E. H. Sturtevant rightly points out that 'as far as we know there is no indication that any language spoken to-day has had a shorter history or a slower development than any other.' (3) *The history of language*: 'The recorded history of language, even when supplemented by the prehistoric reconstructions of the comparative method (. . .), covers only a small fraction of the development to which language has been subjected since its origin. We can learn from the total of our material a great deal about the latter stages of this development, but it does not carry us appreciably nearer the beginning' (Sturtevant).

The problem of the origin of L. is strictly connected with the problem of its *monogenetism* or *polygenetism*, i.e. Was there a single or multiple origin of speech? Have all the existing forms of speech, and those which existed in the more or less distant past, descended from one L.? Is every L. thus related to every other? No answer can be given to these questions. Apart from the scholars who still believe in their own interpretation of the biblical story (see above), the theory of linguistic monogenesis has been upheld by eminent linguists such as the It. Prof. Alfredo Trombetti, and, more recently, Prof. Carlo Tagliavini, while the polygenetic theory has been propounded by other scholars such as Friedrich Müller.

**Languages, Classification of.** L. can be studied either for practical purposes, i.e. as means of communication between members of a social group, or as a branch of knowledge in which they cease to be a means and become themselves the chief object of inquiry. They may be classified either according to their structure or according to their relationship with other L. (see LINGUISTIC FAMILIES).

Classified according to their structure, the 2500 to 3000 L. of the world fall into 3 groups, known as *isolating* or *monosyllabic* (neither of these terms is exact), *agglutinating* (or *agglutinative*), and *inflecting* (or *inflective*). Chinese is generally referred to as the type specimen of isolating L., not so much because each Chinese word is isolated from the rest as because the characters in its script are written separately one from the other, even if they are binomies or polysyllabic terms. There are various other more or less isolating L. in SE. Asia and in Africa (where there are perhaps 1000 different L.). Many of these L. are monosyllabic; Chinese, which was once an agglutinating language, is not pure monosyllabic, i.e. the suffix -ch'u, corresponding to Eng. '-ness', freely attached to adjectives, transforms them into nouns: hâu-ch'u, 'goodness' (from hâu, 'good'), ch'âng-ch'u, 'length' (from ch'âng, 'long'). There are bisyllabic compounds having quite different meanings from those of their component parts, i.e. tûng-hsi means 'thing,' although tûng means 'east' and hsi means 'west.' However, by far the greatest number of words are either rude monosyllables (exactly as 'housemaid' is made from 'house' and 'maid'). Moreover the root never changes; the same word can be a verb, a noun, an adjective, an adverb (e.g. ta means 'great' or 'greatly' or 'greatness' or 'to be great,' etc.). The meaning of a word is determined only by its place in the sentence (e.g. wô pû p'á t'á means 'I not fear him'; t'á pû p'á wô means 'he not fears me'). The Chinese grammar is comparatively simple and logical, e.g. the singular genitives of the 3 persons are wô-ti, nî-ti, ta-ti, while the plural genitives

are *wōmen-ti*, *nimen-ti*, and *tamen-ti*. It can thus be inferred that the nominatives are *wō*, *nī*, *tā*, for singular, and *wō-men*, *nī-men*, *tā-men*, for plural. Tenses are expressed by adding auxiliary verbs rather than conjugation. Its grammar is thus less marked than its syntax. English is perhaps nearest to Chinese as far as the simplicity of its grammar is concerned.

In speaking Chinese or an allied language (such as Burmese) voice inflection is of importance in giving the proper meaning to a word. The characteristic Chinese 'tones' are indeed just as important as the vowels themselves; they are so characteristic in some L. that the latter are sometimes termed polytonic. A word pronounced on a level tone (˘) means one thing; on a rising tone (ˊ) another; on a dipping tone (ˋ) another; and on a falling tone (ˊˋ) another. If the Chinese words with their specific tones were recorded in strictly phonetic signs, they would be seen to be totally different words with different sounds, not different 'tones' of the same sound. That they have been misunderstood to be 'acoustic pitches' or changes of pitch is due to a lack of knowledge about the spoken language. For instance, the so-called 'falling tone' in fact denotes the original final consonant '-k', '-ŋ', or '-l' of a syllable (e.g. the 'Yat' in Dr Sun Yat-sen). The number of tones varies from language to language, from dialect to dialect. While, for instance, Burmese has only 2 tones, Siamese and Cantonese each has 6.

The agglutinating L. form the largest of the 3 groups. To it belong those L. (e.g. Japanese, Korean, the Caucasian forms of speech, the ancient Sumerian and Elamite, the Ural-Altaic family, various Amerindian linguistic groups, and many others) in which root words are united by juxtaposition only, i.e. if it is desired to modify the sense of a word in respect to time, place, or other relation, this is done by adding a prefix or a suffix, i.e. by incorporation of a vowel or a syllable with the main word. Many Eng. words, once classed as compounds, are agglutinated words, e.g. aforementioned, offshoot, matter-of-fact, fishmonger, homesick, and so forth. Various Amerindian dialects are not only agglutinating but polysynthetic or incorporative, i.e. many single words incorporate the conception of a whole sentence. This may be seen, for instance, in such names as that of the famous Aztec 'emperor' Montezuma or Montecuzoma (really Montecuzomal-thulca-mina), meaning 'When-the-chief-is-angry-he-shoots-to-heaven.'

Inflecting (from 'inflect', meaning to bend, to change the form of, to vary) L. are those in which words are susceptible of some slight modifications, which are known to grammarians as inflections, or flexions, or internal changes. This term may be applied to the changes in verb forms (by conjugation) or in noun forms (by declension) by the addition of one or more letters (school, schools; class, classes; (to) love, (he) loves; loved, beloved), or by changes within the words themselves (man,

men; foot, feet; (to) write, wrote; may, might). Inflecting L., however, contain both monosyllabic and agglutinative as well as inflected words. In modern English we have few inflections left, though at one time the language had many. The major ones are those which have to do with numbers and tenses respectively. Ancient Indo-European L. (e.g. Sanskrit, Greek, Latin, and the modern German, Russian, Polish, or Lithuanian, have numerous inflections. The Lat. noun, for instance, had 7 declensional endings: nominative, vocative, accusative, genitive, dative, ablative, and locative. Lat., Gk, Ger., Polish, and other verbs have many suffixes to show tense, number, gender, mood, activity, or passivity of the action, and so forth.

In the other main inflecting linguistic family, that is in the Semitic L., internal variation in the roots plays the most important part in inflection. One striking feature of grammatical structure is common to all Semitic L., i.e. a marked preference for verbal roots using 3 consonant sounds. The characteristic core of the word, be it a noun or a verb or an adjective, called the triliteral root, gives us the fundamental conception, and is represented by consonants, while the vowel sounds (either as prefixes or suffixes or as changes within the words) give us only the complements, the details, such as the part of speech, the voice, the mood, the tense, the declension, i.e. in Hebrew the consonantal abstraction of the root k-t-b indicates any word having a meaning connected with writing, although there is no such word as ktb. On the other hand kṯb means 'I am, you are, he is' writing'; kṯb means 'I shall write'; kṯb 'he wrote'; kṯbm 'writings', and so on. See also INDO-EUROPEAN LANGUAGES; LANGUAGE; LANGUAGE, ORIGIN OF; LINGUISTIC FAMILIES; and bibliographies of these articles.

Languedoc, former prov. of France, united under one authority about the beginning of the 13th cent. The name is Provençal and means 'the tongue of oc', oc being the S. form of the N. *oui*. In 1791 L. was replaced by the 8 depts of Haute-Loire, Lozère, Ardèche, Aude, Tarn, Hérault, Gard, and Haute-Garonne. The cap. was Toulouse (q.v.).

Languedoc, Canal du, see MIDI, CANAL DU.

Languet, Hubert (1518-81), Fr. Huguenot, writer and diplomat, b. Vitteaux, Burgundy. He studied at the univ. of Poitiers, Bologna, and Padua, and spent much time in travelling through France, Italy, Spain, Germany, Sweden, Finland, and Lapland. In 1559 he entered the service of Augustus I, elector of Saxony. He represented the elector at the Fr. court (1561-72), and narrowly escaped death on St Bartholomew's Day, 1572. He was at the imperial court as representative of the elector (1573-7), after which he spent most of his time in the Netherlands. His letters to Augustus are important sources for the hist. of the 16th cent.

**Lanidae**, see **SHRIKE**.

**Lanier**, Sidney (1842-81), Amer. poet and critic, b. Macon, Georgia. His later years were a heroic struggle against the ravages of consumption, which finally mastered him. He graduated with honour from Oglethorpe College, and on the outbreak of the Civil war joined the Confederate army. In 1864, whilst acting as a blockade runner, his ship was captured, and for 5 months L. was confined in a Federal prison. Here his flute, which he had learned to play as a boy, helped to lessen the tedium of imprisonment. In 1873 he was flautist in the orchestra at the Peabody concerts, Baltimore, and in 1876 became lecturer on Eng. literature at Johns Hopkins Univ. Such poems as 'The Marshes of Glynn,' 1881, and 'The Master' entitle him to the first place after Poe among the poets of the S., whilst the *Science of English Verse*, 1880, exhibits his mastery over prose, and his *Letters*, 1899, illustrate the charm of his personality and his Stevensonian courage. See studies by E. Mims, 1905, and A. H. Starke, 1933.

**Lankester**, Sir Edwin Ray (1847-1929), zoologist and biologist; b. London; eldest son of Dr Edwin L., coroner for Central Middx. Educ. at St Paul's School, Downing College, Cambridge, and Christ Church, Oxford. Fellow and lecturer of Exeter College, 1872; he accepted in 1874 the chair of zoology and comparative anatomy at Univ. College, London. F.R.S., 1875. In 1890 he gave up his work in London, and for the next 7 years, lectured on comparative anatomy at Oxford. He was director of the natural hist. depts in the Brit. Museum, 1898-1907. He founded the Marine Biological Association and became its president, 1892; he became vice-president of the Royal Society, 1896. From 1869 he ed. the *Quarterly Journal of Microscopical Science*. Made K.C.B. 1907, in which year he presided over the Brit. Association. His pubs. include *Comparative Longevity*, 1871, *Degeneration*, 1880, *Extinct Animals*, 1905, *Science from an Easy Chair*, 1910-12, *Diversions of a Naturalist*, 1915, and *Great and Small Things*, 1923. He ed. the well-known *Treatise on Zoology*, 1900-9.

**Lanner**, Josef (1801-43), Austrian violinist, b. Oberdöbling, near Vienna. He joined a dance band as a youth and eventually formed one of his own with which he played at balls and for which he composed numerous dances, especially 122 waltzes, which rival those of the elder and anticipate those of the younger Johann Strauss.

**Lannes**, Jean, Duke of Montebello (1769-1809), Fr. marshal, one of Napoleon's greatest generals. B. of humble parents, he was apprenticed to a dyer, but in 1792 he joined the army. The times were auspicious for the rapid rise of any youth of talent. According to Bonaparte he fought in 54 battles and 300 combats, among them being Montenotte and Millesimo (1796), Aboukir (1797), Châtillon, Montebello, and Marengo (1800), Württemberg and Austerlitz (1805), Jena (1807),

Tudela (1808), and Eckmühl (1809). The finest thing he ever did, after his defeat of the Austrians at Montebello, was his brilliant assault of Saragossa (1809). His fall at the battle of Easing was a disaster which Napoleon was the first to appreciate. See lives by C. Thoumas, 1891, and von Montebello, 1900.

**Lannion**, riv. port in the dept of Côtes-du-Nord, France, on the Léguer, 54 m. ENE. of Brest. It has many interesting old buildings. The manufs. are linen and leather, and the tn has a harbour and fisheries. Pop. 7200.

**Lanolin(e)** consists of the purified wool-wax of sheep containing about one-fourth of water. The crude wax is taken from the wool by extraction with a volatile liquid or a soap solution, the latter being treated with acid to precipitate the wax, which is then purified by boiling with caustic soda. The purified wax, free from water, is styled in pharmacy *adeps lanae* or anhydrous L. It is a yellow greasy solid with a characteristic odour, which will form emulsions with a high percentage of water. The purified wax consists essentially of a mixture of sterols and aliphatic alcohols with their esters. Potassium, sodium, and calcium soaps may also be present. L. is used in the manuf. of salves, cosmetics, soaps, leather, and printing inks.

**Lanrezac**, Charles Louis Marie (1852-1925), Fr. general, b. Pointe-à-Pitre, Guadeloupe. Entering St Cyr in 1869, he fought in the Franco-Ger. war and in Tunis. On the outbreak of the First World War he was in command of the Fifth Army, on the right of the Brit. Expeditionary Force. He was removed by Joffre, 3 Sept. 1914. In 1920 he wrote an account of the early months of the war.

**Lansbury**, George (1859-1940), Labour politician, b. Halesworth, Suffolk. He spent his childhood in Sydenham, Greenwich, Bethnal Green, and Whitechapel, attending elementary schools. As a lad he worked at many jobs, including unloading coals for a railway company. He emigrated to Australia in 1884, and worked at various kinds of heavy labour around Brisbane. Returning to England in 1885 he worked for the Liberal party and agitated for an 8-hr day at the National Liberal Conference, Manchester, 1889. Later he joined the Socialists. He was a poor law guardian from 1892, and bor. councillor from 1903. In 1910 he was elected to Parliament as Labour member for Bow and Bromley. He was mayor of Poplar, 1918-20, and, with the bulk of the bor. council, was imprisoned for 6 weeks, autumn 1921, for refusing to pay co. precepts because of the bor.'s poverty. He ed. *Daily Herald* (weekly *Herald* during the First World War), 1912-22, and *Lansbury's Labour Weekly*, 1925-7. He re-entered Parliament for Bow and Bromley, 1922, and became first commissioner of works, 1929-31, as such gaining prominence by projects designed to popularise London parks and open spaces. After the general election of 1931, he became leader of the parl. Labour party, resigning in 1935, as his strongly

pacifist views were not accepted by the majority of the party, and he was succeeded by Clement Attlee. In 1937 he visited Hitler and Mussolini in an attempt to persuade them towards peace. His integrity and idealism earned him the respect of members of all political parties, and he was especially beloved in the E. end of London, where his humanitarian work had been carried on for nearly half a cent. See his *What I saw in Russia*, 1920, *My Life*, 1928, *My England*, 1934, and *My Quest for Peace*, 1938, an account of his visit to Hitler and Mussolini. A life by his son appeared in 1934.

**Lansdown**, elevation (813 ft) in Somerset, England, just NW. of Bath (q.v.).

**Lansdowne**, Baron, see GRANVILLE, GEORGE.

**Lansdowne**, Henry Charles Keith Petty-Fitzmaurice, 5th Marquess of (1845-1927), Brit. statesman, eldest son of 4th marquess, educ. at Eton and Balliol College, Oxford. He joined the Liberal party and served the gov. as lord of the treasury, 1869-72, under-secretary for war, 1872-4, and under-secretary for India, 1880. Governor-General of Canada, 1883-8, then Viceroy of India until 1893. When Gladstone introduced Home Rule for Ireland he became one of the Liberal-Unionist party. From 1895 to 1905 he was once more a member of the Cabinet, first as secretary for war (until 1900), and afterwards as foreign secretary. After Salisbury's death he was Unionist leader in the House of Lords. He joined Asquith's Coalition Gov., 1915, as minister without portfolio, but resigned in 1916. On 29 Nov. 1917, the *Daily Telegraph* pub. his remarkable communication known as the L. letter (q.v.). See life by Lord Newton, 1929.

**Lansdowne**, Henry Petty-Fitzmaurice, 3rd Marquess of (1780-1863), Eng. statesman, educ. at Westminster School, Edinburgh Univ., and Trinity College, Cambridge. Having entered Parliament in 1802 he was a member of Grenville's short-lived ministry of 'All the Talents' (1806-1807). Throughout his public life he was a zealous advocate of Free Trade, the abolition of slavery, and Catholic emancipation. President of the council from 1831 to 1841, and again from 1846 to 1852, he assisted in the passage of the Reform Bill (1832), and subsequently refused the premiership and a dukedom. He succeeded to the marquessate in 1809.

**Lansdowne**, William Petty, 1st Marquess of (1737-1805), Brit. statesman, went to Christ Church, Oxford, and later joined Wolfe's regiment. In 1760 he rose to colonel, having greatly distinguished himself during the Seven Years War at Minden and Kloster-Kampen, and in the same year entered Parliament. In his principles he was closely associated with Pitt, whom he supported on the question of Wilkes's expulsion. When Pitt became Premier, Shelburne (he had succeeded to his father's earldom in 1761) accepted the secretaryship of state (1766), but resigned 2 years later, being opposed to the gov.'s Amer. policy. For a few months in 1782

he was Premier, but the coalition of Fox and North secured his speedy downfall, and he retired from political life. He was created Marquess of L. in 1784.

WILLIAM PETTY, FIRST MARQUESS OF LANSDOWNE

**Lansdowne Letter**, letter written by Lord Lansdowne to the *Daily Telegraph*, 29 Nov. 1917, arguing the necessity for a revision of the Brit. war aims, and, inferentially, advocating peace overtures to Germany. The views expressed in the letter were speedily repudiated by the Brit. Gov., which declared its unswerving adherence to its war policy as previously stated. The letter caused astonishment both in Great Britain and in the U.S.A., but was soon forgotten. See LANSDOWNE, HENRY CHARLES KEITH PETTY-FITZMAURICE, 5th MARQUESS OF.

**Lansing**, Robert (1864-1928), Amer. politician and lawyer. He was counsellor to the state dept until 1915, when he succeeded Wm J. Bryan as secretary of state. He was chosen as one of the 5 delegates to represent America at the Inter-Allied Peace Conference in Paris in 1919. He pub. *The Peace Negotiations*, 1921, and *The Big Four and Others of the Peace Conference*, 1921. His war memoirs appeared in 1935 and *The Lansing Papers*, 1914-20, in 1939-40.

**Lansing**, city, cap. of Michigan, U.S.A., on the Grand R. in agric. area 80 m. NW. of Detroit. It manufs. automobiles, buses, trucks, tools, metal, wood, and cement products, and is the seat of Michigan State Library, Michigan State Univ. (forming Michigan State Colleges) is 4 m. away at E. L. Pop. 92,100.

**Lanson**, Gustave (1857-1934), Fr. literary critic, b. Orleans; educ. at the *lycées* of Orleans and Charlemagne. He was director of the *Ecole Normale Supérieure*, prof. of Fr. literature at the Sorbonne, and, after the death of Brunetière, the chief influence in guiding students of Fr. literature. His method of criticism was essentially one of historical and biographical research, a method which in less able

hands might tend to subordinate literature to the catalogue label. His *Histoire de la littérature française*, 1894, is unrivalled by any other work of similar range. In addition he wrote valuable studies of Nivelle de la Chaussée, Bossuet, Boileau, and Corneille; an ed. of Voltaire's *Lettres philosophiques*, 1908; critical eds. of Lamartine's *Méditations*, 1915; and a *Manuel bibliographique de la littérature française moderne* (new ed., 1921). He was vice-president of the Société d'histoire littéraire de la France and president of the Société des textes français modernes.

**Lanston, Tolbert** (1844-1913), Amer. inventor of the Monotype system of single-type composition, b. Troy, Iowa, in poor circumstances. He served in the Civil war and later in the Pensions Office at Washington. His initial patent is dated 1887, the invention being developed by J. S. Bancroft. The first machine in England was installed in London in 1898. See also TYPE-CASTING AND TYPE-SETTING MACHINES.

**Lanterloo, see** Loo.

**Lantern:** 1. In architecture, an ornamental turret erected on the roof or dome of a building to provide light (and also sometimes providing ventilation). A L. may be square, circular, or polygonal on plan; and its sides may be glazed or open. There are important medieval examples in the cathedrals of York, Ely, and Coutances; also at the church of St Ouen at Rouen. Among Renaissance examples, those on the domes of Florence Cathedral, St Peter's (Rome), and St Paul's (London) are famous.

2. Name given to a case to contain a light. It generally consists of a framework of metal with glass, horn, or mica windows, or some other transparent material. The light may be supplied by a candle, oil, etc. In engineering any L.-shaped construction is often called a L., e.g. a L. pinion. See also LAMP.

**Lantern, Magic, see** MAGIC LANTERN.

**Lantern-fly** (*Fulgoroidea*), family of tropical insects of the order Hemiptera, in many of which there is a large outgrowth from the head, once believed luminous.

**Lanthanum**, symbol La, atomic number 57, atomic weight 138.9. One of the commonest of the rare-earth elements. Discovered in 1839 by Mosander by extraction from crude ceria. It is a white malleable metal which tarnishes in air, and is acted on slowly by water. Chemically it is very like cerium, and forms a basic oxide La<sub>2</sub>O<sub>3</sub> which dissolves in water to give a fairly 'strong' hydroxide. Forms many salts and a hydride, LaH<sub>3</sub>.

**Lanuvium**, or Lanivium, anct city of Italy, situated about 20 m. SE. of Rome, bp. of Antoninus Pius. It stood upon a hill commanding an extensive view of the surrounding country, and had a celebrated temple of Juno. The present vil. is noted for its vineyards.

**Lanzarote**, one of the Canary Is., in the prov. of Las Palmas (q.v.). It is the most easterly of the Is., and abounds in curious volcanic phenomena. Its cap. is Puerto

de Arrecife. Area 323 sq. m.; pop. 30,000.

**Lanzi, Luigi** (1732-1810), It. archaeologist, was educ. by the Jesuits for the priesthood, but the order being suppressed, he became keeper of the galleries of Florence (1775), and henceforward devoted his life to literature and the study of antiquities. His *Storia Pittorica della Italia* (completed in 1796) has been widely trans., and, in that it was the first attempt to treat the schools of painting with historical sequence, is a landmark in art criticism. L. wrote also on the language and vases of anct Etruria.

**Lao-Ling Mountains, see** under CHANG-PAISHAN.

**Lao-Tzu**, Chinese philosopher, author of *Tao Teh King*. According to Sze-ma Ch'ien (c. 100 BC), L. T. was b. in 604 BC and was keeper of the royal library at the court of Chow in the prov. of Honan. In 517 BC he had an interview with Confucius, and in his old age, when the dynasty was growing weak, he left the royal domain and went into 'the regions beyond.' 'The Venerable Philosopher'—one meaning of his name—taught the beauty of action free from selfish motive with only its own accomplishment as its end; the world must roll on 'without striving or crying,' which is the 'way,' or 'Tao.' He taught compassion and humility and the requiting of good for evil, yet he was ever looking back from culture to pre-cultural times for his ideals. Taoism is polytheistic and has little to do with his ethics. See trans. by P. Carus, 1898, 1913; R. Wilhelm, 1911 ff.; A. Waley, 1934, 1942; *Chinese Philosophy* (Everyman's Library); W. Bynner, 1947; also study by R. Stülpe, 1912, and R. Wilhelm, *Laotse und der Taoismus*, 1925.

**Laosag**, tn and port of Luzon, Philippine Is., cap. of the prov. of Ilocos Norte. It is situated on the L. R. and includes the municipality of San Nicolás. There is a shipping trade in rice, Indian corn, sugar, and tobacco; cotton is extensively grown in the dist. Pop. 44,406.

**Laocoön**, priest of Apollo, whose anger he incurred by his marriage and by solemnly warning the Trojans against admitting the treacherous wooden horse within their walls. The vindictive god sent 2 huge serpents out of the sea to the altar of Poseidon at which L. with his 2 sons was officiating. They died in agony, as the monsters coiled themselves about their limbs, see VIRGIL (*Aeneid*, ii, ll. 199 et seq.). The famous Laocoön group in the Vatican museum was discovered in 1506 near the Baths of Titus in Rome. Identified by Michelangelo, it was for long accepted as an original work said by Pliny (*Hist. Nat.* 36) to have been carved by 3 Rhodian sculptors, Agesander, Polydorus, and Athenodorus, and it is ascribed to the 2nd or 1st cent. BC. In September 1957, however, there were found in a cave at Sperlonga, Italy, sev. hundred fragments of an exactly similar group. The latter is now claimed by Prof. Giulio Iacopi, the Rom. archaeologist, to be the true original; all 3 names

other minerals of a similar colour though of different chemical nature.

**Lapithae**, The, mythical race inhabiting the mts of Thessaly. Pirithous, half-brother of the Centaurs (q.v.) was their ruler. Upon his marriage with Hippodamia, the Centaurs tried to carry off his bride and the other women. A fierce battle ensued, in which the L. were victorious. The story is said to symbolise the conflict between the Greeks and Persians.

**Laplace, Pierre Simon, Marquis de** (1749-1827), Fr. mathematician and astronomer, b. in humble circumstances at Beaumont-en-Auge, near Trouville, Normandy. As a youth he taught mathematics in a military school at Beaumont, and in 1767, through the influential assistance of

MARQUIS DE LAPLACE

D'Alembert, was appointed prof. of mathematics in the École Militaire, Paris. In 1796 he pub. his *Exposition du système du monde*, in which he stated the chief astronomical facts and theories, and in a note at the end expounded his famous 'nebular hypothesis' of the origin of the solar system. His *Traité de mécanique céleste*, 1799-1825, made him world-famous. Apart from his extraordinary analytic skill and far-sighted scientific sagacity, L. had a pure literary style which places his works on a level with Newton's *Principia*. His other treatises include *Théorie du mouvement*, 1784, *Théorie analytique des probabilités*, 1812-1820, and *Essai philosophique sur les probabilités*, 1814. His *Oeuvres complètes* were issued (1878-1904) in 13 vols. In his earlier years, it may be said that L.'s work was directed towards an explanation of the secular changes in the motion of the heavenly bodies, especially of the moon. It was during these years, too, that he collaborated with Lavoisier in carrying out experiments in the then new science of heat, which are still described in present-day text-books. His monumental work, *Traité de Mécanique céleste* (see above), deals with all the problems of the solar

system and is reckoned second only to Newton's *Principia*. But from the modern standpoint its most significant contribution to knowledge is the development of the idea of the potential; it is not too much to say that his equation of the potential function is the most important single equation in the whole of physics. The *Mécanique céleste* is a most difficult book to read, and this is the more curious because he had previously pub. his popular account of celestial mechanics, the *Exposition du système du monde*, which book may be described as, in effect, the *Mécanique céleste* without any mathematics and is easy to follow. L.'s brilliance as a scientist remains undimmed with the years. His work on surface tension and on the velocity of sound, as well as his more important studies on attractions and probability, are still important, and in his own lifetime had a profound effect on the progress of knowledge. The Eng. school, hampered by the allegiance to the fluxions of Newton, and by anti-Fr. sentiment, had made no progress, but L.'s work encouraged a new outlook. This began with the collaboration of Woodhouse, at Cambridge, with Babbage, John Herschel, and Peacock, in founding a new school of analytical methods, and had remarkable results in the hands of Adams and Clerk-Maxwell. (See 'A Very Extraordinary Man,' by J. G. Porter, in the *Listener*, 23 Mar. 1949.) See also COSMOGONY. See Baron Fourier, *Eloge*, 1831; D. F. J. Arago, *Report*, 1842, trans. amongst his *Biographies* by Smyth and Grant; I. Todhunter, *Elementary Treatise on Laplace's Functions*, 1875; D. V. Widder, *The Laplace Transform*, 1942.

**Laplace's Equation**, partial differential equation in connection with the theory of attractions discovered by P. S. Laplace (q.v.). By his discovery that the attracting force in any direction of a mass upon a particle could be obtained by the direct process of differentiating a single function  $V$ , the potential, Laplace showed that for empty space this potential satisfied the

$$\text{equation } \frac{\partial^2 V}{\partial x^2} + \frac{\partial^2 V}{\partial y^2} + \frac{\partial^2 V}{\partial z^2} = 0, \text{ and thus}$$

made an important addition to every branch of physics, and more particularly heat, electricity, and magnetism. C. F. Gauss employed it in the calculation of the magnetic potential of the earth, and Clerk-Maxwell's interpretation of harmonics with reference to poles on the sphere threw new light upon it. See SPHERICAL HARMONICS.

**Lapland**: 1. Northernmost co. of Finland. Its size (excluding water area) is 36,243 sq. m., with a pop. of 176,700. It is fast developing into a tourist centre. The cap. is Rovaniemi (pop. 14,500). Kemi (pop. 25,000) has lumber and pulp mills, and is a timber-shipping centre.

2. Name also applied to an extensive region of Fenno-Scandia in N. Europe, inhabited by the Lapps. It has no political existence, and covers ter. in Norway, Sweden, Finland, and Russia,

the first portion consisting of bold headlands and fjords, deep glaciers, long mt lakes, and lake-fed rivs. Russian and Finnish L. is similar to the low-lying parts of Swedish L., but the surface is more level; marshes and the barren tundras of the Arctic Ocean become more frequent, and forests of fir and spruce abound. The climate is typically arctic. Northward from the Arctic Circle (Rovaniemi) the sun in winter does not rise above the horizon for 7 or 8 weeks, and comparative darkness prevails except when the aurora borealis (q.v.) illuminates the snow-covered landscape. The cold is excessive. Summer lasts for 3 months, and

inoffensive, and are extremely susceptible to religious impressions of a sensational character. To-day they all profess Christianity. The number of Laplanders is not supposed to exceed 30,000—18,000 in Norway, 6400 in Sweden, 1600 in Finland, and the rest in Russia. From the 13th to the 17th cent. they were practically in a state of slavery under the Swedish adventurers, the Birkarians. A flourishing colony of them has been estab. in Alaska. See Sir A. de Brooke, *A Winter in Lapland*, 1827; G. von Düben, *Om Lappland och Lapparne*, 1873; E. Rao, *The White Sea Peninsula*, 1882; F. H. Butler, *Through Lapland with Skis and Reindeer*, 1919; H. Sutherland, *Lapland Journey*, 1939; H. A. Bernatzik, *Lapland*, 1940.

**La Plata**, cap. of the prov. of Buenos Aires, Argentina, 30 m. ESE. of the city and 5½ m. from the coast, with which it is connected by railway and the port Ensenada. It was founded in 1882, and has grown into a city with a pop. of 325,165. It has fine gov. buildings, theatres, a library, and a race-course; also a large museum rich in geological and archaeological collections and an astronomical observatory (founded in 1897), both of which have been taken over by the univ. of L. P. Its industries include meat packing, petroleum refining, cement, sawmills; grain, wool, and meat are exported.

**La Plata, Río de**, or **Plate River**, see **PLATA, RÍO DE LA**, or **PLATE RIVER**.

**Lapointe, Ernest** (1876-1941), Fr.-Canadian statesman, b. in Temiscouata co., Quebec, and educ. at Rimouski College, and at Laval Univ., Quebec. He was called to the Bar, but took up politics and then set himself to master the Eng. language, of which he knew not a word. His reputation was well estab. at the end of the First World War, especially over the conscription controversy, and he might have succeeded Laurier (d. 1919) but for the party's desire to alternate the leadership between Fr. and Eng.-speaking persons. L. assumed leadership of Quebec Liberals and, a dominant figure in the govts. of Mackenzie King, he was minister of marine and fisheries and, later, of justice, a post he held until 1930 and again from 1935 till his death. He signed a fishery treaty with the U.S.A., the first treaty ever signed by a dominion minister endowed with plenipotentiary powers from the king. He was chief Canadian delegate to the Imperial Conference, 1929; in Sept. 1939 he spoke eloquently in favour of Canadian participation in the Second World War.

**La Porte**, city, cap. of L. P. co., Indiana, U.S.A., 46 m. E. of Chicago. There are beautiful lakes to the N. of the city, and it is a summer resort. It manufs. woollen goods, machinery, and road-building materials. Pop. 26,400.

**Lappa**, port of China, at the entrance of the Canton R., opposite Macao.

**Lapps**, see **LAPLAND**.

**Lapse**. A devise of real estate and a bequest of a legacy are said to L. where the devisee or legatee d. in the lifetime of the

Swedish Tourist Traffic Association

#### LAPP WOMEN SHOPPING AT A LAPP FAIR

is comparatively hot; N. of Rovaniemi the Midnight Sun can be seen, and for 11 weeks never sets. L. gives little scope for husbandry, the soil being frozen a foot and more below the surface; the fisheries are important, and there are extensive copper-mines and iron deposits. The latter occur principally in Swedish L., where are some of the richest iron-mines in the world. At Kiruna and Gällivara are mts of ore said to be two-thirds pure iron. To serve the mining communities an electric railway has been constructed from Lulea on the Gulf of Bothnia to Narvik on the Norwegian coast. The Lapps mostly live by fishing, fur-trapping, and hunting. The male pop. spends much time tending the large reindeer herds which supply most of the needs of the inhab., providing them with flesh, milk, skins, etc., for the souvenir industry, and acting as a beast of burden. Of Finno-Ugrian stock, the Lapps are remarkably short in stature, with high cheekbones, wide mouths, small, elongated eyes, and snub noses. They are quiet,

testator. But by the Wills Act, 1837, no L. occurs: (a) when the donee is a child or other issue of the testator and dies leaving issue at the testator's death; and (b) when the gift is of an estate tail (*see* ESTATE; ENTAIL) and the tenant in tail leaves issue living at the testator's death capable of inheriting under the entail. In both (a) and (b) the property passes just as if the donee had *d.* immediately after the testator. Lapsed legacies fall into the residuary estate.

**Lapurdum**, *see* BAYONNE.

**Lapwing**, *see* PLOVER.

**L'Aquila** (Degli Abruzzi): 1. Prov. of Italy, in NW. Abruzzi e Molise (q.v.). It is in the Central Apennines (q.v.), and has many high mts in the NE. (Gran Sasso d'Italia, q.v.), centre, and S. The prov. is crossed NW.-SE. by the R. Pescara, and in the S. of the prov. is the Lake of Fucino (q.v.). Cereals, hemp, flax, and fruit are produced. The prin. lns include L'A. and Avezzano (qq.v.). Area 1942 sq. m.; pop. 368,000.

2. It. tn, cap. of the prov. of L'A. and chief tn of Abruzzi e Molise, situated on a hill on the R. Aterno, 58 m. NE. by E. of Rome (q.v.). It was founded by the Emperor Frederick II (q.v.) on the ruins of the anct. *Amitemum*, bp. of Sallust (q.v.). It was almost destroyed in an earthquake in 1703, and was damaged during the Second World War. There is a 14th-cent. archiepiscopal cathedral (restored 18th cent.), and in the 15th-cent. church of S. Bernardino is the tomb of Bernardino of Siena (q.v.). It has paper, linen, and lace manufs., and a trade in saffron. Pop. (tn) 20,573; (com.) 55,300.

**Lar**, or **Lars**, Etruscan word meaning lord, king, or hero. It was employed as a praenomen and borne by Persena (L. Persena) of Clusium, Tolumnius of Veii, and others. *See* C. O. Müller and W. Deecke, *Die Etrusker*, 1877.

**Lar**, dist. and tn of prov. of Fars in Persia. The dist., which was formerly called Laristan, is bounded on the S. by the Persian Gulf. It has a hot climate, and much of the region is dry and barren. Dates, opium, cotton, and tobacco are the chief products. Pop. of dist. about 125,000; of tn about 14,000.

**Lara**, state of N. Venezuela, bounded to the S. by Portuguesa and to the N. by Falcón. The Tocuyo R. traverses L. and there is a railway to the coast at Tucacas. The cap. is Barquisimeto. Coffee and other tropical crops are produced. Area 7642 sq. m.; pop. 368,169.

**Larache**, or **El Arache**, fortified seaport tn of the former Sp. zone of Morocco, Africa, overlooking the Atlantic ocean, 45 m. SSW. of Tangier. L. was once a Phoenician settlement. Pulse, beans, wheat, wool, hides, and wax are exported. L. is a railway terminus and has an airline to Seville. Pop. 41,920.

**La Ramée**, Louise de, *see* OUIDA.

**Laramie**: 1. Co. seat of Albany co., Wyoming, U.S.A., 40 m. NW. of Cheyenne on the Union Pacific Railway, the centre of a stock-raising, lumbering, and mining dist. It has an altitude of 7145 ft, is

enclosed by mts, and is in the midst of picturesque scenery. It contains Wyoming Univ., and has manufs. of cement, bricks, tiles, and timber; there are also railroad repair shops. Pop. 15,580.

2. Riv. in Colorado, flowing NE. through SE. Wyoming; it is 216 m. long, and drains part of L. co. It is used for irrigation.

**Laramie Strata**, appearing in the intermediary age between the Cretaceous and Tertiary, containing seams of lignite. They are well developed in Utah and Wyoming, U.S.A.

**Larat Island**, *see* under **MOLUCCAS** or **SPICE ISLANDS**.

**Larbaud**, Valéry (1881- ), Fr. writer, b. Vichy, educ. at his native tn and at the Sorbonne. His wealth enabled him to travel widely. He has trans. Coleridge, Samuel Butler, and James Joyce from English and Ramon Gomez de la Serna from Spanish. His first considerable original production was *Poésies de A. O. Barnabooth* (1908). 'Barnabooth' being a reputed S. Amer. millionaire in search of happiness. The poems are written in free verse, showing the influence of Walt Whitman. Some years later he pub. the prose work, *A. O. Barnabooth, son journal intime*, 1913. He has also written a short novel, *Fermina Marquez*, 1906, sev. vols. of short stories, and a collection of critical essays. *See* G. J. Aubry, *Valéry Larbaud*, 1949.

**Larbert**, par. and vil. of Stirlingshire, Scotland, on the Carron, 2½ m. NW. of Falkirk. Manuf. of light castings is the main industry. Pop. 15,787.

**Larboard**, *see* STARBOARD.

**Larceny**, or **Theft**, fraudulently taking and carrying away, without a claim of right made in good faith, the property of another, without his consent, with the intention of depriving him permanently of it. L. is either simple or compound, the latter being theft accompanied by circumstances of aggravation, e.g. robbery with violence, theft by a public servant. L. is distinguishable from: (a) false pretences, in that possession only is obtained, while in the latter crime the owner intentionally parts with his right of property as well, although induced so to do by some false representation; and (b) embezzlement, in that L. by a clerk or servant connotes the stealing of property which at the time is in the actual possession of the master, while in embezzlement the property is intercepted. Only personal goods can be the subject of L. There were formerly a great number of things, like trees, plants, deeds, fixtures, coal from a mine, chattels real (q.v.), choses in action (q.v.), wills, animals *ferae naturae* (i.e. wild or unreclaimed), and dogs, or other domesticated animals not ordinarily used for food, which at common law could not be the subjects of L. The theft of most of these things is now, however, punishable as for simple L., while the theft of coal or other ore from mines, wills, records, and deeds is met with much heavier punishment than L., that of wills being punishable to the extent of

a life term of imprisonment. If the taking is bona fide under some colour of right, it might ground a civil action in trespass (q.v.), but would not be larcenous. If the goods are taken by a trick, the owner not intending to part with the ownership of the goods, it is L., e.g. A man gets half a dozen pairs of boots sent to him ostensibly for the purpose of buying one selected pair and then converts all of them to his own use. Welshing is a common form of L. by trick. To constitute L. there must be a complete physical taking (called asportation). This, however, is in law interpreted to mean merely that the goods must have been bodily displaced as distinguished from being merely handled, or if attached or connected in some way (e.g. watch and chain) completely severed. It is not essential that the taking be for the sake of gain, e.g. to take a man's motor-car and run it into a deep riv. merely to spite him is L. if done with intent permanently to deprive the owner of his property. L. by finding is the offence of appropriating goods, the true owner of which may be found by inquiry. If, at the time of appropriation, the finder really believes that the owner cannot be found, it is not L. (Baron Parke in *R. v. Thurborn*, Warburton's *Leading Cases*, 157). See also BURGLARY and THEFT.

**Larch**, common name given to species of *Larix*, a genus of coniferous plants found in N. parts of Europe, Asia, and America. The plants are hardy trees,

which it yields. *L. pendula*, the black L., is common in America. See FORESTRY, TREE.

**Larcom, Lucy** (1826-93), Amer. poetess, b. Beverly Farm, Massachusetts. From 1866 to 1874 she ed. *Our Young Folks*. Her poems include *Roadside Poems*, 1876, and *Hillside and Seaside in Poetry*, 1877. See her autobiography, *A New England Girlhood*, 1889.

**Lard**, fat of the hog melted down and strained, the best quality being prepared from the 'leaf' or fat of the bowel and kidneys. L. should contain about 60 per cent of olein and 40 per cent of palmitin and stearin. Adulteration is frequently resorted to in the manuf. of this commodity, the stearin of beef or mutton being used. The best quality of L. is used for making oleomargarine, whilst the inferior sort is used for making candles. An artificial L. is made by the action of hydrogen upon cotton-seed oil in the presence of nickel shavings, which act as a catalyst (q.v.); though wholesome, it lacks the vitamins of the animal product.

**Lardner, Dionysius** (1793-1859), scientific writer, b. Dublin. Entered Trinity College, Dublin, and took orders, but preferred to write contributions to the *Edinburgh Review* and various encyclopaedias. In 1827 he became prof. of natural philosophy and astronomy in the Univ. of London (afterwards Univ. College), and in 1829 began his great work, *The Cabinet Cyclopaedia*, which was finished in 133 vols. 20 years later.

**Lardner, Ringold Wilmer** (1885-1933), Amer. journalist and short-story writer, b. Niles, Michigan. He studied engineering at Armour Institute, Chicago, but turned to journalism. From 1910 he ed. *Sporting News* at St Louis, and from 1913 to 1916 was a columnist on the *Chicago Tribune*. He became famous as a writer on sport, especially baseball, and for his short stories, written in the semi-literate argot of the baseball fan, and giving a satirical picture of different aspects of Amer. life. His best-known books are *Bib Ballads*, 1915, *You Know Me*, 1916, *Gullible's Travels*, 1917, *Treat 'Em Rough*, 1918, *The Big Town*, 1921, *What of It?*, 1925, *The Love Nest*, 1926, and *Lose with a Smile*, 1933. *The Story of a Wonder Man*, 1927, is a fanciful autobiography. See M. Geismar, *Writers in Crisis*, 1942.

**Lareau, Edmond** (1848-90), Canadian politician of Fr. extraction. Called to the Bar in 1870, and was appointed 6 years later prof. of law in McGill Univ. In 1886 he was elected to the prov. legislature. He wrote *History of Canadian Law*, 1888, as well as *Mélanges historiques et littéraires*, 1877.

**Laredo**: 1. City of Texas, U.S.A., and the co. seat of Webb co., 150 m. SSW. of San Antonio. It is a garrison tn, and a port of entry on the Rio Grande. It is a centre for trade between Mexico and U.S.A., and its industries include anti-mony smelting and car works, cattle-raising, and fruit-growing; it is especially famous for early grapes and Bermuda

much resembling species of *Cedrus* in habit, but they are not evergreen, and the cones ripen in one year. The wood is hard and tough, the leaves are bright green in colour and linear in shape, and the flowers are monoecious. *L. laricina*, the common L., grows to a height of 100 ft. and is valued for its wood, its bark used in tanning, and for the turpentine

onions. In 1936 was opened the new highway (770 m.) between Mexico city and L., on the Amer. border. Pop. 52,000.

2. Sp. port in the prov. of Santander, on the Bay of Biscay. It is a popular resort with a good beach and a pine forest. There are fisheries, and sailing tackle is made. Pop. 6800.

**Larentalia**, *Larentinalla*, see ACCALLA.

**Lares**, Rom. tutelary deities, originally gods of cultivated fields, worshipped by each household. From early times a distinction existed between public and private L., the latter being worshipped by families alone as representing the spirits of departed ancestors. The public L. belonged to the state religion, and their influence included the entire neighbourhood in which they were situated. They had a special ann. festival with public games. In the later rep. they are confounded with the Penates, but in earlier times there was a marked distinction between the two. The name seems identical with the Etruscan *lar*, king, lord. See G. Wissowa, *Religion und Kultus der Römer*, 1902.

**Large Post**, see PAPER.

**Largentière**, Fr. tn, cap. of an arron., in the dept of Ardèche. It has an auct church and castle, and has a silk industry. Pop. 1800.

**Largo**, par. of Fife, Scotland, comprising 3 vils. on L. Bay—Upper L., Lower L., and Lundin Links. All are summer resorts; Lower L. is a fishing vil. with a small harbour, and Lundin Links and Upper L. have summer holiday amenities. Alexander Selkirk ('Robinson Crusoe') was b. in Lower L. Pop. of vils. 2500.

**Largo** and **Larghetto**, It. terms in music used as directions of tempo. **Largo** is generally understood to denote a broad style as well as a slow pace. **Larghetto** is the dimin. of **largo**, meaning less slow than the latter. Handel's 'Largo' is the aria 'Ombra mai fu' from the opera *Serse*, but he wrote innumerable airs in slow 3-4 time, very similar to this, with the tempo direction **largo**.

**Largo**, burgh and popular resort on the Firth of Clyde in N. Ayrshire, Scotland, 12 m. SSW. of Greenock, a tourist centre with good sailing. Pop. 9000.

**Lari**, It. mkt tn, in Tuscany (q.v.), 13 m. SE. of Pisa (q.v.). Pop. 8800.

**Larielo**, see PINE.

**Laridae**, see GULL.

**Larino**, It. tn, in Abruzzi e Molise (q.v.), on the Biferno, 21 m. NE. of Campobasso (q.v.). It suffered destruction by an earthquake in 1300. There is a cathedral. Pop. 8100.

**La Rioja**: 1. Andine prov. of Argentina, situated between Córdoba, San Juan, and Catamarca. In the NW. is the Sierra Famatina (20,000 ft.), with its popular valley resort of Chilcito. Gold, copper, silver, and iron are found, and the soil is fertile in vines, maize, cotton, etc. Area 35,691 sq. m.; pop. (1955 estimate) 122,959.

2. Cap. of above prov., at the E. side of the Sierra Velasco at an altitude of 1620 ft. Pop. 23,000.

**Larissa**, chief tn of Thessaly in Greece. It is now the cap. of the dept of L. and stands on the r. b. of the R. Peneus, 35 m. NW. of Volo. L. was under Turkish authority until 1881, when it was ceded to the Greeks. There are still evidences of its Turkish occupation in the minarets, empty mosques, and Muslim burying grounds. L. lies not far from the Homeric Argissa, and was a name applied to other cities; it signified a fort. It has suffered much from earthquakes. It is low-lying and subject to floods and malaria. Pop. (dept.) 208,000; (tn) 41,000.

**Laristan**, see LAR.

**Larius Lacus**, see COMO, LAKE.

**La Rive**, Auguste de (1801-73), Swiss chemist, b. Geneva. He became prof. of natural philosophy in his native city in 1823, and made a special study of electricity. His chief work is *Traité de l'électricité théorique et appliquée* (3 vols.), 1854-8.

**Larivey**, Pierre (c. 1540-1619), Fr. dramatist, descended from the Giunta, the famous Florentine and Venetian printers. He became canon of the church of St Étienne. His comedies were rather adaptations from It. plays than works of creative art. His prin. work, *Comédies facétieuses*, appeared in 1579. See M. Amato, *La Comédie italienne dans le théâtre de Larivey*, 1909.

**Larix**, see LARCH.

**Lark**, popular name given to the species of *Alaudidae*, a family of passerine birds inhabiting the Indian, Palaearctic, and Ethiopian regions, *Otocorys* being the only

Amer. genus and *Mirafra* the only Australian one. *Alauda arvensis*, the familiar Brit. skylark, nests in a hollow in the ground, usually among grass or cereals. Its rapid, pleasing trill is generally uttered while the bird is soaring, and occasionally it emits a plaintive call. *A. arborea*, the woodlark, *A. cristata*, the crested lark, and *A. alpestris*, the shore lark, belong to the same family.

**Larkhall**, tn of Lanarkshire, Scotland

3 m. SE. of Hamilton, with industrial estate with woollen, tartan, and aluminium factories, motor-car and motor-mower depots, bleach works, and cardboard box manufs. L. is a tomato-growing dist.; it forms part of the par. of Dalsert (q.v.); pop. (of tn) 15,000; pop. of dist. (including vils. of Netherburn, Ashgill, Rosebank, Shawburn, and Swinhill) 19,000.

**Larkspur, see DELPHINIUM.**

**Larmor, Sir Joseph** (1857-1942), physicist, b. co. Antrim, N. Ireland, and educ. at the Royal Belfast Academical Institution, Queen's College, Belfast (graduating with the highest honours), and St John's College, Cambridge, where he was senior wrangler. He was prof. of natural philosophy, Queen's College, Galway, and later at St John's, Cambridge. His *Aether and Matter*, pub. in 1900, on electromagnetic theory, is a systematic working out of the idea, then gaining favour, that matter is essentially an electrical structure. Clerk-Maxwell's theory, which postulates electricity as a continuous fluid, becomes, with L., an electron theory, postulating electricity as atomic in character like matter. L. proved that, if matter be electrically constituted, any moving object must minutely contract in the direction of its line of motion and this phenomenon was the foundation of Einstein's theory of relativity (formulated in 1905). Among other contributions of L. were his formula for radiation of energy by an accelerated electron, and his theory of the precession of electron orbits in a magnetic field. L. also wrote notable papers on hydrodynamics and waves. He was elected to Parliament for Cambridge Univ. as a Unionist from 1911 to 1922. Fellow of the Royal Society, 1892; secretary, 1901-1912; Royal medal, 1915; Copley medal, 1921. He was knighted in 1901. *See also* his vols. of scientific memoirs, 1927-1929.

**Larnaca, or Larnaka**, the anct *Citium*, port on the S. coast of Cyprus. An open roadstead affords good anchorage and there is a jetty. L. is now the third port of Cyprus, but was formerly the port of Nicosia (q.v.), the place of residence of all foreign consuls and, in the 18th and 19th cents., the chief commercial centre of the is. It decayed with the rise of Famagusta (q.v.). A salt lake and the very holy Muslim shrine of Hala Sultan are outside the tn. Estimated pop. (1934) 16,600, of whom about 20 per cent are Turks.

**Larne**, bor. and seaport of co. Antrim, N. Ireland, on Lough L., 18 m. N. of Belfast. The port, which is the terminus for steamers from Stranraer, has become one of the chief passenger ports of Ireland. There are linen manufs. and bauxite refining is carried on; L. has also an import-export trade. The tn. possesses a marine zoological station. The Curran, running S. from L., is a raised gravel beach on which many Neolithic flint implements have been found. Pop. 12,000.

**La Rochefoucauld, François, Duc de** (1613-80), Fr. moralist, the most accomplished of the maxim and memoir writers

of France, b. Paris. He bore the title of Prince de Marsillac. He joined the army at an early age, and soon began to make a figure in public life, becoming engaged in intrigues against Richelieu and in the plots of the Fronde. He was severely wounded at the siege of Paris and again at the fight at the Port Saint-Antoine in 1652. He then retired to the country for a while, but returned to court before the death of Mazarin and became a prominent leader of the literary *salon* of Mme de Sablé. In 1665 he pub. his famous *Maximes* anonymously and under the title of *Réflexions, ou sentences et maximes morales*. They passed through 5 eds. in the author's lifetime, and are as remarkable for their literary excellence as for their acuteness of thought, their bitter realism in the dissection of basic human motives making him the forerunner of modern psycho-analysis. His *Mémoires* were pub. in 1662, and are among the best of a time rich in writings of this kind. His *Lettres* are also of great historic and social interest. La R.'s *Œuvres complètes*, ed. by Gilbert and Gourdaul, appeared in 1868-84. There are numerous eds. of the *Maximes*, the finest being the *Édition des bibliophiles*, 1870 (Eng. version by G. H. Powell, 1903). *See* J. Bourdeau, *La Rochefoucauld*, 1895, and R. Grandsaignes d'Hauterive, *Le pessimisme de La Rochefoucauld*, 1914.

**La Rochelle, see ROCHELLE, LA.**

**Larousse, Pierre Athanasie** (1817-75), Fr. grammarian and lexicographer, b. Toucy, Yonne. His greatest work was the *Grand Dictionnaire universel du XIX<sup>e</sup> siècle* (15 vols.), 1866-76, supplements 1877 and 1887. From 1898 to 1907 appeared the *Nouveau Larousse illustré*, and from 1928 to 1934, the *Larousse du XX<sup>e</sup> siècle*. The publishing house which he founded has continued to issue dictionaries and encyclopaedias.

**Larrey, Dominique Jean, Baron** (1766-1842), Fr. army surgeon, b. Beaudéan, near Bagnères-de-Bigorre. He studied medicine at Paris, spent a short time in the navy, then continued his studies at the Collège de Chirurgie, Paris. In 1792 he joined the army and spent the rest of his active life as a military surgeon. By sheer force of character and ability he rose to become surgeon-in-chief of the Grande Armée and the greatest military surgeon in hist. He was present at all Napoleon's great battles and one of the few who stood by him on his abdication and waited for him on his return in 1815. L. took part in 60 battles and 400 engagements, being wounded 3 times. At Waterloo he was captured and sentenced to death but reprieved on the intervention of Blücher. L. was one of the first to amputate at the hip-joint (1812), first to describe the therapeutic effect of maggots on wounds, gave the first description of 'trench foot', invented the 'flying ambulance' to pick up the wounded as soon as possible, thus originating first aid to the wounded; he also devised many new operations. He was made a baron in 1809. His surgical experiences with

Napoleon are recorded in his *Relation Historique et Chirurgicale de l'Expédition de l'Armée d'Orient*, 1809, *Mémoires de Chirurgie Militaires* (4 vols.), 1812-17, and *Clinique Chirurgicale*, 1829. See P. Triaire, *Napoléon et Larrey*, 1902, and life by P. Triaire, 1902.

Larsen, Karl (1860-1931), Dan. prof., poet, and novelist; b. Rendsborg. He studied law and political science at Copenhagen and Berlin. He was editor of *Juleoser*, 1900-15, *Turistridende*, 1914-1921, and president of the Dan. Authors' Society, 1902-8. His poems, dealing with life, are highly esteemed; his realistic and psychological novels include *Cirkler*, 1893, *Doktor Iz*, 1896, and *Kresjan Vesterbro*, 1897.

A TROCHOSPHERE LARVA (AFTER SHEARER)

M, mouth; A, anus; S, stomach; N, larval kidney; SO, apical sense organ; E, eye-spot; ME, beginning of mesoderm; AV, anal vesicle.

possess a head, legs, and prolegs and are popularly known as caterpillars; the larvae of Coleoptera, which have heads and may or may not have legs, are called grubs; and those of Diptera, which are legless and frequently without a head, are called maggots. Occasionally larvae are able to reproduce themselves, a phenomenon known as *neoteny* or *paedogenesis*; the best known example is the Mexican axolotl.

**Larvacea**, or **Appendicularia** (Lat. *appendix*, from *appendere*, to hang from), family of Ascidians belonging to the phylum Tunicata, including sev. genera, notably the Appendicularia, Oikopleura, Fritillaria, and Kowalevskia. They have an oar-shaped tail which contains a per-

A, first pair of appendages (unbranched); B, C, second and third pair of appendages; these are biramous swimming organs.

Larsen, Kay (1879- ), Dan. author; secretary of the council of Dan. Authors' Society, 1916-19. He writes on Dan. voyages and colonisation, and has made many 'study voyages' under the auspices of the Ministry of Marine. His works include *Glimt*, 1904, *De Danskostindiske Koloniers Historie*, 1907-8, *De Danske i Guinea*, 1913, *Kroniker fra Dansk Guinea*, 1924, and *Dansk Vestindien, 1666-1917*, 1928.

**Larva** (Lat., 'a ghost,' 'a mask'), name applied, first by Linnaeus, to the young form of any animal which has left the egg and which at that stage does not resemble the parent. It is given more particularly to insects, but refers also to tadpoles of frogs, nauplii, and zoeae of crustaceans, the young of echinoderms, the ammocoetes of the lamprey, the trochosphere of annelids, etc. The larvae of Orthoptera and Hemiptera bear a strong resemblance to the imago, or perfect insect, except in the absence of wings, and the metamorphosis is slight; such forms are best described as *nymphs*. Lepidoptera in the larval form

sistent notochord, and they have 2 gill-apertures. See ARCIDIACTA.

Larvik, seaport in the prov. of Vestfold, Norway, standing on a fjord to the SW. of Oslo. Its industries are shipping, whaling, and the manu. and export of pulp. Pop. 10,000.

**Laryngismus stridulus**, spasmodic affection of the larynx that occurs in young children. Characterised by a sudden arrest of respiration, the child becomes blue in the face owing to imminent asphyxiation, and breathing is resumed by prolonged crowing inspirations.

**Laryngitis**, see under LARYNX; in horses, see under HORSE (DISEASES).

**Laryngoscope**, instrument by which the condition of the larynx may be observed. It consists of a small mirror attached to a long handle at an angle of about 120°. The instrument is first warmed to prevent obscuration by the condensation of moisture, and then introduced into the throat with its back against the soft palate and uvula. At the same time a strong light is directed against the mirror from a lamp

placed on the shoulder or forehead of the observer, or from a small electric light bulb in the instrument itself, so that the light is reflected towards the larynx and back again to the mirror. Manuel Garcia, a teacher of singing, invented the first L. in 1855 and it was adapted to medical purposes by Dr Czermak of Pest.

**Larynx**, organ of voice, situated in the upper and front part of the neck. It consists of a framework or box of cartilages, with their ligaments and muscles, and is in the direct course of the current of air from lungs to mouth and vice versa. It opens above into the cavity of the pharynx at the base of the tongue and connects that cavity with the trachea or windpipe. The cartilages are movable with regard to each other, and this motion, together with differences in the tension of the elastic ligaments, causes those modifications in the resistance to the air current which give rise to the phenomena of voice. The cartilages comprising the framework of the L. are the thyroid, the cricoid, the epiglottis, the two arytenoids, the two cornicula laryngis, and the two cuneiform cartilages. The thyroid is the largest, and consists of two lateral pieces united in front to form a ridge, causing the projection known as 'Adam's apple.' Each of the lateral plates has projecting pieces at its upper and lower corners. The cricoid is a ring situated below the thyroid to which it is connected in front by thick fibrous tissue, while it is joined to the trachea below by fibrous membrane. The arytenoids are two smaller cartilages of great mobility resting upon articular surfaces in the posterior part of the cricoid, and bound to it by fine elastic ligaments. The epiglottis is a thin cartilage which serves as a valve or covering for the laryngeal cavity; during respiration it is raised so as to admit of the passage of air, but the action of swallowing brings it down so as to enable the food to pass through the gullet behind. The most important ligaments are those known as the vocal cords. The true vocal cords, or inferior thyro-arytenoid ligaments, consist of fine elastic fibres joined behind to the base of the arytenoid cartilages and in front to the middle of the angle between the wings of the thyroid cartilage. They divide the cavity of the L. into an upper and lower part which communicate with each other by the glottis, a chink or aperture between the vocal cords. The size of the glottis is an important factor in voice production. In the adult male it measures about 23 mm. from front to back, and from 6 to 12 mm. transversely. In females and males before puberty the length of the aperture is about 17 mm. and its width about 4 mm. The muscles of the L. may be divided into two groups: the extrinsic muscles, which move the L. as a whole, and the intrinsic muscles, which move the cartilage with respect to one another. It is by certain of these latter muscles that the tension of the vocal cords is regulated and the size and shape of the glottis altered in the production of different sounds. The voice mechanism

therefore consists of the modifying processes in the course of the blast of air from the lungs. The pressure of the air passing upwards through the trachea distends the margins of the elastic membranes constituting the vocal cords; the aperture is therefore opened momentarily while the air passes through, and thus a series of vibrations is produced. The pitch of the sound is determined by the number of vibrations in a second, while the intensity is determined by the amplitude of those vibrations. Inflammation of the L. is known as laryngitis. It may be caused by excessive use of the voice, irritating vapours or dust, chill, or by microbic infection. The symptoms are pain and difficulty in phonation, and swelling of

THE LARYNX (SEEN FROM BEHIND)

A, trachea; B, cricoid cartilage; C, thyroid cartilage; D, arytenoid cartilage; E, Santorini's cartilage; F, hyoid bone; G, epiglottis.

parts of the L. Laryngitis is always worthy of attention, as excessive inflammation causes great difficulty in respiration, while a succession of attacks is apt to lead to a chronic form in which the voice is affected more or less permanently. Two of the most serious causes of laryngitis are tuberculosis (q.v.) and diphtheria (q.v.). The L. may also be the site of various tumours, including cancer; hoarseness is an important symptom and should not be neglected if it persists for more than a few weeks. In severe infections the inflammation may completely obstruct respiration, in which case tracheotomy (q.v.) is performed. Laryngeal obstruction may also occur as a result of cancerous growth. See CROUP; HOARSENESS; LARYNGISMUS STRIDULUS; LARYNGOSCOPE.

Larzac Breed, see SHEEP.

La Salette, see SALETTE-FALLAVALUX, LA. La Salle, St Jean Baptiste de (1651-1719), Fr. priest, canon of Rheims, and founder of the Brothers of the Christian Schools. In 1683 he resigned his canonry,

and, with 12 others, took a vow to devote himself for life to the teaching of the poor, being in fact the forerunner of modern primary education. The H.Q. of the institution since 1705 has been at Saint-Yon (Rouen). La S. was canonised by Leo XIII (1900). See life by Ravetel, Paris, 1888, and W. J. Battersby, *De La Salle, Saint and Pioneer in Education*, 1948. La S.'s feast is on 15th May.

**La Salle, René Robert Cavelier, Sieur de** (1640-87), one of the greatest of the explorers and adventurers who opened up paths in the trackless Amer. wilderness, was b. Rouen, France. At the age of 23 he went to Montreal, where he secured a grant of land on the St Lawrence R. In 1670 he began the first of his explorations through the country in the vicinity of Lakes Erie and Ontario. He then went further S. and was at one time supposed to have discovered and explored the course of the Ohio R., but doubt has been cast on this. A close friend of Frontenac, governor of Canada, he made sev. trips back to France in the former's interest. His last trip brought for himself the grant of a monopoly of the trade in the Mississippi valley. La S. thereupon worked his way partly overland and partly by portage on some of the lakes and explored the Mississippi down to its mouth. He took possession of this vast area in the name of his sovereign, King Louis, and named it Louisiana in his honour. He attempted to consolidate for the king both the ter. of Louisiana and that other ter. vaguely known as Illinois, and was the first to build a post on the site of what is now the great city of Chicago. Frontenac being succeeded by a new governor who was not friendly to La S., the latter once more went to Paris, and secured from the king the title of governor of Louisiana and Illinois. He set forth with an expedition which was a failure from the start. The commander of the fleet refused to obey his orders. La S. lost his way to the Mississippi, landing instead in Texas. With a miserable remnant of his expedition he sought to find his way back to Canada, but was treacherously assassinated by his own men on 20 Mar. See L. V. Jacks, *La Salle*, 1931.

**Lascar** (Hindu *laskar*, army), name originally used by the Portuguese for an inferior class of men in military service; it is now generally applied to Indian sailors serving on Brit. ships. They are generally Muslims.

**Lascaris, Andreas Johannes** (c. 1445-1535), surnamed *Rhyndacenus*, Gk scholar of noble birth. He was a fugitive to the court of Italy in 1454, and was patronised by Lorenzo de' Medici. Later he went to Paris, where he taught Greek, and in 1508 Leo X placed him at the head of a Gk college in Rome. He is remembered as editor of *The Greek Anthology*, and for his commentaries on Sophocles, etc. See A. F. Villemain, *Lascaris*, 1825.

**Lascaris, Constantinos (Láskaris, Konstantinos)** (c. 1434-1501), Byzantine humanist. In 1453, at the conquest of Constantinople, he became a prisoner of

the Turks, but succeeded in escaping to Rhodes, then went to Crete and later to Italy. In Milan he became tutor in Greek to Princess Ippolita Storza, for whom he compiled the *Grammatica Graeca, sive compendium octo orationis partium*, Milan, 1476, the first book printed in Greek; it was many times revised and reprinted until 1800. In 1466 L. went to Messina, where he taught Greek for 35 years. See H. Rabe, 'Konstantinos Láskaris,' in *Zentralblatt für Bibliothekswesen*, 1928.

**Las Casas, Bartolomé de** (1474-1566), Sp. missionary, b. Seville, noted for his zeal on behalf of the oppressed Indians. Studied at the univ. of Salamanca, and in 1502 went to Hispaniola, where he became a planter and preached the gospel to the natives. In 1516 he returned to Spain to lay before the king the cause of enslaved Indians; but his zeal and plain speaking stirred up powerful enemies, and his efforts were unavailing. Notwithstanding he repeatedly crossed the ocean to plead their cause, and addressed sev. letters and treatises on the subject to Charles V. In 1544 he accepted the bishopric of Chiapa, Mexico. Three years later he returned to Spain and passed the remainder of his life in the Dominican college at Valladolid. His works include an unfinished *History of the Indies*, an important source of information on Sp. discoveries and conquests. See lives by A. Helpe, 1868; F. A. MacNutt, 1909; 1938; see also L. Hawke, *The Spanish Struggle for Justice on the Conquest of America*, 1949.

**Las Casas, Ciudadde**, see SAN CRISTOBAL.  
**Las Cases, Emmanuel Augustine Dieudonné Marin Joseph** (1766-1842), Fr. officer and historian, b. near Revel, Haute-Garonne, the companion of Napoleon at St Helena. He served in Condé's army in 1792, and then spent some time in England, and fought for the royal cause at Quiberon (1795). He returned to France at Napoleon's accession, and worked at his famous *Atlas historique*, 1802, pub. under the pseudonym Lesage. After Waterloo he shared Napoleon's exile, and pub. the ex-emperor's memoirs, *Memoir of St Helena*, 1823.

**Lascaux Cave**, near Montignac-sur-Vézère, in the Dordogne, France, in which in 1940 4 boys discovered rock paintings of the Upper Palaeolithic period, preserved under a glaze of stalactite formation. They are now the most famous examples of cave art known. Since many are painted over former works, it is possible to trace the development of style, particularly in the treatment of horns, antlers, and hooves, over a period of more than a thousand years. There is much skill in technique and great artistic quality in the later paintings, which feature bulls, bison, stags, and horses, along with symbols and signs which may be tribal marks or methods of sympathetic hunting magic. The colours were rubbed on and also blown on to the surface by a tube. See also CAVE ART and under DORDOGNE. See F. Windels, *The Lascaux Cave Paintings*, 1948; also A. H.

Brodrick, *The Caves of Lascaux*, 1948, and *Lascaux: a Commentary*, 1949.

**Lascelles**, family of Yorks, England, Earls of Harwood since 1812 when Edward L. became the first earl, having been made Baron Harwood in 1796. The chief seat is at Harwood House, near Leeds. Henry George Charles L. the 6th earl (1882-1947), succeeded, in 1929; in 1916 he inherited from his great-uncle, the Marquess of Clanricarde, an estate of £2,500,000. As Viscount L. (the title of the eldest son) he married Princess Mary

archbishop upon discovery of his secret marriage. As a refugee in England, he became a friend of Cranmer and helped compile the Prayer Book and Articles of the Church of England. L. returned to Poland in 1556 and tried hard to win it over to the Protestant faith, superintending the trans. of the Bible into Polish. He wrote *History of the Cruel Persecution of the Church of God*. See study by K. Volker in *Kirchengeschichte Polens*, 1930.

**Las Cruces**, cap. of Dona Ana co., S.

Windels, Montignac

#### PREHISTORIC ART IN LASCAUX CAVE, FRANCE

(q.v.), daughter of George V. He was personal A.D.C. to King George VI, lord lieutenant of the W. Riding from 1927, K.C. (1922), G.C.V.O. (1934), and grand master of the united freemasons' lodge of England (1943). George Henry Hubert, the 7th earl, was b. in 1923 and succeeded in 1947. He served in the Second World War, and was a prisoner during 1944-5, and then became A.D.C. to the Governor-General of Canada, the Earl of Athlone. He is well known for his interest in classical music and patronage of modern Eng. opera. His eldest son, Viscount L., was b. in 1950.

**Lasco**, or **Laski**, **Johannes** (1499-1560), Polish reformer, b. Task, nephew of Archbishop Laski (1456-1531). Studying abroad, he became imbued with the doctrines of Zwingli and Erasmus. Nevertheless he was made Bishop of Vespren, but soon fell into disfavour with the

New Mexico, U.S.A., on Rio Grande R., 40 m. NNW. of El Paso, Texas. It is a trade centre for a live-stock and irrigated agric. region: grain, sugar-beets, cotton, vegetables, cotton ginning. New Mexico College of Agric. and Mechanic Arts and White Sands proving grounds (rocket testing grounds) are near by. Pop. 12,325.

**La Serena**, see COQUIMBO.

**Lashio**, important tn of Burma, connected by rail with Rangoon, situated about 50 m. from the Chinese frontier. Being the terminus of the Burma Road (q.v.), it was a vital strategic centre during the Jap. invasion of Burma in the Second World War, and was captured by the Japanese on 28 April 1942. It was bombed frequently by the Amer. Air Force later in the same year. See further under BURMA, SECOND WORLD WAR, CAMPAIGNS IN.

Lashkar, name given to the new tn at Gwallor (q.v.).

Lasker, Emanuel (1868-1941), Ger. chess player, b. Berlinchen, studied at the univs. of Berlin, Göttingen, and Heidelberg. One of the greatest of all chess players, from about 1889 to 1914 his pre-eminence was unchallenged. Both in match play and in tournaments he was invincible, winning decisive victories over such players as Blackburne, Mieses, Bird, Showalter, and Janowski. He won the world championship title in 1894 and defended his title successfully in 1897.

1916 to 1920 at Harvard, and in 1936 at Dublin. Connected with the London School of Economics from 1920, he became prof. of political science at London Univ. in 1926. He became a member of the executive of the Fabian Society in 1922 and of the Labour party in 1936, being chairman of the party from 1945 to 1946. His keen insight into the problems of political thought and the progressive nature of his viewpoint placed him in the first rank of writers on his subject. His many works include *The Problem of Sovereignty*, 1917, *Authority in the Modern State*, 1919, *A*

NATIVE ROCK HOUSES AT LAS PALMAS

Canadian Pacific

He met Capablanca (q.v.) in 1920 after protracted negotiations and lost by 4 games to nil, 10 games being drawn. But his powers were undiminished, and in 1924 at the New York tournament he won first prize with the remarkable score of 16 out of 20. The next year, in Russia, he was second to Bogoljubov and again ahead of his great rival Capablanca. In 1935, again in Moscow, he was unbeaten, being third. A Jew, he left Germany owing to the Nazi persecutions and became a chess prof. in Moscow, but on the fall of his friend Krylenko (q.v.) he went to the U.S.A. Pub. works on chess, science, and philosophy, the most important being *Common Sense in Chess*, 1896, and *Manual of Chess*, 1932.

Laski, Harold Joseph (1893-1950), political scientist, b. Manchester, educ. at its grammar school and New College, Oxford. From 1914 to 1916 he lectured in hist. at McGill Univ., Montreal, from

*Grammar of Politics*, 1925, *An Introduction to Politics*, 1931, *Studies in Law and Politics*, 1932, *The State in Theory and Practice*, 1935, *The Rise of European Liberalism*, 1936, *Parliamentary Government in England*, 1938, *Reflections on the Revolution of Our Time*, 1943, *Liberty and the Modern State* (new ed.), 1948, *The Communist Manifesto: Socialist Landmark*, 1948, and *The American Democracy*, 1948. See K. Martin, *Harold Laski*, 1953.

Las Palmas: 1. Sp. prov. in the Canary Is. (q.v.), comprising the is. of Gran Canaria, Fuerteventura, and Lanzarote (qq.v.). Pop. 390,350.

2. Sp. tn on the is. of Gran Canaria (q.v.), cap. of the prov. of L. P. It is in the NE. of the is. on a narrow coastal strip, with the Atlantic on one side and steep cliffs containing rock houses on the other. There is a fine cathedral, partly 15th cent., other interesting churches, and a museum. Leather and glass are

manuf., and bananas, tomatoes, wine, and cochineal are exported. The port is very busy. Pop. 163,100.

**Lassa, see** **LEASSA.**

**Lassalle, Ferdinand** (1825-64), Ger. Socialist, b. Breslau of Jewish extraction and one of the founders of the Social Democratic movement in Germany. He studied philosophy at Breslau and Berlin Univs. He was imprisoned for his revolutionary activities in 1848. In 1861 he pub. *Das System der erworbenen Rechte*, which contains his views on the structure of society. At about this time L. left the Liberals, and in 1863 founded the General Working Men's Association. In this he was helped by Marx, many of whose ideas he adopted in a modified form. As a political movement modern Ger. socialism owes much to him. He met his death in a duel. His unhappy love-story with Helene von Dönniges is the theme of Meredith's *Tragic Comedians*, 1881, where L. figures as Dr Alvan. See W. H. Dawson, *German Socialism and Lassalle*, 1888; P. Lindau (ed.), *Lassalle's Diary*, 1891; D. Footman, *The Primrose Path*, 1946; also life by G. Brandes (Eng. trans.), 1911.

**Lassen, Christian** (1800-76) Norwegian Sanskrit scholar, b. Bergen. He was the real founder of Indian studies in Germany. A pupil of Eugene Burnouf, he worked with him on Pali MSS., the result of their combined labours being pub. in an *Essay on the Pali or Sacred Language from the Peninsula beyond the Ganges*, 1826. *Ramayana*, 1829-38, and the *Hilopadesa*, 1829-31, were pub. in conjunction with Schlegel. L.'s main work, however, was *Indische Alterthumskunde* (4 vols.), 1844-1862. Other works include *Institutiones Linguae praecliticae*, 1837, and *Anthologia Sanscritica*, 1838. He also wrote on the Eugubine Tables (1833), on the Early Persian inscription of Persepolis (1836), on the Gk and Indo-Scythian dynasties of Bactriana and India (1838), etc.

**Lassigny**, tn in the dept of Oise, France, 10 m. W. of Noyon. The scene of a battle in the First World War begun by the French under Gen. Humbert on 9 Aug. 1914, and ended on the 16th, when the Germans fell back.

**Lassithion**, dept of Greece, in the E. of Crete; cap. Hagios Nicholas. Pop. 74,000.

**Lasso**, plaited rope of rawhide used by the Amer. cowboys and S. Amer. gauchos for catching wild cattle. It measures 60 to 100 ft long, and a slip-noose is made at one end to entrap the head or legs of the animal.

**Lassus, Roland de** (c. 1532-94), Flemish composer, b. Mons, also known as Orlando di Lasso, the It. form of his name. After travels in Italy and England he entered the service of the Duke of Bavaria about 1556, becoming chapel master in 1563. His works include masses, motets, *sacrae cantiones*, psalms, madrigals, It. canzoni, Fr. chansons, and Ger. songs for sev. voices. He is one of the great masters of his time, ranking next to Palestrina, Byrd, and Victoria. He d. at Munich.

**Last Supper**, meal celebrated by Jesus on the eve of His betrayal, at which He instituted the Eucharistic rite of blessing the bread and wine, with thanks to God, and commanding the perpetual repetition of the act in commemoration of Himself. (See also **EUCCHARIST**; **HOLY COMMUNION**; **MASS**). It is disputed whether the L. S. was actually a Paschal Feast, eaten in anticipation, or a solemn preparation.

**Lastra a Signa**, It. tn, in Tuscany (q.v.), 5 m. W. of Florence (q.v.). It is the centre of a straw hat industry. Pop. 11,000.

**Las Vegas**, cap. of Clark co., Nevada, U.S.A., 225 m. N.E. of Los Angeles and 25 m. W. of the Boulder Dam (q.v.). The second largest city in the state, it is a resort centre in a mining and truck-farming area; it manufs. dairy products and beverages. It is famous for its gambling resorts and divorce courts. Nellis air force base and atomic energy installations are at L. V. Pop. 24,620.

**Las Villas** (formerly Santa Clara), prov. of central Cuba, with an area of 8267 sq. m. It has an undulating surface, with rich agric. lands, and the production of sugar is the chief industry. Tobacco, coffee, and fruits are also obtained, as well as wax and honey. Cattle-raising, too, is an important industry, and the prov. is rich in minerals. The terrain rises towards the E. (Pico S. Juan, 3793 ft). Pop. 1,030,590.

**László de Lombos, Philip Alexius** (1869-1938), Hungarian painter, b. Budapest, studied at Munich and Paris. At first a genre painter, he subsequently became a portrait painter. Shortly after the outbreak of war in 1914 he became a naturalised Brit. subject. He was a popular society painter and painted the portraits of members of the Brit. royal family. See O. Rutter, *Portrait of a Painter*, 1939.

**Latacunga**, cap. of Cotopaxi prov., Ecuador, an important commercial centre, 50 m. S. of Quito. The region is noted for dairy products, kaolin and pottery, and iron ware. The buildings are mostly constructed from dark-coloured pumice stone, and L. has been the scene of many mud eruptions from the volcano Cotopaxi (q.v.), 18 m. away. At an altitude of 9055 ft, L. is a rail, road, and air centre. Pop. 18,000.

**Latakia** (Turkish *Ladikiyeh*), or **Lattakieh**, seaport tn of Syria, 75 m. from Tripoli. Tobacco, sponges, silk, and cotton form the exports. The tobacco which takes its name from the tn is much used in pipe mixtures. L. occupies the site of Laodicea and excavations have revealed remains of the earlier city. Pop. about 35,000. See **ALAOUITES**.

**Lateen-sail** (Fr. *voile latine*; Lat., 'sail', so called as the chief form of rig in the Mediterranean), triangular sail suspended to the mast by a long yard, and rigged so that the upper end is raised in the air and the lower brought down to form the tack. A vessel rigged with a L. and yard is known as a 'lateenor.' It is still the typical sail of the felucca of the Mediterranean and the dhow of the Arabian Sea.

**Late Latin Language**, see **LATIN LANGUAGE AND LITERATURE**.

**La Tène**, early Iron Age settlement at E. end of Lake Neuchâtel, Switzerland. From this classic type site the name was given to a culture which in Britain is dated c. 300–75 BC. The type of ornaments and weapons discovered at L. T. is found across Europe from Hungary to Britain; the scroll-work marks a period of Celtic art which later achieved a great brilliance in the metal-work of Britain, where cultures derived from L. T. constitute the Brit. Iron Age 'B'. See also **IRON AGE**. The classic monograph is P. Vouga, *La Tène: monographie de la station*, 1923.

**Latent Heat**, heat that is evolved or absorbed by unit mass of a substance during a change of physical state (e.g. solid  $\rightleftharpoons$  liquid, liquid  $\rightleftharpoons$  vapour). The application of heat ordinarily raises the temp. of a body, but when a change of state is taking place, it is found that heat is applied without any corresponding change in the thermometric reading until the change is complete. On the old assumption that heat was an imponderable substance introduced into the body heated, such heat was called 'latent': that is, it concealed itself from the thermometer. The principle has important applications. For instance, water on evaporating abstracts heat from surrounding bodies. Conversely heat is given out when a vapour condenses, or when a liquid solidifies. The L. H. of fusion of ice is about 80 calories per gm., that is, it takes 80 times the amount of heat required to raise the temp. of water by 1° C. to melt the same weight of ice. at 0° C. The L. H. of vaporisation of water is about 536 calories per gm. See **PHYSICAL CONSTANTS**.

**Lateran, Church of St John**, most important of the Rom. churches in so far as it (and not St Peter's, q.v.) is the Pope's cathedral as Bishop of Rome. It was originally dedicated to the Saviour, and occupies the site of a palace of the Lateran family. It has been rebuilt many times; after rebuilding under Pope Lucius II in the middle of the 12th cent. it was dedicated to St John the Baptist. Pope Sixtus V (q.v.) again completely reconstructed the church, as well as the adjoining Lateran Palace, in 1586. Four oecumenical councils (see **COUNCILS, CHURCH**) have been held here.

**Lateran Treaty**, bilateral agreement signed at the Lateran Palace, Rome, on 11 Feb. 1929, by Cardinal Gasparri on behalf of the Pope, and Mussolini as plenipotentiary for United Italy. The latter recognised the former's sovereign rights over a newly created Vatican City State, extraterritoriality of the Apostolic Palace and various other buildings in central Italy, while the Holy See acquiesced in the occupation by the House of Savoy of the rest of the former papal states. A concordat regulating relations between Church and State in United Italy was organically incorporated in the treaty. A financial convention, by which repara-

tion was made for losses since 1870, was also signed. In virtue of the L. T., the Holy See issues a currency legal in Italy, has its own postal system and radio broadcasting station, and enjoys the right to direct communication with other states, even in time of war, while cardinals and officials of the Rom. court enjoy civil immunities in different degrees.

**Laterite** (Lat. *later*, a brick), superficial deposit of red or brown clay, produced on the surface of rocks by their decomposition—common in tropical regions such as India, Arabia, and the Sahara. L. is usually soft and friable, and rich in iron, though hard masses occasionally occur. The depth of the beds varies up to 30 or 40 ft.

CHURCH OF ST JOHN LATERAN

**Latex**, see **RUBBER**.

**Latham, Sir John Grieg** (1877–). Australian lawyer and statesman. b. Ascot Vale, Victoria, called to the Bar in 1904. L. entered politics as member of the House of Representatives for Kooyong in 1922. He was attorney-general, 1925–1929, leader of the opposition, 1929–31, and held various offices in the gov. as well as being Deputy Prime Minister in 1932–1934. He was Australian delegate to the League of Nations Assembly, 1926 and 1932, and to the disarmament and reparations conferences in 1932. He was leader of the Australian mission to the East, 1934, and first Australian minister to Japan, 1940–1. He retired from politics (1934) to become chief justice of the High Court of Australia in 1935, remaining on the bench until 1952. His pubs. include *Australia and the British Commonwealth*, 1929, *Some Recent International Problems*, 1935, and *Interpretation of the Constitution*, 1952.

**Lathe** (etymology uncertain, possibly a modified form of *lath*, or may be derived

from Dan, *lad*, a framework, as in *savelad*, a saw bench; *vævelad*, loom, etc.), mechanical appliance for holding and rotating any material to be worked upon by a tool, for the purpose of cutting, polishing, etc. In the anct 'bow and cord' and 'pole' L.s the movement was alternately forward and backward; the wheel-driven L. was not used until the 14th cent. The essential principle of all modern L.s is that of two point centres in which the work rotates, and a rest to support the tool operating on its surface. If the work revolves between fixed centres the L. is termed a 'dead-centre' one, but very few are of this class. It consists usually of a bed carrying a tail-stock and headstock, by which the work is supported and driven. The tool is held and moved by a tool-rest, which is mounted on the saddle.

In the *capstan* L. the tools required for various operations are held in a holder which resembles the old-fashioned capstan, the tools taking the position of the capstan handles. By revolving the capstan the various tools can be brought into position in the proper sequence. The *turret* L. is a capstan L. in which the capstan head is automatically operated by power-turning of the tools in correct sequence for the job in hand. The work usually done by a L. includes turning, screw-cutting, facing, and boring. L.s may be operated by treadle, belting from a lineshaft, or by electric motor, the motive being transmitted by belt cones, with or without back gears, chains, or gear wheels.

See P. N. Hasluck, *Lathe Work*, 1927; E. J. Westbury, *Automatic Lathes and Screw Machines*, 1940; E. Molloy (ed.), *Lathe-work*, 1941.

**Lathom**, see ORMSKIRK.

**Laths** (It. *latta*; Fr. *latte*), thin strips of wood employed in building, forming a foundation for plaster, or tiles, slates, and similar covering for roofs. Lattice-work or bars of Venetian blinds and shutters are made from L.

**Lathyrus**, genus of climbing herbs, family Leguminosae, about 100 species, which includes *L. latifolius*, the Everlasting Pea, *L. magellanicus*, Lord Anson's Pea, and *L. odoratus*, the Sweet Pea (q.v.).

**Latimer**, Hugh (c. 1485-1555), reformer, son of a yeoman, b. Thurstaston, near Leicester, educ. at Cambridge; elected a fellow of Clare College in 1510, and appointed a univ. preacher in 1522. He took priest's orders in Lincoln at a date unknown. In 1529 he incurred disfavour as being known to sanction Henry VIII's divorce. He was consecrated Bishop of Worcester in 1535 and preached powerful sermons, urging on the Reformation. He was impeached and sent to the Tower twice during Henry's reign, and on the accession of Edward VI resigned his episcopal functions and devoted himself to preaching and works of benevolence. Under Mary in 1555 he was found guilty of heresy, together with Ridley and Crammer, and burned at Oxford, an event commemorated by the

Martyrs' Memorial. See J. Foxe, *Book of Martyrs*, 1563 (now ed. 1877); J. Stow, *Chronicle*, 1631; J. C. Ryle, *Bishops Latimer and Ridley*, 1925; and monographs by A. J. Carlyle, 1899, and R. Demaus, 1869.

**Latimer Clark's Cell**, see CELL.

**Latimeria**. On 22 Dec. 1938 a S. African trawler working in 37 fathoms of water near the mouth of the Chalumna R. (18 m. SW. of E. London) caught a large odd-looking, bluish-coloured fish. Subsequent examination by Prof. J. L. B. Smith proved that this was a living coelacanth, a representative of a group of crossopterygian bony-fishes that was believed to have become extinct some 50 million years ago. The fish was called *L. chalumnae*. A second example was caught in 1952 in the Comoro Archipelago in the N. part of the Mozambique Channel. Since then another 6 specimens have been taken in this region by the Madagascar Institute of Scientific Research and are now being studied by Prof. Millot and his colleagues.

Like its fossil relatives, *L.* has 2 dorsal fins and only the posterior one has a basal fleshy lobe. The anal fin has much the same structure as the second dorsal while the paired fins are paddle-shaped, each with a basal, scale-covered lobe. The tail is quite characteristic and consists of 3 lobes, a large upper and lower lobe flanking a small terminal centre portion. But there is no ossified swimbladder in *L.*, as in some of the fossil coelacanths; but this organ, which originates from the ventral part of the gullet, is much reduced and surrounded by fatty tissue. *L.* lives at the bottom in fairly deep water and seems to exist largely on other fishes. It grows to about 5 ft in length. All but one of the complete specimens have been males. The female contained a small number of large eggs. See also COELACANTHS.

**Latin America**, name given to the 20 reps. of S. and Central America: Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominican Rep., Ecuador, Guatemala, Haiti, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, Salvador, Uruguay, and Venezuela (qq.v.). This whole vast area of 8,278,000 sq. m., of which one state alone, Brazil, is larger than the U.S.A., has an unevenly distributed pop. of 170,000,000, and though a high proportion of these are aboriginals, a high percentage of the whites owe their origin to their Sp., Portuguese, and It. immigrant forefathers. Hence the broad generic description Latin-American, though there is no juridical significance to be attached to the description and, strictly, no such citizen-or-national-as a 'Latin-American.' But the term has an importance as denoting among the states a common ideological outlook, a pride in independence, and an approach to political solidarity in their joint and sev. relations to the U.S.A. and in their European relations.

Bound together as they are by common

ties of race, language, and character, these Lat.-Amer. states may be regarded as forming a natural, although not a political, federation, with a well-marked distinctive civilisation opposed to, but not necessarily clashing with, that of their Anglo-Amer. neighbours in the N. The economic and social development of 19 of these independent reps. (i.e. excluding Haiti, of French culture), upon which Spain and Portugal have so indelibly impressed their languages and social systems, has become of increasing interest and importance to the world, and they have now in the last

differences of elevation, which account for the variations of climate such as correspond practically to differences of lat., render many of these countries complete entities as regards their food products and other resources.

The Lat.-Amer. peoples are commonly subject abroad to certain misconceptions concerning their racial composition. They are regarded on the one hand as Spaniards or Portuguese, or on the other as merely half-breeds. Neither description is correct; the great mixed race of European and Indian blood, the *mestizos*, which

*Mexican Embassy*

decades begun to play their part in the community of nations, although some of their own problems remain unsolved. To the student of the sociological problems which are everywhere presenting themselves with increasing urgency, the progress of self-governing democracy as represented by L. A. offers conditions and comparisons of growing interest and value. The problems of life and economic development in L. A. differ greatly from those which fall within the experience of European nations, for great variations of topography and climate characterise the S. half of the New World, such as are unknown in the densely settled countries of the Old World, or even by the people of the U.S.A. and Canada. The condition of high elevation, which offsets the heat of the torrid zones, must be one which will profoundly affect the future of the Lat.-Amer. countries and people; and the great

forms the bulk of the Lat.-Amer. nations, is too far removed from the original stocks to be specially identified with either. With the stock formed by admixture of white and coloured races, other races are mingling in increased degree, due to immigration, especially that of Italians, who have greatly modified the composition of the people of Argentina. British, Germans, French, Arabs, Austrians, Slavs, and a sprinkling of all nationalities are found in smaller degree. The Negro element is derived from slaves and is especially strong in Brazil, where a new race may be said to be coming into being, formed by the union of the Portuguese, the Indian, and the Negro. There are also blacks in Colombia, Venezuela, and on the coast of Ecuador, and in Peru, where they were introduced as slaves. The distinguishing types of people inhabiting L. A. are the whites, more or less

pure; the mestizos, formed by the union of white and aboriginal; and the pure Indian; then come the mulatto, formed by the union of black and white, and the zambo, from the union of Indian and black. The first three are those of national importance, but it is to the mestizo that the future of L. A. belongs; and it is this class which constitutes the Mexican, Brazilian, Peruvian, Chilean, and other specially designated people of the New World. It is commonly said that the mixed race of L. A. has inherited the vices of both of its ancestors, but this is too sweeping a characterisation. Rather is it an evolving race, full of life, with the extravagances of a people in the making, in whose hands, too, lies the development of half the W. hemisphere. The character of the ruling classes of the Lat.-Amer. people, formed by the whites and better class mestizos, is a complex one, with marked virtues and defects. They are a people full of imagination, creatures of impulse, moved by sentiment and easily stirred to love or hate, both of which extremes are generally short-lived. Their ideals are high, but in practice they may easily follow tortuous methods and opportunism. The constant plunging of the communities into civil war and the sacrificing of the working pop. as 'cannon fodder' has held back the industries and development of the Lat.-Amer. states. The hist. of these reps., since the time of independence, is made up of such struggles. The abuse and neglect of the Indians in L. A. is notorious and certainly the Indian has vices which keep him backward, notably his abuse of alcohol, in which abuse the lower-class mestizo shares equally. But abuse of the Indians is a short-sighted policy in regard to a people who occupy large portions of the continent, and in certain regions no race could replace them. The political difficulties of the Lat.-Amer. nations and their backward sociological conditions cannot be ascribed to their form of gov., for as far as statutes and theories are concerned these are excellent. The Lat.-Amer. constitutions are, on paper, 'counsels of perfection.' It is in the application of theory to practice, and statute to common behaviour, that failure in self-gov. has so often been due. The man of Sp. race makes excellent laws for the community, but frequently appears to reserve the right to contravene them himself.

Historically L. A. was once a colony of Spain and Portugal. The Sp. conquistadores, after brutally conquering the Indians, Aztecs, Incas, and Chibchas, exploited the Indian tribes by compelling them to labour as miners and agriculturists. But at the beginning of the 19th cent., long after Sp. and native blood had mingled, out of a total pop. of 17,000,000 only 3,250,000 were white to 7,500,000 Indians. Immigration into L. A. on any appreciable scale was a late development of the 19th cent., and the main stream of immigrants flowed into S. Brazil, Argentina, Uruguay, and Chile. Spaniards and Portuguese predominated,

but there were also large elements of Italians and Germans. Indeed a third of the pop. of Argentina to-day is of It. descent and more than a third of the immigrants into Brazil between 1830 and 1930 was Italian. Germans number 750,000 in Brazil, and in Argentina there are some 250,000 Ger.-speaking people, including Swiss and Austrians. Brazil also has 200,000 Japanese, the outcome of an intensive colonising drive concentrated within the present cent. Immigration has given an almost European outlook to Argentine society, besides conducting greatly to the material and social welfare of the R. Plate countries and S. Brazil. But it has to be borne in mind that L. A. is not a unity despite the prevailing descent from the Lat. races of the Old World. The different states differ widely in wealth and power, and also in social and political development.

Spain's great Amer. empire was more or less completely explored and colonised by the end of the 16th cent. It was of long duration and amazingly wealthy, mainly through its exploitation of the precious metals. But essentially the Sp. overseas empire of L. A. was a failure. Its potentialities excepting metals were neither realised nor exploited; there was no such principle as trusteeship in the relations of their Sp. masters to the indigenous people or even to the European settlers. Spain administered her Amer. empire as a centralised absolutism; colonials were excluded from all share in the work of gov. or even of administration. Economic and administrative reforms were made at long last in the 18th cent., but they came too late to save the empire, which collapsed in the beginning of the 19th. The immediate causes of the collapse were Spain's monopolistic myopia and the plunder of her foes. These latter included many great leaders famous in the annals of the Sp.-Amer. struggle for independence, particularly San Martín and Simón Bolívar, liberators respectively of the S. and the N. of S. America, revered not only as great leaders in the field but as statesmen. But having achieved independence in the Sp.-Amer. revolution, the Lat.-Amers. were faced with the still greater task of organising their states in their newly won freedom, and in this task were associated many Brit. names, notably those of Lord Cochrane, who commanded the Chilean Navy, Adm. Brown, who commanded the ships of Argentina, and the Brit. legionaries who fought under Bolívar. The independence of L. A. was assured by Brit. sea-power and by Lord Castlereagh's note to the European chancelleries in 1817 saying that no other power than Spain would be allowed to use force against the Sp. colonies. Some few years later President Monroe of the U.S.A. sent his famous message to Congress which has come down to posterity as the Monroe Doctrine (q.v.), a still further guarantee of the independence of the new states, albeit conceived rather in the interests of that of the U.S.A., whatever its implications to-day.

By 1830 12 new reps. and 1 new empire had been added to the number of independent states. There were 16 new reps. if the 5 reps. of Central America are counted separately. These latter, in 1823, were theoretically united in the confederation of Central America, which survived only till 1838. Cuba did not attain self-government till 1902 and Panama not till 1903. Haiti declared its independence of France in 1804, but the Dominican Rep. fell under the dominion of Haiti and later was again incorporated with Spain for a few years.

by Brit. capitalists in L. A. Foreign immigrants, together with foreign investments in S. Amer. shipping, ports, and public utilities, have all played a decisive part in the spectacular rise of some of these states. Even if the reps. of L. A. show very different degrees of progress, politically, economically, and socially, all profess a common democratic faith, though dictatorship remains in those which have a large aboriginal pop. There are still great difficulties, economic, psychological, and practical, to be mastered in the relations of the Lat.-Amer.

LATIN AMERICA: MEXICAN TYPES  
Indian women of Michoacán.

E.N.A.  
A man of Taxco.

The great rep. of Colombia, the creation of Bolívar, split into the 3 states of Ecuador, Colombia, and Venezuela. Brazil threw off the Portuguese yoke by a peaceful revolution and, by 1822, had estab. an empire under the house of Bragança. The boundaries of the new Sp.-Amer. States followed, in the main, the old colonial administrative divs., but they were ill defined and the source of innumerable inter-state conflicts. But though independent the states were far from prosperous. The masses were for the most part poor and ignorant; their politicians lacked experience in autonomy; dictatorship was not only inevitable but necessary to their welfare. But the eventual independence of L. A. justly ranks with the Amer. and Fr. Revolutions as one of the chief formative influences of modern hist. Capital flowed from Europe into the new states. Already by 1825 more than £20,000,000 had been invested

States to one another, to the U.S.A., and to the world around them, before it can be assumed that they have evolved out of the stage of political instability. Poverty and ignorance remain widespread in the midst of great cultivation and great wealth. A high percentage of the people in Brazil, Peru, and Ecuador are illiterate. Yet there is a high degree of literary attainment among Lat.-Amer. writers generally.

Politically, economically, and intellectually these Lat.-Amer. reps. are destined to play an increasing part in world affairs. Between L. A., the U.S.A., and the Brit. Commonwealth of Nations there are traditional and permanent bonds of mutual sympathy, mutual interests and mutual ideals. The development of the Monroe Doctrine into what once seemed to be an assertion by the U.S.A. of sovereignty and supremacy in the Caribbean area roused the greatest resentment

in L. A., for it was regarded by the reps. as a threatened infringement of their equality in international law and of their political independence. But the U.S.A.'s policy was profoundly modified under both Wilson and Franklin Roosevelt, their 'good neighbour' policy signalling a distinct change in inter-Amer. relations, as was exemplified in later Pan-Amer. conferences and especially after Amer. troops were withdrawn from the Dominican Rep., Haiti, and Nicaragua. Later political developments in inter-Amer. relations were the inter-Amer. conference for the maintenance of peace at Buenos Aires in 1931, and the declaration of Lima in 1938, which was a striking pronouncement of inter-Amer. solidarity in face of the Nazi threat to the world. Finally, in the interests of what is known as 'hemisphere defence,' all the Amer. states have shown an increasing tendency towards the co-ordination of their military and naval resources.

Conspicuous changes have been wrought in L. A. since the 2 world wars; civil aviation is revolutionising S. Amer. life to an extent greater than in any other part of the world. The effect of rapid travel over the S. Amer. countries, with their vast distances and lack of ground and water communications, can hardly be exaggerated. The second great change is industrialisation. Hitherto this continent has mainly produced foodstuffs and raw materials, depending for its manuf. goods on Europe and N. America. The 2 world wars, by almost paralysing sea-borne trade, compelled these countries to adopt a policy of industrial self-sufficiency. Since then local industries, especially in the Argentine and Brazil, have made great advances. Thus São Paulo, the industrial cap. of Brazil, has increased its pop. from 200,000 to 2,000,000; while the industrial production of the Argentine has exceeded the combined value of its agriculture and stock-raising. These developments naturally present economic problems to countries like Great Britain which formerly supplied L. A. with most of their imports of manuf. goods, especially as in every country of L. A. the govs. are active supporters of local industry and the chief distributors of commercial and industrial orders—the natural consequence of the parallel growth of Nationalism (q.v.) and State Socialism. It would appear that the solution of this problem, at least for Britain, can lie only in a more discriminating co-operation between her importers and the S. Amer. market than was necessary in the past. Yet despite the confidence in Lat.-Amer. countries, for which there is much sound reason, there are also obstacles to progress imposed by natural conditions which may discourage the European immigrants whom it is the avowed policy of many Lat.-Amer. countries to encourage in ever increasing numbers. For within even a short drive of, for example, Rio, most civilised of cities, there is virgin forest. European immigrants could not live in savage places unless

civilised life were made possible for them. If they came to the continent to-day most of them would drift into the great Lat.-Amer. cities and make the urb. pop. even more disproportionate than ever in its relation to the pop. of the country. Only a long, patient, and consistent programme will people the vast expanse of forest jungle and impenetrable swamp that covers so much of the surface of L. A. to-day. (For the physical features and description of L. A. see ANDES; CENTRAL AMERICA; SOUTH AMERICA; see also under the names of individual states). See PAN - AMERICAN CONFERENCE; PAN - AMERICAN UNION; PAN-AMERICANISM.

*Latin American Architecture.* In Lat. America outstanding developments have recently been taking place. Particularly noteworthy are the Univ. City, Mexico City; the new city centre of Caracas, Venezuela; the ministry of education building in Rio de Janeiro, Brazil; and Niemeyer's church at Congonhas do Campo, Brazil. In Brazil, great progress has been made in urb. building. The Pan-American 'Low-cost Housing Centre' in Colombia is significant of the widespread effort to overcome modern problems by modern methods. Many books have been written on this subject: a satisfactory introduction is Francis Violeth, *Cities of Latin America*, 1944.

See A. Joyce, *South American Archaeology*, 1912; J. Bryce, *South America, Observations and Impressions* (an important record of conditions before 1914), 1912; J. F. *Latin Empire*, see BYZANTINE EMPIRE. *Latin Language and Literature.* 1. LANGUAGE. Latin belongs to the Italic (in the wide sense of this word) branch and the Latinian sub-branch (the Faliscan dialect being its other member) of the Indo-European linguistic family (see INDO-EUROPEAN LANGUAGES and LINGUISTIC FAMILIES). It was originally spoken by the inhab. of the anct city of Rome (founded according to tradition

in 753 BC) and by the Italic tribe called Latini, who dwell S. of the R. Tiber on the plain to which they gave the name Latium. Curiously enough both the Lat. language and the Lat. alphabet (see ALPHABET; PALAEOGRAPHY; WRITING), which have such a great importance in the hist. of civilisation, had a very poor beginning and a very poor hist. during the first half millennium of their existence. Indeed the records are too scanty to trace the detailed linguistic hist. of Latin in the first period of its development, which lasted till about the middle of the 3rd cent. BC. In this period Latin was still as crude and undeveloped as any other Italic dialect; as far as it is possible to judge from the extant inscriptions and other records the more important Italic dialects, i.e. proper Italic (Umbrian, Oscan, Siculan, Sabine—there were some minor dialects, such as Paaliginian, Volscian, Marrucinian, and others), indicate a greater grammatical competence than existed at the time in Rome. There are many differences between the Italic and the Latinian dialects, both in the structure and in the grammar; (1) for instance, the Indo-European velar-guttural sounds represented in the Latinian dialects by *qu* and *u* or *gu*, following *n*, are represented in the Italic dialects by *p* and *b* respectively (the former thus constituting the *Q*-group, the latter the *P*-group); *s* preceding nasals was preserved in Italic but not in Latin; syncope is much more frequent in Italic than in Latin; and so forth; (2) the Italic dialects have different verb formations (-*f*, -*t*, -*l*, -*nk*) where Latin has -*ut* (-*vi*); they have futures in -*s*, instead of the Lat. -*b*-, and future perfects in -*ust*; they retain -*s* in the nominative plural of *o* and *a* stems, and the short -*es* in the nominative plural of consonant stems; their genitive ends throughout in -*s*; they do not have the new genitive plural of Latin in -*rum*; and so on.

On the other hand, Latin of this early period was not quite the same as that of the later periods: intervocalic *s* has not yet become *r*; the old ending of the dative -*oi* still remains; *quoi* is used for *qui*, *recci* for *regi*; there are archaic forms such as *sakros* (for *later sacer*), *ioumenta* (for *umentum*), *diouesiod* (for *iustio*), and so forth. This archaic Latin can be studied in a few inscriptions which have been preserved. The oldest record is to be found in the Praeneste fibula (found in 1886), a gold brooch dating probably from the 7th cent. BC, rather than from the 6th or even the 5th cent., as some scholars were inclined to think. The inscription runs from right to left and reads MANIOS: MED: FEEFHAKE: NUMA: SIOI, i.e. in classical Latin, *Manius me fecit Numerio* ('Manius made me for Numerius'). The most interesting feature of this inscription is the use of the device of combining the letters *f* or rather *v-v* (digamma) and *h* to represent the sound *f*, which was common in Latin, but was wanting in Greek. Not much later is the famous inscription from the Rom.

Forum, belonging to the 6th cent. BC (some scholars, however, assign it to the 5th cent. BC). It is engraved vertically on the 4 faces of a *cippus*, a broken pyramidal stone found in 1899. The inscription is in boustrophedon style, i.e. in lines alternatively reading from right to left and left to right, or rather, in this case, upwards and downwards. The loss of the upper part of the *cippus* makes every line incomplete, and therefore the meaning of the whole inscription cannot be clearly ascertained. Another inscription, known as the Duenos inscription (the most intelligible part reads DUENOS MED FEEBO), is on a vase found in Rome, near the Quirinal, in 1880, and seems also to belong to the 6th cent. BC, although it is dated by some scholars as late as the 4th cent. BC. The direction of writing is still from right to left. There are about 30 words, but as there are no spaces or interpunctuation between them (as on the preceding 2 inscriptions), the exact wording and the general interpretation are much disputed.

Some Sabine inscriptions, among them one on a vase found at Tivoli, another on a plate of bronze found in the lake of Fucino, and a few inscriptions dedicated to Juno or Juno Lucina, belong to the end of the 5th or to the 4th cent. BC. There are also a few inscriptions belonging to the 3rd cent. BC and to the 2nd cent. BC. Among the former there are the inscriptions on the tombs of the Scipios, the oldest being on the tomb of L. Cornelius Scipio Barbatus, who d. in 298 BC; this inscription, originally painted on and afterwards engraved, is assigned to about 260 BC (or slightly later); there is also the inscription of the tomb of the famous consul L. Cornelius Scipio, who d. in 259 BC. Only from the 1st cent. BC onwards do the Lat. inscriptions become so numerous all over the world that they cannot be counted. Sometimes, however, documents were preserved which were copies of originals composed in much earlier times. For instance, the very ancient hymn of the Arval brethren is found in a very corrupt form dating only from AD 218. The fragments of the laws of the 12 tables come down from 450 BC, but the documents preserved cannot be assigned to an earlier period than the 1st cent. BC.

The second period of Latin, which may be termed the archaic literary period, was brought about by two main causes: (1) the Romans gradually made themselves masters of the Peninsula; Latin estab. itself as the lingua franca of Italy, and in this process of expansion Latin became richer by its contacts with Oscan, Umbrian, and Etruscan; (2) the contact with the Greeks of Magna Graecia (q.v.) gave an immense and lasting stimulus to literary production. The second period, lasting from c. 250 to 90 BC, contains a considerable mass of literature, though only a small fraction has been preserved. Rom. power, which was constantly spreading, had already extended to a large part of Italy and Sicily. Latin became more and more adapted to the needs of legal, administrative, historical, and rhetorical writing

of a great empire. At first the ancient dialects had not perished under the influence of Rom. civilisation and gov.: only with Sulla's victory in the Social war (82 BC) had the last chance of any Italic dialect of achieving supremacy over Latin for ever passed away. At the same time the Lat. literary language separated from the vulgar dialect of Rome; the latter, also called *sermo cotidianus*, or daily life language, became general throughout Italy, although in each region it borrowed considerably from the previously spoken languages. The peasantry, without doubt, spoke dialects in which the inflections had never been developed or had been dropped. Some scholars doubt whether the literary language was ever spoken. However, although for a certain period literary Latin remained almost unchanged in sounds and forms, men of letters had attempted to improve the methods of recording the language; some reforms (those introduced by Aelius and Lucilius) failed, others were successful (the introduction of double consonants by Ennius). Many old forms died out or were retained only in legal, religious, or poetical language. L. Aelius Stillo, b. c. 154 BC at Lanuvium, may be considered as the first Lat. philologist. The literary language slowly acquired various characteristics, which remain typical of it, but it has not yet been reduced to a uniform system, and many irregularities appear in structure, grammar, and syntax. It is, however, symptomatic that the most important authors, Plautus, Terence, Ennius, were not Romans, nor even Latin by birth; Plautus especially is generally regarded as writing excellent Latin. The third period of Latin, the classical or golden age of Lat. L. and L., roughly extends to the Christian era. This period saw the zenith of Lat. style, first in prose and then in poetry: indeed, Latin has now reached its highest pitch of excellence. In the hands of Lucretius, Catullus, Virgil, and Horace Latin received its finest form as a poetic instrument. Lucretius and Cicero created the Lat. philosophical language, the latter, however, representing nearly all sides of Lat. styles, and especially excelling in oratory and the high polished language used in the law courts. He may be considered as the greatest artist in Lat. prose. Salustius, \_\_\_\_\_, and Livy are the great artists of the Lat. historical style. Lat. prose reached its full maturity in the reign of Augustus, when it attained perfect clarity while keeping its former solidity and dignity. The fourth period of Latin may be termed its silver age. This period lasted to AD 117 (corresponding to the death of Trajan). The change was chiefly stylistic, but it was a change for the worse; it is particularly noticeable in poetry, which became contaminated by rhetoric. Moreover, the 'prestige of the older writers prevents the new from attempting to rival them on their own lines; all that is left for them to do is to express the old ideas in a new way' (Giles). Literary Latin more and more became marked by an affectation of

ornament and straining after rhetorical effect. Partly Livy, but particularly Propertius, may be considered as the forerunners of the Lat. silver age. An exaggerated conciseness and point take the place of the more elaborate periods of the past. It would, however, be wrong to assume that there were no great Lat. writers in this period; it is sufficient to mention Tacitus, Suetonius, or Quintilian, to prove that there were still great masters of Latin, although there was no hope for a new writer of surpassing his predecessors on their own ground.

*The expansion and decadence of Latin.* With the conquests of the Rom. legions, Latin had spread into countries far from Rome, and was almost universally adopted throughout the W. civilised world. In a few countries (Gaul, Spain, and Rumania) Latin replaced the languages of the natives, and it became the ancestor of the modern Romance languages (Italian, Spanish, Portuguese, Provençal, French, Rumanish, Rumanian, and sev. minor dialects). At the same time, however, with the increase of commerce and travel, the Lat. vocabulary became increased by borrowings from foreign languages, and many words of common use crept into the literary language.

*Late Latin.* The tradition of writing in Latin was kept up by Christian and other medieval scholars, who, however, used an impoverished and disorganised form of the language known as Late or Low Latin (q.v.). Churchmen and missionaries carried the Lat. language further afield for many more cents. Catholic Rome was then the light of the W. world, the centre whence religion and learning were disseminated to all parts of W., Central, and N. Europe. In consequence Latin, the language of the Rom. Church, became and remained for many cents. the international tongue of the European higher intellectual world, and it was the language of the higher schools in W. Europe until the time of the Reformation. Schoolboys everywhere from Italy to Scotland read Latin and were taught Lat. grammar. Before the invention of printing nearly all important MSS. in the W. world were written in Latin. The first book printed was a Lat. Bible. Univ. profs. lectured in Latin. It was the language of diplomacy until the end of the 17th cent. (Milton was employed by Cromwell as the Lat. secretary to translate state papers received from other countries and to write replies in Latin.) Even nowadays Latin is still used extensively for learned works and the theological treatises in the Rom. Catholic Church, although it lost its dominant position in consequence of the natural development of the last three cents.

Latin is a highly inflectional language (see LANGUAGES, CLASSIFICATION OF). Nouns have 3 genders, but only singular and plural numbers, the dual number (still preserved in Greek) being only present in 1 or 2 Lat. words, such as *ambo*, 'both.' Latin has 6 cases, nominative, genitive, dative, accusative,

vocative, ablative (lacking in Greek), with traces of a locative. Unlike Greek, Latin has no article, no aorist tense, and only traces of an optative mood and of a middle voice; it has also less facilities than Greek of making compound words and expressing abstract terms; it is also less free in verbal syntax. On the other hand, it has fuller passive inflections than Greek; it has 5 declensions of nouns (Greek has only 3). Although it has not that variety of particles and prepositional usage which make Greek a perfect instrument for expressing the subtlest philosophical thought, it has greater conciseness and precision. For Lat. script see ALPHABET and under the single letters (A, B, C, D, etc.). See H. S. Roby, *A Grammar of the Latin Language from Plautus to Suetonius*, 1887; T. R. Glover, *Life and Letters in the Fourth Century*, 1901; P. Giles, *A Short Manual of Comparative Philology for Classical Students*, 1901, and 'The Languages of Italy' in S. E. Lejay, *Syntax Latine* (5th ed.), 1908; O. Weise, *Language and Character of the Roman People* (trans.), 1909; K. Stolz, *Geschichte der lateinischen Sprache*, 1910; T. Frank, *Life and Literature in the Roman Republic*, 1930; D. Diringer, *The Alphabet* (4th impression), 1953 (with bibliography).

2. LITERATURE. It is impossible to fix with any precision the beginning of Lat. literature in Rome and the neighbouring Lat. communities, that is to say, the date when the art of writing was employed consciously in literary form. Of Lat. inscriptions the earliest known to us is the Fibula Inscription, 'engraved on a brooch found in a Praeneste tomb of the 7th cent. BC; and many inscriptions of various kinds, belonging to a period prior to the 3rd cent. BC, have been preserved. Some on tablets commemorate victories; others on coffin lids or on busts take the form of epitaphs and eulogies. Legal, historical, and religious records were preserved, including those of the Arval Brothers (q.v.) and the Twelve Tables, fragments of which survive. Oratory appears to have been esteemed at an early date, for Cicero tells us that a speech of Appius Claudius delivered in 280 BC was extant in his time. Besides the traditional hymns and ballads of a peasant folk, there were *Fescennine verses* (q.v.), an infant form of the *satura* (see SATIRE), which included ribald songs sung at harvest, vintage, and wedding festivals. But these early writings were only the crude efforts of a young race; the literature of the Rom. people did not, strictly speaking, begin until the middle of the 3rd cent. BC.

The first period of Lat. literature, commonly called the pre-classical period, extends from about 250 BC to about 85 BC. During this time the Romans made experiments with various literary forms, with tragedy, comedy, satire, and epic and

didactic verse. At the close of the Punic war in 241 BC, Rome having secured her position as mistress of the Mediterranean, her more wealthy citizens turned to the leisurely pursuit of learning. The only literature that was available to them was that of Greece, and Gk culture continued to hold sway over Rom. thought to the end. It is a significant fact that the hist. of Lat. literature begins with the name of Livius Andronicus (c. 284-204 BC), a Gk captive of Tarentum, who is celebrated for having produced, in 240 BC, the first

CATO THE CENSOR  
Lateran Museum, Rome.

drama on the Rom. stage. His plays were adaptations from the Greek, and achieved such success that theatrical performances became a permanent institution in Rome. Andronicus also trans. the *Odyssey* into Saturnian verse, and wrote at least one hymn of thanksgiving. Considerable progress in the development of the drama and the epic was made by his 2 younger contemporaries, Gnaeus Naevius (c. 270-c. 201 BC) and Quintus Ennius (c. 239-169 BC). Naevius wrote a great number of comedies and some tragedies, the majority of which were based on Gk originals. But in 2 cases, at least, he handled materials provided by the hist. of his own country, and may therefore be said to have founded the national drama. His *Alimonium Romuli et Remi* treated of the legendary founding of Rome, and the *Clastidium* dealt with a contemporary historical event, namely, the victory of M. Marcellus over the Gallic tribes in 222 BC. Naevius also laid the foundation of the Rom. national epic. His *Bellum Poenicum*, a

verse chronicle, narrating the events of the first Punic war, in which he himself had taken part, was an acknowledged classic in Horace's days, and was undoubtedly an important source of Virgil's *Aeneid*. Only a few fragments of his works remain.

Ennius, 'the father of Rom. poetry,' was b. in a dist. of Calabria, known as Magna Graecia on account of the number of Gk colonies that had sprung up in the neighbourhood. Consequently in early life he was as familiar with the Greek as with his native tongue, and when he came to write his *Annales*, an epic of Rom. hist. in 18 books, he chose the Gk hexameter in preference to the native Saturnian metre. Ennius showed considerable power, too, as a writer of tragedies. These were modelled chiefly on the dramas of Euripides, but were infused with the true Rom. spirit. A more important branch of his work must be mentioned. His *saturnae* differed from the musical 'medleys' which have already been noted in connection with the early beginnings of Lat. literature. They were really collections of miscellaneous poems on fabular, philosophic, didactic, and various other subjects. A few of these, written probably through the influence of Aristophanes and Cratinus, dealt with contemporary events in a satirical tone, and hence prepared the way for the 'satire' proper, a purely native product of anc. Italy. The satire, as he used it, was later developed by Gaius Lucilius (c. 180-102 BC), who, employing the dactylic hexameter, brought all spheres of political, social, and literary life within the range of discussion, and lashed pitilessly at the vices and absurdities of his time. Naevius and Ennius were succeeded by Marcus Pacuvius (220-c. 131 BC) and Lucius Accius (170-c. 85 BC), who were regarded as the most important tragedians of Rome, but whose works have unfortunately not survived, except for a few fragments. Pacuvius, who was a nephew of Ennius, wrote imitations of Gk plays, as well as praetextatae (i.e. plays whose plots are derived purely from Rom. hist., and in which the hero wears the *toga praetexta*, the official robe of a Rom. magistrate). Accius was apparently a far more prolific writer. His tragedies were chiefly imitated from Gk models, but some were on Rom. subjects. He wrote *Brutus* and *Decius*, examples of the praetextatae tragedies, of which the titles and fragments of nearly 50 remain, and poems on miscellaneous subjects, such as grammar, poetry, acting, metres, antiquities, etc., which have been lost.

The chief exponent of Rom. comedy was Titus Maccius Plautus (c. 254-184 BC). Of his plays 21 are extant, which are all included in the list of genuine plays compiled by Varro. The best of these are the *Captivi*, *Menaechmi*, *Miles Gloriosus*, *Amphitruo*, *Bacchides*, *Rudens*, and *Pseudolus*. They are excellent examples of the *fabula palliata*, a particular class of Rom. comedy so called from *pallium*, a Gk mantle, because it was derived from Gk sources. Plautus modelled his style on the New Attic Comedy of

Menander, Philemon, and other Athenian poets. Though in form and matter Plautus followed Gk models, he nationalised his plays by introducing incidents, situations, and customs peculiar to the life of Rome. His work is not infrequently slipshod, but he had a masterly command over language and an inexhaustible fund of lively, though often coarse, wit. Plautus's influence on modern comedy is inestimable; to the dramatists of the Renaissance he was, with Aristophanes, the model for comedy. His influence is manifest in the work of Shakespeare and Molière, as well as in the Restoration Comedy of Manners.

Plautus's immediate successor in Rome was Q. Caecilius Statius (c. 220-168 BC), an Insubrian Gaul, who had been brought captive to the city about 194 BC. He is to us, however, hardly more than a name. The titles of some 40 of his plays have survived, and he appears to have been held in high esteem. A more cultured, but less virile writer was Publius Terentius Afer (c. 195-159 BC), who, according to tradition, produced his first comedy, *Andria*, under the patronage of Caecilius Statius. Terence was a Carthaginian prisoner of war, and received his emancipation and education from the senator Terentius Lucanus. His literary gifts admitted him when a youth into the most aristocratic circles of Rome, and he became an intimate friend of men such as Gaius Laelius and the younger Scipio Africanus. Besides the comedy already mentioned, he wrote *Hecyra*, *Heautontimorumenos*, *Eunuchus*, *Phormio*, and *Adelphi*, all of which are extant. Terence adhered more closely than Plautus to the Gk originals, retaining also the Gk background to his scenes. His plays are chiefly distinguished by their elegance and artistic finish; he lacked the vigorous originality of Menander and the fresh wit of Plautus.

After the death of Terence a new kind of comedy sprang up, known as *fabula togata*, the form of which was still Greek, but the life and characters Italian. Examples of it remain only in fragments, and it is improbable that it ever had any literary value. The earliest representative of this latter form of Lat. comedy was Titinius, who flourished about 150 BC. His most important successors were Quinctius Atta (d. 77 BC) and his contemporary, Lucius Afranius, who was praised by Cicero and retained some of his popularity as late as Nero's time. However, the development of Lat. comedy virtually ceased with the death of Terence. The Rom. populace preferred for holiday entertainment the more sensational performances of *mimi*, jugglers, and gladiators; and literary enterprise was therefore obliged to seek fresh channels of expression.

Lat. prose, not unnaturally, was of late growth. From the very earliest times prose was used in the necessary business of city life. The earliest inscriptions, epitaphs, laws, and records were written in prose, but the development of prose style, the recognition of prose as a literary

medium of expression, took place late in the hist. of Lat. literature. A prose style was gradually formed by the practice of public speaking, oratory being an art in which Romans excelled. Marcus Porcius Cato (334-149 BC), commonly known as 'Cato the Censor,' was regarded as the founder of Lat. prose literature. About 150 of his speeches were extant in Cicero's time, but have not come down to us. Cato's contemporary orators included C. Laelius and the younger Scipio, who were succeeded by Marcus Lepidus Porcina (fl. 137 BC) and the famous Gracchi (Tiberius, 163-133 BC, and Gaius, 154-121 BC). The oratory of the next generation, and in particular of Marcus Antonius and Licinius Crassus, attained a higher level of literary perfection, until we reach the unrivalled speeches of Cicero.

Meanwhile scientific treatises were written on the rules of rhetoric, only one of which is extant, namely the *Rhetorica ad Herennium*, formerly ascribed to Cicero, but probably the work of one Quintus Cornificius. The early annalists, who include Fabius Pictor, the historian of the second Punic war, and Cincius Alimentus, who was taken prisoner by Hannibal and narrated his personal experiences, wrote in Greek, probably because Latin was not sufficiently developed to meet the requirements of prose composition. Cato the Censor was the first to write a hist. of Rome in Lat. prose. His *Origines*, in 7 books, brought the hist. of the city down to his own time and comprised the results of his wide study and personal experience. The only work of Cato which has survived is a treatise on agriculture, *De Re Rustica*, to which Virgil probably had recourse in writing his *Georgics*. But Cato's influence prevailed chiefly as an historian, and his successors, Cassius Hemina, Calpurnius Piso Frugi, Caelius Antipater, and others, borrowed freely from the *Origines*. An advance was seen in the work of Claudius Quadrigarius (fl. 80 BC), who showed judgment in his choice of material by rejecting all legendary and doubtful records. Sulla, the dictator, who lived about the same time, wrote a memoir of his own life and times, entitled *Rerum Suearum Commentarii*. Sempromius Asellio (fl. 100 BC) in his *Rerum Gestarum Libri* was not content with giving facts in chronological sequence, but attempted to explain the cause and effect of events. Other annalists of this period are Valerius Antias (fl. 50 BC), Licinius Macer (d. 66 BC), Caelius Antipater, and Cornelius Sisenna (d. 67 BC), whose works are lost but for a few fragments.

During the 1st cent. BC a new impulse was given to the writing of poetry, which for a time had made little or no advance, by renewed study of Gk and Alexandrian poetry. There existed in Rome at this time a friendly group of poets united by their common enthusiasm for Gk culture. It included Valerius Catullus (c. 84-c. 54 BC), who adapted to his own purpose and obtained complete mastery over various forms of Gk lyric metres. He wrote

passionate love songs to one Lesbia; an epithalamium to Peleus and Thetis, and another in honour of Manlius and Vibia; a paraphrase of Callimachus's *Coma Berenices*, and the *Attis* in galliambic metre, which is as remarkable as a *tour de force* in metrical form as for its dramatic force and vividness of conception. Other members of this group were Gaius, Helvius, Cinna, and Licinius Macer Calvus, whose works have not come down to us. Very different from any of these, both as a poet and as a man, was Titus Lucretius Carus (c. 95-c. 54 BC), the author of one of the greatest philosophical poems in any language. His *De Natura Rerum* in heroic hexameters expounds the physical structure of the universe according to the teaching of Epicurus. Lucretius d. before the poem was completed, and it is, probably in consequence, very unequal in quality. Lucretius regarded the graces of poetry as subordinate to the truths of his philosophy, so that it is remarkable with what genius he gives poetic form to an unpoetic subject, a subject, moreover, which had not hitherto been treated in the Lat. tongue. Catullus and Lucretius d. within a year of each other, both fore-runners of the great poetic outburst which glorified the age of Augustus.

During the same cent. toward the close of the republican period, Lat. prose reached its zenith. Marcus Terentius Varro (116-27 BC) was a most prolific and versatile writer. He wrote on philology (*De Lingua Latina*), on agriculture (*Rerum Rusticarum Libri*), on antiquity (*Antiquitates Rerum Humanarum et Divinarum*), and philosophy (*Logisticorum Libri*). He also pub. an encyclopaedia of the arts (*Disciplinarum Libri*), and portraits of famous Greeks and Romans (*Imagines*). As a poet and a satirist Varro showed considerable ability. His *Saturae Menippeae*, moral essays written partly in prose and partly in verse, were in imitation of the cynic Menippus of Gadara, and were important as marking the development of the Lat. 'satire.' The treatise on agriculture is the only one of Varro's writings which has been preserved in its entirety and, of the 70 works he is said to have composed, only 2 have come down to us, the other, *De Lingua Latina*, being in a mutilated form.

Marcus Tullius Cicero (106-43 BC) made an indelible impression on the literature as on the hist. of Rome. His literary work may be classified under 3 headings: speeches, philosophical treatises, and letters. Oratory had already attained a high perfection in Rome, and at the time of Cicero's entrance into public life Quintus Hortensius Hortalus (114-50 BC) had no rival in the Forum. Hortensius indulged in the florid mannerisms of Attic rhetoric, and his fame was soon eclipsed by the young orator who aimed at polished and correct composition. Of Cicero's speeches 57 are extant, the most famous being the Verrine and Philippic orations, the 4 speeches delivered against Catiline, *Pro Murena*, *Pro Lege Manilia*, *Pro Archia*, *Pro Sestio*, *Pro Plancio*, and *In Pisonem*.

Of his philosophical treatises the chief are *De Oratore*, *De Republica*, *De Legibus*, *De Natura Deorum*, and *De Officiis*. Cicero's letters, particularly those ad *Atticum* and ad *Familiares*, are, of course, unequal in style and very different from his speeches; but they are of inestimable importance to the student for the vivid picture they give of contemporary Rom. life among the upper classes. As letters they stand the supreme test, and have long been regarded as the model of epistolary style. They reveal the man himself, in his strength and in his weakness. Cicero's great achievement was the creation of a prose style which was adapted to all the needs of life. He was sensitive to the dignity and harmony of Lat. prose and avoided all that was merely florid and declamatory. His style is lucid: reflecting every passing emotion of the writer it is used with consummate ease to convey wit, humour, tenderness, pathos, anger, vehemence, invective, at his will. Thus Cicero made Latin the written vehicle of the civilised world for cents. to come.

Julius Caesar (c. 102-44 BC), a colossal figure in the hist. of Rome, is second to Cicero as a writer of Lat. prose. Caesar wrote personal memoirs of his campaigns in Gaul, *Commentarii de Bello Gallico*, in a clear and simple style, admirably suited to the subject. His *Commentarii de Bello Civili*, 49-48 BC, have also survived, but his other works, which include *De Analogia* and *Anticatores*, have not come down to us. As an historian Caesar is incomparably superior to any of his predecessors, but like them his main object was to narrate the chief events in due order. Gaius Sallustius Crispus (86-c. 34 BC) was the first Roman to attempt an interpretation of historical events. Modelling his work on that of Thucydides, Sallust attempted to give it an artistic unity. Unfortunately he affected an archaic style in imitation of the elder Cato, and not infrequently sacrificed accuracy for the sake of producing an artistic effect. His works were *Bellum Catalinae*, *Bellum Jugurthinum*, and *Historiae*. The last-named comprised 5 books, but only fragments of it have survived. Of the other prose writers who flourished towards the close of the republican period, brief notice may be given to Cornelius Nepos (c. 98-25 BC), the author of an extensive biographical work entitled *De Viris Illustribus*, and Aulus Hirtius (d. 43 BC), who added an eighth book to Caesar's *Commentarii de Bello Gallico*.

The Augustan period may be said, roughly speaking, to have begun with the victory of Augustus at Actium in 31 BC. His death in AD 14 marked its close. This period was distinguished by a remarkable output of verse, only to be compared in its fertility with that of the Elizabethan age in England. Publius Vergilius Maro (70-19 BC), in his expression of the Rom. spirit of the national sense of duty and honour, is the most representative poet of his age. His earliest pub., a number of bucolic poems, called the *Eclogues*, which were written in

imitation of the idylls of Theocritus, estab. his fame. He won a patron in Maecenas, to whom he addressed his *Georgics*. The *Aeneid* was written in imitation of the *Odyssey* and *Iliad*, and was intended to arouse patriotism by a glorification of the origin of the Rom. people in the founding of their city by Romulus, the descendant of Aeneas, and by a comparison between the Trojan hero and the Emperor Augustus. It was unfinished at the death of Virgil, and was pub. at the express command of Augustus under the editorship of Varius Rufus and Plotius Tucca. The *Aeneid* has stood the test of time, and is now ranked with the great epics of the world, with the *Iliad* and the *Odyssey*, with Dante's *Divine Comedy*, and with Milton's *Paradise Lost*.

Quintus Horatius Flaccus (65 BC-AD 8), was, like Virgil, a man of humble origin who, through his literary ability, was admitted to the inner circle of the highest society in Rome. In 35 Horace pub. his first book of satires, dedicated to Maecenas, who in return made him the gift of a small Sabine estate, henceforth his favourite abode. They were written in hexameters, and owed their form to the satires of Lucilius. Horace himself called them *Sermones*, or conversations. Between 30 and 29 BC his second book of *Satires* and his *Epodes* were completed, while the *Odes* (*Carmina*) were pub. in 23 and 13 BC, and the *Epistles* (*Epistulae*) in 20 and 15 BC. As a metrist Horace was unrivalled. His verses are lively and graceful, and so finely polished that they give the effect of spontaneity and ease, but the wings of his Pegasus are clipped so that he never soars to the loftiest heights of poetry. He has an extraordinary gift of words; his style is epigrammatic and terse, 'neat because homely.' His poems give us a very clear picture of contemporary life, and afford delightful reading for their revelations of his personality. Horace also pub. a work of literary criticism, the famous *Epistula ad Pisone*, better known as the *Ars Poetica*, which has exercised a powerful influence on subsequent literary criticism and creation, particularly in France and England. Its immediate aim was to give guidance to young dramatists.

Tragedy was again in vogue, and was being attempted by Asinius Pollio (76 BC-AD 5), Varius Rufus (74-14 BC), and Augustus himself. The younger generation of poets were, however, chiefly attracted by elegiac poetry, which had been cultivated in the Ionian cities and in Alexandria. The chief representatives of the Rom. elegists are Tibullus, Propertius, and Ovid. Albius Tibullus (54-19 BC) sang poems to his mistress Delia, and lamented her faithlessness in *Nemesis*. His poems are marked by their sincerity; the versification is polished, while the language is simple and homely. The poet, when not in mind of his love, sang the praises of country life. Sextus Propertius (c. 52-c. 16 BC) had no metrical skill, but possessed greater political genius. His chief theme was his mistress Cynthia.

His style is often harsh and cumbersome, but he was stirred by a great, if sensuous, passion, and his poetry at its best is fresh and vigorous and rich in imagery. Publius Ovidius Naso (43 BC-AD 17), unlike the 2 fellow poets of his youth, lived to a ripe old age. His early life was spent in Rome, where his amatory poems—*Amores* addressed to Corinna and *Heroides*, a series of fictitious love letters, the *Ars Amatoria*, and *Remedia Amoris*—as well as the *Metamorphoses*, a collection of stories from Gk and Rom. mythology, and the *Fasti*, a poetic exposition of the Rom. calendar, were produced. In AD 8 he was suddenly banished from Rome for an unknown offence to

prose writers include Vitruvius Pollio, the author of *De Architectura*; Annaeus Seneca, father of the philosopher and author of *Controversiae* and *Suasoriae*; Pompeius Trogus, who wrote the first general hist. in Latin, *Historiae Philippicae*, of which only an epilogue by Justin is extant; and Marcus Verrius Flaccus, who wrote the first Lat. lexicon, *De Verborum Significatu*, most of which is lost.

The period immediately succeeding that of Augustus was barren of first-rate literature. The most notable of the prose writers were Vellius Paterculus, who wrote a compendium of Rom. hist., and Valerius Maximus, who made a collection of anecdotes, *Factorum et Dictorum Memorabilium Libri*. The poets included Phaedrus, the fabulist, and Germanicus, the emperor's nephew, who trans. the *Phaenomena* of Aratus into Lat. hexameters. A more prominent figure was Lucius Annaeus Seneca (c. 4 BC-AD 65), the philosopher, whose numerous prose writings included discourses on philosophical and moral subjects, *Quaestiones Naturales*, and letters. The tragedies ascribed to him (*Medea*, *Agamemnon*, *Phaedra*, *Oedipus*, etc.) are the only tragedies in Lat. literature which have come down to us. Seneca's nephew, M. Annaeus Lucanus (AD 39-65), wrote an unfinished epic poem in 10 books on the struggle between Caesar and Pompey, entitled *Pharsalia*. Aulus Persius Flaccus (34-62), the friend of Lucan, left 6 vivacious *Satires*, which still retain their interest.

After the death of Nero (68) a more serious tone was reflected in literature. During the reign of Vespasian the only writers of any note were Plinius Secundus (23-79), Pliny the Elder, whose *Historia Naturalis* is a storehouse of learning, and C. Valerius Flaccus, the author of an unfinished poem, *Argonautica*, who endeavoured to maintain the tradition of the Virgilian style. In the reign of Domitian there began a revival of letters. The most original genius of his age was M. Valerius Martialis (c. 40-104). Martial was the creator of the epigram in its modern sense. His satire invariably had a sting in the tail. He combined a brilliant and caustic wit with the metrical skill of Ovid, but his poems are frequently marred by his fulsome flattery of men in high place and by his vulgar lack of reticence. His contemporary poets were of a secondary order. Silius Italicus (c. 25-101) wrote a lengthy and uninspired poem on the Punic war, and Papinius Statius (45-96) left 2 mythological poems, *Thebais* and the unfinished *Achilleis*, which are brightened here and there by a *purpureus panis*, and a collection of shorter poems, entitled *Silvae*. The most influential prose writer was Fabius Quintilianus (c. 35-c. 100), whose *Institutio Oratoria* (The Training of an Orator) has remained a standard work on the subject.

A more complete literary revival took place in the reigns of Nerva, Trajan, and Hadrian. The prominent figures of this

Augustus, and spent the remainder of his life in exile at Tomis on the Black Sea. There, in his loneliness, he gave expression to his grief in the *Tristia*, *Epistulae ex Ponto*, and *Ibis*.

The prose of the Augustan period is to-day represented by one great writer, Titus Livius (59 BC-AD 17), of Patavium (modern Padua). He began his hist. of Rome, *Ab Urbe Condita* (from the foundation of the city), about 25 BC, and did not publish the first 21 books until after the death of Augustus (AD 14). The hist. was originally in 142 books (only books i-x and xxi-xiv are extant; summaries of the missing books, except cxxxvi and cxxxvii, still exist) and extended from the arrival of Aeneas down to the death of Drusus in 9 BC. The faults of the work are obvious. Livy had no idea of historical research, and his chronology and description of places are often inaccurate. Moreover, he had little grasp of the Rom. law and the Rom. military system. But he is a consummate artist in the arrangement of his material and in the dramatic presentation of his characters. Minor

so-called Silver Age are Tacitus, Juvenal, and the Younger Pliny, who add, 'as it were, a sunset splendour to the literature of Rome.' Publius Cornelius Tacitus (c. 55-120) is known principally by his *Historiae*, extending from Galba to the death of Domitian, and *Annales*, a hist. of the Julian house, beginning with the death of Augustus. He also wrote an account of Germany, and a beautiful memoir of his father-in-law, Agricola, besides a dialogue, *De Oratoribus*, his earliest extant work. Tacitus is a careful, though not an impartial, historian. His deep scorn for the emperors, whom he regards as the greatest enemies of Rome, cannot but make itself felt. The spirit of the age is again prevalent in the work of Decimus Junius Juvenalis (c. 60-c. 140). He has not the good-natured cynicism of Horace. Juvenal's *Satires* paint with pitiless scorn and moral indignation the degraded state of Rom. society. Plinius Caecilius Secundus (c. 62-113), the nephew of Pliny the Elder, gives us in his *Letters* a more pleasing picture of the public, social, and literary life of his time. The only remaining literary men of note who flourished during the reign of Hadrian are Suetonius Tranquillus (c. 70-c. 140), fragments of whose *De Vita Caesarum* have come down to us; Cornelius Fronto (c. 100-c. 166), whose letters to his pupil, Marcus Aurelius, are of some interest; and Aulus Gellius (c. 123-c. 165), the author of *Noctes Atticae*, a series of quotations and excerpts from miscellaneous Grk and Lat. authors.

With Gellius the literature of classical Latin is closed. For many cents. works in Latin were still produced. At the time of the Renaissance European scholars wrote in Latin, believing that only by so doing would their work endure, and since then controversial works as well as theological and scientific treatises have been written in Latin, in order that they may be understood by educ. men of different nationalities. But all such Late Lat. literature is outside the scope of the present sketch.

See separate articles on the various authors, and see also J. W. Mackail, *Latin Literature*, 1895; J. Wight Duff, *Literary History of Rome from the Origins to the Close of the Golden Age*, 1909; *Literary History of Rome in the Silver Age from Tiberius to Hadrian*, 1930; F. A. Wright and T. A. Sinclair, *A History of Later Latin Literature*, 1931; H. J. Rose, *Handbook of Latin Literature*, 1936.

Latin Union, political monetary union entered into in 1865 by Franco, Belgium, Italy, and Switzerland, by which the amount of silver to be coined yearly was fixed for each member, in order to protect them against the relative appreciation of silver to gold, due to the gold discoveries in Australia and California. A few years later Greece, Serbia, Rumania, and some of the S. Amer. states also joined the union. The unit of coinage was the franc. In 1874 the members agreed to suspend the free coinage of silver owing to the fall in this metal which made it depreciate relatively to gold. See BIMETALLISM.

Latina: 1. Prov. of Italy, in SE. Lazio (q.v.). It is mainly a coastal plain on the Tyrrhenian Sea (q.v.), but has mts in N. and W. There are coastal lagoons, and the prov. contains the Pontine Marshes (q.v.). The prin. tns include L., Terracina, Gaeta, Formia, and Fondi (qq.v.). Area 868 sq. m.; pop. 301,000.

2. It. tn, cap of the prov. of L., 34 m. SSE. of Rome (q.v.). It is an agric. centre, and was founded in 1932 at the beginning of the work of reclaiming the Pontine Marshes. Pop. (tn) 10,000; (com.) 35,000.

Latini, or Latino, Brunetto (c. 1230-94), It. poet, orator, and grammarian, b. Florence. Here he taught philosophy and grammar, Dante figuring amongst his pupils. He was attached to the Guelph party and held some of the most important offices in the rep. His most noted work is an encyclopaedia entitled *Li Livres dou trésor* (ed. by P. Chabaille, 1863), written in French, which contains extracts and trans. on rhetoric, hist., and philosophy from the classic authors. L. was also the author of a treatise on rhetoric and a poem entitled *Il Tesoretto*. See F. Maggini, *La Retorica di Latini*, 1915; G. B. Zannoni, *Il Tesoretto e il Favolello di ser Brunetto Latini*, 1924; G. Bertoni, *Il Duecento*, 1940.

Latini, some of the most anct inhab. of Italy, forming a league or confederation of 30 states with H.Q. at Alba Longa. These L. are sometimes called 'Prisci L.' to distinguish them from the later subjects of Rome. See LATIUM.

Latinus, son of Faunus and of the nymph Marica, or of Hercules and Fauna, or of Odysseus and Circe, King of Latium and father of Lavinia, the wife of Aeneas. See Virgil, *Aeneid*, vii-xii.

Latitude and Longitude. The lat. of a point on the earth's surface is its angular distance, N. or S., from the equator, measured on the curved surface of the earth, along the meridian of the point in question. It is measured and recorded in degrees (°), min. (′), and sec. (″) (60 sec. = 1 min.; 60 min. = 1 degree). Direct measurement, whether on sea or land, is virtually impossible, so that astronomical observations and calculations are needed. The lat. of a place is the angle between the direction of a plumb-line at the place and the plane of the equator. This is equivalent to the elevation of the celestial pole above the horizon. *Geographical lat.*, as used in maps, is based on the supposition that the earth is an oblate spheroid, of which the compression and the angle which the normal makes with the equator are known. It differs from *astronomical lat.* only in being corrected for local deviation of plumb-line. The *geocentric lat.* of a place is the angle which a line from the earth's centre to the place makes with the plane of the equator. The lat. of a celestial object is its distance from the ecliptic measured by the arc of the great circle which passes through the pole of the ecliptic and the object.

The following is an outline of a few

different practical methods used for determining the lat. of a place or ship.

(1) Observation of the stars. This method is one of the easiest and quickest, as star tables are worked out in the *Nautical Almanac* for all stars of the first magnitude in both hemispheres, and for navigation stars of the second and third magnitudes, with the astronomical apparent times at which they cross the observer's meridian on the first day of each month in the year. All stars come to the meridian 4 min. earlier each day. The altitude of the star on the meridian is observed, and the lat. calculated from its known polar distance. (2) Observation of the Pole Star. The true altitude of the star is observed; the local apparent time is obtained and converted into astronomical time. To this is added the sun's right ascension, from the *Nautical Almanac*. Apply this result (minus 24, if necessary) to the table of Pole Star corrections, and then add the degrees and minutes to, or subtract from, the true altitude already determined. (3) Observations of the sun on the meridian. The corrected altitude, which is called the true central altitude, is obtained by the use of the sextant, and subtracted from 90°. The zenith distance, N. or S. as the case may be, is given by the result. The angular distance of the sun from the celestial equator (the corrected declination) is then taken from the *Nautical Almanac*. If both the declination and the zenith distance be the same, N. or S., add them together; if one is N. and the other S., subtract the lesser from the greater and the result is the lat. N. or S. as the case may be. If the sun be obscured by a cloud at the meridian, an observation is taken of it as near as possible to the meridian, and its altitude at the meridian then worked out. The same principles are observed if observations are made of the moon, or a planet. (4) Observation by means of an artificial horizon. This method, which is employed on land, is carried out by the aid of a basin, etc., filled with some reflecting medium such as liquid tar, quicksilver, etc., and protected from the wind to keep it still. The observer should walk backwards, facing the celestial body from which observations are to be made, until its image can be seen in the reflecting medium. The sextant is then brought to bear on the celestial body, the image of which is brought down to coincide with the reflected image. The altitude of the body observed in degrees is half that shown on the sextant, except in those instruments which are specially graduated to make this adjustment automatically. From this and the star's declination the lat. can be calculated.

**Variability of terrestrial latitude.** The lat. of a point on the earth's surface is measured from the equator, which is defined by the condition that its plane is at right angles to the axis of rotation of the earth. Therefore if the points on which this axis intersects the earth, i.e. the poles, are not fixed, the position of the equator will change, and consequently the

lat. It was shown by research about the end of the 19th cent. that such a change, very minute but measurable, does take place; the N. and S. poles wander round in a circle with a radius of approximately 25 ft. The theory regarding the periodicity of the change is briefly as follows. The 14 months' (429 days) term is a result of the fact that the axes of rotation, and of the figure of the earth, do not strictly coincide, but make a small angle (about 0°·15 on the average) with each other. If the matter on the surface of the earth were immobile, the result of this non-coincidence would be the revolution of one pole round the other in a circle of radius 0°·15 (equal to 15 ft) in a period of 429 days; this is known as the Eulerian motion from the name of the astronomer (Euler) who discovered it. But owing to meteorological causes the motion is subject to ann. change. Apart from the statical causes, that is to say, the changes of position of the deposits of snow and ice on the earth, the causes of this change are dynamical. The statical causes change the position of the pole of figure of the earth, but to an infinitesimal and negligible degree. The dynamic causes are the atmospheric and oceanic currents. If these were invariable the effect would be the Eulerian motion, not exactly round the mean pole of figure of earth, but a point slightly apart. The currents, however, vary annually, and the motion of the pole of rotation varies also. The International Geodetic Association estab. a series of stations round the globe, as nearly as possible at the same lat., to make similar observations, in view of the importance of the fluctuations in position of the poles. The prin. stations are at Carloforte, in Italy; Midzusawa, in Japan; Gathersburg, in Maryland; and Ukiah, in California, all situated about 39° 8' lat. N.

The length of a minute of arc, measured along the equator (which for all practical purposes is invariable), is known as a geographical mile; but a statute or 'land' mile, being an arbitrary unit introduced by Queen Elizabeth I, is 5280 ft. This statute mile is never used in navigation. The standard nautical or 'sea mile' is, strictly, the length of a minute of arc measured along a meridian, but as this length varies from about 6046 ft at the equator to about 6108 ft at the poles the approximate mean value is therefore taken as 6080 ft as the standard nautical mile for measuring distances at sea. When lat. is expressed in minutes it gives the distance in nautical miles. Thus if the lat. of a place is 50° 45' N., then it is  $(50 \times 60 + 45) = 3045$  nautical miles N. of the equator. Places having the same lat. clearly lie on a 'small circle' (as it is called) the plane of which is parallel to the plane of the equator. This small circle is called a parallel of lat.

The long. of a place on the earth is the angle which the terrestrial meridian from the pole through a point on the earth's surface makes with some standard meridian. As the earth runs through 360° of long. in 24 hrs, if the sun is on the

meridian at any place it will be at the meridian on another place 15° W. of the first 1 hr later. Thus 15° of long. represent 1 hr of difference in apparent time; all methods of determining long. are based on this fact. Formerly each nation took its own standard meridian, but the meridian of Greenwich is now used as the standard. It is important to remember that the astronomical day starts at midnight and the hours are reckoned from mean midnight, which is 0 hr up to 24 hrs later. Thus 9 a.m. 1 Jan. (civil time) is Jan. 1 day 9 hrs (astronomical time), but 3 p.m. 1 Jan. is Jan. 1 day 15 hrs (astronomical time). Greenwich time, which is all-important in the navigation of ships, has customarily been obtained from the set of chronometers which every ship carries; but Greenwich time is now broadcast twice a day from Rugby (England). In astronomy the long. of a celestial body is the distance in degrees of its projection upon the ecliptic from the vernal equinox, counted in the direction W. to E. See also NAVIGATION. See *The Nautical Almanac* and *Inman's Nautical Tables*, 1873; J. Gill, *Textbook on Navigation*, 1898; H. Roper, *Navigation and Nautical Astronomy*, 1908; *Navigation Manual*, vol. II (Admiralty), 1938.

**Latitudinarians** (Lat. *latitudo*, breadth), name applied to a school of Eng. theologians in the 17th cent. who endeavoured to inculcate a more broadminded and liberal spirit into the Eng. Church. They opposed both the High Church party and that of the Dissenters, and strove to minimise the importance attached to particular doctrines and ceremonies. The chief representatives were Hales, Chillingworth, More, and Tillotson. Their movement was closely allied to the philosophical school of the 'Cambridge Platonists' (q.v.), and they may be considered the forerunners of the Broad Church party of the 19th cent. and, in their emphasis on the supremacy of reason, of the 20th-cent. Modernists. See J. Tulloch, *Rational Theology in England in the Seventeenth Century*, 1872.

**Latium**: 1. Country of the Latins (q.v.), div. of anc. Italy, about two-thirds the size of Wales, which extended along the coast of the Tyrrhenian Sea, S.-eastward from the mouth of the Tiber, which formed the inland boundary of the N. half. See **ROME**.

2. Region of Italy, see **LAZIO**.

**Latona**, see **LETO**.

**La Tour, Georges de** (1593-1652), Fr. painter, b. Vic-sur-Seille, of a noble family. He studied art in Italy, later worked at Lunéville in the Lorraine of the Thirty Years War. He refined on the violent lighting effects of Caravaggio in a very personal way, though it is only in recent years that he has come to be recognised as one of the greatest religious painters of the 17th cent. Among his beautiful works are the 'Adoration' (Louvre) and 'St Sebastian mourned by St Irene' (Berlin).

**La Tour, Maurice Quentin de** (1704-1788), Fr. painter, b. St Quentin. He

studied in Paris and devoted himself to pastel, than made fashionable by the Venetian, Rosalba Carriera. He was appointed painter to the king in 1750 and achieved great celebrity by his pastel portraits. Much of his lively portraiture is preserved at his native tn.

**La Tour d'Auvergne, Théophile Malo Corret de** (1743-1800), Fr. captain of grenadiers, b. Carhaix, Brittany. He served with the Republican army in the Pyrenees and Alps, leading with great success his 'Infernal Column.' As he obstinately refused to be promoted, Napoleon bestowed upon him the title 'Le Premier Grenadier de France.' He was killed at Oberhausen, Bavaria. See **LIVES** by E. Simond, 1899, and C. le Goffic, 1928.

**La Trappe**, see **TRAPPISTS**.

**Latreille, Pierre André** (1762-1833), Fr. entomologist, b. Brives. In 1786 he became a priest, but spent most of his leisure studying insects. During the revolution he suffered imprisonment, but, arousing interest through his entomological studies, was released. He was appointed to take charge of the insects at the Jardin des Plantes, Paris, and succeeded Lamarck as prof. of zoology. He wrote *Genera crustaceorum et insectorum* (4 vols.), 1806-7, and the portion 'Insects and Crustacea' in G. de Cuvier's *Règne animal*, 1829.

**Latrobe**, par. in Westmoreland co., Pennsylvania, U.S.A., 35 m. ESE. of Pittsburgh. It is a mining and coking dist. and has large collieries, steel, ceramics, and plastics works, saw-mills and lumbering mills, etc. Pop. 11,800.

**Latter Day Saints**, see **MORMON CHURCH**.

**Lattice Leaf**, see **APONOGONETON**.

**Lattre de Tassigny, Jean Marie Gabriel de** (1889-1952), Fr. soldier, b. in La Vendée; he was educ. at Poitiers, Paris, and St Cyr, graduating in 1910 and joining the cavalry. He was wounded soon after the outbreak of war in 1914 and, after transfer to the infantry, was awarded 8 citations to the Croix de Guerre. At the end of the war, though only 29, he was in command of a battalion. Between the two world wars he fought in the Rif campaign in Morocco, as well as serving in sev. staff appointments. At the beginning of the war in 1939 he was chief of staff of the Fifth Army, and soon was in command of the 14th Div., until the Fr. surrender. He was in sympathy with the allied cause and, after the invasion of N. Africa, he attempted to create a bridgehead for the hoped-for invasion of S. France, but was captured and sentenced to imprisonment for 10 years. In 1943 he escaped and was rescued by the R.A.F. He later was in command of the Fr. forces in NW. Europe, and had the personal satisfaction of signing on behalf of France the surrender of Germany. In 1948 he was appointed commander-in-chief W. Union until 1950, when he was sent to Indo-China as commander-in-chief. His efforts to save Fr. Far E. ters. eventually failed, but he did not live to see this outcome.

His health deteriorated in the Far E. and he d., after being flown home to France, in Jan. 1952. His was an inspiring personality, and he was a far-sighted strategist and tactician, both militarily and politically. See G. Salisbury-Jones, *So Full a Glory*, 1954.

**La Tuque**, tn in Quebec, Canada, N. of Trois-Rivières on the St Maurice R., popular rendezvous for sportsmen as a taking-off point for fishing and hunting excursions. The prin. industry is pulp and paper. Pop. 11,000.

**Latvia** (Latvian *Latvija*), constituent rep. of the U.S.S.R., adjacent to the Baltic Sea, traversed by W. Dvina R. L. is largely lowland, partly covered by mixed forests, with many lakes and marshes and a moderately continental climate. Area 24,600 sq. m.; pop. (1956) 2,330,000, mostly Latvians (63 per cent) and Russians (35 per cent), before the war also Germans. The Latvians are a Baltic-speaking people, mostly Lutherans except the Latgale in the E. who speak a distinct dialect and are Rom. Catholics. There are varied engineering, food, light, and timber industries. Dairy farming, hog-raising, grain, flax, and potato-growing are carried on. The chief tns are Riga (cap.), Daugavpils, Liepaja, Ventpils, and Jelgava. (For *History*, see **BALTIC PROVINCES** and **BALTIC STATES**.) During the period of independence, 1918-40, the heavy industries and the seaports of L., having lost the Russian market, greatly declined, while agriculture flourished (butter and bacon being exported to Britain and Germany). Politically independent L. was first a parliamentary rep. with many parties; in 1934 the Prime Minister Ulmanis estab. through a *coup* a dictatorial nationalist regime. See A. Spekke, *Latvia and the Baltic Problem*, 1955, also bibliography for **BALTIC STATES**.

**Lauban**, see **LUBAN**.

**Laube, Heinrich** (1806-84), Ger. novelist and playwright, b. Sprottau, Silesia. In spite of a somewhat interrupted career, his output of dramas and novels was considerable, the most famous being his plays, *Graf Essex*, 1856, and *Montrose* 1859. His romances include *Die Böhmingen*, 1880, and *Der Schatten Wilhelms*, 1883. L. was noted for his ability in stage-craft, and he was director of the Vienna Burgtheater from 1849 to 1867. His collected works were ed. in 50 vols. by H. H. Houben (1910-12). See E. Ziemann, *Laube als Theaterkritiker*, 1934, and M. Dürst, *H. Laube als unser Lehrer*, 1951.

**Laud, William** (1573-1645), prelate, Archbishop of Canterbury, b. Reading; educ. at Reading Free School and St John's College, Oxford, becoming a fellow in 1592; graduated B.A. in 1594, M.A. in 1598, ordained in 1601, graduated D.D. in 1608. He was made Archdeacon of Huntingdon in 1615 and dean of Gloucester in 1617. In 1621 he became prebendary of Westminster and Bishop of St Davids, in 1626 being transferred to the see of Bath, and 2 years later to that of London. In 1630 he was elected

chancellor to the univ. of Oxford, and finally made Archbishop of Canterbury (1633). Throughout Charles I's reign L. was one of the king's most faithful supporters. He instituted rigorous proceedings against all who refused to conform to the Church of England. In 1640 he was impeached for high treason by the Long Parliament, and committed to the Tower (1641), tried in 1644, and executed in 1645. L. set himself the task of representing the Eng. Church as a branch

WILLIAM LAUD

of the Church catholic, in opposition to the Puritan, or left-wing eccles., movement of the times. Of his works the most interesting is his *Diary*, pub. by H. Wharton (1695-1700). See also his biography by his disciple and admirer, Heylin, under the title of *Cyprianus Anglicus*. His works were pub. in 8 vols. (1847-60). See lives by A. Benson, 1887; C. Simkinson, 1894; W. Hutton, 1895; W. L. Mackintosh, 1907; R. P. Coffin, 1930; H. R. Trevor-Roper, 1940.

**Laudanum**, tincture of opium (q.v.), is prepared by macerating opium in dilute spirit, and is a brown-coloured liquid with the characteristic smell of opium. It contains about 1 per cent of morphine. It is administered as a soporific and for relief in gastric troubles. Its use in the case of young infants is dangerous. L. poisoning should be treated by an emetic, for which purpose apomorphine is best. The stomach should be washed out with a salt solution and caffeine introduced by the mouth or in the form of strong coffee per rectum. The patient should be kept awake and walked about if possible. Failing this artificial respiration should be resorted to.

**Lauder, Sir Harry MacLennan** (1870-1950), Scottish comedian and singer, b. Portobello. He worked as mill-boy and miner. His first appearance on the stage was at Arbroath. His first success was in Belfast, Ireland; and his inimitable impersonations of Scottish characters on the

vaudeville stage (especially at the old Tivoli) won him deserved popularity. He wrote both words and music of many of

being some of his best. L. first went to America in 1907 and was a great favourite there. His only son, Capt. John L., was killed in the First World War, 1916. L. was knighted in 1919.

**Lauder, William** (c. 1710-71), Brit. literary forger. Educ. at Edinburgh Univ., where for a time he was an assistant in Latin, he became notorious later for his attempts to detract from Milton's honesty and literary achievements. He wrote an *Essay on Milton's Use and Imitation of the Moderns* in his 'Paradise Lost,' in which he used falsified quotations from various 17th-cent. writers to prove plagiarism on the part of Milton. Dr Douglas exposed L., and Dr Johnson made him sign a retraction of his allegations.

**Lauder, royal bor.** of Berwickshire, Scotland, situated on the R. L., 26 m. SE. of Edinburgh. It was the scene of the brutal murder of Robert Cochrane and 6 others before King James III in 1482. Pop. 600.

**Lauderdale, John Maitland** (1616-82), 2nd Earl and 1st Duke of Maitland, Scottish statesman, b. Lethington (Lennox-love), near Haddington. In 1643 he was named one of the commissioners for the Solemn League and Covenant. In 1645 he succeeded his father as second Earl of L., and by 1647 had gone over to Charles I. In 1651 he followed Charles II to Worcester, where he was taken prisoner and detained for 9 years. He became Scottish secretary of state at the Restoration, and laboured with persistence to bring about the absolute power of the Crown in Church and State. He was a member of the Privy Council and had a seat in the Cabal ministry. In 1672 he was created duke. His administration in Scotland was ruthless and unpopular, but the king resisted all efforts to overthrow his favourite, and L. remained in office until 1680, when he resigned. See life by W. C. Mackenzie, 1923.

**Laudon, Gideon Ernst**, see **LOUDON, BARON VON**.

**Lauds**, see **BREVIARY**.

**Laue, Max Theodor Felix von** (1879-), Ger. physicist, b. Pfaffendorf, near Koblenz, prof. at Zurich, Frankfurt, and later at Berlin, 1919-43. As a physicist of high standing he is chiefly known as the pioneer of modern X-ray crystal study. He surmised that the regular arrangement of points in a crystal would serve to produce diffraction effects on incident X-radiation. Success was expected because of the comparable values of point distances in a crystal and the supposed wave-length of X-rays. The experiment performed by Friedrich and Knipping (1912), at his suggestion, vindicated his theory. He was awarded the Nobel prize for physics in 1914. He has pub. *Die Relativitätstheorie*, 1919, *Über die Auffindung der*

*Röntgenstrahlinterferenzen* (Nobel lecture), 1920, *Röntgenstrahleninterferenzen*, 1941, *Materiewellen und ihre Interferenzen*, 1944, *Geschichte der Physik*, 1946, and *Theorie der Supraleitung*, 1947.

**Lauenburg, Duke of**, see **BISMARCK**.

**Lauenburg**. 1. Former Ger. duchy, on the r. b. of the Elbe between Holstein and Mecklenburg (qq.v.). In 1876 it became part of Schleswig-Holstein (q.v.). The last holder of the dukedom was Bismarck (q.v.). Area 453 sq. m.

2. Ger. tn in the Land of Schleswig-Holstein, at the junction of the Elbe and the Elbe-Trave canal, 66 m. S. by E. of Kiel (q.v.). It was formerly the cap. of the duchy of L., and in the Middle Ages was an important tn on the 'Salt Route.' It is now a zonal crossing-point on the frontier between W. and E. Germany. Pop. 11,000.

**Lauenburg**, see **LEBORK**.

**Laugharne**, small tn and par. of Carmarthenshire, Wales, on the Taf estuary, with remains of a 12th-cent. castle and a 15-cent. church. The poet Dylan Thomas lived and was buried here. Pop. 1010.

**Laughing Gas**, or **Nitrous Oxide**, colourless gas with a faintly sweetish taste. It is used as an anaesthetic in minor surgery, particularly dental surgery, and in conjunction with oxygen as a general anaesthetic for major surgery and obstetrics (see **ANAESTHESIA**; **OBSTETRICS**; **SURGERY**). It is non-irritant and non-toxic and induction of anaesthesia and recovery from it are rapid. Unless oxygen or air are administered with L. G. asphyxia occurs.

**Laughing-Jackass**, **Great Kingfisher**, or **Kookaburra**, popular name of the species of *Dacelo*, an Australian genus of coraciiform birds belonging to the family Alcedinidae. They are so called because of their

LAUGHING-JACKASS

extraordinary gurgling notes. *D. gigas*, the prin. species, has brown plumage, with a white stripe on each side of the head. It nests in shady forest regions, but will also frequent the vicinity of

houses. The food consists of insects, lizards, snakes, mice, rats, small birds, and

Laughton, Charles (1899- ), Eng. actor, b. Scarborough. He was educ. at Stonyhurst and the Royal Academy of Dramatic Art, and made his first appearance in 1926. Married Elsa Lanchester in 1929. His film roles include *The Private Life of Henry VIII*, 1933, *The Barretts of Wimpole Street*, *Ruggles of Red Gap*, *Mutiny on the 'Bounty'*, and *Rembrandt*. In 1937 he formed his own film company, the Mayflower Pictures Corporation, in partnership with Erich Pommer. See Elsa Lanchester, *Charles Laughton and I*, 1938. 'Launay, Vicomte de' (Delphine Gay), see under GIRARDIN, EMILE DE.

Launce, see SAND LAUNCE.

Launceston: 1. (Anct Dunheved), municipal bor., mkt tn, and administrative centre of Cornwall, England, 26 m. W. of Plymouth. There are ruins of a castle (partly Norman) and a priory. Tin, tungsten, and wolfram are mined in the vicinity. Pop. 4600.

2. Chief city of N. Tasmania, beautifully situated in a valley at a confluence of the N. Esk and S. Esk Rs., which form the estuary of the R. Tamar. It is a thriving up-to-date city, being the second city in the state and is often referred to as the N. cap. It was founded in 1804 by Col. Paterson and named by him after Governor King's native tn in Cornwall, England. The right of self-gov. was granted in 1852. It became a tn in 1858 and was declared a city in 1889. It is well laid out and has all modern utilities, such as electricity, gas, tram and bus services, filtered water supply, sewerage, beautiful parks, good theatres and excellent schools, modern crematorium and cemetery, a museum and art gallery and free library. It has made rapid strides in its industries, which include textile mills, pottery works, concrete and earthenware pipes manuf., tennis rackets and other sporting goods, brewery, timber-mills, railway workshops. L. is the terminus of the prin. steamship lines operating between Tasmania and the mainland of Australia. Agric. produce, fruit (principally apples), minerals, timbers, wool, and woollen goods are the main exports of the port. Pop. (with suburbs) 50,690.

Launch (Malay *lanchar*, quick, speedy), name given to one of the largest size of ship's boats, or to a boat propelled by electricity, internal combustion engine, or steam.

Launch, Motor, see MOTOR BOATS.

Laundries (Lat. *laundria*, things to be washed; *lavare*, to wash), estabs. for the washing of soiled body and table linen. Articles formerly rubbed by the hands of the laundress, or stirred and beaten with a 'dolly' (viz. a wooden rod with a series of spokes at the lower end and a crossbar handle at the upper), are now commonly treated in rotary washing-machines driven by power. The best type of rotary consists of an outer cylinder of metal containing an inner horizontal cylindrical cage, in which the clothes are placed.

Then the doors are closed, the machinery is set in motion, and hot water and cleanser are admitted, the clothes being tumbled on each other in the cleanser and water contained in the outer casing, which enters the cylinder through perforations. The clothes are soaked in alkaline water, washed, boiled, and rinsed, all without removing them from the machine. The linen is then taken from the machine and placed in a hydro-extractor which consists of a perforated metal basket revolving rapidly inside an iron or steel case. The water is thrown out through the perforations in the basket by centrifugal force and the linen is ready to be taken out in about 20 minutes, the drying often being completed in an apartment through which dry air is forced by fans. The ironing machines generally consist of a polished metal roller or polished head heated by gas or steam, working against a felted surface in the form of another roller or flat table; or (Decoudun type) of a felted metal roller rotating against a heated concave bed of polished steel. Hand-ironing is still practised and time is saved by continuously heating the irons by means of gas or electricity. In Great Britain L. are inspected by public health officials, and there are legal provisions for the hours of employment and the workers' conditions. See also DRYING MACHINES and HOME LAUNDRY. See Agnes Jackman and B. Rogers, *Principles of Domestic and Institutional Laundrywork*, 1934; P. F. Jolly and W. Burt, *Laundrywork*, 1934; A. Harvey, *Laundry Chemistry*, 1935.

La Unión (anct Herrería), Sp. tn in the prov. of Murcia, in a dist. which has iron, manganese, calamine, sulphur, silver, and lead mines. Pop. 12,000.

Laurea (Gk. 'alley', possibly from Lat. *lura*, mouth of a bag), name given to a group of cells inhabited by ascetics or monks in the deserts of the E. St Charito appears to be the first to have founded a L.

Lauraceae, family of dicotyledonous tropical and sub-tropical evergreen trees and shrubs of over 1000 species. Many are aromatic. Chief genera are *Cinnamomum*, *Laurus*, *Lindera*, *Litsea*, *Ocotea*, *Persea*, *Sassafras*, and *Umbellularia*.

Laurehütte, see SIEMIANOWICE SZASKIE.

Laureate, Poet (Lat. *laureatus*, from *laurea*, 'the laurel-tree'), title conferred by letters-patent from the Eng. Crown on the poet attached to the royal household. Its origin is obscure. In anct Greece the laurel wreath was the crown of honour of poets and heroes, and thus the word laureate came to mean in English eminent, generally, though not always, in a literary sense. The medieval kings had poets or minstrels attached to their households who received pensions, though the appointment was not official. In this way Ben Jonson was looked upon as the first L., but the title seems never to have been really conferred upon him, John Dryden being the first Eng. poet to receive the title by letters-patent in 1670. It is interesting in this connection to draw attention

to the position of John Skelton, who, about 1500, seems to have been called P. L., or King's Orator, and insisted on being, so termed. He certainly was awarded by the univs. of Oxford and Cambridge the degree of L., a degree in grammar, including rhetoric and versification at the award of which the graduate was presented with a laurel. In 1493, however, Skelton was granted the distinction of wearing a white and green dress with the name Calliope embroidered on it and he soon after became tutor to the

1878; K. West, *The Laureates of England*, 1896; R. K. Broadus, *The Laureateship*, 1921.

Laurel, Stan (real name Arthur Stanley Jefferson) (1890- ), actor and comedian, b. Ulverston; educ. King James School, Bishop Auckland. He appeared in circuses, musicals, dramatic plays, and vaudeville. He began his screen career with Hal Roach in 1917, then produced and directed his own comedies. In 1929 he teamed with Oliver Hardy (q.v.) and formed a comedy partnership in which

Yellowknife on the Great Slave Lake, North-west Territories. The sparse coniferous forest, the large areas of bare rocks, the lakes in the glaciated landscape, are all typical of the region.

future Henry VIII (see P. Henderson's ed. of Skelton's works, 1931). From Dryden onwards the post became a regular institution. The complete list of L.s. with their terms of office, is: John Dryden, 1670-89; Thomas Shadwell, 1689-92; Nahum Tate, 1692-1715; Nicholas Rowe, 1715-18; Lawrence Eusden, 1718-30; Colley Cibber, 1730-57; Wm Whitehead, 1757-85; Thomas Warton, 1785-90; Henry James Pye, 1790-1813; Robert Southey, 1813-43; Wm Wordsworth, 1843-50; Alfred Tennyson, 1850-92; Alfred Austin, 1896-1913; Robert Bridges, 1913-30; John Masefield, 1930-. The P. L. generally produces formal and appropriate verses on public and state occasions, though the custom at the present day is not obligatory. See W. Hamilton, *The Poets Laureate of England*,

much of the humour is derived from the contrasting physical appearance of its 2 members, L. being the thin, mournful-looking one whose simplicity infuriated the plump Hardy. Their films include *Berth Marks*, *Pack up your Troubles*, *Babes in Toyland*, *Bonnie Scotland*, *The Bohemian Girl*, *Swiss Miss*, *Blockheads*, *Air Raid Wardens*, *Jitterbugs*, *The Dancing Masters*, and *The Bullfighters*.

Laurel, term properly applied to the 2 species of *Laurus*, the chief genus of Lauraceae, but it is also used in a compound name of other plants, e.g. cherry-L. (*Prunus*), spurge-L. (*Daphne*), and sea-side-L. (*Phyllanthus*). *L. nobilis*, the true L. or sweet bay, is to be found round the Mediterranean, and its aromatic leaves are used in condiments; *L. canariensis* is a native of the Canary Is.

**Laurel**, Cherry, or *Prunus laurocerasus*, species of Rosaceae, closely allied to the bird-cherry, almond, and plum. See CHERRY.

**Laurencekirk**, burgh in Kincardineshire, Scotland, 29 m. SSW. of Aberdeen. Pop. 1485.

**Laurencin**, Marie (1885-1956), Fr. painter and graphic artist, b. Paris. She first exhibited there in 1907 and became celebrated in the 1920's for charming stylised figure paintings, the features suggested rather than drawn, carried out in pastel pinks and blues. Her work included drawings, lithographs, mural decorations, and dress design (for Paul Poiret).

**Laurent**, Auguste (1807-53), Fr. chemist, b. near Langres, France. He is chiefly noted for his discoveries with Gerhardt in connection with the homologous series and the theory of types. He was appointed prof. of chem. at Bordeaux in 1838, and warden of the mint, Paris, in 1848. L. did important research work on naphthalene, paraffin, and phenol.

**Laurentia**, see ACCA LARENTIA.

**Laurentian rocks**. Name given to Pro-Cambrian rocks covering an area of over 200,000 sq. m. N. of the St Lawrence in Canada. The L. consists of highly altered sedimentary and volcanic rocks into which much granite has been intruded, the whole now forming a complex of crystalline material once deeply buried within the crust of the earth during a time in which a Pre-Cambrian mt range occupied this area. Erosion has exposed these rocks which give rise to a characteristic landscape and which form a part of the Canadian Shield from which much of the mineral wealth of Canada is drawn.

'**Laurentic**,' auxiliary cruiser which was sunk off the Irish coast by a Ger. submarine or mine on 25 Jan. 1917. She carried a cargo of gold bars to the value of £6,000,000. £4,958,000 worth were recovered.

**Laurentum**, cap. of the anct kingdom of Latium (q.v.). It was the traditional residence of the mythical Latinus, first King of Latium. See Virgil, *Aeneid*, vii-xii.

**Lauria**, It. tn in Basilicata (q.v.), 42 m. S. of Potenza (q.v.). It has textile manufs. Pop. 12,000.

**Lauriacum**, see ENNS.

**Laurier**, Sir Henri Charles Wilfrid (1841-1919), Canadian Liberal statesman; b. St Lin, near Montreal; only son of Carolus L., Catholic and Fr.-Canadian land surveyor. He was educ. at L'Assomption College and McGill Univ. He practised law for a while in Montreal, but ill health obliged his removal to Arthabaska, prov. of Quebec. He was not in favour with the higher clergy of his church, and his weekly paper, *Le Défricheur*, was banned. In 1871 he was elected to the prov. legislature for Drummond and Arthabaska cos., and from 1874 he represented the same constituency in the Dominion Parliament. He was minister for inland revenue in the Mackenzie Cabinet, 1877-8, but had to find another seat on his appointment

at Quebec E., which he represented for the rest of his parl. life. In 1887 he succeeded Edward Blake as Liberal leader. His policy of unlimited reciprocity with the U.S.A. was not successful at the elections of Mar. 1891, just before Sir John Macdonald's death. L. always favoured free trade; and in 1896 he won the elections against the tariff-maintenance policy of Sir Charles Tupper, and became Prime Minister. He remained so until 1911—visiting London and being knighted in 1897. After 1900 his gov.

Public Archives, Ottawa  
SIR WILFRID LAURIER

gave much aid to the Grand Trunk Pacific Railway and the Canadian N. Railway in order to develop the NW. His sending of troops to aid the Brit. in S. Africa was not approved by his native prov., which was better pleased by his resistance, at the Imperial Conference of 1902, to Chamberlain's scheme of unified empire defence. He carried the general elections of 1900 and 1908, being hotly opposed by the nationalist leader Bourassa for 'supporting British jingoism.' His once popular policy of reciprocity with the U.S.A. was defeated at the elections of 1911. During the First World War he declined Sir Robert Borden's invitation to form a coalition. See O. D. Skelton, *Life and Letters of Sir Wilfrid Laurier*, 1922.

**Laurine**, fatty principle of laurel berries; in appearance it is crystalline, and to the taste it is bitter.

**Laurion**, or *Ergasteria*, mining tn in Greece, 25 m. SE. of Athens. It has anct lead and silver mines, reopened in 1864, and iron and manganese are also produced. Pop. 6700.

**Lauriston**, Jacques Alexandre Bernard Law, Marquis de (1768-1828), general and

ultimately marshal of France, b. Pondichery, India. He distinguished himself in the Republican army campaigns, becoming aide-de-camp to Napoleon in 1800. In 1802 Napoleon sent him to England with the ratified treaty of Amiens. He also went on diplomatic missions to Denmark and Russia. He commanded the rearguard in the retreat from Moscow.

Laurvik, see LARVIK.

Laus Pompeia, see LODI.

Lausanne, cap. of the canton of Vaud, Switzerland, on the N. shore of Lake Geneva. It has a very fine cathedral (Protestant since the Reformation) dating back to the 13th cent., the restoration of which was completed in 1926, a 15th-cent. castle, a univ., a museum of natural hist., and an art gallery. L. is the seat of the Federal Tribunal. Voltaire, Byron, and Dickens paid extended visits to the tn, and Gibbon wrote part of his *Decline and Fall of the Roman Empire* there. Main industries are machinery, tobacco, and chocolate, and the tn is an important commercial and main-line railway centre of W. Switzerland. Pop. (1957) 117,350, Fr.-speaking.

Lausanne, Treaty of (1923), officially terminated the state of war between the Allies and Turkey by bringing to an end the difficulties outstanding between the Allies and the Angora Turks. Though Turkey surrendered unconditionally to the Allies in Oct. 1918, the Angora Turks declined to accept the treaty of Sèvres, which mandated Smyrna to Greece, and made war on Greece (see GRAECO-TURKISH WAR). After the evacuation of Smyrna a convention was stated between the Allies and Kemal Atatürk at Mudania, thereby averting further war (Oct. 1922). The Lausanne Conference between the Allies and the Kemalists began 20 Nov. 1922, the chief Brit. delegate being Lord Curzon, who was then foreign secretary, and dragged on to April 1923. The treaty, which was signed on 24 July 1923, ceded E. Thrace (including Adrianople) to Turkey, but took away from Turkey Palestine and Iraq, which were mandated to Great Britain, Syria, which was mandated to France, and also the rest of Arabia. The treaty left the N. frontier of Mesopotamia to be settled by later negotiation or, failing agreement, by reference to the League of Nations. This matter was eventually settled by a tripartite treaty between Great Britain, Turkey, and Iraq, signed at Ankara in June 1925. It also confirmed It. possession of the Dodecanese (q.v.) and Gk possession of is., except Imbros and Tenedos, formerly held by Turkey in the Aegean. All Turkish rights over Egypt, the Sudan, and Cyprus were surrendered. But the most vital clause was that which concerned the straits. This clause guaranteed the freedom of the straits: zones on each side of the Bosphorus and the Sea of Marmora were demilitarised by special convention, and rules were laid down for preserving the freedom of the straits in both peace and war, such rules to be applied by a mixed commission of the

League of Nations. But by the Montreux Convention, 1936, Turkey regained the right to fortify the straits. See H. W. V. Temperley, *History of the Peace Conference of Paris* (vol. vi), 1924; Earl of Ronaldshay, *Life of Lord Curzon*, 1928-9; H. Nicolson, *Curzon: the Last Phase*, 1919-26, 1934.

Lausitz, see LUSATIA.

Lauterbrunnen, vil. and resort in the Bernese Oberland, Switzerland, 6 m. S.E. of Interlaken. It is situated in a picturesque valley and has numerous waterfalls, the most famous of which is the Staubbach (980 ft.). A cog-railway connects L. with Grindelwald, over the Kleine Scheidegg pass, and a funicular electric railway ascends to Mürren. Pop. 3000.

Lauson, city on the S. shore of the St Lawrence R., near Quebec city, Canada. Shipbuilding and repairing are the prin. industries. Pop. 10,000.

Lava, substance which is emitted in a liquid state from the crater of a volcano. L.s are divided into different classes, the quality of the L. depending on the amount of silica which it contains. Those which are known as 'basic' contain less silica than the others, and flow for much greater distances, as they are less viscous. The exterior or crust of a stream of L. cools quickly when exposed to the air, and the molten L. which is underneath often breaks through this crust and continues its course, thus disturbing the evenness of the original surface and forming loose blocks of material.

Laval, Gilles de, see RRETZ.

Laval, Pierre (1883-1945), Fr. politician, b. Châteldon, near Vichy, son of a butcher of gipsy extraction. L. became a school teacher in Auvergne, but having gained a footing in trade union circles as a militant Socialist he went to Paris and became a lawyer. In 1908 he was elected mayor of Aubervilliers. In 1914 he was elected to the Chamber of Deputies. He joined his regiment at the front on the outbreak of the First World War, but was on the suspects list till 1918. He was defeated in the 1919 elections, but elected again 5 years later. His subsequent progress was rapid. In 1925 he was minister of public works under Poincaré, and he sat as Independent senator for the Seine dept from 1926. L. was Prime Minister in 1930, 1931, 1932, 1935, and 1936, and foreign minister for a time in 1934, 1935, and 1936. Concurrently with this accession of power his private fortune grew enormously and he bought the historic castle of Châteldon, overlooking the tiny cottage where he was born, and, as his wealth increased, his early left-wing ideals were apparently forgotten. He was responsible, with Hoare, for the abortive Hoare-L. plan for satisfying Mussolini's Ethiopian ambitions in 1935, and in 1936 he resigned to give way to Blum after the Left victory at the elections in that year. When the Second World War came, as easy Ger. conquests multiplied, he became less discreet and began to sound various politicians on the feasibility of forming a Pétain gov. to organise a Lat. bloc with Mussolini and Franco and thereby leave

Britain to face Germany single-handed. When France collapsed L. was at once called into Pétain's Cabinet as minister of state and deputy prime minister, was nominated Pétain's successor, and appointed foreign minister. Pétain, however, disliked L. personally and was suspicious of his ambitions, and in Dec. 1940 L. was suddenly dismissed and arrested. But the Germans secured his release and L. fled from Vichy France to Paris. In Aug. 1941 he and Déat, the Fascist leader, were shot at during a military ceremony at Versailles and L. was seriously injured. Pétain resisted Ger. efforts to secure L.'s reinstatement, but in April 1942 he had to yield to a Ger. ultimatum and the Vichy Gov. was reconstituted with L. at its head. In Nov. 1942 Pétain signed constitutional Acts giving L. power to make laws and issue decrees on his signature alone. This made L. virtual dictator of France, under Ger. supervision. Yet it is clear, that though the free world considers L. the arch-collaborator, the Germans frequently considered his collaboration too half-hearted; he had to be on constant guard against attempts to supplant him. After 1943 L. played a leading part in the deportation of Frenchmen to work in Germany, a role probably forced on him by the Germans and by the growing power of Fr. resistance; he was not naturally a cruel man, but as the last resort was willing to act in any way which would safeguard his personal position. In 1944 he went to Germany, and was soon afterwards sentenced to death in his absence by a Marseilles court of justice. In 1945 he flew to Spain, but later surrendered himself into Fr. hands. He was again put on trial, this time in the high court in Paris, before 3 judges and 24 assessors, and found guilty on all the main charges preferred against him—conspiracy against the security of the State, collaboration with the enemy, and armed action against the Fr. resistance movement—and condemned to death (9 Oct. 1945). On the morning of the day of his execution he tried to take his own life by poison but was not successful, and soon afterwards met his fate before a firing squad (15 Oct.), dying with calm and courage. In a detailed defence of his actions, which he left to be pub. after his death, he denied that he had ever hated Britain, declared that the policy of collaboration was engineered at Montoire between Hitler and Pétain, and averred that in 1941 Darlan, then in power, went to Hitler to confer on an extensive scheme for a real alliance with Germany. See *The Unpublished Diary of Pierre Laval*, 1948. See also A. Werth, *France, 1940-1945*, 1955, and P. Farmer, *Vichy Political Dilemma*, 1955.

**Laval**, cap. of dept. of Mayenne, France, on the Mayenne, 45 m. E. of Rennes. It is the seat of a bishopric and has numerous historic buildings. The old feudal city is on the r. b. of the river, and the new tn on the l. b. There are metal industries and linen-mills. Pop. 32,500.

**Laval-Montmorency**, François Xavier de (1622-1708), Fr.-Canadian bishop, native

of Laval. Ordained priest in 1647, he became archdeacon of Evreux, France. He went (1659) to Canada as vicar apostolic of New France and titular Bishop of Petraea. His authority being contested by the archdeacon of Rouen, the Pope made L.-M. first Bishop of Quebec (1674) and immediately responsible to Rome. A great educationalist, L.-M. founded the seminary of Quebec (1663), a junior seminary (1668), and an industrial school (1678). He resigned in 1688, but returned to Canada to work under his successor. Laval Univ. (Quebec) is named after him.

**Laval University**, Fr. Catholic institution founded by the Seminary of Quebec in 1852 under royal charter; a papal bull extended its constitution in 1876. It is under the general supervision of the Archbishop of Quebec and a council of bishops of the prov. of Quebec. The Univ. Council nominates profs. other than those in the faculties of theology, canon law, and philosophy. The usual language of instruction is French. There are faculties of agriculture, arts, commerce, forestry and surveying, law, letters, medicine, philosophy, sciences and engineering, social sciences, and theology. Graduate studies, education, nursing, social work, and fisheries are among some of the subjects studied in special schools of the univ. There are in all some 8000 students. Bachelor's, master's, and doctor's degrees are granted. The univ. controls the programmes and examinations of many secondary type schools most of which are in the provs. of Quebec and Montreal.

**Lavalleja**, inland dept. of Uruguay (cap. Minas). It is chiefly an agric. region, producing wheat, maize, linseed, oats, and raising cattle. Area 4819 sq. m.; pop. 118,000.

**La Vallière**, Louise Françoise de Lebaume Le Blanc, Duchesse de (1644-1710), mistress of Louis XIV, to whom she bore 4 children, and who made her a duchess, 1677. When Athénaïs de Montespan became a royal favourite La V. retired to a Carmelite nunnery in Paris, where she lived the remaining 30 years of her life. She pub. *Réflexions sur la miséricorde de Dieu par une dame pénitente*, 1680. See G. Basset d'Auriac, *Les Deux Pénitences de Louise de la Vallière*, 1924; also lives by A. Housaye, 1860; J. Lair, 1891 (Eng. trans., 1908); J. Cladel, 1912.

**Lavater**, Johann Kaspar (1741-1801), Swiss Protestant and writer, b. Zürich; he took orders in the Protestant church in 1762 and was appointed to the church of St Peter. He had before this, however, written a book of Swiss poems called *Schweizerlieder*, 1767. His other works are *Aussichten in die Ewigkeit*, 1768-78, and *Physiognomische Fragmente zur Beförderung der Menschenkenntnis und Menschenliebe*, 1775-8, the latter being his great work on physiognomy. A selection of his works was ed. in 1943 by E. Stähelin. See studies by O. Guinaudeau, 1924; C. Janentsky, 1928; O. Farnet, 1938; T. Hasler, 1942.

Lavour, Fr. tn in the dept of Tarn, on the Agout. It has a fine Gothic church, formerly a cathedral. Silk is manuf. Pop. 5900.

La Vendée, see VENDÉE, LA.

Lavender, name given to the various species of the labiate genus *Lavandula*, which consists of hoary, narrow-leaved, fragrant bushes, inhabiting S. Europe, the Canaries, Barbary, Egypt, Persia, and W. India. The flowers are generally blue and yield much honey to bees. *L. vera*, the common L., and *L. spica*, the spike L., are the two best known species, and yield the oil used in the manuf. of L. water.

LAVENDER

Lavenham, vil. of Suffolk, England, 10 m. S. of Bury St Edmunds. In the 16th cent. L. was a noted woollen tn, and it is perhaps the finest example of such a tn still existing. Its par. church is an excellent example of the late Perpendicular style; there are streets of timbered houses and a pre-16th-cent. guild hall now restored. Pop. 1451.

Laver, see SEAWEED.

Laveran, Charles Louis Alphonse (1845-1922), Fr. physician, b. Paris and studied medicine there and at Strasburg, at which latter he qualified in 1867. He entered the army, serving during the Franco-Prussian war. In 1874 he began to teach at Val-de-Grâce military medical school. From 1878 to 1883 he served with the army in Algeria. On 6 Nov. 1880 he first saw the malaria parasite and at once grasped its significance. This great discovery was at first received with scepticism. L. was professor of military hygiene at Val-de-Grâce from 1884 to 1894. He resigned from the army in 1896 to continue his scientific work at the Pasteur Institute, Paris. Besides his research on malaria he made important contributions to the knowledge of trypanosomiasis, leishmaniasis, and other parasitic diseases. His literary output was prolific; his books include *Traité des Maladies et Epidémies des Armées*, 1875,

*Traité des Fièvres Palustres*, 1884, *Du Paludisme*, 1891, and *Trypanosomes et Trypanosomiasis* (with F. Ménil), 1904. In all he contributed over 600 articles and books to medical literature.

La Vérendrye, Pierre Gaultier de (1685-1749), Canadian explorer, b. Three Rivers. Serving as a soldier he was wounded at Malplaquet. Prompted by an Indian's tale, he set out for the W. with 3 sons in 1731, starting from Montreal and Lake Superior. He reached Lake Winnipeg, but had to return to Montreal to be examined by his financial helpers. He returned to establish Fort Rouge (Winnipeg) and Fort La Reine (Portage La Prairie). In the winter of 1738 he set out S.-westwards from Fort La Reine and reached the Missouri R., suffering great hardships on the return journey. Two of his sons then began exploring alone, and on 1 Jan. 1743 sighted the Rocky Mts. To La V. and his sons is due the credit for opening up the great W. plains. See A. C. Laut, *Pailfinders of the West*, 1904, and G. Dugas, *The Canadian West, and its Discovery by De La Vérendrye* (trans.), 1905.

Lavery, Sir John (1857-1941), portrait painter, native of Belfast, Ireland. Studied in Paris and, about 1881, became acquainted with Sir James Guthrie and the 'Glasgow School' of artists. He rapidly made a name for himself and received many official commissions; but it was in his smaller studies of interiors with figures, such as those of 'The House of Lords' and 'The House of Commons,' and impressions of jockeys in the weighing-room, that he showed his more characteristic powers. Among his best portraits are those of Lord Melchett and Mr Cunningham Grahame and (for the National Gallery of Ireland) of Arthur Griffith and Michael Collins. In 1883 his 'Two Fishers' was exhibited in the New Salon, and 'The Tennis Party' (Munich Pinakothek) at the Royal Academy, 1887. Among his other best known works are 'Mother and Son,' 'White Feather,' 'A Lady in Black,' 'The Visit of Queen Victoria to the Glasgow Exhibition' (1888) is hung in the Glasgow Gallery. He was commissioned by the Free State (now Rep. of Ireland) Gov. to design the first currency notes in that country. Knighted, 1918. R.A., 1921. He wrote *The Life of a Painter* (autobiography), 1940. See W. S. Sparrow, *John Lavery and his World*, 1911.

La Villemarqué, Théodore Claude Henri Hersart, Vicomte de (1815-95), Fr. scholar, b. Quimperlé, Bretagne. One of his earliest works was a collection of Breton songs, *Barzaz Breiz*, 1839. Among his other works are *Contes populaires des anciens Bretons*, 1842, *Poèmes des bardes bretons*, 1850, *Poèmes bretons du moyen-âge*, 1850. He also ed. *Dictionnaire français-breton*, 1857.

Lavin, Mary (1912- ), Amer. novelist, b. Massachusetts. Educ. in Ireland at the National Univ., she settled in Meath. In 1943 the Tait Black Memorial Prize was awarded to her book of short stories,

*Tales from Bective Bridge*. Later collections of stories are *The Long Ago*, 1944, *The Becker Wives*, 1946, and *A Single Lady*, 1951. *The House in Clewe Street*, 1945, and *Mary O'Grady*, 1950, are novels. In 1947 she married Wm Walsh, a Dublin lawyer.

**Lavinium**, old Rom. tn of Latium (q.v.), 16 m. SE. of Rome. It was supposed to have been founded by Aeneas and named after his wife Lavinia.

**Lavisse, Ernest** (1842-1922), Fr. historian. He was made prof. of modern hist. at the Sorbonne in 1888 and elected a member of the Fr. Academy in 1892. From 1904 to 1919 he was director of the École normale supérieure. Among his works are *Études sur l'histoire de la Prusse*, 1879, *Trois empereurs d'Allemagne*, 1888, *La Jeunesse du grand Frédéric*, 1891, *Histoire de France depuis les origines jusqu'à la Révolution*, 1900, and in collaboration with A. N. Rambaud, *Histoire générale du VI<sup>e</sup> siècle à nos jours*, 1893-1901.

**Lavoisier, Antoine Laurent** (1743-94), Fr. chemist. He was b. in Paris of a wealthy family, his father being an advocate and his mother the daughter of an advocate; but he was brought up by his maternal grandmother. He was educ. at the Mazarin College, then notable for its excellent teaching in science. At first he was most drawn to mathematics and meteorology and assisted his geological teacher, Guettard, in a survey for a geological map of France. Later he carried out much work for the Fr. Gov. In 1768 he became a member of the Royal Academy of Science, though he had not yet done any scientific work of real importance, and shortly afterwards he was appointed one of the *fermiers-généraux* and commissioner of powder to the Fr. Gov. His chief theories and discoveries relate to the nature of the atmosphere and the process of combustion; he showed that combustion was the union of the burning substance with atmospheric oxygen. L. also discovered the composition of water independently, or partly so, of Cavendish and Watt, and to him is due in large measure the modern system of chemical nomenclature. In his famous work, *Traité élémentaire de chimie*, 1789, he gave chem. its modern form, and indeed his great services to chem. have tended to obscure his achievements in other fields; for living in the age of the Encyclopédistes his natural ambition and curiosity took him into many fields of inquiry, and the 6 great vols. of his writings, collected under the auspices of the Royal Academy of Science between 1864 and 1893, are largely devoted to his many investigations in applied science; and the fact of their pub. by the academy illustrates the prevalent and doubtless sound idea that it was a matter of public importance to have existing knowledge summarised and rationalised for the public benefit. In his researches in chem. he soon hit on combustion as the outstanding problem to be solved; and the explanation that combustion and calcination consist in the

union of the combustible or metal with oxygen, though strongly opposed by older chemists, soon gained acceptance after the pub. of J.'s *Traité* and no less rapidly in Germany, the home of the old phlogiston doctrine. L. explains the appearance of heat and light, or fire, in combustion, by assuming the existence of imponderable elements, caloric and light, which bore a strong resemblance to the old phlogiston. Chemists had universally accepted a theory that things burn because they contain an inflammable principle called phlogiston. L.'s experiments showed him that phosphorus and sulphur increased in weight during burning. The

ANTOINE LAURENT LAVOISIER  
Engraving after a painting by  
J. L. David.

experiments of Cavendish in the formation of water from hydrogen and oxygen (pub. 1784) enabled L. to complete his so-called anti-phlogistic theory and played an important part in leading to its acceptance. Cavendish's discovery in 1783 that water was formed when inflammable air from metals was burnt with oxygen gave L. the clue he needed and he named the inflammable air hydrogen, or water-producer. Thus if the vital clue came from England—from Priestley and Cavendish in particular—it was L. who interpreted their work and grasped its wider implications. L.'s surmise that the earths are oxides of unknown metals received striking confirmation in Davy's isolation of the alkali and alkaline earth metals in 1807-8. During the revolution L. continued to work for the State, but he was soon attacked by Marat, whose theory of fire had been unfavourably criticised by L. In the end no more could be charged against him than that he had, as a *fermier*, adulterated tobacco with water, and on that petty accusation the great Frenchman was condemned and, on 8 May 1794, guillotined. In 1795 his property,

previously confiscated, was restored to Mme L.—it was in 1791 that he married the beautiful and accomplished Marie Anne Paulze, daughter of a member of the *ferme* and then only 14. She helped him in his researches and the illustrations in his *Travé* are from her drawings. Some time after his death she married the Amer. scientist, Benjamin Rumford, but this second marriage proved unhappy. See lives by E. Grimaux, 1895; J. A. Cochrane, 1931; D. McKie, 1938.

**Lavoro, Terra di**, see CASERTA.

**Lavrov, Pëtr Lavrovich** (1823-1900), Russian thinker and revolutionary, a leader of the Populists (see POPULISM). He was a prof. of mathematics. L. contributed to liberal periodicals on philosophy, sociology, and anthropology, and was especially interested in ethics and the hist. of thought. He ed. the *Encyclopaedic Dictionary*, 1861-4, was banished in 1866, emigrated in 1870, and till 1872 ed. the revolutionary jour. *Forward*; he was a member of the First International (q.v.). In his famous *Historical Letters*, 1868-9, L. developed a philosophy of hist. which largely dominated the subsequent Populist thought. See *Lettres historiques*, Paris, 1903.

**Law, Andrew Bonar** (1858-1923), statesman; b. New Brunswick, Canada; son of a Presbyterian minister. He was educ. at New Brunswick; Gilbertfield School, Hamilton; and the High School, Glasgow. L. then entered an iron merchant's business in Glasgow. In 1900 he retired from business and entered Parliament as Unionist member for the Blackfriars div. of Glasgow. From the first he was an outstanding speaker, especially on economic affairs. In 1902 he became parl. secretary to the board of trade. He was the most enthusiastic supporter of 'Tariff Reform' left in the ministry when Joseph Chamberlain resigned. Defeated in Glasgow, 1906, he was returned almost immediately afterwards for Dulwich. At the second general election of 1910 he deserted Dulwich and lost at NW. Manchester. From 1911 till 1918 he represented Bootle. On Balfour's resignation of the Conservative leadership, 1911, L. was selected to succeed him as the only means of reconciling the supporters of Sir Walter Long with those of Austen Chamberlain. Before the First World War he was one of those who advocated resistance by Ulster to Irish Home Rule. In 1915 he joined Asquith's War Coalition as colonial secretary, and he carried the Compulsory Service Bill through the Commons. He originated and took part in the Economic Conference of the Allies, 1916, and he supported Lloyd George for the premiership. In 1916-18 he was chancellor of the exchequer, member of the War Cabinet, and leader of the Commons. In 1917 he announced the gov's acceptance of the principle of imperial preference. He signed the treaty of Versailles, 1919, and had much to do with the shaping of the last Irish Home Rule Act (which never operated). From 1918 until his death he represented Central Glasgow.

Lord privy seal, 1919-21, when he resigned for health reasons. He appeared to make a good recovery, and when the Coalition fell in Oct. 1922 L. became Prime Minister, winning the general election on a slogan of 'tranquillity.' Failing health caused him to resign 20 May following, and he d. 5 months later. See life by R. Blake, 1955.

**Law, Edmund** (1703-87), Bishop of Carlisle, b. Cartmel, Lancs., and educ. there and at Kendal. Graduated at St John's College, Cambridge. In 1743 he became archdeacon of Carlisle, and returned to Cambridge in 1756 as master of Peterhouse; he was appointed librarian to the univ. in 1760 and Knightbridge prof. of moral philosophy in 1764. He became Bishop of Carlisle in 1768 and was an earnest student of Locke, whose works he ed. in 1777. His own most important philosophical work is *Considerations on the State of the World with regard to the Theory of Religion*, 1745.

**Law, Edward**, see ELLENBOROUGH.

**Law, John** (1671-1729), Scottish financier, originator of the Mississippi scheme, b. Edinburgh. Having killed a man in a duel, he fled to Holland in 1697, where he studied banking. After a few years returned to Scotland and in 1700 unsuccessfully proposed to the Scottish Parliament a system of paper currency. In 1716, under the patronage of Orleans, the Fr. regent, he set up a private bank in Paris, and soon afterwards persuaded the regent to found a national bank, which issued banknotes and raised the credit of the gov. His Mississippi scheme, which was at first enormously popular, proved a disastrous failure, and L. fled from Paris in 1720 and d. in poverty at Venice. He wrote *Money and Trade*, 1705, and *Lettres sur le nouveau système des finances*, 1720. See A. W. W. Stoyon-Glynn, *John Law of Lauriston*, 1907; G. Oudard, *La Très Curieuse Vie de Law*, 1927; H. Montgomery Hyde, *The Amazing Story of John Law*, 1948.

**Law, William** (1686-1761), divine, b. Kingscliffe, Northants. In 1711 he was ordained and elected fellow of Emmanuel College, Cambridge; but on the accession of George I, being unable to take the oath of allegiance, he forfeited his fellowship, and became a non-juror. From about 1727 until 1737 he was tutor in the household of Edward Gibbon, father of the historian. In the latter year L. retired to Kingscliffe. His controversial writings include *Three Letters to the Bishop of Bangor*, 1711, *Remarks on Mandeville's Fable of the Bees*, 1723 (repub. by F. D. Maurice, 1844), and *Case of Reason*, 1732, written in reply to Tindal's *Christianity as old as the Creation*. His *Treatise of Christian Perfection*, 1726, and the *Serious Call to a Devout and Holy Life*, 1729, which had a profound influence on the leaders of the Evangelical Revival, still remain the most popular of L.'s works. The influence of Jacob Boehme is seen in the mysticism of his later writings, *The Spirit of Prayer*, 1749, 1752, *The Way to Divine Knowledge*, 1752, and *The*

*Spirit of Love*, 1752, 1754. An ed. of his works was pub. in 9 vols., 1772-6, and an ed. by G. B. Morgan in 1893. See C. Walton, *Notes and Materials for a Complete Biography of W. Law*, 1848; J. H. Overton, *William Law, Non-juror and Mystic*, 1881; A. Whyte, *Characters and Characteristics of William Law*, 1892; K. Minkner, *Die Stufenfolge des mystischen Erlebnisses bei William Law*, 1939; N. Tallen, *William Law: a Neglected Master of English Prose*, 1948.

**Law.** Among the many definitions of L. is that of Prof. Holland, namely 'Law in general is the sum total of those general rules of action as are enforced by a sovereign political authority.' This definition is particularly relevant to a mature political society. Even primitive communities are ordered by rules which are imposed by the authority of a tribal chief or council or accepted by common consent. The sources of these rules are various, written and unwritten.

Rom. lawyers recognised a distinction between 'positive' L. (i.e. settled by men for their practical needs) and 'natural' L., which was a conception of an ideal system. Rom. L. is admirably set out in the *Institutes of Justinian*. Many continental legal systems are inspired by Rom. L. and its influence is to be found in Scots L. The Eng. legal system has its origins in customary L.s which have been developed by judicial precedents. Although even in medieval times Eng. jurists produced scholarly treatises on L., Eng. L. has never been set out in a code such as the Code Napoléon or formally summarised in the periodical 'Restatements' produced by Amer. jurists.

The prin. sources of Eng. L. are legislation and the principles worked out in decided cases in the courts ('judge-made' L.).

(a) **Legislation.** This is the body of statute L. enacted by the legislature. It also includes subordinate legislation by Gov. depts and other public bodies on matters delegated to them by statute (see LEGISLATION).

(b) **Judge-made law.** The legal principles evolved from precedents in decided cases are known as the Common L. In order to mitigate the hardship sometimes inflicted by the strict application of the Common L. a system known as Equity was evolved. The decisions of courts of equity have now hardened into a system of judicial precedent but still provide equitable remedies which would not otherwise have been available at Common L. (see EQUITY).

There are sev. classifications of L. The most important is probably its div. into Private and Public L. The former is concerned with rights and obligations under the civil as opposed to the criminal L., arising out of such matters as property, contracts, torts or actionable wrongs, and 'status' (e.g. the L. of husband and wife, infants, lunatics, and bankrupts). Public L. may be subdivided into criminal, constitutional, and administrative. Criminal L. deals with infringements of the L.

which are punishable by fine, imprisonment, or other judicial sanction. Constitutional L. is concerned with the analysis of the legislative, executive, and judicial elements of the gov. of a country and the rights and obligations of the individual vis-à-vis the State (see CONSTITUTIONAL LAW). Administrative L. is an expanding body of L. regulating the executive, quasi-legislative, and quasi-judicial functions of public authorities (see ADMINISTRATIVE LAW).

L. may also be classified as substantive or adjectival L. Substantive L. defines legal rights and duties. Adjectival L. is concerned with the procedural machinery which gives effect to those rights and duties. For example, the legal rules determining nuisance, negligence, or contract are in the province of substantive L. The court procedure governing injunctions to restrain the commission of nuisances, action for damages for negligence, and decrees for specific performance of contract belongs to adjectival L.

Most questions which arise for determination in a L. court are questions of L. or of fact, meaning by the former a question as to what is the L. on a particular point; questions of fact, where there is a jury, are for its decision; questions of L. are for the court to decide. See also INTERNATIONAL LAW; JURISPRUDENCE; JUS GENTIUM.

See J. Bentham, *Traité de législation*, 1830; J. Austin, *Jurisprudence*, 1869; T. E. Holland, *Jurisprudence*, 1880; I. Kant, *Philosophy of Law*, 1887; Sir F. Pollock and E. Maitland, *History of English Law*, 1895; Sir F. Pollock, *Essays in the Law*, 1920; W. S. Holdsworth, *History of English Law*, 1922-38; T. F. T. Plucknett, *Concise History of Common Law*, 1936; Sir H. Slessor, *The Administration of the Law*, 1949; K. Renner, *The Institutions of Private Law and their Social Functions*, 1949.

**Law, Degrees in,** see LEGAL EDUCATION.

**Law Courts,** see COUNTY COURTS; COURT OF SESSION; ROYAL COURTS OF JUSTICE; SUPREME COURT OF JUDICATURE; etc.

**Law Lords,** those members of the Brit. House of Lords who act as lords of appeal. The body comprises 9 lords of appeal in ordinary, with a salary of £2000 a year, either former judges or law officers of the Crown. To these are joined the lord chancellor and any peers who have formerly held high judicial office or have been lord chancellor. The 9 ordinary lords are made peers for life on appointment. See WENSLEYDALE PEERAGE.

**Law Merchant.** The L. M., or *Lex mercatoria*, was developed in the Rom. Empire and was that part of the Law of Nations (see JUS GENTIUM) which regulated the affairs of commerce. In England it was largely rooted in mercantile customs and administered by special courts outside the jurisdiction of the common law. Under the celebrated Chief Justice Lord Mansfield (q.v.) the special courts gave place to the common

law courts, and the floating customs of the L. M. were crystallised into a system and incorporated into the body of the common law.

Eng. mercantile law (the term L. M. is never used at the present day) no longer pays any regard to international customs, relying solely on Eng. trade usage. Any fresh custom which satisfies certain conditions will become part of the law, e.g. certain instruments may by custom become negotiable (*see* CUSTOMS and MERCANTILE LAW).

**Law Reports** are to be distinguished from the reports of legal proceedings in newspapers. L. R. are concisely written accounts of the arguments and judgments in such cases before the courts as involve in their decision some new legal principle or the novel application or the extension or limitation of an existing principle. Such reports are essential in any system which pays regard to precedent and recognises the value of judiciary or 'judge-made' law. There are in England at the present day a number of reports both private and official. Among the best of the unofficial reports are those of the *Law Times*, *The Law Journal*, *The Justice of the Peace*, *The Times*, and *The All England Law Reports*, cited respectively as L.T.R., L.J., J.P., T.L.R., and All E.R. The abbreviated citations of the official reports are A.C. (appeal cases), L.R.Q.B. (Queen's Bench), and L.R.C.D. (Chancery Div.), with the year and number of vol. preceding. The official L. R. only commenced on 2 Nov. 1865, and their institution was due to the exertions of W. T. S. Daniel, Q.C., a former co. court judge. Law reporting is an art requiring considerable legal training and an acute eclectic power. Many barrister-reporters of the Council of Law Reporting have subsequently acquired judicial or professional distinction. There are also the official N. Ireland Reports, but the various Scottish L. R. pub. for the faculty of advocates are not official. The Ontario L. R. are pub. by the Law Society of Upper Canada, Quebec reports by the Quebec Bar. A similar system of federal and states reports has reached its full development in the U.S.A. It is to be observed that official L. R. have, as such, no superior title to judicial respect to such unofficial reports as have gained a first-rate reputation.

**Law Society**, society of solicitors estab. in 1825 to exercise a general control over the interests of solicitors. Any solicitor practising in Great Britain, or who has ceased to practise, is eligible for membership. The society examines students for all the solicitors' examinations, and makes arrangements for lectures. The disciplinary committee of the society is empowered by statute to hear complaints of misconduct on the part of solicitors and to order that offenders be suspended from practice or struck off the roll. In cases of suspected criminal offences by solicitors the society may report to the Public Prosecutor. The society administers a compensation fund to which all practising solicitors contribute £10 per annum and

from which defrauded clients can claim compensation. The society has a building in Chancery Lane, London, and a splendid library.

**Law Terms**, *see* TERMS.

**Lawman**, *see* LAYMAN.

**Lawes, Henry (1596-1682)**, composer, b. Dinton, Wilts, was a pupil of Coperario, and in 1626 became a gentleman of the Chapel Royal. In 1633 he, with Simon Ives, wrote the music for a masque which was played at Whitehall, and in the next year composed the music for Milton's *Comus*. He wrote, among other works, *Choice Psalms put into Music for Three Voices*, 1648, and was commended by Milton for matching poetry with music fitting the words to perfection. L.'s brother Wm (1602-45), also a composer, was killed at the siege of Chester.

**Lawes, Sir John Bennet (1814-1900)**, agriculturist, educ. at Eton and Brasenose College, Oxford, and after spending some time in the study of chem. began in 1834 a regular system of agric. experiments. These he carried on at Rothamsted, on the family estate. He was assisted in his efforts, both literary and agric., by Dr Gilbert. Their joint work on artificial manures revolutionised agric. practices, and has been carried on since their time at Rothamsted, which is now a state experimental station.

**Lawn**, a fine linen (q.v.).

**Lawn**, close-mown, turf-covered plot, usually in a garden. The Eng. climate is specially favourable for the cultivation of a good L. Grass has largely superseded the camomile L. popular in Shakespeare's day. A grass L. may be made by sowing seed in Sept. or April, or by laying turf between Oct. and Feb. By laying turves evenly and closely on a firm bed and beating them thoroughly, a fine L. can be had in a few weeks. To make a L. from seed naturally takes considerably longer. The land should be perfectly level and be properly drained, and it is most important that the soil be well prepared. It is best to do the work early in Sept., first digging the whole plot, incorporating rotted manure, compost, or lawn peat, and working the soil until it is quite fine. The seed should be sown 1-1½ lb. to the square rod, then lightly raked and protected from birds. The best possible grass seed should be obtained, preferably dressed with Aldrin and Thiram against pests and disease. An estab. L. needs regular ann. treatment: aerating or spiking in autumn, top-dressing with soil compost in early winter, dressing with complete L. fertilisers in spring, rolling to firm, and mowing with increasing frequency as growth is made. Weed control should be exercised with L.-sand or selective weed-killers in late spring and early summer. *See* GARDENING. *See also* L. G. Lewis, *Turf*, 1949.

**Lawn Tennis** is one of the most popular games of the 20th cent. It originated from such games as rackets and tennis, the idea being to play the game on any large level piece of turf, without the need of a costly built court. The game is

THE SERVICE

The first photograph shows the correct sideways position, the flexing of the knees, and the transference of weight to the forward foot as the racquet swings towards the ball. The second photograph shows the moment of impact in which the weight of the server is now completely on the forward foot.

played by 2 or 4 persons with racquets and ball across a net stretched over a court. It is an out-of-door summer game, and may be played on a grass lawn, on asphalt, cinders, wood, or concrete. In winter the game may be played indoors on a covered court. The court must be kept perfectly smooth and firm, and is marked with right-hand and left-hand courts and a service line. A court should be 78 ft long and 36 ft wide for a double game, 27 ft for a single-handed game. The height of the net in the centre is 3 ft. The ball is not less than  $2\frac{1}{2}$  in. in diameter nor more than  $2\frac{1}{2}$  in. and not less than 2 oz. in weight nor more than  $2\frac{1}{2}$  oz. In a single-handed game the server must stand behind the base-line, beginning the game from the right-hand court and afterwards serving from alternate courts. He must serve the ball diagonally across the court so that it falls within his opponent's service-court or upon the lines enclosing the service-court. If the ball touches the net, the service otherwise fulfilling the above conditions, it is counted as a 'let' and the server serves again from the same court. If the server fails to fulfil any of the above conditions the service is a 'fault.' Two faults count a point to the opponent. If the first service, however, fulfils the required conditions it 'counts,' the server may not serve again, and his opponent or the 'striker-out' must hit back the ball after the first bounce. Afterwards the ball may be volleyed on either side, or it may be hit after it has

touched the ground once. If either player fails to hit the ball over the net, or only hits it after the second bounce, or hits it so that it falls outside his opponent's bounding-lines, his opponent wins a point. In a 4-handed game the service is taken alternately by the opponents, who keep to the same side of the court to receive the service. The service is arranged so that each player serves 1 game out of 4; thus if A and B play C and D the order of service is A C B D.

*The method of scoring.* A player on winning his first point counts 15; on his second, 30; on his third, 40; if he wins a fifth stroke, before his opponent has reached further than 30, the game is his. If, however, both players have won 3 strokes the score is 'deuce.' Whoever wins the next stroke is scored 'advantage in' if he is serving, 'advantage out' if he is the striker-out. The game is not complete until 1 player has won 2 points in succession after 'deuce.' The player who first wins 6 games wins a set, but if the score is 5 all the set continues until one player has a lead of 2 games. The increased speed of play is one of the most marked recent developments.

*Service.* The server stands to the right or left of the centre line (according into which court he is serving). The ball should be thrown 4 or 5 ft up, and about 1 ft in front of the hitting shoulder. The hit should then be made with arm and racquet at full stretch, care being taken that the foot opposite to the striking arm

FOREHAND DRIVE AND BACKHAND VOLLEY

The first photograph shows the correct execution of the forehand drive; horizontal racquet, toes pointing to the sidelines, and the shoulder towards the net. The low backhand volley shows the knees well flexed, and the racquet held above wrist level.

*Photographs by courtesy of the Dunlop Sports Company*

is behind the base line and in contact with the ground until the hit is completed. The perfect service combines high speed with accuracy of placing.

**Strokes.** Other basic strokes are the forehand and backhand drive and the forehand and backhand low volley. In the forehand drive the hitting arm is extended fully, in line with the shoulder, and swung across the body over the opposite shoulder. The weight should be allowed to follow it naturally, without muscular tension. To avoid this it is well slightly to bend both knees, rising as the weight carries one on to the balls of the feet. In the backhand drive the hitting arm is carried across the body upwards towards the opposite shoulder and back again across the line of the stomach but rising to finish level with the hitting shoulder. Both forehand and backhand low volleys are made in a more or less crouching position. The latter is simply the reverse of the former; the hitting arm is not swung across the body and there is little movement of the feet. For particulars of advanced strokes (smash, spin, chop, etc.) the bibliography of the game should be consulted.

**Tactics** will largely depend upon the class of game played, men's or women's singles or doubles, or mixed doubles. The following 3 general rules, however, are indispensable to the successful player at all times and in all circumstances: (1) Learn to attack, with an all-court game, relying upon winning shots rather than upon the mistakes of an opponent. (2) Try to find out as quickly as possible an opponent's peculiarities, what are his best and weakest shots, and generally what kind of game needs to be played in order to defeat his efforts. (3) Concentration upon the game from start to finish to the exclusion of all distractions and annoyances. Broadly speaking, in the singles

game the aim is to secure a good length drive. This not only is more difficult to return, but gives one time to come up to the volleying position from which it is easiest to produce decisive shots. In doubles the return of service is probably the most important shot.

**Practice.** A practice wall with a net-high line chalked or painted on it is an excellent means of improving ground shots and teaching correct stroke-making. For practice of service much benefit can be derived from 15 min. serving from alternate ends into alternate courts of a vacant court. A player may also use a friendly match to improve his defects rather than with a view to beating his opponent; and watching an expert player will perhaps prove the best of all methods of learning the game. There are some L. T. professionals who are chiefly coaches, but L. T. has remained almost entirely an amateur game. The Brit. L. T. championships are played off at Wimbledon at the All-England L. T. and Croquet Club, which was founded towards the end of the last cent. This famous club still keeps its status as a private club, although it has moved and enlarged its grounds. The championships are organised by the L. T. Association and the club. An amateur L. T. player is not permitted to make any financial gain from playing. He is allowed to receive a contribution towards his expenses when competing in tournaments, but may not receive more than actually spent. He is not allowed to advertise commercially or gain pecuniary advantage from the game.

The winners of the All-England Championship (singles since the opening year, 1877; doubles from 1950) are as follows:

*Men champions.* S. W. Gore, 1877; F. Hadow, 1878; J. T. Hartley, 1879-1880; W. Renshaw, 1881-6, 1888-9; H. F. Lawford, 1887; W. J. Hamilton, 1890; W.

Baddeley, 1891-3, 1895; J. Pim, 1893-4; H. S. Mahony, 1896; R. F. Doherty, 1897-1900; A. W. Gore, 1901, 1908-9; H. L. Doherty, 1902-6; N. E. Brookes, 1907, 1914; A. F. Wilding, 1910-13; (no competition 1915-18); G. L. Patterson (Australia), 1919, 1922; W. T. Tilden (U.S.A.), 1930-1, 1930; W. M. Johnston, 1923; J. Borotra (France), 1924, 1926; R. Lacoste (France), 1925, 1928; H. Cochet (France), 1927, 1929; S. B. Wood (U.S.A.), walk-over, 1931; H. Ellsworth Vines (U.S.A.), 1932; J. Crawford (Australia), 1933; F. J. Perry, 1934-6; J. D. Budge (U.S.A.), 1937-8; R. L. Riggs (U.S.A.), 1939; (no official competition 1940-5); Y. Petra (France), 1946; J. Kramer (U.S.A.), 1947; R. Falkenberg (U.S.A.), 1948; F. Schroeder (U.S.A.), 1940; B. Patty (U.S.A.), 1950; R. Savitt (U.S.A.), 1951; F. Sedgman (Australia), 1952; V. Seixas (U.S.A.), 1953; J. Drobný (Egypt), 1954; T. Trabert (U.S.A.), 1955; L. A. Hoad (Australia), 1956-7.

*Women champions.* Miss Maud Watson, 1884-5; Miss Bingley, 1886; Miss L. Dod, 1887-8, 1891-3; Mrs Hilyard, 1889, 1894, 1897, 1899, 1900; Miss Rice, 1890; Miss C. Cooper, 1895-6, 1898; Mrs Sterry, 1901, 1908; Miss M. E. Robb, 1902; Miss D. K. Douglass, 1903-4, 1906; Miss M. Sutton, 1905, 1907; Miss D. Boothby, 1909; Mrs Lambert Chambers, 1910-11, 1913-14; Mrs Larcombe, 1912; (no competition 1915-18); Mlle Lenglen (France), 1919-23, 1925; Mrs L. A. Godfree, 1924, 1926; Miss H. Wills (U.S.A.), 1927-30; Fri. C. Aussem (Germany), 1931; Mrs H. Wills Moody (Miss H. Wills), 1932-3, 1935, 1938; Miss D. Round, 1934, 1937; Miss H. Jacobs (U.S.A.), 1936; Miss A. Marble (U.S.A.), 1939; (no official competition 1940-5); Miss P. Betz (U.S.A.), 1946; Miss M. Osborne (U.S.A.), 1947; Miss A. L. Brough (U.S.A.), 1948-50, 1955; Miss D. Hart (U.S.A.), 1951; Miss M. Connolly (U.S.A.), 1952-4; Miss S. Fry (U.S.A.), 1956; Miss A. Gibson (U.S.A.), 1957.

*Men's doubles.* J. E. Bromwich and A. K. Quist (Australia), 1950; K. McGregor and F. Sedgman (Australia), 1951-2; L. A. Hoad and K. R. Rosewall (Australia), 1953, 1956; R. N. Hartwig and M. G. Rose (Australia), 1954; R. N. Hartwig and L. A. Hoad (Australia), 1955; G. Mulloy and B. Patty (U.S.A.), 1957.

*Women's doubles.* Miss A. L. Brough and Mrs W. du Pont (U.S.A.), 1950, 1954; Miss S. Fry and Miss D. Hart (U.S.A.), 1951-3; Miss A. Mortimer and Miss J. A. Shilcock (Great Britain), 1955; Miss A. Buxton (Great Britain) and Miss A. Gibson (U.S.A.), 1956; Miss A. Gibson and Miss D. Hard (U.S.A.), 1957.

*Mixed doubles.* E. W. Sturgess (S. Africa) and Miss A. L. Brough (U.S.A.), 1950; F. Sedgman (Australia) and Miss D. Hart (U.S.A.), 1951-2; V. Seixas and Miss D. Hart (U.S.A.), 1953-5; V. Seixas and Miss S. Fry (U.S.A.), 1956; M. G. Rose (Australia) and Miss D. Hard (U.S.A.), 1957.

Other famous L. T. competitions are the Davis Cup (q.v.) and the Wightman

Cup, which is a competition for women, and the Australian, U.S.A., Fr., and S. African championships.

See Suzanne Lenglen, *Lawn Tennis: the Game of Nations*, 1925; F. Perry, *Tennis*, 1936; L. A. Godfree and H. B. T. Wakelam, *Lawn Tennis*, 1937; N. H. Patterson, *The Complete Lawn Tennis Player*, 1948.

Lawrence, St (d. AD 258), early Christian martyr. He is said to have been b. at Huesca in Spain, and in the pontificate of Sixtus II he became a deacon at Rome, and was called upon by Valerian to deliver up the church treasures. He brought forward the poor and the sick as his treasures, and was condemned to suffer death by burning on a gridiron. His feast day is 10 Aug. See ESCORIAL.

Lawrence, David Herbert (1885-1930), novelist, b. Eastwood, Notts, son of a coal-miner. He went to Nottingham High School with a board-school scholarship and then to the local Univ. College. He became a clerk and later a schoolmaster. Coming to London, he wrote hist. books as *Lawrence H. Davidson*. His first novel was *The White Peacock*, 1911. L.'s mother d. in the year of its pub., and this marked a crisis in his life. The demands of love which his mother made upon him influenced his whole life and are the theme especially of his third novel, *Sons and Lovers*, 1913. L. describes man as a 'thought-adventurer,' and his novels and poems are records of his intense emotional experiences and thought-adventures. He is thus always an autobiographical writer. With *Sons and Lovers* he achieved fame, which, with *The Rainbow*, 1915, was unjustly turned to notoriety. That book parallels the beautiful and penetrating series of poems, *Look! We Have Come Through*, pub. in 1917, but written between 1911 and 1915. L. was among the best poets of the 20th cent., but he admittedly paid no attention to form. He was not concerned with art so much as with discovering a guiding authority for his own life and that of his generation whose difficulties from an ill-fitting morality he saw clearly. In *Fantasia of the Unconscious*, 1922, he formulated the theories implicit in his novels. L. travelled much, finding sympathy and then disillusion. His intuition enabled him to penetrate and express the souls of the places and people he encountered. Fine descriptive powers are shown in his travel essays *Twilight in Italy*, 1916, *Sea and Sardinia*, 1921, and *Mornings in Mexico*, 1927. His sympathy with the traditions of the Aztec civilisation encouraged him to found an ideal community in Mexico, while in his Mexican novel, *The Plumed Serpent*, 1926, he expounds a mystical and yet physically satisfying religion. In his last works, *Lady Chatterley's Lover*, 1928, and *The Escaped Cock*, 1930, he returned without mysticism but with tenderness to the themes of human and divine love.

His primitivism, which led him to ignore character as conceived consistently and in a definite moral scheme, was apparently

suggested by Marinetti's physiology of matter, and therefore had its mainspring in the It. futuristic movement. Hence the amorphism and incoherence of such novels as *The Rainbow* and *Women in Love*, the characters in which seem to belong to a subhuman world, having but little relation to true life. Even in the more coherent *Lady Chatterley's Lover* the characters exist solely as symbols of fecundity or otherwise, the proletarians alone offering vitality and rejuvenation,

E.N.A.

DAVID HERBERT LAWRENCE

the fact being that L., convinced of the corruption of capitalist society, concluded that all civilisation was equally false. He rejected the intellect and, in reverting to what is irrational, superstitious, and rudimentary in man, himself became an embodiment of the very degeneration he sought to escape—'a latter-day Baptist and a Noble Savage calling upon the world to repent of its intellectual pretensions and put its trust in the blood.' Although his genius as a lyrical rhapsodist and as a writer of peculiar sensibility is undoubted, much of his work is marred by a sensationalism and excess that are usually associated only with vulgar art; while the novel, as he handles it, degenerates into formlessness and an unrestrained flow. But this is really explained by the fact that L., far from solving his intellectual problems by presenting an objective picture, huris himself at his task, thinking aloud as he writes so that, as has been well said, 'his battle

with himself takes place in public and is itself the novel.'

Works in addition to those already mentioned are *The Trespassers*, 1912, *Love Poems*, 1913, *The Widowing of Mrs Holroyd* (play), 1914, *The Prussian Officer* (stories), 1914, *Amores* (poems), 1916, *New Poems*, 1918, *Bay* (poems), 1919, *Touch and Go* (play), 1920, *The Lost Girl*, 1920, *Tortoiseshells* (poems), 1921, *Aaron's Rod*, 1922, *England, My England* (stories), 1922, *Fantasia of the Unconscious* (essays), 1922, *The Ladybird*, 1923, *Studies in Classic American Literature*, 1923, *Kangaroo*, 1923, *Birds, Beasts, and Flowers* (poems), 1923, *The Boy in the Bush*, 1924, *St Mawr*, 1925, *David* (play), 1926, *The Woman who Rode Away* (stories), 1928, *Fancies* (poems), 1929, *Pornography and Obscenity* (essays), 1929, *The Virgin and the Gipsy*, 1930.

See H. J. Seligmann, *D. H. Lawrence*, 1924; E. D. MacDonald, *Bibliography of the Writings of D. H. Lawrence*, 1925; S. Pottor, *D. H. Lawrence*, 1930; J. Middleton Murry, *Son of Woman: the Story of D. H. Lawrence*, 1931; A. Huxley (ed.), *The Letters of D. H. Lawrence*, 1932; K. Merrild, *Poet and Two Painters*, 1938; H. Klingsnill, *D. H. Lawrence*, 1938; R. Aldington, *Portrait of a Genius, But . . .*, 1950; Fr. W. Tiverton, *D. H. Lawrence and Human Existence*, 1951; W. Binner, *Journey with Genius*, 1953; H. T. Moore, *The Intelligent Heart*, 1955; G. Hough, *The Dark Sun*, 1956.

Lawrence, Ernest Orlando (1901-), Amer. physicist, b. Canton, S. Dakota, U.S.A. Educ. at S. Dakota, Minnesota, Chicago, and Yale Univs. National research fellow, Yale, 1925-7. Associate prof. and prof. of physics, univ. of California since 1928. He invented the cyclotron (q.v.) (1931), by means of which he made researches into the structure of the atom, produced artificial radioactivity, and brought about the transmutation of certain elements; applied radiations in the study of problems in biology and medicine. Made director of radiation laboratory, 1936, and fellow of Amer. Association for the Advancement of Science and of the Amer. Physical Society. Awarded Elliott Cresson medal of the Franklin Institute, 1937; Comstock prize of the National Academy of Science, 1937; Hughes medal, Royal Society (of Britain), 1937; Research Corporation prize, 1937; and the Nobel prize for physics, 1939.

Lawrence, Gertrude (1898-1952), actress, b. London. She started as a dancer under the tutorage of Mme Espinosa and studied elocution under Italia Conti. Her first stage appearance was as a child dancer at the Brixton Theatre in the pantomime, *Babe in the Wood*, 1910. She toured in sketches, dancing troupes, cabaret, revues, musical comedies, and pantomimes, and then in 1921 she got her first big opportunity as leading lady in *A to Z* at the Prince of Wales's. She made many notable successes in London and in New York—and was outstanding in *London Calling* at the Duke of York's in 1923. She co-starred with Beatrice

Lillie (q.v.) in New York in *Andre Charlot's Revue* of 1924. Now in the very front, she spent her time between London and New York, a tremendous favourite in both cities. She made a very big hit, too, with Noel Coward in *Private Lives* and in 1936 in *Tonight* at 8.30, in which she showed her brilliance and her great versatility. G. L. was not only a magnificent actress in every branch of her profession, but she had complete command of stage technique. An indefinable but compelling charm won her immense popularity. Her last big success was as Anna Leonowens in *The King and I*, a big musical success by Rodgers and Hammerstein in New York. She d. during the New York run. Such was the affection felt for her by the members of her profession that on the night of her death all theatres in the West End extinguished their outside lighting for one minute to pay her honour.

**Lawrence, Sir Henry Montgomery** (1806–1857), soldier and statesman, elder brother of the first Lord L., was b. Matara in Ceylon. He joined the Bengal Artillery at Dum-Dum in 1823, and took part in the first Burmese war (1828), the first Afghan war (1838), and the Sikh wars (1845, 1848). In 1842 he was appointed resident at the court of Nepal, and about this time founded his famous philanthropic institutions, the L. military asylums, in the Punjab, Rajputana, and Madras. He prophesied the Indian Mutiny in 2 articles, pub. in 1856, and it was through his forethought that the Lucknow residency withstood the besiegers for 4 months. He himself was mortally wounded by a shell on 2 July 1857, and d. 2 days later. See lives by Sir H. B. Edwards and H. Morivale, 1872; J. J. M. Innes, 1898; J. L. Morison, 1934.

**Lawrence, James** (1781–1812) Amor. naval captain, b. Burlington, New Jersey. When in command of the *Hornet* he captured the Brit. ship *Peacock*, but as commander of the *Chesapeake* was defeated by the *Shannon* and d. of his wounds.

**Lawrence, John Laird Mair, 1st Baron** (1811–79), viceroy and Governor-General of India, was b. Richmond, Yorks. He entered the Indian civil service in 1829, and acted as magistrate and land revenue collector in the neighbourhood of Delhi. When the news of the mutiny reached him he raised a new army of 59,000 men, and after a siege of 3 months captured Delhi. On his return to England (1858) the 'saviour of India' was created a baronet and granted a life pension of £2000 a year. He succeeded Lord Elgin as Governor-General of India (1863), and was promoted to the House of Lords in 1869. See lives by B. Smith, 1885; Sir R. Temple, 1889; Sir C. Althison, 1892.

**Lawrence, Pethick-**, see PETHICK-LAWRENCE.

**Lawrence, Sir Thomas** (1769–1830), portrait painter, b. Bristol. He studied at the Royal Academy from 1787, and was elected as associate in 1791 and a full member in 1798. He succeeded Reynolds

as prin. painter to the king (1792), and became the fashionable portrait painter of his age. From 1820 till his death he was president of the Royal Academy. A representative collection of his work may be seen in the Waterloo Gallery, Windsor. See D. E. Williams, *Life and Correspondence of Sir T. Lawrence*, 1831; R. Gower, *Sir T. Lawrence*, 1900; H. Layard, *Sir Thomas Lawrence's Letter Bag*, 1906.

**Lawrence, Thomas Edward** (1888–1935), Brit. archaeologist and soldier. His interest in archaeology began early, and

Imperial War Museum

T. E. LAWRENCE

on leaving Oxford he was employed on the excavations at Carchemish under D. G. Hogarth (q.v.) and travelled in Syria. When Turkey entered the First World War, he was sent to Cairo to help in the Arab Bureau. In Oct. 1916 he went to Arabia where he became the moving spirit in the Arab revolt which protected the right flank of the Brit. advance into Syria. At the peace conference L. backed the Hashemite family, especially Feisal, and when the conference had finished, L. changed his name to Shaw and tried to hide in the Royal Air Force. As he had become a legend, and not only in his own country, he was a problem to authority and to himself, but was at last allowed to stay in the R.A.F. working at fast motor-boats for rescues at sea. He d. in a motor-cycling accident. He was either much loved or cordially

disliked. His story of the Arab revolt is told in *The Seven Pillars of Wisdom*, 1926 and 1935. See H. Williamson, *Genius of Friendship*, T. E. Lawrence, 1941, and R. Aldington, *Lawrence of Arabia*, 1955.

**Lawrence:** 1. Co. seat of Essex co., Massachusetts, U.S.A., on both sides of the Merrimack R., 26 m. to the N. of Boston. It has some of the largest mills in the world, the 28-ft fall of the riv. and a large dam providing excellent facilities for working them. The manufs. include cotton, woollen, and worsted cloth and paper, as well as machinery, shoes, feed, malt liquors, plastic fabrics, rubber products, soap, and radio equipment. Pop. 80,550.

2. Co. seat of Douglas co., Kansas, U.S.A., on the Kansas R. It manufs. paper, flour, and pipe organs, and is the processing and shipping centre for a grain-growing and truck-farming area. The Kansas Univ. and the Haskell Institute (Indian) are here. Pop. 23,350.

**Lawrence, St. River.** see ST LAWRENCE. **Laws of War.** see AERIAL WARFARE; CHEMICAL WARFARE; CRIMES, WAR; INTERNATIONAL LAW; PRISONERS OF WAR; REPRISALS.

**Lawson, Cecil Gordon** (1851-82), landscape painter, b. Wellington, Shropshire. He was first admired for riverside Chelsea subjects. His 'The Hop Gardens of England,' painted at Wrotham, Kent, was a feature of the Royal Academy in 1876; but 'The Minister's Garden' of 1878 (now in the Manchester Art Gallery) was his great success. His 'August Moon' is in the Tate Gallery. Great promise was cut short by his early death. See memoir by Sir E. Gosse, 1883.

**Lawson, Henry** (1867-1922), Australian short story writer and poet, b. on Grenfell gold-field, New S. Wales, of Norwegian father and Australian mother. Father was sailor, prospector, miner, and subsistence farmer; mother, a feminist and journalist. He had little schooling and many jobs, started writing verse in his teens, and leapt to popularity at 21 with 'Faces in the Street,' pub. in the *Sydney Bulletin*. In the *Days when the World was Wide*, 1896, was enthusiastically received, and was followed by many books of prose and verse collected from the *Sydney Bulletin*, *Boomerang* (Brisbane), *Worker*, etc. L.'s name is coupled with 'Banjo' Paterson's (q.v.) as a leading Australian balladist, but his stories are more important. He led a restless life, travelling in W. Australia, New Zealand, and England, but chiefly he roamed the outback of New S. Wales and wrote of and for the people he worked amongst, on the land and in the diggings. He had a sense of fun and an ironic humour 'mateship' was his creed, he created a company of memorable characters, and his colloquial, deceptively easy style is the perfect vehicle. He has been called 'the first articulate voice of the real Australia.' By far the most popular collections of his stories are *While the Billy Boils*, 1896. *On the Track and over the Stiprails*, 1900, and *Joe Wilson and his*

*Mates*, 1901. Collected works: *Poetical Works of Henry Lawson* (3 vols.), 1925, and *Prose Works of Henry Lawson*, 1948. See *Henry Lawson*, 1931, by his mates, and Vance Palmer, *The Legend of the Nineties*, 1954.

**Lawson, Sir Wilfrid** (1829-1906), politician, b. Carlisle, first returned to Parliament as a member for Carlisle in 1859. From 1886 to 1900 he represented Cookernouth, and from 1903 to 1905 the Camborne div., Cornwall. He was an ardent advocate of teetotalism, and in 1864 introduced a local veto bill which provided that the public-houses in any dist. should be closed where two-thirds of the inhab. expressed a wish to this effect. The bill was thrown out by a great majority. See memoir by G. W. E. Russell, 1909.

**Lawton**, city, cap. of Comanche co., SW. Oklahoma, U.S.A. It is the industrial centre for an agric. area (cotton, wheat, live-stock), with oil wells near by. It produces cotton-seed oil, dairy products, packed meat, flour, feed, leather goods, concrete products, wood products, tiles, and patent medicines. There are granite and limestone quarries, sand, gravel, and asphalt pits. Cameron State Agric. College is here. Pop. 34,757.

**Lawyer**, generic term embracing anyone versed in the law, or who follows the profession of the law, or practises in the law courts. It now includes jurists, judges, barristers or counsel, and solicitors, though formerly there were also attorneys, special pleaders, and proctors. Attorneys corresponded to the procurators of the civil and canon law, but by the Judicature Act, 1873, they were denominated solicitors, a term once appropriated exclusively to legal agents who practised in the courts of equity. Special pleaders were those members of the Inns of Courts whose occupation was confined to giving opinions and drawing pleadings. These functions are now performed by counsel in the ordinary course of their duties. Proctors, who were analogous to solicitors, and practised in the Court of Arches, are now classed as solicitors.

**Laxatives**, see APERIENTS.

**Laxness, Halldor Kiljan** (1902- ), Icelandic novelist and essayist, awarded the Nobel prize for literature in 1955 'for his descriptive epics which have renewed the great Icelandic art of narration.' 'Kiljan Laxness' are assumed names, his original name being Halldór Guðjónsson. His pubs. include *Salka Valka*, 1934, and *Independent People*, 1939; he has also trans. Hemingway's *A Farewell to Arms*, Voltaire's *Candide*, and other works into Icelandic. See illustration, p. 668.

**Lay-reader**, layman licensed by a bishop in the Anglican church to read Morning and Evening Prayer (except the Absolution), to officiate at funerals, and to preach. In the time of St Cyprian readers were an inferior order of clergy, and they still form one of the minor orders of the Rom. Catholic Church. The reformed Prayer Book of Edward VI contained an office for the admission of

evolution of sulphur dioxide, and these L. compounds further react with more galena, forming pure L. and sulphur dioxide.

In the N. of England a small blast furnace is used, simply consisting of a brick shaft with a sloping iron bed plate. This shaft is lined with firebrick for a height of about 4 ft. Through the back comes a single tuyere about a foot above the bed, and a charging space is left above the iron plate called the fore stone, which closes the front. The L. trough is an iron pan, the larger part of which is filled with coarse cinders, and separated from the rest by a vertical partition, which does not quite reach the bottom. The bed plate is now covered with a sloping mass of coal ashes to about 1 in. below the tuyere, the fire is then made up with coke and peats, and the blast is turned on. When the furnace is hot slag, ore, and the fused mass over from a previous charge (browse) are introduced. As the reduction goes on the L. sinks through the ashes on the bed plates, and runs into the troughs and filters through the cinders into the smaller div., whence it is tapped into moulds. The L. so obtained is hard and somewhat impure.

The last process is the Scotch ore hearth, in which there is an iron sump some 2 ft square and 6 in. deep, set in masonry and surrounded on 3 sides by iron bars about 8 in. square. The bars are called the side stones and the back stones. Under the back stone is the single tuyere. The front of the hearth has a sloping plate in which is a gutter, down which the L. flows into a trough. The open back opposite to the back stone carries a girder which supports a small flue for carrying off the fumes.

L. produced by these processes is nearly always hard, and has to be softened. This is quite a simple process, as the impurities which render the L. so hard will all oxidise if the L. be kept heated for sev. hours or days as the case may be. Any amount of L. can be treated at once, the oxides rising to the top and being skimmed off.

L. being very malleable is easily rolled into sheets. L. for this purpose is first cast into cakes about 5 ft square. L. piping is common because L., when hot, flows easily under pressure. Such pipes are usually forced out by strong hydraulic pressure, the L. being squeezed between the core and the die. Shot is made by pouring molten L. into a perforated ladle containing cinders; the L. finds its way through the perforations, and if allowed to fall through about 150 ft the drops become spherical. Those which are not true are separated by rolling down an inclined plane having a gap in it. The true ones will gather enough impetus to jump it, but the oblate ones fall through and are remade.

L. forms numerous alloys, and in particular: *Bronze bearing metal* (Cu 77, Sn 8, Pb 15); *solders* (Pb and Sn), a common one being composed of equal amounts of the 2 metals; *pevter* (Sn 75, Pb 25);

and *fusible alloys* of many kinds. It forms a basic oxide  $PbO$  (litharge; massicot) from which the many salts of L. can be obtained by interaction with appropriate acids. In such compounds the valency of the metal is 2. In addition there are the oxides L. dioxide,  $PbO_2$ , a puce-coloured solid; Red L. ( $Pb_3O_4$ ), both of which can be made to yield oxygen either when heated alone or with concentrated sulphuric acid. The sulphate and carbonate of L. can be obtained by double decomposition, and are almost insoluble in water. White L. (q.v.) is an important white pigment made by the action of acetic acid (vinegar), air, and carbon dioxide on the metal.

**Production.** The U.S.A. produces over one-third of the world's L. output, Mexico following with about one-eighth. Other leading countries are Australia, Spain, and Germany. See also ACCUMULATOR. See J. W. Gough, *The Mines of Mendip*, 1930.

**Lead, The,** instrument for discovering the depth of water at sea. It is a large piece of elongated lead, similar in shape to an old-fashioned clock-weight, attached to a line called the lead-line, generally about 20 fathoms long. It weighs from 7 to 11 lb. There is a cavity at the lower end filled with tallow to ascertain upon what sort of ground the soundings are struck. The weights for different depths of sounding naturally vary. When the depth is great the deep-sea L., weighing from 25 to 30 lb., is used, the line being marked by knots every 10 fathoms. One of the regulations prescribed by the navy is that ships shall constantly keep the hand-lead going when near land or shoals, or in pilot water.

**Lead Chromate,** see CHROME YELLOW.

**Lead-glance,** see GALENA.

**Lead Plaster** (*Emplastrum plumbi*), made of lead acetate, soap, and water, and is used as an external application to raw and irritated surfaces. It has practically no effect on the unbroken skin, but when applied to sores has the effect of coagulating the albumen and so contracting the small blood-vessels. *Emplastrum plumbi iodidi* is made from lead iodide, and has much the same curative effect.

**Lead Poisoning, or Plumbism,** form of poisoning due to the introduction of lead into the system. It is an occupational disease and specially affects workers in potteries, where lead glaze is used, painters, plumbers, glaziers, printers, and others. In such cases the disease is the result of an accumulation of minute doses of lead being absorbed over a long period of time. The symptoms vary with the extent of the poisoning, and also with the constitution of the individual. A common form is painter's colic, which is attended with frequent intestinal pains and obstinate constipation. The poison proceeds to produce anaemia, wasting, muscular tremors, and ultimate paralysis. Among characteristic signs are the blue line on the gums and the presence of 'wrist-drop,' in which the hands become useless and the joints deformed. A test for lead in the system is provided by painting a small

area of the skin with a 6 per cent solution of lead sulphite; if lead be present the area will darken in a few days. The treatment in acute cases consists of the administration of potassium iodide. Lead colic may be alleviated by administration of belladonna; for paralysis strychnine is used in conjunction with potassium iodide, and electro-therapy has proved a valuable aid in restoring the use of muscles. The treatment should in all cases be prescribed by a doctor. Preventive measures employed in factories include the wearing

put by mutual consent as to matters not contested or merely introductory, and may also be put to refute evidence *already given* by an opposing witness. L. Q.s may be put without restriction in cross-examination.

Leaf, in botany, a term applied to various lateral outgrowths of the stem, e.g. bracts, sepals, and petals, all of which are considered under their individual headings, but in its best-known sense it is applied to those members of the plant which constitute its foliage. The foliage

LEAF: PARTS AND VENATIONS

Leaf parts. 1 (pansy): A, axil of leaf between stem and petiole; L, lamina or blade; V, vein or nerve; P, petiole or leaf-stalk; S, stipule at base of petiole; ST, stem of plant.

Venation of leaves. 2, Reticulate or net venation of ivy (palmate); 3, reticulate venation of oak (pinatifida); 4, parallel venation of bamboo; MR, mid-rib.

of overalls and respirators, the provision of baths and insistence on their use by employees, frequent medical examinations, and the provision of acid drinks tending to remove lead from the system.

**Leadhills**, vil. of Lanarkshire, Scotland, 25 m. S. of Lanark. Its lead-mines have been worked since the early 17th cent., and some silver is also mined. Pop. 500.

**Leading Question.** In the law of evidence (q.v.) a L. Q. is one which by its form suggests to the witness the answer required by counsel for the purposes of his case. For example, if in an action for damages for personal injuries alleged to have been sustained by the negligence of a motor-bus driver, the plaintiff's case is that the bus was being driven at an excessive speed, a witness for the plaintiff should be asked not 'Was the bus going at a furious pace?' but 'At what speed was the bus going?' L. Q.s are, however,

L. consists typically of 3 parts: the *lamina* or L.-blade, *petiole* or L.-stalk, and the L.-base. The latter frequently bears 2 lateral outgrowths known as *stipules*, e.g. rose; when the petiole is absent, as is often the case, the L. is said to be *sessile*, e.g. honeysuckle. The shape of the lamina varies greatly, but the different forms are divided sharply into two as *compound* or *simple*, the former indicating that the lamina is split up into a number of distinct parts called leaflets (as in the horse-chestnut, which is palmately compound, and the ash, which is pinnately compound), while the latter indicates that however much the blade may be indented it is not split up into leaflets. The venation of L.s is necessarily related to their form: in the typical L. of Monocotyledon, e.g. iris, the veins run parallel to one another, and the L. is long and undivided, while in a Dicotyledon the

venation is always reticulate and the L. may be greatly divided, e.g. horse-chestnut. The same plant may bear sev. types of L.s, and one which grows with part of its foliage in a submerged condition will be noticed to have its aquatic L.s very finely divided to withstand the force of the water (e.g. water crowfoot). The functions performed by L.s are of the greatest importance to the life of the parent plant. Most of the carbon dioxide absorbed from the atmosphere is taken in by the L.s during photosynthesis; respiration or the exchange of carbon dioxide for oxygen is also effected by them, as well as transpiration or the giving

the veins in the front wings, especially in the female. The vegetable mimicry is carried out even in the eggs, which, in many species, closely resemble seeds.

**Leaf-mould**, term applied to thoroughly rotted leaves in gardening; beech and oak L. is most valued. Also applied to certain fungus diseases of foliage (e.g. Tomato L.).

**League** (Lat. *leuca*, a Gallic m.), measure of length of great antiquity, estimated by the Romans at 1500 paces, or 1.376 Eng. m. It was introduced into England by the Normans, and was then equal to 2 O.E. m., or about 3 modern m. It is now a nautical measure, the twentieth part of a degree,

LEAF: SHAPES OF BLADES AND LEAF MARGINS

1, linear; 2, lanceolate; 3, oblanceolate; 4, ovate; 5, obovate; 6, sagittate; 7, elliptical; 8, spatulate; 9, hastate; 10, cordate; 11, reniform. Margins: 12, entire; 13, serrate; 14, dentate; 15, crenate.

off of large quantities of surplus water. The development and arrangement of leaves are associated with these functions. To use carbon dioxide the L. must have light, and L.s form a mosaic to secure as much as possible without directly overshadowing one another. Plants growing in dry situations (xerophytes) frequently have L.s which are reduced in size, or provided with hairs, sunken stomata, or thick cuticles. These were formerly regarded as devices which reduced water loss during transpiration, but experiments show that such plants may actually transpire rapidly, and it seems that the problem is more complex than was at first thought. L.s may be variously modified, e.g. into the fleshy parts of bulbs, or into tendrils or thorns; reduced (scale) L.s also occur.

**Leaf Insect**, insect genus (*Phyllium*) of the family Phasmodidae, which, on account of its resemblance to a leaf, conceals itself from its enemies. The leaf-like appearance is chiefly due to the arrangements of

i.e. 3 geographical m., or 3'456 statute m. The French and other nations use this nautical measure. See METROLOGY.

**League, The**, or, properly, the Holy Catholic L., was a coalition organised in 1576 by the Duke of Guise to suppress the reformed religion in France by denying civil and religious liberty to the Huguenots, and particularly to prevent the future accession of Henry of Navarre, a Protestant, to the Fr. throne.

**League of Nations**. Immediately after the armistice in 1918 associations to prevent wars were formed in England, France, Germany, and Scandinavia, while in the forefront of the Versailles peace treaty were placed President Wilson's proposals for a L. of N. (see COVENANT OF THE LEAGUE OF NATIONS). The L. of N. formally came into being on 1 Jan. 1920, when the treaty of Versailles came into force, and it consisted of 28 allied states and 14 neutral states. The U.S.A. was not a member. The membership of the L. of N. was later increased to some

60 states, Great Britain and the dominions (including the Rep. of Ireland, together with India) being each independent members, with separate voting power and representation. Japan and Germany withdrew in 1935, and Italy in 1937; Russia and Afghanistan became members in 1934.

Membership was open to all self-governing states, dominions, and colonies, provided effective guarantees were given of intentions to observe international obligations and to accept the ruling of the League in matters concerned with the military services; but the subsequent hist. of Europe made these and many other conditions of purely academic interest. A two-thirds majority in the Assembly was required to secure membership. The purpose of the L. of N. was 'to prevent future wars by establishing relations on the basis of justice and honour and to promote co-operation, material and intellectual, between the nations of the world.' The official seat of the L. of N. was at Geneva and the official languages were French and English. The names of Earl Balfour, Aristide Briand, Lord Robert Cecil, Lord Grey of Fallodon, Dr F. Nansen, Dr Gilbert Murray, and F.-M. Sinuts are among those especially associated with the development of the League. Under the covenant (q.v.) of the League a member state undertook never to go to war with a fellow state until all possibilities of a peaceful settlement had been exhausted, and then only after an interval of 9 months. With a member state which broke this pledge, the other states guaranteed to discontinue financial and economic relations. The covenant's signatories constituted the majority of the world's govts., and its provisions were very far-reaching, including the estab. of a permanent administrative, deliberative, and judicial organisation; and, also, it was based implicitly upon an agreed philosophy of gov. The League was not an executive body. It had no Cabinet. It was not an instrument of international policy. Policies continued to be framed in the different caps. and by the ministers and foreign offices of individual states. That could not but continue, however much the League or any analogous body might gain in authority, for many world problems are too great to allow of centralised direction. The mutual relations of two or more states are of no concern to the society of states unless and until they involve danger of a breach of the world's peace. The function of the League was, in this sphere, not positive but negative. It did not conduct policy. It served as the limiting factor of policy. But the prevention of war cannot be dissociated from the positive organisation of society. Hence the concern of the League for the limitation and control of armaments and the obligation of its members to interchange full and frank information on this subject. The League was, in essence, an association for mutual protection. It was based on the conception of co-operative defence and it was pledged to embody

that conception in a practical system. All treaties which a member state contracted with other states were to be registered with the League for immediate pub. Members of the L. of N. guaranteed to direct international interest and action towards such questions as labour conditions, public health, communications, economic and financial questions, the traffic in arms, the traffic in women and children, and the traffic in dangerous drugs. The primary organisations of the L. of N. were as follows: (1) the Assembly, consisting of delegations from all the member states. Each delegation consisted of 3 delegates, and each state had 1 vote. The Assembly met usually at Geneva on the first Monday in Sept., and the president was elected at the beginning of each session. The Assembly was divided into sev. prin. committees, concerned with jurisdiction, technical organisations, disarmament, budget and staff, social questions, political questions, and the admission of new members. The decisions of the Assembly had to be unanimous, except on questions of procedure, when a majority vote only was required. (2) The council, consisting of permanent members and non-permanent members, while any state might be represented at meetings at which matters affecting that state were discussed. The council met in Jan., May, and also before and after the meetings of the Assembly in Sept. (3) The secretariat, the permanent civil service of the L. of N., was composed of the secretary-general and 500 officials, selected from citizens of the member states and from the U.S.A. It was the working instrument of the League, with H.Q. in Geneva. (4) The International Labour Office, which had a working staff almost as large as that of the secretariat. (5) The Permanent Court of International Justice (see INTERNATIONAL JUSTICE, COURT OF). There were other secondary organisations belonging to the L. of N., such as technical organisations, permanent and temporary advisory committees, administrative commissions, international institutes, and an international bureau. The expenses of the L. of N. were shared by the member states, and the ann. expenditure was about £1,000,000. In 1928 John D. Rockefeller, junior, gave £2,000,000 for the endowment of the League library.

The chief function of the L. of N. was the prevention of war, although its important social and economic work must not be overlooked. The League, working through the council, did prevent war in sev. instances—as in 1921 when Yugoslavia invaded Albania and in 1925 when Bulgaria invaded Greece. Other political disputes which were settled were, in 1920, between Sweden and Finland concerning the Åland Is., and later a frontier question between Turkey and Iraq. Other work of the L. of N. consisted in arranging mandates for various countries, in investigating the minority question of certain countries, and in assisting reconstruction work in Austria, Hungary, and

N. Greece. The constructional and co-operative work of the League embraced valuable contributions to child welfare work and public health instruction. Many years' study was given to the question of disarmament in preparation for the Disarmament Conference of 1932, but the doctrine of collective security was doomed to frustration. The L. of N. soon began to encounter failures when the 'vital interests' of powerful totalitarian nations were involved, as, for example, when Italy disallowed its intervention over the murder of Tellini, and Greece was forced to pay an indemnity of £500,000. Also the League never arrived at a just settlement of the Polish-Lithuanian quarrel, occasioned by the seizure of Vilna in 1920. One of the chief causes of failure on the constructive side was that its economic conferences had little effect on the tariff policies of individual nations. The L. of N. did not force, but ought to have forced, its decisions on members. In fact all conventions (international agreements) sponsored by the League had to be ratified, and ratification was optional at the discretion of each gov. Thus internationalism was not allowed to interfere with nationalism, but once a convention was ratified the contracting states were bound to carry it out. If they failed to do so other states might lodge a complaint against them. What happened indeed was that recalcitrant states merely withdrew their membership or went to war in spite of the League's decisions. In 1935 the Disarmament Conference broke down. In the same year Mussolini invaded Ethiopia regardless of economic sanctions. Germany, who was now re-arming at top speed, gave notice of secession from the League and she was followed by Japan, who had invaded N. Manchuria in defiance of a European Commission and the adverse judgment of the League. (See ITALO-ETHIOPIAN WAR, 1935-6, and SINO-JAPANESE WAR.) Again when Paraguay and Bolivia went to war over their rival claims to the Gran Chaco no power intervened and the warnings of the League were innocuous. When Japan occupied Manchuria the League instituted no economic sanctions, nor made any effort to expel Japan from ter. which Japan asserted to be vital to her national existence. Italy gave notice of withdrawal in 1937 as a consequence of her *entente* with Germany and the League's half-hearted efforts to thwart her Ethiopian adventure. Sev. of the S. Amer. states also left the League or gave notice of their intention to do so. The prestige of the League never recovered from the blow of the It. conquest of Ethiopia—for a league that took care to confine sanctions to a restriction of trade as opposed to military sanctions had, in reality, abjured the covenant. The result was that the different nations reverted to the policy of alliances and blocs. The annexation by Germany of Austria and Czechoslovakia met with no opposition from the League, which was again supine when Germany invaded Poland in 1939.

Yet curiously enough, after the Russian invasion of Finland, the League Assembly was convened on 11 Dec. 1939, Russia's action was condemned and she was expelled from the League—the member which had made the strongest appeals for disarmament. This was the League's last activity. In 1938 the League was operating through a permanent council comprising only Great Britain, U.S.S.R., and France, with 12 other states elected annually. In 1940 some of the offices of the League were transferred to New York. The final meeting of the League Assembly was held on 8 April 1946. The states remaining members of the League to the last sent strong delegations to this final meeting, thereby attesting at the last solemn obsequies the importance they attached to its principles; for although the League was now disappearing, the U.N.O. (q.v.) had already replaced it and was now to take over the material assets of the League and assume some of its political and technical functions. The necessary decisions had to be taken as quickly as possible so that essential work might be carried on without interruption. All through the war the League had kept alive the machinery and technical services it had estab., for a long period with the hostile Germans only 10 minutes' walk from the Palais des Nations. Far-reaching posers were entrusted to the League by nations or groups of nations under treaties, conventions, and other international political instruments. The League's Treaty Series, almost the only part of its activities that had, for obvious reasons, not been kept fully abreast of events during the war, needed to be taken over by the U.N.O. so that the valuable international code might be completed. Even before this closing meeting of the League Assembly the U.N.O. decided to take over the technical sections of the League, notably the economic, social, health, and opium sections—together with the League library of more than 300,000 vols. and the archives of the League. The financial position remained sound to the last. The total value of the assets was about 47,000,000 Swiss francs. It may be that, on balance of opinion, the acting secretary-general in his final report on the work of the League was justified in his view that the League may be held not to have failed, but that it was the nations that failed the League—failure being due to the fact that statesmen and peoples contented themselves with lip service, while some states foolishly imagined that they could be lookers-on.

*Historical analogies to the League of Nations.* The concept of the L. of N. of 1920 was new, but more or less remote analogies may be sought in former schemes or projects for a European federation. This project indeed has a long hist. 'Since the fourteenth century the idea of bringing the states to federation has been in the European mind. As early as 1307 the French *légitime*, Pierre Dubois, had drafted a scheme for forming a union of Christian nations under the lead of the

King of France' (J. S. Ross Hoffman, *The Great Republic*, 1942—Chapter I of which describes the deeply settled objection of W. man through the cents. to a world state). At the end of the 16th cent. Henry IV's minister, Sully, set forth a comprehensive plan: 'Europe would be composed of fifteen dominions nearly equal in size and strength and those would be constitutionally integrated in a permanent league.' The proposal was adapted to the needs of the 18th cent. by the Abbé de St Pierre. After the War of the Sp. Succession, which ended in 1714, he proposed to form 'a permanent league of European states on the basis of the *status quo*, which league would command an international army and have power to enforce submission to its collective will.' After the Napoleonic wars these ideas influenced the conception of the Holy Alliance, and after the First World War they were revived by Aristide Briand (q.v.). (See W. Lippmann, *U.S. War Aims*, 1944.)

For cents. past, indeed, mankind has searched for some means of preventing war. Repeatedly in the last 4 cents. there has been held up as the ultimate ideal the conception of an association of nations co-operating for their common good and bound together for the fundamental purpose of making war impossible. Some former plans still have more than an historical interest. Research to-day will find something of practical value in such conceptions as those embodied in Wm Penn's plan for a federal union of Europe, made known in 1693, or again in the scheme for a federation of free and democratic peoples pub. in 1795 in Kant's *Critique of Pure Reason*. The chaotic period which followed the Fr. Revolution and Waterloo gave a new impulse to the search. But the only solution forthcoming was that submitted by the Vienna Congress in the shape of the Holy Alliance. This was foredoomed to failure in that it perpetuated a reactionary *status quo* and through a military alliance repressed human freedom. In the second half of the 19th cent. Europe was spared any general war as a result of the armed truce brought about by the Brit.-sponsored balance of power system. Some progress at least towards international co-operation was made as a result of the suffering caused by the Crimean War; for international agreements for the adoption of more humanitarian standards in the conduct of war were concluded at the conference of Paris in 1864. The first major achievement in the sphere of international co-operation for avoiding the causes of war came, however, through the Hague Conferences of 1899 and 1907, held on the initiative of the Russian Gov. The agreements reached in these conferences provided machinery for the pacific adjustments of international controversies through arbitral tribunals set up at The Hague. Progress would have been made too in the field of international disarmament but for the unyielding opposition of the Ger. Gov. When the third Hague

Conference was about to meet, the First World War broke out.

See *Handbook on the League of Nations*, 1920-4, and *League of Nations Year Book*, 1925 and later, and other official pubs. of the League; also R. Williams, *The League of Nations To-day*, 1923; H. G. Alexander, *The Revival of Europe*, 1924; G. G. Butler, *A Handbook to the League of Nations*, 1925; F. Alexander, *From Paris to Locarno and After*, 1929; Robert de Traz, *The Spirit of Geneva*, 1935.

**Leagues**, political alliances or coalitions such as the Aetolian and Achaean L. of antc Greece; the Holy L., of which the most famous are those formed by Pope Julius II against Venice in 1508 (often known as the League of Cambrail), and against France in 1511; commercial L., like that of the Hanse tns (see HANSEATIC LEAGUE); the Solomn League and Covenant between England and Scotland in 1643, for the estab. of the Presbyterian Church; the Smalkaldic League in Germany; the Catholic League in France; and the Protestant Union and Catholic League in Germany, which heralded the Thirty Years War. After the peace of Westphalia, while France and Spain were still at war, Mazarin helped to form the League of the Rhine, which included powerful Ger. princes, and was aimed against the emperor. Many L. were formed during the latter part of Louis XIV's reign to check the growing power of France, the most important being the League of Augsburg (1686), formed after Louis had seized Strasburg and Ger. lands in the period of peace after the treaty of Nimegen, and the Grand Alliance (1701-2) headed by William III of England. The most famous league of the 18th cent. was that of France and Spain, which were allied by a series of family compacts. The name has been adopted by various political associations, such as the Anti-Corn Law League, the Irish Land League, the Primrose League, the United Irish League, etc. See QUADRUPLE ALLIANCE. See B. Croce, *Europe in the Nineteenth Century*, 1934; H. Pirenne, *Histoire de l'Europe*, 1936; R. Seton-Watson, *Britain in Europe, 1789-1914*, 1937.

**Leake, William Martin** (1777-1860), officer and archaeologist, b. London. Having obtained the rank of lieutenant-colonel in the army, he travelled in Asia Minor, the Morea, and other parts of Greece, surveying the coasts and fortresses and making collections which are now in the Brit. Museum. He retired in 1823 and pub. sev. works, among them being *Researches in Greece*, 1814, *Topography of Athens*, 1821, *Travels in the Morea*, 1830, *Travel in Northern Greece*, 1835, and *Numismatica Hellenica*, 1859. See memoir by J. H. Marsden, 1864.

**Leamington** (Royal Leamington Spa), municipal bor. and health resort of Warwickshire, England, on the R. Leam, 24 m. from Warwick. The mineral springs (saline, chalybeate), first recorded in 1586, are used extensively. L. is famed for its parks, gardens, and spacious

avenues, and has metal industries. Pop. 37,000.

**Lean, David** (1908- ), film director, b. Croydon, educ. Leighton Park. Entered films in 1928 as a camera assistant; later he worked as an assistant director and editor. He was co-director with Noel Coward of *In Which We Serve*, and has directed among other films *This Happy Breed*, *Blithe Spirit*, *Brief Encounter*, *Great Expectations*, *Oliver Twist*, *The Sound Barrier*, *Hobson's Choice*, *Summer Madness*, and *The Bridge on the River Kwai*.

**Leander**, see **HERO and LEANDER**.

**Leap Year**, also known as **Bissextile**, name given in England to every year which has 366 days. In 46 B.C. the calendar was reformed by Julius Caesar. The solar year was settled at 365½ days, and under the new arrangement the Feb. of every fourth year was to have 29 days instead of 28, the calendar thus taking a leap of 1 day every fourth year to balance its being 6 hrs too short in each ordinary year. All years divisible by 4 without a remainder are L. Y.s, except those ending in 00, of which only every fourth is a L. Y., i.e. those in which the number of the cent. is divisible by 4. See also **CALENDAR**.

N.P.G.

EDWARD LEAR  
Silhouette by an unknown artist.

**Lear, Edward** (1812-88), artist and nonsense writer, b. London, of Dan. descent. As a young man he was for a time art master to Queen Victoria. He early made ornithological drawings in the Zoological Gardens, and assisted Gould as

draughtsman in his *Birds*, 1832-6. Later he exhibited for years at the Royal Academy. L. produced his delightful *Book of Nonsense*, 1846, for the grandchildren of his patron, the Earl of Derby, and drew the plates to *The Knowsley Menagerie* for him. Ruskin said of *The Book of Nonsense* that it was 'first in the list of a hundred delectable volumes of contemporary literature.' It was this book rather than his paintings and drawings and other writings which gained him fame, and he is remembered above all as the practical originator of the limerick. Other works were *Journal in Greece and Albania*, 1851, praised by Tennyson in his 'Lines to E. L.'; *Journal of a Landscape Painter in Southern Calabria*, 1852; *In Corsica*, 1870; *More Nonsense Rhymes*, 1871; and *Laughable Lyrics*, 1876. His *Letters* were ed. by Lady Strachey in 2 series, 1907 and 1911, and *The Complete Nonsense of Edward Lear*, by Holbrook Jackson in 1947. See W. B. O. Field, *Edward Lear on my Shelves*, 1933, and A. Davidson, *Edward Lear, Landscape Painter and Nonsense Poet*, 1938.

**Lease-Lend**, see **LEND-LEASE**.

**Leasehold**, in law a chattel (q.v.) real, not, strictly speaking, an estate in land nor properly involving tenure; though the phrases 'estate for years' and 'leasehold tenure' are common. L.s are all of one kind, and, being personality (and not real property), the tenant, for however long the term, is 'possessed,' not 'seised.' The very name term implies a definite date of ending, as opposed to the indefinite end of freehold estate by death or failure of heirs. L.s are (a) tenancies from year to year, (b) leases for years, (c) long terms. Tenancy from year to year arises (i) by operation of law, on demise at ann. rent without express term, or (ii) by act of parties under verbal or written lease. It is determined by half a year's notice, which may be a 'customary half-year,' i.e. from one quarter-day to the next, but always so as to end with the current year of the tenancy. Lease for years arises mostly by express demise, which, if for more than 3 years and not at a rack rent, must be in writing. Lease for years determines by efflux of period; or on fulfilment of a condition (if any), e.g. lease to B for 80 years, if he shall so long live; or to C for 21 years, provided that on non-payment of rent, or breach of covenant, the lessor may re-enter, etc. It may also determine by merger and by surrender in fact (deed) or in law (accepting a new lease on different terms before the old one expires). As to covenants on leases see **COVENANT**. Long terms are chiefly (1) terms of 100 to 1000 years, formerly created by way of mortgage as security for an advance; (2) terms created in the 16th cent. as a device for making a personal interest in land as valuable as fee simple; (3) terms in settlements (q.v.) limited to trustees as security for raising portions, jointures, and annuities (q.v.). These are the most frequent and the most important. No rent is reserved on (1) or (3), and on (2) only a

nominal or 'peppercorn' rent, if any. On (3) there are, as a rule, no covenants. See also LANDLORD AND TENANT.

**Leasehold Emfranchisement.** From the end of the 18th cent. and onwards the practice of leasing land for 99 years for building purposes became fairly general in London and other urb. areas. The extraordinary increase in the built-over area in London resulted in an enormous increase in the value of sites, and in many cases an equally extraordinary increase in the value of the premises for business and residence. The Bedford and Westminster estates in London are typical instances. When in the eighties and nineties of last cent. leases fell in, the ground landlords required extremely heavy payments for renewals. Goringes in Buckingham Palace Road was an instance much discussed at the time. As a matter of public interest, it was mooted that freeholders should not be permitted to lease land in this fashion, and that existing leases should be converted into freeholds at a fair valuation, much in the same way as under the Law of Property Acts, 1925, copyholds have ceased to exist. Up to the present nothing has been achieved in this direction, but the Landlord and Tenants Act, 1954, has provided tenants of business premises with some security of tenure.

**Least Action, see ACTION.**

**Least Squares,** principle involved in Gauss's theory of errors, stating that in a large number of independent measurements of a quantity, the most probable value is that for which the sum of the squares of the errors of individual measurements is a minimum. The theory does not deal with (1) mistakes, which should be eliminated by proper checks, (2) constant errors, having the same effect on all the measurements (e.g. a chain being too long), (3) systematic errors, which may vary on sign (see ERRORS). When these are eliminated from a series of equally accurate observations, it is found that the observed values still differ. The problem is to assign a definite value to the quantity being measured and to assess the accuracy. If  $x_1, x_2, x_3 \dots x_n$  are the  $n$  observed values of a quantity whose most probable value is  $x$ , the residual errors are  $x_1 - x = v_1, x_2 - x = v_2 \dots x_n - x = v_n$ . Assume that (1) each of these is due to a number of factors, whose cause and action is unknown, (2) each is as likely to be positive as negative, (3) small errors are more likely than large ones and there is a finite limit to the magnitude. Dividing these 'casual' errors into groups according to magnitude and sign: those between 0 and 0.1, between 0.1 and 0.2, . . . between 0 and -0.1, between -0.1 and -0.2, etc., plot the numbers of errors in each group in a graph. The result is a curve which becomes the more like Fig. 1 the larger the number of observations. Gauss gave to the curve the analytical expression

$$o(v) = \frac{h}{\sqrt{\pi}} e^{-h^2 v^2} \quad \text{where } h \text{ is a constant}$$

depending on the precision of measurement. The number of errors in a group between  $v$  and  $v + dv$ —or the probability of an error occurring between these limits

—is  $o(v)dv = \frac{h}{\sqrt{\pi}} e^{-h^2 v^2} dv$ . If the probability (q.v.) of an error  $v_1$  is  $\propto e^{-h^2 v_1^2}$ , the probability of the errors  $v_1, v_2 \dots v_n$  occurring in a set of measurements is  $e^{-h^2 v_1^2} \times e^{-h^2 v_2^2} \times \dots e^{-h^2 v_n^2} = e^{-h^2 \sum (x_i - x)^2}$ . If  $x$  is the most probable value of the quantity, this probability must be a maximum (see MAXIMA AND MINIMA),

or  $\frac{d}{dx} \sum (x_i - x)^2$  must be a minimum. Differentiating,  $2 \sum (x_i - x) = 0$ , or  $\sum x_i - nx = 0$ ,  $x = \frac{1}{n} (x_1 + x_2 + \dots + x_n)$ . Thus the most probable value is the arithmetic mean, A.M., and the sum of the squares of the errors is a minimum. The average

error,  $a$ , is the A.M. of the actual errors without regard to sign, the mean square error,  $\mu$ , is the square root of the mean of the squares of the errors, the probable error,  $\rho$ , is such that it is as likely to exceed it as not to reach it. The probability of an error between  $-\rho$  and  $+\rho$

must then be  $\frac{h}{\sqrt{\pi}} \int_{-\rho}^{+\rho} e^{-h^2 v^2} dv$ , which

gives  $\rho = \frac{1}{h} \times 0.4769$ . The following relations exist for large numbers of observations:  $\rho = 0.6745 \times \mu = 0.8453 \times a$ . If  $[v^2]$  is the sum of the squares of the residual errors in  $n$  observations, the  $\rho$  of a single observation is  $0.6945 \sqrt{[v^2]/(n-1)}$  and the  $\rho$  of the A.M. is  $0.6745 \sqrt{[v^2]/n(n-1)}$ . When sev. sets of independent measurements of a quantity are made, a weight is attached to each result according to its estimated accuracy or its probable error. In calculating the mean of the results, each is multiplied by its weight and the sum of weighted results is divided by the sum of the weights. The principle of L. S. also applies to 'conditioned' observations of quantities subject to some rigid relation, as the sum of the angles in a geometric figure, and to 'indirect' observations, where a quantity is derived from measurements of related

quantities. See D. Brunt, *Combination of Observations*, 1926, and D. Clark, *Plane and Geodetic Surveying*, vol. ii, 1948.

**Leather** (word common to all Teutonic languages; Ger. *leder*; Dutch *leer* or *leder*; Swedish *lader*; Welsh *llaren*), name given to hides and skins in which the original fibrous structure is left more or less intact and which have been rendered impetrable by treatments known as tanning. Any hides or skins can be turned into L. but the most usual are those from cattle, calves, sheep, goat, deer, pigs, peccaries, horses, seals, snakes, lizards, crocodiles, and ostriches. The term hides refers to the skins of larger animals such as horses and cattle, and skins to those of smaller animals such as sheep and goats. The wool or hair is commonly removed but sheepskins, and less often seal and calfskins, may be dressed with the wool or hair left on.

The skin consists of 3 main layers—on top, the epidermis containing the colouring matter and the hair roots, next the corium or true skin, and then the adipose or hypodermic tissue. The corium, which alone is of use to the tanner, principally consists of a grain layer and a thicker fibrous flesh layer mainly made up of bundles of collagen fibres, which in turn are bundles of finer structures known as fibrils.

**Pre-tanning processes.** Hides and skins first arrive either fresh or cured by drying or salting. Fresh skins are simply cleaned but cured skins must be soaked to restore the moisture and if necessary remove the salt. The next stage is to remove the epidermis and the fatty tissue and is the object of the process known as 'liming.' This destroys the epidermis, loosens the hair, swells the fibres and fibrils, and softens and loosens the adipose tissue and the mucous matter between the fibres, and can take up to about 3 weeks; in general the shorter the period the tighter the grain and the L. The hides or skins are immersed in pits or drums containing a liquor of milk of lime, caustic soda, a mixture of these two, or a mixture of milk of lime, sodium sulphide, and soda ash. Where the hair or wool is to be recovered it is first loosened by painting the flesh side with a paste consisting of lime and sodium or arsenic sulphide or, as is sometimes done with sheepskins, by 'sweating' or suspending in a humid atmosphere. The hair or wool and the adipose tissue are removed by machine or by hand scraping.

After liming stout hides and skins may be split into two or sometimes more layers known as grain and flesh splits. The various parts of a cattle hide vary considerably in thickness and a hide is normally cut or 'rounded' into portions known as the butt or back, the shoulder and the bellies. The hide or skin is now delimed with a weak acid solution to a varying extent depending upon the amount of stretch or pliability required in the finished L.; in general the greater amount of deliming the more stretch there is in the L.

If a pliable L. is wanted the hide or skin is puered or bated, which consists of digesting and loosening by means of enzymes or bacteria, unwanted parts of the skin known as the scud and comprising the residual hair roots, short hairs, pigments, epidermis, lime soaps, grease, and degraded mucous filling. Simultaneously by means of a salt incorporated in the bate deliming is carried a stage further and the two actions have the combined effect of opening up the fibre structure prior to tanning. The scud is removed by machine or by hand.

Sheepskins and skins that are to be chrome tanned are then pickled in a salt-sulphuric acid solution. Pickling preserves the skin and pickled sheep pelts are shipped in barrels, for instance, from New Zealand to all parts of the world. If large amounts of natural grease remain in the skin this grease must be removed by pressure or solvents. After this the hide or skin is ready for tanning.

**Tanning.** Vegetable substances such as barks of trees, shrubs, nuts, etc. (vegetable tanning), mineral salts such as basic chromium salts (chrome tanning) or alum (alum tanning), fish oils such as cod oil (oil tanning or dressing), formaldehyde, sulphur and combinations of these materials (combination tanning) all have the power to tan the hide or skin. Vegetable is the oldest and still probably the commonest method. Originally oak bark was used but other products have now largely taken its place; these include valonia, chestnut, myrabolanus, sumac, mimosa, quebracho, gambier, avurambark, babool bark, and extracts made from these and other woods. Tanning is carried out in pits, rotating drums, or special wooden vats known as paddles and normally takes from 2 or 3 days to 3 weeks according to the hide or skin and the type of L. required, although it may take as long as 2 years. To obtain penetration the hides or skins are treated first with weak liquors and the strength is gradually increased.

Chrome tanning is rapidly gaining in popularity, particularly where lightness, flexibility, light colour, and resistance to heat are wanted. The process consists of treating the pickled hides or skins with a solution of a chrome salt (normally the sulphate or chloride) gradually increasing the concentration of the salt and finally basifying it until tannage is complete. Only a basic chrome salt will tan a hide or skin.

In alum tanning the skins are usually treated with alum, flour, salt, and egg yolk, and the resultant L. is white, very stretchy, strong, and tough, but will not withstand soaking in water.

Oil tanning consists of alternately treating the de-limed skins (usually flesh splits of sheepskins) with fish oils and hanging them up in a heated room to allow the oil to oxidise. After this has been done a number of times the skins are repeatedly piled to develop heat and spread out to cool. Oil tanning is used mainly to produce chamols L., which can also be

made by tanning with a combination of formaldehyde and fish oil.

L.s that have been first vegetable tanned and then chrome tanned are known as semi-chrome, and L.s that have been chrome tanned and then vegetable tanned are known as chrome retan. Recently some synthetic tannins, or syntans, have been developed.

**Dressing.** After tanning, the hide or skin becomes L. (crust or rough tanned in the case of vegetable tanned, or in the blue in the case of chrome tanned) but needs to be finished or dressed according to its final purpose. This might involve a number of processes such as evening the thickness, treating with oil or grease, colouring, softening, rolling, correcting surface faults, developing the grain, superimposing another pattern, polishing, and even water-proofing. For instance, sole L.s, i.e. L.s for shoe soles, have little further treatment beyond levelling, rolling, and brushing, but upper and other L.s may go through practically all the dressing processes.

Usually after tanning the L. is dried and sorted and the first dressing operation is to wet it back and shave it on the flesh side to level substance by means of a machine with a rapidly revolving bladed cylinder; this also cleans off any surplus flesh. It is often retanned to modify its properties and/or treated with oil or 'fat liquored' to soften it. Colouring is done by dyeing in drums or paddles with natural or coal-tar dyes, by brushing or spraying with dyes or pigments, or by both dyeing first and pigmenting later. After the L. has been retanned, fat liquored, or drum dyed, it is dried under heat and tension by toggling on frames, nailing on boards, or pasting on glass. The L. can be mechanically softened by staking or densified by rolling. The grain surface may be fluffed or buffed to remove small faults or may even be completely removed, as is often done with, for example, gloving L.s finished on the flesh side as a suede. Some L.s are dressed so as to reveal the natural grain and surface markings to preserve the distinctive character of the L. The natural grain can be brought into prominence either by using an astringent tannage that causes the grain layer to shrink or by a special process involving folding the L. either by hand or by machine (boarding), morocco, levant, levant seal, pin seal, and Niger goat are common examples of such L.s. Boarding also produces the square shaped and natural crocuses in such L.s as box and willow calf. L. is given a polished surface by treating it with a suitable glazing season and ironing it, plating it (that is, pressing it with a highly polished plate), or glazing it, which consists of drawing a polished glass, stone, or metal roller rapidly across its surface. When the dressing operation consists principally of incorporating large amounts of grease into the L. it is known as currying and the resultant L. as curried L.

From this it can be seen that L. can be modified very greatly according to the

final purpose for which it is intended. Shoe and clothing L.s, for instance, can be treated to make them water repellent, gloving L.s to be washable so that the colours do not run, and bookbinding L.s to be acid and ironfree for long life under storage.

L. is used for a tremendous range of products such as the uppers, linings, and soles of shoes, gloves, clothing, belts, hats, upholstery, luggage, handbags, other L. goods, bookbinding, driving belts, pickers, roller covers in spinning-machines, gas-meter diaphragms, bellows, organs, gaskets, washers, and oil seals, and for cleaning, wrapping, and even petrol filtering. Most types of hides and skins are used in L.s for shoes and L. goods; but the majority of upholstery and luggage L. is produced from split hides, and gloving and clothing L. from sheepskins.

**Leather-jackets.** see CRANE-FLY.

**Leathercloth,** cotton or linen fabric treated with a solution of pyroxylin. The solvents usually employed are a mixture of alcohol and amyl acetate or one of wood spirit, acetone, and amyl acetate. An insoluble dyestuff is added to the solution, and after the material has been coated it is run through a machine with a pattern or 'grain,' which is impressed on the fabric. The modern method is to coat the fabric with one of the vinyl plastics, such as polyvinyl chloride (P.V.C.).

**Leatherhead,** par. and tn of Surrey, England, 3 m. from Epsom, on the R. Mole. There are light industries, and agriculture is carried on. Pop. 8850.

**Leathers, Frederick James, 1st Viscount** (1883- ), Brit. industrialist, who was a gov. adviser on shipping and transport problems in both world wars. He was minister of war transport, 1941-5, and from 1951 to 1953 was secretary for the co-ordination of transport, fuel, and power. He was made a baron, 1941; viscount, 1954.

**Leatherwork.** Of recent years the art of creating goods from leather has become increasingly popular as a hobby. Leather is pleasant and easy to handle, and a minimum of tools and very little skill are required to produce useful and decorative articles. L. falls roughly into 3 classes. The first, and nowadays probably the largest, class is that which concerns itself with the making of hand-bags, purses, and hoddalls. There are many leathers which can be used for this purpose, the most popular being calf, pigskin, cowhide, and embossed sheepskin. The simple basic tools required for hand-bag making are a good knife, steel ruler, cutting board, awl, and a 6-way plier punch. The materials for an average thonged hand-bag consist of: (a) Leather (usually sold by the square foot). Skins with holes and blemishes can be used but care must be taken that the required pieces can be cut out by avoiding these faults. (b) A skiver (grain split of a sheepskin) or lining leather. The skiver is attached to the leather with paste, and a press is used for drying. (c) Thonging. This is made in

leather or plastic. (d) Glue. (e) A fastening. There is a wide variety obtainable: clips, press-studs, buckles, etc. If press-studs are used a special fixer can be purchased. The process of making a handbag consists of placing the pattern on the leather and skiver, cutting out, pasting them together, then sewing the bag by threading the thonging through a series of holes made by a plier punch. The edges of the leather which are to be punched and thonged are glued together and held in place with bull-dog clips before being punched. Accuracy, combined with practice, is needed to ensure that holes are a uniform distance apart, and to keep the stitches at an even tension. A stitch marker can be used if necessary.

The second class of L. is artistic L. This embraces tooled and decorated leather, modelled, appliqué, hammered and punched leather, blind tooling and gold tooling. This type of work is more specialised. It is particularly suitable for book covers and finely modelled bags, pocketcases, comb cases, etc. The best skins for general artistic decorative work are calf or cowhide; calf is very malleable. Dull-surfaced cowhide is used for modelling. The tools required by beginners are also simple and few: a good knife, tracer, steel ruler, set-square, punch, and modelling tools.

The third category in amateur L. is glove-making. Hand-made gloves are always popular for many reasons, one of the most important being that individual patterns can be used. The most popular leathers for gloving are Cape gloving, Persian, nappa, imitation peccary, gloving lamb and sheep skins, coloured and white doeskins, chamois leather, and gloving shearling and lamb skins with the wool on. A good pattern, a really sharp pair of scissors, needles, and good strong thread are adequate equipment for simple types of gloves. The secret of glove-making lies in the cutting and in the correct method of stitching. The 'stretch' must always be across the width of the hand, and it is essential to know where the stretch of a gloving skin lies when laying on the pattern. See Betty Dougherty, *Four Leatherwork*, 1947; F. R. Smith, *Leatherwork*, 1949; R. L. Thompson, *Leathercraft*, 1949.

**Leaven** (through Fr. *levain*; from Lat. *levamen*, solace; *levare*, to lift up), substance which produces fermentation; also an underlying element or influence which produces a subtle change in anything. To the Hebrew the word suggested corruption, hence leavened bread was not permitted in sacrifices. At the Feast of the Passover or of Massôth unleavened bread was eaten. In the N.T. the kingdom of heaven is compared to L. (Matt. xiii. 33) signifying a good influence. The idea of corruption is suggested in the reference to the L. of the Pharisees in Matt. xvi. 6.

**Leavenworth**, co. seat of L. co., E. Kansas, U.S.A., on the R. Missouri, 20 m. NW. of Kansas City. Fort L. to the N. is seat of command and general staff school. Coal is mined, and machinery

engines, bricks, furniture, flour, woollens, mattresses, and canvas goods are manuf. Sherman air force base is near by. Pop. 20,579.

**Leavis, Frank Raymond** (1895- ), critic, Cambridge. Educ. at Perse School and Emmanuel College there, he was elected a fellow of Downing College in 1935, and in the following year became a lecturer in English. Owing to the unconventional views put forward in his works, they have aroused a good deal of controversy. They include *Mass Criticism and Minority Culture*, 1930, *New Bearings in English Poetry*, 1932, *Tradition and Development in English Poetry*, 1936, *The Great Tradition: George Eliot, James, and Conrad*, 1948, *The Common Pursuit*, 1952, and *D. H. Lawrence, Novelist*, 1955.

**Lebanon**, co. seat of L. co., SE. Pennsylvania, U.S.A., 25 m. from Harrisburg. Its manufs. include iron and steel products, machinery, stoves, clothing, chemicals, textiles, food products, and paper boxes; it also has railroad shops. Pop. 28,150.

**Lebanon, or Lebanese Republic**, state in the Near E., bounded by Syria on the N. and E., Israel on the S., and the Mediterranean on the W. It consists mainly of the parallel mt ranges of the L. and the Anti-L. divided by the Bekaa valley. Area 3400 sq. m.; pop. 1,400,000. There are slightly more Christians than Muslims and more than half the Christians are Maronites (q.v.). The princ. towns are Beirut (cap.), Tripoli, Saida (Sidon), and Sur (Tyre). The country is mainly agric., but iron and lignite are mined on a small scale. The hist. of L. can hardly be separated from that of Syria until 1864, when owing to its Christian majority it was made a privileged prov. of the Ottoman Empire, with a Christian governor supervised by the European powers. The French were given a certain precedence. With the outbreak of war in 1914, the Turks abolished the special regime. With the rest of Syria, L. came under Fr. mandate after the First World War; in 1920 it was proclaimed a state with its own assembly and president. It continued, however, under Fr. control, but in 1936 was promised complete independence in 1939. This was not granted and in 1940 L. was held by the Vichy administration. In 1941 it was captured by British forces and placed under the control of Gen. de Gaulle. Brit. and Fr. troops were withdrawn in 1946 and L. was now completely independent for the first time in its hist. As a member of the Arab League, L. took part in the war against Israel in 1948. A few villages were lost to Israel, but these were restored by the armistice agreement of Mar. 1949. L. is a constitutional rep. with a president and an assembly of 44 members. It is a member of the U.N. L. is generally considered to exercise a moderating influence on her fellow members in the Arab League, and her attitude towards the W. powers remained relatively friendly during the Suez crisis (1956) and subsequent events.

**Lebanon, Mount** (*Libanus*, the White Mt.), mt chain from which the rep. of L. derives its name, parallel with the Mediterranean coast with spurs projecting to the sea; the Jebel-Libnan or Jebel-el-Gharbi of the Arabs. It stretches from the Nahr-el-Kebir, near Tripoli, and Homs to the Litany (ancient *Leontes*), near Tyre, and the range is continued by the hills of Palestine, the biblical mts of Naphtali, Ephraim, and Judaea. To the E. is the Anti-Libanus range (Jebel-esh-Sharki), with El-Beka'a (ancient *Coele-Syria*), a narrow, fertile valley, between. The average height of L. is 7000 ft, its chief peaks, Dahr-el-Kodib and Jebel-Makmal, being

E. Buchanan

## CEDARS IN LEBANON

about 10,000 ft. The formation is limestone, sandstone, and basalt. Only a few groves of the once noted cedars now remain. The vills. on the slopes of L. are favourite summer resorts for the people living in Beirut. See J. Eddé, *Géographie Liban-Syrie*, 1941, and A. K. Hourani, *Syria and Lebanon*, 1945.

**Lebbeke**, tn in the prov. of E. Flanders, Belgium, 15 m. NW. of Brussels; engaged in agriculture and manuf. of furniture and lace, in tanneries and oil-mills. Pop. 12,500.

**Lebda**, see LEPTIS.

**Le Bel, Joseph Achille** (1847-1930), Fr. chemist who shares with J. H. van't Hoff, a Dutchman, the honour of having originated an important theory of the arrangement of atoms in space.

**Lebensraum, or Living-space**, slogan of neo-Ger. imperialism, in use before the First and Second World Wars. The word really denotes two different things: (a) the alleged over-pop. of Germany in comparison with her arable soil—whence the need for territorial expansion; (b) the Ger. claim to control various neighbouring zones in the E., SE., N., and W. of Europe—a claim based on strategic or economic interests. Before 1914, and in the early inter-war period, L. concentrated on a demand by Germany for, firstly, more colonies, and later for a return of the colonies taken from her after the First World War.

By 1939, however, Germany no longer

regarded herself as overcrowded (if she ever had), and Hitler's use of the term was by this time largely restricted to an extension of Germany's living-space in Europe alone.

**Leblanc, Nicolas** (1742-1806), Fr. chemist who invented an important method of manufacturing washing soda from common salt. This method is now obsolete but was worked for over a cent. L. was ruined by the revolution and finally committed suicide.

**Le Blanc**, Fr. tn, cap. of an arron., in the dept of Indre, on the Creuse. It has an important agric. trade. Pop. 6700.

**Lebœuf, Edmond** (1809-88), marshal of France, b. Paris. He entered the army in 1832, and after service in Algeria was made colonel. He directed the Fr. siege operations around Sevastopol in the Crimean war and was made brigadier-general. He rose to be commander-in-chief of the artillery and served with distinction at the battle of Solferino. In 1869 he became minister of war and the following year marshal. Before the Franco-Ger. war he claimed France to be in perfect readiness, so that he was largely blamed for the disasters of his country. After resigning he fought bravely at Noisseville and Gravelotte, and was taken prisoner at Metz.

**Lebork** (Ger. *Lauenburg*), tn of Poland, in Gdańsk prov., on the Leba, 40 m. WNW. of Gdańsk (q.v.). It was founded in the 14th cent. by the Teutonic Knights (q.v.), and passed to Brandenburg in 1657. It has textile and foodstuff industries. Pop. 12,000.

**Le Bossu, René** (1631-80), Fr. writer and critic, b. Paris. He joined the canonry of St Genervève in 1649, and taught the humanities in various schools. His *Traité du poème épique*, 1675, won for him a European reputation. It was trans. into English by 'W. J.' in 1695, and there was a later version in 1719. Its thesis was that the subject should be chosen before the characters, and the action arranged independently of them: it was known to Dryden, Addison, and Pope. See memoir by Le Courayer, prefixed to the 6th ed. of the *Poème épique*.

**Lebret**, see ALBRET.

**Lebrija, El Antonio de** (1444-1522), Sp. writer, b. Lebrija, Andalusia. For 20 years he taught rhetoric at the univ. of Salamanca and then at Alcalá. He is especially remembered as one of the collaborators on the Complutensian polyglot Bible. He wrote numerous works on languages, mathematics, theology, law, hist., and archaeology, as well as Sp.-Lat. and Lat.-Sp. dictionaries, and, in 1492, the first important Sp. grammar.

**Lebrija** (Rom. *Nebrija*), Sp. tn in the prov. of Sevilla, with ancient walls, a Moorish castle, and an interesting church, formerly a mosque. It trades in cattle, grain, wine, and oil. Pop. 17,000.

**Lebrun, Albert** (1871-1950), Fr. statesman and President of France, b. Méry-le-Haut, Meurthe-et-Moselle. After being a mining engineer and prof. he became a deputy of the moderate right in 1900. He

was minister of colonies during the Agadir incident (q.v.). In 1932 he became President of the third rep., averting the 1934 crisis of the Paris riots by calling a national gov. In 1940 his authority was superseded by that of Pétain (q.v.), and he was arrested by the Germans in 1943. In 1944, after his release, he retired from public life.

**Le Brun, Charles** (1619-90), Fr. historical painter, pupil of Vouet. He designed many of the decorations at Versailles (1679). In 1648 he helped found the Academy, estab. the Fr. school at Rome, became court painter to Louis XIV, and director of the Gobelins manufactory (1660). His art was devoted entirely to the glorification of the Grand Monarque. His works include 'Massacre of the Innocents,' five pictures illustrating the hist. of Alexander (1661-8, in the Louvre), 'The Family of Darius,' and 'The Repentant Magdalen.' See Blanc, *Histoire des Peintres*, 1849-75, and Bayle, *Historical and Critical Dictionary*, 1696; also lives by Genevay, 1885, and Jouin, 1890.

W. F. Mansell

ELISABETH VIGÉE LEBRUN  
(Self-portrait.)

**Lebrun, Marie Louise Elisabeth** (née Vigée) (1755-1842), Fr. portrait painter. b. Paris. She painted her first portrait of Marie Antoinette, 1779, and was admitted to the Academy, 1783, with 'Peace Bringing back Plenty.' She travelled much in Europe. Her portraits include Lady Hamilton, Mme de Staël, herself and her daughter, J. Vernet, Lord Byron, the Prince of Wales, and Marie Antoinette and her 3 children. She pub. her *Souvenirs* about 1835. See also Nolhac, *Vigée Le Brun*, 1908.

**Le Caron**, see BEACH, THOMAS MILLER.

**Le Cateau**, see CATEAU, LE.

**Lecco**: 1. Prov. of Italy, in E. Apulia (q.v.). It is the S. part of the 'heel' of Italy, and is mainly a great plain, bordered on the E. by the Adriatic and on the W. by the Gulf of Taranto (qq.v.). There is some high land in the SE. The prin. tns include L. and Copertino (qq.v.). Area 1090 sq. m.; pop. 644,000. See also 'ALABRIA.

2. (anc. Lupiae) It. tn, cap. of the prov. of L., 86 m. SE. of Bari (q.v.). It has Gk remains, and some fine baroque buildings, including a cathedral (1670) and a bishop's palace. There is a trade in textiles, wine, oil, and tobacco, and manufs. of papier-mâché goods. Pop. (com.) 66,200.

**Lecco**, It. winter and tourist resort in Lombardy (q.v.), on the E. arm (called the *Lago di Lecco*) of Lake Como (q.v.). Textiles and metal goods are manuf. Pop. (tn) 15,600; (com.) 42,400.

**Lech**, riv. of Austria and Germany, which rises 10 m. E. of Bludenz, in Vorarlberg (qq.v.), and flows NE. and N., past Augsburg, to join the Danube (q.v.) E. of Donauwörth (q.v.). Length 177 m.

**Lecky, William Edward Hartpole** (1838-1903), historian and philosopher; b. near Dublin, his family being of Scottish origin. Educ. at Armagh School, Cheltenham, and Trinity College, Dublin. He attributed much of his success to his study of the works of Bishop Butler, Hobbes, Boesuet, Whately, and Buckle. His earliest pub., *Religious Tendencies of the Age*, 1860, revealed a spirit of tolerance and a liberal outlook, as also did his *Declining Sense of the Miraculous*, 1863, which work later formed the early chapters of his *History of Rationalism*, 1865. This latter book put L. in the front rank as an author who knew how to present hist. and philosophy with unity of conception, power of thought, and a method of cultural evolution. L. is nowadays best remembered for his *History of England in the Eighteenth Century*, one purpose of which was to refute what he described as the anti-Irish calumnies of Froude. The 8 vols. were pub. between 1878 and 1890 and were described by Lord Acton as 'fuller of political instruction than anything that had appeared for a long time.' The work estab. L. as an authoritative and impartial historian, thorough in research, and able to present summaries and deductions in philosophical language and with the soundest judgment. Other works include *Leaders of Public Opinion in Ireland*, 1861 (revised, 1903), *Democracy and Liberty*, 1896, *The Map of Life Conduct and Character*, 1899, and *Historical and Political Essays*, 1908. He was Unionist M.P. for Dublin Univ. in 1895 and 1900. See memoir by Mrs L., 1909, and life by J. J. Auchmuty, 1946.

**Leclair, Jean-Marie** (1697-1764), Fr. violinist and composer. b. Lyons. Becoming a ballet master at Turin, he studied the violin under Somis there. He went to Paris in 1728 and played with much success at the Concert Spirituel and at court until 1736, when he devoted himself to composition and teaching. He

wrote chamber music especially for his instrument, and an opera, *Seylla et Glaucus*.

**Lecianché Cell**, see under CELL.

**Le Clerc, Jean** (1657-1736), Swiss theologian, b. Geneva. After completing his studies he became a prof. at the Remonstrant seminary at Amsterdam, 1684. Among his numerous works are *Bibliothèque universelle et historique*, 1686-93, *Bibliothèque choisie*, 1703-13, *Ars Critica*, 1712-30, and *Bibliothèque ancienne et moderne*, 1714-26.

**Le Clerc, Sébastien** (1637-1714), Fr. designer and engraver, b. Metz. In 1608 his *Géométrie pratique* in 80 plates attracted the notice of Colbert, who procured for him a post in the Gobelins tapestry manufactory. Le C. also pub. a number of scientific treatises and a *Traité d'architecture*, 1714. See C. A. Jombert, *Catalogue raisonné de l'Œuvre de Sébastien Le Clerc*, 1774.

**Leclerc de Hauteclouque, Philippe** (1902-1947), Fr. soldier, b. of an old Picardy family, his true name being Philippe, Vicomte de Hauteclouque. Passed out of St Cyr, 1924. At the outbreak of war in 1939 he was a captain. Wounded and taken prisoner, he escaped to England and offered his services to Gen. de Gaulle, adopting the name of L. to avoid reprisals against his wife and family; and at the end of the Second World War he changed his name to L. de H. Sent by de Gaulle to the Cameroons, he played a prominent part in setting up the new regime under the Free Fr. movement. His first great military exploit was the capture of the Kufra oasis (q.v.) during Gen. Wavell's offensive, but he had to retreat when the British retreated. The march of his motorised column from Fort Lamy (q.v.) in Fr. Equatorial Africa to join the Eighth Army (q.v.) at the Marth line was magnificent achievement and one which had great moral value to France. Its *éclat* should not, however, obscure the fact that it was the outcome of organising power and immense labour, necessitating the transport of vehicles and heavy stores up the Congo for a distance of 1000 m. After the N. African campaign he came to England to raise and train the famous Fr. Second Armoured Div., and indeed it is as a brilliant divisional commander that he will be remembered. His div. took part in the invasion of Normandy (1944) and made its spectacular dash to liberate Paris (24-5 Aug.). Later the div. joined the Fr. Army, which had landed in the S. of France from the Mediterranean, and were the first troops to enter Strasbourg (23 Nov.). For a time in 1945 L. was governor of Strasbourg. Later in that year he was sent to Fr. Indo-China as commander-in-chief, where his stern measures against the Viet Nam insurgents excited criticism in left wing quarters. He was killed on 28 Nov. 1947 in an aircraft accident in Fr. N. Africa, where he had been inspector of the forces of land, air, and sea since April 1947. His leadership and achievements did much to restore Fr. confidence in the glories of the

Fr. Army, which had suffered eclipse in 1940, and his reputation was enhanced by youth and charm (see *The Times*, 29 Nov. 1947). See *Le Général Lervier vu par ses compagnons de combat*, Paris, 1948.

**L'Ecluse, Charles de** (1526-1609), botanist, of Artois, author of *Rariorum Plantarum Historia*, 1601, etc. Clusius (q.v.) was named in his honour.

**Lecocq, Charles** (1832-1918), Fr. composer, b. Paris, where he studied at the Conservatoire. His first operetta appeared in 1857, *Le Docteur miracle* (with which he won, at the same time as Bizet, a prize offered by Offenbach), followed by many others, notably *Fleur de thé*, 1868, *Les Cent Vierges*, 1872, and best known of all, *La Fille de Mme Angot*, 1872, produced in Paris and London, 1873, which was never equalled in his subsequent pieces, including *La Petite Mademoiselle*, 1879, *Le Jour et la nuit*, 1881, *Le Cygne*, 1899, and *Yella* (Brussels), 1908.

**Lecointe de Lisle, Charles Marie** (1818-1894), Fr. poet, b. in the is. of Réunion. He settled in Paris in 1846. His first work, *La Vénus de Milo*, 1848, gained him many admirers, especially amongst the devotees of classical literature, and he produced his *Poèmes antiques*, which contain some of his best work, in 1852. These were followed by *Poèmes et Poésies*, 1855, *Le Chemin de la croix*, 1859, *Poèmes barbares*, 1862, *Les Erinnyes*, a tragedy after the Gk model, 1872, *Poèmes tragiques*, 1884, and *L'Apollonide*, 1888. Besides this he trans. Theocritus, Anacreon, the *Iliad* and *Odyssey*, Hesiod, Aeschylus, Horace, Sophocles, and Euripides. *Derniers poèmes* appeared posthumously, 1895. His poems had a great influence on the young poets of his time, and are marked by classic regularity and faultlessness of form. He played an important part in formulating the aims of the Parnassiens, and became their acknowledged leader. In spite of his gospel of impassiveness his poems express a pessimistic awareness of the transitoriness of things. He was made assistant librarian at the Luxembourg in 1873, and succeeded to Victor Hugo's chair at the Academy in 1886. See J. Vianey, *Les sources de Lecointe de Lisle*, 1907, and *Les poèmes barbares*, 1935; P. Flottes, *Le poète Lecointe de Lisle*, 1929; P. Jobit, *Lecointe de Lisle et le mirage de l'île natale*, 1951.

**Le Corbusier**, pseudonym of Charles-Edouard Jeanneret (1887- ), Swiss-Fr. architect and writer on architecture; b. La Chaux-de-Fonds, Switzerland; was trained in Vienna, Paris, and in Berlin under Behrens (q.v.). He began independent practice in Paris c. 1922. At first his work consisted mainly of small houses. Later buildings: the Swiss Hostel in the Cité Universitaire, Paris, 1932; various exhibition pavilions; and the enormous block of flats known as the Unité d'Habitation, Marseilles, 1945-50, which accommodates 1600 persons.

He has also prepared town-plans for Moscow, the univ. city at Rio, Bogotá, Algiers, Ismir (Turkey), Saint-Dié, and Chandigarh—the cap. of the Punjab in

India. He has written sev. most important books on architecture and town-planning, especially *Vers une Architecture*, 1922, and *Urbanisme*, 1924. By these books, trans. into other languages and read all over the world, as well as by his own designs, he has influenced current architecture more substantially than any other modern architect, ever since he invented the doctrine that a house is 'a machine for living in.' Some of his ideas are impracticable and visionary; nevertheless his importance remains unchallenged.

He was the Fr. member of the Advisory Committee for the U.N. building in New York; and was awarded the R.I.B.A. Royal Gold Medal in 1953. See biography by M. Ganthier, 1943.

**Lecouvreur, Adrienne** (1692-1730), Fr. actress, b. near Châlons. After making her début in 1717 she was received into the Comédie Française, where she attained an extraordinary popularity. She was extremely fascinating, but her success was largely due to the naturalness of her delivery and her simple pathos. Her death was supposed to have been due to poison administered by a rival, the Duchess Bouillon. Scribe and Legouvé's play, *Adrienne Lecouvreur*, 1849, gives an account of her life.

**Le Creusot**, see CREUSOT.

**Lectern**, originally set in the middle of the choir to support the antiphoners and graduals of the cantors, as it still is in monastic and collegiate churches. In Eng. par. churches, at the Reformation, it was moved out into the nave to be used as a stand for the Bible, at which the Lessons at morning and evening prayer should be read. A common type of L. is in the form of an eagle with outstretched wings.

**Lectionary**, book containing, or book prescribing, the portions of scripture to be read during the course of the year in the public services of churches and synagogues.

**Lectures** (Lat. *lectura*, from *legere*, to read; cf. Fr. *lecture*), a discourse before an audience or class upon a given subject, usually for the purpose of instruction; particularly a course of L. at univs. or colleges. Lectureships were endowed at most univs. with a view to spreading the opinions of the founder, at first restricted to theology or religion. In Commonwealth univs. lecturers are appointed to deliver courses; they are subordinate to professors. 'Univ. Extension' L. (given in centres away from the univ. to adult education classes) have been promoted by the univs. of Cambridge, Oxford, and London for 80 years. Other univs. in the U.K. and throughout the world have followed this example. There still remain many special L.; the topics treated range widely and they are promoted by a variety of organisations, often in memory of a distinguished member. Many univs. have special L. At Oxford, among others, are delivered the **Bampton** (theology), the **Sidney Ball** (economics), **Halley** (astronomy), and

**Herbert Spencer** (philosophy); at **Cambridge**, **Hulsean** (Christian theology), **Rouse Ball** (mathematics), **Scott** (physics), and **Alfred Marshall** (economics); at **London**, **Stamp Memorial** (economics), **Ethel M. Wood** (theology), and **Creighton** (hist.), among others. **Gifford L.** in natural theology are delivered at each of the Scottish univs.

AN OLD LECTERN IN BURY CHURCH, HUNTINGDONSHIRE

**Lecythis**, typical genus of Lecythidaceae. Over 60 species are known, mostly giant trees of Brazil, Venezuela, and the Guianas. The great woody pericarps of the various species are used by the natives as drinking vessels. The seeds are large and eatable but leave an unpleasant bitter taste. *L. ollaria*, the Monkey Pot, is the largest tree in the Brazilian forests. The bark is cut by the Indians into thin layers and used as wrapping for cigars or for cigarette wrappers. *L. zabucajo* is the source of palatable seeds, sold as Sapucacia Nuts (q.v.).

**Leczycza**, tn of Poland, in Łódź prov., on the Bzura, 23 m. NNW. of Łódź (q.v.). It has a 12th-cent. Romanesque church, and has flour and brewing industries. Pop. 7000.

**Leda**, mythical daughter of Thestius and Eurythemis, and wife of Tyndareus, King of Sparta. Zeus visited L. in the form of a swan, and to him she bore Castor and Pollux (q.v.).

**Ledbury**, tn in Herefordshire, England, at the S. extremity of the Malvern Hills. Fine cider orchards and hop grounds are in its immediate neighbourhood. There is a fine timbered market house of 1633. Pop. 3689.

**Lede**, tn in the prov. of E. Flanders, Belgium, 12 m. SE. of Ghent. There is agriculture and the manuf. of linen, lace, tobacco, and chicory. Pop. 9300.

**Ledeberg**, SE. suburb of Ghent, Belgium, engaged in floriculture, cotton-mills, manufs. of machinery, chemicals, sugar, and dye-works. Pop. 11,600.

**Ledochowski, Mieczyslaw, Cardinal Count** (1822-1902), Polish ecclesiastic, b. Gorki, Galicia. He was educ. at Warsaw, finishing at Rome, where he was ordained in 1845. In 1865 he became Archbishop of Gnesen-Posen, and in 1876 was made a cardinal. He championed the cause of his religion against the gov., and suffered imprisonment in 1873 during the Prussian and Ger. *Kulturkampf*, on refusing to lay aside his office. Being released in 1876 he went to Cracow, but on being expelled from Austria went to Rome, finally resigning his archbishopric in 1885. In 1892 he was made prefect of propaganda.

**Ledru-Rollin, Alexandre Auguste** (1807-1864), Fr. politician, b. Fontenay. He was admitted to the Bar in 1830, and became well known as an extreme democrat. In 1846 he pub. *Appel aux travailleurs*, in which he advocated universal manhood suffrage. On the outbreak of the revolution in 1848 he became a member of the provisional gov., standing for the presidency, against Louis Napoleon, later in the year. In 1849 he tried to organise a revolution in Paris. His followers were easily dispersed, and he fled to London, returning to France after an exile of 20 years.

**Leduc**, tn in Alberta, Canada, about 20 m. S. of Edmonton. It was at L. that, in 1947, the first major discovery of oil was made during the surge of exploration that followed the Second World War. There are now a number of productive fields in the surrounding area extending more than 60 m. along the NE.-SW. trend of the Devonian reef formation. The recoverable reserves of the L. field are 230 million barrels, but the potential of the whole area amounts to sev. hundred million barrels. The same area also produces the bulk of Canada's natural gas.

**Ledward, Gilbert** (1888- ), sculptor, b. London, second son of Richard Arthur L., sculptor. He obtained the first Brit. School of Rome scholarship in sculpture, the R.A. travelling studentship and gold medal, both in 1913. In the First World War he was a lieutenant in the Royal Garrison Artillery. He designed, with H. Chalton Bradshaw, the Guards' Div. memorial on the Horse Guards Parade. He also designed war memorials in 5 Eng. tns and at Grahamstown (S. Africa), as well as the Marquess of Ormonde memorial in Kilkenny Cathedral, the Dean Spence memorial in Gloucester Cathedral, the Alfred Milner memorial in Westminster Abbey, and bronze statues of King George V. at Kampala, Uganda, 1939, and at Nairobi, Kenya, 1940. From 1926 to 1929 he was prof. of sculpture at the Royal College of Art. His statue-fountain in Sloane Square, London, 1953, won the medal of the Royal Society of British Sculptors for the best sculpture of the year.

**Ledyard, John** (1751-88), Amer. traveller, b. Groton, Connecticut. In 1776 he

accompanied Capt. Cook on his last voyage, on his return publishing a jour. of the voyage with an account of Capt. Cook's death. In 1786 he set out on an expedition to the Arctic regions, arriving at Irkutsk after a journey of great hardships, where he was arrested as a spy and forbidden to re-enter Russia. Returning to London, almost immediately he started on another expedition to the interior of Africa, but d. at Cairo.

**Lee, Ann** (1736-84), b. Manchester, left the Quakers at 22. After persecution as a religious eccentric she, with others, left for America in 1774 and founded the American Society of Shakers.

**Lee, Fitzhugh** (1835-1905), Amer. general, b. Clermont, Virginia. He served throughout the Virginian campaigns of 1862 and 1863, becoming major-general the same year, and led the last charge of the Confederates at Farmville in 1865. He was governor of Virginia, 1886-90, consul-general at Havana, 1896, and military governor of Havana and Pinar del Rio, 1899. He wrote *Robert E. Lee*, 1894, and *Cuba's Struggle Against Spain*, 1899.

**Lee, Frederick Richard** (1799-1879), landscape painter, b. Barnstable. He became a student of the Royal Academy in 1818, and first exhibited in 1824. He was elected an academician in 1838. His works were chiefly of Eng. scenery, the cattle in many of them being painted by Sidney Cooper. Some of his pictures are 'The Cover Side' (dog, etc., by Landseer), 'Showery Weather', 'Evening in the Meadows', 'A River Scene' (all of which belong to the Tate Gallery, London), 'Near Redleaf', 'Gathering Seaweed', and 'Distant View of Windsor' (Victoria and Albert Museum).

**Lee, Henry** (1756-1818), Amer. soldier known to every Amer. schoolboy as 'Light-Horse Harry Lee', was b. near Dumfries, Virginia. He graduated from Princeton, and when the Amer. colonists began their war for independence served for a time under Washington. Later, given independent command of a mobile troop, he captured the fortress of Paulus Hook from the British, and then distinguished himself by his dash into the Carolinas. After the war had been won he became governor of Virginia, and took a leading part in suppressing the so-called whisky rebellion in Pennsylvania. In Congress he delivered the funeral oration on the death of Washington. He was the father of Robert E. Lee (q.v.), commander-in-chief of the forces of the S. Confederacy. See life by T. Boyd, 1931.

**Lee, Nathaniel** (c. 1653-92), Brit. dramatist, educ. at Westminster School and Cambridge. He produced his first play, *The Tragedy of Nero, Emperor of Rome*, in 1675. He next pub. *Sophonisba*, 1675, and *Gloriana*, 1676, but he made his reputation by *The Rival Queens*, a blank verse tragedy in 1677. Many others followed, his last being *The Massacre of Paris*, 1689. L. also collaborated with Dryden in *Oedipus*, 1679, and *The Duke*

of Guise, 1682. His works were collected in 3 vols., 1736. See R. G. Ham, *Olway and Lee*, 1931.

**Lee, Richard Henry** (1732-94), Amer. statesman, b. Stratford, Virginia, being a scion of an old Virginia family of Cavalier stock. He was educ. in England and returned to his country in 1752, having inherited large landed estates. He served in the Virginia legislative assembly and distinguished himself by leading the opposition to what he deemed the arbitrary acts of the Brit. governing authorities. He was a delegate to the first Continental Congress held in Philadelphia in 1774, and proposed the first and second addresses to the Brit. people. In the Congress of 1776 he introduced the resolutions which brought about the writing of the famous Declaration of Independence, mainly the product of his fellow Virginian, Thomas Jefferson. L. subsequently served a number of terms as congressman and senator.

**Lee, Robert** (1804-68), theologian, b. Tweedmouth, Northumberland. He was educ. at St Andrews Univ., and was minister of the old Groyfriars Church, Edinburgh (1843-68). He was an innovator within the Church of Scotland, and introduced stained-glass windows in 1857 and an organ in 1864. He pub. *The Reform of the Church in Worship, Government, and Doctrine*, 1864, as well as many other theological works and books of prayers.

**Lee, Robert Edward** (1807-70), Amer. soldier, perhaps the greatest commander the Amer. Civil War produced, and acknowledged by European military critics to be one of the greatest generals of modern times, was b. at Stratford, Virginia. The L. family, originating in Shropshire, was among the early settlers of Virginia. L. himself married Mary Custis, daughter of the adopted son of George Washington, so that the young couple really represented the very flower of S. aristocracy. Graduating second in his class at West Point Military Academy L. won rapid promotion, until by 1838 he was a captain in the engineers corps. He won high praise for his services during the siege of Veracruz, and was wounded during the storming of the heights of Chapultepec. The close of the war found him a colonel, and in 1852 he had command of the U.S. Military Academy. When the Civil war broke out he had much searching of heart. A lover of the Union and opposed to secession, he nevertheless felt that he owed his first allegiance to the state which had given him birth and so highly honoured his ancestors.

In May the Confederacy named 5 generals, of whom L. was only third on the list. He was without any command at first, being engaged as military adviser to President Davis and to superintend the defences of Richmond and the coast defences of Georgia and S. Carolina. However, the severe wounding of Gen. J. E. Johnston, his intimate friend and classmate, caused L. to be placed in charge of the troops defending Richmond. In a

brilliant 7 days' series of battles he defeated the Union troops and wrecked the Peninsular campaign of Gen. McClellan. Later he crossed the Rapidan R. and defeated Gen. Pope at Manassas. He made an ill-advised invasion of Maryland, and had to retreat across the Potomac. He gained brilliant victories at Fredericksburg and Chancellorsville (1863). In response to pressure from public opinion in the Confederacy, he marched his armies into Pennsylvania, thereby giving the S. hope that the war would be transferred to N. soil. The bloody battle of Gettysburg followed. Though successful the first day L. was defeated on the succeeding days, and retreated to Virginia. The closing years of the war, 1864-5, found L. pitted against Gen. U. S. Grant in an ever increasing numerical inferiority. Antietam was a drawn battle, but Cold Harbor was a victory for the Confederates. When Grant took Petersburg in April 1865, and Richmond fell a few days later, L. recognised the inevitable by surrendering to him at Appomattox Courthouse, Virginia, with his ragged and exhausted army of 28,302 men. He had to start life all over again, and his beautiful home at Arlington, overlooking Washington, had been expropriated. He accepted the presidency of Washington College, Lexington, Virginia, later to be known as Washington and Lee Univ. He d. there on 12 Oct. 1870. Between L. and Grant there was no bitterness. Great soldiers both, they recognised that each had done his duty as he saw it. L. was the greater strategist and the greater master of the arts of war. The wonder was how, with inferior numbers and supplies, he managed to keep his army intact and fighting for so long a period. Apart from his skill as a commander there was something about his personality that appealed to his men. See W. H. Taylor, *Four Years with General Lee*, 1878; A. L. Long, *Memoirs of Lee*, 1886; R. E. Lee (his son), *Recollections and Letters*, 1904; J. F. C. Fuller, *Grant and Lee*, 1933. See also lives by F. Lee, 1895; W. P. Trent, 1899; P. A. Bruce, 1907; G. Bradford, 1912; F. Maurice, 1930; D. S. Freeman, 1934; B. Moses, 1937; B. Davis, 1956; E. S. Miers, 1956.

**Lee, Sir Sidney** (1859-1926), biographer, b. London of Jewish parents. Educ. at the City of London School and Balliol College, Oxford, he became assistant editor of the *Dictionary of National Biography* in 1883, joint editor with Sir Leslie Stephen, 1890-1, and editor from 1891 onwards. L. contributed numerous articles, and wrote the memoir of Edward VII, 1912. Other works of his are *Stratford-on-Avon from the Earliest Times to the Death of Shakespeare*, 1885, *A Life of William Shakespeare*, 1898, *A Life of Queen Victoria*, 1902, *Elizabethan Sonnets*, 1904, *Great Englishmen of the 16th Century*, 1904, *Shakespeare's and the Modern Stage*, 1906, *The French Renaissance in England*, 1910, and *Principles of Biography*, 1911 (Leslie Stephen lecture at Cambridge). He was prof. of Eng. literature at E. London College, Univ. of

London, 1913-24, and dean of the faculty of arts in the univ. of London.

**Lee, William**, inventor, b. Calverton, Notts. Graduating from Cambridge he was ordained in 1582. About 1589, whilst holding the cure at Calverton, he invented the stocking-frame (see Hosiery). This machine he later improved, and in 1598 produced silk stockings. The opposition of the hand knitters drove him abroad, and he d. in Paris.

**Lee of Fareham, Arthur Hamilton Lee**, 1st Viscount (1868-1947), soldier and politician, educ. at Cheltenham and the Royal Military Academy, Woolwich. He was prof. of strategy and tactics at the Royal Military College, Kingston, Canada, 1893-8, and Conservative M.P. for the Fareham div. of Hants, 1900-18. He was civil lord of the Admiralty, 1903-5, director general of food production, 1917-1918, minister of agriculture and fisheries, 1919-21, and First Lord of the Admiralty, 1921-2. In 1921 he gave Chequers estate, Bucks, for a country residence for prime ministers. He was created viscount in 1922. His autobiography, *A Good Innings*, 1868-1940, was pub. in 1940.

**Lee**, dist. of London, in the N. of the bor. of Lewisham. There is a chapel built by Christopher Boone, and the Merchant Taylors' almshouses. The manor house, formerly a residence of the Earl of Northbrook, is now a public library. Pop. 21,000.

**Lee**, riv. in co. Cork, Rep. of Ireland, rising on the Kerry-Cork border, forming Lough Gougane Barra and Lough Allua and flowing through Cork co. into Cork harbour at Cork. With its tribs. it is an important centre of salmon and trout fishing. It is at present (1958) being developed for electrical power on a large scale between Macroom and Inniscarra.

**Lee**, term implying shelter or protection, usually from wind. It occurs principally in nautical expressions. Thus the *L. side* of a vessel (as contrasted with the windward side) is the opposite side to that on to which the wind is blowing—the sheltered side; *lee-way* is the sideways drift from a desired course occasioned by wind; a *L. shore* is a shore to leeward of a vessel, and therefore a shore on to which the wind is blowing from the sea.

**Lee-Enfield**, Brit. rifle, see GUN.

**Leech, John** (1817-64), caricaturist, b. London and educ. at Charterhouse. In 1835 he began to exercise his gift of caricature, and in that year pub. *Etchings and Sketches by A. Pen.* In 1837 he illustrated Theodore Hook's *Jack Brag*, and 3 years later, with Leigh, produced a *Comic Latin Grammar* and a *Comic English Grammar*. In 1841 *Punch* was founded and L. became its prin. artist and cartoonist until his death. It is said that he contributed no less than 3000 drawings to its pages. This, however, did not by any means exhaust his activities, and he illustrated many books, including Dickens's *Christmas Stories*, a Beckett's *Comic History of England*, and the *Bon Gaultier Ballads*. More refined than Cruikshank he was scarcely second to that great master,

except in the range of his subjects, and gives a most valuable record of Victorian social life. See life by W. P. Frith (2nd ed.), 1891, and G. Tidy, *A Little About Leech*, 1931.

**Leeches**, see LITCHEI.

**Leeches**. Leech is the common name of any class of the Hirudinea, a class of elongated, worm-like animals belonging to the group Annelida. They can be distinguished by their sucking disks, which are situated at each end of the body if there are two, and at the posterior extremity if only one is present. They occur in all parts of the world, and generally live in water, frequenting streams, ponds, marshes, and the sea, but land L. are also found, for example, in Ceylon. Among aquatic forms the most familiar is the horse leech (*Haemopsis sanguisuga*), which inhabits freshwater ponds and ditches, and unlike some other L. has a few small teeth of blunted form. The medicinal leech is known by its minutely ringed body, and by the presence of an anterior and posterior sucker. Its mouth in the anterior sucker contains 3 teeth, which are minutely serrated so that each tooth looks like a saw. It is these teeth which make the leech so useful in blood-letting, for with these it makes a wound in the skin, having first fixed itself by the anterior sucker, and sucks the blood into its own body. L. are usually of a dark olive colour, with patches or spots on a paler ground, but bright green specimens also occur.

**Leeds, Thomas Osborne**, 1st Duke of (1631-1712), Eng. statesman, son of a Yorks baronet. In 1647 he succeeded to the title and estates, became M.P. for York in 1665, and an opponent of Clarendon, under Buckingham's leadership. He held various offices in the navy administration, and on his appointment as lord treasurer in 1673 was created viscount, becoming Earl of Danby in the following year. A strong partisan of the Church of England and its supremacy, he advised against Charles II's attempts to obtain toleration for Rom. Catholics. In foreign affairs he was an enemy of France, but his position was complicated by his keen royalism, and he must have been aware of the secret treaty of Dover. However, whilst obtaining Fr. subsidies, simultaneously he concluded a league with Holland for war against Louis XIV and was largely responsible for the marriage of Mary of York and William of Orange, 1677. His fall was engineered by Montagu, in 1679, an act of attainder being brought in against him by the Commons on various charges, including the raising of a standing army, corruption, and embezzlement. He was released from the Tower in 1684 and took the lead of the moderate Tories in the House of Lords against James II. He was one of the leaders who invited William of Orange to England in 1688. From 1690 to 1695 he was a chief adviser to William, regaining his post of lord treasurer and becoming Duke of L. in 1694. After this period his power declined, and a charge of bribery

was brought against him in 1695, but not pressed.

**Leeds**, city, parl. and co. bor. in the W. Riding of Yorks, on the R. Aire, 25 m. WSW. of York and an important railway centre. It is situated in beautiful country near the Yorks dales and the 'Brontë' land. It was made a co. bor. in 1889 and a city in 1893. It owes its modern development to its industries, being the seat of the Eng. woollen industry and noted for this manuf. for cents. Situated about the centre of the national railway system, and having communication with

employ some 15,500. Large as the woollen trade is it is rivalled by the engineering trade and the manuf. of iron, which includes both the casting of metal and the manuf. of machinery and employs some 15,000 persons. L. is an important centre for leather manuf., the printing trade, and furniture making; and among its other numerous industries are chemicals, soap manuf., coach-building, ferro-concrete construction, medicines, hairdressing apparatus, cardboard box-making, mineral waters, carpets, scientific instruments, cameras, jams and sauces, hats, brushes,

*Valentine & Sons Ltd, Dundee*

LEEDS: ROUNDHAY PARK

Liverpool by the L. and Liverpool Canal and with the Humber by the Aire and Calder Navigation Canal, L. has valuable transport facilities, and the proximity of the great coal- and iron-fields has also been a most influential factor in establishing its prosperity. The early hist. of L. is obscure; apparently its original name was Loidis and at the coming of the Normans it was an agric. vil. of 1000 ac. cultivated by 35 farmers. In later years, with the introduction of the art of weaving and the development of cloth manuf., L. gradually rose to a prominent place among the towns of England. The first royal charter, which formed the town and parish into a municipal borough, was granted by Charles I in 1626.

To-day L. is the largest ready-made clothing centre in the world, giving employment to well over 55,000 persons; while the woollen and worsted trades

clocks and watches, fish canning, button making, and electrical appliances and accessories.

In the centre of City Square stands Brock's equestrian figure of the Black Prince, whose father Edward III did much to establish the wool industry in L. Briggate, which crosses Boar Lane, is a leading shopping street, and Duncan St.—named after Adm. Duncan—is another chief shopping centre. Another, Kirkgate, leads to the markets and to the parish church. The church is said to be the fourth to be built on this site since Domesday Book recorded that L. possessed 'a priest, a church, and a mill.' In the church is a pre-Conquest cross, the oldest political monument in L. Crossing Briggate is a new 80-ft-wide street, called the Headrow. This is now the main street leading to the city's shopping centre; its elevations are the work of Sir Reginald

Blomfield. Above the Headrow is St John's Church, the city's eccles. treasure, which was built and endowed in 1634 by John Harrison and is a complete example of 17th-cent. Gothic architecture. Running off the Headrow is King Charles Croft, the site of the Red Hall, formerly a mansion, which received as a prisoner King Charles I. The L. museum, in Park Row, contains an Egyptian mummy of 1070 bc, pottery, Yorks tokens, objects of Civita Lavinia, zoological specimens, and much else of general interest. Near Park Row is St Anne's Rom. Catholic cathedral. The tn hall was designed by Cuthbert Brodrick and opened by Queen Victoria in 1858; it is in the classic style, with a tower 225 ft high. At the rear of the tn hall is the civic hall, the most modern public building, which was opened by King George V in Aug. 1933. The main frontage has a portico with 6 columns and the twin towers are 170 ft high, each surmounted by a large gilt owl, which is part of the arms of the corporation. Opposite the tn hall are the municipal buildings, now occupied by the central reference and lending libraries, the commercial and technical library, and the art gallery.

The city has a fine univ. (see LEEDS, UNIVERSITY OF). There are a girls' high school (1876) and a grammar school founded in 1552 and enlarged in 1663, as well as over 160 primary and secondary schools, accommodating 73,000 children. There is a teachers' training college and a college of housecraft, and the Carnegie Physical Training College in Beckett Park was the first of its kind in the country. L. returns 7 members to Parliament and is the second city of Yorks and the sixth in England. L. did not suffer extensive war damage compared with some other cities of the kingdom, the heaviest raid being on 14-15 Mar. 1941. Altogether there were 9 raids on L., in which 77 persons were killed, over 300 injured, and 4000 rendered homeless; 170 houses were demolished and 4300 damaged; while 22 non-residential buildings were demolished and 3400 non-residential buildings were damaged.

The area of L. is about 38,300 ac. Of this over 3200 ac. are taken up by parks and open spaces. The 2 prin. parks are at Roundhay (629 ac.) and Temple Newsam (935 ac.). Roundhay Park has natural woodlands and 2 lakes and was formerly a royal hunting ground. Temple Newsam, the largest of the city's open spaces, was acquired in 1922 from the Hon. E. F. L. Wood, later Lord Halifax. Another attractive piece of woodland is Middleton Park (316 ac.), lying to the S. of the city near an industrial dist. There is an aerodrome at Yeadon of some 200 ac. The pop. of L. in 1775 numbered 17,000; to-day (1958) it is 505,500.

**Leeds, University of**, developed from the Yorks College of Science, founded 1874, which was predominantly scientific in its instruction but later broadened its educational field, and in 1884 united with the L. School of Medicine (founded 1831). Subsequently the college became feder-

ated with Owens College, Manchester, and Univ. College, Liverpool, to form the Victoria Univ. (q.v.). This union was dissolved in 1903, and the following year the univ. of L. was constituted by royal charter. The Brotherton Library (capable of housing 1,000,000 vols.) forms part of the development scheme for univ. buildings to cover 16 ac. As parts of an extensive building programme the Parkinson building, the man-made fibres building, and University House have been completed since 1950. Work is in progress on other buildings and further extensions are planned. There are 6 faculties and an institute of education. Students number over 3,530 (of whom nearly 500 are post-graduate). The 4 affiliated colleges include the College of the Resurrection, Mirfield.

'**Leeds Mercury**,' estab. in 1718 as a weekly newspaper at 1½d. When the stamp tax was imposed its price gradually rose until in 1797 it was 6d., with a circulation of only 800. Under the guidance of the Baines family it became a powerful voice of Liberalism and for a long time had the largest sale of any prov. daily. In 1901 it was 1d. It was amalgamated with the *Forkshire Post* (q.v.) in 1939.

**Leek**, mrkt tn of N. Staffs, England, 8½ m. from Burslem, known as the 'capital of the moorlands,' near the Dove, Manifold, and Dane valleys, and specially noted for its sewing thread and silk dye works, and manufs. of silks and ribbons. Pop. 19,358.

**Leek**, hardy biennial plant, *Allium ampeloprasum*, var. *porrum*, which is largely grown for food, the whole plant, with the exception of the fibrous root, being utilised. It is the national emblem of the Welsh, who wear it on St David's Day; but some authorities maintain that the L. has been confused with the daffodil, which in Welsh is *Centin Pedr*, St Peter's L. See also HOUSE LEEK.

**Leer**, Ger. tn in the Land of Lower Saxony (q.v.) at the confluence of the Ems and the Leda, 110 m. NW. by W. of Hanover (q.v.). It is a busy riv. port, has an anet castle, and has interesting churches. There are foodstuff and textile industries. Pop. 20,000.

**Lees**, urb. dist., tn, and par. of Lancs, England, 1½ m. SE. of Oldham, of which it is a suburb. Pop. 4100.

**Leese**, Sir Oliver William Hargreaves (1894- ), Eng. soldier. After service in the First World War, in which he gained the D.S.O., L. was appointed deputy chief of the general staff of the B.E.F. in 1940, and a divisional commander. A lieutenant-general in 1942, he commanded the 30th Corps of the Eighth Army from Alamein to Sicily. In Jan. 1944 L. became Eighth Army commander until transferred in Nov. to Allied Land Forces, SE. Asia. From 1945 to his retirement in 1946 he was general officer commanding-in-chief, R. Command. In 1937 he succeeded to the family baronetcy. Lieutenant-general, 1944; lieutenant of Tower of London, 1954.

**Leeton**, tn in Murrumbidgee Irrigation

Area in New S. Wales, Australia, 378 m. SW. of Sydney. Fruit- and rice-growing are the prin. pursuits. Pop. 5100.

Leeuwarden, cap. of the prov. of Friesland, Netherlands, 70 m. NNE. of Amsterdam. The tn is intersected by numerous canals and is well built. The Frisian museum has a fine collection of paintings, silver ware, porcelain, and regional costumes. L. trades in grain, dairy produce, and cattle, and has important manufs. of glass, metal, gold, and silver ware, musical instruments, and cloth. Pop. 81,370.

C. A. Watts & Co. Ltd  
ANTHONY VAN LEEUWENHOEK

Leeuwenhoek, Anthony van (1632-1723), Dutch naturalist, b. Delft. He was a cloth merchant by trade, and as a hobby made magnifying lenses. He obtained quite high magnifications, even though his microscopes were of the simple type and contained only a single lens; the compound microscope, with separate eyepiece and objective, was invented a few years earlier by Galileo (1564-1642). L. ground his own lenses by a method which still remains a secret. He made many important discoveries in the anatomy of man and the higher animals and insects. He also discovered bacteria (q.v.). Most of his discoveries were pub. in the *Philosophical Transactions* of the Royal Society, of which body he became a fellow in 1680, and in the *Mémoire* of the Paris Academy of Sciences, of which he became a member in 1697. Two collections of his works, one in Dutch and one in Latin, appeared in his lifetime, and a selection from them has been trans. into English by S. Hoole (1798-1807). His letters were pub. in 1941 in Amsterdam. See C. Dobell, *Van Leeuwenhoek and his Little Animals*, 1932.

Leeward Islands, name given to the

group of the Lesser Antilles which skirts the Venezuelan coast. The name—*Islas de Sotavento*—was formerly a geographical designation given by the Spaniards, to indicate the sheltered position of the is. as opposed to *Islas de Barlovento*, the Windward Is. It is now applied to the Brit. colony comprising the 4 presidencies Antigua (with its dependencies Barbuda and Redonda); St Kitts, Nevis, and Anguilla; Montserrat; and the Virgin Is. (q.v.). Dominica (q.v.), by her own wish, ceased to be a presidency of the L. I., becoming a separate colony under the governor of the Windward Is., and an Act to that end was passed by Parliament in 1938. The federation of the L. I. was effected by an Act of the Imperial Parliament of 1871. In its geographical sense the L. I. also include Guadeloupe and Martinique and other is. belonging to other European states. France possesses Guadeloupe, Martinique, St Bartholomew, and part of St Martin (q.v.), while Holland has St Eustatius (q.v.), Saba, and the other part of St Martin, and Denmark has a share in the Virgin Is. St Kitts has been in continuous Brit. occupation since the days of Sir Thomas Warner (from 1623), and, having thus early been a base for further colonisation, proudly calls herself 'The Mother Colony of the W. Indies.' Norman Is., in the Virgins, is said to be the original 'Treasure Island' of R. L. Stevenson. The chief products are sugar, salt, phosphate of alumina (obtained from the rich deposits in the islet of Redonda), lime-juice, which is exported from Montserrat, rum, molasses, cacao, and oils, the two last being from Dominica. St John, in Antigua, with a pop. of 11,000, is the cap. and residence of the commander-in-chief of the Brit. colony. A commission appointed in 1932 recommended that the L. I. and the Windward Is. should be united into one colony under a single governor, with the H.Q. at St Lucia, but the recommendation was not accepted. Air services touch at Antigua. The total area of the Brit. L. I. is 422½ sq. m. and the pop. 127,140. See A. Macmillan, *The West Indies, Past and Present, with British Guiana and Bermuda*, 1938.

Le Fanu, Joseph Sheridan (1814-73), novelist, b. Dublin, grand-nephew of Richard Brinsley Sheridan (q.v.). Educ. at Trinity College, Dublin, he became proprietor of the *Dublin University Magazine*, in which many of his novels made their first appearance. In 1837 he wrote the famous Irish ballad, 'Shamus O'Brien.' He was long engaged in journalism, amalgamating the *Warden*, the *Evening Post*, and the *Dublin Evening Mail* as the *Evening Mail*, but he pub. 2 novels, *The Cock and Anchor*, 1845, and *Torloagh O'Brien*, 1847, neither of which attracted any particular attention. It was in 1863, with *The House by the Churchyard*, that he first secured public favour, and he followed up this success with *Uncle Silas*, 1864, and *Wylder's Hand*, 1864, both popular, and sev. other works of fiction such as *Haunted Lives*, 1868, *The Wyvern*

*Mystery*, 1869, *Willing to Die*, 1870, and *Through a Glass Darkly*, 1872. Another member of the family, Brinsley le F., was well known as an illustrator of books. See J. M. Ellis, *Wilkie Collins, Le Fanu, and Others*, 1931.

**Lefebvre, Pierre François Joseph, Duc de Danzig** (1755–1820), marshal of France, b. Rufsch, Alsace. He fought at Fleurus in the revolutionary wars, and on his return to France assisted Napoleon in the *coup d'état* of 1799, becoming a marshal of the empire in 1804. In the war against Prussia he captured Danzig in 1808. He commanded the Imperial Guard in Russia, 1812, and fought through the last campaign of the empire. After Napoleon's abdication he was made a peer. See life by J. Wirth, 1904.

**Lefèvre d'Étaples, Jacques**, see **FABER, JACQUES**.

**Leflier, Anna Carlotta**, see **EDGREN**.

**Lefroy, Mount, peak**, 11,230 ft high, in the Rocky Mts., at the W. border of Alberta, Canada, 35 m. WNW. of Banff.

**Left-handedness**, see **AMBIDEXTERITY**.

**Left Opposition, or Left Deviation**, in Communist parties and in the Communist International, opposition to the policy of the dominant group by the more radical elements, i.e. those stressing revolutionary principles or the proletarian character of the party. In Russia the main L. O.s were those led by Bukharin in 1918, by Trotsky in 1923, by Zinoviev and Kamenyev in 1925, and the 'combined' opposition in 1927. See F. Borkenau, *The Communist International*, 1938, and L. B. Schapiro, *The Origin of the Communist Autocracy*, 1955.

**Leg.** In common speech the word leg is used for the whole of the hind limb; anatomically the word applies only to the shank, or portion between the knee and ankle. There is a great similarity in the anatomy of the hind limb in all animals. The thigh has one main bone, the femur, which enters into the formation of the hip-joint above and of the knee-joint below. The L. proper contains 2 bones, the tibia and the fibula. The tibia is the larger of the 2 bones and the more palpable. Its anterior border forms the shin. The upper part of the tibia forms, with the lower part of the femur, and with the patella or knee-cap, the knee-joint; but both the tibia and the fibula enter into the formation of the ankle-joint, the tibia forming the inner and the fibula the outer malleolus. Below these 2 bones come the small bones of the tarsus and metatarsus, forming the framework of the foot, and below the metatarsus come the phalanges of the toes. The chief difference in structure of the hind limb is due to the fact that in the course of evolution it has rotated inwards. The anterior part of the L. of a lizard is represented in man by the inner part, whereas the homologue of the posterior part is the posterior outer and anterior parts of a man's L. The main arterial supply of the L. is from the common femoral artery, which runs at first in the anterior part of the thigh and curves round the lower part of the femur

to become the popliteal artery behind the knee; the main nerve supply is the great sciatic nerve, running in the posterior part of the thigh. The nerve supply from the knee downwards comes from the popliteal nerves, branches of the great sciatic. The artery with its vein and the 2 nerves are to be found in the popliteal space at the back of the knee. The popliteal artery divides into the anterior and posterior tibial

BONES OF THE LEG

A, ilium; B, sacrum; C, femur; D, patella; E, tibia; F, fibula; G, tarsals; H, metatarsals; I, phalanges.

arteries. The venous return is by deep and superficial channels. The superficial group of veins, which end in the long saphenous vein, which in turn enters the femoral vein just below the groin, are those which are liable to become varicose (see **VEINS**).

**Legacy** (Lat. *legatum*), in Eng. law bequest of personal property made by a testator in his will to be paid by his executor. L.s may be specific, general, demonstrative, or cumulative. A specific L. is a gift of a specified object, such as a particular picture or certain shares. Such a L. is liable to ademption, that is to say, if the picture should have been destroyed by fire or the shares sold in payment of the testator's debts, no compensation is made. But if the specific L. exists it must be paid in full in preference to all other L.s. A general L. is a gift payable out of the assets and not particularly distinguished from the whole of the personal estate. It is liable to abatement only when there is not sufficient to pay all the general L.s. A demonstrative L. is primarily payable out of a specified fund, but if there is any balance to be paid recourse must be had

to the residue of the estate. A cumulative L. is a second or further L. to the same person. If the 2 L.s are of equal amount, or bequeathed by the same instrument, it is assumed that the second is a mere repetition of the first; but if they are bequeathed by different instruments or are of unequal amounts it is assumed that the second L. is in addition to the first. A L. is not payable till a year after the death of the testator. A L. to a creditor is regarded as payment of the debt, provided it is not less than the sum owing. See also LEGACY AND SUCCESSION DUTY. See Jarman, *On Wills*, 1951, and Theobald, *On Wills* (9th ed.), ed. by J. H. C. Morris, 1954.

**Legacy and Succession Duty.** Legacy duty was first imposed under the Legacy Duty Act of 1796 as a tax on all bequests of personality. The 1853 Succession Duty Act required all property passing at death not liable to legacy duty to pay succession duty. The duty was payable at rates varying with the degree of relationship between the testator and the beneficiary irrespective of the amount involved.

L. and S. D. no longer exists; it was consolidated into estate duty (q.v.) in 1949.

The rates of duty imposed by the Finance Act, 1947, were:

<i>Relationship of Beneficiary</i>	<i>Rate of Duty per cent</i>
Husband or wife, child, or lineal descendant, or ancestor	2
Brother or sister or lineal descendant	10
Charities	10
Any other beneficiary	20

The average ann. yield from the duties for the financial years 1945-6 to 1949-50 was £17 million.

**Legal Aid,** see POOR PERSONS' LEGAL AID.

**Legal Education** in England is undertaken by the univs., which award law degrees; the Council of L. E., which is responsible for the examination leading to the call to the Bar; and the Law Society, which conducts the examination of candidates for admission to the roll of solicitors:

(a) The *Universities* provide degree courses in the academic study of law. The possession of a law degree does not entitle the holder to practise as a barrister or solicitor. Some prov. univs. do, however, provide courses for the professional examinations.

(b) The *Council of Legal Education*, controlled by the 4 Inns of Court. Candidates for call to the Bar must register as a student member of an Inn. The student is generally required to keep terms by attending dinners in the hall of his Inn to the number of 24 a year for 3 years. In the days before formal L. E., the object of dining in hall was to enable the student to hear learned members of his Inn give readings on legal topics and attend 'moots'

(i.e. disputations on some legal proposition). Nowadays tuition in subjects in the curriculum for the Bar is provided by the Council of L. E.; attendance at its lectures is not obligatory. Before call to the Bar the student must pass the examinations held by the Council of L. E. Part I of the examination comprises Rom. Law, Contract and Tort, Real Property, and Legal History. Part II comprises Common Law, Equity, Evidence, Civil and Criminal Procedure, Master and Servant, Company Law, and optional papers in either Conveyancing or Divorce. As many students from India, Pakistan, and Ceylon and the colonies obtain the qualification of barrister-at-law to enable them to practise in their own countries, they may take alternative papers in Rom.-Dutch, Hindu, or Muslim law. An applicant for admission as a student must produce a certificate of character to the satisfaction of the Masters of the Inn which he seeks to enter. Many persons obtain the qualification of barrister-at-law without any intention of practising at the Bar. Members of certain professions are not allowed to become Bar students. For this reason all applicants for admission to an Inn of Court must make a declaration that they are not acting, either directly or indirectly, as solicitor, attorney, clerk of the peace, parl. agent, or in any similar capacity, nor as chartered accountant, actuary, land agent, surveyor, patent agent, or consulting engineer. Before commencing practice, the newly called barrister usually serves a period of pupillage in the chambers of an estab. counsel in order to learn something of the practice of the courts and pleading.

(c) The *Law Society* conducts the examinations for applicants for admission to the roll of solicitors. Candidates must be articled for a minimum of 3 years to a practising solicitor of at least 5 years' standing. Candidates who are not univ. graduates or solicitors' managing clerks of 10 years' standing are usually articled for 5 years. Univ. graduates in law are exempt from the law portion of the intermediate examination, but are, in common with all other candidates, obliged to take a paper in solicitors' bookkeeping and trust accounts. Candidates for the final examination must pass each of 7 papers in a much wider range of subjects than is proscribed for Bar students. The Law Society conducts a law school which provides tuition for candidates for its examination. Attendance at this school for 1 year is obligatory on all articled clerks who have not previously studied in the law faculty of an Eng. univ. Applicants for admission to the rolls must produce a statement from their principals that they have attended their offices regularly. The purpose of this requirement is to satisfy the Law Society that the articled clerk has acquired some practical experience of the work in a solicitor's office. See Glanville Williams, *Learning the Law* (5th ed.), 1954.

Le Gallienne, Richard (1866-1947), poet

and essayist, b. Liverpool, son of a merchant. Literary critic for the *Star*, 1891, he joined the staffs of the *Daily Chronicle* and the *Speaker*. The range and quality of his general criticism were well represented in *Retrospective Reviews*, 1896. His romantic novel, *The Quest of the Golden Girl*, which appeared in 1896, won not only a *succès d'estime* but popular favour as well. He visited the U.S.A. on a lecture tour in 1898, afterwards taking up his residence in New York and later in France. His other works include *My Lady's Sonnets*, 1887, *Robert Louis Stevenson and Other Poems*, 1895, *Travels in England*, 1900, *George Meredith: some Characteristics*, 1902, *Vanishing Roads*, 1915, *Pieces of Eight*, 1918, *The Romantic Nineties*, 1926, *The Magic Seas*, 1930, and *From a Paris Garret*, 1943.

**Legal Marxists**, group of economists and sociologists in Russia who in the 1890's were advancing and developing Marxist views in the legal (i.e. not underground) press. It included among others P. B. Struve, Tugan-Baranovskiy, Bulgakov, and Berdyayev. Together with Plekhanov and Lenin they popularised Marxism in Russia, and to a considerable extent succeeded in converting the Socialist intelligentsia from populism (q.v.). See D. W. Treadgold, *Lenin and his Rivals*, 1955.

**Legal Tender**, see TENDER.

**Legal Theory**, see JURISPRUDENCE.

**Legaspi**, city, cap. of Albay prov., Luzon, on Albay Gulf, in the Philippine Archipelago. The municipalities of Albay and L. were combined in 1907 to form L. Daraga municipality and L. municipality were combined soon after 1940 to form L. city. It is an industrial town and shipping centre for abaca and copra. Pop. 78,828.

**Legate** (Lat. *legatus*, ambas.), title now confined to the ambas. or diplomatic representative of the Pope. L.s are of 2 classes: *legati nati* (L.s b.) and *legati missi*, or *dati* (dispatched L.s). The former title is now almost honorary. *Legati nati* were formerly attached to some such see, such as that of Canterbury, and the title still attaches to the sees of Seville, Rheims, Cologne, etc. *Legati missi* may be (1) *Legati a latere*, that is, dispatched 'from the side' of the Pope. A cardinal is generally employed, and he is the plenipotentiary representative of the Pope. (2) *Nunci* or *internunci apostolici*, those whose jurisdiction is limited, according to the terms of their mandates. (3) *Apostolic delegates*, whose duty it is to supervise eccles. matters and inform the Pope thereon. (4) *Envoys extraordinary* are apostolic delegates charged with some definite ecclesiastico-diplomatic mission. The functions of L.s are generally performed to-day by the lesser representatives known as nuncios, or internuncios.

**Legend** (Lat. *legenda*, from; *legere*, to read), originally the term applied to a narrative of a religious kind in the early days of Christianity, and hence used for portions of scripture and lives of the saints as read in public worship. The word later came to be applied to a story without any

foundation in hist., but popularly supposed to be true, handed down from one generation to another. These L.s were at first brief and simple, but gradually developed into long and imaginative tales of a more and more exaggerated description, so that by degrees the word came to mean a narrative, professedly historical, but in reality only traditional. The famous *Golden Legend*, a medieval collection of the lives of the saints, was composed towards the end of the 13th cent. by Jacobus de Voragine or Varagine (1230-98), b. Varaggio, in Genoa. The title of his collection, in Latin, was *Legenda Sancta*, but it became so popular that it was called *Legenda Aurea*. The word L. is also used in connection with coats of arms and shields, by numismatists for inscriptions or mottoes on coins or medals, and by printers for the title or descriptive matter accompanying an illustration. See A. H. Guerber, *Myths and Legends of the Middle Ages*, 1906; G. H. Gerould, *Saints' Legends*, 1916; J. G. Frazer, *Folk Lore in the Old Testament*, 1919; W. R. Halliday, *Indo-European Folk Tales and Greek Legends*, 1933; E. Morris, *Legends of the Bells*, 1935.

**Legendre, Adrien Marie** (1752-1833), Fr. mathematician, b. Toulouse. Through the influence of D'Alembert he obtained the professorship of mathematics at the École Militaire, and afterwards at the École Normale. He was admitted to the Académie des Sciences for a brilliant paper on the attraction of spheroids in revolution (1783), and in 1787 was appointed to the commission to connect geodetically Greenwich and Paris. In *Nouvelles Méthodes pour la détermination des orbites des comètes*, 1806, he propounded his method of least squares. Perhaps his greatest works were his *Traité des fonctions elliptiques et des intégrales Eulériennes*, 1827-1832, and *Essai sur la théorie des nombres* (3rd ed.), 1830.

**Léger, Fernand** (1881-1955), Fr. painter, b. Argentan. He became an architect's draughtsman in Paris, studied painting, and evolved from Cubism an art directly influenced by modern mechanical forms. His work includes painting and book illustration, designs for wall decoration, mosaic and stained glass, and has had considerable influence on the modern poster. See studies by E. Tériade, 1928, and D. Cooper, 1949.

**Legge, George**, see DARTMOUTH, BARON. **Legge, James** (1815-97), Scottish sinologist and missionary, b. Huntly, Aberdeen. In 1839 he went as a missionary to the Chinese, but was stationed at Malacca until 1842. Then he moved to Hong Kong, and remained there until 1873. In 1876 he became prof. of Chinese language and literature at Oxford; and his trans. of the Chinese classics, completed a few years before his death, won him a world-wide reputation. L.'s vast work forms an essential contribution of European scholarship to the knowledge of Chinese literature and civilisation. He ed. and commented, in 8 vols., the Chinese Confucian classics (1861-72), which he later reprinted in *The Sacred Books of the East*.

He also ed. *The Travels of Fa-hsien*, 1886, and the Taoist texts (2 vols.), 1891. Apart from these works he published sev. works on Chinese religion, hist., and philosophy.

**Leghorn** (It. Livorno): 1. Prov. of Italy, in W. Tuscany (q.v.), lying along the coast of the Ligurian Sea. In the S. it is in the Maremma (q.v.), and it is generally low-lying, but has some hills in N. and S. The chief rvs. are the Cecina and the Cornia. The is. of Elba (q.v.) and other small is. are included in the prov. Among the prin. tns are L. and Piombino (qq.v.). Area 488 sq. m.; pop. 294,000.

2. It. seaport, cap. of the prov. of L., on the Ligurian Sea, 47 m. WSW. of Florence (q.v.). In the 14th cent. it was under the domination of Pisa (q.v.). At the beginning of the next cent. it came into the hands of the French, who sold it to Genoa (q.v.) in 1407. It was purchased by the Florentines in 1421, from which time its prosperity dates. In 1606 the port and harbour were opened to traders of all nationalities, and it was a free port from 1691 to 1867. There was very severe damage from bombing and shellfire during the Second World War. The cathedral (begun 1594) has a façade ascribed to Inigo Jones (q.v.). Of the 4 porticoed palaces which stood in the adjoining square only one escaped serious injury in the war. There are many other palaces and Renaissance churches, as well as impressive coastal forts. The tn has museums and picture galleries, and there is an important library (1816). The chief industry is shipbuilding, and the exports include 'Leghorn' (straw) hats, coral ornaments, olive oil, and wine. Pietro Mascagni (q.v.) was b. here. Pop. (tn) 110,000; (com.) 145,700.

**Legion**, see ROMAN ARMY.

**Legion d'Honneur**, see ORDERS OF KNIGHTHOOD, FRANCE.

**Legion of Mary**, founded in Dublin on 7 Sept. 1921. The aims of the L. of M. are (a) the sanctification of its members by prayer and apostolic works; and (b) the provision of a *corps d'élite* which will be at the disposal of the eccles. superiors for the carrying out of any work desired (save the giving of material relief). The Legion looks beyond the actual work to the daily life and occupations of its members, and trusts, by enkindling in them the apostolic spirit, to set abroad a leaven in the community influencing every home, factory, shop, office, and every other place in which its members may be set by circumstances. The obligations of membership are satisfied by (1) attendance at a weekly meeting; (2) daily recitation of certain prescribed prayers; (3) weekly performance of some active work assigned at the weekly meeting. Generally the works of the Legion are based upon the principle of establishing friendly, personal contact with all sections of the community through the visitation of homes, hospitals, and various institutions. Also, every effort is made to cater for youth, and there is a special junior section of the Legion which organises an apostolate to youth by youth. The organising and conducting of

youth clubs and the providing of leaders for various youth movements receive special attention. Other works undertaken are the propagation of Catholic literature, the conducting of book-barrows on the streets, the seeking and instruction of converts, and work for the derelict sections of the pop. Legion branches composed of members of the various services carry out a wide and varied apostolate amongst soldiers and seamen. The L. of M. is now estab. in almost 1000 dioceses throughout the world. Its manual or handbook has been pub. in 15 languages, while trans. are in course of preparation in 6 other languages. The legion prayers are being recited in 70 languages and dialects throughout the world. Legion membership embraces all sections of the community and all races.

**Legion of Merit**, U.S. decoration instituted in 1939.

**Legis**, see CEHEGIN.

**Legislation and Legislative Processes**, the making of laws by a sovereign body elected or otherwise constituted for that purpose. Although at the present time the great mass of legislation emanates from the promulgations of parliaments and similar institutions, there can co-exist other sources of new laws. In England the Crown still possesses, by virtue of its prerogative (see CROWN), a residue of legislative power by proclamation in times of emergency. In practice such power is only exercised on the advice of the Cabinet. In view of the volume of legislation many modern legislatures, including the Brit. Parliament, delegate to the executive certain limited powers to issue regulations having the force of law on matters of detail. Similar delegated powers of legislation are often conferred on local authorities and statutory undertakings (e.g. the London Co. Council and the Brit. Transport Commission).

The judges have a covert and unavowed power of legislation. It is, however, an axiom of legal administration that the Eng. judges only *declare* law; but a study of the law reports shows that old *rationes decidendi* (principles underlying judicial decisions) are constantly undergoing slow but distinct modification by the process of engrafting so many exceptions or extensions as to render the original principles almost unrecognisable. At one time the judges claimed the right to challenge the validity of statutes if they conflicted with their conception of the common law. The claim has long since been abandoned as the intentions of the legislature could have been defeated by the caprice or prejudice of judges. Modern Eng. judges interpret enacted law 'grammatically,' i.e. according to the letter. If, however, a statute is logically defective by reason of ambiguity, inconsistency, or incompleteness, the judges literally or strictly apply the more natural meaning; where this is incapable of strict construction they apply the statute equitably. Generally, however, it is not competent for judges to ascertain the intention of the legislature by reference to speeches in parl. debates

if those intentions are not expressed in enactments.

In progressive societies legislation, according to Maine, comes last in historical order among the agencies by which law is brought into harmony with society (see EQUITY; FICTION; CUSTOMS), the other agencies being legal fictions and equity. The characteristic difference of legislation from the other agencies is that its obligatory force in no way depends upon its principles, for theoretically parliament or an autocratic prince can legislate in defiance of public opinion. That legislatures, in democratic countries at least, do not in fact do so at the present day is because their enactments are in accordance with the morality and sentiments of either the actual majority or at least a very respectable proportion of the people at large. It would be an interesting but speculative inquiry to investigate the actual relations of custom or customary law (see CUSTOMS; CONSUETUDINARY) and legislation. Customs have frequently crystallised into legislative enactments, and on the other hand general enactments have often expressly respected customs. At all events one assertion of Maine's seems historically accurate, that generally speaking the epoch of customary law is everywhere the immediate predecessor of the era of codes (q.v.).

Legislation in the sense of law enacted by sovereign legislatures tends to absorb all other sources and even forms of law. Rights and duties may, of course, be created by private bodies in whose name has been vested a restricted autonomy. For example, the shareholders of a company may, by a resolution at a general meeting, alter Articles of Association, and such alteration will be binding on a dissentient minority, provided that it is not *ultra vires*. The quasi-legislative powers of companies are, however, subject to the detailed provisions of the Companies Acts. Similarly the powers of professional bodies to make regulations binding on their members are often limited by statutory enactments.

In the Middle Ages statute law in England contributed less to law-making than did the common law which was being evolved from the precedents of decided cases. Practically two-thirds of the Acts recorded in the statute book between the 13th cent. and the middle of the 19th cent. were passed in the last 200 years of that period. The meetings of Parliament were intermittent until Parliament in its great constitutional struggle with the Crown in the 17th cent. won its unchallenged legislative powers. Parliamentary sovereignty and the rapid expansion of governmental activity in the social and economic life of the nation and in international affairs have in the last 100 years enormously increased the volume of statute law. Although legislative acts in England are not imposed by consent in quite the same degree as Acts imposed through a referendum (see INITIATIVE), the principle of representative gov. ensures that modern statute law meets with

the approval of a large proportion of the electorate and would be ineffective without the sanction of public opinion.

*Legislative processes.* In ancient Rome there was but little direct law-making, except to meet temporary emergencies. Such laws as were made were first proposed and determined on by the Senate, under the guidance of the king as the chief magistrate, and then submitted to the supreme council of the *gentes* (*comitia curiata*). The king himself as *pontifex maximus* promulgated laws (*leges regiae*) relating exclusively to religious ceremonies. In the rep., after the assembly of the tribes had superseded that of the centuries, the chief process of legislation was by *plebiscita*, though the ordinances of the Senate (*senatus consultum*), from being of doubtful authority, were gradually acquiring importance. The Senate also issued injunctions in the form of directions to particular magistrates, and, according to Puchta, before the era of the rep. had closed made independent enactments by decree in matters concerning religion, police, and civil administration. After the rep. gave way to the empire, the method of legislation, as well as its source, changed completely. The emperor, nominally only chief magistrate, acquired the *imperium*, or supreme command in the state, and gradually absorbed the sole legislative authority, dictating to the Senate what it was to enact or else enacting law himself. The processes by which the emperor's will expressed itself in legislation were by *edicta*, enunciated in his capacity as magistrate, *mandata*, or orders, directed to particular officers, *epistulae* addressed to individuals or public bodies, *decrees* or judicial sentences having the force of precedents, and *rescripts* to magistrates by way of answer on points of difficulty. Nominally the people continued to make laws, but they were no more than laws passed at the bidding of the emperor. The process of legislation was for the emperor to lay a bill or *lex* before the Senate in an *oratio* or *epistula*, after which it received the more or less formal *auctoritas* of the Senate.

In England legislation under the Norman kings was by charter issued by the king and assented to by the barons; those charters were hardly more than confirmations of customs and liberties (see FRANCHISE). The Angevin kings made laws by *assize* (*assisa*, statute) issued by the advice and consent of the barons, archbishops, abbots, and other members of the royal council, and proclaimed in the shire courts by the sheriffs. According to Stubbs they remained in force during the royal pleasure. In Henry III's reign legislation was, by a form, called *provisions*, e.g. the provisions of Oxford; and towards the end of the 13th cent. by statute and ordinance. Statutes were enacted by the assent of the prelates, earls, barons, and the commonalty of the realm. They were generally founded on petitions addressed to the king by the Commons, with the assent of the prelates, earls, and barons. The petitions were

referred to a committee of the peers and answered by the king on their advice, the statute itself being framed from the petition and its answer (see J. E. Jolliffe, *Constitutional History of Medieval England*, 1937, and Stubbs, *Select Charters*). The prerogative power of legislation by ordinance was of short duration, and the enactments so made were not enrolled in the year books, unless ultimately converted into Acts of Parliament. When the executive and legislative functions became more clearly separated, and the Commons had gained the controlling power in initiating legislation, they protested against legislation in the guise of an executive ordinance, and accordingly ordinances ceased in the 15th cent. Legislation by ordinance was revived in the 16th cent. in the shape of *proclamations* issued by the Crown in council by way of supplement to statute law, and later as completely independent autocratic enactments. Charles I issued many of these illegal proclamations, but they disappeared after 1640. The claim of the Stuart kings to dispense with the operation of particular statutes in individual cases, or to suspend an Act altogether, was abrogated by the Bill of Rights in 1689. The Crown can, however, still manifest the residue of its discretionary power by means of Orders in Council and Proclamations; but they are probably made subject to the assent of Parliament, and in any case are revocable by statute.

Legislation is now by Bill introduced in either House, passed by both Houses, and formally assented to by the Crown. Thus every Act of Parliament commences with the declaration 'Be it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons in this present Parliament assembled, and by the authority of the same, as follows . . .'

Certain Acts of Parliament empower ministers of the Crown to make regulations having the force of law on matters of detail. Such regulations, formerly called Statutory Rules and Orders, are now known as Statutory Instruments and must be laid before Parliament, which can annul them. The procedure for this 'delegated legislature' is to be found in the Statutory Instruments Act, 1946. A great deal of the law of England is now to be found in these Statutory Instruments.

The National Assembly of the Church of England has powers to legislate on matters of eccles. law binding on the Estab. Church. Its enactments are known as Church Measures.

**Legislature**, body of men in any state constitutionally vested with the power to make, amend, or repeal laws. Constitutionally the sovereign L. in England is the House of Commons, the House of Lords, and the queen. But the queen's veto is never exercised (see CROWN), and the Parliament Act cut down the power of the Upper House to the extent that Bills 3 times sent up to it within 2 years automatically became law. In 1948 the

Labour Gov. reduced the number of times a Bill had to be sent to the Lords from 3 times to 2, and the period from 2 years to 1. There is theoretically nothing a sovereign L. cannot do, but where the L. is representative it more or less reflects the will of the political sovereign, i.e. the electorate (q.v.). In England there is no law that the L. cannot make or abrogate, but in the U.S.A. laws may be treated by the courts as unconstitutional and therefore void; and in Switzerland the federal assembly cannot alter a constitutional principle without the consent of the people (see INITIATIVE). There are analogous limitations on the powers of the L. in respect of the Australian Commonwealth Constitution and, under the British North America Act, on the Canadian Parliament's powers. On the relations of the Eng. L. and the Executive see CABINET and EXECUTIVE, and for the L.s. of the crown colonies see that title. See also LEGISLATION AND LEGISLATIVE PROCESSES.

**Legitim**, or **Bairn's Part of Gear**, in Scots law that portion of the free movable property of their parent to which children are entitled at his or her death. If a father leaves one or more children but no widow, the former get one-half as their L., the other half being dead's part (q.v.). If he leave both widow and children the widow takes one-third, one-third goes to the children as L., and the remaining third is dead's part (see also JUS RELICTAE). There is no right of representation as to L., and hence the children of a deceased child have no claim to that part of their grandfather's estate which their parent would have been entitled to as L. had he survived. The right to L. is defeated if the father makes provision, however small, for his children in an ante-nuptial contract of marriage, expressly by way of substitution for L., but if he settles the whole of the property on the children by such contract, even though subject to a life-rent (q.v.) for the wife, the right to L. is excluded by implication. Generally speaking children claiming L. must collate any separate provision received by them from, or any advancement made to them by, the father (see HORTSPOT); and this applies to the heir in heritage, who must collate the heritage, unless he be an only child. Like other legal systems deriving directly or indirectly from Rom. law, Scots law prevents a parent from willing away from his children more than a fixed proportion of his estate.

**Legitimacy**. By Eng. law a child born anywhere in lawful wedlock is legitimate, i.e. to quote a hypothetical case in Foote's *Medical Jurisprudence*, if a couple are married at 2 o'clock, and a child is born at 3 o'clock on the same day, that child is legitimate. Prior to 1927 there was no law in England for legitimating a child born out of wedlock, although Scots law has long recognised *legitimo per subsequens matrimonium*, i.e. legitimation by the subsequent marriage of parents. Legitimation *per subsequens matrimonium* is now an accepted principle

in Eng. law. By the Legitimacy Act, 1926, which came into operation on 1 Jan. 1927, an illegitimate person is rendered legitimate if the parents marry or have married, whether before or after 1 Jan. 1927; but the father must at the date of the marriage be domiciled in England or Wales; and the legitimization dates either from 1 Jan. 1927 or from the marriage, whichever last happens. This Act does not legitimate a person whose father or mother was married to a third person at the time when the illegitimate person was born. The legitimated person may take property under intestacy occurring after legitimization or under any disposition coming into operation after legitimization. The legitimated person is legally bound to maintain all persons whom he would be bound to maintain if he had been born legitimate. The Act specially provides that nothing in it is to render any person capable of succeeding to or transmitting a right to any dignity or title; but otherwise legitimated issue is under no legal disability. Questions of L. have frequently arisen in lawsuits when, though a child has been born in wedlock, the parties have not been accessible to each other. But a man's accessibility to his wife is by the Eng. law of evidence taken for granted if, to use a quaint old phrase, he was 'within the four seas of the realm.' Eng. law, however, even before 1927, recognised as legitimate children born out of wedlock, but whose parents subsequently married, if both the law of the father's domicile at the date of birth and that of his domicile at the date of his marriage concur in allowing legitimization by subsequent marriage. In cases relating to disputed title to land the question of L. is determined exclusively by the law of the place where the property is situate (see *lex loci rei sitae*, under *LEX LOCI*), and if that law allows legitimization the child is legitimate. And generally it is a principle of the comity (q.v.) of nations to recognise the L. of children who are legitimate by the law of their place of origin, i.e. the father's domicile. Again even before the Act of 1926 the only consequences of illegitimacy were in regard to the devolution of property on intestacy (see *DESCENT*; *HEIR*; *INHERITANCE*). No person born out of wedlock could, prior to 1927, be an heir to Eng. real property, though such property could, prior to 1927, be validly left to him by will. Peerages or other hereditary dignities, not being the subject of testamentary disposition, could not devolve on an illegitimate person, and, as we have seen, they are excluded from the operation of the new Act. The Deceased Wife's Sister's Marriage Act, 1907, has the effect of legitimising the issue of any union with a deceased wife's sister, whether contracted before or after the Act was passed (see also *DECEASED WIFE'S SISTER*). Applications to the divorce court for declarations of L. or validity or invalidity of marriage are made under the provisions of the Judicature Act, 1925 (re-enacting the Legitimacy Declaration Act, 1858).

Under that Act a person may also claim to establish his right to be deemed a natural-born subject (see also as to Scottish law under *DECLARATOR*).

**Legitimation**, in Scots law, is the act by which children born out of wedlock are made lawful for the purpose of extending to them the privileges of truly lawful children. L. *per subsequens matrimonium* is a process derived from the canon law, which allowed the L. of all bastards, whether the offspring of concubinage or not, if the parents were capable of marrying at the date of conception (some authorities say the date of birth) and afterwards actually married. L. *per subsequens matrimonium* gives the bastard the full rights and status of lawfully begotten children. Where parents are domiciled, have bastard children, and then marry in a country the law of which does not recognise L., the children are not capable of succeeding to real estate in Scotland, for the law applicable is the *lex loci rei sitae*. Another mode of L. recognised by Scots law is by letters of L. from the sovereign (L. *per rescriptum principis*). Generally speaking, the only effect of this mode of L. is to defeat crown rights to property on intestacy; for in form letters of L. confer a right on a bastard who has no lawful issue to dispose of his property during his lifetime or by will, which right he enjoys independently of such letters. It may be mentioned here that the Age of Marriage Act, 1929, which nullifies marriage between persons either of whom is under the age of 16, does not affect in Scotland any right or capacity of L. *per subsequens matrimonium*. See W. M. Glog and R. C. Henderson, *Introduction to the Law of Scotland*, 1956.

**Legitimists** (Fr. *légitimistes*, from *légitime*, lawful, legitimate), name applied to a party in France, who, after the revolution of 1830, continued to uphold the claims of the elder branch of the Bourbon house. The rise to power of Napoleon III at the head of affairs set back its cause, but on his fall in 1871 its hopes were again raised. The Comte de Chambord gave it his support, but on his death in 1883 it was practically dissolved, only an insignificant remnant remaining (see *BOURBON FAMILY*). The word *légitimiste* has now spread beyond France, and is applied in England to any supporter of monarchy by hereditary right as against a parl. or other title. It is also used especially with regard to the Hapsburg followers in Austria.

**Legnago**, It. tn, in Veneto (q.v.), on the Adige (q.v.), 22 m. SE. of Verona. It is one of the fort. tns of the famous 'Quadrilateral' (q.v.). Pop. 22,000.

**Legnano**, It. tn, in Lombardy (q.v.), 15 m. NW. of Milan (q.v.). The Emperor Frederick I (q.v.) was defeated here by the Lombards in 1176. There are metallurgical and cotton industries. Pop. 35,900.

**Legnica** (Ger. *Liegnitz*), tn of Poland, in Wrocław prov., on the Katzbach, 40 m. W. of Wrocław (q.v.). It was formerly in Lower Silesia (q.v.). It was the cap. of the duchy of Liegnitz, 1163-1675, and it

then came into the hands of the Hapsburg (q.v.) family. In 1742 it passed to Prussia. There was much damage during the Second World War. There is an ancient castle and a baroque church. Textiles and chemicals are manuf. Pop. 60,000.

**Legnone, Monte**, in the Alps, on the E. side of Lake Como (q.v.), and the highest summit (8565 ft) in that region.

**Legouvé, Gabriel Jean Baptiste Ernest Wilfrid** (1807-1903), Fr. dramatist and writer, b. Paris. In 1832 he pub. a little vol. of verse entitled *Les Mortis bizarres*, followed by a succession of novels, the chief being *Edith de Falsen*, 1840. In 1849 he made his mark as a dramatist with *Adrienne Lecouvreur*, written in conjunction with Scribe. In 1855 appeared his tragedy of *Médée*, which achieved a great success. Later he became prominent for his studies on the character and needs of women and children in France. His *La Femme en France au XIX<sup>e</sup> siècle*, 1864, *Messieurs les enfants*, 1868, *Conférences parisiennes*, 1872, *Nos filles et nos fils*, 1878, and *Une Éducation de jeune fille*, 1884, were works of wide-reaching influence in the moral order. He was elected to the Fr. Academy in 1855. See J. Quérard, *La France littéraire*, 1827-64.

**Legros, Alphonse** (1837-1911), Fr. painter and etcher, b. Dijon. He was a pupil of Lecoq de Boisbaudran, and in 1859 his 'Angelus' was exhibited and was highly praised. In 1863 L. came to England, married, and became a teacher of etching at the S. Kensington School of Art, and in 1876 Slade prof. at Univ. College, London, in succession to E. J. Poynter. See monograph by L. Bénédite, 1904. He is mainly celebrated for his etchings and drawings.

**Leguminosae**, dicotyledonous family of over 7000 species of shrubs, trees, ann. and perennial herbs, with one-celled superior ovary always, and fruit a legume, usually podded. Usually divided into 3 sub-families: *Papilionaceae*, *Caesalpinioideae*, and *Mimosoideae*. Distinctive for symbiotic association with bacteria in nodules on roots. Genera include *Acacia*, *Astragalus*, *Baptisia*, *Caesalpinia*, *Caragana*, *Cercis*, *Coleutea*, *Cytisus*, *Galega*, *Genista*, *Indigofera*, *Laburnum*, *Lupinus*, *Mimosa*, *Ononis*, *Pisum*, *Robinia*, *Vicia*, *Wisteria*, etc.

**Legya**, or **Laiha**, vil. and state of the S. Shan States, Burma, SE. by K. of Mandalay, produces rice, cotton, and sugarcane. It manufs. iron and lacquer ware. Pop. (state) 36,400.

**Leh**, tn of Kashmir, cap. of Ladakh, 160 m. E. of Srinagar. It is enclosed by a wall and towers, and has sev. Buddhist temples. It is the great rendezvous for intercourse between the Punjab and Tibet and Chinese Turkestan. It has an active trade in shawl wool. L. lies between the Indus, about 5 m. distant, and a chain of mts.

**Léhar, Ferencz (Franz)** (1870-1948), Hungarian composer, b. Komárom, son of a military bandmaster. For a time he followed his father's calling, though his

training at the Prague conservatory was as a violinist. His music shows the influence of the S. Slavonic folk tunes and he first tried to win fame as a composer of serious opera as, for example, in *Kukuska* (later renamed *Tatiana*), produced in 1896; but it was subsequently in the field of operetta that he achieved real distinction and the widest popularity. His best productions in this kind are *The Merry Widow*, 1905, *The Count of Luxembourg*, 1909, *Gipsy Love*, 1910, *The Land of Smiles*, 1923 (London, 1931), and *Frasquita*, 1925, all distinguished for light music of a high order deftly orchestrated. See studies by E. Deczey, 1924; G. Knosp, 1935; S. Czech, 1948; M. v. Peteani, 1950.

**Lehigh**, riv. in Pennsylvania, U.S.A., 103 m. long. It flows through an industrial area (power dams) past Allentown and Bethlehem to the Delaware R. at Easton. It has the scenic L. Gap near Palmerton.

**Lehmann, John Frederick** (1907- ), poet and essayist, b. Bourne End, Bucks, son of Rudolf L. (q.v.). Educ. at Eton and Cambridge, he went into the publishing business, and also ed. *New Writing*, and from 1954 the *London Magazine*. His vols. of verse include *A Garden Revisited*, 1931, *The Noise of History*, 1934, *Forty Poems*, 1942, *The Sphere of Glass*, 1944, and *The Age of the Dragon*, 1951. *Evil was Abroad*, 1938, is a novel, *Down River*, 1939, a travel book, and *The Open Night*, 1952, a collection of essays. *The Whispering Gallery*, 1951, is autobiographical.

**Lehmann, Lilli** (1848-1929), Ger. soprano singer, b. Würzburg. Studied under her mother, the singer Marie L., appeared at Prague as the first genie in Mozart's *Magie Flute* at an early age, was engaged at Danzig in 1868, at Leipzig in 1870, and made her first appearance in Berlin in the latter year. In 1876 she first sang at the Wagner performances of Bayreuth and in 1880 first visited London.

**Lehmann, 'Liza'** (Elizabethta Nina Mary Frederika) (1862-1918), singer and composer, b. Pinner. Studied first with her mother, Amelia Chambers, an accomplished amateur composer, and later at Rome, Wiesbaden, and at home with MacCunn, also singing with Randegger. In 1885 she made her first appearance as a singer at St James's Hall, where she sang for the last time in 1894, when she married the painter and composer Herbert Bedford. Her song cycles are still remembered as light music of the best kind.

**Lehmann, Rosamund Nina** (1903- ), novelist, b. London, daughter of Rudolf L. and sister of John L. (qq.v.). She was educ. at Newnham College, Cambridge, which is the scene of her first book, *Dusty Answer*, 1927. Others of her novels are *A Note in Music*, 1930, *Invitation to the Waltz*, 1932, with its sequel, *The Weather in the Streets*, 1936, *The Ballad and the Source*, 1944, and *The Echoing Grove*, 1953. *The Gipsy's Baby*, 1946, is a book of short stories, and *No More Music*, 1939, a play. A sensitive and brilliant writer, she excels in depicting the thought-processes of adolescent girls.

**Lehmann, Rudolf Chambers** (1856-1929), Journalist and oarsman, b. Sheffield. Educ. at Highgate and Trinity College, Cambridge, he founded the *Granta* magazine. Famous for his rowing, he acted as coach to the varsity crews. In 1880 he was called to the Bar at Inner Temple, and from 1890 to 1919 he was on the staff of *Punch*. From 1906 to 1910 he was Liberal M.P. for Market Harborough. Besides sev. other books, he pub. *The Complete Oarsman* in 1908.

**Lehmbruck, Wilhelm** (1881-1919), Ger. sculptor and painter, b. Duisburg. He came of a peasant family, but in early youth was apprenticed to a commercial firm of metalworkers. In 1901 a grant enabled him to study art at the Dusseldorf Academy under the direction of Peter Janssen. Finishing at the academy in 1906, he travelled in France and Italy during the next 8 years. Thereafter he lived mainly in Berlin until his death by suicide. In his work he strove to express the spiritual and psychological aspects of his subject through his medium and was not deflected from this end by the pursuit of realistic representation. He is remembered particularly for his sculpture of the female figure, in which an attenuated form romantically conveys feeling and idealism. Works by him were shown posthumously in an exhibition of Ger. artists in Paris in 1927, and he is represented in the museums in Berlin, Munich, and other Ger. towns, and also in New York.

**Leibnitz, Gottfried Wilhelm, Freiherr von** (1646-1716), Ger. philosopher and mathematician, b. Leipzig. In 1661 he entered the univ. of Leipzig as a law student, and in 1666, being refused his doctor's degree on account of his youth, he applied to the univ. of Nuremberg, Altdorf, which not only conferred upon him his degree but offered him a professorial chair. At Nuremberg he made the acquaintance of Baron von Boineburg, who advised him to dedicate his treatise, *Nova methodus docendi discendique juris*, a proposal for the reform of the *Corpus Juris*, to the elector of Mainz. In this way the young man attracted the attention of the elector and entered his service. At first L. assisted in the revision of the statute book. In 1669 he was required to promote by argument the Ger. claims to the vacant throne of Poland, but his *Specimen demonstrationum politicarum pro rege Polonorum eligendo* had not the desired effect, and a Polish prince was elected. At this time Germany was in danger of attacks by the aggressive Louis XIV. and, in order to divert his attention from any such projects, he was approached with a scheme of L. for the Fr. conquest of Egypt. In 1672 L. was summoned to Paris to propound more fully the scheme he had laid down in *De expeditione Aegyptiaca et Consilium Aegyptiacum*. It is believed that Napoleon conceived his plan for the invasion of Egypt (1798) on finding the *Consilium* in Hanover. In Paris L. made the acquaintance of Christian Huygens, who spurred him on to a deeper study of mathematics. Here,

too, he became the friend of Arnaud and Malebranche, and during his visit to London he met Newton, Boyle, and Oldenburg. He invented an intricate calculating machine, for which he was elected a fellow of the Royal Society of London in 1673. About the same time he discovered a new method of the differential and integral calculus, which Newton also claimed as his invention. On his return to Germany in 1673, L. left the service of the elector of Mainz, and placed himself under Duke John Frederick of Brunswick-Lüneburg, who, in 1676, appointed

FREIHERR VON LEIBNITZ

him librarian at Hanover. He was also employed to write a hist. of the house of Brunswick, and visited the libraries of the chief cities of Germany, Austria, and Italy to collect his materials. He was much interested in the suggested union between the Rom. Catholic and Protestant churches, and contributed to the discussion his *Systema ethologicum*, written in 1686, but not pub. till 1819. In 1700 Frederick I of Prussia, at his instigation, founded the Akademie der Wissenschaften at Berlin, and L. was elected president for life. While on a visit to Vienna, 1712-14, he was elected an imperial privy councillor and made a baron (*Reichsfreiherr*) of the empire. On his return he found that the Elector George of Hanover had been created King of England, and though he would have liked to accompany his master to London, he was obliged to remain behind to finish his hist. Two years later he d.

In 1696 L. wrote his *Nouveaux Essais sur l'entendement humain*, 1765, which is a critical analysis of Locke's *Essay on the Human Understanding*, pub. in 1690. In 1710 he pub. *Essais de Théodicée sur la bonté de Dieu, la liberté de l'homme, et*

*l'origine du mal*, and in 1714 appeared *La Monadologie* and *Principes de la nature et de la grâce*. L. had read widely, and, having assimilated various philosophical systems, his own is somewhat eclectic. It stands between the dualism of Descartes, who separated all things into 2 heterogeneous substances, and the monism of Spinoza, who held that all are absorbed in one divine substance. In L.'s doctrine of substance the universe consists of simple and similarly constituted monads, which differ in quality but are all alike in being percipient and self-active. These series of monads, though acting independently, are all in harmony with each other and with God, who is the prime and efficient cause of all things. He held that the ultimate reality of substance is force, each monad having an inherent striving property, the ultimate aim of God's universe being perfection. He recognised the presence of evil, but believed in its final suppression, thus contending that this is the best possible world, and that faith and reason are essentially harmonious. See also INNATE IDEAS.

The complete ed. of L.'s works, ed. by the Prussian Academy (1923 ff.), is still unfinished. See B. Russell, *A Critical Exposition of the Philosophy of Leibniz*, 1900, 1937.

**Leicester, Earl of**, see MONTFORT, SIMON DE.

**Leicester, Robert Dudley, Earl of** (c. 1532-88), Eng. courtier, fifth son of John Dudley, Duke of Northumberland, and a favourite of Queen Elizabeth I. He married Amy Robsart in 1550. His father was executed for supporting Lady

1560 his wife met her death in mysterious circumstances, public opinion believed L. guilty of at least planning her murder, though a coroner's jury returned a verdict of death by misadventure. After this scandal Elizabeth gave up all thought of marrying L., though he continued to be her favourite until his death, being created Earl of L. in 1564. He entertained Elizabeth sumptuously at Kenilworth in 1575. L. seems to have had little influence with Elizabeth in political affairs, but in 1585 she placed him in command of an expedition to the Netherlands, and in the following year he was appointed governor. In this position he showed himself thoroughly incapable, and was recalled in 1587, dying the following year. L. secretly married Lady Sheffield, 1573, and bigamously married the Countess of Essex, 1578. See E. Bekker, *Elizabeth und Leicester*, 1890.

**Leicester, Thomas William Coke, 1st Earl of** (1754-1842). He was member of Parliament for Norfolk from 1776 until 1806, and again from 1807 until 1832. He became a farmer on a large scale, gaining wide fame by his improvements in crops and in the breeding of cattle and sheep. He became, in 1837, Earl of L. L. was known familiarly as (Coke) of Norfolk. See A. M. W. Stirling, *Coke of Norfolk and his Friends*, 1907.

**Leicester**, co. tn of Leics, England, 97½ m. by rail from London. In the Rom. period L. (or *Ratae Coritanorum*) was evidently a large and wealthy tn, and rich mosaic or tessellated pavements have been found. After the Rom. withdrawal L. was called by the Saxons *Legerceastre* and became until 874 a bishop's see. The bishopric was transferred to Dorchester (Oxon.) during the Dan. invasion, when the Danes held L., Derby, and other midland tns. At the Domesday survey L. had 322 houses and 6 churches, and a pop. of about 2000. The hist. of 12th-cent. L. was closely identified with that of the Beaumont family, which was responsible for the building of the church of St Mary de Castro and the great hall of the castle, where Parliament met in 1426 and again in 1450. Henry II besieged L., partially destroying the tn and demolishing the walls. In 1201 a meeting of barons took place in L., which was to prove a forerunner to the meeting in 1215 at Runnymede. By then the anct portmoot had already developed into an oligarchy consisting of the mayor and a self-constituted corporation. The guild merchant, the anct equivalent of the present-day chamber of commerce, gradually merged with this corporation, and this amalgamation of council and chamber of commerce governed L. for cents. In the Civil war L. was for Parliament, and although taken by Prince Rupert it was retaken by Cromwell after the battle of Naseby. It was during the early years of the ensuing Puritan rule in England that Wm Lee (q.v.), a country curate of Notts, was experimenting with a knitting-frame with 12 needles.

The earliest castle at L. was probably

ROBERT DUDLEY, EARL OF LEICESTER

Jane Grey in 1553, and L. himself was imprisoned in the Tower. On the accession of Elizabeth he was released, and soon became the queen's favourite. It seems probable that Elizabeth would have married him had he been free; when in

erected by Robert, Count of Meulan, the first of the 4 Beaumont overlords who ruled L. throughout the 12th cent. While it remained a residence the castle was enlarged and improved from time to time, but after 1399, when Henry IV. who was Duke of Lancaster and Earl of L., ascended the throne, the building was allowed to fall into decay. The great hall, however, has survived from the Norman period, and is incorporated in the present structure, erected in the 18th cent. Courts of justice are still held there. Close to the castle is the church of St Mary de Castro. There was possibly a church on this site before the Norman Conquest; when later the castle was founded the church, while retaining its parochial character, became the castle chapel. Much of the present building, including the chancel, belongs to the 12th cent., but the building received considerable alterations and additions at later dates. The church of St Martin was in a special sense the civic church of the old bor. from the 14th cent. onwards, and was chosen to be the cathedral when the new diocese of L. was formed. Near it is the old guildhall and library. The earliest portions of the old guildhall were erected towards the end of the 14th cent. by the Corpus Christi Gild, an important religious fraternity which had its chapel in St Martin's Church. The building remained the official H.Q. of L. until 1876, when the present hall was opened. Near St Martin's is St Nicholas's Church, with a Saxon nave and Norman tower, partly built of flint material. Immediately W. of this church is a fine stretch of Rom. work known as the Jewry Wall. As a result of excavations in 1936-8, the theory was advanced that this was the W. wall of a basilica of the Rom. town, the rest of the building lying under the church, and the Rom. Forum to the W. of this wall. This view has in recent years been strongly challenged, supporters of the alternative theory maintaining that the Jewry Wall was part of the 2nd-cent. public baths, the undoubted foundations of which may be seen in the middle of the supposed 'forum.' Other excavations have revealed the ground-plan of part of the abbey of St Mary in the Meadows (de Pratis), better known as L. Abbey, founded 1143 for canons regular of the order of St Augustine, at Abbey Park. Near by is Belgrave Hall (c. 1709-13), now a period museum. Adjoining it is a botanical garden. In the area called the Newark is the almshouse, Trinity Hospital, originally founded in 1331 by Henry, 3rd Earl of L. The main part of the hospital chapel is the original building of 1331, and portions of the old arcades remain embedded in the present modern structure. The Newark gateway (14th cent.) was the main entry to an eccles. enclosure which contained the church of the Annunciation and its collegiate buildings, now destroyed, together with the associated almshouses and infirmary known as Newark Hospital. In the Newark also is the Newark Houses Museum, an early 17th-cent. house

with later additions now used as a museum of the social hist. of the city and co. Modern L. also has some fine buildings; apart from the tn hall, De Montfort Hall for meetings and large concerts is impressive. In Victoria Park is the war memorial designed by Sir Edwin Lutyens. L. Univ. received full univ. status in 1957.

The staple trades of L. are engineering, hosiery, and boot and shoe manufs.; but there are many other well-established industries, including printing, tobacco, spinning, tanning, and the manuf. of agric. machinery for the surrounding agric. dist. L. is the greatest hosiery producing centre in Britain and the greatest centre in the world of the knitwear industry. Many local industries are ancillary to the staple trades, e.g. the tanning and dressing of upper and lining leathers. Some of the biggest engineering firms in the city are concerned with the manuf. of boot and shoe and hosiery machinery; but there are numerous other engineering activities: typewriters, woodworking machinery, machine tools, lenses and optical instruments, scientific and surgical instruments, electric vehicles, electric clocks, heating and ventilating equipment, cranes, lifts, cinema equipment, electric transformers, gas-meters, turbo-generators, concrete and road-making machinery, aluminium hollow ware, laundry and dyeing plant, lawn mowers, bakery equipment, watches, fountain pens, etc. Allied trades include sheet metal works, iron and brass foundries, and the largest pattern-making shop in the country. Near the city are factories concerned with research and manuf. of jet engines. The bor. sends 4 members to Parliament. Pop. 287,300. See P. W. Bryan, *A Scientific Study of the Leicester District*, 1933.

**Leicester Breed**, see SHEEP.

**Leicester University**, founded 1918 and granted a royal charter of incorporation as a Univ. College in 1950, with courses leading to the external degrees of London Univ. In Mar. 1957 it was granted full univ. status. There are some 730 students.

**Leicestershire**, midland co. of England. The chief physical feature of the co. is the broad valley of the R. Soar, which runs S. to N. and separates the Charnwood Forest (q.v.) area of the NW. from the uplands of the E.; the latter are again divided by the R. Wreake valley running E. to W. The highest elevation is Bardon Hill (912 ft) in Charnwood Forest. The prin. rvs. are the Soar and the Wreake, though the Trent touches the NW. boundary of the co. near Castle Donington, and the Welland the SE. boundary by Market Harborough. There is only slight evidence of prehistoric settlement in the co., but excavations in the city of Leicester have revealed remains of the Rom. city *Itatae Coritanorum* which stood on the Fosse Way. In the 9th cent. the dist. was in the hands of the Dan. invaders, and the many place-names of Scandinavian origin perpetuate evidence of the Dan. occupation. L. was famous for its wool as early as 1343 and, with the

introduction of the hand knitting frame in the 17th cent., the co. soon estab. itself as the main area for hosiery in the country. Nearly the whole co. is under cultivation, its pastures being especially good. During the Second World War a considerable amount of pasture land was put under the plough for the first time for cents., but since the termination of the war there has been a tendency for it to revert to pasture. In 1953, 213,999 ac. were under tillage and 231,028 ac. were pasture. Cattle are reared extensively and the co. is famous for its New Leicester sheep, first bred in the 18th cent. by Bakewell at Dishley, near Loughborough. Dairy farming is carried on extensively in the Vale of Belvoir and in the area around Melton Mowbray, the home of Stilton cheese. L. is well known for fox-hunting and is the co. of the Quorn, Fernie, and Atherstone hunts. There are considerable mining industries, including coal in the region of Coalville, Moira, and Bagworth to the W. and NW. of Charnwood Forest; limestone at Barrow-on-Soar and Breedon-on-the-Hill; ironstone in the NW.; and granite at Mountsorrel, Enderby, and Stoney Stanton. Mountsorrel granite is world-famed, and the skill of the Mountsorrel sett-makers has been carried to all parts of Britain and the U.S.A. The hosiery industry is still important, and chief centres are at Leicester, Loughborough, Earl Shilton, and Hinckley. Boots and shoes are manuf. in some 13 tns and vils. in addition to the city of Leicester. There are also brickfields and ironworks at Holwell and Asfordby, and considerable engineering works at Loughborough and Leicester. L. contains 6 hundreds, and returns 8 members to Parliament (4 for the administrative co. and 4 for the city of Leicester). Area 832 sq. m.; pop. 630,893 (city and co.). See the *Victoria County History of Leicester*, vols. i to iii, 1907-55.

**Leicestershire Regiment, The Royal.** This regiment, the old 17th Foot, was raised in 1688, and fought under William III in Ireland and Flanders (Namur, 1695). During the Seven Years War it took part in the siege of Louisburg, Cape Breton, and later of Havannah. It served in the Amer. War of Independence. In 1804 it went to India and distinguished itself in the first Afghan war (1839). In the Crimea it fought at Sevastopol, then went back to India for the second Afghan war (1878-9). It formed part of the garrison defending Ladysmith during the S. African war (1899-1902). During the First World War it raised 19 battalions which served in France, Flanders, Palestine, and Mesopotamia. It was granted the badge of the Royal Tiger, superscribed 'Hindoostan,' for distinguished service in India. In the Second World War the regiment formed part of the Brit. forces which fought in Malaya in 1941-2 against the Jap. invaders. Other battalions formed part of the Brit. Eighth Army on the It. front. The title Royal was granted in 1946.

**Leiden**, see **LEYDEN**.

**Leile**, see **LYS**.

**Leif Ericsson**, see **ERICSSON**.

**Leigh, Vivien** (née Vivien Mary Hartley) (1913-), actress, b. Darjeeling, India; married (1) Herbert Leigh Holman (marriage dissolved), (2) Sir Laurence Olivier (q.v.). She studied at the Comédie Française and for a short time at the Royal Academy of Dramatic Art, and appeared first in films, making her début in 1934 as a schoolgirl in *Things Are Looking Up*. She made her first appearance on the stage at the 'Q' Theatre, 1935, as Giusta in *The Green Sash*, and had a most sensational success at the Ambassadors Theatre, 1935, as Henriette in *The Mask of Virtue*. Many other parts followed and in 1937 she went with the Shakespearian company to Denmark to play Ophelia in *Hamlet* at Elsinore—the Hamlet being Olivier. In Hollywood she scored a phenomenal success as Scarlett O'Hara in *Gone with the Wind*—one of the most widely talked of and popular films of recent times and many times revived. Among her subsequent notable successes on both sides of the Atlantic were *The Doctor's Dilemma*, *The Skin of Our Teeth*, and *A Streetcar named Desire*. In 1951 she played Cleopatra in both Shaw's *Cæsar and Cleopatra* and Shakespeare's *Antony and Cleopatra* at the St James's Theatre with Sir Laurence Olivier, and in 1955 she joined the Stratford-on-Avon Shakespeare Memorial Theatre Company.

**Leigh**, in Lancs, England, 7 m. SW. of Bolton, has extensive textile manufs. Coal is found in abundance. Parsonage colliery, the deepest in Britain, has been used for research on the relation between depth and the magnetism of the earth. The tn stands on a branch of the Leeds and Liverpool and Bridgewater Canals. Pop. 48,714.

**Leigh-Mallory, George** (1887-1924), Eng. mountaineer, educ. at Winchester and Cambridge. Master at Charterhouse, 1910; served with Heavy Artillery, 1915-1918; secretary and lecturer to the board of extra-mural studies, Cambridge, 1923. A great mountaineer, who began Alpine climbing in 1904. (Papers in *Alpine Journal*, vols. xxxii, xxxiii). He took a leading part in reconnaissance of Everest (q.v.), 1921, reached nearly 27,000 ft without oxygen in 1922. In 1924 he and his companion Irvine were almost certainly seen about midday through a gap in the clouds, climbing the NE. ridge of Everest at over 28,000 ft; they were not seen again. His writings show a high appreciation of mountaineering as a conquest of mind over matter, the physical achievement only a means to enlargement of the soul. He wrote parts of *Mount Everest, The Reconnaissance*, 1921, and *The Assault on Mount Everest*, 1922. See life by D. Pye, 1927.

**Leigh-on-Sea**, see **SOUTHEND-ON-SEA**.

**Leighton, Frederic Leighton, Baron** (1830-96), painter and sculptor, b. Scarborough. At Florence he studied under Bezzuoli, Servolini, and Zanetti. After 4 years there he went to Frankfurt,

visited Brussels and Paris, then settled down to study under Eduard von Steinle. His first picture to attract attention in England was 'Cimabue's Madonna,' carried in Procession through the Streets of Florence,' which was exhibited in the Royal Academy in 1855, and which was bought by Queen Victoria. The following year he sent another picture, 'The Triumph of Music,' but it was not so successful, and he did not exhibit again until 1858. In 1866 he moved into his now famous house at Holland Park Road, containing the celebrated Arab hall with Damascus tiles, which is now open to the

W. F. Mansell

FREDERIC LEIGHTON  
(Self-portrait.)

public as L. House. Among his earlier pictures was the popular 'Wedded,' but it was in his treatment of classical subjects that L. especially excelled. L. was elected an Academician in 1868, and exhibited his diploma picture, 'St Jerome,' in 1869. He became president in 1878, when he was knighted, being raised to the peerage a few days before his death. L. excelled as a sculptor; his 'Athlete struggling with a Python,' 1877, was purchased by the Chantrey Bequest, 'The Sluggard' and 'Needless Alarums' being exhibited in 1886. As an illustrator he also did good work, especially for the cuts to Dalziel's Bible, and a series of illustrations for George Eliot's *Romola*, which reveal an unsuspected sense of humour. His decorative work may be seen at the Victoria and Albert Museum in the fresco 'The Industrial Arts of War and Peace,' also his 'Cimabue' in mosaic. Lyndhurst Church also possesses mural decorations illustrating 'The Parable of the Wise and Foolish Virgins,' to the memory of Peppys Cockerell. L. possessed many foreign orders and distinctions, and belonged to all the prin. foreign academies.

His varied talents, wide knowledge, and personal charm set him on a pinnacle, though the perfection of his work falls short of greatness to modern eyes. See Mrs A. Lang, *Art Annual*, 1884; C. Monkhouse, *British Contemporary Artists*, 1899; Lt. Barrington, *The Life, Letters, and Work of Frederick Leighton*, 1900; also lives by E. Rhys, 1900, and G. C. Williamson, 1902.

**Leighton, Robert** (1611–84), Archbishop of Glasgow. From 1641 to 1652 he had the care of a Presbyterian church in Newbattle, Midlothian, and from 1653 to 1661 was principal and prof of divinity in Edinburgh Univ. For 9 years from 1661 he held the bishopric of Dunblane, and in 1671 accepted from Charles II the archbishopric of Glasgow, his mission from the king being to induce the Presbyterian clergy to become reconciled with their episcopal brethren. He resigned in 1672 but his resignation was not accepted until Aug. 1674. His works, with a life, were pub. by J. N. Pearson in 1830. See G. Burnet, *History of his Own Times*, 1723–1734; also life by E. A. Knox, 1930.

**Leighton Buzzard**, anct franchise mktk tn of Beds, England, centre of an agric. and farm produce area with weekly cattle markets, 40 m. NNW. of London. The prin. industries are sand quarrying (over 100 varieties) and tile-making, and there are clothing manufs. and light engineering. There is a fine Early Eng. cruciform church and a market cross. Pop. 9000.

**Leinhall**, see COLDESTREAM.

**Leiningen**, former principality of Germany, dating back to the 11th cent. After the peace of Luneville (q.v.) in 1801, the greater part of its ter. was shared between Baden, Hesse, and Bavaria (qq.v.).

**Leinster**, SE. prov. of Rep. of Ireland, comprising the cos. of Dublin, Kildare, Carlow, Kilkenny, Laoighis (or Leix), Offaly, Longford, Louth, Meath, Westmeath, Wicklow, and Wexford. The MacMurroughs were kings of L. down to the early years of the 12th cent. Their descendants ruled independently in Wexford and Carlow till the 16th cent. Richard Strongbow accepted L. from Henry II as a fief of the Crown. Area 7580 sq. m.; pop. 1,336,576.

**Leinster Regiment**, The, formerly 100th and 109th Regiments, which were linked in 1881. The 100th was raised in 1857 from Canadian volunteers at the time of the Indian mutiny, hence its title 100th or Prince of Wales's Royal Canadians. Its Canadian origin was represented by a maple leaf in each of the 4 corners of the regimental colour. The 109th was raised as the 3rd Bombay European Infantry, and served under Sir Hugh Rose in central India during the Indian mutiny. The joint regiment served during the S. African war, 1899–1902. During the First World War it raised 7 battalions, which served in France, Flanders, Macedonia, Gallipoli, and Palestine. After the inauguration of the Irish Free State the regiment was disbanded on 31 July 1922. See Lt.-Col.

F. E. Whitton, *The Prince of Wales's Leinster Regiment (Royal Canadians)* (2 vols.), 1924.

THE ARMS OF LEINSTER

**Leipa**, see ČESKA LÍPA.

**Leipzig**: 1. Dist. (*Besirk*) of the Ger. Democratic Rep. (E. Germany), bounded on the W. and N. by Halle, on the E. by Kottbus, on the S. by Karl-Marx-Stadt, and on the SW. by Gera (q.v.). It was formerly part of Saxony (q.v.). Area 1915 sq. m.; pop. 1,596,000.

2. Ger. city, cap. of the dist. of L., on the White Elster (q.v.) at its confluence with the Pleisse and Parthe, 90 m. SW. by S. of Berlin. It grew up around a fort erected by the Emperor Henry I on the site of a Wendish settlement, and it developed rapidly into an important trading tn. It suffered severely during the Thirty Years War (the battles of Lützen and Breitenfeld (q.v.) were fought near by). During the Napoleonic wars (see NAPOLEON I) it was the scene of the great Fr. defeat of 16-19 Oct. 1813. In the Second World War it was on sev. occasions attacked by allied bombers at the same time as Dresden and Chemnitz (Karl-Marx-Stadt); in Feb. 1945 devastating raids on L. assisted the 1st Ukrainian Front armies of Marshal Koniev (q.v.) in their invasion of Silesia. The city fell to the 1st Amer. Army on 17 April 1945. Broad walks (on the site of the old city walls) divide the picturesque inner tn from the modern part of the city. Among the buildings of interest are the Nicolaikirche (11th-16th cents.); the Thomaskirche (13th-15th cents.), where J. S. Bach (q.v.) was organist; the old Rathaus (16th cent.); the Gewandhaus (rebuilt 1884), originally a guild house and afterwards famous for its concerts; and Auerbach's Keller, an inn in which a scene of Goethe's (q.v.) *Faust* is placed. The univ. of L., founded in 1409, was formerly one of the greatest in Europe; and the academy of music, founded by Mendelssohn (q.v.) in 1843, testifies to L.'s past as a cultural centre. Among other musical and literary figures of note who were connected with the city were Schumann, Gottsch. Gellert, Lessing, and Schiller (q.v.). Until the Second World War L. was the centre of Ger. publishing. After 1879 it was the site of the Ger. Supreme Court (*Reichsgericht*). It has 2 important

industrial fairs, a trade in furs, and engineering, textile, foodstuff, and chemical industries. Pop. 820,000.

**Leiria**: 1. Dist. of W. central Portugal, in Beira Litoral and Estremadura provs. (q.v.). There is a coastline on the Atlantic, and the centre of the dist. is hilly. Agriculture and fishing are the chief occupations. Area 1307 sq. m.; pop. 389,200.

2. City of Portugal, cap. of the dist. of L., on the Liz, 75 m. N. by E. of Lisbon. It has a Moorish castle and a Romanesque church. The tn is the seat of a bishopric. There are leather and cement industries, and there is a trade in agric. produce, wine, and oil. Pop. 7500.

**Leishman, Sir William Boog** (1865-1926), bacteriologist, b. Glasgow, son of the regius prof. of midwifery there. L. was educ. at Westminster School and Glasgow Univ., where he qualified in 1886. Next year he entered the Army Medical Service. From 1890 to 1897 he served in India, and in 1899 was given charge of the medical wards at Netley military hospital, spending his spare moments in the pathological dept, then in the charge of Almroth Wright (q.v.). Here he saw the early development of Wright's anti-typhoid vaccine. When the Army Medical School moved to Millbank, London, in 1903, L. was appointed prof. of pathology, a post he held until Jan. 1914, when he became War Office expert on tropical diseases. During the 1914-18 war he served in various capacities and in June 1919 became the first director of pathology at the War Office. Finally, in July 1923 he was appointed medical director-general of the Army Medical Service, with the rank of lieutenant-general. He was knighted in 1909. In 1901 L. elaborated a stain for blood, now known by his name; he used it to detect the parasite of kala-azar (dum-dum fever, oriental sore, and later leishmaniasis, and the parasite was later named *Leishmania donovani* after L. and a co-discoverer, C. Donovan. At Millbank L. perfected the anti-typhoid vaccine and was instrumental in preventing this disease from attaining serious proportions during the First World War. Another piece of important work was his demonstration of the life cycle of *Spirochaeta duttoni*, the causal organism of relapsing fever. See memoir in *Journal of Pathology and Bacteriology*, vol. xxix, 1926, page 515.

**Leisnig**, Ger. tn in the dist. of Leipzig, on the Freiberger Mulde, 26 m. ESE. of Leipzig (q.v.). It has textile and engineering industries. Pop. 10,000.

**Leiston**, or **Leiston-cum-Sizewell**, seaside tn of Suffolk, England, 21 m. SSW. of Lowestoft. Industries are engineering, radio manuf., and canning. The ruins of St Mary's Abbey date from the 12th cent. Pop. 4100.

**Leitch, Archibald** (1878-1931), physician and bacteriologist, b. Bute and educ. at Rothesay Academy and Glasgow Univ. His earliest work in London was in the cancer research laboratories of the Middlesex Hospital, and it is for his work in

cancer research that he will be remembered. In the First World War he was in charge of a mobile bacteriological laboratory; in 1920 he was made director of the research dept at the Royal Cancer Hospital, and in 1927 he was appointed to the chair of experimental pathology in London Univ. tenable at that hospital. Perhaps his best work was in the study of mule spinners' cancer and the cancers induced by tar, shale-oil, and other carcinogenic substances.

**Leith**, port of Edinburgh, Scotland, on the S. shore of the Firth of Forth, now an integral part of the city of Edinburgh (q.v.), with which it was incorporated in 1920. It has much traffic with the ports of Antwerp, Copenhagen, and Christiansand, etc. The harbour, dock, and warehouse accommodation is excellent. Shipbuilding, distilling, engineering, soap-boiling, and sugar-refining are the chief industries.

**Leith Hill**, highest point in SE. England, 1 m. from Coldharbour, near Dorking, Surrey. Height 965 ft. From the top of the tower on the summit 13 cos. can be seen.

**Leitmertz**, see LITOMĚŘICE.

**Leitmotiv** (Ger., 'leading motive'), musical term used to describe a distinctive phrase symbolising persons or ideas in an opera or (more rarely) a symphonic poem or other programme music. It was first developed extensively by Wagner for the basic material of his musical dramas, but not actually invented by him, for themes of this kind appear in operas by Mozart, Weber, and others.

**Leitrim**, maritime co. of Rep. of Ireland, in the prov. of Connaught, bounded NW. by Donegal Bay. The surface of the co. varies, the N. being mountainous, the S. more or less level; the scenery is extremely beautiful. In the N. are the Druskmore Hills, and E. of Lough Allen is Slieve Anierin (1922 ft), the highest point of the co. The chief rvs. are the Shannon, the Bonnet, the Drowes, and the Duff. There are numerous loughs, of which Lough Allen (8900 ac.) is the largest, the trout fishing being very good. A small quantity of coal is found, and iron and lead are abundant in the mountainous parts, but the co. is not very productive; the soil is moist and heavy, and the grain crops are poor. Potatoes are grown and some cattle and sheep are reared. Linen and woolsens of a rough kind are manuf., and there are some potteries. L. is divided into 5 baronies, but the only tns of importance are Carrick-on-Shannon and Manor Hamilton. The tn of L. is a few miles N. of Carrick-on-Shannon. Three members are elected to the Dail. Area 619 sq. m.; pop. 44,500.

**Leix**, see LAOIGHIS.

**Lekue**, Guillaume (1870-94), Belgian composer, b. Housy, Verviers. He studied with César Franck (q.v.), and later under d'Indy and gained second prize in the Prix de Rome competition. L. was regarded as promising to become the leading representative of the Belgian school had he lived long enough to fulfil his promise.

His most memorable works are a symphonic study, *Hamlet. Fantaisie sur deux airs populaires angevins* for orchestra, *Adagio* for strings, a string quartet, a piano trio, a piano quartet (finished by d'Indy), and a violin and piano sonata.

**Leland**, Charles Godfrey (1824-1903), Amer. poet and folklorist, b. Philadelphia. He was admitted to the Bar in Philadelphia in 1851, but soon devoted all his time to literary work of an editorial and journalistic nature. Gipsy language and hist. was one of his special studies, and he also obtained a reputation as a Ger. scholar. In 1861 he estab. the *Continental Magazine* in Boston. L.'s best-known work is *Hans Breitmann's Ballads*, 1914, recounting the numerous diverting adventures of their hero, told in the patois termed Pennsylvania Dutch. He was also the author of *Sunshine in Thought*, *English Gypsies and their Language*, *English Gypsy Songs* (with E. H. Palmer and Janet Tucker), and *Autobiographical Memoirs*. See life by E. R. Pennell, 1905.

**Leland**, John (c. 1506-52), antiquary, b. London, was educ. at St Paul's School, Christ's College, Cambridge, All Souls' College, Oxford, and Paris. Taking holy orders, he became chaplain and librarian to Henry VIII in 1533, and received the commission of king's antiquary, with power to search for records, MSS., and documents of antiquity in all the religious houses of England. In 1536 he was made canon and prebend of King's College, Oxford, and a prebend of Salisbury. Most of L.'s work was in MS. at the time of his death, the bulk being deposited by Burton in the Bodleian at Oxford. His most important works are the *Itinerary*, a record of his extensive and well-described antiquarian travels in England and Wales (pub. by T. Hearne, 1710-12); the *Commentarii de Scripturibus Britannicis*, 1709, and *De Rebus Britanniae Collectanea* (pub. by T. Hearne, 1715). See lives by E. Burton, 1549, and W. Huddesford, 1772; also J. Bale, *Catalogues*, 1557; L. T. Smith, *The Itinerary* (5 vols.), 1907. The best general account of L.'s achievements and background is in T. D. Kendrick's *British Antiquity*, 1950.

**Leleges**, anc. race, often mentioned, with the Pelasgians, as the most anc. inhab. of Greece. Piracy is said to have been their chief occupation. They are represented as the ancestors of the Teleboans and the Taphians, who were notorious for their piracies. The L. are described in the *Iliad* as a tribe in SW. Troas, and as allies of the Trojans.

**Lelewel**, Joachim (1786-1861), Polish historian, b. Warsaw. He became lecturer in hist. at Vilna, 1814, being dismissed in 1821 on suspicion of having taken part in secret revolutionary proceedings. In 1829 he became a prominent leader of the Polish revolution, and on its failure fled to France. His chief work is the series of books collected under the title of *Poland, her History and Affairs Surveyed* (pub. in 20 vols.), 1853-76. See monographs by S. P. Koczowski, 1927, and A. Sliwinski, 1932.

**Lely, Sir Peter** (1618-80), Dutch painter, b. Soest, near Utrecht, studied in Haarlem under F. P. de Grebber. When William of Orange came to England in 1641 L. was in his train. L. painted many portraits of William and his bride Mary, which were much admired in England, and he was soon appointed one of the court painters. Perhaps the temporary absence of Van Dyck tempted L. to try his fortune in this country, and, with the favour bestowed upon him by the court, and his general popularity, he soon established a large practice.

When L. arrived in England he immediately dropped the Dutch style of painting for that of Van Dyck. When the monarchy was overthrown, and during the period of Puritanism that followed, L. altered his style to one of 'dour severity'; but it was during the Restoration that L.'s full powers were revealed. After the period of restriction a burst of exuberance followed, in which L. excelled, and he dominated the 17th-cent. group of Stuart portrait painters by his facile grace of style. Much favoured by Charles II. he was knighted in 1679. During the Restoration period L. painted his best works, namely, the 2 great series, the 'Flagmen' and the 'Windsor Beauties.' In the latter L. was successful in bringing out the sensual attraction of his sitters. He was buried in the Covent Garden church of St Paul, and was succeeded at court by Sir Godfrey Kneller. See C. Baker, *Lely and the Stuart Portrait Painters*.

**Lemaître, François Élie Jules** (1853-1914), Fr. critic and writer, b. Venecy, Loiret. From 1875 to 1879 he was prof. of rhetoric at the lycée of Le Havre, and from 1879 to 1881 prof. at the École des Lettres, Algiers. He first came to the notice of the public in 1880 with a small vol. of verse, entitled *Les Médailleurs*, followed, in 1882, by *La Comédie après Molière*, and in 1883 by *Petites orientales*. In 1884 he held a professorship at Grenoble, which, however, he soon abandoned, and devoted himself exclusively to literary work. In 1895 he was elected a member of the Fr. Academy. Besides the works already mentioned he pub. *Les Rois Sérénius*, 1886, *Les Contemporains*, 1887, *Impressions de théâtre*, chiefly literary essays, 1888-1920, *Myrrha*, 1894, *Contes en marge des vieux livres*, fiction, 1905, 1907, and the plays *Les Rois*, 1893, *Révolte*, 1895, *Le Pardon*, 1895, *L'Ainée*, 1898, *La Massière*, 1905, *Bertrude*, 1906, and *La Vieillesse d'Hélène*, 1914. See L. Grimm, *Lemaître als Kritiker des französischen Theaters*, 1927, and S. Seillière, *J. Lemaître, historien de l'évolution naturaliste*, 1935.

**Leman, Gerart Mathieu Joseph Georges** (1851-1920), Belgian general, was, before the First World War, director of studies at the military school at Brussels, with considerable repute as a mathematician. He became general in 1912, and attained celebrity by his defence of Liège against the Ger. invader, Aug. 1914. On the 14th he was overcome by fumes of exploding

shells at Fort Loncin, and taken prisoner. He was created a count.

**Le Mans**, see MANS, LE.

**Lemberg**, see L'VOV.

**Lemercier, Jacques** (c. 1585-1654), Fr. architect, b. Pontoise, son of an architect; studied in Rome, 1607-c. 1613. Built the Pavillon de l'Horloge at the Louvre, Paris, 1624; then, for Cardinal Richelieu (q.v.), the château and town of Richelieu in Poitou, 1625-35; the Sorbonne, with its church, in Paris, 1629 onwards; the Palais-Cardinal, afterwards Palais-Royal, in Paris, 1629-36; and the château of Rueil, c. 1630. He also designed the church at Richelieu, the Oratoire and St Roch in Paris; and completed F. Mansart's church of Val-de-Grâce, Paris, 1646 onwards.

GENERAL LEMAN

**Lemery, Nicolas** (1645-1715), Fr. chemist, b. Rouen, was contemporary with Boyle. He is remembered as a skilful experimenter who, breaking with traditional alchemy, adhered closely to observed experimental fact. He became physician to Louis XIV. His *Cours de chimie*, a standard work for many years, was pub. in 1675.

**Lemming** (*Lemmus lemmus*), small rodent, belonging, like the short-tailed Eng. field-mouse and the water-rat, to the subfamily of voles (*Arvi colinae*), which is part of the family Muridae, in the order Rodentia. It has brownish-yellow fur, a short head, short, partially concealed ears, and a very short tail. In length it is about 5 in. and it has a blunted muzzle, black beady eyes, and dark brown or black spots on its back. L.s. abound in the plateaus above the pine belt in the mts of Norway and Sweden. They feed on grasses, lichens, and shoots of dwarf birch, and are never carnivorous. Their nests, which are built of straw and lined with hair, are hidden in the grass or under stones, and are inhabited by 5 young at a time; they breed at least twice in a year. About

every 3 years, after they have multiplied their numbers to a great extent, armies of these restless little animals march seawards, causing great destruction in their path, and drawing after them a host of eagles, wolves, foxes, and other predatory beasts. During these extraordinary migrations, which last from 1 to 3 years according to the distance to be traversed, they only travel by night. Thousands die by the way, and certain death awaits those which on reaching the sea, plunge in and, swimming onwards in the same direction, perish beneath the waves.

**Lemna**, genus of small floating herbs, family Lemnaceae, about 7 species, commonly known as Duckweed, native to Britain and N. Hemisphere. Fish and water-birds feed on them.

**Lemniscate** (Lat. *lemniscatus*, ribboned), curve invented by Jakob Bernoulli, occurring in many mathematical problems. It may be defined as the locus of a point moving so that the product of its distances from 2 fixed points is constant, and equal to the square of half the distance between those fixed points. From this definition it is easily deduced that its equation can be written in the form  $(n^2 + y^2)^2 = 2a^2(n^2 - y^2)$ , or in polar coordinates  $r^2 = 2a^2 \cos 2\theta$ , where  $2a$  is the distance between the fixed points (see Ovals). See H. Brocard, *Notes de bibliographie des courbes géométriques*, 1897-9.

**Lemnos**, or **Limnos** (modern, **Limni**), is. of the Grecian archipelago, midway between Mt Athos and the coast of Asia Minor. It is of irregular form and hilly, and presents volcanic formations. The coast is deeply indented but L. possesses a fine harbour at Mudros. It produces grain, oil, wine, fruits, and tobacco, and in former times the celebrated Lemnian earth was exported. It was at one time a possession of Athens. The chief port and town is Castro on the W. coast. (Gk mythology has it that when the Argonauts landed at L., they found it inhabited only by women, who had murdered their husbands. By the Lemnian women the Argonauts became the fathers of the Minyae, who were ultimately expelled by the Pelasgians. Darius conquered the is., but Miltiades delivered it from the Persians and made it subject to Athens. In 1478 it was taken by the Turks. The armistice with the Allies after the First World War was signed by the Turks at Mudros on 30 Oct. 1918. Area 184 sq. m.; pop. 28,000.

**Le Moine**, Sir James Macpherson (1825-1902), Canadian author, b. Quebec. Among his chief publs. are *Picturesque Quebec*, 1828, *L'Ornithologie du Canada*, 1862, *Les Pêcheries du Canada*, 1862, *Quebec Past and Present*, 1876, *Canadian Herpetines*, 1887, *Legends of St Lawrence*, 1898, and *The Annals of the Port of Quebec*, 1901. He was knighted in 1897.

**Lemon**, Mark (1809-70), humorous writer, b. London. He wrote novels, farces, and melodramas, and was a prolific contributor to many periodicals. He ed. the *Family Herald* and *Once a Week*, but is best known as one of the

founders of *Punch*, over the destinies of which he presided from its birth in 1841 until his death. As editor of *Punch* he was the right man in the right place, and he surrounded himself with such valuable supporters as Thackeray, Jerrold, Leech, Keene, and Tennyson. He was an intimate friend of Dickens for many years. His *Jest Book* appeared in 1864.

**Lemon**, valuable fruit produced by *Citrus limonium*, a subtropical tree or shrub, and its many varieties. L. culture is the main industry in Sicily, but in many other dists. with suitable climates, including California and Rhodesia, the fruit is grown on a large scale. Like other citrus plants the L. grows well on greenhouse walls, and the fruit which is allowed to ripen on the tree is greatly superior to imported fruit gathered before the flavour could mature. The L. is distinguished from the citron by its thin rind, and is longer and less knobbed at the tip. The lime (q.v.) is more globular.

**Lemon Sole**, or **Smear Dab**, is the popular name of *Microstomus microstomus*, a species of flat fish belonging to the teleostean family Pleuronectidae. It is found from the Bay of Biscay to the N. coasts of Europe, and is widely consumed, its flesh, however, being inferior in flavour and firmness to that of *Solea solea*, the common sole, a member of the same family. The L. S. has both eyes on the right side of the head, the dorsal fin commencing above the eye; its skin is smooth and of a brownish-yellow colour, with light and dark spots.

**Lemonade**: 1. Still beverage made by expressing the juice of ripe lemons, diluting with water, sweetening and preferably icing, spices, mint, etc., sometimes being added.

2. Carbonated beverage with sugar and citric acid base, flavoured by soluble essence of lemon, sometimes blended with oranges, limes, or citron. Both are excellent thirst quenchers, especially when refrigerated.

**Lemonnier**, Camille (1845-1913), Belgian art critic and novelist, b. Brussels. His first book, *Salon de Bruxelles*, 1863, was a vol. of art criticism. The 'realistic' tendency of his studies of peasant life more than once involved him in trouble with the authorities. He was 3 times prosecuted on the same grounds, being once fined and twice acquitted. His other works include *Nos Flamands*, 1869, *Salon de Paris*, 1870, *Un Coin du village*, 1879, *Un Mâle*, 1881, *La Belgique*, 1888, *Théâtre*, 1899, *L'Amant passionnée*, 1905, *La Maison qui dort*, 1909, and *Edénie*, 1912.

**Le Moyné**, Charles, **Sieur de Longueuil** (1625-83), Canadian explorer, b. Normandy, first served in the Fr. Army, and then emigrated to Canada, where he became interested in colonisation. He lived for a time among the Hurons and obtained from them a concession to rebuild the fort at Niagara, which work he was engaged on when he d. Of his sons sev. were well-known pioneers. His son Charles (1656-1729) was at the defence of

Quebec in 1690. He was made a baron and governor of Montreal, 1700, and commandant-general of Canada, 1711.

**Lemoyne, François** (1688-1737), Fr. painter, *b.* Paris, studied under Galloche, and in 1711 won the Prix de Rome, with his picture, 'Ruth and Boaz.' In 1718 he became an academician. His title to fame rests chiefly on the decoration of the vault of the 'salon d'Hercules' at Versailles, 64 ft in length, and containing 142 pictures of great merit.

**Lemprière, John** (c. 1765-1824), Eng. classical scholar, *b.* Jersey, Channel Is. He took orders and became headmaster of schools in Abingdon and Exeter, and later held 2 livings in Devonshire. He is best known as the author of the classical dictionary, *Bibliotheca Classica* (first pub. in 1788), founded on Sabatier's *Dictionnaire des auteurs classiques*, and he also wrote a *Dictionary of Universal Biography*, 1808.

**Lemur**, name applied to members of the suborder Lemuroidea of the order Primates, and so called originally because of their nocturnal habits and rather ghostly appearance at night. They are divided into 3 families, and of these we have representatives in the black L., the dwarf L., grey slow Loris, and the slender Loris. The distinguishing characteristics of the typical L. are the thick woolly fur, dog-like snout and nostrils, and the structure and number of the teeth. The fourth digit of the hand and foot is the longest and the second digit of the foot bears a claw, used for scratching the skin. The true L.s (i.e. black L.) are not nocturnal. L.s are found in Madagascar and W. Africa, India, Malay, and Indo-China. They all inhabit trees, and their diet consists of fruit, birds and their eggs, small reptiles, and insects.

**Lemur(es)**, evil spirits who wandered about in search of mischief, distinguished from the 'manes,' or 'spirits of the dead,' by their wicked intent. The Romans sought to appease them during the festival of the Lemuria, held annually on 9, 11, and 13 May. The name was said to be a corruption of Remuria, which referred to Remus, being intended for the satisfaction of his shade. During it no man might marry, and all shrines and temples were closed. Ovid describes in his *Fasts* the curious rite which the paterfamilias performed. Rising at midnight he traversed his house with bare feet and washed hands, 9 times spat a black bean from his mouth, and with backward glance cried 'Thus I redeem me and mine.' The evil 'lemures' either picked up the beans, or else entered into them. Then the father washed again, beat kettles, clanged brazen vessels, and 9 times repeated the courteous request 'Manes exite paterni' (Shades of our fathers, depart). One had to exorcise these ghosts, as they alarmed good men, and haunted those of evil conscience. Some have detected elements of ancestor worship in this rite.

**Lena**, one of the largest rivs. of Siberia. Rising in the Baykalan Mts W. of Lake Baykal, it flows NE. to Yakutsk, then N. into the Laptev Sea of the Polar Ocean,

forming a large delta (over 10,000 sq. m.). Length 2670 m.; drainage area 943,400 sq. m. The main tribs. are Vitim, Olëkma, and Aldan on the right, Viluy on the left. In its upper and middle reaches the flows through mountainous country, in the lower through the central Yakutian lowland. Most of its basin is covered by coniferous forests, with perpetually frozen subsoil. Vitim (see BODAYBO) and Aldan (q.v.) are gold-mining areas, and coal-mining is carried on near Yakutsk. The L. is navigable almost throughout its course for 4 to 5 months a year. The chief goods exported from the L. basin are timber, furs, and gold; imported are industrial products and food. The prin. ports are Osetrovo and Yakutsk.

**Lena**, see POLA DE LENA.

**Le Nain, Antoine, Louis, and Mathieu**, see NAIN, LE.

**Lenard, Philipp E. A. von** (1862-1947), Ger. physicist; *b.* Pozsony, Hungary; educ. at Budapest, Vienna, Berlin, and Heidelberg; prof. at Heidelberg, 1896-1898, Kiel, 1898-1907, and Heidelberg again, 1907-31. His investigation of the cathode rays showed that the electrons of which they were composed could pass right through atoms, and hence that much of the space within atoms was empty. For this work he received a Nobel prize in 1905. He demonstrated that in the photo-electric effect electrons are released by the action of light, carried out fundamental work on phosphorescence, and made the first measurements of ionization potentials.

**Lenau, Nikolaus** (1802-50), pen-name of Nikolaus Niemsch von Strehlenau, Austrian poet, *b.* Osat, Hungary. His poetry is pervaded by a deep seriousness, often bordering on despair, which has earned him the title of the 'German Byron.' Some of his most beautiful poems are contained in the *Schilfsieder*, 1832. He wrote also a longer poem, *Faust*, 1836, which dramatises his own conflict between faith and knowledge, and an epic, *Die Abigensier*, 1842. In 1844 he became insane. L. is one of the lyric poets most frequently set to music. His collected works were pub. by A. Grün in 1855. See lives by A. X. Schurz (his brother-in-law), 1855, enlarged by E. Castle, 1913, and L. Renaud, 1904; see also M. Schaefferberg, *Lenaus Dichtwerk als Spiegel der Zeit*, 1935, and H. Vogel-sang, *Lenaus Lebenstragödie*, 1952.

**Lenbach, Franz** (1836-1904), chief Ger. portrait painter of the 19th cent., *b.* Schrobenuhausen, Upper Bavaria. He became a pupil of Piloty, whom he accompanied to Italy, where he studied the old masters. On his return to Munich he soon recognised that his chief strength lay in portraiture, and at Rome, where he spent many of his winters, he soon became the centre of a brilliant artistic circle. His best-known portraits are those of Bismarck, Moltke, Gladstone, Wagner, Strauss, and Liszt. See monograph by A. Rosenberg (5th ed.), 1911.

**Lencas**, widespread Amer. Indian people in Honduras and Nicaragua. The

Aztecs looked down on the L. and called them aliens or barbarians, but they were more or less civilised, as proved by ruins and objects found in the graves in dists. where they once dwelt. There are no temples left, or inscriptions on anything, but monoliths 6 or 7 ft high, stone figures of animals, idols, gold ornaments, and earthenware pots have been found in large quantities. See D. Stom, 'The Lenca,' in J. H. Steward's *Handbook of South American Indians* (vol. iv), 1948.

**L'Enclos, Anne, or Ninon de** (1616-1705), Fr. courtesan, b. Paris, famous for her beauty and intelligence. She had a succession of lovers, including Saint-Evremond, Sévigné, La Rochefoucauld, and Condé. Her wit and intellectual abilities soon made her the leader of society in Paris and the friend of Mme de Maintenon, Mme de la Fayette, and Voltaire. See Helen K. Hayes, *The Real Ninon de l'Enclos*, 1908, and C. Austin, *The Immortal Ninon*, 1929.

**Lend-Lease.** The Lend-Lease Act, 1941, which constituted an innovation of supreme importance in the hist. of economic policy, was passed by the U.S. Congress in Mar. 1941 and enacted that the President might authorise the manuf. or procurement of 'any defence article for the gov. of any country whose defence the President deemed vital to the defence of the United States'; and that he might permit competent authorities to 'sell, transfer title to, exchange, lease, lend, or otherwise dispose of to any such government any defence article,' etc. 'Defence article' is defined as including not only weapons, munitions, and ships, but 'any agricultural, industrial, or other commodity or article for defence.' Under this Act not only the Brit. Commonwealth but all the allied nations, and also fighting France, the S. Amer. neutrals, Turkey, Egypt, Iraq, and Persia, were declared eligible for L.-L. Master L.-L. agreements were negotiated with numerous countries. Reciprocal L.-L. agreements were also signed with a number of countries, including Great Britain, providing that each country receiving L.-L. aid from the U.S.A. should furnish in return such goods and services as it could supply and as the U.S. Gov. required for its own war effort, without any consideration being given to the maintenance of a balance between the values of goods and services received and given. The office of L.-L. Administration was estab. in Oct. 1941, to list and arrange the procurement of supplies under the Act.

L.-L. supplies were not subject to export licence and were available only to govts. and not to private individuals. The office was therefore in constant contact with foreign govts. and had its own missions or representatives in sev. of the countries concerned. Thus the Harriman mission in London represented the office and the War Shipping Administration.

**United Kingdom. Lend-Lease.** The U.K. also made L.-L. payments to the other countries of the allied nations. Up

to the middle of 1943 the U.K. had made such payments to a total of \$2,250,000,000 in excess of the sums received from the allied nations. Figures issued by the Ministry of Production in Sept. 1944 of the Brit. aid for the invasion of France reflect the extent of reverse L.-L. to U.S. forces: thus 5000 special trains were lent to the Amer. forces for the invasion; the military equipment provided for the Amer. forces included 14,000,000 rounds of small arms ammunition. Before the invasion started the U.K. had become an armed camp for the Americans, and by 30 June 1944 some \$49,184,000 had been spent by the War Office on new buildings for the Amer. forces.

L.-L. was officially terminated on 20 Aug. 1945. As at July 1945 the money value of L.-L. material totalled nearly \$42,000,000,000, while the money value placed on reverse L.-L. (i.e. goods and services supplied to U.S. forces abroad) was estimated at \$5,500,000,000. In the twenty-third report to Congress on L.-L., Truman disclosed that the Brit. Empire received 65 per cent of all L.-L. aid to allied countries. The figure for the Brit. Commonwealth was over \$7,875,000,000. Russia received 23 per cent—over \$2,800,000,000.

**Lendinara, It.** tn in Veneto (q.v.), 10 m. W. of Rovigo (q.v.). Pop. 16,500.

**Lenfant, Jacques** (1661-1728), Fr. minister and writer, b. Baroches. He was ordained to the Protestant Church in Heidelberg about 1684. Among many writings, chiefly theological, he ed. and annotated the N.T. in French, in collaboration with Beausobre.

**Lengeh, or Bandar Lengeh**, seaport tn of Persia in the dist. of Lar on the Persian Gulf. There is a harbour with anchorage for small ships at comparatively short distance from land. Pop. 9000.

**Length, Measure of, see METROLOGY.**

**Lenin** (real name Ul'yanov), Vladimir Il'ich (1870-1924), Russian politician of half-Ger. descent, founder and leader of the Communist party and the Communist International, founder of the Soviet state and first head of the Soviet Gov. He was b. Simbirsk, son of a senior civil servant (inspector of schools). Like his brothers and sisters L. even as a schoolboy, was greatly influenced by the revolutionary and socialist Populist (see POPULISM) literature of the 1860's and 70's; his older brother was executed in 1887 for an attempt on the life of Alexander III. Expelled from Kazan Univ. for participation in student riots, L. graduated in law (with a gold medal) at St Petersburg Univ. as an external student. In 1887-93 he belonged to the first Marxist circles in Kazan and Samara; in 1893 he moved to St Petersburg, joined the main Marxist circle there, and became its leader in theoretical attacks on Populism and Legal Marxism (q.v.). In 1895 he and Martov (q.v.) formed the St Petersburg Union for the Struggle for the Liberation of the Working Class, with the aim of replacing theoretical propaganda among students by practical

agitation among workers. Arrested in the same year, L. was banished in 1897 to S. Siberia, where he continued his journalistic and underground activities. Released in 1900, he emigrated to W. Europe. Meanwhile the Russian Social Democratic Labour party (q.v.) had been formed in 1898, combining various trends, orthodox Marxist and reformist, conspiratorial and trade-unionist. L.'s own mind was already concentrated on the problems of seizing and keeping power. He set out to capture the Social Democratic party through an unstutory organisation *Iskra* (q.v.), which packed the second party congress in 1903 but

LENIN IN 1918

itself split, L.'s followers forming the Bolshevik faction. L. soon lost control over the party and even over the Bolshevik faction, and in 1905 was expelled from the purely Bolshevik Central Committee (headed by Krasin, q.v.) for disorganising party work. He had already formed a rival 'stone-hard' Bolshevik subfaction (Bogdanov, Lunacharskiy, Litvinov, Rykov, qq.v.), and assailed the Central Committee until they were prepared to make peace. Having returned to Russia in Oct. 1905, L., together with Bogdanov and Krasin, led the Bolshevik faction through the final stages of the revolution of 1905-7 (q.v.), then again emigrated. The following years were spent in petty *émigré* quarrels and intrigues in which L. again lost control over the ostensibly reunited Social Democratic party and over his own faction, having broken with Bogdanovists and with the 'party-minded' Bolsheviks Rykov and Sokolnikov (q.v.); his chief lieutenants were now Zinov'ev and Kamenev (qq.v.). In 1912 a gathering of a dozen hand-picked Leninists in Prague elected a 'Central Committee of the Social Democratic party' and in advance 'expelled' from the party all those who would not obey this Central Committee. After this break with everyone else L. concentrated on guiding the attempts of his followers to

extend their influence in the advancing labour movement in Russia by gaining control in trade unions, co-operatives, educational associations, etc., as well as through the daily newspaper *Pravda* (q.v.) and the Bolshevik members of the Duma (q.v.). During the First World War L. and Zinov'ev lived in Switzerland, propagating a defeatist attitude for Russian workers and organising international anti-war conferences of Left-wing Social Democrats. After the February revolution (q.v.) in 1917 L. returned to Russia through Germany, and from this time until the assassination of the Ger. ambas. in Russia in 1918 the Bolsheviks received financial aid from the Ger. Gov., of which L. appears to have known. From the time of his return L. planned an armed uprising against the Provisional Gov. (q.v.) and the seizure of power. This alienated Kamenev and Zinov'ev, but attracted L.'s old bitter opponent Trotsky (q.v.), who became his main partner in organising and conducting the October revolution (q.v.) and in establishing the Soviet Gov. (see SOVIET). L. became chairman of the Council of People's Commissars (Prime Minister) and held this post until his death. The first actions of his gov. were nationalisation of the land, the estab. of the Cheka (q.v.) and suppression of non-Socialist parties, the dispersal of the Constituent Assembly (q.v.), and the conclusion of the Brest-Litovsk peace treaty (q.v.). Then the civil war (q.v.) ensued with the policy of War Communism (q.v.), followed by the period of the New Economic Policy (q.v.). After the Brest-Litovsk treaty L.'s closest collaborators were Sverdlov and Stalin (qq.v.), and from 1919 he was assisted in leading the party and the gov. by the Politburo (q.v.), which included most of the prominent Bolshevik leaders. Opposition to his policies arose almost constantly in the party, the most important being that of the Left Communists (see BUKHARIN and LEFT OPPOSITION) and the Workers' Opposition (q.v.), until inner-party oppositions were formally condemned at the packed tenth party congress in 1921 (see COMMUNIST PARTY OF SOVIET UNION). L. was wounded in an attempt on his life by Left Socialist Revolutionaries (see SOCIALIST REVOLUTIONARIES) in 1918, and from 1922 suffered from a brain disease which finally caused his death. His mummy is displayed in the mausoleum on the Red Square in Moscow. L. had a powerful charismatic quality of leadership. He had a genius for organisation and tactics, intrigue and demagoguery, and his writings on these subjects (e.g. *What is to be Done?*, 1902, and *The Infantile Disease of 'Leftism' in Communism*, 1918) are among the classics of political theory. But his philosophical efforts (*Materialism and Empirio-criticism*, 1909) are miserable, and there is little that is original in his economic writings (*Imperialism as the Highest Stage of Capitalism*, written 1916). He was a realist whose attitude to Marxian theory was highly utilitarian and

opportunist: he displayed great reverence for the works of Marx and Engels while in fact treating them as a source of suitable quotations. Modest in private life, kind and considerate in personal relationships, he had no moral scruples in politics. The 5th ed. of *L.'s Works* in Russian is being prepared in Moscow in 50 vols. For Eng. trans. see *Selected Works* in 12 vols., London, 1936-8. Literature about L. is vast. See memoirs by his wife Krupskaya, 1932, and Gor'kiy, 1932, and studies by M. A. Aldanov, 1922; R. Fueleop-Miller, 1927; C. Hollis, 1938; C. Hill, 1947; B. D. Wolfe, 1948; D. Shub, 1951.

**Leninabad:** 1. Oblast (prov.) of the Tadzhik S.S.R. Pop. 495,000.

2. Cap. of the above; fruit-preserving and canning are carried on, and there are leather, silk, and brick works. Pop. 60,000.

**Leninakan** (until 1924 *Aleksandropol'*), tn in Armenia, 55 m. NW. of Yerevan. It is an important industrial centre (since late 19th cent.)—textile, metal-working (bicycles), and food industries. Pop. (1956) 103,000 (c. 1914, 49,000; 1926, 42,000). L. was founded by the Russians in 1834 on the site of an ancient fortress.

**Leningrad:** 1. Oblast in NW. Russia, adjacent to the Gulf of Finland and Lakes Ladoga and Onega. It is a region of half-forested lowland, with a maritime climate. There are bauxite, oil-shale, and peat deposits. Area 32,800 sq. m.; pop. (without L. city) over 1,500,000, mostly Russians, also Finns, Estonians, Karelians, and small Finnish peoples. The economy of the oblast is largely aimed at supplying L. city. There is peat and oil-shale extraction, timber, aluminium, and building materials are produced, and there are food and light industries; vegetables, potatoes, and coarse grain are grown, and the area also has dairy farming and fishing. The prin. tns are L., Vyborg, Volkhov, and Gatchina. The area (except W. of the Karelian Isthmus) belonged to Novgorod. was sometimes partly held by Swedes in the 16th-17th cents., and finally became Russian in 1721. The Karelian Isthmus, with Vyborg, belonged to Finland, 1809-1940 and 1941-4. Most of the oblast was occupied by Germans during the Second World War and witnessed much bitter fighting.

2. Cap. of the above (formerly **St Petersburg** until 1914, then **Petrograd** until 1924), second largest city of the U.S.S.R. and second only to Moscow as an economic and cultural centre. It is directly subordinated to the gov. of the Russian Federal Rep. It is situated at the head of the Gulf of Finland, on both banks of the Neva R. Pop. 2,814,000 (with suburbs 3,176,000), having risen steadily since 1754, when it was 150,000. L. has large engineering works (ship-building, precision instruments), and there are electrical, chemical, woodworking, food, and light industries. Electricity is supplied to the city from hydro-electric

stations of the L. oblast; coal comes from Vorkuta (q.v.) and Poland, and gas by pipeline from Estonia (a new pipeline to convey natural gas from Stavropol' (q.v.) is under construction). Twelve railway lines radiate from L. Its sea port, although frozen from Jan. to April, is one of the largest in the world, and its riv. port is one of the most important in the U.S.S.R. The latter stands at the end of 2 artificial waterways: the Volga-Baltic (see *MARIINSKY WATERWAY*) and the White Sea-Baltic Canal (q.v.).

*Soviet Weekly*

**LENINGRAD: THE GRIBOYEDOV CANAL**  
On the left is the Kazan' cathedral.

From its 23 higher educational estab. with 12,000 students in 1910, L. possessed 47 with 100,000 students in 1953, among them the univ. founded in 1804. There are 40 museums, including the famous Hermitage Museum, founded by Catherine the Great, with its magnificent collection of European paintings, and the Russian Museum of native art, founded in 1895. The 1700 libraries include the Saitykov-Shchedrin Public Library (founded 1795), with 10 million vols., and the Academy of Sciences Library, with 8 million vols. Among the 16 theatres are the opera and ballet theatre, founded in 1783, and the drama theatre, founded in 1832.

L. is one of the best-planned and most beautiful cities in the world. The prin. part of the city is on the l. b. of the Neva. In the centre stands the Admiralty, surrounded by the beautiful Alexander Garden. From this central point radiate 3 long boulevards, rendered imposing by

their width. Eastwards runs the Nevsky Prospekt, the city's central thoroughfare, while S. and SE. respectively stretch the Voznesensky Prospekt and the Gorokhovaya Ulitsa. L.'s oldest building is the Peter and Paul fortress founded in 1703. The buildings of the earlier part of the 18th cent. are baroque in style, among them the Alexander Nevskiy monastery (1710), the cathedral of SS. Peter and Paul (1733), the univ. (1742), the Winter Palace (1762), the Smol'nyy convent (1764); those of the late 18th and early 19th cents. are in the neo-classical style, and among these are the Academy of Arts (1772), the Marble Palace (1785), the Taurida Palace (1788), Michael Castle (1800), the cathedral of the Theoklos of Kazan' (1811), the rebuilt Admiralty (1823), the Exchange (1816), the Michael Palace (1825—now the Russian museum), the ensembles of the Palace Square (1829), the Senate Square (1834), and the drama theatre (1832), and St Isaak Cathedral (1858). The second half of the 19th and the 20th cents. have added little to the beauty and magnificence of L., though the stadium (1950) and the underground (1956) are notable.

L. was founded by Peter the Great in 1703, and from 1712 to 1918 was the cap. of Russia, symbolising the imperial epoch of its hist. Since 1918 it has retained unofficial status as the second cap. of Soviet Russia. From its foundation it was the main seaport of the country, replacing Archangel. From the second half of the 18th cent. it was also the industrial centre, first of heavy industry (shipbuilding and engineering), and later of the textile industry. From its foundation St Petersburg was also a centre of higher education and learning, the naval academy being founded in 1715, the engineering school in 1719, the artillery school in 1721, and the Academy of Sciences in 1725 (this last was transferred to Moscow in 1934). In the 19th cent. L. was the main centre of the radical and revolutionary movements in Russia, and one of the main centres of the labour movement and of Social Democracy. The Bolsheviks were strong in St Petersburg from the time of the revolution of 1905 (q.v.), and it was one of their strongholds during the period of the 'dictatorship of the proletariat' (q.v.), though the L. party organisation, led by Zinov'ev, was in the mid 1920's in opposition to the central leadership. The assassination of Kirov (q.v.) in L. in 1934 initiated the wave of terror which culminated in the great purge (q.v.). During the Second World War L. was besieged for 2 years and earned the name of 'Hero City' (see next article).

**Leningrad, Siege of (1941-3).** From 21 Aug. 1941, in the Second World War, L. was closely besieged by the Germans, and for 16 months overland communications with the rest of Russia were cut. The siege was begun by von Leeb with an army of 300,000 riflemen, a div. of motorised infantry, 1000 tanks, and 1000 first-line aircraft. For months L. lay under direct threat of capture. Probably

over 200,000 Germans, Finns, and soldiers of other satellite nations d. in the approaches to the city; while in L. itself the Russian death-roll from gunfire, hunger, and exposure was very high. The active defence policy of its garrison saved L. Its aircraft bombed the Ger. positions and went far out to attack the Luftwaffe's bases in Finland and Estonia. Its ground forces were always attacking the Ger. defence system; snipers stealing through the bracken on outlying hills or on skis over the snow and ice took heavy toll. When navigation was free the Baltic fleet harassed the supply routes from the Hanseatic ports to the Ger. force in Finland; and when the fleet was icebound its guns were lent for the suppression of the Ger. siege artillery batteries. In Dec. 1941 transport difficulties and Ger. air-raids brought L. to the verge of famine; but this was remedied when the great ice highway across Lake Ladoga was built and Douglas planes flew provisions into the city. Once the Lake Ladoga road was open and the Russians had advanced in the Lake Ilmen, Volkhov, and Kalinin sectors, the situation at L. improved, though the suburbs sustained widespread damage from siege guns in the W. and SW., some of these being suppressed by the Russian advance towards Peterhof. Famous buildings did not suffer very greatly, though Pushkin's house on the Moika was wrecked early in the war. The piercing of the blockade was at length effected by a combined operation under Govorov, the victor of Mozhaisk and commander of the L. garrison from early in 1942, and Meretzkov, aided by men of the fleet fighting on the ice of Lake Ladoga and the guns of warships and coastal batteries. While the issue was still in some doubt the pressure of heavy Russian tanks, which had been brought across the Neva by pontoons, and deadly low-flying Stormovik planes flung the enemy back to the edge of the forest; while on the Volkhov Meretzkov forced a passage to Lake Ladoga and split the Ger. belt asunder. From the E. yet another Russian force delivered a powerful series of frontal attacks. The junction of the 2 armies of Govorov and Meretzkov on 18 Jan. 1943, after a 7-day battle, estab. a corridor 10 m. broad and so relieved the city. See also EASTERN FRONT, OR RUSSO-GERMAN CAMPAIGN, IN SECOND WORLD WAR.

**Leninogorsk**, formerly Ridder, a tn in the E. Kazakhstan oblast (prov.) of the Kazakh S.S.R. of the Soviet Union. It is one of the main zinc and lead producers in the U.S.S.R. Pop. 120,000.

**Leninsk-Kuznetskiy** (until 1925 Kol'-chugino), tn in the Kemerovo oblast of S. Siberia, 47 m. S. of Kemerovo. It is one of the main centres of coal-mining in the Kuznetsk basin (q.v.). Pop. (1956) 119,000 (1917, 20,000; 1926, 20,000; 1939, 82,000). It was founded in 1864 as a coal-mining settlement.

**Lenkoran'**, tn in Soviet Azerbaijan, on the Caspian Sea, 160 m. S. of Baku. It

is the centre of a subtropical area growing rice, citrus fruits, and tea. It was cap. of the Talysh Khanate under Persia in the 18th cent., becoming Russian in 1813. Pop. (1956) 31,000, mostly Talysh (q.v.).

**Lennel**, see COLDMSTREAM.

**Lennep, Jacob van** (1802-68), Dutch poet and novelist, *b.* Amsterdam. He took his doctorate in law at the univ. of Leyden in 1824 and started legal practice in Amsterdam in 1829, becoming procurator general. He was a member of the Dutch Parliament, 1853-6. His first essay in literature was a trans. of Byron's *Bride of Abydos* in 1826 and of the *Siege of Corinth* in 1831. A greater influence was, however, that of Sir Walter Scott, and he is now remembered chiefly for his series of historical novels which displayed excellent narrative power. They include *De Pleezoon, een verhaal*, 1835 (Eng. trans., *The Adopted Son*, New York, 1847); *De Roos van Dekama*, 1836 (Eng. trans., 1847); *Jacob's Weeklacht op het huis te Teylingen*, 1839 (Eng. trans., 1840); *Ferdinand Huyck*, 1840 (Eng. trans., *The Count of Talavera*, 1880). Van L.'s dramatic works were pub. in 3 vols. (Amsterdam), 1852, and his poetical works in 11 vols. (Rotterdam), 1859-62. See life by N. Beets, 1906, and M. F. van Lennep, 1909; also M. E. Kluit, *Jacob van Lennep*, 1942.

**Lennox, Charles Henry Gordon**, see RICHMOND AND GORDON, 6th DUKE OF.

**Lennox, Charlotte**, *nee* Ramsay (1720-1804), Brit. writer, *b.* New York. She came to London in 1735, and after a brief period on the stage earned her living by writing. Her chief books are *Life of Harriet Stuart*, 1751, *The Female Quixote*, 1752, and *Shakspear Illustrated: or The Novels and Histories on which the Plays are founded*, 1753-4.

**Lennox**, anct Scottish ter. comprising the anct sheriffdom of Dumbarton and large portions of the shires of Stirling, Perth, and Renfrew. The earldom of L. was first conferred on Alwin c. 1175. The title passed in 1473 to his descendant, Sir John Stewart, Lord Darnley. Matthew, second earl of this Stewart line, fell on Flodden Field, and Matthew, fourth earl, married Margaret Douglas, daughter and heir of the Earl of Angus and Margaret Tudor, sister of Henry VIII; Matthew's eldest son, Lord Henry Darnley, married Mary Queen of Scots. After the murder of Darnley (1571), Matthew worked for the abdication of Mary, and in 1570, his grandson being recognised as James VI of Scotland, he was appointed regent. On his death (1571) the title passed to James, who conferred it on his uncle, Charles, the younger brother of Darnley, who left an only daughter, Lady Arabella Stewart. In 1580 James conferred the title on his cousin, Esmé Stewart, grandson of the third earl, and in the following year Esmé was created Duke of L. He was succeeded by his son Ludovic, who was created Earl of Richmond (1613), and Earl of Newcastle and Duke of Richmond (1623) in the Eng. peerage. On his dying without male issue (1624) his titles passed to his

brother Esmé. On the death of the sixth duke, Charles, the L. dukedom devolved upon Charles II, who bestowed it on his illegitimate son, Charles Lennox (by the Duchess of Portsmouth), who sold the lands to the Marquess of Montrose in 1702.

**Lennox-Boyd, Alan Tindal** (1904- ), Brit. politician, educ. at Sherborne and Christ Church, Oxford. He has been a Conservative M.P. since 1931. He held junior offices in Chamberlain's gov., and subsequently in Churchill's coalition gov., becoming minister of aircraft production, 1943-5. He was minister of state for colonial affairs, 1951-2; minister of transport, 1952-4; and since 1954 has been secretary of state for colonial affairs, in which capacity he has had to deal with especially difficult problems in Cyprus, Kenya, and Singapore, and has been closely concerned in the negotiations leading to dominion status for the Gold Coast (Ghana) and Malaya.

**Lennox Hills**, range of hills in Scotland which includes the Campsie Fells, Strathblane Hills, and Kilpatrick Hills, situated between Dumbarton and Stirling. They rise to 1894 ft at Earl's Seat.

**Lennoxtown**, vil. of Stirlingshire, Scotland, 10 m. N. of Glasgow, chiefly residential. Nails are manuf. Pop. 4966.

**Leno, Dan** (1861-1904), stage name of George Galvin, comedian, *b.* Somers Town, London. His parents were travelling entertainers, known as Mr and Mrs Wilde, and as a child he was trained as an acrobat and dancer. With his brother he won the world championship in clog-dancing at Leeds in 1880, and after appearing in pantomime at the Oxford and Surrey Theatres, he was engaged for Drury Lane by Sir Augustus Harris. In 1900 he was transferred to the Pavilion Music Hall, and in 1901 performed before the king at Sandringham. He was the most famous comedian and pantomime performer of his day. See J. H. Wood, *Dan Leno*, 1905.

**Lenocinium** is the term used in Scots divorce law to indicate connivance at or consent to adultery of one spouse by the other. A pursuer is barred from obtaining a decree if he or she has been guilty of connivance at the adultery complained of.

**Lenormand, Henri René** (1882-1951), Fr. dramatist, *b.* Paris, son of the composer, René L. His first work was *Les Possédés*, 1909, performed at the Théâtre des Arts, and the next *Foussière*, 1914, followed by *Les Râles* (Eng. trans., *Failures*, 1923) and *Le Temps est un songe* (Eng. trans., *Time is a Dream*, 1923), both performed at the Théâtre des Arts. His work is profoundly influenced by Freud, and his plays show men driven by their subconscious instincts. His later plays are *Le Simoun*, 1920; *Le Mangeur de rêves*, 1922 (a modern reproduction of *Edipus Rex*); *L'Homme et ses fantômes*, 1924; *Les Trois Chambres*, 1931; *Crepuscule du théâtre*, 1935. See H. Daniel-Rops, *Sur le théâtre de H.-R. Lenormand*, 1926, and P. Blanchard, *Le Théâtre de H. R. Lenormand*, 1947.

**Lenormant, François** (1837-83), Fr.

archaeologist, b. Paris. He won the prize in numismatics at the Académie des Inscriptions with his *Classification des monnaies des Lagides*, 1856, and was appointed sub-librarian, 1862. After travelling in Greece he accepted the professorship of archaeology at the Bibliothèque Nationale, 1874-83. His chief works are *Les Antiquités de la Troade*, 1876, and *Les Origines de l'histoire d'après la Bible*, 1880-4. From cuneiform inscriptions he deduced the existence of a non-Semitic tongue which was later known as Accadian. Other works: *Manuel d'histoire ancienne de l'ouest*, 1868-9, 1881, *Lettres assyriologiques*, 1871-9, *Les Premières Civilisations*, 1874, *Les Sciences occultes en Asie*, 1874-5, *La Monnaie dans l'antiquité*, 1878-9, and *Monnaies et médailles*, 1883.

**Le Nôtre, André** (1613-1700), Fr. landscape gardener. Louis XIV, who heard of his skill, gave him a commission to lay out the gardens of Versailles, the Trianon, the terrace of St Germain, and the gardens of Fontainebleau, St Cloud, and Chantilly. He was also the designer of St James's Park and Kensington Gardens in England, and of Greenwich Park. In addition to these he visited Rome and laid out the gardens of the Quirinal and Vatican, see J. Guiffrey, *André le Nôtre*, 1912.

**Lens, Fr.** tn in the dept of Pas-de-Calais. It was the scene of a victory of Condé (q.v.) in 1648 during the Thirty Years War, and was an important theatre of operations during the First World War, particularly in the battle of Arras (q.v.). In 1918 it was in ruins, but was rebuilt, and was again damaged in the Second World War. It is the centre of a rich coal-mining valley, and there are also sugar and metallurgical industries. Pop. 34,100.

**Lens, in optics**, a portion of a refracting medium bounded by 2 curved surfaces, or by 1 plane surface and 1 curved surface. L.s. are usually made of glass, their surfaces being usually portions of spheres, and for most practical purposes having a small thickness in proportion to the radius of curvature. They may be divided into 2 classes, convex or converging L.s. and concave or diverging L.s. The former are thicker in the centre than at the edges, and the latter thinnest at the centre. Light is refracted (i.e. changes its direction) when it passes from air to glass, or from glass to air, and L.s. are important because the refraction at their 2 surfaces can be made to alter the directions of the incident light rays in such a way that whole groups of rays pass onwards towards a single point, or in directions away from a single point. If, for example, rays from a point on a distant object fall on the convex L. of a camera, they are so refracted that all reach one point on the photographic plate or film placed behind the L. and at a suitable distance from it, and they are said to form an *image* of the object point. From each point on the object a group of rays is in this way focused on the plate at an appropriate point, so that the totality

of rays passing through the L. produces a picture or image of the object upon the plate. In this case the rays travel to the image, and the image is said to be a *real* one. Similarly the rays from a point on an object fall on the L. of a pair of spectacles, and are refracted in such a way that they pass to the eye as though they had come from a point other than that where they originated; that is, they merely appear to come from an image point, and the image is said to be *virtual*. Whether the image produced by a convex L. is real or virtual depends upon the distance of the object and such characteristics of the L. as the curvature of its faces and the nature of the glass of which it is made; concave L.s. however, produce only virtual images of real objects. The sizes and positions of the images formed by L.s. depend upon the sizes and positions of the objects, and upon various characteristics of the L.s. See also DIOPTRIC. See A. Cox, *Photographic Optics*, 1943, and B. K. Johnson, *Practical Optics*, 1945.

**Lens, in botany**, genus of Mediterranean climbing annuals, family Leguminosae, of which *L. esculenta* is the Lentil (q.v.).

**Lent** (O.E. *lenten*, *lengen*, spring; M.E. *leinten*, *lenten*, *lente*), in the Christian Church the period of fasting before Easter. In the time of Irenaeus a rigid fast was observed by some Christians for 40 hours before Easter morning. In Alexandria, during the 3rd cent., Christians fasted throughout Holy Week, and by the 4th cent. the period had extended to about 40 days. In the 8th or 9th cent. it was determined that the fast should begin on Ash Wednesday, between which and Easter Sunday are 40 days, excluding Sundays, on which the fast is not observed. Hence in Latin the Sundays in L. are called in *Quadragesima*, i.e. within the Forty Days, whence Fr. *Carême*, etc. The fourth Sunday in L., Mid-lent Sunday, has various other names, as Refreshment Sunday (from the Gospel, the story of the feeding of the 5000) or *Lactare* Sunday (from the opening word of the introit); it provided a break in the penitential season, and rose-pink vestments are worn instead of purple. From the Epistle, referring to Jerusalem above, the mother of us all, it became called Mothering Sunday, when mothers are paid visits, given gifts of flowers, etc. In days past, young servant maids were allowed a holiday to visit their mothers, and usually took with them a rich *stannel* cake. The fifth Sunday is Passion Sunday, beginning Passiontide which ends with Holy Saturday, the day before Easter. The sixth Sunday is Palm Sunday and begins Holy Week, commemorating the last days of the earthly life of Christ.

**Lenthall, William** (1591-1662), politician, b. Henley-on-Thames, son of an Oxfordshire landowner, and educ. at Alban Hall, Oxford. Called to the Bar in 1616, he entered the Short Parliament as member for Woodstock in 1640, and in the following year the king made him Speaker, a position he retained until 1653. His behaviour when Charles I ordered

him to disclose the whereabouts of the Five Members (q.v.) he wanted to arrest is historic. He became master of the Rolls in 1643, and was Speaker again in 1659 when the Rump was recalled. Though favouring the Restoration he was at first exempted from pardon in 1660.

**Lentils**, seeds of an ann. branching plant with pale blue flowers (*Lens esculenta*). Their shape has given the name to the glass lens. There are numerous varieties and all are of high food value. The plant will grow in warm parts of Britain, but is rarely cultivated. In all S. parts of Europe, and in Egypt and India, the crop is an important one.

**Leontini**, tn in Sicily (q.v.), near Lake L., 22 m. NW. of Syracuse (q.v.). It has pottery manufs. and a large agric. market. Pop. 29,300. See LEONTINI.

**Leontulus**, patrician family of the gens Cornelia, of which the most prominent members were: (1) *P. Cornelius L. Sura*. Praetor in 75 BC and consul 4 years later, he was expelled from the Senate in 71, with 63 others, because of his infamous life. This humiliation caused him to ally himself with Catiline (q.v.). In order to gain power and recover his place in the Senate, L. stood a second time for the praetorship, which he assumed in 63. When Catiline left for Etruria L. was left as leader of the home conspirators, and his irresolution probably saved the city from being burned. L. was deposed from the praetorship, and was strangled in the Capitoline prison (5 Dec.). (2) *P. Cornelius L. Spintus* was successively curule aedile, praetor, and consul over the period 63-57 BC. In his consulship he moved for the immediate recall of Cicero, and afterwards received Cilicia as his prov. On the outbreak of the civil war in 49 BC he joined the Pompeian party, and was executed after Pharsalus (48 BC).

**Lenz, Jakob Michael Reinhold** (1751-1792), Ger. poet, b. Sesswegen, Livonia, is a typical representative of the *Sturm und Drang* period. His earliest efforts at composition were sacred songs in the style of Klopstock. After studying theology at Königsberg, he migrated to Strassburg, joined the literary coterie of Salzmann (1749-1821), and gained the friendship of Goethe (q.v.). His passionate lyrics, *Die Liebe auf dem Lande*, were inspired by Friederike Brion, whom Goethe also loved. Insanity overtook him in 1777. His romantic comedies *Der Hofmeister*, 1774, and *Die Soldaten*, 1776, etc., show a marked deficiency in restraint. See H. Kindermann, *Lenz und die deutsche Romantik*, 1925.

**Lenz's Law**, see INDUCTION, ELECTROMAGNETIC.

**Leo**, name of 13 popes, of whom the following are most outstanding:

**Leo I**, St (440-61), styled *the Great*. B. probably in Tuscany, he was elected to succeed St Sixtus III. He combated the Pelagians, Manicheans, Priscillianists, Nestorians, and Eutychians. It was against these last that he addressed to the patriarch of Constantinople a celebrated dogmatic letter, known as the Tome of St

L. in which he defined the doctrine of the hypostatic union and which was accepted by the Council of Chalcedon (451) as the teaching of the Church. In 452 L. turned Attila from the gates of Rome, and 3 years later prevented the sack of Rome's anct basilicas by the Vandals under Genseric. His feast is on 11 April, and he was declared a Doctor of the Church by Benedict XIV in 1754.

**Leo II**, St (681-3), b. in Sicily, successor of St Agatho. The prin. event of his pontificate was the condemnation of Pope Honorius I (625-38) for having failed to condemn Monothelitism.

**Leo III**, St (795-816), b. Rome, successor of Adrian I. In 799, when public order and even his own life were threatened by the Rom. factions, he invoked the aid of Charlemagne, who restored peace to the city and was crowned emperor of the W. by L. in St Peter's (800). L.'s feast is on 12 June.

**Leo IV**, St (847-55), b. Rome, successor of Sergius II. Before his election he was a Benedictine monk of San Martino. During his pontificate he built the Leonine Wall to enclose the Vatican, inspired a great victory over the Saracens at Ostia, and stood godfather to the future Alfred the Great when the latter was confirmed in Rome (853).

**Leo IX**, St (1049-54), b. in Alsace, 1002; Bishop of Toul, 1026; succeeded Damasus II. With the aid of Hildebrand (afterwards St Gregory VII) he began to reform the Rom. Curia, combated simony and other abuses, condemned Berengarius, and endeavoured to prevent the schism between E. and W. L. was a friend of Edward the Confessor, and was visited by Macbeth. Taken prisoner by the Normans at Benevento in 1053, he d. soon after his release.

**Leo X** (1513-21), b. Florence, 1475, son of Lorenzo de' Medici the Magnificent, and successor of Julius II. The early years of his pontificate were occupied in negotiations with the Empire, Spain, and England for an alliance against Venice and France, with the ultimate aim of a crusade against the Turks. His immoderate grant of indulgences was one of the abuses which helped to precipitate the Reformation. His diplomatic failures were largely due to his policy, on the one hand of advancing the temporal claims of the papacy, and on the other to his efforts for the aggrandisement of his family.

**Leo XII** (1823-9), b. near Spolito, 1760, successor of Pius VII. Before his election L. had been secretary to Pius VI (1775-99); cardinal priest, 1816; cardinal vicar, 1820. It was not expected that L.'s pontificate would be of long duration; but within 6 years he proved himself a reactionary, and the effects of his policy in the papal states became manifest in later years.

**Leo XIII** (1878-1903), b. Carpineto, 1810, successor of Pius IX. He was ordained priest in 1837; consecrated bishop in 1843; Archbishop of Perugia, 1846; cardinal, 1853. His pontificate is a landmark in European hist.; for he

enforced a stricter theological training in accordance with the teaching of St Thomas Aquinas, opened the Vatican archives to scholars of all nations, and encouraged the study of eccles. hist. His encyclical, *Iterum Novarum*, 1891, dealing with the condition of the working classes under industrialism, advocated a wider diffusion of private property. His commission to inquire into the validity of Anglican orders led to their definite and final condemnation in 1896.

See also POPES, LIST OF THE.

**Leo I, Flavius** (c. 400-74), Byzantine emperor, b. Thrace, gained the throne on the death of Marcianus in 457 through the influence of Aspar, master of the troops (whom L. later put to death). He adopted stern measures against the Eutychians, and defeated the Huns in Dacia. While on an expedition to recover part of Africa, however, his fleet was destroyed by the Vandals. Towards the end of his reign he suppressed a rising of Goths. He was succeeded by his 4-year-old grandson, Leo II, who d. after a nominal reign of 10 months.

**Leo III, the Isaurian** (c. 680-740), Byzantine emperor. L. was the founder of the Isaurian dynasty, b. in the Syrian prov. of Commagene. In 717, refusing to acknowledge the usurper Theodosius III, he was elected emperor by the army, and during the first year of his reign defeated the Saracens, who had laid siege to Constantinople. He later inflicted a decisive defeat on them at Acroinon (740). L. did much to improve administrative efficiency, reformed the army, and helped the peasantry. He passed legislative reforms on religious matters, and by issuing edicts against the image worshippers gave rise to the great iconoclast controversy (see ICONOCLASTS). He attempted to transfer S. Italy, Greece, and Macedonia from the Lat. patriarchate to that of Constantinople, with the result that the prov. of Ravenna separated from the empire.

**Leo V, Flavius**, surnamed the Armenian (d. 820), Byzantine emperor, served as a commander under Nicephorus, but was exiled for treachery in 811. Later he was recalled and made commander of the E. army by Michael I, and went with the latter on an expedition against the Bulgarians. During a battle near Adrianople the army became disaffected and L. withdrew with his own forces, leaving Michael to defeat. L. was then crowned at Constantinople (813) and in the succeeding 2 years subjected the Bulgarians to 2 decisive defeats. His persecution of image worshippers, however, made him unpopular, and he was assassinated (820) by the friends of Michael the Stammerer, who was raised to the throne as Michael II.

**Leo VI, surnamed Sapiens and Philo-sophus** (d. 912), Byzantine emperor, succeeded his father Basilus I in 886. His earliest act was to depose Photius, patriarch of Constantinople. Most of his reign was occupied in minor wars against barbarians and conflicts with the church.

The origin of his surname is unknown, though Gibbon suggests that it was given only because he was less ignorant than most of his contemporaries in matters of Church and State. He did, however, complete the digest of Justinian's code; a work on military tactics is sometimes attributed to him, and sometimes to Leo III.

**Leo, Leonardo** (1694-1744), It. composer, b. near Brindisi. While studying at Naples from 1709-13 his sacred drama, *L'Infedeltà abbattuta*, was performed by his fellow students. But he became especially important as an operatic composer and had a great influence particularly on later It. masters of comic opera. His output of stage and sacred music was enormous.

**Leo**, or the **Lion**, fifth sign of the zodiac (q.v.), the sun entering it about 22 July. The constellation can be easily found by drawing a line through the Pole Star and the third star of the Plough ( $\gamma$  Ursae Majoris). This line intersects L. at the star  $\beta$  Leonis, about magnitude 2. The 3 brightest objects in the constellation are Regulus ( $\alpha$  Leonis), first magnitude, at the bottom of the well-known 'sickle,' and the stars  $\beta$  and  $\gamma$  Leonis (magnitude 2.2).

**Leo Africanus** (Alhassan Ibn Mohammed Alwazzan), Berber traveller of the 15th cent. He travelled extensively in N. and central Africa and Asia Minor, and while returning from Egypt was captured at sea by pirates and taken to Rome, where he was converted to Christianity. His account of his journeys, written in It., was pub. in 1550 by Ramusio. Other works include poems, lives of Arab philosophers and physicians, and a Sp.-Arabic dictionary.

**Leo Alatiuss**, see ALLATIUS, LEO.

**Leoben**, Austrian tn in the prov. of Styria, on the Mur. It has a mining school, and is the centre of a lignite and iron mining area. Pop. 35,650.

**Leobschütz**, see GLUBCZYCE.

**Leochares** (fl. 350 BC), eminent Gk sculptor, was a pupil of Scopas, with whom he worked on the Mausoleum (q.v.). With Lysippus he executed a group in bronze representing Alexander at a lion hunt. He also made busts of Alexander, statues of Zeus, Ares, and of the family of Philip of Macedonia. All his works are lost, but the statuette in the Vatican of 'Ganymede carried away by an Eagle' is probably a copy of his work.

**Leominster**: 1. Bor. and mrkt tn of Herefordshire, England, situated at the confluence of the Lugg and 2 other small rivs. It is 12 m. from Hereford and 137 m. from London. It has regular and wide streets and has some fine old timbered houses. The magnificent church has a Norman nave and fine examples of window tracery. It was restored in 1866 and enlarged by the addition of the S. nave in 1879. The tn hall was built in 1855. Formerly a centre of the wool trade, with certain merchant guilds, L. now trades chiefly in livestock and other agric. produce. The tn originated in a monastery founded by the Mercian king.

Merwald, who had a castle near by, where a fortress stood till 1055, when it was destroyed by the Welsh. The tn's charter of incorporation was granted by Queen Mary Tudor. L. was represented by members of Parliament as early as 1295, but in 1868 its representation was reduced to one member. Pop. 6120.

2. Tn in Worcester co., Massachusetts, U.S.A., 40 m. WNW. of Boston, manufacturing toys, clothing, plastics, paper, machinery, and tools. Pop. 24,100.

**León, Fray Luis de** (c. 1527-91), Sp. poet and theologian, b. Belmonte del Tajo. In 1561 he was elected to the chair of theology at Salamanca. He was

de L. in the W. separate the basins of the Duero and the Miño (qq.v.). In the S. and E. are plains, part of the Castilian plateau. Sheep-rearing and agric. are the main occupations, and coal and iron are found. Area 5937 sq. m.; pop. 558,500.

3. Sp. tn, cap. of the prov. of L., on a plateau 2695 ft high, at the confluence of the Torio and Bernesga. It grew up on the site of a Rom. camp, and in the 10th cent., after its recapture from the Moors, became the cap. of the kingdom of L. It has a very fine Gothic cathedral, and sev. other old churches, including one dating from the 11th cent. Parts of the old

LEÓN CATHEDRAL

imprisoned from 1572 to 1577 because of his trans. of the Song of Solomon. In his fine prose poems *De los Nombres de Cristo*, 1583-5, and *La Perfecta Casada*, 1583, as well as in his charming lyrics, such as *La Noche Serena* and *De la vida del cielo*, will be found a rare blend of (1) purity and Heb. passion. See life by A. F. C. Bell, 1925, and A. G. Palencia, *Fray Luis de León en la poesía castellana. Historias y leyendas*, 1942.

**León:** 1. Region of NW. Spain, comprising the provs. of L., Palencia, Salamanca, Valladolid, and Zamora (qq.v.). In the 10th cent. a kingdom of L. was formed when the cap. of the old kingdom of the Asturias (q.v.) was moved from Oviedo to L. After periods of independence and of unity with Castile and Aragon, this kingdom was finally united with Castile in 1230.

2. Sp. prov. in the region of L. (see 1 above). It is hilly in the N. and W., in which directions it is bounded by the Cantabrian Mts (q.v.). The Montañas

walls remain. Linen, pottery, and leather are manuf. Pop. 65,000.

4. Formerly the cap. of Nicaragua (q.v.), 50 m. NW. of Managua (q.v.), the present cap. Tanning and the manuf. of textiles and boots and shoes are the staple industries. The ornate Renaissance cathedral (completed in 1774) and the many handsome public buildings, such as the National Univ., lend dignity to the tn. L. was the bp. of Rubén Darío (q.v.), Lat. America's greatest poet. Pop. 59,110.

5. Tn in Guanajuato prov., central Mexico, 30 m. W. by N. of Guanajuato. There are fine public buildings and an airport. Wheat and other cereals are grown in the area, and the tn has manufs. of cotton and woollen goods, pottery, and leather goods. Pop. 74,160.

**Leonard, Frederick**, see LONSDALE.

**Leonard, Thomas Arthur** (1864-1948), pioneer of open-air holidays, b. Stoke Newington. Studied in Germany and at the theological college in Nottingham, afterwards becoming a minister of the

Congregational Church in Lancs. His observation of the futile use which the industrial workers of the N. made of their leisure revealed to him a vision of an enlightened society without barriers of class, creed, or colour, and encouraged by friends he found opportunity of putting his theories into practice through the medium of holidays. In the early nineties the Co-operative Holidays Association, and in 1913 the Holiday Fellowship (q.v.), were founded. He was the first general secretary of each of these bodies, and he played a prominent part in starting youth hostels (q.v.), the Greycourt Fellowship, and International Tramping Tours. He was awarded the O.B.E. in 1935.

**Leonardo da Vinci** (1452-1519). It. painter, sculptor, engineer, and architect. b. Vinci, near Empoli. His father was Ser Piero da Vinci, a Florentine lawyer, and his mother (Catarina) was of humble birth and unmarried. He ranks not only as one of the greatest artists, but also as one of the great scientists and inventors. The child was brought up in his father's household, and from his earliest years showed the greatest promise for the future. Among his early pursuits were music, modelling, and drawing. His father placed him under the tuition of Andrea del Verrocchio (q.v.), and in his studio L. da V. worked with Sandro Botticelli and Pietro Perugino, and other less famous men such as Lorenzo di Credi. If tradition is to be believed, he was soon able to teach his master. Verrocchio allowed his pupil, then about 18, to paint a kneeling angel in the picture of 'Christ's Baptism,' and the result was such that Verrocchio knew that he could teach L. da V. nothing more. The picture is now in the Academy at Florence. In 1472 he was enrolled in the painter's guild at Florence. Somewhere about 1477 Lorenzo the Magnificent appears to have taken him into special favour, and under his protection L. da V. worked independently until 1481. During this time he was filled with projects of all kinds of architecture, hydraulics, mechanics, and engineering, also studying and observing every branch of science and philosophy. Astronomy, cosmology, geology, and anatomy, all came within his scope. As a natural scientist he was highly original and inventive, as may be judged from his voluminous *Notebooks*, and he was a pioneer in the then almost non-existent science of aeronautics (q.v.).

His art was not the reviving of lost glories, but the finding of fresh revelations in living and often obscure things. Thus the minute study of insects and reptiles enabled him, when young, to paint a very fearsome dragon on a wooden shield; and a later picture, his 'Medusa,' impressed those who saw it by its combination of the sinister and grotesque with a tragic beauty. From Florence he went to Milan, about 1482, and here, under the protection of Ludovico Sforza, he commenced various works, among them the equestrian monument to Francesco Sforza of which only the model was completed,

and the world-famous fresco of the 'Last Supper,' in the refectory of the convent church of S. Maria delle Grazie. This masterpiece, in which L. da V. used an experimental oil medium, suffered from the damp wall on which it was painted. The picture became blistered and mildewed, and after many years Cavaliere Cavenaghi restored as far as is possible the wonderful gift to posterity left by L. da V. From Milan he went to Venice, and while commencing various pictures spent half his time in gigantic plans of engineering work. In 1502 he travelled as chief engineer to Caesar Borgia, mapping out the country and planning and arranging canals, harbours, and various restorations, but in 1503 he was back again in Florence. His next commission was the decoration of the council hall of the Signory; Michelangelo was also commissioned to produce a battle scene on another wall of the same apartment. L. da V.'s cartoon, the 'Battle of Anghiari,' was finished in 2 years and was exhibited with that of Michelangelo. The violent action and extraordinary vitality of both these great works moved the whole of Florence to passionate admiration. Raphael, then only 19, came to watch these two at work. L. da V. left the painting unfinished, however, and used an experimental technique which destroyed what he had done. The portrait of Mona Lisa (or 'La Gioconda'), the wife of Francesco Zanobi del Giocondo, was finished in 1504; that mysterious, smiling picture was perhaps his masterpiece—a work of rare suggestion and subtle elusiveness, such as L. da V. loved. Francis I bought it later for 4000 golden florins, and it was placed in the Louvre, from which it was mysteriously stolen in 1912, but was later recovered and returned.

In 1506 L. da V. returned to Milan and later accompanied Francis I back to France. The last 2½ years of his life were spent at the castle of Cloux, near Amboise, which had been presented to him. Only a few of his works have survived; many were begun and never finished. Among his surviving works are the 2 pictures of 'Our Lady of the Rocks' in the Louvre and the National Gallery, the latter probably helped out by his pupil Ambrogio de Predis; 'St Anne' and 'John the Baptist,' now in the Louvre; the noble cartoon, 'Virgin and St Anne' (Royal Academy, London); and many studies and drawings at Christ Church, Oxford, Windsor, and elsewhere. A wax bust of 'Flora' was discovered and attributed to L. da V. in 1909 and bought as such by the Kaiser Friedrich Museum in Berlin. Its authenticity remains dubious. See E. MacCurdy, *Leonardo da Vinci*, 1907; W. von Seidlitz, *Leonardo da Vinci*, 1909; J. This, *Leonardo da Vinci: the Florentine Years of Leonardo and Verrocchio*, 1913; D. Merejkowski, *Romance of Leonardo da Vinci*, 1913; A. J. Anderson, *Leonardo da Vinci: the Admirable Painter*, 1915; R. A. Taylor, *Leonardo the Florentine: a Study in Personality*, 1927; J. P. Richter, *The Literary Works of Leonardo da Vinci*, 1939; A. E. Popham, *The Drawings of Leonardo da*

*Vinci*, 1946; Sir Kenneth Clark, *Leonardo da Vinci*, 1952, and *Selected Drawings of Leonardo da Vinci at Windsor Castle*, 1955; also life by Antonina Vallentin, 1939.

**Leonardo of Pisa** (*Leonardus Fibonacci*, or *Pisanus*), It. mathematician b. 1175 at Pisa, date of death unknown. His *Liber abaci* attracted the attention of the Emperor Frederick II, to whose court he was admitted. His other works are *De practica geometriae*, 1220, and *Liber quadratorum*, 1225. He had a great influence on the development of mathematics.

**Leoncavallo, Ruggiero** (1858-1919), It. composer, b. Naples, where he studied at the Conservatory. He wrote a number of effective operas, but *I Pagliacci*, 1892, survives, with scarcely diminished success. *La Bohème*, performed in Venice in 1897, suffered by comparison with Puccini's more famous opera of the same title.

**Leonforte**, tn in Sicily (q.v.), 8 m. N.E. of Enna (q.v.). It was damaged during the Second World War. There is a trade in agric. produce, olive oil, and wine. Pop. 23,000.

**Leonid Meteors**, see METEOR.

**Leonidas** (c. 487-480 BC). King of Sparta, in succession to his half-brother Cleomenes. In 480 he marched with his troops against the invading army of Xerxes, King of Persia, and posted his men, numbering 5300, by the narrow pass of Thermopylae. The Persians vainly attempted to force a way through the pass; they were driven back by L. and his gallant band with great slaughter. At length the Malian, Ephialtes, turned traitor and showed the Persians a track to the rear of the Spartan Army. When L. learned that the Persians were crossing the mt he dismissed all the other Greeks except the Thespians and Thebans, declaring that he and the Spartans must needs remain in the post they had been sent to guard. Without waiting for the Persians to attack in the rear he advanced from the pass and charged the enemy masses with his handful of troops. In the hopeless battle which resulted L. was overcome and fell in the fight, his head being afterwards cut off and his body crucified.

**Leonin** (12th cent.), Fr. music scholar, see FRENCH MUSIC.

**Leonine Verse**, medieval Lat. verse-form, consisting of hexameters or alternate hexameters and pentameters in which the final word rhymes with the word preceding the caesura. L. V. was much used for proverbs, e.g. 'Per risum multum poteris cognoscere stultum' ('You may know a fool by his frequent laughing.') Tennyson wrote a set of leonine elegiacs which began:

'Low-flowing breezes are roaming the broad valley dimm'd in the gloaming; Thoro' the black-stemm'd pines only the far river shines.'

**Leonnatus**, a Macedonian, served in the bodyguard of King Philip, and afterwards became a distinguished general in the army of Alexander the Great. Alexander,

remembering how 2 years previously Leonnatus and Peucestes had saved his life in battle, gave the former a golden crown at Susa in 325 BC. On his master's death (323) Leonnatus became satrap of Lower Phrygia; but in 322 he crossed over into Europe to assist Antipater (q.v.) against the Greeks, and was killed in battle.

**Leonov, Leonid Maksimovich** (1899- ), Russian writer, a fellow traveller (q.v.). Wrote stories (*The End of a Petty Man*, 1924) and plays (*The Orchards of Polovchansk*, 1936-8; *The Wolf*, 1938; *Invasion*, 1942; *Lenushka*, 1943), but is best known for his novels (*The Badgers*, 1925; *The Thief*, 1927; *Sol'*, 1930; *Skutarskiy*, 1932; *The Road to the Ocean*, 1935; *The Russian Forest*, 1953). L. is the chief representative of Dostoyevsky's tradition in contemporary Russian literature.

**Leont'ev, Konstantin Nikolayevich** (1831-91), Russian thinker and publicist, strongly anti-liberal and anti-democratic, denounced the 'levelling bourgeois progress' of Europe, but rejected Slavophilism (see SLAVOPHILES) and advocated Byzantine asceticism. He anticipated some of Nietzsche's ideas. See study by N. A. Berdyayev, 1940.

**Leontini** (modern Lentini, q.v.) was founded by Chalcidians from Naxos, 729 BC. It never attained political importance owing to the proximity of Syracuse. L. was the bp. of Gorgias (q.v.).

**Leontius** (fl. 6th cent.), theologian, b. Byzantium, and entered the monastery of St Saba, Jerusalem. He wrote *Contra Nestorianos*, *Contra Severum*, and other polemical treatises. See life by J. P. Jungius, 1908.

LEOPARD

**Leopard** (*Panthera pardus*), fierce blood-thirsty carnivore found throughout the African continent and S. Asia, though its numbers are rapidly diminishing. Its colour is pale fawn to rufous buff, and the coat is covered with large rosette-shaped spots. It varies in length from 3½ to

4½ ft. and is smaller than the lion or tiger, to which it is closely allied, though it differs from them in climbing trees. The black L. of Java was formerly regarded as a separate species, but is now agreed to be a case of melanism. The L. seems to kill for the love of slaughter; though rarely attacking man unless provoked, it may attack children. For the snow L. see OUNCES. The clouded L. (*Neofelis nebulosa*) is found in the E. Indies, Malaya, and India; it is about 6 ft long, feeds on small birds and mammals, and lives in trees.

**Leopard, Hunting, see CHEETAH.**

**Leopardi, Giacomo, Count (1798-1837).** It. poet, b. Recanati, of a poor but noble family. He devoted his early years to an unaided study of the classics, with remarkable success. Dissatisfied with his home life, he went to Rome in 1822, hoping to find a more congenial environment, but he suffered an intense disappointment; and in spite of the friendship formed there with Bunsen and Niebuhr, he returned in the following year to Recanati. Here he remained for 10 years, except for short holidays at Florence, Pisa, Milan, and Bologna; at the last named in his brilliant classical scholarship earned for him a commission to edit Cicero and Petrarch (1825). The last 4 years of his life (1833-7) were passed at Naples. L. presents a most fascinating study in psychology and temperament; he is akin in various ways to Heine and d'Annunzio. A sensitive soul, capable of idealism, but embittered by disillusionment and a martyr to ill health, loneliness, and privation, he stands out as the poet of despair; the growing pessimism of his mind is to be clearly traced in his works. His despondency finds its most poetic expression in his *Bruto Minore*, 1824; in 1827 appeared his *Operette Morali*, for the most part a series of imaginary dialogues, which have brought him the same high degree of recognition as a master of prose that his *Idilli* and *Canti* have brought him as a poet; whilst his *Epistolario* in particular is one of the most pathetically beautiful works ever penned. As a masterly genius of literary expression he stands in the front rank of It. poets. It. eds. of his works are by Ranieri (6 vols.), 1845, and De Robertis, 1937-8. The chief Eng. trans. are: (prose dialogues) C. Edwardes, 1882, P. Maxwell, 1905, and J. Thomson, 1905; and (poems) Sir T. Martin, 1904, and J. Heath-Stubbs, 1946. See studies by F. De Sanctis, 1885, 1920; P. Hazard, 1913; G. A. Levi, 1934; A. Tilgher, 1940; A. Zottoli, 1947.

**Leopard's Bane, see DORONICUM.**

**Leopold I (1840-1905).** Holy Rom. Emperor, son of Ferdinand III, became King of Hungary (1865), King of Bohemia (1868), and formally emperor (1868). During his long reign he was engaged in many wars—with Sweden (1860); with the Turks, who, being defeated by Montecuccoli at St Gothard (1864), agreed to the treaty of Vasvár (1864), and who were subsequently defeated outside Vienna itself by John Sobieski of Poland (1863);

with the Protestants of Hungary, whom he suppressed with extreme cruelty with the Sobieski, and defeated at Mohacz (1867) and Zenta (1897). He was engaged in 3 wars with Louis XIV of France, and towards the close of his reign, L., on the death of Charles II (1700), claimed the Sp. throne for his second son, the Archduke Charles, thus beginning the War of the Sp. Succession. Though a conscientious and capable ruler, L.'s narrow bigotry seriously prejudiced his gov.

**Leopold II (1747-92).** Holy Rom. Emperor, son of Francis I and Maria Theresa, b. Vienna, became Grand-Duke of Tuscany in 1765. He was chosen emperor in 1790, on succeeding to the Austrian hereditary dominions on the death of his brother, Joseph II. He managed to re-establish order in Belgium and Hungary and to make an alliance with England, but was chiefly preoccupied with affairs in France, where the life of his sister, Marie Antoinette, was in danger. In 1792 he concluded the treaty of Pilnitz with Prussia for the restoration of Louis XVI of France.

**Leopold I, George Christian Frederick (1790-1865).** King of the Belgians, was the younger son of Francis, Duke of Saxe-Coburg-Gotha, and uncle to Queen Victoria. In 1813 he became cavalry general under the Russian emperor, Alexander I, and fought in the battles of Leipzig and Lützen (1813-14). The death of his first wife, Princess Charlotte (daughter of George IV and heir-presumptive to the Eng. crown), after one year of married life (1817), was a great blow to him. He remained in England for sev. years, and in 1831 accepted an invitation to become the first king of the newly independent Belgium. He proved a wise and capable ruler. Queen Victoria received much advice from him, and his political experience gave him considerable influence in Europe on affairs. His second wife was a daughter of Louis Philippe of France. See T. Juste, *Leopold 1<sup>er</sup>*, 1868, and L. de Lichtervelde, *Leopold 1<sup>er</sup> et la formation de la Belgique contemporaine*, 1929.

**Leopold II, Louis Philippe Marie Victor (1835-1909).** King of the Belgians, son of Leopold I. From 1846 to 1865, the year of his accession, he served in the army. In 1853 he married Marie Henriette (d. 1902), daughter of the Archduke Joseph of Austria. Before his father's death he travelled a great deal in the E. and in N. Africa. As a king he will be remembered for the major part he played in the events which led finally to the foundation of the Congo Free State in 1908. He had formed the Association Internationale Africaine (1876), and proceeded to exploit as his private property the almost unexplored regions of the Congo. In view of the serious strictures passed in various quarters, L. himself in 1904 appointed a commission of inquiry into the administration of the area. The pub. of the commission's report (1905), which revealed serious maladministration and abuses,

aroused deep and painful interest, and in 1908 L. handed the tor. over to the state. His rule at home was generally unexceptional, though his family life was notorious for its scandals. His only son predeceased him and he was succeeded by his nephew, Albert.

**Leopold III** (1901- ), ex-King of the Belgians, son of Albert I, whom he succeeded in Feb. 1934. L. was educ. at Eton and Ghent Univ., and served in the Belgian Army. In 1926 he married Princess Astrid of Sweden, who was killed in 1935 when a car which L. was driving crashed in Switzerland. By this marriage L. had 3 children: Baudouin (q.v.) (b. 1930), Albert (b. 1934), and Josephine Charlotte (b. 1927). In Sept. 1941 L. married Mlle Marie Lillian Baels, daughter of an ex-minister. L. stated that his second wife would be known as Princess de Réthy. The children of this marriage have no claim to the throne.

On 10 May 1940 the Germans launched an attack on Belgian airfields and communications. L. took command of the Belgian Army, appealing to the Allies for military assistance. But on 28 May the Belgian Army capitulated on L.'s orders. Piorlot, the Belgian Prime Minister, declared in a broadcast from Paris that L.'s capitulation had no legal validity, that his decision had been taken against the wishes of the Cabinet, that Belgium would continue to resist, and Belgian ministers were henceforth absolved from their allegiance to L.

L. was confined at Laeken, near Brussels, by the Germans, being moved to Germany when the Allies invaded Europe in 1944. He was liberated by the Americans in May 1945. His conduct in 1940 had aroused much hostile comment in Britain, and his actions, coupled with his second marriage, were also condemned by many Belgians. When L. announced his intention of returning to Belgium there was a public outcry. The Prime Minister resigned, and L. withdrew to Switzerland, declaring that he had never collaborated with the Germans and that he had no intention of abdicating. In July 1945 a bill was passed prolonging the regency (Charles, L.'s brother, had been appointed regent in Sept. 1944 when L. was still in Germany) until parl. authority declared it ended. In 1946 L. appointed a commission to investigate his conduct and policy during the war, and its report, issued in 1947, was a justification of L.'s actions. The question of the return of the king continued to dominate Belgian politics. In 1950 a referendum was held: nearly 58 per cent voted in favour of L.'s return, slightly over 42 per cent were against. As a result the regency was terminated and L. and his sons returned to Belgium (July 1950). Rioting and strikes resulted, and civil war seemed imminent. In Aug. 1950 L. agreed to delegate his powers to his son Baudouin. He abdicated in favour of Baudouin in July 1951.

**Leopold, Carl Gustaf af** (1756-1829) Swedish poet, b. Stockholm. In 1786

he was made literary adviser to Gustavus III and member of the Swedish Academy. His classical tragedies, among which may be mentioned *Oedon*, 1790, and *Virginia*, 1802, were valued highly by his contemporaries, and his poems are still admired. His collected works were pub. in 6 vols. (1814-33). See O. Holmberg, *Den unge Leopold*, 1953, and *Leopold och Gustaf III*, 1954.

**Leopoldina Railway**, one of the former Brit.-owned railway systems in Brazil, and now owned by the Brazilian Gov. The L. R. system serves a large area to the N. and NE. of Rio de Janeiro, with its main terminal at Rio itself, the total length being 1902 m. It was constructed and developed by Brit. capital and management at a net cost of over £15,000,000, and by 1958 had been in operation for nearly 90 years. It is one of Brazil's 3 main companies.

**Leopoldville** (also known as **Stanley-pool**), since 1926 the cap. of Belgian Congo, central Africa. It stands on the l. b. of the Congo, opposite Brazzaville, and is the cap. of L. prov. and Stanley-pool dist. L. is connected by rail with Matadi, a port on the Congo 230 m. away and 93 m. from the sea. It is likewise connected with Point-Noire (380 m.). There is a regular air service between L. and Brussels. Pop. 16,500 (whites).

**Leosthenes**, Athenian general, was commander of the Greeks in the Lamian war, 323 and 322 bc. He was killed in a siege before Lamia, after having defeated Antipater.

**Leotychides** (491-469 bc), King of Sparta. In 479 bc he was commander of the Gk fleet and distinguished himself as victor at the battle of Mycale.

**Leovigild**, or **Löwenheid** (d. 586), king of the Visigoths in Spain. He was successful in defeating the Byzantines in Andalusia, and by 585 had united all Spain except the S. imperial dists. He was a staunch supporter of Arianism, and was ardent in his persecution of the Catholics.

**Lepage, Jules**, see BASTIEN-LEPAGE.

**Lepanto**, see CORINTH, GULF OF.

**Lepanto**, naval battle fought 7 Oct. 1571, off the tn of L. (Naupaktos) in the Gulf of Corinth, between a Turkish fleet of about 273 galleys under Ali Pasha, with the bey of Alexandria and the dey of Algiers, and an allied fleet of some 200 galleys, and some heavy galleasses. The allies were commanded by Don John of Austria, representing Spain, but the prin. force was contributed by Venice under Barbarigo, Genoa under Andrea Doria, and the papal contingent under Marc Antonio Colonna; Sicily and Naples also sent a force commanded by the Spaniard, Santa Cruz. Pius V had instigated the league in fear of the growing and aggressive power of Turkey in the Mediterranean. The result was a crushing and final blow to Muslim sea power; the Turkish centre was routed, their right wing annihilated, and only part of the left escaped; the Turks are said to have lost 20,000 men, including their prin. leaders. The allies

lost 8000, with Barbarigo. Cervantes lost an arm in this battle.

**Lepchas**, original inhab. of Sikkim. Their number now is uncertain and may well be less than 20,000. Their language is Rong. There is little of tribal organisation, the only grouping being into clans which are in effect family groupings. Nowadays the sole function of these clans is to regulate marriage, since a man must not marry a girl of his own clan. L. believe in a spirit world, but the ordinary man must deal with the spirits by the mediation of a lama. The pop. is practically self-supporting, though some commodities, such as salt, cotton, and oil, are obtained via a Tibetan trade route.

**L'Epée, Charles Michel, Abbé de** (1712-89), Fr. Jansenist, b. Versailles. One of the founders of the system for instructing deaf-mutes largely by means of the manual alphabet and signs. He founded a school for the purpose (1755). He wrote *Institution des sourds et muets, par la voie des signes méthodiques*, 1776. His *Dictionnaire général des signes* was completed by Abbé Sicard. See lives by Valette, 1857; Morel, 1833; Berthier, 1852; also P. Schumann, *Geschichte des Taubstummenwesens*, 1940, and A. Hartmann, *Deafmutism*, 1881.

**Lepers**, see DAMIEN, FATHER, and LEPROSY.

**Lepidolite**, mica of a lilac colour, sometimes violet, found in masses made up of scales containing lithia.

**Lepidoptera**, scale-winged order of insects, comprising butterflies and moths. It is the scales which give the usually gay colours to the 4 wings of the perfect insect. L. have a well-marked metamorphosis through the egg, larval, and chrysalis stages. Most are easily distinguished from other insects, though the clear-wing moths and some of the wingless females may be confused. The perfect insect has usually a long spiral proboscis or tongue by which nectar may be extracted from flowers. The larva or caterpillar has biting jaws which the perfect insect lacks, and usually casts its skin sev. times before pupation. The chrysalis stage is almost or quite inert, and in many cases is passed in a cocoon. See also articles under individual species. See F. W. Frohawk, *Complete Book of British Butterflies*, 1934, E. B. Ford, *Butterflies*, 1945, and vols. on butterflies, moths, and caterpillars in the Wayside and Woodland Series (Warne).

**Lepidosiren**, genus of dipnoid or 'lung' fishes. It is confined to certain rivs. in S. America. See DIPNOI.

**Lepidum Regium**, see REGGIO NELL'EMILIA.

**Lepidus**, name of the famous Rom. patrician clan of the Aemilii.

**Marcus Aemilius Lepidus**, sent as ambas. to Ptolemy, King of Egypt, in 201 BC. Consul in 187 BC, he was pontifex maximus and 6 times princeps senatus.

**Marcus Aemilius Lepidus**, consul in 137 BC, was praised by Cicero for his oratory. His conduct of the Numantine war in Spain was a fiasco.

**Marcus Aemilius Lepidus**, father of the triumvir, proved a grasping praetor of Sicily in 81 BC. At first he sided with Sulla, but, having veered over to the popular party, tried to rescind the Sullan constitution during his consulate in 78 BC. He opposed the burial of Sulla in the Campus Martius, and the bitter quarrel with Catulus, his colleague, to which his opposition gave rise, eventually led to civil war. In 77 BC suffered defeat in the Campus Martius at the hands of Pompey and Catulus, the senatorial leaders.

**Marcus Aemilius Lepidus**, the 'slight, unmeritable man' of Shakespeare's *Julius Caesar*. It was he who proposed Caesar's dictatorship, and in 46 BC was rewarded for his services by being made the dictator's colleague in the consulship. In the civil war which followed Caesar's murder (44 BC), he joined forces with Antony, and was allowed to join him and Octavian in the triumvirate (43 BC). But whilst the other triumvirs fought their enemies abroad, L. was left idle in Rome, and after Philippi was stripped of his provinces, Gallia Narbonensis and Spain. Octavian finally reduced him to impotence after his attempt to seize Sicily for himself (36 BC). Here his undignified public life ends, but he lived on under strict surveillance at Circii till 13 BC.

**Lepine, Louis** (1846-1933), Fr. police officer, b. Lyons and educ. at Heidelberg and Berlin Univs. In the Franco-Ger. war of 1871 he was a sergeant-major in Rochereau's Scouts. In 1877 he entered the civil service, and in 1892 became prefect of police for the first time and then for some years governor of Algeria. In 1899 he was again prefect of police and, during the next 2 decades, reorganised the service. He formed the *brigades criminelles*, founded a research dept., and estab. a body of riv. police. His fearlessness during riots was proverbial, and he narrowly escaped death on sev. occasions.

**Le Play, Pierre Guillaume Frédéric** (1806-82), Fr. engineer and economist, was a native of La Rivière St. Sauveur (Calvados). After other appointments he became prof. to the School of Mines in Paris, and received a commission from Napoleon III to organise the exhibition of 1855; he afterwards organised the one of 1867.

He pub. *La Réforme sociale en France*, 1864, *L'Organisation du travail*, 1870, *La Constitution essentielle de l'humanité*, 1884, and *Les Ouvriers européens* (6 vols.), 1885. In 1856 he founded the Société internationale des études pratiques d'économie sociale, stressing the value of private property, religion, and family organisation. See F. Auburtin, *Frédéric Le Play d'après lui-même. Vie-méthode-doctrine*, 1906.

**Lepontine Alps**, part of the Alps between the Simplon and Splügen passes. They include also the Adula group close to the sources of the Upper Rhine.

**Leporidae**, hare family, belong to the

order Lagomorpha, distinguished by the presence of 2 pairs of incisors in the upper jaw, whereas all rodents have 1 pair only. The family contains the hares and rabbits (q.v.).

**Leprechaun**, in Irish-Celtic folklore a dwarf or gnome in the form of an old man with wrinkled face, generally a rich curmudgeon who can only be induced by threats of violence to disclose the place where his treasure lies; when caught by human beings he purchases his liberty by revealing the location of a 'crock of gold' which disappears when its hiding-place is found. The L., though peculiar to Ireland, seems indebted to England, at least for his name. In Irish he is called 'Lobaircin,' akin to Eng. 'Lubberkin,' and L. is no doubt a corruption of that word.

**Leprosy**, an endemic, chronic, and mildly contagious disease caused by the *Mycobacterium leprae*, which was first identified as its cause by Dr Hansen of Norway in 1874. L. has, however, been known from time immemorial. In biblical times it was regarded as a visitation from God for certain heinous sins. In this wider sense it was common in Great Britain and Europe throughout the Middle Ages, and many hostels for the shelter of sufferers were estab. in this country, being usually known as leper houses from St Lazarus, the patron saint of the disease. Rigid segregation, mainly under the influence of the Church, effected the disappearance from this country—as endemic—of the disease by the beginning of the 16th cent.; the number of cases now in Great Britain is estimated at between 200 and 300, compared with estimated figures for the world of up to 10 or 12 million and for the Commonwealth 3,000,000.

Prior to the First World War leprosy was mildly endemic in most S. European countries, and the movements caused by war may have increased the incidence. In N. Europe it is not endemic. The central African belt is probably the most highly infected part of the world per head of the pop., though India, China, Japan, and S. America, for which accurate figures are lacking, are heavily infected. Africa, it is estimated, has 1,000,000 to 1,250,000 cases.

The disease is not hereditary, nor a dirt or sex disease. The method of transmission is by continuous close association. Although, like every other disease, it is encouraged by bad health conditions, and is most prevalent where crowded housing makes close contact inevitable, L. is no respecter of class, race, or colour. Liability to infection, however, seems to be confined to young and adolescent children and to a small proportion of adults who are particularly susceptible to it. The incubation period is long and an infection contracted in childhood develops in later life. No specific cure or protection from the disease has been found comparable with penicillin or quinine, but the time-honoured treatment by injections with chaulmoogra oil and its derivatives is

usually beneficial in early cases. During the last 15 years good results have been obtained from the sulphone family of drugs, particularly in severe cases, and research with them and other synthetic drugs is active. The disease is found in 2 main types with intermediate variations. The anaesthetic form is not contagious and can well be treated in out-patient clinics; it is, however, liable, unless treated, to turn into the other type and, since it affects the nervous system, frequently results in disfigurement and maiming through atrophy of the nerves and body extremities. The nodular form affects the skin and mucous membranes and constitutes perhaps one-quarter of all cases. This type is probably the source of infection and spread of the disease by contact, but although it produces nodules and superficial disfigurement, does not normally render the sufferer unfit for work. Such cases should be segregated, or at least isolated from the chance of contact with children. In fact, the protection of children is the most important side of L. control work. The U.N. Children's Fund has been active ... supplying money for drugs as well as facilities for early diagnosis.

The difficulties in control of the disease arise from the tradition-mindedness of most of the peoples afflicted with the disease, their lack of health education, and the financial stringency of most of the colonies affected. Although most of the colonies have, under the Colonial Development and Welfare Acts of 1940 and 1945, formed their plans, these have been slow to develop, though Brit. Guiana, Fiji, Nigeria, and others have been active for some time. In 1955 the executive board of the World Health Organisation decided to instigate large-scale campaigns in every country affected by the disease.

Finally the psychological side must be stressed. A leper is everywhere taboo because he has the disease. It is not his fault, and he may well be uninfected. But the taboo reacts on his chances of recovery, and a more humane view of the disease would give him much better hopes, not only of being cured, but of complete rehabilitation. Much more research is necessary, but there is some evidence that B.C.G. vaccine used in the prevention of tuberculosis (q.v.) may be of prophylactic value in L. See A. Weymouth, *Through the Leper Squint*, 1938; P. Burgess, *Who Walk Alone*, 1941; L. Rogers and E. Muir, *Leprosy* (3rd ed.), 1946; R. G. Cochrane, *Practical Textbook of Leprosy*, 1947; E. Muir, *Manual of Leprosy*, 1948.

**Lepsius, Karl Richard** (1810–84), Ger. Egyptologist, b. Naumburg an der Saale. In 1834 he wrote his first book, *Die Paläographie als Mittel der Sprachforschung*. Between 1834 and 1842 he travelled in England, Italy, Holland, and Germany, collecting materials for his dissertations on Egyptian art, and studying the anc. Etruscan and Oscean languages. During these years he wrote *Lettre à M. Rosellini sur l'alphabet hiéroglyphique and Inscriptions Umbricæ et Oscae*. He led the

Prussian expedition (1842-5) to Egypt, and pub. the results of his researches in *Denkmäler aus Aegypten und Aethiopien* (12 vols.), 1849-59. His other works include *Chronologie der Aegypter*, 1849, *Über den ersten Aegyptischen Götterkreis*, 1851, *Königsbuch der Aegypter*, 1858, and *Standard Alphabet* (2nd Eng. ed.), 1863. See life by G. Ebers, 1887.

**Leptis Magna**, see HOMI, 2.

**Lepus** (the Hare), anct constellation supposed to represent a hare in the act of running from Orion's dog. It is situated directly S. of Orion.

**Le Puy**, or **Le Puy en Velay**, see PUY, LE.

**Le Queux**, William Tufnell (1864-1927), novelist, b. London. He travelled much and made a fine collection of medieval MSS. He wrote over 130 sensational stories, his most famous being *The Invasion of 1910*, 1906, which foreshadowed the First World War. Others are *Guilty Bonds*, 1891, *The Eye of Ishtar*, 1897, and *Fatal Fingers*, 1912. See N. S. Sladen, *The Real Le Queux*, 1938.

**Lerberghe**, Charles van, see VAN LERBERGHE.

**Lercara Friddi**, tn in Sicily (q.v.), 28 m. SSE. of Palermo (q.v.). It has important sulphur deposits. Pop. (com.) 14,000.

**Lerichie**, René (1879-1955), Fr surgeon, b. Roanne, Loire. He graduated in medicine at Lyons, 1906. In 1920 he was appointed prof. of experimental surgery at Lyons, in 1924 prof. of clinical surgery at Strasburg, and in 1928 prof. of medicine at the Collège de France, Paris. His important contributions include work on the physiology and surgery of the blood vessels, and on the relief of pain, particularly by removal of sympathetic nerves.

**Lerici**, It. tn in Liguria (q.v.). It is on the Riviera (q.v.), on the E. shore of the Gulf of Spezia. It has a 12th-cent. castle (now used as a youth hostel) in which is a notable Gothic chapel. L. has a small port and is a popular holiday resort. Pop. 10,000.

**Lerida**: 1. Sp. prov., in Catalonia (q.v.), stretching from the Pyrenees to the Ebro (q.v.). The lowlands have been irrigated by means of canals, but agriculture is still unprofitable. Wine, wool, and cattle are exported, and there are textile manufs. Area 4692 sq. m.; pop. 331,100.

2. (Rom. *Ilerda*; Catalan *Lleyda*) Sp. tn, cap of the prov. of L., on the Segre. It has Rom. remains, and an immense Moorish castle, within the grounds of which is a ruinous 13th-cent. cathedral. There is also a 17th-18th-cent. cathedral. Glass and silk are manuf., and there is a large trade in agric. produce. Near this tn, in 48 BC. Julius Caesar, employing tactics of unsurpassed brilliance, inflicted a crushing defeat on the Pompeian forces under Afranius and Petreius. Pop. 56,150.

**Lerina**, see LÉRINS, ÎLES DE.

**Lérins**, Îles de, group of Fr. is., 2½ m. S. of Cannes, in the Mediterranean. They are in the dept of Alpes-Maritimes. On Ste-Marguerite (anct Lero) the Man in the Iron Mask (q.v.) and Bazaine (q.v.) were

confined. St-Honorat (anct Lerina) has a famous 5th-cent. monastery.

**Léris**, **Claire Joseph**, see CLAIRON.

**Lerma**, riv. of S. Mexico, rising 18 m. W. of Mexico city and flowing 350 m. into W. Lake Chapala, emerging as the Rio Grande de Santiago and flowing into the Pacific. It is valuable as a source of power for electricity and for irrigation, but is not navigable.

**Lermoliev**, Ivan, see MORELLI, GIOVANNI.

**Lermontov**, Mikhail Yur'yevich (1814-1841). Russian poet and novelist of Scottish ancestry, b. Moscow, became an officer in the Guards. Twice transferred to active service in the Caucasus as punishment for his poem on the death of Pushkin (1837)—an attack on court society—and for participating in a duel. He was killed in the Caucasus in another duel. His novel, *A Hero of Our Time*, 1840, continued the 'superfluous man' theme originated by Pushkin in *Eugene Onegin*. His character and poems were alike Byronic. More truly a romantic than any other Russian poet, his imagination created a glowing supernatural picture in his poem of demoniac love, *Demon*, pub. 1856. See A. Heifetz, *Lermontov in English*, 1942 (a bibliography).

**Lero**, see LÉRINS, ÎLES DE.

**Lerol**, Julian David (1724-1803), Fr. writer on architecture, b. Paris. He went to Rome to study the antiquities. In 1754 he visited Greece for a similar purpose, and on his return pub. his *Ruines des plus beaux monuments de la Grèce* (2nd ed.), 1770, which was the earliest systematic account of the archaeological remains of that country.

**Leros**, one of the Dodecanese near Calymnos in the Aegean, forming part of Greece. Area 21 sq. m. Under It. rule L. became a strong naval base. Vines and olives are grown. In 1948 the Gk Gov. instituted at L. a scheme for reclaiming and re-educating boy bandits who had become victims of rebellion and general unrest in the civil war (see GREECE, *History*). Pop. 7050.

**Leroy**, Edouard (1870- ), Fr. philosopher, member of the Academy of Moral Political Science since 1919, deputised for Bergson at the Collège de France, 1914, and was titular prof. there from 1921. He is a chevalier of the Legion of Honour. His chief works are *Les Origines humaines et l'évolution de l'intelligence*, 1928, and *Le Problème de Dieu*, 1929. Other works: *Dogme et critique*, 1907; *Une Philosophie nouvelle*: Henri Bergson, 1912; *L'Existence idéaliste et le fait de l'évolution*, 1927; *Introduction à l'étude du problème religieux*, 1944.

**Leroy-Beaulieu**, Henri Jean Baptiste Anatole (1842-1912), Fr. writer and historian, b. Lisieux. From 1881 he was prof. of modern history at the École Libre des Sciences Politiques in Paris. He wrote a series of articles for the *Revue des deux mondes*, 1882-9. In book form these articles became subsequently known as *L'empire des tsars et les Russes*. In

another of his Russian studies, *Un Homme d'état russe*, he told the story of the emancipation of the serfs under Alexander II. He also wrote sev. books in Judaism and the Jews, and on Rom. Catholicism and the papacy.

**Leroy-Beaulieu, Pierre Paul** (1843-1916), Fr. economist, brother of the preceding, became prof. of political economy at the Collège de France. In his popular *Le Collectivisme*, 1883, he purported to expose the errors of collectivist doctrines. Other of his works are *La Colonisation chez les peuples modernes*, 1874, and a *Traité de la science des finances*, 1877.

**Lerroux, Alejandro** (1864-1949). Sp. statesman, b. La Rambla, Cordova. He took a prominent part in the formation of the Sp. Rep. in 1931, being the first foreign minister in the provisional gov. of Radical Socialist, Socialist, and Republican Alliance parties, and was Prime Minister sev. times between 1931 and 1936. He took no active part in politics after the outbreak of the civil war.

**Lerwick**, seaport and cap. of the Shetland Is. (q.v.), Scotland, and the most northerly tn of size in the U.K. L. is on a natural harbour on the E. coast of the mainland, sheltered by the is. of Bressay, and lies 115 m. to the N.E. of Kirkwall in Orkney. L. is an important fishing station, and also a centre for the Royal Naval Reserve, who use the old Cromwellian fort as their depot. The New Year is celebrated in L. during the first week of Jan. with the festival called *U'p-Helly-Aa* which includes the burning of a replica of a Viking galley. Pop. 5500.

**Lesage, Alain René** (1668-1747), Fr. novelist and dramatist, b. Sarzeau, Morbihan. An assiduous writer, he pub. over a hundred dramas, the best of which are *Crispin rival de son maître*, 1707, an extravagant farce of a knavish valet, and *Turcaret*, 1709, a brilliant and essentially Molièresque comedy and satire on the contemporary dealers in finance. But his fame now rests on his romances, *Le Diable boiteux*, 1707, and *Gil Blas de Santillane*, completed in 1735. Though the scene of the latter, his masterpiece, is laid in Spain, it is the life of Paris which is painted. The characters of Gil Blas and the preposterous quack, Dr Sangrado, as also of the sprightly demon Asinodens in *Le Diable boiteux*, are drawn with the detachment of a great artist, whilst as a stylist L. ranks with the best authors of his day. See study by E. Lintilhac, 1893, and G. Lanson, 'Études sur Gil Blas' in *Hommes et livres*, 1895.

**Les Andelys**, see ANDELYS.

**Lesbonax**, Gk rhetorician, who lived in the days of Augustus. According to Suidas he wrote at least 16 political orations, but 2 only have survived. See F. Kichr (ed.), *Lesbonactis quae supersunt*, 1907.

**Lesbos**, see MYTILINI.

**Les Cayes**, see CAYES, LES.

**Lescot, Pierre** (d. 1568), Fr. architect, b. Paris. He began as a painter, but turned to architecture before he was 21. The

original design of the Hôtel Carnavalet, Paris, c. 1544, is attributed to him, working in conjunction with Jean Goujon the sculptor. They jointly won the competition held in 1543 for rebuilding the Louvre in Paris; and the Fontaine des Innocents, Paris, 1547-9, is also their joint work.

**Lése-majesté**, see LEZE-MAJESTY.

**Lesina**, see HVAR.

**Leskov, Nikolay Seménovich** (1831-95), Russian writer, one of the best masters of the Russian language. His novels (*Cathedral Folk*, 1872) and stories (*The Enchanted Wanderer*, 1873; *The Scaled Angel*, 1873, and many others) deal mainly with the life of the church and clergy, the beliefs and superstitions of the people—all this in a language whose richness and colourfulness are unsurpassed in Russian literature. Strongly anti-Radical in his political views (*No Way Out*, 1864), L. was regarded with suspicion by the Conservatives because of his sharp exposure of eccles. bureaucracy; he was attacked from both sides or ignored; full appreciation came only after his death.

**Leskovac**, tn in Serbia, Yugoslavia, on the Voternica. It is the centre of the Yugoslav textile industry, and is a mkt tn for the produce of the fertile surrounding dist. Furniture and soap are also manuf. Pop. 24,650.

**Leslie, Lesly**, or **Lesley**, Scottish family, descended from Malcolm, son of Bartholf, who lived during the latter part of the 12th cent. In Lesslyn or Leslie, in Aberdeenshire. In 1457 the family received a title by the conferment of the earldom of Rothes on George L., a native of Rothes. The 7th earl was created Duke of Rothes, Marquess of Ballinbreich, but d. without issue, the title continuing through the family of his eldest daughter. Connected with the Earls of Rothes are the Earls of Leven, descended from Alexander L. (q.v.); the Lords Lindores, whose title was created in 1600 and became extinct in 1775; and the Lords Newark, the first of whom was David L. (q.v.).

**Leslie, Alexander, Lord Balgonie**, 1st Earl of Leven (c. 1580-1661), general, a native of Aberdeenshire. He enlisted as a common soldier in the army of Gustavus Adolphus, King of Sweden, but by 1636 he had been promoted to the rank of field marshal of Sweden, and his gallantry was rewarded by a knighthood. He fought with great distinction in the Thirty Years War, holding the chief command under Gustavus. In 1620 he successfully defended Stralsund against the insurgent imperialists, led by Wallenstein. Nine years later he was recalled to Scotland to resist the eccles. policy of King Charles I and set himself to organise the Covenanting army. With his army he marched S. to Duns Law in 1639, and in 1640 reached Newcastle, which he held till the treaty of Ripon in 1641. In Aug. of that year he was received by the king and created Earl of Leven and Lord Balgonie. He fought in Ireland in 1642, and later commanded the Scots Covenanters against the Royalists in the

Civil war. Charles surrendered to him at Newark in 1647. After the execution of the king he worked for the restoration of Charles II, and fought against Cromwell at Dunbar in 1650. In 1651 he was imprisoned in the Tower, and on his release retired to Scotland. See C. S. Terry, *The Life and Campaigns of Alexander Leslie, First Earl of Leven*, 1899.

**Leslie, Charles Robert** (1794-1859), painter and writer, b. London of Amer. parents. His first successful picture was 'Anne Page and Slender' (1817), which was followed by 'Sir Roger de Coverley going to Church' (1819). He chose his subjects chiefly from the works of Shakespeare, Addison, Fielding, and Cervantes. In 1824 he was elected an R.A. after the exhibition of his 'Sancho Panza and the Duchess' (1826). He was appointed prof. of drawing at the Military Academy at West Point (1833-4) and prof. of painting at the Royal Academy (1848-51). He also gained some popularity as a writer, his chief books being *Handbook for Young Painters*, 1845, a life of Constable, 1845, and of Sir Joshua Reynolds, which was completed by Tom Taylor, 1865, who also ed. his *Autobiographical Recollections*, 1860.

**Leslie, David, Lord Newark** (1601-82), general, fifth son of the 1st Lord Lindores. He took part in the Thirty Years War, serving under Gustavus Adolphus, but returned to Scotland about 1640 at the time of the rise of the Covenanters against King Charles I. Joining the troops under his kinsman, Alexander L., Earl of Leven, as lieutenant-general, he was present at the battle of Marston Moor (1644), routed Montrose at Philiphaugh (1645), and fought in the siege of Newark, when Charles took refuge in the Scottish camp. With the Earl of Leven and the rest of the Covenanters he went over to the Royalist side, and after some strategic success was taken prisoner by Cromwell at Worcester in 1651 and was confined in the Tower till the Restoration. In 1661 he was created Lord Newark.

**Leslie, or Lesley, John** (1527-96), bishop and historian, b. Kingussie, Inverness-shire, where his father, Gavin L., was rector. He studied at Aberdeen, Poitiers, and Paris, and became a priest in 1558. In 1561 he went to France to bring home the young Queen Mary, whose friend and spiritual adviser he continued to be to the end of his life. His promotion was rapid. He was appointed prof. of canon law, Aberdeen (1562), privy councillor (1565), and Bishop of Ross (1566). On the imprisonment of Mary in England, he appeared as her ambas. before Elizabeth, plotted for her escape, and made plans for her marriage to the Duke of Norfolk. He was imprisoned in the Tower (1571-1573) and was afterwards banished from England. While on the Continent pleading Mary's cause he pub. *De Origine, Moribus, et Rebus Gestis Scotorum*, Rome, 1578. In 1578 he was made suffragan and vicar-general of the diocese of Rouen. He was appointed Bishop of Coutances in Normandy (1593); d. in an Augustinian

monastery near Brussels. His writings include *A Treatise concerning the Defence of the Honour of Marie, Queene of Scotland*, 1569. See E. G. Cody's ed. of his Scottish hist., 1888-95.

**Leslie, Sir John Randolph Shane**, (1885- ), novelist and biographer, b. London, son of an Irish baronet. Educ. at Eton, Paris, and Cambridge, he visited Russia in 1907 and became a friend of Tolstoy. In the following year he was converted to Rom. Catholicism. From 1916 to 1925 he was editor of the *Dublin Review*, and in 1921 he was appointed Privy Chamberlain of Sword and Cape to the Pope. His novels include *The Oppidan*, 1922, *Doomsland*, 1923, *Musquerades*, 1924, and *The Cantab*, 1926, with its sequel, *The Anglo-Catholic*, 1929. Among his biographies are *Manning, his Life and Labours*, 1921, *George the Fourth*, 1926, *The Skull of Swift*, an *Extempore Eulogium*, 1928, and *Cardinal Gasquet, a Memoir*, 1953. He also pub. sev. books of verse and an autobiographical work, *The Film of Memory*, 1938.

**Leslie, Thomas Edward Cliffe** (1827-82), political economist, b. in co. Wexford, Ireland. In 1853 he was appointed to the chair of jurisprudence and political economy at Queen's College, Belfast. His papers on industrial economy were collected in *The Land Systems*, 1870, *Essays on Political and Moral Philosophy*, 1879, and *Essays in Political Philosophy*, 1888.

**Leslie**, burgh and mkt tn of W. Fifeshire, Scotland, on the Leven, 3 1/2 m. S. of Falkland, with bleach works, and flax-spinning and paper-mills. Pop. about 3000.

**Lesmahagow**, tn and par. of Lanarkshire, Scotland, 12 in. S. of Hamilton, with fruit-growing and nylon manufs. Pop. 11,552.

**Lesparre-Médoc**, Fr. tn. cap. of an arron., in the dept of Gironde. It has a trade in wines. Pop. 3100.

**Lespinasse, Jeanne Julie Eléonore de** (1732-76). b. Lyons, the illegitimate daughter of the Comtesse d'Albon. For 10 years (1754-64) she acted as companion to Mme du Deffand, and in her *salon* made the acquaintance of d'Alembert and other members of her brilliant coterie. But the attractions of her companion roused the jealousy of Mme du Deffand, and a violent quarrel ensued, the result of which was that Mme de L. set up a rival *salon*, and d'Alembert shared her roof. She did not, however, accept him as her lover, but, as her *Lettres* (pub. in 1809) reveal, was the victim of a devouring passion for the Comte de Guibert, and in a lesser degree for the Sp. Marquis de Mora. See A. Beaumier, *La Vie amoureuse de Jeanne de Lespinasse*, 1928, and G. Truc, *J. de Lespinasse*, 1942.

**Lesse**, riv. of Belgium and one of the main tribs. of the Meuse, rising in the prov. of Luxembourg, Ardennes, and flowing NW. through the prov. of Namur. It joins the Meuse at Anseremme, 2 m. S. of Dinant. At Belvaux the waters of the L. disappear to continue for 24 hrs their mysterious underground course,

which has formed the famous caves of Han.

**Lessen**, see LESSINES.

**Lesseps**, Ferdinand, Vicomte de (1805-1894), Fr. diplomatist and engineer, b. Versailles. In 1828 he was sent as assistant vice-consul to Tunis, and in 1832 he was appointed vice-consul at Alexandria. He received the Cross of the Legion of Honour for his heroic conduct during an epidemic of the plague (1834). He became consul at Cairo, and while there began his plans for the construction of the Suez Canal. In 1837 he married Mlle Agathe Delamalle. His second wife was Mlle Antard de Bragard. By his first marriage he had 5 sons, by the second 12 children. He served as consul at Rotterdam, Malaga, Barcelona, and Madrid. In 1854 he received the concession authorising him to pierce the isthmus of Suez. He obtained, by subscription, more than half the capital he needed, and the canal was finished in 1869 (see SUEZ CANAL); for this he received the Grand Cross of the Legion of Honour and an Eng. knighthood. In 1881 he commenced the Panama Canal. The funds were insufficient and political trouble followed; the company was wound up in 1888, and the directors were charged with fraud (see PANAMA CANAL). De L. came to England enfeebled in health and broken with trouble. He was later exonerated of complicity in the fraud and returned to France, where he d. at La Chénale in Berry. He was a man of great courage, with a reverence for duty and honour, possessing simple tastes and an affectionate nature. He was a member of the Fr. Academy and of the Academy of Sciences. See G. Smith, *The Life and Enterprises of Ferdinand de Lesseps*, 1893, and J. d'Elbée, *Un Conquistador de génie*, 1938; also life by H. J. Schonfeld, 1937.

**Lesser Antilles**, see BARBADOS; LEEWARD ISLANDS; TOBAGO; TRINIDAD; VIRGIN ISLANDS; WINDWARD ISLANDS; see also ANTILLES and WEST INDIES.

**Lesser Brethren**, see FRANCISCANS.

**Lesser Celandine**, see RANUNCULUS.

**Lesser Pettychaps**, see CHIFFCHAFF.

**Lessines** (Flem. *Lessen*), in the prov. of Hainaut, Belgium, situated on the R. Dender, 19 m. NNW. of Mons. It has important porphyry quarries and manufs. of safety matches and electric lamp bulbs. Tobacco and medicinal plants are largely cultivated in the surrounding dist. Pop. 9600.

**Lessing**, Gotthold Ephraim (1729-81), Ger. essayist, critic, and dramatist, b. in Kamenz in Upper Lusatia (Saxony). After 5 years at Meissen he passed in 1746 to Leipzig Univ. to study theology, but found more attraction in philosophy and literature. After a few years' literary hackwork in Berlin he went to Wittenberg (1751-2) where, in the course of extensive reading, he took his M.A. The next 2 years were spent in Britain studying Lat. and Eng. literature; in 1754 appeared his first work of importance, *Vademecum für den Herrn G. S. Lange*. About this time he became intimate with Nicolai,

and collaborated with Moses Mendelssohn in the brilliant essay *Pope, ein Metaphysiker*, 1755; the same year saw the pub. of his first drama of any worth, *Miss Sara Sampson*, the outcome of his studies in Eng. literature. The Seven Years War (1756-63) cut short a 3 years' tour L. had projected, and he returned to Leipzig; but 1758 found him again in Berlin with Nicolai and Mendelssohn, with whom he issued a jour., *Litteraturbriefe*, consisting of letters in criticism; the 54 letters which L. himself contributed are the direct antecedents of his later writings, and possess much of the same elegance, force, insight, and originality. From 1760 to 1765 he was secretary to the governor of Breslau, but returning to his literary career he produced in quick succession 2 of his finest masterpieces: *Laocoon*, 1766, one of the greatest constructive critical works on aesthetics ever written, and *Minna von Barnhelm*, 1767, the first great comedy in the Ger. language in point of both chronology and merit. His essays on the Fable (1759) and the Epigram (1771) must also be mentioned. His ideas found a maturer expression in his *Hamburgische Dramaturgie*, 1769, the outcome of his short-lived connection with the National Theatre of that tn. A series of brilliant pamphlets followed, notably the essay *Wie die Alten den Tod gebildet*, 1769, written in controversy against Klotz and the whole school of eclectics, who had attacked his *Laocoon*. The following year he became librarian at Wolfenbüttel, under the patronage of the Duke of Brunswick, with whom he subsequently travelled in Italy; and here *Emilia Galotti*, 1772, his greatest tragedy, was pub. In 1776 he married Eva König, but she d. in childbirth after little more than a year's conjugal happiness. Meanwhile L. had become entangled in theological controversy against orthodox Lutheranism under George of Hamburg, his chief attack being the *Reimarum Fragmente*; but for fear of incurring the displeasure of his patron he returned to 'his old pulpit, the stage', and summed up his ideas on toleration in the splendid dramatic poem, *Nathan der Weise*, 1779. The following year saw the completion of the masonic dialogues, *Ernst und Falk*, and also *Die Erziehung des Menschengeschlechts*, the corner-stone of his theological writings and his last work of importance. His works rank as monuments of constructive criticism; they bear witness to his profound learning, and are written in an exceptionally concise and vivid style. There are eds. of his works by K. Lachmann (12 vols.), 1838-40; (24 vols. re-ed. by F. Muncker, 1886-1924, 3rd ed.); E. Bell (dramatic works, 2 vols.), 1879; R. Boxberger and H. Blümmel (14 vols.), 1883-90; J. Petersen and M. von Olshausen (25 vols.), 1925-9. See A. von Arx, *Lessing und die geschichtliche Welt*, 1944, and H. B. Garland, *Lessing: the Founder of Modern German Literature*, 1949; also lives by J. Sime, 1877; H. Zimmern, 1878; T. W. H. Rolleston, 1889; E. Schmidt (4th ed.), 1923; H. Schneider, *Zwölf biographische Studien*, 1951.

**L'Estrange, Sir Roger** (1616-1704), pamphleteer, b. Hunstanton, Norfolk, and probably educ. at Cambridge. He accompanied Charles I on his expedition against the Scots, and during the Civil war was captured by the Parliamentarians in an attack on Lynn and condemned to death as a spy. He was relieved and imprisoned in Newgate, but escaped in 1648 and fled to the Continent, returning to England in 1653, and making terms with Cromwell. He wrote various anonymous pamphlets attacking the Commonwealth, and was made licenser of the press at the Restoration. In 1663 he estab. the newspaper the *Public Intelligencer*, and also the *News*, which in 1665 became the *London Gazette*. From 1675 to 1680 he issued the *City Mercury*, or *Advertisements concerning Trade*, and in 1679 he founded the *Observer*. He lost his office as licenser at the revolution of 1688.

**Le Sueur, Eustache** (1617-55), Fr. painter, b. Paris, was the pupil of Vouet (q.v.) and noted for his religious paintings. His best work is a series of panels on the life of St Bruno. These and other works, including 'Angel and Hagar,' 'St Paul preaching at Ephesus,' and numerous fine drawings, are in the Louvre, Paris. See life by G. Rouchès, 1923.

**Lesueur, Jean François** (1760-1837), Fr. composer, b. Drucet, near Abbeville. He was musical director at the cathedral of Notre-Dame, Paris, 1786-8. From 1795 to 1802 he was inspector of studies at the Paris Conservatoire, and in 1804 he was appointed *maestro di capella* to Napoleon, for whose coronation L. composed the musical service. Louis XVIII retained him at his court, and in 1818 appointed him prof. at the Paris Conservatoire. His operas include *La Caverne*, *Ossian*, and *Paul et Virginie*. He wrote much church music and introduced some orchestral innovation anticipating Berlioz, who was his pupil.

**Le Sueur, William Dawson** (1840-1917), Canadian author and historian, b. Quebec. Educ. at Montreal High School and Toronto Univ. From 1888 to 1902 he was secretary of the post office dept, and later became vice-president of the Canadian Society of Authors. He was joint editor of *The Makers of Canada* series, to which he contributed a life of Count Frontenac (1906). He also wrote *Evolution and the Positive Aspects of Modern Thought*, 1884.

**Leszno** (Ger. *Lissa*), tn of Poland, in Poznań prov., 40 m. SSW. of Poznań (q.v.). There are lignite mines near by, and the tn has a trade in agric. produce, and manufs. rolling-stock and machinery. Pop. 24,000.

**Letchworth**, tn of Herts, England, 37 m. N. of London. It was founded in 1903 as the first garden city on the lines suggested by Sir Ebenezer Howard (q.v.) in *Tomorrow: a Peaceful Path to Real Reform*, 1898, subsequently pub. as *Garden Cities of Tomorrow*, 1898, and has been developed as an industrial and residential tn by the L. Urb. Dist. Council and First

Garden City Ltd., on an estate of 4897 ac. A permanent rural belt surrounds the development. There are over 150 factories and workshops in the industrial area, the leading industries being heavy and light engineering, tabulating machinery, printing, bookbinding, embroidery, parachutes, perambulators, photographic papers, the manuf. of refuse-collection vehicles, furniture, corsets, and scientific instruments. Careful balance is maintained between industries requiring male and female, skilled and unskilled labour. Schools include L. Grammar School (Education Authority), St Francis College, a Rom. Catholic boarding and day school in impressive modern buildings for over 500 pupils directed by the Sisters of Charity, St Christopher's School (co-educational), and the N. Herts Technical College, recently built. L. is within the outer country ring suggested in the Greater London Plan, 1944, and the proposed optimum pop. is 32,500. It is one of the healthiest tns in England and an outstanding example of modern in planning. Pop. 21,260. See also GARDEN CITIES. See the books issued by First Garden City Ltd., and C. B. Purdom, *The Garden City*, 1913, and *The Building of Satellite Towns*, 1925, 1949.

**Le Tallier, François Michel**, see LOUVOIS.

**Lethaby, William Richard** (1857-1931), architect and writer on architecture, b. Barnstaple. Studied abroad, entered the office of Norman Shaw (q.v.), and began practice about 1891. His buildings are few and unimportant, but he was surveyor of Westminster Abbey, 1906 to 1928. He became principal of the L.C.C. Central School of Arts and Crafts, 1894, and first prof. of design at the Royal College of Art, 1900. A follower of Wm Morris (q.v.), he introduced his theories into his admirable books on the hist. and nature of architecture.

**Lethargic Encephalitis**, see ENCEPHALITIS.

**Lethargy**, state of unnaturally sound or prolonged sleep or stupor, from which the sufferer can be aroused only with great difficulty. It is intermediate between heavy sleep and complete coma, and may be the result of excessive exertion, either of mind or body, but is more often occasioned by conditions similar to those which cause coma (q.v.).

**Lethbridge** (formerly Coalbanks, later Coalhurst), city of Alberta, Canada, 145 m. SSE. of Calgary. L. owes its existence to coal-mining; prior to 1885 it was known as Coalbanks because of the large deposits of coal found there. It was renamed L. after Sir Wm Lethbridge, the first president of the Northwest Coal and Navigation Co. Ltd, who developed the coal-mines around L. Incorporated as a tn in 1891, and becoming a city in 1906, L. is known as the 'Irrigation Capital of Canada.' It is the Canadian Pacific Railway's divisional H.Q. for the L. div., and is served by Trans-Canadian and NW. airlines. L. is the centre of a large farming area and includes among its industries vegetable canning and freezing,

flour-milling, brewing, coal-mining, gas and oil production, and iron working. Pop. 28,300.

**Lethe** (Gk. 'oblivion'), one of the rivers of the lower world whose waters, when drunk by the dead, made them forget all evils past. L. first appears in literature in the 5th cent. BC, in Aristophanes' *Frogs*. Plato embodies the myth in his *Republic* (x), and Pausanias includes the drinking of the waters of L. in the Orphic initiatory rites (ix. 39, 8), cf. Dante's *Purgatorio* (xxviii and xxxiii). See J. E. Harrison, *Prolegomena to the Study of Greek Religion*, 1908.

**Lethington**, Lord, see MATTLAND, SIR RICHARD.

**Leti Islands**, see MOLUCCAS.

**Leto** (Rom. *Latona*), daughter of Coeus the Titan and Phoebe, beloved by Zeus and by him the mother of Apollo and Artemis. Her worship was linked with that of her children, particularly at Argos and Delos.

**Le Touquet**, see TOUQUET-PARIS-PLAGE, LE.

**Letter of Credit**, see CREDIT, LETTER OF. **Letter of Marque**, licence or commission granted by the gov. to a private person to fit out an armed ship or privateer to capture the enemy's ships and merchandise in time of war, or in reprisal for damage done. Privateering was abolished by the declaration of Paris in 1856, so that the granting of L.s of M. has fallen into disuse. See also PRIVATEERS. See H. Wheaton, *International Law* (4th ed.), 1904, and W. E. Hall, *International Law* (8th ed.), 1924.

**Letter-wood**, name given to the heart-wood of *Brosimum Aubletii*, a species of Moraceae found in Trinidad. It is chiefly used as a veneer.

**Lettering**. The hist. of European L. is broadly a hist. of modifications due to the various means of reproducing it in different ages. The classic Roman alphabet, whose form was standardised by about the 1st cent. AD, was the archetype of all later styles, and owed its main characteristics to the fact that it was incised in stone. Later the scribe who wrote with a pen on vellum was not consciously devising new forms, but doing his best to imitate earlier models. He worked on a smooth, easy surface and the capitals tended to become rounded, and at the same time he narrowed the proportions to save space. Since the 16th cent. the exigencies of type design have influenced L. so that, for example, swash characteristics tend to be eliminated.

The following is a brief hist. of the development of L. *Roman capitals*, of which the best known example is the inscription on Trajan's column, were the models for what are called *square capitals*. These were formal pen-made letters and were in use until the beginning of the 6th cent. at the same time as the freer form of *rustic capitals*. By the 4th cent. *uncials* were developed, a rounder hand more characteristic of the pen and quicker to write. Their evolution to *half-uncials* at about the beginning of the 6th cent. marked the first appearance of minuscules

proper with 'ascenders' and 'descenders.' This hand branched out into different families, the Irish half-uncial becoming one of the most perfect forms. The revision of liturgical books instituted by Charlemagne in the 8th cent. brought about a revival of good penmanship, which had declined outside England and Ireland. The creation of the hand now known as the Caroline Minuscule by Alcuin at the monastery at Tours had a widespread influence throughout all Europe, except Germany, and it was to become the prototype of our present-day 'Rom.' alphabet. However, by the 12th cent. the impulse towards speed of writing and the necessity to save space resulted in a gradual compression and increasing angularity to form the characteristic Gothic style. Fortunately the Renaissance saw the revival of the Caroline Minuscule in Italy, and it was this hand which the first printers followed when cutting their types. The rapid spread of the invention of printing saw the gradual decline of the art of L., and the monastic *scriptorium* was no longer the home of bookmaking. Therefore the letter-forms found in 15th- and 16th-cent. MSS. have acquired a permanence due to the conservative character of type designs. At the turn of the present cent., which saw a reversion to earlier forms of craftsmanship in various fields, there was a revival of good penmanship associated with the names of Wm Morris, Edward Johnston, Eric Gill, and others. In the present day the wood-engraved L. by Reynolds Stone should be mentioned, and the further revival which has extended to the reform of handwriting in general and is represented notably by Alfred Fairbank. Side by side with this revival have come the enormous demands of commercial advertising for a bewildering variety of styles which, while of a high technical competence, are of very varied artistic merit. See also ILLUMINATION OF MANUSCRIPTS AND TYPE AND TYPEFOUNDING. See E. Johnston, *Writing and Illuminating and Lettering*, 1906; E. Maunde-Thompson, *Introduction to Greek and Latin Palaeography*, 1912; Sir A. Heal, *English Writing Masters, 1570-1800*, 1931; *Lettering of Today*, Studio, 1937. See also PALAEOGRAPHY AND WRITING.

**Letterkenny**, mkt tn of co. Donegal, Rep. of Ireland, 15 m. NW. of Lifford. Industries include hosiery, confectionery, mineral waters, iron-founding, milling, and bacon-curing. Pop. 4300.

**Letterpress Printing**, see PRINTING.

**Letters**, branch of literature which is but little studied, although one of the most delightful forms. A good letter requires to be natural, easy, and well expressed, suited to the nature and requirements of the person addressed. Among the L. of literature those of Mme de Sévigné occupy one of the foremost places. Among the most famous L. in Eng. literature the first in date are the *Paston Letters*, written between various members of the Paston family (afterwards Earls of Yarmouth) between the years 1422 and 1509, and first

pub. in 1823. These, not being meant for pub., are frank and natural, and provide an excellent picture of the times in which they were written. The epistolary form has often been used for didactic purposes as the epistles of St Paul and the early Christian teachers, and for political purposes, as in the *Letters of Junius*, 1769-72. Other famous collections are *Lord Chesterfield's Letters to his Son*, 1774-1787; Sir Walter Scott's *Paul's Letters to his Kinsfolk*, 1815, and *Letters of Malachi Malagrouther*, 1826, and in more recent times the *Vallima Letters*, 1895, of Robert Louis Stevenson. Swift's *Journal to Stella*, 1768, is more in the nature of a diary, but his *Drapier's Letters*, 1724, are a masterpiece of literary invective. Other famous letter-writers are Cicero, Seneca, Erasmus, Horace Walpole, Pope, Charles Lamb, Mme de Maintenon, Cowper, Jane Welsh Carlyle, and Byron. See also EPISTLE. See C. E. Vulliamy, *English Letter Writers*, 1945.

**Letters, or Signs,** see ALPHABET; NUMERALS; PHONETICS.

**Letters Missive**, letters from the sovereign conveying permission or command to some particular person, thus differing from 'letters patent,' which are addressed to the public. They are used generally for the nomination of a bishop, and are sent to the dean and chapter with the *congé d'lire* (q.v.).

**Letters of Attorney**, see POWER OF ATTORNEY.

**Letters Patent**, see PATENTS.

**Lettow-Vorbeck**, Paul Emil von (1870- ), Ger. general, b. Saarbrücken, in the Saar, eldest child of Gen. Paul Karl von L.-V. Graduating at Berlin Univ. he was sent out as colonel to Ger. E. Africa in Jan. 1914 to command the colonial troops. During the war (see AFRICA, GERMAN EAST, FIRST WORLD WAR, CAMPAIGN IN) he showed the highest ability, and only surrendered on being informed of the armistice, at Chambezi, 14 Nov. 1918. His *Reminiscences of East Africa* appeared in English in 1920.

**Lettres de Cachet** (*lettres closes*) were blank 'letters' signed and sealed by the King of France (from about the 14th cent.) and issued to governors of prisons. The insertion of a person's name therein was all that was necessary to secure commitment to the Bastille or another prison. (Meetings of estates and other bodies were called by L. de C. also.) They were abolished in 1789, though Napoleon used them for a short time.

**Lettres Portugaises**, see ALCOFORADO, MARIANA.

**Letts**, see LATVIA.

**Lettuce**, *Lactuca sativa*, valuable salad plant which can be grown all the year round. The cabbage L. is low and cabbage-like, the cos L. is more crisp, erect, and compact, but these types are widely varied. L. is rich in vitamins (q.v.).

**Leitzburg**, see LUXEMBOURG.

**Leucadia**, see LEUKAS.

**Leucase**, see LOCHES.

**Leucaemia**, see LEUCOCYTHAEMIA.

**Leuchars**, vil. and par. of Fifeshire, Scotland, 6 m. NW. of St Andrews, noted for its R.A.F. airfield. It has a church dating from the 12th cent. with a Norman apse and chancel, and a 15th-cent. castle. Pop. 3000.

**Leucine**, or **Aminoisocaproic Acid**,  $(CH_3)_2CH \cdot CH_2 \cdot CH(NH_2) \cdot COOH$ , substance found widely distributed in the animal juices, particularly in the pancreas. It is produced by the putrefaction of proteins, and may be prepared from proteins such as casein by hydrolysis.

**Leucippus** (fl. 6th cent. BC), Gk philosopher, contemporary of Zeno and Anaxagoras, and the founder of the Atomistic theory afterwards developed by Democritus (q.v.).

**Leucite**, rock-forming mineral, consisting of potassium and aluminium metasilicate,  $KAl(SiO_3)_2$ . The crystals often contain such minerals as olivine and augite, as well as other impurities. L. rocks are found widely distributed throughout the globe, especially in the form of lavas near Vesuvius and Rome. They are usually rocks which contain felspar but no quartz.

**Leucocytes**, see under LEUCOCYTOSIS and BLOOD.

**Leucocythaemia**, or **Leucaemia**, acute or chronic progressive disease of the leucocyte-forming tissues. It is diagnosed by the presence of a large number of immature leucocytes in the blood and in the bone-marrow, by the invasion of other tissues by these cells, by the presence of anaemia, and by the occurrence of haemorrhages into the skin and mucous

BLOOD FILM SHOWING INCREASE IN  
WHITE CORPUSCLES  
Magnified 300 times.

membranes (see EPISTAXIS). **Lymphatic L.** is a type of L. characterised by an excessive production of leucocytes of the lymphatic type, together with enlargement of the lymphatic glands and the spleen. **Myeloid L.** is a L. in which there is proliferation of the myeloid leucocytes and enlargement of the spleen. **Monocytic L.**

is a L. in which there is proliferation of the monoblastic leucocytes. Treatment of these malignant conditions of the blood is unsatisfactory. Application of X-rays to the spleen and the long bones often retards the progress of the disease. Removal of the spleen is also helpful in some cases. Recently results from treatment with the group of chemical substances known as the nitrogen mustards has been encouraging in certain cases. Cortisone treatment has also had some success, but at present there is no specific cure. See BLOOD.

**Leucocytosis**, increase in the number of white corpuscles above the average number contained in the blood (q.v.). The white corpuscles, or leucocytes, act as destroyers of microbes that may have attacked the tissues. In normal health the number of leucocytes is from 5000 to 10,000 per cubic millimetre. There are 5 varieties: the neutrophil cell, derived from the bone-marrow and constituting 70 per cent of the total number of white corpuscles; the eosinophil cell, derived from bone-marrow, and forming 2 per cent of the whole; the lymphocyte, derived from the lymphoid tissue, and forming above 20 per cent of the whole; the monocyte, probably a later development of the lymphocyte, and forming 4 per cent of the whole; and the basophil, a cell rarely found in the blood of adults. The functions of the different varieties vary to a certain extent; they probably have varying capacities for attacking the different pathogenic organisms. L. is usually associated with an increase in the number of polymorphonuclear cells, although there are allied conditions in which the lymphocytes or the eosinophil cells may be increased above the average. The neutrophils increase during the process of digestion, in pregnancy, and when tissue is breaking down as a result of trauma or infection. The eosinophils increase in a variety of conditions in which foreign proteins enter the body, as in the allergic diseases (asthma, hay-fever) and in some parasitic diseases. Lymphocytes are involved in the production of antibodies. They increase in exercise and in diseases such as whooping-cough, glandular fever, many virus diseases, and in lymphatic leucæmia. An increase in lymphocytes is known as lymphocytosis and an increase of eosinophils as eosinophilia. As L. does not occur in such infective diseases as influenza, measles, malaria, and typhoid fever, it is possible to base a differential diagnosis on the extent of L. The number of leucocytes in many cases bears a relation to the defensive power of the blood against bacillary invasion, and a sudden fall in the quantity of leucocytes is a sign of danger in many diseases. When the number becomes excessive the condition is called leucocythæmia (q.v.) or leucæmia. The opposite condition to L., that is, where there is marked absence of leucocytes, is called leucopenia.

**Leucocium**, genus of central European and Mediterranean bulbous plants, family

Amaryllidaceæ, about 10 species, commonly known as Snowflake: *L. aestivum*, *L. autumnale*, *L. hiemale*, and *L. vernum* are the summer, autumn, winter, and spring Snowflakes, with green-marked snowdrop-like flowers.

**Leucol**, name formerly applied to *quinoline* or its isomer, *isoquinoline* ( $C_9H_7N$ ). Both are obtained in the distillation of coal-tar, and occur in the fraction which comes over between  $236^\circ C.$  and  $243^\circ C.$  Isoquinoline is separated by converting the mixed bases into the acid sulphates and subsequently decomposing the sulphate of isoquinoline with caustic solution.

**Leucoma**, opacity of the cornea, or anterior transparent portion of the eye. To outward appearance a white spot is presented, bearing a certain likeness to ground glass. According to the position and extent of this opaque area a certain amount of disturbance of vision is occasioned. The condition is caused by inflammation resulting from injury or infection from the conjunctiva. If the inflammation occurs below the epithelial layer of the cornea a loss of tissue takes place, and the place of the destroyed tissue is taken by opaque connective tissue. After the actual inflammation has ceased the opacity may gradually decrease, but in many cases it persists and threatens to become permanent. If the lens and retina are undamaged it is sometimes possible to remove the L. and to replace it with a graft of transparent cornea obtained from another person. L. is to be distinguished from fatty degeneration of the margin of the cornea which causes in old people a white opacity in that region.

**Leucotomy**, see INSANITY (TREATMENT).

**Leuctra**, vil. in Boeotia, anc. Greece, 6 m. from Thebes, famous for the victory gained in its neighbourhood by the Thebans, under Epaminondas, over the Spartans (371 BC).

**Leuk** (Fr. *Loèche-la-Ville*), summer resort of Switzerland in the canton of the Valais, on the r. b. of the Rhône,  $15\frac{1}{2}$  m. E. of Sion. At Leukerbad (*Loèche-les-Bains*), about 10 m. N. of the tn, at an altitude of 4629 ft., are hot, saline, chalybeate, and sulphurous springs, 22 in number. L. has sev. times been destroyed by avalanches, from which it is now protected by a strong embankment.

**Leukas**, or **Leucadia**, name of one of the Ionian Is., also called *Santa Maura*, lying off the coast of Acarnania, 50 m. SE. of Corfu. It is about 20 m. long, with a greatest breadth of 8 m., and has an area of 113 sq. m. The surface rises in rugged limestone heights, from the chalky appearance of which the Is. takes its name meaning 'Whiteland.' The bold promontory (Cape Ducato) at the S. end of the Is. rises to 2000 ft. and is the legendary scene of 'Sappho's Leap' and the death of Artemisia, Queen of Halicarnassus. The chief products are olive oil, currants, and wine. The cap. *Amaxiki*, or *L.*, lies at the NE. end. The land was colonised in the 7th cent. BC by the Corinthians, who made it an Is. by cutting a canal through

the isthmus which joined it to the mainland. It has been suggested that L. may be Homer's Ithaca. Pop. 28,000.

Leuthen, see LUTYNIA.

Leutholf, Hiob, see LUDOLFUS, JOB.

Leutschau, see LEVOČA.

Leutze, Emanuel (1816-68), Ger.-Amer. painter, noted for his historical pictures, b. Gmünd, Württemberg. From 1841-59 he studied art at Düsseldorf and his best-known work, 'Washington crossing the Delaware,' is in the Metropolitan Museum, New York.

Leuven, see LOUVAIN.

Leuvenhoek, see LEEUWENHOEK.

Leuzinite, mineral, classed by some geologists as a variety of halloysite. It is a hydrous silicate of alumina, and is opaline and translucent.

Levallois-Perret, Fr. tn in the dept of Seine, a NW. suburb of Paris. It is a working-class, industrial dist., and has chemical, electrical, and automobile manufs. Maurice Ravel (q.v.) is buried here. Pop. 62,800.

Levant (from the It. *il levante*, the E.), originally applied as a general name for the E., meaning the coast-lands of the Mediterranean from Greece to Egypt, but now generally restricted to the Mediterranean coast-lands of Asia Minor and Syria (qq.v.). See J. Hart, *A Levantine Log-Book*, 1905, and E. Kirk, *A Short History of the Middle East*, 1948.

Levant Company, Eng. company which traded with the L. from about 1592 to 1825. It was estab. under a charter of 1581 which gave it a monopoly of the trade with Constantinople and the neighbourhood. It had branches at Aleppo and Smyrna. It flourished for many years, though its trade was seriously interfered with by pirates. Most of its records are in the Public Record Office, London.

Levant et Couchant, legal term used when a landlord sues the owner of cattle which have been trespassing on his land for not less than 24 hours, that is, long enough to lie down and get up to feed (*couchant et levant*). The term is also used for the right of a cattle-owner to pasture (L. & C., i.e. by day and by night) his cattle on common pasturage.

Levanter, strong easterly wind prevalent in the W. end of the Mediterranean and off the N. African coast during the whole of the summer months.

Levanzo, see AEGADIAN ISLANDS.

Leves (Fr. *lever*, to rise): 1. Morning ceremonial visit to the sovereign of such gentlemen as have the right of entry. The name arises from the fact that these visits were first inaugurated by the kings of France, who held these receptions in their dressing-rooms. A L. is distinguished from a 'drawing-room' or court in England, inasmuch as only gentlemen attend the former. Neither has been held since the Second World War.

2. Embankment built to prevent overflowing during floods. The most noteworthy system of L.s is that of the Mississippi, which covers about 1800 m. The L.s are controlled by the various

bordering states and by a Federal Mississippi R. Commission.

Levée en Masse, see LEVY.

Level, in automatic telephony, a row of selector contacts; in mining, a level road in the mine; in engineering, building, etc., an instrument for testing the horizontality of a surface, or for providing a horizontal line of sight. The spirit-level, often attached to a camera, is a round metal box with a domed glass cover like a watch glass, nearly filled with spirit. The small air bubble left always seeks the highest point under the glass, and if the tangent plane at the centre is parallel to the underside of the box, that will be horizontal when the bubble is at the centre. This is usually marked with an

W. F. Stanley & Co. Ltd

#### 12-IN. ENGINEER'S PRECISION LEVEL

etched circle. The L. used by builders, carpenters, etc., is a wooden frame like a thick ruler on edge, the lower edge usually lined with a brass strip. In the upper edge is mounted a slightly carved, closed glass tube, nearly filled with spirit, and so fixed that the tangent plane to the tube surface at the middle point is parallel to the underside of the frame. The bubble in the tube will be at the middle, marked with etched lines, when the underside of the frame is horizontal. A long bubble and a slight curvature give the greatest accuracy.

A U-tube filled with water makes a simple L. for sighting horizontally, as the water is always at the same level in the 2 upright branches. The shape and size of the connect-portion between the upright tubes are immaterial, but a long tube gives a more accurate sightline. In a surveyors' L. the sightline is the optical axis of a telescope which can turn around an axis perpendicular to the optical axis. The telescope carries a sensitive spirit-L. and rests on 3 screws by means of which it can be accurately set, so that its optical axis swings in a horizontal plane when the telescope is turned. A glass diaphragm in the focal plane carries 2 fine wires crossing one another in the optical axis. In the Y-form of L. the telescope rests in 2 grooves and can be reversed and also rotated round its optical axis. This form is obsolete, but arrangements for turning the telescope round its optical

axis are incorporated in sev. modern precision designs. See SURVEYING AND LEVELLING.

**Levellers**, ultra-republican political party in England during the Civil war. Powerful in the army during the early years of the Commonwealth, they advanced their extremist views on religious toleration and democratic gov. in numerous pamphlets, the most noteworthy being by their leader John Lilburne (q.v.). His *Agreement of the People* is a noteworthy essay in democracy, and foreshadows some later developments in Eng. gov. They were dissatisfied with Cromwell's increasing power, and in April 1649 caused an army mutiny, which was suppressed by Fairfax. The movement continued, mostly underground, throughout the Commonwealth, but lacked cohesion after 1649. See T. C. Pease, *The Leveller Movement*, 1916; G. P. Gooch, *English Democratic Ideas in the Seventeenth Century* (2nd ed.), 1927; A. S. P. Woodhouse (ed.), *Puritanism and Liberty*, 1938; W. Haller and G. Davies (eds.), *The Leveller Tracts, 1647-1653*, 1944; W. Schenk, *The Concern for Social Justice in the Puritan Revolution*, 1948.

**Levelling**, see SURVEYING AND LEVELLING.

**Levels**, North, Middle, and South, divs. of the Cambridgeshire (q.v.) fenslands, planned and executed by Cornelius Vermuyden, a Dutch engineer, in conjunction with the 4th Earl of Bedford, to drain the area and prepare it for pasture. The work was completed by 1653. See also BEDFORD LEVEL and FENS.

**Lever**, Earl of, see LESLIE, ALEXANDER.

**Leven**, burgh at the mouth of the L., frith of Forth, Fifeshire, Scotland, 9 m. N.E. of Kirkcaldy. It is a summer resort with a sandy beach and fine golf-links. There are foundries and timber yards, and other industries are paper-making, golf club making, and flax-spinning. Pop. 9000.

**Leven**, Loch: 1. Lake in the co. of Kinross, Scotland, area 5½ sq. m., and 11 m. in circuit, drained by the L. R. It contains 7 is., on one of which, Castle Is., are the ruins of L. L. Castle in which Mary Queen of Scots was imprisoned (1567-8). A causeway just under water connects the is. with the W. bank. St Serf's, the largest is., contains the ruins of an old priory. The trout fisheries are famous.

2. Sea-loch forming part of the boundary between Argyllshire (S.) and Inverness-shire (N.), Scotland, between Ballachulish (q.v.) and Kinlochleven.

**Levenshulme**, dist. of Manchester (q.v.).

**Lever**, Charles James (1806-72), novelist, b. Dublin of Eng. parents, his father being an architect. He was educ. privately and at Trinity College, Dublin, where he took a degree in medicine. He forsook medicine for literature when, in 1837, his first novel, *Harry Lorrequer*, appeared serially in the *Dublin University Magazine* and was immediately successful. He later became editor of the magazine, and gathered round him the Irish wits

and writers of the time. He is chiefly remembered for his rollicking tales of Irish life, such as *Jack Hinton*, 1834, *Charles O'Malley*, 1840, *Tom Burke Ours*, 1844, and *Arthur O'Leary*, 1844. In later life he lived on the Continent, was Brit. consul at Spezia, and d. while at Trieste. His *Life and Letters* were ed. by W. J. Fitzpatrick, 1879. See L. Stevenson, *Doctor Quicksilver*, 1939.

**Lever**, Sir William, see LEVERHULME.

**Lever**: 1. Great, dist. of the co. bor. of Bolton (q.v.).

2. Little, tn and urb. dist. of Lancs, England, 3 m. S.E. of Bolton, with cotton-mills, and bleaching, chemical, and plastics works. Pop. 4700.

**Lever**, rigid bar which turns about a point called the fulcrum. The parts of the bar on each side of the fulcrum are called the arms. The principle of the lever was estab. by Archimedes. By applying force at one point on the L. a weight is raised or resistance overcome at another point. There are 3 classes of L.s, according to the position of the fulcrum in regard to the power and weight: (1) Where the fulcrum is between the power and weight; to this class belong the crow-bar, a poker in the bars of a grate, the handle of a pump, the balance, etc. The bascules of the Tower Bridge are of this class, the visible portion representing an arm of the L. (2) Where the weight is in the middle; to this class belong a wheelbarrow, nutcrackers (a double L.), etc. (3) Where the power is in the middle; to this class belong the treadle of a lathe, a pair of tongs, etc. In a L. the power multiplied by its 'arm,' or distance from fulcrum, is equal to the weight multiplied by the arm. If the force applied to the L. is less than the resistance of the weight, the L. is said to work at a mechanical advantage, if vice versa, at a mechanical disadvantage. L.s of the first class may work at either an advantage or disadvantage, or the force may be exactly equal to the weight. L.s of the second class always work at an advantage, and those of the third class always at a disadvantage, though there is the 'advantage' in the last class that the object moved is moved through a greater distance than the power. In bent L.s the perpendicular distance from the fulcrum to the meeting-place of the lines of direction of the forces is taken for calculation. Compound L.s are those in which the short arm of one acts on the longer arm of another, as in drawbridges, testing-machines, etc. The 3 types of L.s above described abound in all mechanism, though very often in a disguised form.

**Leverhulme**, Sir William Hesketh Lever, 1st Viscount (1851-1925), founder of Port Sunlight, b. Bolton, Lancs, a son of a wholesale grocer of substance. L. extended his father's business to Wigan in 1877. When soapmakers tried to raise the wholesale price he was paying them for the soap he was wrapping and selling as 'Sunlight Soap,' he bought soap works at Warrington, engaged an experienced soapmaker (called Winsor), and devoted

himself to making, advertising, and marketing his own soap. He prospered so fast that he was able to found Port Sunlight (q.v.) on the Wirral peninsula in 1888. There he began what he called prosperity sharing, in lieu of profit sharing. The employee was housed on the estate at an uneconomically low rent and received payments in kind, and was thus bound to the interests of the firm of Lever Brothers (James Darcy L. was the brother in partnership). After many attempts L. entered Parliament in 1906 as Liberal member for Wirral. But he did not stand again, and ceased to be M.P. in 1910. He bought the lease of Stafford (now Lancaster) House in 1913 and presented it to the nation for the London Museum. Ennobled in 1917, he took the title of L. In 1918-20 he acquired the ls. of Lewis-with-Harris and tried developments in Lewis that did not succeed; he yielded much of his property there to the inhab. See life by his son, the second Lord L., 1927; also Charles Wilson, *The History of Unilever*, 1954.

**Leverkusen**, Ger. tn in the Land of N. Rhine-Westphalia (q.v.), on the Rhine (q.v.), 5 m. N. of Cologne. It has important chemical, textile, and machinery industries. Pop. 70,000.

**Leverrier**, Urbain Jean Joseph (1811-1877), Fr. astronomer, b. St. Lô, Normandy. In 1846 he was admitted to the Academy of Sciences. His most notable work was the inference of the existence of the planet Neptune, and his calculation of the point at which it would become visible. It was discovered in the position by the Ger. astronomer Galle (see NEPTUNE). In 1854 he became director of the observatory of Paris.

**Levertin**, Oscar (1869-1906), Swedish poet and novelist, of Jewish descent. He became prof. at Stockholm Univ. in 1899; and as literary critic in the *Svenska Dagbladet* he exerted great influence on Swedish literature. His verse is often aesthetic rather than emotional in inspiration, as in *Legender och visor*, 1891, but in his later years he wrote some very moving poetry, especially the song cycle *Kung Salomo och Morolf*, 1905. His wide culture and knowledge is shown in his essays, as well as in his stories and novels *Roccoconoveller*, 1899, and *Magistrarne i Österås*, 1900. His *Samlade Skrifter* was ed. in 24 vols., 1907-12. See W. Söderhjelm, *O. Levertin* (2 vols.), 1914-17, and F. Böök, *O. Levertin*, 1944.

**Leveson-Gower**, Francis, see ELLES-MERE, 1st EARL OF.

**Leveson-Gower**, George, see GRANVILLE, 2nd EARL OF.

**Leviathan**, name of a reptile that occurs 5 times in the O.T. (Ps. civ. 25-6, Ps. lxxiv. 14, Isa. xxvii. 1, Isa. li. 9, and Job xli where a description is given). In all cases but that in Ps. civ the term is usually explained as referring to the crocodile, and this animal being known to the Israelites chiefly from the crocodiles of the Nile, it was often used as the symbol of Egypt (Isa. li). Some have seen in L. and Behemoth legendary

creatures combined from various Egyptian and Babylonian myths.

BEHEMOTH AND LEVIATHAN

William Blake's conception in *Illustrations of the Book of Job*.

'**Leviathan**,' name of, at one time, one of the world's largest ships formerly called the *Vaterland*, and built in Germany in 1914. She was bought by U.S. Lines in 1922 and operated as *President Harding*, but proved uneconomical. In 1939 a Belgian company purchased her. As the *Ville de Bruges* she was sunk by a Ger. submarine in Feb. 1940. Her tonnage was 59,957; dimensions 907 × 100 × 58 ft (8 ft shorter than the Brit. *Majestic*, and if measured according to Brit. mercantile rules the tonnage would be 54,282, while that of the *Majestic*, if measured by Amer. rules, would be 61,206 instead of 56,621). Also the name of a Brit. light fleet carrier, launched in 1945, of 18,000 tons displacement and carrying 44 aircraft.

**Levico**, It. tn in Trentino-Alto Adige (q.v.), 10 m. SE. of Trento (q.v.). It is near the lake of L., and is frequented for its arsenical springs. Pop. (tn) 3800; (com.) 5550.

**Le Vigan**, see VIGAN, LE.

**Levin**, prin. tn of lower Manawatu dist., N. Is., New Zealand; situated on the W. coast, 59 m. N. of Wellington by rail. It is the centre of a flourishing dairy industry. The neighbouring Tararua ranges, numerous trout streams and rivs., and bathing beaches make L. a well-known sports centre. The Horowhenua College is the prin. educational institution. Pop. 6447.

**Levirate** (Lat. *levir*, brother-in-law), institution by which a widow is inherited by her deceased husband's successor, but her later children are legally those of her dead husband, not of her new pro-husband. It is found among anc. Hebrews and many African and other peoples to-day.

**Levis**, or Point Levi, city of Quebec, Canada, on the S. shore of the St. Lawrence. It has a ferry and a railroad

bridge to Quebec. It is fortified, has fine docks, great shipping trade, and considerable manufs., including iron, ship-building, and saw-mills. Pop. 13,500.

**Levison, Wilhelm** (1876-1947), Ger. historian, an outstanding authority on the hist. of NW. Europe, particularly of N. England, during the 7th and 8th cents. Prof. of medieval hist. at Bonn Univ., he was dismissed by the Nazis and came to England in 1933 to continue his studies at Durham Univ., of which he was elected honorary fellow in 1939. The Ford lectures delivered by him at Oxford Univ. in 1943 were pub. in 1946 with the title *England and the Continent of Europe in the Eighth Century*. A comprehensive selection from his works in German, French, and English was pub. in Düsseldorf in 1947, entitled *Aus Rheinischer und Fränkischer Frühzeit*.

**Levits, Elias** (1468-1549), rabbi, philologist, critic, and poet. He spent most of his life in Rome and Venice, and had a wide circle of friends there. His works are on the Psalms, Job, Proverbs, Amos, a Talmudic and Targumic dictionary, and a Heb. grammar. See life by J. Levi (Breslau, 1888).

**Levites**, descendants of Levi, son of Jacob and Leah, the tribe of Moses and Aaron. For the attack made on Shechem by Simeon and Levi, these 2 tribes were not given a portion of the ter. of Canaan, but scattered throughout the country. The hist. of the L. is complicated by the gradual restriction of priestly functions to the sons of Aaron and of sacrifice to a single sanctuary. Deuteronomy (x. 8 and xxi. 5) distinguishes the L. from the rest of the tribes for the bearing of the ark, for the ministry of Yahweh, and for the deciding of controversies. At the same time it enjoins that the Israelites should erect a single sanctuary on taking possession of Canaan. This, however, was not done till the time of Josias, to which date Deuteronomy (in its present form) belongs. In earlier times we find L. at least preferred to other tribesmen for priestly functions—cf. Judges xvii. It has been suggested (cf. Judges xviii. 30) that the L. were Mosaic priests of the numerous High Places, suppressed by Josiah, and compelled to take a subordinate role by the jealous Aaronite priests of the one surviving and lawful sanctuary at Jerusalem. See G. Buchanan Gray, *Sacrifice and Priesthood*.

**Leviticus**, the third book of the Pentateuch (q.v.), belongs almost entirely to the stratum known as P. It is concerned chiefly with legislation regarding the priestly functions. Chs. i-vii deal with the laws of sacrifice and with certain priestly regulations. Chs. viii-x deal with the consecration of priests, and chs. xi-xvi with the laws of purification and atonement. The section consisting of chs. xvii-xxvi is known as 'the Law of Holiness,' (cf. Ezek. xi-xviii) and stands apart from the preceding chapters.

**Levkas**, see **LEUKAS**.

**Levkosia, Leukosia**, see **NICOOSIA**.

**Levoča** (Ger. Leutschau; Magyar Lőcse),

Czechoslovak tn in the region of Kólkice (q.v.). Formerly a royal free city of Hungary, it has a 13th-cent. church and a Renaissance tn hall. Pop. 9800.

**Levuka**, small port on Ovalau Is., Fiji (q.v.), site of the first white settlement and from 1874-82 cap. of the colony.

**Levy, Hermann Joachim** (1881-1949), Ger. economist, b. Berlin, became a naturalised Brit. subject, 1946. Son of a retired textile manufacturer, he was educ. at Munich Univ., where he took up the study of economics. After lecturing at Halle for some years he became a prof. at Heidelberg Univ. During the First World War he worked in the Ger. Admiralty, but after the war returned to economics, paying special attention to industrial cartelisation. In 1918 he became prof. at the Technische Hochschule, Berlin. Essentially a lover of peace, L.'s life in Germany became ever more difficult, and in 1935 he came to England, where he soon estab. himself as a leading economist in industrial assurance. His first pub. was *Large and Small Farms*, 1911; his next *Economic Liberalism*, 1913. His *Industrial Germany*, 1935, was an acute analysis of collectivism and monopoly as opposed to free competition, and in *The New Industrial System*, 1936, he surveyed the tendency in Britain towards large industrial units. *Industrial Insurance*, pub. in collaboration with Sir Arnold Wilson in 1937, attacked the companies and societies engaged in industrial insurance, advocating strongly the extension of National Health Insurance arrangements to cover death benefits, while in *National Health Insurance*, 1945, he proposed alternatives to the proposals of the Beveridge Report. In his *Retail Trade Associations*, 1942, and *The Shops of Britain*, 1948, he argued for state control of industrial combinations and retail trade associations. *Drink: an Economic and Social Study* was pub. posthumously in 1951 (ed. by R. P. Lynton).

**Levy** (Fr. *levée*, from *lever*; Lat. *levare*, to raise), collection of a body of men for compulsory military or other service in times of national emergency. The L. is usually restricted to a class, e.g. to men between certain ages, but in times of great danger a *levée en masse* may be enforced, when all able-bodied men are required to serve in person, for purposes of either defence or offence. In Brit. Middle E. protectorates the term is applied to local militia forces. The word L. is also used as a synonym for *raising* taxes.

**Levy-Bruhl, Lucien** (1857-1939), Fr. philosopher, b. Paris. Educ. at the Lycée Charlemagne and at the École Normale Supérieure, he became a lecturer at the latter institution and then at the Sorbonne (1899). He was later a prof. at the univ. of Paris. His works include *L'Idée de responsabilité*, 1884, *L'Allemagne depuis Leibnitz*, 1890, *History of Modern Philosophy in France* (Eng. trans.), 1899, *La Philosophie d'Auguste Comte*, 1900, *Les Fonctions mentales dans*

les sociétés inférieures, 1910, *La Mentalité primitive*, 1921, *L'Âme primitive*, 1927, and *Le Surnaturel et la nature dans la mentalité primitive*, 1931.

Levy-Lawson, Sir Edward, and Sir Harry Lawson-Webster, see BURNHAM.

Lewanika (c. 1840-1916), paramount chief of the Barotse of N. Rhodesia from 1875 to 1916. His real name was Robosi, the 'escaped one,' because he was b. when his mother was fleeing from the Makololo; 'Lewanika' was merely an adopted name. He was of distinguished descent, being a grandson of Marambwa, a famous Barotse chief. He succeeded to, or rather usurped, a kingdom comprising some 20 large African tribes, to which the Portuguese governors of Angola to the N. of Barotseland had given the name Marotse-Mambunda. L. was in exile when, heading a revolution against his cousin King Sebeso, he obtained the throne and, finding that the cap. Sesheke was still a storm centre of rival factions, set up his seat of gov. at Lealui on the Zambezi in the N. Among the chief influences for good in his career as by far the most successful of Barotseland's rulers was the work of such Protestant missionaries as François Coillard and Arnot. But L. was by nature a lover of the arts of peace and a social reformer, even though he was also a doughty tribal fighter and a fine hunter. In 1885 he was ousted from the throne through the treachery of Mathaha, a counsellor who had poisoned L.'s mind against his supporters and so forfeited their confidence. Mathaha now put Tatira, a youth, on the throne as a puppet king and wielded the chief power himself. But L. returned at the head of an army and, in a battle in which Mathaha and most of the chiefs on both sides were killed, regained his throne. He seems to have pardoned some of the rebels, but Tatira and a great many others, of both sexes, were put to death. His reforming zeal was shown in the abolition, by 1893, of trial by ordeal and witchcraft at his cap. Slavery, however, was only stamped out after L. had sued for and obtained Brit. protection. Realising that he would be always beset by enemies both at home and abroad, L. made a treaty with the Brit. representatives, but the first Brit. resident commissioner (Major—afterwards Sir—Robert Coryndon, a member of Rhodes's staff) did not arrive until 7 years later (1897). In 1902 L., accompanied by Col. Colin Harding, who had organised the Barotse police, visited England for the coronation of Edward VII. He was quick to appreciate the difference between those who only received him as a king and those who welcomed him as a friend. What unquestionably impressed him on this visit was to see 'what respect there was for God and His Law,' and though L. never actually declared himself a Christian he was by nature a devout man and allowed Litia, his son and successor, to be baptised as a Christian. L. and his people were intensely loyal to the allied cause in the First World War, but the strain of the time adversely affected

his declining health and he d. on 4 Feb. 1916, his burial being conducted with immense pomp, according to all the Barotse traditions. See H. Marshall Hole, *The Passing of the Black Kings*, 1932; Lt.-Col. C. Harding, *Far Bugles*, 1932; C. W. Mackintosh, *Lewanika*, 1942.

Lewes, George Henry (1817-79), author, b. London. He began to contribute to the *Edinburgh* and *Quarterly* reviews in 1840, and continued to do so for many years. He pub. a *Biographical History of Philosophy* in 1845-6, and in 1855 brought out his *Life of Goethe*, which became a standard authority on the subject both in England and in Germany. His *Physiology of Common Life* appeared in 1858-60 and *Problems of Life and Mind* in 1878. For a short time (1865-6) he was editor of the *Fortnightly Review*. In 1851 he met Mary Ann Evans, later famous under the pseudonym of 'George Eliot,' with whom he lived until his death. See A. T. Kitchell, *George Lewes and George Eliot*, 1934.

Lewes, municipal bor. and cap. of E. Sussex, England, situated on the navigable Ouse, 50 m. from London. It is a tn of great historical importance; here was fought the battle of L. (1264) when Simon de Montfort defeated Henry III. The ruins of the castle may be seen, including the Norman inner gate. Here also are the remains of the Cluniac priory (1078) and a 15th-cent. mansion, residence of Anne of Cleves. Barbican House possesses a fine archaeological museum, and there is a 16th-cent. grammar school. Near by is Glyndebourne (q.v.). Pop. 13,104.

Lewes, Mise of, see MONTFORT, SIMON DE.

Lewin, William C. J., see TERRISS.

Lewis, Alun (1915-44), poet, b. near Aberdare. He was educ. at Cowbridge Grammar School, the Univ. College of Wales, and Manchester Univ. He entered the army in 1940 and was commissioned in the S. Wales Borderers with which regiment he served in India and Burma. He was accidentally killed while in Burma in Mar. 1944. His austere sense of vocation as a writer and his disciplined style of writing marked him out as a poet of great promise, as shown by his first pub. vol. of poems, *Raiders Dawn*, 1942. This was followed by *Ha! Ha! Among the Trumpets*, a vol. prepared by him and pub. posthumously in 1945 with an introduction by Robert Graves. L.'s poetry is most successful in its realistic and humane approach to life, tempered with a fine idealism, and formed with integrity and discipline. His sense of realism also found expression in a notable collection of short stories, *The Last Inspection*, 1943. A number of his letters from India were pub. in 1949, together with 6 short stories under the title *In the Green Tree*.

Lewis, Cecil Day (1904- ), poet, b. Ballintogher, Ireland, son of a clergyman; on the mother's side related to Goldsmith. The family moved to England, and L. was educ. at Sherborne and Wadham College,

Oxford, where he ed. the anthology *Oxford Poetry* in 1927. After working as a schoolmaster at Oxford, Helensburgh, and Cheltenham, in 1935 he abandoned teaching for writing. With Auden and Spender (qq.v.), who had been his contemporaries at Oxford, he formed a poetic group partly inspired by T. S. Eliot (q.v.) and voicing the current feeling of social discontent. His more important books of verse are *Collected Poems, 1929-33*, 1935, *Overtures to Death*, 1938, *Word Over All*, 1943, *An Italian Visit*, 1953, and *Pegasus*, 1957; he also trans. Virgil's *Georgics*, 1941, and *Aeneid*, 1952, into verse. His critical works include *A Hope for Poetry*, 1934, *Poetry for You*, 1945, *Enjoying Poetry*, 1952, and *The Grand Manner*, 1952. He wrote some novels, including *The Friendly Tree*, 1936, *Starting Point*, 1937, and *Child of Misfortune*, 1939, but is better known for the excellent detective stories that he pub. under the pen-name of Nicholas Blake. Among the best of these are *A Question of Proof*, 1935, *Malice in Wonderland*, 1940, and *The Case of the Abominable Snowman*, 1941. During the Second World War he was employed at the Ministry of Information, and from 1951 to 1955 he occupied the chair of poetry at Oxford. See D. Powell, *Descent from Parnassus*, 1934, and S. Spender, *World within World*, 1951.

Lewis, Clive Staples (1898- ), moralist and novelist, b. Belfast, son of a solicitor. Educ. at Malvern and Univ. College, Oxford, he served during the First World War with the Somerset Light Infantry. From 1925 to 1954 he was a fellow of Magdalen, then was appointed prof. of medieval and renaissance English at Cambridge. Critical works are *The Allegory of Love*, 1936, and *English Literature in the Sixteenth Century*, 1954. He also wrote religious and ethical works, which include *The Pilgrim's Regress*, 1933, *The Problem of Pain*, 1940, *The Screwtape Letters*, 1942, *Christian Behaviour*, 1943, *Beyond Personality*, 1944, and *Mere Christianity*, 1952. There is a strong religious tone also in his scientific fiction, which includes *Out of the Silent Planet*, 1938, an account of an imaginary voyage to Mars, and *Perelandra*, 1943, a similar romance about Venus. He also wrote a number of delightful children's books, including *The Lion, the Witch, and the Wardrobe*, 1950, *Prince Caspian*, 1951, *The Voyage of the Dawn Treader*, 1952, and *The Silver Chair*, 1953. His long poem *Dymor*, 1926, was pub. under the name Clive Hamilton.

Lewis, Dominic Bevan Wyndham (1894- ), journalist and biographer, b. Wales. As a young man he was intended for the law, but reading for the Bar was interrupted by the First World War. He served with the infantry in France and Macedonia, and was invalided out in 1918. He decided to enter journalism, and in 1919 joined the staff of the *Daily Express*, his contributions to which under the name 'Beachcomber,' made his reputation as a satirically witty writer and deserving a place in the line of great Eng. humorists.

He left the *Daily Express* in 1924 and wrote for the *Daily Mail*, the *Sunday Referee*, and other papers. In later years he also contributed to the *News Chronicle* under the pseudonym of 'Timothy Shy.' In addition to his humorous writings, L. is a Fr. scholar and historian, having pub. studies of François Villon, 1928, and Ronsard, 1944, also biographies of Louis XI of France (*King Spider*, 1930) and of Charles V (*Emperor of the West*, 1932). His essays and humorous writings have been collected in a number of vols., including *A London Farrago*, 1922, *At the Sign of the Blue Moon*, 1924, *At the Blue Moon Again*, 1925, and *On Straw and Other Conceits*, 1927. He trans. Barbey d'Aureville's *Anatomy of Dandyism* in 1928, and in collaboration with Charles Lee compiled an anthology of bad verse, entitled *The Stuffed Owl*, 1930.

Lewis, Sir George Cornwall, 2nd Baronet (1806-63), statesman, b. London, and educ. at Eton and Christ Church, Oxford. He entered Parliament as a Liberal in 1847. From 1855 to 1858 he was chancellor of the exchequer; home secretary, 1859-61, and then secretary of state for war, 1861-3. He was editor of the *Edinburgh Review*, 1852-5, and author of many books, the most valuable of which is *Essays on the Administration of Great Britain from 1783 to 1830*, 1864. His *Letters* were ed. in 1870 by his brother Gilbert, who succeeded him in the baronetcy.

Lewis, John Llewellyn (1880- ), Amer. labour leader, b. Lucas co., Iowa, and educ. at public schools. Between 1909 and 1917 he was active in promoting the United Mine Workers of America and the Amer. Federation of Labor, and was elected president of the United Mine Workers' Union in 1920. Founder and leader of the Congress of Industrial Organisations, he organised mass unions in place of the more restricted 'craft unions' of the older system. In the presidential election of 1941 he urged Amer. labour to support Willkie, declaring his intention of resigning if Roosevelt were re-elected, his assumption being that Roosevelt was leading the country into war. The result was that he split the ranks of the C.I.O. and ensured Roosevelt's return in triumph. He accordingly resigned from the presidency of the C.I.O., but continued to exercise a strong influence on Amer. labour as president of the Mine Workers' Union. See biographies by J. A. Wechsler, 1944, and Saul Alinsky, 1949.

Lewis, Matthew Gregory (1775-1818), author, b. London. Educ. at Westminster and Oxford, he was attaché to the Brit. embassy at The Hague in 1794, and in the following year pub. *The Monk*, which attracted much attention and made its author famous. He wrote plays and poems, and his *Castle Spectre* ran at Drury Lane for 60 nights. His *Life and Correspondence* was pub. in 1839.

Lewis, Meriwether (1774-1809), Amer. explorer, b. in Virginia, was the first (with

Wm Clark) to explore the Amer. continent from St Louis to the mouth of the Columbia R. in the Pacific (1894-6). See O. D. Wheeler, *The Trail of Lewis and Clark*, 1904.

**Lewis, Percy Wyndham** (1884-1957), painter and author, b. Nova Scotia of Brit. parents; educ. at Rugby and in the Slade School. As an artist he achieved fame as leader of a school of abstract painting known as Vorticism, and founded and ed. a periodical in support of the movement (*Blast*, 1914-15). His work is represented in the Tate Gallery and the Victoria and Albert Museum, London, and in other public galleries, a comprehensive exhibition being held at the Tate Gallery in 1956. Notable portraits are those of Edith Sitwell (Tate Gallery) and T. S. Elliot (Durban). A prolific writer, he produced satirical and grotesque novels among which are *Tarr*, 1918, and *The Apes of God*, 1930, the latter a huge work in which a personal exasperation becomes magnified. He developed an authoritarian philosophy in *The Art of Being Ruled*, 1926, and produced many other polemic and critical works, full of intellectual vigour and discontent. His sight failed in the last 5 years of his life, but he continued to write, notable works being *The Demon of Progress in the Arts*, 1954, an attack on extremism, and the completion of a trilogy, *The Human Age*, which had begun with *The Childermass*, 1928, the sequels, *Monstre Gai* and *Malign Fiesta*, both 1955, being commissioned by the B.B.C. (a broadcast version was produced in the same year). Autobiographical works were *Blasting and Bombardiering*, 1937, and *Rude Assignment*, 1950. Other pubs. include *Paleface*, 1929, *The Diabolical Principle*, 1931, *Snooty Baronet*, 1932, *Men Without Art*, 1934, *The Revenge for Love*, 1937, *Count Your Dead*, 1937, *The Mysterious Mr Bull*, 1938, and *The Hitler Cult*, 1939. See G. Wagner, *Wyndham Lewis: Portrait of the Artist as the Enemy*, 1957.

**Lewis, Sinclair** (1885-1951), Amer. novelist, b. Sauk Centre, Minnesota. Graduating from Yale Univ. in 1907, he worked for a time as a newspaper reporter and then in various editorial capacities with some Amer. book-publishing firms. In 1914 appeared his first novel, *Our Mr Wrenn*, followed by a number of others, none of which had any marked success. But in 1920 there appeared his *Main Street*, which rapidly became a 'best seller.' It was recognised that here was a new force in Amer. literature, a satirist of the first order, who saw his countrymen with clear eyes. The book brought in more money to its author than he ever dreamed possible, and from then on he felt free to do the work he was all along assured was in him. In 1922 appeared his *Babbitt*, which gave Americans a new term, one with which to designate the self-satisfied Rotarian type of Amer. business man. *Martin Arrowsmith*, a picture of the medical profession, appeared in 1924. In 1927 appeared his *Elmer Gantry*, a savage satirical picture of the

professional religious revivalists. *Dodsworth*, 1929, was the fruit of his numerous trips to Europe. L.'s position in literature was consolidated when in 1930 he was the first American to be awarded the Nobel prize for literature. His other novels include *Ann Vickers*, 1933, *It Can't Happen Here*, 1935, *The Prodigal Parents*, 1938, *Bethel Merriday*, 1940, *Gideon Planish*, 1943, *Cass Timberlake*, 1945, *Kingsblood Royal*, 1948, *The God-Seeker*, 1949, and *World So Wide*, 1951. *The Man from Main Street*, 1954, is a collection of his essays, and his *Letters* were pub. in 1952. See study by C. van Doren, 1933; M. Geisman, *Last of the Provincials*, 1947.

**Lewis & Co., John**, see JOHN LEWIS PARTNERSHIP.

**Lewis, or Lewis-with-Harris**, northern-most and largest is. of the Outer Hebrides, off the W. coast of Scotland, from which it is separated by the Minch, 30 m. wide. Length, N. to S., 60 m.; greatest breadth, 30 m.; area, 770 sq. m. Lochs Reasort and Seaforth divide it into L. on the N. and Harris on the S. The coast is much indented, having Loch Erlisort and Broad Bay on the E. and Loch Roag on the W., while on the N. the headland of the Butt of L. rises to 80 ft. Much of the surface is rugged, and 2 peaks, Mealaival and Ben More, reach 1750 ft. but large tracts are swampy, and there is much peat and anet forest remains. There are many Druidic remains and ruined forts. Chief industries are crofting, sheep farming, fishing, and the hand weaving of Harris tweed. Barley, oats, and potatoes are grown. Stornoway is the only tn. Sir James Matheson owned the is. from 1844 to 1918, when Lord Leverhulme bought it with the idea of developing the is. industries, but the scheme was unsuccessful. Pop. 23,700.

**Lewis Gun**, light, portable gun introduced into the Brit. Army in the First World War and used until the Second World War as an infantry weapon. Like the Hotchkiss gun (q.v.) it is an automatic firearm, and continuity of fire is its primary function. Continuity of fire is controlled by attaching the striker to some member of the moving parts, the completion of whose forward movement is properly timed. The bullet is fired by the striker passing through a hole in the face of the bolt. The gun is fed by a circular magazine fixed horizontally over the mechanism, and holding 47 rounds. The weight of the gun (without mounting) is 26 lb., about the same as that of the Hotchkiss gun. The wear on the barrel through over-heating, and the rush of gas which forces the bullet up the barrel, is great, and a cooling system is provided by means of flanges radiating from the barrel and encased in a tubular cover. The Vickers .303-in. machine-gun has now replaced the L. G. in the Brit. Army.

**Lewis River** (U.S.A.), see SNAKE RIVER. **Lewisham** (meaning the ham or home of a person called Liofa), parl. and metro-politan bor. of SE. London. With Camberwell, on its W. side, it is one of the 2

bors. of S. London with no riv. frontage. The bor. comprises the old vils. of Lee, Bellingham, Sydenham (qq.v.), Catford, Rushey Green, Ladywell, Forest Hill, Southend, and other settlements, its 2 pars. being Lee and L. The manor of L. was granted in 918 by a daughter of Alfred the Great to the abbey of St Peter at Ghent. It is a large bor. of many residential areas, sev. open spaces, and a few industries. It returns 3 members to Parliament. Area 7015 ac.; pop. 224,200. See also BLACKHEATH.

**Lewisian**, geological name of group of

of these 2 periods are developed in Scandinavia where they form part of the Sveco-Fennid chain with which part of the L. may now be equated. See also PRE-CAMBRIAN.

**Lewisite**, 2-chlorovinylchloroarsine ( $\text{ClCH} : \text{CH.AsCl}_2$ ), a powerfully vesicant oily liquid suggested as a possible military poison gas. It can be prepared by passing acetylene through a mixture of anhydrous arsenic trichloride and aluminium chloride.

**Lewiston**: 1. City of Androscoggin co., Maine, U.S.A., on Androscoggin R.,

*Valentine & Sons Ltd, Dundee*

LEWIS: GRABHIR AND LOCH ODHAIRN

Pre-Cambrian gneisses, schists, granitic and altered basic rocks which are exposed in NW. Scotland and in the Outer Hebrides, especially in Lewis, from whence the name. Parts of the L. are 1200 million years old, but older rocks are probably present. The L. includes a few metamorphic rocks which were once demonstrably sedimentary; these are now quartzites, schists, and marbles and include the Three marble. Other sedimentary rocks may have been present but are now altered beyond recognition by metamorphism and migmatization. In its present state the L. forms a very variable complex of rocks which included both basic and acid types, though true granites, as opposed to granitic gneisses, are rare. Two periods of regional metamorphism have been detected and may date from 2 distinct orogenies in the later Pre-Cambrian. Rocks formed in the later

opposite Auburn. It is the second largest city in Maine. The riv. here falls about 60 ft., affording water power used in the manuf. of cottons, woollens, shoes, wood products, bricks, and metal products; there are also printing plants. L. is the seat of Bates College. Pop. 40,900.

**Lex Dei**, see COLLATIO.

**Lex Loci**, phrase used in private international law on the extraterritorial application of legal rights (see COMITY) to denote the principle on which the law of one country is applied to decide cases tried by the tribunals of another country. *L. L. rei sitae* denotes the principle on which questions relating to land are decided by the real property law of the place where the property is situate; *L. L. actus* denotes the law of the place where a legal transaction took place. The prin. species of the *L. L. actus* are the *L. L. contractus*, or the law of the place where

a contract was made, or its terms finally agreed upon; *L. L. delicti commissi*, or law of the place where a civil injury was committed; *L. L. solutionis*, or law of the place where a contract was to be performed. The abbreviated form, *L. L.*, is generally appropriated to the *L. L. contractus*. In the absence of express terms to the contrary, it is presumed a contract is to be performed at the place where made, and that its nature, the interpretation of its terms, and its validity generally are to be determined by the laws of that place; and where, therefore, a place of performance is specified the law of that place will govern the interpretation and validity of the contract and not the *lex contractus*; and where the law of the place of performance and that of the place where the contract was entered into differ, it is presumed that the parties intended the contract to be governed by the principles of the former. In the case of actions in Eng. courts on bills of exchange, the net results of the Bills of Exchange Act, 1882, is that the law of the place where an act is to be done is to govern the performance of that act, e.g. in the case of a Bill drawn in France and accepted in England and payable in Germany, Fr. law governs the drawing, Eng. the acceptance, and Ger. the payment.

**Lex Talionis**, law of retaliation, which finds expression in the Mosaic dispensation of an eye for an eye, etc. Something of the principle is to be found underlying Bentham's celebrated *Theory of Punishment*. Whether punishment in kind does most adequately fit the crime depends on whether one's individual theory of punishment is vindictive, retributive, deterrent, morbid, or otherwise. L. T. in modern international law includes (a) *amicable retaliation* or retaliatory acts corresponding to legal but discourteous acts of another nation (called also *retorsion de droit*), and (b) *vindictive retaliation*, or *retorsio facti*, i.e. belligerent acts in kind. See also MAIM.

**Lexicon**, see DICTIONARY.

**Lexington**: 1. Co. seat of Fayette co., Kentucky, U.S.A., 75 m. S.E. of Louisville. In the heart of the Bluegrass region, it is the third largest city in the state. It is the U.S. centre for the raising of thoroughbred horses, and an important market for looseleaf burley tobacco. It is a rail junction and a shipping centre for E. Kentucky. There are meat-packing, coffee-roasting, tobacco-processing, and printing plants, and manufs. of clothing, limestone products, cutting tools, sheet-metal products, furniture, toys, electrical equipment, and auto parts; there is also flour-milling. The tn contains Kentucky Univ. Pop. 55,534.

2. Tn of Middlesex co., Massachusetts, U.S.A., 11 m. NW. of Boston. L. is famous as the place in which the first shot of the Amer. revolution was fired. Printing and publishing are carried on, and there is an agric. industry (truck farming and nursery produce). Pop. 17,350.

**Ley, Robert** (1890-1945), Ger. Nazi politician, b. Niederbreidenbach in Hesse. He took a degree in chem. at the Univ. of Bonn, and served in the First World War, being taken prisoner in France. He joined the National Socialist party in 1924 and represented it in the Reichstag in 1932. When Hitler came to power L. was given the task of abolishing the trade unions and setting up in their place a labour organisation with himself at the head. In this capacity he was responsible for directing the labour needs of the Ger. war machine both before and during the Second World War. On 16 May 1945 he was captured by Amer. troops and eventually tried at Nuremberg as a war criminal. During the trial, however, he managed to commit suicide by hanging himself. He was notorious for his violent anti-Semitism.

**Ley Farming**, practice of growing grass as a crop and as pasture from selected seeds mixtures in a rotation, alternating with tillage crops. Earliest work on seeds mixtures was done in the 1870's. L. F. advanced in Great Britain under such pioneers as Prof. Gilchrist and Robert Elliot (Clifton Park). It received big impetus from advocacy and breeding of new and leafy strains of grasses and clovers bred at the Welsh Plant Breeding Station, Aberystwyth, by Sir R. George Stapledon; it became a key factor in food production (milk and meat) during the Second World War, and is a permanent feature of modern post-war farming. The ley is valuable to redeem marginal or poor land, to refresh worn-out permanent pastures, to provide more nutritious and heavier crops for cutting or grazing, and to leave the soil in better fertility for the taking of a tillage crop. Leys may be laid down for 1 to 6 years. Thorough cultivation by plough, disks, roller, and harrows is essential to give a fine, firm, and shallow seed bed of good tilth. Estab. depends upon rectification of any lime deficiency, generous phosphatic manuring, and the application of a soluble nitrogenous fertiliser (nitro-chalk or sulphate of ammonia) at sowing time. Main sowing dates are mid Mar. to early April, June, and late July-Aug., the earlier the more successful as a rule. Ley mixtures may be sown under corn but do better by direct sowing. Seeds mixture is determined more by usage: general purpose; mainly hay; or mainly grazing, and rainfall than by soil type; clovers, cocksfoot, timothy, and perennial ryegrass being chiefly employed, though lucerne and sainfoin are sometimes used. See R. G. Stapledon, *The Plough-up Policy and Ley Farming*, 1939; H. I. Moore, *Grassland Husbandry*, 1950.

**Leyburn**, par. and mrkt tn of the N. Riding of Yorks, England, 7½ m. SW. of Richmond, near the l. b. of the Ure. Pop. (of par.) 1281; pop. of rural dist. of L. (33 pars.) 7000.

**Leycesteria Formosa**, Himalayan Honey-suckle, or Flowering Nutmeg, hardy deciduous shrub, family Caprifoliaceae, with handsome racemes of white or purple flowers, succeeded by purple berries which

are eaten by game birds. A variety has pretty variegated leaves.

**Leyden, Lucas van** (1494-1533), *see* **LUCAS VAN LETDEN**.

**Leyden, or Leiden**, city in the prov. of S. Holland, Netherlands, on the Old Rhine, 6 m. from the N. Sea, 17 m. N. of Rotterdam, and with canal communication to both Rotterdam and Amsterdam. It is an anct. tn. Its weaving estab. were very important at the end of the 16th cent., and L. balze and L. cloth were familiar terms. These industries have declined, and linen and woollen manufs. are the most important; there is also a considerable transit trade in butter and cheese, and the tn is a centre of the bulb-growing industry. But in spite of these industries L. is essentially an academic tn. and contains the most important univ. of the Netherlands. It was founded in 1575 as a reward to the inhab. for their courageous defence against the Spaniards in 1574, and was for a long time one of the most famous schools of Europe, numbering among its profs. Salmasius and Grotius. Connected with the univ. is a library containing over 200,000 vols., and some very important oriental and Gk MSS.; the botanic garden, founded in 1587; the observatory (1860); the museum of natural hist.; and the National Museum of Antiquities. The 14th-cent. Church of St Peter contains the tomb of John Robinson, who was pastor of the Pilgrim Fathers (q.v.). Many famous Dutch painters, among them Lucas van Leyden and Rembrandt, were b. in L., and the Lakenhal Municipal museum contains a large collection of their works. Pop. 93,800.

**Leyden Jar**, early type of electrical condenser consisting of a glass jar coated inside and outside with tinfoil. The outside is usually earthed. *See* **ELECTROSTATICS** and **CAPACITOR**.

**Leydenburg, or Lydenburg**, one of the oldest tns in the Transvaal (q.v.), cap. of L. dist. and situated on the Dorps R., a trib. of the Olifants, 144 m. ENE. of Pretoria. L. gets its name from the fact that the early Voortrekkers from Potchefstroom to Ohrigstad were so stricken with fever that they moved 30 m. S. and called their next settlement 'L,' or 'the place of suffering.' Near L. the first gold-mining area in the Transvaal of any size was discovered; formerly the area was rich in alluvial gold deposits, but the importance of these has now been superseded by platinum. The tn does a thriving trade in agric. produce. The first Dutch Reformed church, built in 1864, is now a museum of Voortrekker relics. L. was for 11 years an independent rep. until its amalgamation with the Utrecht Rep. (1858). In the L. dist. are 2 of the highest mts in the Transvaal, Mt Anderson and Mt Mauchberg, and the dist. is better provided with rvs. than any other dist. in the prov. Pop. (tn): Europeans, 2362; Bantu, 2041; Coloured, 103; Asiatics, 139.

**Leyland**, urb. dist. and tn of Lancs, England, 4½ m. S. of Preston. It has cotton-mills, bleaching yards, and manufs.

of paint, rubber products, and motor vehicles. Pop. 16,800.

**Leys School**, The, Cambridge, public school for boys, founded in 1875 by leading Methodists who wished to provide a public school of an undenominational Christian character.

**Leyte**: 1. Prov. of the Philippines, including the is. of L. and over 7000 is. and islets with a total land area of 114,830 sq. m. The is. of L. (2785 sq. m.) is a detached peninsula of Samar, from which it is separated by the strait of San Juanico. The coasts are high and there are good natural harbours. Abacá, sugar, hemp, rice, and coco-nut oil are produced, and the mineral wealth includes manganese, oil, and sulphur. The cap. is Tacloban. It is the eighth largest of the Philippine Is., and became of great strategic importance (possessing 8 airfields) in the fighting in the SW. Pacific during the Second World War. Occupied by the Japanese in 1941, it was recaptured in 1944, following large-scale landings by U.S. forces on 20 Oct. The Japanese were finally driven out by 23 Dec. 1944. Pop. 835,532. *See* **PACIFIC CAMPAIGNS IN THE SECOND WORLD WAR**.

2. Tn on N. coast of above is., on L. Bay. 36 m. NW. of Tacloban. Pop. 20,559.

**Leyton, bor.**, forming a residential and industrial suburb of the metropolitan area of Essex, England, on the l. b. of the Lea. The bor. includes also the dist. of Leytonstone to the E. Saxon and Rom. remains have been found in the vicinity. L. has the Essex C.C. ground. Pop. 105,183.

**Lezaky, see** **LIDICE**.

**Leze-majesty, or Lese-majesté** (Norman-Fr., from Lat. *laesa majestas*, high treason), in jurisprudence, refers to any crime committed against a sovereign power. Amongst the Romans it denoted political misdemeanours, acts of rebellion, and similar offences against the majesty of the empire. It is now frequently used in a general sense as a term for an insult. *See* **MAJESTY**.

**Lezgians** (formerly also called Kyurins), the best known of the Caucasian-speaking peoples of Daghestan (q.v.); they live also in N. Azerbaijan. Most L. also speak Azeri. They numbered 134,000 in 1926, and are Suni Muslims, mostly peasants, now collectivised. Their cultural centre is Derbent (q.v.). L. formed sev. khanates semi-independent from Persia in the 18th cent., which came under Russian rule between 1800 and 1830. The name L. was often used in the past to denote all the mt peoples of Daghestan.

**Lhasa, or Lhasa** (the 'Holy Land'), cap. of Tibet, 29° 39' N., 91° 5' E. It is situated on a fertile plain, 11,830 ft above sea level, and is surrounded by barren hills. A little to the S. flows the Kyiohu or L. R., which empties into the great Tsangpo (Yalutsangpo), some 40 m. to the SW. Though it is only 360 m. by road from Darjeeling, until the Brit. armed mission of 1904 advanced into the interior of Tibet for the purpose of arranging a commercial treaty, only one European,

Thomas Manning, an emissary of Warren Hastings, had penetrated to this 'forbidden city.' Before the Chinese Civil War of 1947-9 there was a Nationalist high commissioner in L., under the Tibetan-Mongolian Affairs Commission of the Executive Yuan (Cabinet). L. has been the seat of the Dalai Lama who rules Tibet by virtue of his position as supreme head of the Lamaist Church. When the Chinese Communist Army marched into Sikang in 1950, the Dalai Lama fled to India, while the alternative head, the Pachen Lama, proclaimed his allegiance to the People's Gov. in Peking. The Dalai Lama was later persuaded to return to L.

been estab. in the city, and it is cleaner than before. Considerable irrigation work done by the Chinese Army has expanded the arable area of the Kyichu valley with terraced fields on the hillside. L. is now cap. of the prospective Tibetan Autonomous Region which is being planned by a commission headed by the Dalai Lama. In 1954 both the Dalai Lama and the Pachen Lama were elected representatives to the first National People's Congress, and vice-chairmen of the Congress.

*Description.* The city can now be entered by 3 main roads: from the E. by the Szechwan-Tibet road which leads to the railway junction in Chengtu, from the

THE POTALA, LHASA

E.N.A.

and his representatives were sent to Peking to negotiate. Together with the Pachen Lama, agreement was reached in May 1951 between the Peking Gov. and the L. authority on the peaceful liberation of Tibet. In the autumn of 1954 two trunk roads, one from Yaan (1400 m. to the E.) and the other from Sining (1300 m. to the N.E.), reached L., linking the city with the rest of China. Another road was built from L. to Gyantse and Yatung via Shigatse in 1955. The original pop. of 50,000 has been greatly increased and trade revived with the opening to traffic of the 2 trunk roads. The inhab. include Tibetans, Chinese, Mongolians, Nepalese, and Ladakis. Most Tibetans are engaged in weaving stuffs from yak and sheep wools, but the potters also form a busy class, and the Nepalese are excellent gold- and silversmiths. The Muslims in the city are astute tradesmen. In recent years modern hospitals, schools, dept stores, a power station, and a People's Bank have

N. by the Chinghai-Tibet road which leads to the railway junction in Lanchow, and from the W. by the L.-Gyantse road which leads to India, the last being the old route by which Europeans and Indians approached the city. This route, the picturesque Pargo Kaling, lies between 2 eminences, the Chagpori, crowned by a fort and the lamas' medical college, and the other on which is built the splendid 13-storey Potala palace of the Dalai Lama. The Potala is a majestic mountain of red and white buildings covering a rock hill from top to bottom with its terraces, its buttressed battlements, and many-windowed walls. It is approached on either side by a broad stone stairway which zigzags up to the outward-sloping walls. The Jo Khang, or Great Temple of the Jo (Buddha), in the centre of the city is the prin. religious edifice and is a mile away from the Potala. The splendour of its exterior is largely hidden by surrounding houses, so that only a cluster of squat

buildings with glittering gilded roofs can be seen, but within are found jewelled lamps, highly wrought gold and silver vessels, and richly decorated chapels, images, and shrines. The private houses are built of stone or sun-dried brick; white-wash and bands of red and yellow enter largely into their colour scheme. L. is a refuge of monks and lamas. There are monasteries in the city, but the most famous lie some few miles distant. Of the latter, the oldest extant in Tibet is the Samye, founded in 770, situated 36 m. to the SE. on the l. b. of the Tsangpo. The Ganden, 25 m. to the E. of the city, on the other side of the Kyichu, is the oldest temple of the Yellow Sect founded by Tsongkhapa (1358-1418), whose marble tomb containing his body and the golden shrine impressed with his hand- and foot-prints are the treasure of the Tibetans. The Debung ('Bras Spungs'), 6 m. W. of L., with its 8000 monks, is the largest monastery and is also known as the 'Mongol Convent.' The Sera, 3 m. N. of L., is the resting-place of the Thunderbolt, symbol of strength.

**History.** L. was the cap. of the T'uphan state during the T'ang dynasty. Princess Wen-ch'eng of the T'ang was married to King Srongtsan-Gampo, who flourished in the 7th cent. and taught the Tibetans Buddhism. In 822 a peace pact was made between the Tibetan king and the Great T'ang emperor and it was inscribed on a giant monolith which is extant in the city. From that date the monarchy declined and yielded to a state of chaos; central authority was no longer respected and every town was under the control of its own priests. In the 14th cent. Tsongkhapa, a native of Kamsu, succeeded in unifying the Lamaist Church by founding the Yellow Robe Sect which did away with much of the primitive nature of the old Red Robe Sect. Tsongkhapa's 2 great disciples, Kengtunchupa and Kherchunima, were respectively the first Dalai Lama and Pachen Lama. Since the days of Ngawang Lopzang, the 5th Dalai Lama (d. 1681), his successors have dwelt in the Potala and ruled the Tibetans. See P. Landon, *Lhasa, the Tibet Expedition*, 1903-4, 1906; E. Candler, *The Unveiling of Lhasa*, 1910; A. David-Neel, *My Journey to Lhasa*, 1927; F. S. Chapman, *Lhasa, the Holy City*, 1938; articles on Tibet and Lhasa in *China Reconstructs*, 1953-5. For other reference books see bibliography under TIBET.

**Lherzolite**, in petrology a fine-grained, dark green or black rock, often granulitic, and consisting of olivine, chrome-diopside, and enstatite, and accessory picroite or chromite, and belonging to the peridotites. First described from Lherz, in the Pyrenees.

**L'Hôpital**, Guillaume François Antoine (1661-1704), Marquis de Sainte-Mesme and Comte d'Autremont, Fr. mathematician, b. Paris, entered the army, but was obliged to leave it on account of defective sight. He had always studied mathematics with great zeal, and in 1692 made the acquaintance of John Bernoulli, from

whom he learnt the principles of the infinitesimal calculus. His works include *Une Théorie des courbes mécaniques*, 1693, *L'Analyse des infiniment petits*, 1696, the earliest systematical treatise on the differential calculus; *Traité analytique des sections coniques*, 1720, *Les Lieux géométriques*, and *La Construction des équations*.

**L'Hôpital**, Michel de (c. 1504-73), Fr. statesman, b. Aigueperse, Auvergne, studied law at Toulouse and Padua, and became an advocate in Paris in 1534. He rapidly rose to a position of high authority, becoming successively auditor of the Rota at Rome, counsellor of the Parlement of Paris, ambas. for Henry II at the Council of Trent (1547-8), steward in the household of the Duchess of Berri, superintendent of finances (1554), member of the Council of State (1559), and chancellor of France (1560). He resigned in 1568, his moderation having brought him into disfavour with the Guises. See A. E. Shaw, *Michael de l'Hôpital and his Policy*, 1905.

**Lhotse**, Himalayan mt 2 m. S. of Everest; height 27,890 ft. The world's fourth highest peak, it was climbed in 1956 by the Swiss Fritz Luchsinger and Ernst Reiss. L. has 3 tops above 27,000 ft forming a sharp SE. ridge which is the frontier between Tibet and Nepal. L. is linked to Everest (q.v.) by its N. ridge which falls 2000 ft to Everest's S. Col.

**Li**, Chinese measures of length; 1 L. = .3579 Eng. m. Also one thousandth part of a liang (see TAEI).

**Li-hsi**, King of Korea, came to the throne in 1864. Before the war of 1894-5 he made 2 unsuccessful attempts (1882 and 1884) to reject Chinese suzerainty over Korea. He was of a somewhat weak and vacillating character, and was largely influenced by the Russian agent residing at Seoul. In 1897 he renamed Korea 'Daihan,' and was proclaimed Emperor of Korea; but in 1910 the country was formally annexed by Japan.

**Li Hung Chang** (1823-1901), Chinese statesman, b. Hefei in Anhui. In 1865 he became governor of Kiangsu prov., and on the outbreak of the Taiping rebellion in 1866 again took the field and ultimately succeeded in suppressing the movement, with the aid of Gordon's forces. He subsequently became the Viceroy of Tientsin, which position he held till his death. At the time of the war with Japan Li was in a position of great responsibility. He recognised the necessity of reorganising the Chinese forces to meet the threatening encroachments and rising influence of Japan, and under his supervision both army and navy were greatly strengthened. Nevertheless the Chinese forces were routed, and in 1895 the emperor sued for peace, Li being sent to negotiate. In 1896 he represented the emperor at the coronation of the tsar. He died shortly after the conclusion of the Boxer movement, the peace being mainly brought about through his exertions.

**Li Po**, see CHINESE LITERATURE.

**Lia Fail**, see INNISFAIL.

**Liadov**, Anatol Konstantinovich (1855-1914), Russian composer, b. St Petersburg, where he studied at the Conservatory under Rimsky-Korsakov. In 1877 he became a teacher there. He wrote especially well for the piano, but also composed orchestral works which made him a distinguished member of the national Russian school.

**Liakhov Islands**, see NOVOSIBIRSKIYE.

**Liana**, or **Liane**, term for kinds of tropical climbing plants, which are very numerous where there is high temp. and abundant moisture; it is estimated that there are at least 2000 varieties. L.s. are a most conspicuous feature of tropical forests, twisting their snake-like coils round trees, hanging in festoons from bough to bough, and breaking into a wealth of blossom where they attain the sunlight. The term is sometimes extended to all climbing plants, which are divided into 4 types: scramblers, such as the bramble and the rattan palm; climbers, of which ivy is an example; twiners, like wistaria and honeysuckle; and tendrill climbers, of which the vine is typical.

**Liang**, see TAEI.

**Liaoning**, prov. of Manchuria, China, one of the 3 NE. provs.—L., Kirin, and Helungkiang—which comprised Manchuria. It lies in the S., with Korea on the SE. and Hopei and Jehol on the W. Its important tns are the cap. Mukden (Shenyang), Liaoyang, Chinchow, Fushun (a coal-mining centre), Penki (where there are iron deposits), and the industrial city of Anshan, which produces half of China's steel. Port Arthur lies at the S. extremity. The prov. produces coal and iron, wheat, millet, soya-beans, and fruits. The apple crop in 1956 amounted to 180,000 tons. Area 92,165 sq. m.; pop. (1954) 18,545,147.

**Liaotung**, peninsula of Manchuria in the extreme S., forming part of Liaoning prov. The Gulf of L. is on the W. and Korea Bay on the E. At the S. tip of L. is Port Arthur. Fuh sien is an important tn.

**Liaoyang**, city of Manchuria, lies in the prov. of Liaoning, between Mukden and Port Arthur. It was the scene of a great Russian defeat in 1904, when it fell into the hands of the Japanese. Pop. 100,000.

**Liaquat Ali Khan** (1896-1951), Indian politician, b. E. Punjab, second son of a wealthy landowning family, which claims descent from the Persian king Naushervan the Just, and is said to have gone to India 5 cents. ago. From 1919 to 1922 he was in England, and after taking a law degree from Exeter College, Oxford, he was called to the Bar by the Inner Temple. In 1926 L. was elected to the United Provs. Legislative Council, where he sat for 14 years, 6 of them as deputy president and leader of the Democratic party. In 1940 he was elected to what was then India's Central Legislative Assembly and became deputy leader of the Muslim League. Through his long and close association with Jinnah (q.v.) he was destined to play a leading part in the negotiations which culminated

in the partitioning of India into 2 dominions. In 1946 he was appointed a member of the Viceroy's Executive Council and leader of the Muslim League in the Interim gov. In this gov. he was the first Indian finance minister and presented the Indian budget of 1947-8. He became Prime Minister and minister of defence of Pakistan when the new dominion was estab. He took part in the Brit. Commonwealth Conference of April 1949 which discussed the commonwealth status of India. He was assassinated at Rawalpindi, 16 Oct. 1951.

On the death of Mr Jinnah in 1948 L. became automatically the foremost surviving leader of the Muslim League. In that position he showed real statesmanship, and set Pakistan firmly on the road to independence and progress. His loss was a calamity.

**Libanius** (AD 314-c. 393), Gr rhetorician, b. Antioch of a wealthy pagan family. Having studied at Athens, he taught at Constantinople, Nicomedia, and Antioch. Though a keen supporter of Julian the Apostate, he remained on friendly terms with his former pupils SS. John Chrysostom, Basil, and Gregory of Nazianzus. His writings, in spite of their defects, are a valuable source for the political and cultural hist. of his age. His collected works were ed. by R. Förster (12 vols.), 1903-23. They include 1600 letters and numerous rhetorical exercises. See R. A. Pack, *Studies in Libanius*, 1935; G. Misch, *A History of Autobiography in Antiquity* (trans.), vol. II, 1950.

**Libanus**, see LEBANON, MOUNT.

**Libation**, a drink-offering of wine or other liquid poured out in honour of a deity. Sacrifices were often accompanied by L.s. and the Romans at their meals made drink-offerings to their household gods. So too the Jews poured oil or wine upon their altars.

**Libau**, or **Libava**, see LIEPAJA.

**Libavius**, Andreas (1540-1616), Ger. chemist, b. Halle; became director of the gymnasium at Coburg. L. wrote an important treatise on chem. (*Alchymia recognita*, 1597) and designed the first chemical (as opposed to alchemical) laboratory; he discovered stannic chloride, SnCl<sub>4</sub>, and developed a rudimentary system of chemical analysis.

**Libel**, see DEFAMATION.

**Libellati**, Christians who evaded the persecution of Decius (AD 250) by obtaining *libelli*, i.e. official statements that they had sacrificed to the gods, and that the charge of Christianity was unfounded. The L. were reckoned as apostates (*lapsi*) and excommunicated for life; but there were so many that this discipline was gradually modified. The relaxation caused a schism of the rigorists under the anti-pope Novatian (251).

**Libellula**, typical genus of the family Libellulidae, or dragon-flies (q.v.). Named by Linnaeus (q.v.) from the supposed resemblance of the expanded wings to an open book.

**Liber**, Rom. deity identified with Dionysus when the Hellenic cult of

Demeter spread to Italy. Originally the It. god of fertility, and especially of the vine, he was called L. from the unrestrained character of his worship. A temple to L., Libera, and Ceres stood near the Circus Flaminius, and a festival, called the 'Liberalia,' was held in Rome on 17 Mar. In rural parts a feast to L. and Libera (Gk Persephone) was held at the vintage, the first fruits of which were offered up, with cakes of meal, honey, and oil. At the Liberalia youths used to lay aside the *toga praetexta* and assume the *toga libera*, or *virilis*. See Ovid, *Fasts*, iii.

**Liberal Regis** (Valor Ecclesiasticus), book compiled in 1535 on the eve of the Reformation, which contains an account of the valuation of all the eccles. property of England and Wales. The authorisation for the work was an Act providing for the payment to the king as the supreme head of the Church of England, not only of first-fruits and benefices, but of one-tenth of the entire property of the Church. Queen Anne, by giving up first-fruits and tenths to trustees, who were empowered to administer them for the benefit of the poorer clergy, made them part of the fund since known as Queen Anne's Bounty.

**Liberal Party, The.** Liberalism is a belief in the value of human personality, and a profound conviction that all human progress has been due to the free exercise of men's powers: the rate of that progress always depends upon the degree of emancipation from unnecessary restrictions upon freedom of thought and action. The long uphill struggle for political and civil liberty in the 19th cent. was waged by the L. P.—the lineal successor of the historic Whig party—under the inspiration and leadership of, among others, Bentham, Bright, Cobden, J. S. Mill, and W. E. Gladstone (q.v.), the latter being 4 times Liberal Prime Minister. For 30 years before the passing of the 1832 Reform Act there had been no social reform in spite of widespread distress. Before the Reform Act there were fewer than half a million electors: many members of Parliament sat for 'rotten bors,' and seats were openly bought and sold. Gladstone said in 1860: 'The practice of the old Parliamentary Constitution of England to carry forward enfranchisement from time to time ceased in 1688.' Under Gladstone's slogan, 'Peace, Retrenchment, and Reform,' Victorian Liberals were primarily concerned with liberating trade, and estab. civil and political liberty. Universal male suffrage was achieved in 1884. Abroad slavery was abolished, and the whole character of the Brit. Empire transformed. Liberals believed that with safeguards against arbitrary powers and control of gov. in the hands of the people instead of a single class, individual energy and enterprise would, if left alone, bring well-being to the whole community. It soon became apparent that much more than the mere removal of restrictions was necessary if real liberty was to be achieved, and that the community, acting through the State, must assume responsibility for ensuring

healthy conditions of life and work, educational facilities and safeguards against undeserved insecurity and poverty. The provision of these things was a large part of the work of Liberalism during the second half of the 19th cent and the first part of the 20th. They were the subject of a long series of Public Health Acts, Factory, Housing, and Educational Acts, and immense expenditure upon hospitals, drainage, schools, and univs. The Liberal gov. of 1906-14, under Prime Ministers Sir H. Campbell Bannerman and Asquith (later Lord Oxford and Asquith), placed a great code of social legislation on the statute book, including old age pensions, national insurance, minimum wages, trade boards, etc. The 1911 Parliament Act broke the traditional power of the House of Lords to veto reform legislation, Home Rule for Ireland, taxation of land values, and other Liberal reforms were frustrated by the First World War.

**Modern Liberalism.** Though out of office since 1918 the L. P. is still the acknowledged champion of the rights of the individual and the essential freedoms. It was the first political party to advocate family allowances and to support the Beveridge report, and has made valuable contributions to economic and social thinking. David Lloyd George and Clement Davies (q.v.) were outstanding champions of Liberalism in this period. To-day in Parliament the L. P.'s 5 members (1957), under the leadership of Joseph Grimond (married to Asquith's granddaughter), are the only check against domination by the big party machines of Left and Right. Under the present electoral system—1 representative for each constituency—Parliament does not reflect the true value of voting forces in the country. In 1950 a Liberal vote of over 2½ million returned only 6 Liberal members. Electoral reform is to-day still a plank in the programme of the L. P. In 1958 there was a notable swing to Liberalism in the by-elections, and the seat at Torrington (q.v.) was won from the Conservatives. See INDIVIDUALISM.

**Liberal Unionists, see** POLITICAL PARTIES.

**Liberalitas Juliae, see** EVORA.

**Liberation of Labour Group,** one of the first Russian Marxist organisations, set up in 1883 by the former Populists (see POPULISM) Plekhanov (q.v.) and P. B. Akselrod, who lived in emigration in W. Europe. They did much to popularise Marxism in Russia. In 1900 they joined forces with Lenin against Reformism and Economism (q.v.; see also ISKRA). The group was dissolved in 1903.

**Liberec:** 1. Region (*krať*) in NW. Czechoslovakia, bordering on Germany and Poland, part of the former prov. of Bohemia (q.v.). It contains part of the Sudetic Mts (q.v.). Area 1635 sq. m.; pop. 480,000.

2. (Ger. *Reichenberg*) Czechoslovak tn, cap. of the region of L., on the Neisse (q.v.). It has a folk museum, and manufs. chemicals and textiles, for the latter of which it has been known since the 16th cent. Pop. 52,800.

**Liberi, Pietro** (1605-87), called 'Il Libertino', It. painter, b. Padua, studied under Padovanino. His paintings exhibit great variety of subjects and treatment, though he gained his nickname from his naked Venuses in the manner of Titian.

**Liberia**, Negro rep. in W. Africa, lying between the Brit. colony of Sierra Leone on the NW., the Fr. colony of the Ivory Coast on the E., and Fr. Guinea on the N., and extending some 350 m. along the N. coast of the Gulf of Guinea, with the R. Mano on the W. and the Cavalla on the E., navigable for 50 m. From time to time the boundaries of the Liberian frontier have been marked out by Franco-Liberian treaties, and the present demarcation was fixed in 1911. The chief headlands are Cape Mount, 1050 ft above sea level, with the lagoon known as Fisherman Lake at its base, Cape Montsenado, 350 ft, and Cape Palmas, 200 ft above the sea. The area is 43,000 sq. m. Monrovia is the cap., and there are 9 ports of entry. The coastal plain is narrow except in the W.; in the E. the land rises to Mt Kibi Daudi (2296 ft). The civilised region stretches, about 20 m. in width, along the coast; further inland is unexploited, little explored forest. The prin. rivs., besides the above mentioned, are the Cestos, of which the Nuon has been discovered to be the upper course (1908), the St John, and the St Paul. Most of these have rapids or falls which prevent navigation. The hinterland is composed of vast forests; the Nidd forest, possessing *Puntumia* rubber trees, is being actively developed with Amer. capital as a source of natural rubber. In 1954 the Goodrich Rubber Co. was granted an 80-year concession to produce rubber. The Firestone Plantations Co. already has large plantations employing 25,000 men and producing (1953) 30,000,000 lb. of rubber, and 41,640,640 lb. of latex. The Firestone concession covers 1,000,000 ac. of which, in 1952, 81,259 ac. were planted. A further 25,400 ac. were under production in 1953. So far little has been done with regard to the mineral wealth: there are indications of gold in most of the rivs., also of bitumen; sapphires have been found, corundum being met with in many places; lead and iron are also found. Iron is being worked and gold-mining is increasing. Some diamonds are found, and when illicit diamond-mining was at its height in Sierra Leone, it was known that the bulk of these stones was smuggled to the international markets through L.

KOTONIS, COTON, COTON, DISSAVA, KOTONIS, and Ivory are produced and exported. There are about 400 m. of state roads, and 195 m. of private roads in the rubber plantations. With lend-lease (q.v.) aid the road system was extended into the interior. There is an airport at Robertsfield, and services are run by Air France and Pan-Amer. Airways. A light railway, built in 1951, connects Monrovia with the Bomi Hills iron ore mines (40 m.).

In 1821 the Amer. Colonisation Society

selected Cape Montsenado as a refuge for the Amer. freed Negro slaves, and from that time onward they continued to be sent there. The Amer. colony was founded by Jehudi Ashmun between 1822 and 1828, the name L. being given it in 1824 by the Rev. R. R. Gurley. Until 1857 there were 2 reps., L. and Maryland. Troubles on the frontier led eventually to an Amer. commission being sent to L. by President Roosevelt in 1908, and this resulted in Amer. supervision of the finances, military organisation, and the boundary question. The rep. is now governed by a president, elected for 8 years, a House of Representatives, and a Senate, its constitution being modelled on that of the U.S.A. There are local magistrates, courts of common pleas, quarterly courts (5), and a supreme court. There is a gov. college at Monrovia, and about 200 schools, of which the greater part is maintained either by the gov. or by missions. The official gov. language is English. The total pop. is about 1,000,000, which includes the Kru Mandingo, Gola, and Kpwele tribes. The Mandingos are Muslims, and the other tribes are mostly pagan. The Americo-Liberian pop. numbers about 12,000. About 60,000 of the Negroes on the coast are said to have been converted to Christianity. Until L. declared war on Germany in 1917 about 70 per cent of her trade had been in Ger. hands. L. was one of the signatories of the treaty of Versailles, and an original member of the League of Nations. In 1927 the U.S.A. arranged a loan of \$5,000,000, with which the previous loan (1912), mainly British in origin, was paid off. As a result of an International Commission of Inquiry on Slavery and Forced Labour, the Liberian Gov. decided to adopt various suggestions and recommendations for social reform, and requested the co-operation of the League of Nations to that end. But in 1939 natives from L. were still being taken to the Sp. is. of Fernando Po to work in the cocoa plantations under conditions which savoured strongly of slavery. During the Second World War agreements between L. and the U.S.A. in 1942 and 1943 led to America undertaking considerable development in the country from the point of view of defence and communications. L. finally declared war on Germany and Japan on 26 Jan. 1944. In this year an Amer. mission was sent out to further the economic development of the country. See C. H. Huberich, *The Political and Legislative History of Liberia* (2 vols.), 1947, and *The Liberian Year Book*.

**Liberia** (Costa Rica), see GUANACASTE. **Liberius**, St (352-66), Pope, who succeeded Julius I. He was banished to Thrace (355) by Emperor Constantius for refusing to excommunicate Athanasius. About 357 he was allowed to return to Rome, whereupon Felix II, who had been installed in his absence, retired. It has been asserted, and some historians still hold, that L. signed the Arian 'Second Formula of Sirinium' as the price of his

liberation. He later condemned even the mitigated 'Third Formula' (360). See L. Duchesne in *Mélanges de l'école française de Rome*, xxviii, 1 and II, 1908, and J. Chapman, 'Contested Letters of Pope Liberius' in *Revue Benedictine*, 1910.

**Libertad, or La Libertad:** 1. Dept in the SW. of Salvador (q.v.), traversed by mts. The Pacific Ocean forms the S. boundary and the port of La L. lies on it. There are crops of rice, coffee, sugar, etc., which constitute a considerable export trade, and there are also silver- and gold-mines. Area 840 sq. m.; pop. 165,200.

2. La L., port of the above prov., on the Pacific, 16 m. SSW. of Nueva San Salvador, and 23 m. from San Salvador itself. Most of Salvador's imports enter the country by this port. It is a popular resort, and noted as a trading centre on the 'Balsam Coast.' Pop. 3500.

3. Maritime dept of NW. Peru, with Ancash to the S. and Lambayeque to the N. The W. Cordillera traverses the dept from NW. to SE. The short rivs. are useful for irrigation. Large quantities of sugar are produced, and coffee, cocoa, rice, and other crops are cultivated. Mineral products include silver and gold, and there is much timber. Trujillo is the cap. Area 10,201 sq. m.; pop. 481,440.

'Liberté,' quadruple-screw turbine passenger liner of 51,839 tons gross, the largest in the Fr. merchant fleet and flagship of the Fr. line. She was built as the Norddeutscher Lloyd's *Europa* in 1928, and in 1930 made an Atlantic crossing at 27.91 knots, taking the Blue Riband from the old Cunarder *Mauritania* (26.85 knots). In 1945 she was taken over by the Allies as war reparations and was ultimately ceded to France, entering the Atlantic service in 1950.

**Liberton,** Scottish vil., now part of the city of Edinburgh (q.v.). It has an anct par. church; in the neighbourhood are quarries and coal-mines.

**Liberty, Equality, Fraternity** (Fr. *liberté, égalité, fraternité*), motto of the Fr. rep., dating from the first revolution, when it was adopted as a political confession of faith, embodying the main teachings of the social philosophers of the 18th cent. By 'equality' was meant merely equality for rich and poor in the eyes of the law and the absence of class privileges.

**Liberty Bell,** bell cast in London in 1752, with the motto 'Proclaim liberty throughout the land unto all the inhabitants thereof.' It was rung on the occasion of the adoption by Congress of the Declaration of Independence. In 1835 it cracked, and now is preserved as a historic relic in Independence Hall, Philadelphia.

**Liberty Loans,** name given to the internal loans raised in the U.S.A. during the First World War. There were 4 separate issues of these loans during the war, and after the armistice a fifth, known as the Victory Liberty Loan. The Amer. people subscribed some \$24,000,000,000, and nearly one-quarter of the pop. of the country became owners of this scrip. All the bonds were issued

at par, some of them being as low in value as \$50. The first issue bore interest at 3½ per cent, the fifth at 4½ per cent. The fourth loan, which was the biggest raised by any country during the war, brought in \$7,000,000,000. Every loan was oversubscribed.

**Liberty of the Press,** see PRESS, FREEDOM OF THE.

**Liberty Party,** Amer. political anti-slavery party, founded 1840. It opposed the annexation of Texas. Its last convention was held in 1847. In 1848 it merged with anti-slavery Whigs and Democrats to form the Free-Soil party.

**Liberty Ships,** name given to cargo vessels of 7100 gross tonnage built by assembly of prefabricated material under the auspices of the U.S. Maritime Commission. The original programme in 1941 consisted of 200 ships for Lend-Lease purposes. In 1942, after the Jap. attack on Pearl Harbour, the programme was expanded, and in the peak year in 1943 over 1200 L. S. were completed in U.S. dockyards. The vessels were capable of a speed of 11 knots, some being coal burning, some oil. Dimensions: length 441 ft 6 in.; beam 56 ft 10 in.

**Librum Veto** became an integral part of the Polish constitution in the earlier half of the 17th cent. It was adopted in the diet by the *szlachta*, or lesser nobility. Any one of them might veto any measure introduced into the diet, and thus ensure the diet's dissolution. The L. V. was first used in 1652, and was finally abolished in 1791, having contributed much to the downfall of the independent Polish state.

**Libido,** see PSYCHOLOGY.

**Libitina,** Rom. goddess of funerals, whose temple at Rome contained all the symbols of mourning. The door through which wounded gladiators were carried from the arena was called the Gateway of L.

**Libmanan,** tn of the Philippine Is., situated in the Camarines Sur prov., Luzon. It is a trade centre. Pop. 43,482.

**Libocedrus,** genus of evergreen conifers, family Pinaceae, 9 species, of which *L. decurrens*, Incense Cedar of Oregon; *L. chilensis*, Chilean Cedar of Chile; and *L. plumosa*, Kawaka of New Zealand, are sometimes grown in mild dists. in Britain.

**Libonia,** winter-flowering greenhouse plants, natives of tropical America, now included in the genus *Jacobinia*.

**Libourne,** Fr. tn, cap. of an arron., in the dept of Gironde, at the confluence of the Dordogne and the Isle. One of the anct free tns founded by the English (c. 1269) it became a thriving city, and is still a busy riv. port. It has wine and ship-building industries. Pop. 20,200.

**Libra, or the Balance:** 1. Seventh sign of the zodiac (q.v.), which the sun enters about 23 Sept. In the older Gk writers the Scorpion occupies 2 constellations of the zodiac, or rather the body of the animal occupies one and the claws, *chela*, another. — the *chela* were certainly a part of the Scorpion, yet they are often mentioned (as by Aratus, for

instance) by themselves, as if they formed a distinct constellation. The word *chela* had sev. significations; so that it may have been by simple mistranslation that the Romans (according to Hyginus, Virgil, etc.) gave the name of L. to the part of the leaves in question, and drew back the claws of the Scorpion to make room for the scales. L. is surrounded by Scorpius, Ophiuchus, Virgo, Centaurus, and Lupus, and contains the third magnitude star  $\alpha$  Librae, with a companion of fourth magnitude, 230" distant, easily seen with binoculars.

receive a copy of every book pub. in the U.K. (see COPYRIGHT LIBRARIES). Specialised national collections are maintained at the Science Library (over 390,000 vols.) which provides, in addition to the finest reference collection of scientific and technical literature, an information and bibliographical service; the Victoria and Albert Museum Library (300,000 vols. on the arts); the Natural Hist. Museum (300,000 vols.); and the Patent Office (360,000 vols. and 100,000 patent specifications).

The Univ. L. contain a substantial part of the world's recorded knowledge, pride

2. Rom. unit of weight, and a unit of value, hence the Eng.  $\mathcal{L}$ . Lat.-Amer. countries, Spain, and Portugal still use the term for a unit of weight.

**Libra (Roman), see METROLOGY.**

**Libraries.** Many of the great L. of the world receive separate entries in this encyclopaedia; here is given a brief account of the different types of L. in Great Britain other than Public L. (q.v.) and the outstanding L. of other countries, both public and private.

**UNITED KINGDOM.** Three L. serve as national collections, the Brit. Museum (q.v.), the National Library of Scotland (q.v.), and the National Library of Wales (q.v.). These L. are deposit L. under the copyright laws, and together with the Bodleian Library (q.v.) and Trinity College (Dublin) Library are entitled to

of place being accorded to the Bodleian Library in Oxford. The Univ. Library of Cambridge (with over 2,000,000 vols.) dates from the 15th cent. and is now housed in a magnificent modern building, while the comparatively recent library of the Univ. of London (founded 1837), containing some 580,000 vols. is also in a spectacular new building, whose central tower containing the book-stacks rises above the roof-tops of Bloomsbury. It is augmented by the L. of the London School of Economics (the Brit. Library of Political and Economic Science, 975,000 vols.), as well as such specialised L. as those of the Institute of Advanced Legal Studies and the School of Oriental and African Studies. Of the many fine old college L. should be mentioned Christchurch at Oxford and Trinity College,

Cambridge. Of the Scottish univ. L. the earliest is at St Andrews, founded in 1456, while Edinburgh Univ. Library was estab. in 1580. New L. have been built at the univs. of Leeds, Manchester, and Southampton, among others.

Of the learned societies the first 2 to be mentioned are the L. of the Royal Society, founded in 1660, and the Royal College of Physicians, founded in 1518, and now containing a reference collection of 40,000 vols., not all on medicine. The Royal Institution (55,000 vols.) concentrates on the sciences in general, while others, such as that of the Zoological Society (75,000 vols.), have valuable specialised collections. There are many fine endowed L. The Chetham Library at Manchester takes priority as perhaps the earliest (1653) free library in England, and the John Rylands Library (q.v.) contains a fine collection of incunabula. The L. of the Inns of Court were estab. in the 16th cent. They suffered badly in the Second World War; the new library of the Inner Temple was opened in April 1958.

Of religious L. the largest is Sion College Library, for some time during the 18th cent. a copyright library. Also serving the Church of England is the library of Lambeth Palace in which are to be found over 80,000 charters, deeds, and other MSS. Dr Williams Library (95,000 vols.) covers theology and philosophy, and has pub. a useful catalogue of its stock.

A special part is played by the L. of gov. depts, such as those at the War Office, the Ministry of Education, and the Board of Trade. The library of the House of Commons specialises in books on economics and financial subjects, and the library of the House of Lords on legal aspects of gov. The Public Records Office contains over 40,000,000 documents.

Large business firms and industrial organisations have more recently come to see the value of establishing library and information depts, and while many have large collections of books the tendency is to collect, and make available by means of abstracting, indexing, and systematic classification, the monographs and periodical articles which record the advance of scientific and technical knowledge before it reaches book form.

Perhaps unique among L. is the London Library (q.v.) which loans to subscribers books from its stock of 600,000 vols. The pub. catalogues of the London Library are valuable as bibliographic tools, as are the printed catalogues of Lewis's Library of scientific and technical books. The largest of the general subscription L. operating to-day are the Times Book Club, and the L. of Harrods, Army and Navy Stores, Boots, and W. H. Smith (see also under MUDIE).

Most colleges and technical institutes have L. for the use of lecturers and students, notably the Regent Street Polytechnic and the St Bride Institute (40,000 vols. on the hist. of printing).

Other subjects too numerous to mention are the special concern of the L. of

societies and institutions. The Royal Geographical Society Library and Map Room (the latter open to the public) has a stock of 80,000; the Royal Institute of Brit. Architects Library has a stock of 60,000; while printed catalogues have been issued recently by the L. of the Institute of Civil Engineers, the National Book League (q.v.), the Brit. Drama League, and others.

Most famous London clubs have their own L., mostly founded in the 19th cent., e.g. the Athenaeum and the Reform Club.

The Library Association (q.v.) is the professional body for librarians, and ASLIB is the Association of Special Libraries and Information Bureaux.

UNITED STATES OF AMERICA. The national and copyright deposit library is the world-famous Library of Congress (q.v.), estab. in 1880 for the use of congressmen and now containing 7,500,000 vols. It conducts a central cataloguing agency, and has a union catalogue of all books in Amer. L. The pub. form of its classification is used in many other countries. Famous L. founded by private benefaction are the Johns Hopkins Library (q.v.), the Folger Shakespeare Library at Washington, and the Huntington Library at San Marino, California (both specialising in Shakespeare and the 16th cent.), and the Pierpont Morgan Library in New York (MSS. and incunabula). The Army Medical Library (estab. in 1836, 600,000 vols.) issues a printed catalogue, and the Massachusetts Institute of Technology is perhaps the best example in the world of a decentralised special library. Harvard Univ. Library, the oldest in N. America, has over 4,000,000 vols., and there are notable L. at the univs. of Yale, Princeton, Chicago, Illinois, Indiana, and California. The first free tax-supported library was in Peterborough, New Hampshire, in 1833; the first to be estab. by law was the Boston public library in 1854. The U.S.A. leads the world in the provision of well-organised and progressive L. which make full use of microfilm and photo devices, and numerous time-saving methods which leave the qualified staff free to attend to readers' inquiries. Among the best are Cleveland and Los Angeles Co., the vast New York public library which also has a very fine collection of incunabula, and many others such as Baltimore, Queensborough, and St Paul, Denver. Many schemes of library co-operation are in operation up and down the country (notably the Farmington Plan and the Mid-West Library Center) and the mobile L. cover immense distances. Professional training for librarianship is considered as a post-graduate subject and there are sev. library schools.

EUROPE. Austria. The Imperial Public Library at Vienna is said to date from 1440, and to have been founded by the Emperor Frederick III. It contains a portion of a famous medieval collection, that of Matthaeus Corvinus of Hungary. Its printed vols. number over 1,000,000.

with nearly 30,000 MSS. It also lends vols.

*Belgium and France* have old-established royal and private L. The Bibliothèque Nationale (q.v.) in Paris is one of the great L. of the world and has of all great L. the longest hist., though it may not be true that it dates from the collections of Charlemagne or of St Louis. What is certain is that it contains a very large number of the collections of the Fr. kings, and that it represents the Bibliothèque du Roi of times before the Fr. Revolution. It contains upwards of 4,000,000 vols., and a magnificent collection of MSS., prints, medals, and maps. Other great L. are those of the Arsenal, confiscated at the revolution, the Mazarin Library, and that of the univ., originally the Sainte-Geneviève Library, founded in 1624. The library of the Sorbonne contains one and a half million vols. In Belgium there is the Bibliothèque Royale, which serves the whole country.

*Czechoslovakia.* The National and University Library in Prague was founded in 1348 and has now over 1,500,000 vols.

*Germany.* Owing to the importance of the various state L., no national library existed until recently, when the former Prussian State Library in Berlin was recognised as the national library. It contains 2,850,000 vols., but at the end of the Second World War and the div. of Germany these were divided between the Deutsche Staatsbibliothek in Berlin and the Westdeutsche Bibliothek at Marburg. A union catalogue of books in Prussia, Munich, and Vienna was begun in 1931, and started again in 1950 in both E. and W. Germany. The Bavarian State Library at Munich is the finest of the other state L. which include those at Dresden and Stuttgart. Frankfurt and Leipzig have always been important literary and book trade centres, and co-operation between the L. of different states is well advanced; the public library movement, however, has made little headway.

*Holland.* Holland's national library is the Royal Library at The Hague, built in 1798 and containing 600,000 vols. The univs. of Leyden (1575), Utrecht (1582), Groningen (1614), and Amsterdam (1578) have fine old-established L. The first publicly administered library was at Dordrecht, but there are no public L. as we know them, as all charge an ann. subscription or a borrowing fee.

*Italy.* Chief in antiquity, in wealth of MSS., printed rarities, and inexhaustible treasures of archives and historical and other works, is the library of the Vatican at Rome. Its early hist. is broken by the removal of the popes with the books to Avignon, and its modern hist. dates back to the Renaissance popes, of whom may be mentioned Nicholas V. Sixtus IV., and Sixtus V. the founder of the present building in 1588. Printed books are said to number 700,000, MSS. nearly 60,000, of which the famous *Codex Vaticanus* of the Bible stands first, together with the great MSS. of Virgil, Terence, etc. The library is open to the public, and since the papacy of Leo XIII the archives also with

certain reservations. Next in importance, both historically and for its invaluable contents, is the Biblioteca Mediceo Laurenziana at Florence, containing the collections of Cosimo, Piero de' Medici, and Lorenzo the Magnificent. It was opened to the public in 1571, and contains some of the most precious classical MSS. in existence, including over 700 dating from before the 11th cent., and in addition a 4th-cent. Virgil and a 10th-cent. Homer. The largest modern library in Italy is the Nazionale Centrale Vittorio Emanuele at Rome, founded 1875, with nearly 2,000,000 vols. Other important national or municipal L. are at Naples, Florence, Milan, Venice, Turin, and Palermo, while all over Italy are numerous ancient L., containing great treasures, such as the specimens of early printing at Subiaco and the famous Biblioteca Ambrosiana at Milan.

*Scandinavia.* The public L. of Denmark and Sweden are among the best in the world. The co. and rural services are well developed and the best large city service outside the U.S.A. is probably that of Stockholm. Few compare with the smaller public L. of Malmö in Sweden and Aarhus and Frederiksberg in Denmark. Sweden has also the Royal Science Academy Library at Stockholm and the Univ. Library at Upsala, which has over 1,000,000 vols. The national library in Norway is the Univ. Library in Oslo which co-operates extensively with other L., many of which suffered heavily during the war. Denmark has 3 copyright L., the Royal Library at Copenhagen, estab. in 1661 (1,000,000 vols.), and the Univ. L. of Aarhus and Copenhagen. A variety of bibliographical and cataloguing services is undertaken centrally at the Bibliographical Office, an independent concern set up in 1939. Most of the co. library services are based on a municipal authority and one co. runs a library boat.

*Spain.* The Bibliotheca Nacional in Madrid (previously the Royal Library, 1712) has over 1,500,000 vols.

*Switzerland* is best known for its research L. such as the library of the Swiss Federal Institute of Technology in Zürich and the 6 univ. L. The library at Basel was founded in 1461. The National Library in Bern lends non-fiction to the whole country.

*U.S.S.R.* The 2 chief L. are the Lenin State Library at Moscow (11,000,000 vols.) and the Leningrad State Public Library (4,000,000 vols.), one of the great L. of the world.

**BRITISH COMMONWEALTH LIBRARIES.**  
*Australia and New Zealand.* Australia has a well-developed system with large L. in the cap. cities and active inter-lending. The L. of Sydney in New S. Wales, Melbourne in Victoria, Perth in W. Australia, and Adelaide in S. Australia were all founded in the 19th cent. W. Australia was the last to appoint a Library Board, but it is one of the most flourishing and progressive. The Commonwealth National Library is at Canberra. *New Zealand* has public L. at Wellington, where there is a

fine new building, and at Auckland and Dunedin.

**Canada.** The national library is the Parl. Library at Ottawa (1849) and the L. of the univs. of Alberta and Macdonald college in Quebec run extensive services in their areas. The best L. are on the E. seaboard; the public and the univ. L. in Toronto, and others in Ontario, and in the prov. of Quebec at McGill Univ., Montreal. A large-scale regional system covers the country and there are mobile services in the provs. of Brit. Columbia,

E. Caribbean Regional Library Service and the Central Library of Trinidad and Tobago are now combined under one Brit. director, together with the public library of San Fernando.

British Council Libraries exist in a number of foreign countries throughout the world and in the Commonwealth.

See A. Esdalle, *National Libraries of the World*, 1934; L. McColvin and J. Revie, *British Libraries*, 1946; L. McColvin, *The Chance to Read*, 1956; J. W. Thompson, *The Medieval Library* (2nd ed.), 1957; J.

Information Services Dept., Accra: Crown Copyright Reserved  
CENTRAL LIBRARY, ACCRA, GHANA

Saskatchewan, Newfoundland, and Nova Scotia.

**Ghana** has a growing library service, started in 1944 by the Brit. Council. In 1946 the Aglonby Library was opened and the Gold Coast Library Board set up to administer it in Accra. Mobile L. are in use for inland areas.

**India.** The largest institutional library is the Imperial Library at Calcutta, opened in 1903. No public L. existed until the important U.N.E.S.C.O. pilot project began with the Delhi public library which is free.

**South Africa.** The oldest S. African public library is at Cape Town, estab. in 1818 and holding copyright privilege for Cape Prov. Together with the Pretoria State Library it forms the National Library. Also there are L. in the legislatures, the parl. library at Cape Town being prominent. There are univ. L. at Pretoria and Cape Town.

**The West Indies.** The W. Indies have had L. of some kind for generations. The

Sears, *Library Catalogues of the English Renaissance*, 1957; *Aslib Directory*, 1958.

**LIBRARY CO-OPERATION.** Co-operation between L. of every variety has been growing since the McColvin report of 1942 made clear the necessity for a system of co-ordinated library provision—regional, subject specialisation, inter-library loans, and a centralised national authority. This authority is the National Central Library (q.v.) which acts as the clearing house for requests for titles unobtainable in any of the 6 regions into which the library resources of Great Britain have been divided, as well as keeping a large stock of the more expensive or unusual vols. Each region maintains a union catalogue of the books available for interlending within its region, and all of these are duplicated at the N.C.L. Attached to the N.C.L. by agreement are a large number of 'outlier' L. (the L. of specialised subjects belonging to societies, colleges, and institutions), so that it is

possible that a man in a rural dist. of Cumberland who applies to his local co. library for a book not generally available will eventually be lent a copy belonging to the library of some small but specialised society in London. In the same way, and through the agency of the N.C.L., books are borrowed and lent abroad.

Other smaller schemes of library co-operation include the Metropolitan special collections whereby each London bor. specialises in a particular subject from which it loans books to other bor. L. A joint fiction reserve is also maintained in this way. The SE. Region has a similar scheme, and in Sheffield co-operation between public, univ., and industrial L. is far advanced. The idea of the inter-availability of readers' tickets has gained a firm hold in London and at coastal resorts. See R. F. Vollans, *Library Co-operation in Great Britain; Report of a Survey of the National Central Library and the Regional Library Bureau*, 1952; P. H. Sewell, *The Regional Library System*, 1956.

**Libraries, Friends of the National.** This society was founded in 1931 to assist national and other L. by promoting the acquisition of books and MSS. of importance, by arranging photographic reproduction when originals are unavailable, and by co-operation with the National Art Collections Fund in cases of MSS. and books with an artistic as well as historical or literary value. Funds are acquired by gifts, bequests, and special appeals. Examples of its work are the contribution of £800 towards the purchase of the *Sherborne Cartulary* for the Brit. Museum, and in 1956 the contribution of £500 towards the purchase of the Bute Collection of plays for the National Library of Scotland.

**Library Association.** The L. A. was founded in 1877 and incorporated by royal charter in 1898, its prin. purposes and powers being to unite all persons engaged or interested in library work; to promote the better administration of libraries, and the improvement of the position and qualifications of librarians; to hold examinations in librarianship and to issue certificates of efficiency; and to promote and encourage bibliographical study and research. The association has a total of 12,000 personal and institutional members, including nearly 700 from countries outside the Brit. Isles. It maintains the Register of Chartered Librarians on which there are 4700 fellows and associates. Ten branches and five sections serve the local and special interests of members respectively. Professional examinations are held twice yearly in June and Dec.

**Library of Congress,** the national library of the U.S.A., and the third largest in the world. It was founded in 1800, and shortly afterwards incorporated Jefferson's Library of some 7000 vols. It now contains over 10,000,000 vols. and pamphlets. Its collection of MSS. is also notable. It receives a copy of every book copyrighted in the U.S.A. Over 300,000

vols. are added to the library each year. The classification system invented for the L. of C. is pub. in book form and used by libraries all over the world (see **CATALOGUES AND CLASSIFICATION**). The catalogue too is pub. in book form, and also on cards which are bought by libraries to use in their own card-catalogues.

**Libration.** This term is applied to a small irregularity, compounded of the moon's rotation round her axis and her orbital motion, by means of which her visible hemisphere is not always quite the same. The mean revolution of the moon round her axis is the same period of time as her mean revolution in her orbit. If both motions were equable the moon would always present the same face to a spectator placed at the centre of the earth, on condition that the plane of her equator passed through the centre of the earth. None of these conditions being exactly fulfilled, a small portion of the moon's surface in the E. and W. edges, and also in the N. and S., is alternately visible and invisible. The maximum L. longitudinally is 7° 45' and latitudinally 6° 44'. There is also a small L., maximum 57', which depends upon the observer's position on the earth, and which is known as the diurnal L. See **MOON**.

**Libretto** (dimin. of *lt. libro*, a book), text of a dramatic vocal work, especially an opera. The author of such a text is called the librettist. Some of the more famous Italians who composed operatic libretti were Rinuccini, who collaborated with Peri, Caccini, Monteverdi, and Gagliano; Apostolo Zeno, who lived in Vienna and Venice as court poet; Metastasio, whose texts were set by many important composers down to and including Gluck and Mozart; Lorenzo da Ponte, the author of Mozart's *Le Nozze di Figaro*, *Don Giovanni*, and *Così fan tutte*; Romani, associated with Bellini and Donizetti; Boito and Plave (with Verdi); Illica and Giacosa (with Puccini). Among the French, Quinault as Lully's librettist was famed for a cent. and a half; Scribe wrote texts for Meyerbeer, Halévy, Auber, Boieldieu, and Verdi. Wagner was his own librettist. Hugo von Hofmannsthal collaborated with Richard Strauss in most of that composer's more celebrated stage works, including *Elektra*, *Rosenkavalier*, *Ariadne auf Naxos*, *Die Frau ohne Schatten*, and *Arabella*.

**Libreville**, tn of Gabun, Fr. W. Africa, is situated on the N. shore of the Gabun estuary. It is the cap. of the Fr. settlements in the Gulf of Guinea and was founded in 1849. It has a shipping industry. Pop. (1942) 6178.

**Libya and Libyan Desert**, anct Gk name for the N. part of Africa, including Egypt; Homer mentions the land as very fertile. In Rom. hist. the name applied only to the region now known as the Libyan Desert, a huge plateau rising gradually to 1000 ft above the Nile in stony terraces. The present L. lies along the N. coast from Tunis to Egypt and comprises Tripolitania and Cyrenaica. The coastline is 1100 m. and the area 680,000 sq. m.

There are sev. famous oases, the largest being Kharga, easy of access from Abydos and Thebes; others are Dakel, Farafra, Bahariet, and Siwah; they are well supplied with springs and are exceedingly fertile; their occupation goes back to remote antiquity. Further to the W. the Libyan Desert mingles with the trackless silence of the Sahara. L. was annexed by Italy, following war with Turkey, in 1911. In the course of operations (which relied mainly on the naval blockade of Tripoli) Benghazi was captured by Gen.

the U.K. £1,000,000. France, Turkey, and Egypt provided £30,000 for development. Total revenue, including grants in aid but not development funds, was estimated in 1956 at £9,818,405. In the Mediterranean zone of L. fruits, cereals, and dates are produced; tobacco, salt, leather goods, and carpets are other products. Pop. about 1,100,000. See R. A. Bagnold, *Libyan Sands*, 1935; D. Campbell, *Camels through Libya: a Desert Adventure from the Fringes of the Sahara to the Oases of Upper Egypt*, 1935; J. Despois, *La*

LICE  
(Diameter enlarged fourteen times)

- 1, head-lice (*Pediculus capitis*); 2, pubic louse (*P. pubis*);  
3, body-lice (*P. corporis*).

From 'Clinical Methods' (Hutchinson and Rainy), by courtesy of Cassell & Co. Ltd

Ameglio (20 Oct.). This was followed a few days later by the fall of Derna. By the end of the year Italy was in formal possession of all the coast tns of Turkish N. Africa and then organised an expeditionary force for a movement into the desert interior. The 'pacification' of the Arab tribes was eventually accomplished by Gen. Graziani (q.v.), who employed methods of the utmost brutality. L. became a major theatre of operations in the Second World War (see AFRICA, NORTH, SECOND WORLD WAR, CAMPAIGNS IN). After the war a Brit. military administration was estab. until such time as the U.N. could decide on the future of L. In 1949 Cyrenaica achieved independence under the rule of the Emir sayyid Idris al-Senussi. In 1951 L. became an independent state. A treaty of friendship and alliance between the U.K. and L., associated with financial and military agreements, was signed on 29 July 1953. On 9 Sept. 1954 an agreement between the U.S.A. and L. was entered into regarding military and air bases, use of which was refused to Britain by L. during the Suez Canal crisis in 1956. Grants in aid for 1956 amounted to £2,750,000. In addition the U.S.A. allocated £3,214,285, and

*Colonisation italienne en Lybie. Problèmes et méthodes*, 1935; K. Holmboe, *Desert Encounter: an Adventurous Journey through Italian Africa*, 1936; M. Moore, *Italy's Fourth Shore: Italy's Mass Colonisation of Libya*, 1940.

**Licata, or Alicata** (anot Phintias), seaport in Sicily (q.v.), on the S. coast, at the mouth of the Salso, 24 m. SE. of Agrigento (q.v.). Here Regulus (q.v.) defeated the Carthaginians in a naval battle in 256 BC. U.S. troops landed here during the invasion of Sicily in 1943 (see ITALIAN FRONT, SECOND WORLD WAR CAMPAIGNS ON). There is a trade in sulphur. Pop. 36,400.

**Lice**, parasitic insects without wings, including the Aptera, with the exception of the fleas. Among the distinct groups are human L. (*Pediculidae*), true L. (*Haemolipinus*), bird L. (*Mallophaga*), and epidermis eaters (*Trichodectes*). Three kinds of human louse are common in England. There is the head-lice, which makes the scalp its home and pasture-ground; the crab-lice, which chiefly occupies the hairy part of the pubes; and

the hairs of their respective hunting grounds. The body-louse deposits its eggs not only on the small hairs of the skin, but also on the clothes. The nits are firmly stuck to the hairs or clothing by a sort of cement, and are usually not very easy to detach. Nits take about a week to hatch, and the young reach maturity in about a fortnight after birth.

The presence of L. is generally made known by the intense irritation of the skin which they provoke. As a result of the consequent scratching, surface infection is common, and neighbouring lymphatic glands may become swollen and tender. Fortunately pediculosis, as a louse-infested condition is called, is amenable to treatment if it be carried out persistently and with assiduity. In the case of the head-louse and the pubic (crab) louse, the first thing is to cut as short as possible the hairs of the affected region. Twice daily, until all trace of these nauseous insects has disappeared, the shortened hair should be thoroughly combed with a fine-toothed comb. After the combing the parts should be vigorously scrubbed with warm water and Derbac soap, or, if this is difficult to obtain, coal-tar soap. The skin, having been dried by thorough rubbing with a towel, a little perchloride of mercury lotion, of a strength 1 in 2000, should be well rubbed in. Lastly ammoniated mercury ointment may usefully be applied. The whole of these procedures should be carried out systematically, twice daily, until not a louse or nit can be found. The body-louse present a somewhat more complex problem. To begin with all bed-clothing and all linen that has been in contact with the skin should be baked in a disinfecting apparatus or be boiled in water. Twice a day the whole surface of the body should be vigorously washed with coal-tar soap and warm water containing a generous allowance of washing soda. Before the washing it is a good plan to rub into the skin—at any rate of those parts notably affected—an equal mixture of olive oil and common lamp paraffin, the warm water and soap being used some 10 min. later. Half-hearted or irregularly applied treatment is useless whereas regular and persistent treatment is invariably successful—though a measure of patience may be called for. Infestation with L. is likely to occur in conditions of overcrowding and where washing facilities are deficient. The insecticide D.D.T. dusted into clothing and on the bodies of those exposed to infestation is a most valuable preventive measure. Its efficacy was proved among the troops in the Second World War.

**Licences and Licensing Law.** The Eng. licensing code is a body of laws the primary object of which is the control of the liquor traffic. Practically the whole law in England on the acquisition, retention, and forfeiture of the right to sell to the public intoxicating liquors, subject to a payment to the state in the form of excise licence duty, and the performance of various conditions, is now contained in the Licensing (Consolidation) Act, 1910,

and the Licensing Act of 1921. The Act of 1910 does not apply to Scotland, but the law applicable to that country is practically the same in principle.

The basis of Eng. licensing law is the control of the sale of liquor by granting licences (generally speaking) only to persons who have obtained a justices' licence authorising them to hold an excise licence. Justices' licences are available only for 1 year, and must be annually renewed at the licensing sessions. There is no right of appeal from a refusal, except in the case of old licences, when an appeal lies to quarter sessions. A licence may be forfeited by the holder if convicted of permitting premises to be used as a brothel, harbouring thieves, allowing seditious meetings to be held on the premises, selling or exposing liquor he is not authorised to sell, permitting gaming, or allowing bad characters to resort to the house, and other serious offences. It is a fundamental condition of the grant of a licence that liquor be sold only upon the premises and during certain hours. The Licensing Act of 1921 abolished the old-time 'closing hour,' but limits the sale of liquor to what are called 'permitted hours,' and thus leaves the publican free to keep his premises open for the sale of food and non-intoxicants at any hour of the day or night.

By the present law justices at the general ann. licensing meeting have, within certain limits, the power of determining the hours during which the sale of intoxicating liquor on the licensed premises is permitted within their dist. on weekdays. The hours of sale, or 'permitted hours,' must be, on weekdays, 8 hours in ordinary dists. and 9 hours in the metropolis, subject to the proviso that in any licensing dist., if they are satisfied that the special requirements of the dist. make it desirable, the justices may substitute 8½ for 8 hours. The justices in any dist. outside the metropolis may extend the permitted hours, in their discretion, to 8½ hours a day, provided that no sale shall take place earlier than 9 o'clock in the morning or later than 10.30 at night, and that there shall be a break of at least 2 hours in the afternoon. In the metropolis the permitted hours may, in the justices' discretion, continue until 11 p.m. On Sundays, Christmas Day, and Good Friday the permitted hours are 5 only, of which not more than 2 shall be between 12 noon and 3 p.m., and not more than 3 between 6 p.m. and 10 p.m. In Wales and Monmouthshire there are no permitted hours on Sundays. These regulations apply both to on-licences and off-licences.

The Licensing (Consolidation) Act, 1910, contains important provisions regarding the sale or supply of intoxicating liquor to children and young persons. Contraventions are punished by a fine of £1 for a first and £2 for a second or any subsequent offence. The Act of 1921 provides that no one may sell or supply liquor from a van, barrow, or basket, unless the liquor has been previously ordered and

the quantity and price, together with the name and address of the person to whom it is to be supplied, have been entered in a delivery book carried by the deliverer, and in a day book kept on the premises. Under the same Act, too, no person may sell or supply to any person, as the measure of intoxicating liquor for which he asks, an amount exceeding that measure—commonly known as the 'long pull.' Conviction for either of these last two mentioned offences may entail a fine up to £30. Imprisonment may be given as an alternative, together with forfeiture of the licence, or confiscation of the liquor, or unlimited disqualification to hold a licence again. There are also a number of regulations as to the sale of liquor in clubs. Under the Licensing Act, 1921, a club in which the sale of intoxicants is made only as part of a meal may sell intoxicants for the space of 1 hour after the close of the permitted hours for the dist., and where liquor is supplied during permitted hours a further half-hour is allowed to the member for the consumption of that liquor, provided it is taken with a meal. Under the Licensing Act of 1949, bottle parties may not serve drinks after 2 a.m.

Generally speaking, a retailer cannot obtain an excise licence until he has been granted a licence by the justices at brewster sessions—i.e. the special ann. meetings of the local justices held for the purpose of granting or renewing licences—authorising the grant to him of an excise licence. The grant of a new justices' licence by the licensing justices must be confirmed by the 'confirming authority' (or sessions), who may refuse to confirm even if the grant is unopposed; but it is essential that those who occupy the position of a confirming authority should not only be unbiased, but so related to the matter as to be free from any reasonable suspicion of bias (Lord Hewart, L.C.J., in *R. v. Sheffield Confirming Authority*, 1937). The applicant for a manufacturer's or dealer's licence requires no authorisation from justices. Again retail liquor licences for the following places can be obtained from an officer of customs and excise without previous authority from the justices—theatres, passenger vessels, railway restaurant cars, and naval and military canteens; while occasional licences are authorised by consent of a petty sessional court.

Manufacturers' licences relate to either spirits, beer, or sweets, and expire on 30 Sept. each year. The penalty for manufacturing spirits, beer, or sweets without a licence is £500. A distiller, rectifier, or compounder of spirits must take out a licence annually. Spirits means any fermented liquor containing a greater proportion than 40 per cent of proof spirit. Beer includes ale, porter, spruce beer, black beer, and any liquor made or sold as a description of, or as a substitute for, beer, and which, on analysis, yields more than 2 per cent of proof spirit. Sweets is liquor made from fruit and sugar that has undergone a process

of fermentation; it includes Brit. wines, 'made wines,' and metheglin. Licences for wholesale dealers in spirits, beer, wine, or sweets must also be taken out annually. Occasional licences are granted for cricket matches, flower shows, galas, and similar festivities.

The penalty for dealing without a licence is £100. Retailers' licences are either on-licences, i.e. for sale of liquor for consumption *either on or off the premises*, or off-licences, for consumption *off the premises* only. The term 'publican's licence' is exclusively appropriated to a retailer's on-licence for spirits, and the expression 'fully licensed premises' means premises to which a publican's licence is attached. A person who holds a publican's licence may sell by retail beer, cider, wine, and sweets, as well as spirits, without taking out any further retailer's licence. The penalty for selling by retail without a licence is either £50 or a sum equal to treble the full duty.

A reduction in duty is allowed in the case of (a) fully licensed premises and beerhouses of an ann. value exceeding £500; (b) hotels and restaurants; (c) premises used for any purpose to which the holding of a licence is merely ancillary, e.g. theatres, law courts, public gardens, picture galleries, and exhibitions; (d) refreshment rooms at a railway station. *See also LIQUOR CONTROL.*

Lichen, medical term for skin diseases characterised by papular, i.e. nodular, and follicular, i.e. connected with a follicle (q.v.), eruptions. *See SKIN, Diseases.*

Lichens, Lichenes, special group of lowly plants, usually classed as a secondary sub-division of fungi (q.v.); consisting of over 18,000 species, about 2000 of which are British, resistant to extremes of heat and cold and probably more widely distributed than any other form of plant life. Each lichen is a self-supporting symbiotic association of a fungus and an alga; the fungus propagating by spores, to envelop, protect, and supply the alga with moisture; while the alga multiplies by division, and manufs. food for the whole lichen by absorbing carbon dioxide from the air, which is built up under the influence of light into starch or lichenin. Vegetative reproduction is also possible by broken-off parts of the thallus forming new plants, or by tiny masses of algal cells and fungal hyphae (soredia), or by tiny outgrowths of the thallus (isidia). L. are mostly xerophytes, and are common on rocks, walls, and the bark of trees, sometimes with a bad effect on the growth of trees by their interference with growth functions and their harbouring of pests. Some L. are of economic value, such as *Rocella*, yielding cudbear, litmus, orchil, orseille, and other colouring substances; *Cetraria islandica*, Iceland Moss, valued for food; and *Cladonia rangiferina*, the Reindeer Moss so important in Lapland and arctic regions. Arctic L. have proved life-saving foods for explorers who have exhausted their

provisions more than once. The grey-branched lichen (*Claydonia cornuoptoides*) is used by florists in floral designs. See G. Massee, *British Fungi*, 1911, and H. Gwynne-Vaughan and B. Barnes, *The Structure and Development of the Fungi*, 1937.

**Lichfield**, municipal bor. and cathedral city of Staffs, England, lying in the valley of the Trent, 15 m. SE. of Stafford. The cathedral, in the Decorated style, dates from the 12th cent. and has a valuable library. It is the only Eng. cathedral with 3 spires. Together with many interesting monuments and memorials it contains a masterpiece by Chantrey, 'The Sleeping Children.' The city has a wealth of historical and literary associations—Dr Samuel Johnson (compiler of the first full-length Eng. dictionary) was b. here in 1709 and educated at its grammar school, with Addison and Garrick (q.v.). Johnson's bp. is now a museum containing many exhibits of great interest to visitors. On the edge of the beautiful Stowe Pool is the church and well of St Chad, who settled there in 669, and became the first bishop of L. Pop. 11,000.

**Lich-gate**, or **Lych-gate** (from O.E. *lich*, a corpse), roofed gateway (at the entrance to a churchyard), beneath which the bier carrying a corpse could be rested pending the arrival of the priest to conduct the burial service.

**Lichtl**, see **LITCHEL**.

**Lichnowsky, Karl Max, Prince** (1860–1928), Ger. diplomat, b. Kreuzenort. He entered the diplomatic service and in 1912 was appointed ambas. to Great Britain. The revelation of Ger. policy after the Sarajevo murders of 1914 came as a shock to him, and he privately printed a pamphlet called *Meine Londoner Mission, 1912–14*, which one of his friends pub. without his consent in 1918, with the result that L. was expelled from the Prussian Upper House and fled to Switzerland. Fuller revelations of his attitude may be found in his book trans. into English as *Heading for the Abyss*, 1928.

**Lichtenberg, Georg Christoph** (1742–99), Ger. philosopher and satirist, b. near Darmstadt. He frequently visited England and gathered materials for his famous explanations of Hogarth's (q.v.) pictures,

*Ausführliche Erklärung der Hogarthischen Kupferstiche*, 1794–9. His work includes philosophical essays, witty burlesques, satirical writings, and physical investigations, especially into electricity. His *Gesammelte Schriften* (14 vols.) appeared in 1844–53, his *Briefe*, 1901–4, and his *Aphorismen*, 1902–8. *Briefe aus Lichtenbergs englischen Freundeskreis* were ed. by H. Hecht in 1925. See R. M. Meyer, *Swift und Lichtenberg*, 1886, and P. Requaadt, *Lichtenberg*, 1948.

**Lichtenstein**, Ger. tn in the dist. of Karl-Marx-Stadt, 14 m. WSW. of Karl-Marx-Stadt (q.v.). It is in a coal-mining area and has a textile industry. Pop. 15,000.

**Licinius (Flavius Galerius Valerius Licinianus)**, Rom. emperor (AD 307–24), b. of peasant family in Dacia or Illyria, c. 250. He was raised to the rank of Augustus by Galerius, upon whose death in 311 he became sole ruler of the eastern provs. He defeated Maximinus in 314, but was himself defeated by Constantine in 315 and again in 323. In this latter year he was deprived of his throne and put to death in 324. See Gibbon, *Decline and Fall*, xiv.

**Lick Observatory**, on Mt. Hamilton, California, U.S.A., was built at a cost of \$140,000 according to the bequest of James L. (1796–1876), an Amer. financier and philanthropist. It stands at an altitude of 4209 ft. and contains the vault of its founder. The observatory now belongs to the univ. of California. Its 120-in. reflecting telescope enables observation at 900,000,000 light-years distance.

**Licking**, riv. in Kentucky, U.S.A., rises in the E. of the state, flowing NW. to the Ohio, which it joins opposite Cincinnati. It is 320 m. long and navigable for 70 m.

**Lictors**, attendants on Rom. magistrates, before whom they bore the fasces (q.v.). They were generally persons of humble origin. Their town dress was the toga; but in triumphal processions they wore a red coat, and at funerals black. Their duties were to clear the way, and also, at one time, to inflict corporal punishment and carry out executions.

**Liddell, Henry George** (1811–98), famous as the collaborator, with Dean Scott, in the compiling of the *Gk Lexicon*. From 1846 to 1855 he was headmaster of Westminster School, dean of Christ Church from 1855 to 1891, and vice-chancellor of Oxford, 1870–4. Besides the valuable *Lexicon* he wrote a *History of Rome*, 1855.

**Liddesdale**, or **Lidedale**, beautiful dist. of the Eng.-Scottish border, is the valley traversed by Liddel Water, a union of small streams which flows through Roxburghshire from the SW. of the Cheviot Hills and joins the Esk 12 m. N. of Carlisle. In the valley is Hermitage Castle, a massive 13th-cent. stronghold.

**Liddon, Henry Parry** (1829–90), divine, b. N. Stoneham, Hants. Appointed prebendary of Salisbury Cathedral in 1864. In 1870 became canon-residentary of St Paul's Cathedral, and Ireland prof. of exegesis at Oxford. His sermons, lectures, and writings, all of a High Church

tendency, had a remarkable influence on the religious thought of the period. At the time of his death he was engaged on a life of Dr Pusey, which was finished by other hands and pub. in 1893-4. See J. O. Johnston, *Life and Letters of Henry Parry Lidford*, 1904; also life by G. W. E. Russell, 1905.

Lidford, see LYDFORD.

Lidford Law, an O.E. proverb, ran:

'First hang and draw,

Then hear the cause by Lidford law.'

The term thus came into use to mean hang a man first and try him afterwards. The theory is that it arose from the very arbitrary procedure of the Stannary courts in the Devonshire tn of Lidford.

Lidgett, John Scott (1854-1953), Methodist Church leader and social reformer, b. Lewisham. He entered the ministry by way of Univ. College, London, and for 14 years was minister in Methodist circuits. One-time vice-chancellor of London Univ.; associated with Hugh Price Hughes in the movement for the improvement of the industrial classes. He will, however, be best remembered as the man who, in 1890, in conjunction with Dr Moulton, founded the Hermondsey Settlement, of which he held the wardenship from 1890 to 1949, and also as the guiding spirit in the movement which resulted in the union of the 3 Methodist denominations, of which he became the first president.

Lidice, Czechoslovak mining vil. in the region of Prague (q.v.), E. of Kladno (q.v.). During the Second World War it was the scene of a notorious Ger. reprisal after the assassination of Heydrich (q.v.), the Protector of Bohemia and Moravia. The Germans alleged that the vil. had aided the men who killed Heydrich, and, in consequence, on 10 June 1942, the male inhab., numbering 172, were shot; the women were either shot or sent to concentration camps, where many d.; and the children were sent to concentration camps, or, in some cases, to foster homes in Germany. The vil. itself was systematically destroyed, the ground was ploughed up, and the name of L. was erased from official records. Later the small vil. of Lezaky, near Chrudim (q.v.), suffered a similar fate.

In remembrance of L., many places abroad, including a co. of Quebec, took its name. The first house of a new vil. of L., planned at Columbia Univ., was occupied in 1949. Pop. about 200.

Lido (It., 'shore'), It. is., 7½ m. long and very narrow, separating the lagoon of Venice (q.v.) from the Adriatic. It is a fashionable holiday resort with a splendid beach, and is connected to Venice by ferries. The term L. is popularly applied to bathing resorts in many countries.

Lido di Roma, see OSTIA.

Lidzbark Warmiński (Ger. Heilsberg), tn of Poland, in Olstyn prov., on the Lyna, 25 m. N. of Olstyn (q.v.). It was the seat of the bishops of Ermland, 14th-18th cents. During the Second World War there was much damage. Pop. 5000.

Lie, Jonas Laurits Idemil (1833-1908), Norwegian novelist, b. Elker, near Drammen. At first a lawyer, he devoted himself to literature as a result of a bankruptcy. In 1866 he pub. a vol. of poems, and in 1870 his first novel, *Den Fremsynde* (Eng. trans., *The Visionary*, 1894), a melancholy romance which made him famous. He spent his time thereafter between Italy, Germany, Paris, and the Tyrol, not finally returning to Norway until 1891. During these years he pub. *Tremasteren Fremtiden*, 1872 (Eng. trans., *The Barque 'Future'*, 1879); *Lodsen og hans Hustru*, 1874 (*The Pilot and His Wife*, 1874, 1879), his first really great novel; *Faustina Strozzi* (a verse drama), 1876; *Rutiland*, 1881; *Gaa paa*, 1882; *Livsslaven*, 1883; *Malstroem*, 1885; *Niobe*, 1894; *Dyre Rein*, 1896; *Fasti Forland*, 1899; and many others. He excels in descriptions of Norwegian middle class life, and he has been called 'the writer of the home.' He has also dealt successfully with the fantastic and the demonic forces in life. His output has been considerable, but uneven. See E. Lie, J. Lie, *En livsskildring*, 1933; F. Paasche, J. Lie, 1933; A. Gustafson, *Six Scandinavian Novelists*, 1940.

Lie, Marcus Sophus (1842-99), Norwegian mathematician, b. Nordfjordeif, near Bergen. He was educ. at the univ. of Christiania, where a special chair of mathematics was created for him in 1872. In 1886 he was appointed prof. of geometry at Leipzig. He pub. *Theorie der Transformationsgruppen*, 1888-93, and *Vorlesungen über Differentialgleichungen mit bekannten Infinitesimalen Transformationen*, 1891. He was a foreign member of the Royal Society.

Lie, Trygve (1896- ), Norwegian lawyer and statesman, b. Grorud, near Oslo, and educ. at Oslo Univ., practised as a barrister. He joined the Norwegian Labour party in 1919, and later became its legal adviser. From 1935 he served in the Norwegian Gov., being successively minister of justice, commerce, and supply, and becoming minister of foreign affairs in the exiled gov. in London in 1941. This office he held until 1946, when he resigned on being appointed the first secretary-general of the U.N. Assembly. His firm leadership did much to estab. the prestige and effectiveness of U.N. in its early years; but he resigned in Nov. 1952. His strong support for U.N. action in Korea in 1950 was openly resented by the Soviet bloc, and by 1952 his position was becoming increasingly difficult, although he had in fact been re-elected for a further 3 years in 1951. He was succeeded, 1953, by Dag Hammarskjöld (q.v.). He wrote an account of his U.N. experiences, *In the Cause of Peace*, 1954.

Lieber, Thomas, see ERASTUS.

Liebermann, Max (1847-1935), Ger. painter and etcher, native of Berlin. He was a pupil of Steffek, and in 1869 studied at the School of Art at Weimar. He worked in Paris, 1873-8, acquiring something of the Impressionist outlook. Typical subjects, showing the influence of

J. Israels (q.v.), are of humble folk in the vils. and fields of Holland, besides factory life in Germany. Some of his finest paintings are 'Flax Spinners' (Berlin National Gallery), 'The Woman with Goats,' 'An Asylum for Old Men,' and 'Labourers in a Turnip Field.' See lives by M. J. Friedländer, 1924, and H. Ostwald, 1930.

**Liebhard, Joachim**, see CAMERARIUS.  
**Liebig, Justus, Freiherr von** (1803-73), Ger. chemist, b. Darmstadt. At an early age he displayed a love of natural science, and in 1819 was sent to the univ. of Bonn, going from there to Erlangen, where he took his doctor's degree in 1822, publishing a paper on fulminating mercury the

JUSTUS LIEBIG

same year. He then went to Paris, where he made the acquaintance of Humboldt and Gay-Lussac. At the recommendation of the former he was made prof. of chem. at the univ. of Giessen, where he attracted students from all parts of Germany and other European countries. In 1852 he became a prof. of chem. at Munich. At the outset of L.'s career chem. was in its infancy, but at the time of his death it had developed beyond all expectations. He estab. the first laboratory where students could receive thorough practical training, and introduced the well-known method of organic analysis. One of his favourite branches of research was the phenomena of animal and vegetable life, and he was the first to prove that the activity of physical and chemical forces is the same in the organised as in the mineral world. He caused great developments in agriculture by the use of fertilisers, and invented meat extract and baby food. His prin. work was *Chemistry in its Application to Agriculture and Physiology*, 1840, and he also wrote *Animal Chemistry, or Chemistry in its Application to Physiology and Pathology*, 1842; a *Dictionary of Chemistry*, 1837; *Familiar Letters on Chemistry*, 1844, and *Researches on the Chemistry of Food*, 1847;

most of which have been trans. into English and French. See J. Vogel, *Liebig als Begründer der Agriculturnchemie*, 1874; A. W. Hofmann, *The Life-work of Liebig in Experimental and Philosophic Chemistry*, 1876; W. Ostwald, *Grosse Männer*, 1909; and lives by R. Blunck, 1938, and R. Schenk, 1941.

**Liebig's Condenser**, apparatus used to convert a vapour into the liquid state by cooling with the aid of water. There are sev. other kinds of condenser all founded on the same principle—vapour passing through a tube and being cooled by water; but L.'s C. is convenient when larger quantities of a liquid are to be distilled. The apparatus consists of a glass tube enclosed in a jacket through which a constant stream of cold water is passed. The liquid to be distilled is contained in a distilling flask provided with a side tube, which is passed through a cork in the condenser. In the neck of the flask a thermometer is supported by a cork, so as to enable the boiling-point of the liquid to be determined.

**Liebknecht, Karl** (1871-1919), Ger. socialist, son of Wilhelm L. (q.v.). He practised at the Berlin Bar. His outspoken anti-militarism and socialism led to his expulsion from the Reichstag, 1916; he was sentenced to 4 years' penal servitude for 'attempted high treason,' and released in Oct. 1918. He led the Spartacist rising in Berlin, was arrested Jan. 1919, and was shot dead by his guards, who said that he had tried to escape. His fellow prisoner, Rosa Luxemburg (q.v.), was killed at the same time.

**Liebknecht, Wilhelm** (1826-1900), Ger. socialist, b. Giessen. Imprisoned for his share in the Baden revolt of 1848, he escaped, going first to Switzerland, then to London, where he worked for Ger. newspapers and associated with Marx and Engels. In 1862, after the amnesty, he returned to Germany, but was banished from Berlin and Prussia for socialist agitation. In 1864 he entered the N. Ger. Parliament, and in 1868 began to edit, with Bebel, the *Demokratisches Wochenblatt*; an attack on Bismarck in its pages led to their imprisonment for 2 years. On his release L. entered the Reichstag, remaining a member almost uninterruptedly for 25 years. He ed. the Berlin *Vorwärts*, and in 1895 was imprisoned for 4 years on a charge of *Lebensmisset*. He pub. sev. works. See life by K. Eisner, 1900.

**Liebler, Thomas**, see ERASTUS.

**Liechtenstein**, European principality in the Alps, bounded on the E. by the Austrian prov. of Vorarlberg, and on the W. by the Rhine, which separates it from Switzerland. It was formed in 1719 out of the 2 countships of Vaduz and Schellenberg, and was closely associated with Austria-Hungary until the dissolution of the monarchy. It remained neutral during the Second World War. L. is governed by a prince and a diet of 15 members, and is attached to Switzerland for monetary, customs, postal, and diplomatic purposes. There are textile, leather,

pottery, and household manufs., and cattle, pigs, and poultry are raised. Irrigation canals have recently been opened. The cap. is Vaduz (q.v.) and there are 10 vils. Area 85 sq. m.; pop. 13,800. See E. Hinderer, *Reiseführer für Liechtenstein*, 1935, and H. Hiltbrunner, *Fürstentum Liechtenstein*, 1946.

**Liedekerke**, small tn in the prov. of Brabant, Belgium, 12 m. W. of Brussels. Pop. 8900.

**Lieder**, see GERMAN AND AUSTRIAN MUSIC.

**Liège** (anct *Leodium*; Flem. *Luik*; Ger. *Lüttich*): 1. Prov. of E. Belgium, almost bisected by the R. Meuse, and bounded on its E. side by Germany. This prov. offers very different aspects. Coal is found along the Meuse valley, where subsequently the iron and glass industries were centred. In its S. part are extensive quarries of freestone. Phosphate of lime abounds in the fertile Hesbaye plateau, where sugar-beet is the most important crop and where the refineries are situated. In the NE. is rich grassland and the breeding of horses, cattle, and pigs is carried on. In the SE. rises the high plateau of the Ardennes with the highest point of this prov. and of Belgium, the Botrange (2275 ft.). The wool industry is highly concentrated in the Vesdre valley round Verviers. Since the 10th cent. L. has been a mighty eccles. principality. In 1795 it came under France. In 1815 it was given to Holland, and it became a prov. of Belgium in 1830. The inhab. are mainly Walloons. In 1920 the Ger. dists. of Eupen and Malmédy were ceded to Belgium and incorporated in the prov. of L. (see *EUPEN*). Area 1525 sq. m.; pop. (1955) 994,185.

2. Cap. of the above prov., on the R. Meuse, almost opposite the valleys of the Vesdre and Ourthe, 54 m. SE. of Brussels. It is one of the most important cities of Belgium and has a pop. of 155,000 (1955). Together with its suburbs, Angleur, Ans, Bressoux, Chénée, Grivegnée, Herstal, Jemeppe, Jupille, Montegnée, Ougrée, St Nicolas, Seraing, and Tilleur, there live 372,000 people on about 43 sq. m. The city itself contains many interesting old churches dating from the 10th, 11th, and 12th cents. The cathedral (formerly St Paul's Church) was rebuilt in the 13th cent. The chief secular building of L. is the magnificent old palace of the prince-bishops. It dates from the 10th cent., was ravaged sev. times by fire, and rebuilt for the last time in the 16th cent. The edifice covers an area of about 17,400 sq. yds and accommodates at present the prov. gov., the law court, and the archives. L. has a univ. founded in 1817, sev. interesting museums, and a conservatoire. Two forts of its anct fortifications remain, and it is a bishop's see. It is the bp. of Grétry, a famous Belgian composer. Among the products of its intensive hardware industry the chief is firearms. Other manufs. are zinc, machinery, textiles, sautehoue, and sugar. Situated on a navigable riv. linked by the Albert Canal with Antwerp and junction of

international railways, L. is an important trade and transportation centre.

**Liège, Siege of** (Aug. 1914). The Ger. war plan for an offensive against France envisaged the violation of Belgian ter. in order to give their right wing sufficient space in which to swing round and eventually envelop the Fr. left. L. was protected by a ring of outer forts all of pre-1914 design and armament. The Ger. force entrusted with the siege was under the command of Gen. von Emmich (q.v.) and one of his staff officers was Ludendorff (q.v.). The Germans crossed the frontier on 4 Aug. 1914, and met with considerable opposition from the Belgians. Eventually each fort fell, crumbled by the huge howitzers of the Germans, which, till then, had been a secret. Ludendorff, on his own initiative, had collected the scattered remnants of companies and regiments and organised them into a fighting force. He was then given command of a brigade, with which he broke through the interval between Forts de Fléron and d'Évegnée and reached La Chartreuse. Soon the girdle of forts was pierced and L. was entered on 7 Aug. 1914. Some forts, although completely surrounded, continued to resist, under the heroic command of Gen. Leman, until 14 Aug., when his H.Q., the fort of Loncin, occupied by 300 men, was blown up. The delay, however, caused by the Belgian stand proved invaluable to the Allies (see *FORTIFICATION; FRANCE AND FLANDERS, FIRST WORLD WAR CAMPAIGN* in).

**Second World War** (May 1940). As L. was again a key position at the end of the strategical Albert Canal, its fortifications were completely rebuilt and modernised. A second time the defending troops had to withdraw, on 13 May, threatened with encirclement by Ger. units, which had crossed the canal to the N. The forts, however, resisted again as long as possible and gave no rest to the advancing Germans. The fort of Pepinster continued firing until 29 May, the day after the capitulation of the Belgian Army. After its liberation on 8 Sept. 1944, L. and its suburbs suffered much from flying bomb and rocket attacks. See also *FORTIFICATION; FRANCE AND FLANDERS, SECOND WORLD WAR CAMPAIGN* in.

**Liegnitz**, see *LEGNICA*.

**Lien**, right to retain the goods of another pending payment of a debt due either in respect of the goods retained, or on a general account between the parties. Ls are either possessory, maritime, or equitable. Possessory Ls are divided into (a) *particular*, i.e. giving a right to retain the *particular* goods in connection with which the debt arose. Such a L. may be provided for by express agreement, or it may be implied. The law implies a L. where skill has been exercised on the goods, or the creditor has been compelled to receive them. Examples of particular Ls are those of an innkeeper over his guest's luggage for payment of board and lodging, a shipowner over the cargo for his freight, a common carrier for goods carried, a wharfinger for goods

warehoused, and the unpaid vendor's L. under the Sale of Goods Act. (b) *General*, i.e. with a right to retain not only for the debt arising in connection with the goods retained, but for a *general* balance of account. Such a L. arises either from trade custom (*see* CUSTOM) or express agreement. Bankers, solicitors, dyers, factors, and stockholders have the right to exercise a general L. A possessory L., generally speaking, carries with it no right to sell the goods retained unless such right is conferred by statute. Innkeepers and wharfingers may sell, and so may the unpaid vendor.

Maritime L.s include those of seamen for their wages, a master for his wages, and disbursements in and about the cargo, a salvor, the owners of a ship which has been damaged in colliding with another ship by the default of the latter, and a bottomry bondholder (*see* BOTTOMRY). The right is exercisable over the ship and its cargo, and far from depending on the possession of the thing over which it exists, as in the case of a possessory L., it is said to follow the thing wherever it goes. Among conflicting maritime L.s priority is given in the inverse order to that in which they arose.

Equitable L. exists independently of possession, and is in the nature of a right arising out of a trust created by agreement, express or implied; for example, the L. of a trustee on trust property for his costs and expenses, of a vendor of land for unpaid purchase money. L. may be lost by surrender of possession.

Liepaja (formerly Russian Libava, Ger. Libau), tn in the Latvian Rep. on the Baltic Sea. It has metal-working and fish-canning industries, and is an important transportation centre (ice-free port, 5 railway lines). Pop. (1956) 69,000 (1913, over 100,000), Latvians and Russians—until 1940 also Germans. Known since 1263, tn 1625 (history, *see* KURLAND); there was a flourishing export trade before 1914, which declined in independent Latvia; 1952-3, cap. of L. oblast (abolished).

Lier (Fr. Lierre), tn in the prov. of Antwerp, Belgium, a charming place situated at the confluence of the Great and Little Nèthe, forming together the R. Nèthe (q.v.). Noticeable buildings are the tn hall with belfry (1269-1411), the collegiate church (1377-1455), and the Zimmertoren, containing an interesting astronomical clock and a museum. The picturesque Béguinage (convent) dates from the 13th cent. The chief manufs. are shoes, lace, embroideries, instruments of brass, and cutlery. Pop. 29,000. *See* S. Leurs and J. A. Goris, *Lier in Ars Belgica*, vol. III, Antwerp, 1935.

Liestal, or Liethal, cap. of the half-canton of Basel-Land, Switzerland, 8 m. S. of Basel. It manufs. textiles. Pop. 7500.

Lieutenancy, Commission of, name given to the body of commissioners who take the place of a lord-lieutenant in the city of London. They are sometimes called deputy lords-lieutenant, but this is an

incorrect designation, as, although they perform the duties of a lord-lieutenant, they are commissioners appointed annually (as a rule) by the Crown; deputy lords-lieutenant, on the other hand, are appointed by the lord-lieutenant. The difference between the city of London and the rest of England is that in the former the L. is 'in commission.' It is noteworthy that under the Commonwealth the L.s of all the cos. were in commission, as Cromwell refused to recognise lords-lieutenant and appointed commissioners in their stead.

Lieutenant (Navy). In the R.N. a L. holds intermediate rank between a sub-L. and a L.-commander. A young naval officer first serves as a cadet or midshipman and then passes through the ranks of acting sub-L. and sub-L. He then qualifies in various courses of instruction, including such subjects as navigation, pilotage, and gunnery, and is then promoted to L., his seniority being according to the results of the examinations. Sub-L.s and L.s rank with L.s and captains in the army, according to seniority in their respective ranks. There are also the ranks of instructor-L. and engineer-L.

Lieutenant and Second Lieutenant (Army) (Fr. *lieutenant*, from Lat. *locum tenens*, holding the place of another), officers in the Brit. Army next in rank to a captain. The former are 'subaltern officers,' the latter 'subalterns.' The name L. is given to them because they 'understudy' the troop, squadron, or company commander, themselves commanding platoons or equivalent sub-units. Second L.s were formerly called cornets or ensigns, except those of fusilier regiments, who were called second L.s, but when an alteration was made in 1871, those appointed before 26 Aug. 1871, or from the Sandhurst 'A' list, were made L.s as from 1 Nov. 1871; those appointed after 26 Aug. 1871 were sub-L.s. The latter rank was altered in 1877 to second L., which, after being abolished from 1881 to Jan. 1887, is now in force. The duties of L.s and second L.s are identical. A L. of the army is of co-ordinate rank with a sub-L. of the navy and with a flying officer of the R.A.F.; a second L. ranks with a commissioned officer from warrant rank of the navy and with a pilot officer of the R.A.F.

Life, *see* BIOLOGY.

'Life,' a picture news weekly of the U.S.A. including feature articles, was started by Henry R. Luce in 1936. Its circulation has been in excess of 5,000,000 since 1947, and besides the regular ed. there are an international ed. and an ed. in Sp. In 1957 it was permanently represented by correspondents in 14 bureaux in the U.S.A. and Canada and 14 bureaux overseas. It had a regular staff of 24 photographers and also commissioned free-lance photographers and writers for special projects.

**Life Assurance**, see **INSURANCE**.

**Life Guards**, The, premier corps of the Brit. Army, taking precedence over all other regiments. Their duty is to attend the sovereign, as their title shows, 'life' being a corruption of the Ger. *Leib*, body, the L. G. thus being the bodyguards of the sovereign. The L. G. were originally composed of separate troops which were not regimented as the 1st and 2nd L. G. until 1788. The first 2 troops, raised by Charles II in exile, were linked with a third which had formed Monck's bodyguard in the Commonwealth army at the Restoration. A fourth troop raised in Scotland was added in 1661 and a fifth in 1679. Before 1788 those in the ranks of the L. G. enjoyed a special status in keeping with the origin of the troops—bands of gentlemen who served as the king's bodyguard. They fought at Dettingen, the Peninsular war, Waterloo, Tel-el-Kebir, and in S. Africa. On the outbreak of the First World War squadrons from the 1st and 2nd L. G. and the Royal Horse Guards were formed into a composite regiment for active service, and at once proceeded to France and joined the 4th Cavalry Brigade, in Gen. Allenby's div. Its first action was in the retreat from Mons; then it took part in the battle of the Marne (q.v.) and the general advance. In Oct. 1914 it moved northwards and came under Sir Douglas Haig's command, and took part in the first battle of Ypres, immediately followed by the defence of Messines. While the composite regiment was in France a Household Cavalry Brigade had been forming in England, into which were drafted officers and men of line cavalry regiments. This brigade went to the relief of Antwerp on 7 Oct. 1914, but arrived too late, and withdrew down the coast until it joined the allied forces about Ypres. On 7 Nov. the brigade won distinction by driving the Germans out of a gap they had made between Cavan's right and Demoussy's left at Klein Zillebeke. In the course of the campaign the Household Brigade, in common with all cavalry, was converted to an infantry status, and, later, organised machine-gun squadrons. Further honours were gained in many battles, notably on the Somme, at Albert, Arras, the Scarpe, Passchendaele, the Hindenburg line, and Cambrai.

In the general reduction of the army after the First World War the 1st and 2nd L. G. were amalgamated and designated 'the L. G.', and the Royal Horse Guards (the Blues) were reduced in strength. (For the services of the Household Cavalry in the First World War see Sir G. Arthur, *The Story of the Household Cavalry*, vol. iii, 1926.) In the Second World War the L. G. and Royal Horse Guards, forming the 1st Household Cavalry Regiment, served in Palestine with the 1st Cavalry Div. The unit was soon mechanised, and saw service in Iraq, Syria, N. Africa, Italy, and Europe. A second regiment, formed in 1940, fought as an armoured car unit with the Guards Armoured Div. in the liberation of Europe. After the

war the L. G. resumed their mounted ceremonial duties at Windsor and London.

**Life Insurance**, see **INSURANCE**.

**Life-saving and Rescue Apparatus**. Maritime practice includes rocket apparatus, lifebelts, rafts, buoys, bells, etc. The prin. means of saving life near the coasts of Great Britain is the first-named. In 1807 Capt. G. W. Manby introduced the 'mortar' apparatus, which preceded the use of rockets. By this a line was fired over the wrecked vessel by means of a mortar; in 1814 there were 45 mortar stations in England, and Capt. Manby was awarded a grant of £2000. John Dennet of Newport introduced the rocket system, and by 1853 there were 120 stations in the U.K. fitted with the apparatus. The rocket invented by Capt. Boxer was adopted in 1855; this is a combination of 2 rockets in 1 case, so that when the first rocket has carried the line as far as it can, the second adds an impetus to it, and a greater range is thereby attained. There are 5 parts to the rocket apparatus: the rocket, the rocket-line, the whip, the hawser, and the sling lifebuoy. The rocket, to which the rocket-line is attached, is fired over the wreck. The crew of the latter haul in the whip, which is an endless line rove through a block with a tail attached to it; the tail is detached and fastened to some portion of the ship high above the water, such as a mast. The hawser, to which is hung the travelling lifebuoy, is then hauled off to the wreck by the rescue party. The persons on the wreck then travel one at a time to shore in the lifebuoy. The rocket apparatus of Great Britain is the exclusive property of the Board of Trade, and is managed by the coastguard service. Next in importance comes the lifebelt. Every man engaged in lifeboat work must wear a lifebelt or life-preserver, a canvas jacket, the lining of which is stuffed with cork or with rubber material that can be inflated. The lifebelts used in lifeboat work will support a man fully clothed and a second person. The Ryder hammock, a mattress made of cork, is serviceable and will support 3 men in the water. Inflated rubber dinghies are also used.

**Life-saving service in the U.S.A.** Although this service used to enjoy a separate existence it was merged by Act of Congress of 1915 with the Revenue Cutter Service, under the general term of Coast Guard. Nevertheless in its own personnel, methods of work, and equipment it has been allowed a considerable amount of autonomy. It probably surpasses any life-saving service in the world for the amount of ground it has to cover, this being the vast coasts on the Atlantic, Pacific, and Gulf of Mexico belonging to the continental U.S.A. One peculiarity is that it also maintains 1 inland station, the life-saving fort at Louisville, Kentucky, because of the dangerous falls of the Ohio at that point. It has had a marvellous record in saving the lives of those imperilled by storms on the coasts, and in salvage of ships and property.

For life-saving from drowning see

under ARTIFICIAL RESPIRATION; HUMANE SOCIETY, THE ROYAL; SURF LIFE-SAVING; SWIMMING; from fire and in mines, etc., see RESCUE WORK.

Lifeboat, boat specially designed for saving life in cases of shipwreck, etc. The first insubmersible boat was built in 1785 by L. Lukin, a London coachbuilder, encouraged by the Prince of Wales, but it was not until the wreck of the *Adventure* off S. Shields in 1789 stirred up public feeling that any great interest was manifested in the question. A prize was then

right way up as soon as she capsizes, she is, in fact, more liable to capsize than the L. which cannot self-right. This, although once it goes over it has no chance of self-righting, is more stable.

In 1890 the first steam L. was completed. She was propelled, not by screws, but by a powerful pump, which drew in water through an opening in the bottom of the boat and discharged it at the sides. It could take in a ton of water in a second and drive the boat at 9 knots. Altogether 6 steam L.s were built, some

WHITEHILLS LIFEBOAT SETTING OUT

J. G. Bodie

offered for the best L., and Henry Greathead was commissioned to build a boat embodying the best points of the prize-winning plans of Wm Wouldhave and modifications suggested by members of the adjudicating committee. The principles of Wouldhave's L. were not generally adopted until the S. Shields L. capsized at the mouth of the Tyne in 1849 and 20 of her crew lost their lives. It was then that the first self-righting L. was built. The power to self-right is obtained by the 2 air chambers, or high 'end-boxes,' as they are called, which are the distinguishing feature of the self-righting L., and by a heavy keel, weighing from one-fifth to one-third of the boat's total weight. These high end-boxes, exposed as they are to the wind and the sea, make the self-righting L. less easy to handle in heavy weather; and though she will come

with pumps and some with screws. Motor L.s have now taken the place of all others. The first L. to be converted into motor power was completed in 1904 and sent to Tynemouth. She had a 12-h.p. 2-cycle motor. To-day the Royal National Lifeboat Institution maintains 155 motor L.s on the coasts of Great Britain and N. Ireland.

Through its ability to cover distances impossible for boats which depend on sails and oars, and its power against a heavy sea, the motor L. with diesel engines has been able to save lives that could never have been saved by the older boats. Fewer boats are required, as 2 boats can now safeguard a bay that once required 5 or 6. The cost, however, is greater. The first L. cost £150. To-day the largest L.s, 52 ft in length, are driven by two 72-h.p. diesel engines. Oil-spray, 2

radios, one with very high frequency radio transmission for direct communication with aircraft, loud-hailer, line-gun, and searchlight are carried. The modern motor L. costs from £17,000 to nearly £40,000. In addition the boathouse and launching slipway, which are as essential as the L. itself, may cost as much as or more than the boat. Only the best materials are used in the construction of a L., and each boat has to be passed as good by an inspector before being used. The carriage of a L. is a necessary adjunct where it is necessary to launch boats at a distance from the boathouse.

The National Institution for the Preservation of Life from Shipwreck, now the Royal National Lifeboat Institution, was founded by the efforts of Sir W. Hillary T. Wilson, and G. Hibbert in 1824. Except for a period of 15 years from 1854 to 1869, when there was a small gov. subsidy, the institution has always been dependent on voluntary subscriptions. Since 1824 more than 81,000 lives have been rescued from shipwreck; nearly £1 million a year is required to maintain the L. service. It gives rewards for rescues and attempted rescues. It compensates those injured in the service, and pensions the widows and orphans of those killed in its duties. The U.S. Life-Saving Service was introduced in 1871, and both in equipment and efficiency has reached a very high standard; it is subsidised to a great extent by Congress. The life-saving societies of both France and Germany date from 1865.

In Britain, each L. station is controlled by a local voluntary committee; usually there is one full-time member of the L. crew (the motor mechanic) at each station. Other members of the crew normally have their own occupations; many, though not all, are fishermen. The coxswain who commands the L. at sea, the second coxswain, and the bowman are 'boats' officers' and receive small retaining fees. The crew are all volunteers; rewards are paid by the Royal National Lifeboat Institution when they go out in the L., whether on service or on exercise.

L.s must be carried on board ships in sufficient number to accommodate crew and passengers. The *Queen Elizabeth* has 28 steel L.s, powered by diesel engines, fireproof and virtually unsinkable, carrying 145 passengers; equipment includes provisions, charts, radio, distillation plant, etc. Oil-tanker L.s are specially constructed to permit launching into an oil-covered sea. Launching is effected electrically, or by gravity as in the *Queen Elizabeth*.

The Second World War saw the introduction of airborne L.s to rescue air crews, and the first was used operationally in May 1943. The most efficient type is constructed of 2 mahogany skins; buoyancy chambers to ensure self-righting are inflated automatically when the L. is dropped on parachutes from the transporting aircraft. Sails and a 4-h.p. engine are provided, as well as radio, provisions, etc.

See J. R. Barnett, *Modern Motor Lifeboats*, 2nd ed., 1933; C. Vince, *Storm on the Waters*, 1946; Sir J. G. Cumming, *Literature of the Lifeboat, 1785-1947*, 1947; M. Savill, *The Adventure of the Lifeboat Service*, 1950; P. Howarth, *The Heroic Story of the Lifeboat Service*, 1956, *The Lifeboat Story*, 1957.

**Liferent**, in Scots law a right or personal servitude analogous to the Rom. *usufructus*, to use and enjoy a thing during life without thereby destroying or wasting its substance. It applies not only to heritable subjects, but also to household furniture or other things which wear out in process of time. A L. in a stocked farm would be construed to mean that the liferenter must leave the stock at the close of his period of enjoyment substantially of the same descriptive value and extent as at entry, and a L. of money would give the interest to the liferenter. L.s are divided into legal and conventional. Legal L.s comprise (a) *terce* (*tertia*) or right of a widow, or wife who has divorced her husband, to one-third of the husband's heritable subjects, and (b) *courtesy* or right given to the surviving husband of all his wife's heritage, provided issue of the marriage was b. alive (i.e. has been heard to cry). Conventional L.s are said to be either simple or by reservation. The former are constituted by grant by the proprietor completed by infestment; in the latter the proprietor reserves to himself a L. in the same writing by which he conveys the fee of the land to another. See W. Gloag and R. C. Henderson, *Introduction to the Law of Scotland* 1956.

**Liffey, River**. The L. is formed by 2 streams rising in the Wicklow Mts near Enniskerry. It flows through co. Kildare, past Kildoulen and Newbridge, and into Dublin Bay. In its passage through the city, which it divides into two, it is crossed by 10 bridges, of which O'Connell bridge is the prin. Its course is about 80 m. Its plain forms excellent pasturo land, and has the lowest rainfall in the Rep. of Ireland. The Golden Falls hydro-electric power station has a 6400-h.p. water-turbine and generator. (See illustration, p. 764).

**Lifford**, co. tn of Donegal, Rep. of Ireland, on the R. Foyle, 1 m. from Strabane in co. Tyrone. Pop. 800.

**Lift**, appliance for the transport of persons or goods between 2 or more levels in vertical direction by means of a guided car or platform. L.s are usually driven by electric power, but may be driven by hand or hydraulic power. The car and a part of the load are counterbalanced by a weight which is also guided. Otis of New York and Waygood of London installed the earliest successful electric L.s towards the end of the 1880's.

Modern high-speed L.s of 400 ft per min. and over employ gearless machines in which the sheave is mounted direct on the motor shaft. With automatic push-button control the car can be called to any floor by means of the landing pushes, or dispatched to any floor by

pressing the appropriate push in the car, and the car stops automatically at the required floor. Automatic L.s having collective control are arranged to answer both car and landing 'calls' in floor sequence independently of the order in which the car or landing buttons have been pressed. L. landing doors are provided with locking devices which prevent the L. from being operated unless all doors are closed, and prevent a door being opened unless the car is opposite that door. Modern L.s have power-operated doors which may open and close automatically or under the control of the L. attendant. The car is equipped with a safety device which clamps the car to the guides in the event of rope failure or of

sunk beneath the L. Another form of hydraulic L. is the suspended type in which the car is attached to a set of ropes that is led to a hydraulic cylinder and ram mounted on the wall of the L. By providing the cylinder and ram with an arrangement of multiplying pulleys, a relatively short cylinder may be employed. These L.s can operate at speeds as high as 400 ft per min. and the cars are provided with safety devices to prevent accident through rope failure. Hydraulic L.s, however, are now installed to meet special circumstances. In collieries steam-driven L.s were used, but to-day electrically driven L.s are usually arranged in pairs so that one cage counter-balances the other.

English Electric Co. Ltd

GOLDEN FALLS POWER STATION ON THE RIVER LIFFEY

excessive speed when descending, when overspeed on governor is provided. L.s may be provided with illuminated indicators to show the position of the car in L.-well and its direction of travel or the direction of a car that is about to stop at a landing. L.s are now frequently provided with automatic levelling equipment which ensures that the car stops level with the floor independently of the load or direction of travel. On high-speed L.s hydraulic buffers are installed to reduce impact should the car overrun its normal limits of travel.

Hand-power L.s are mainly used for the conveyance of meals and light loads where the service is infrequent. They are manually operated by means of an endless rope running in a V-grooved pulley that is mounted on a shaft which carries another V-grooved pulley over which passes the rope that 'connects' the car to the counterweight. For the larger sizes of hand-power L.s it is common practice to incorporate speed gearing in the winding mechanism.

Hydraulic L.s may be direct acting, in which the car is attached to the top of a ram which works in a hydraulic cylinder

Lifu, *see* LOYALTY ISLANDS.

Ligament, band of flexible connective tissue connecting the ends of bones and sometimes enveloping the joints. Most L.s are composed of white fibrous tissue, which is made up of fibres running parallel to each other so as to form a compact structure. Such are the L.s around the joints. Other L.s are composed of yellow elastic tissue which is specially adapted to support a continuous but varying stress, as in the L.s connecting the various cartilages of the larynx. L.s are also classified as *funicular*, or cylindrical cords; *fascicular*, or flattened bands; and *capsular*, or enveloping L.s completely investing a joint.

Ligan, or Lagan, *see* FLOTSAM.

Ligao, in of the Philippine Is., in Albay prov., Luzon. Rice and abacá are grown. Pop. 37,331.

Ligature (Lat. *ligatura*, a band), cord, band, or thread for tying about arteries or other vessels to occlude them temporarily or permanently. A L. may be *provisional*, if it is applied during an operation with the intention of removing it after the operation has been performed. If a part is tied so as to prevent discharge from a vessel until a wound has been healed, it is

usual to employ pure silk or catgut for the purpose, so that it may become absorbed as the necessity for the L. passes away. For temporarily arresting the circulation of a limb, as when an artery is severed, a tourniquet (q.v.), which can be tightened by turning a stick thrust between the band and the limb, is employed. The word L. is also used with reference to the concomitants of ecstasy (q.v.).

**Liger**, see LOIRE.

**Light**, agency that produces the sensation called sight. Certain bodies such as the sun, lamps, fires, etc., are said to emit L. or to be self-luminous. Most objects, e.g. the walls of a room, grass, trees, human beings, books, etc., are rendered visible by L. reflected by them from self-luminous bodies. In the absence of such sources of L., these objects cannot be seen. L. travels through empty space with a velocity of 299,793 kilometres per sec., i.e. 186,283 m. per sec., so that it travels from the sun to the earth in rather more than 8 min. (see VELOCITY OF LIGHT). Its speed in air and other gases is slightly less than this, but in transparent substances such as glass and water its speed is considerably diminished. Thus in water its speed is less than 140,000 m. per sec. This diminution in the speed of L. as it passes from one transparent medium to another is responsible for the phenomenon of refraction that causes, for example, a stick to appear bent when partially immersed in water, and governs the behaviour of lenses. Reflection of L. takes place at the surface of separation of 2 media which have different velocities of transmission of L. For the laws of refraction and reflection see the articles on these subjects.

Newton (q.v.) first analysed white L. by means of a prism purchased at Stourbridge fair. The analysed L. consists of a very large number of colours that lie between what we call red and violet. These are the 'colours of the rainbow' and are produced in a similar way by refraction in rain drops. The wavelength of red L. is about  $7 \times 10^{-6}$  cm., while that of violet L. is about  $4 \times 10^{-6}$  cm. These wave-lengths have been determined with great precision by means of the interferometer (q.v.). Electromagnetic waves of wave-lengths lying between the above limits cause the sensation of colour when they enter the eye, and are said to lie in the visible spectrum; waves of greater wave-length than  $7 \times 10^{-6}$  cm. may affect our sense of heat (infra-red waves), and longer waves of the same type are used in connection with radar and broadcasting. Again electromagnetic waves of wave-lengths lying between  $10^{-7}$  and  $10^{-9}$  cm. are X-rays; and still shorter waves are the gamma-rays from radioactive substances. Ultra-violet waves are about  $3.5 \times 10^{-6}$  cm. long, and the shortest known waves are about  $4 \times 10^{-10}$  cm. The L. waves that affect our sense of vision are extremely short by comparison with ordinary objects, and they do not bend round them appreciably. Hence L. travels very approximately in

straight lines. Diffraction of L. waves takes place appreciably when the obstacle is very small and not very much larger than the wave-length of these waves. The diffraction (q.v.) grating provides such obstacles and analyses white L. by virtue of the fact that the diffraction effect depends on the wave-length. The diffraction grating thus enables us to measure the wave-lengths of L. with precision.

The phenomenon of *interference* (q.v.) is produced when L. waves from 2 suitable sources are superposed, and it is possible to obtain darkness by such superposition. The colours of soap bubbles and other thin films such as oil and petrol on a road are due to interference of L. waves. L. waves may be *polarised*. In electromagnetic waves the vibrations, i.e. directions of the electric and magnetic fields, are at right angles to the direction of propagation of the waves. The vibrations may be in any one of the infinite number of directions at right angles to this direction of propagation. When L. passes through a crystalline medium the vibrations in the emergent waves are confined to 1 of 2 given directions, and if L. passes through 2 crystals suitably cut the emergent waves are *polarised*, i.e. there is only 1 direction of vibration. It is interesting to note the contrast between L. waves and sound waves—the vibrations in the latter are longitudinal, i.e. they are in the direction of propagation. Sound waves therefore cannot be polarised.

Optics is a very ancient branch of physics. It is stated that a lens of rock crystal was found in the ruins of Nineveh, while Aristophanes mentions the use of burning-glasses in *The Clouds* (Act II). Reflection and refraction were known to the Greeks of 300 BC, and theories of vision were formulated by the Pythagoreans and the Platonists. Cleomedes, a Roman of the time of the Emperor Augustus, following Ptolemy, extended the knowledge of refraction and explained that atmospheric refraction enables us to see the sun after it has set. De Hazen (about 10th cent. AD) wrote a book on optics, and, in addition to advancing the knowledge of reflection and refraction, made a close study of the optics of the human eye. Roger Bacon (13th cent. AD) made notable contributions and prophecies in optics, some of which bore fruit when Galileo constructed one of the first telescopes in 1609. Snell of Leyden discovered the law of refraction about this time, and Newton explained it by the assumption of a corpuscular theory of L. According to this theory a luminous body emits swarms of corpuscles that travel in straight lines through the all-pervading ether. Huygens, a contemporary of Newton, formulated a wave-theory of L., but Newton's great contributions to the knowledge of L., combined with his great reputation, caused his theory to be favoured, and it was left to Fresnel (1788–1827) and Young (1773–1829) to establish Huygens's theory by the evidence of their experiments on diffraction and interference, and

the explanation (by Fresnel) of the possibility of the propagation of L. in straight lines in normal circumstances (see above). The 19th cent. saw the development of the elastic solid theory of the ether, the medium through which L. was propagated, but this finally gave place to the electromagnetic wave (q.v.) theory following Maxwell's theoretical researches supported by the accurate determinations of the velocity of L. The emission of L. from self-luminous bodies is an atomic phenomenon that was given a satisfactory explanation by Planck, Bohr, and others in terms of the quantum theory (q.v.). Similarly the absorption of L., and in particular the emission of electrons from metallic surfaces illuminated by L. (photo-electric effect), was explained by the quantum theory. Certain properties of L., however, are explained only on the hypothesis that L. is propagated as electromagnetic waves (q.v.). Thus the quantum theory accounts for the photo-electric effect (q.v.), while the electromagnetic wave theory accounts for the interference of L. The relation between these 2 theories can be approached in terms of Heisenberg's Indeterminacy Principle (q.v.). The reader is referred to the articles on RADIATION and QUANTUM THEORY for further discussion of this problem.

Lighter and Lightermen. Lighters are strong, heavy, flat-bottomed boats for transporting cargo to and from ships or docks. They are usually open, but some have a deck and large covered hatches. They are either furnished with mast and sail or else oars or sweeps are used; some are fitted for motor or steam propulsion, but many are towed. Lightermen are those employed in or about lighters. Thames lightermen are licensed by the Watermen and Lightermen's Co., incorporated in 1827.

Lightfoot, John (1602-75), cleric and rabbinical scholar, b. Stoke-on-Trent. He took orders and became chaplain to

Sir R. Cotton in London, who, in 1630, presented him to the rectory of Ashley in Staffs. His first pub. work, *Erubhim, or Miscellanies, Christian and Judaical*, appeared in London in 1629. His next pub. was *A Few and New Observations upon the Book of Genesis*, 1642. In 1643 he was made rector of St Bartholomew's Church, near the Exchange. In the same year he sat in the Westminster Assembly. In 1650 he was appointed master of St Catherine Hall, Cambridge, and 4 years later vice-chancellor of the univ. The best ed. of his work is by J. H. Pitman, 1822-3. See life by D. M. Welton, 1878.

Lightfoot, Joseph Barber (1828-89), prelate and theologian, b. Liverpool. In 1861 he was made Hulsean prof. at Cambridge, and shortly afterwards he became chaplain to the prince consort. In 1871 he was made a canon of St Paul's Cathedral, and in 1879 accepted the bishopric of Durham. He left a number of important theological works, the chief of which was his *Apostolic Fathers* (2nd ed.), 1890. He also wrote *Ignatius and Polycarp*, 1885, and commentaries on St Paul's Epistles. See W. Sanday, *Lightfoot as a Historian*, 1890; also life by B. F. Westcott, 1890.

Lighthouse, building erected to carry a light for the purpose of warning and guiding mariners as to their position and course. From very ancient times towers were erected with beacon fires, those built by the Libyans and Cushites in Lower Egypt being perhaps the earliest. The first beacon which was regularly maintained for the benefit of mariners was probably that referred to by the Gk poet Lesches at Sigeum in the Troad. The Pharos of Alexandria, built in the reign of Ptolemy II (283-247 bc) by Sostratus of Cnidus, was one of the 7 wonders of the world, and 'pharos' was for long used as a generic term for a L. The Emperor Claudian built a tower at Oetia in AD 50, and other noted L.s of the Romans were those at Ravenna, Pozzuoli, and Messina. The earliest L.s in W. Europe were those at Boulogne (La Tour d'Ordre) and at Dover (the Pharos), built by the Romans, who are also presumed to have erected L.s at Holywell and Flamborough Head. The earliest example of a tower exposed on all sides to the onslaught of the waves is the L. of Cordouan, built on a rock in the sea at the mouth of the Gironde; the first L. at this point (805) is attributed to Louis le Debonnaire. Many towers with braziers were built at various positions on the coasts of Europe during the 17th and 18th cents., such as those at Tynemouth (c. 1608), St Bees (1718), and the Lizard (1751) in the U.K. The Boston Light on Little Brewster Is., Massachusetts, is the oldest in the U.S.A., dating from 1716, and the present structure from 1859; other early L.s were erected at Beaver Tail, near Newport (1740), and at Brant in Nantucket Harbour (1754). L.s built on rocks, etc., exposed to the sea may be of masonry or concrete, of openwork steel or iron on

pile foundations, cast-iron plated towers, or structures on cylinder foundations. Masonry towers require good foundations; the centre of gravity should be as low and the foundations as deep as possible, and the structure should be of a circular plan. There should be no projections save a gallery under the lantern. The stones, especially those on the outer face, should be dovetailed or joggled; recently concrete and reinforced concrete have been used in construction. The openwork L.s are suitable for shoals, coral reefs, etc., where the bottom is insecure or sandy, as iron or steel piles can be driven in and the structure built thereon. Iron-plated L.s are erected in situations where the cost of stone or the scarcity of labour renders masonry expensive. Cylinder or caisson foundations are used where it is desired to erect a substantial structure on sandbanks, shoals, etc., as in the case of the *Rothersand Tower* (see below). Some of the more important of exposed L.s are: *Eddystone L.* (q.v.). *Bell Rock L.* (1811) off *Forfarshire* has a focal plane 93 ft above high water. *Skerryvore L.* (1844) off *Argyllshire* has a height of 138 ft, a diameter at the base of 42 ft, and at the summit of 16 ft. *Héaux de Brehat L.* (1853), off the *Île de Ré*, has a height of 86 ft. *Bishop Rock L.* (1858, destroyed during building in 1850), in the *Scilly Isles*, was strengthened in 1874 and again between 1881 and 1897. *Minot's Ledge L.* (1860), in *Boston Harbour*, *Massachusetts, U.S.A.*, has a height of 89 ft. *Beachy Head L.* (1902) has a height of 103 ft; the old structure on the cliff had a height of 234 ft. *Rothersand L.* was commenced in May 1881, but was destroyed in Oct. of the same year. The present structure, which was completed in 1885, has a height of 78 ft above high water, or from the foundation caisson to the top vane a height of 185 ft. Other noteworthy L.s are the *Horsburgh, Singapore* (1851); *Smalls L.* (present structure 1861); *Daedalus Reef in the Red Sea* (1863); the *Wolf Rock L.* (1869); *Dhu Heartach* (1872); *Great Basses, Ceylon* (1873); *Prongs, Bombay* (1874); *Spectacle Reef, Lake Huron* (1874); *Chicken Rock, off the Galf of Man* (1874); *Armen, near the Île de Sein, Finistère* (1881); *Katray Head* (1895); *Fastnet* (q.v.) (1904); and *Jumant d'Ouessant, France* (1911). L.s built on land do not present any particular difficulties in construction; the highest is *Île Vierge Tower (Finistère)*, built in 1902, with a height of 247 ft from ground to focal plane, whilst the *Phare d'Eckmühl (Penmarc'h, Finistère)*, 207 ft, built in 1897, is one of the most magnificent of such structures.

*Optical apparatus of lighthouses.* There are 3 different systems of lighting: the catoptric, the dioptric, and the catadioptric. In the first the rays of light are simply reflected on silvered mirrors of plane, spherical, parabolic, or other profile. In the second the rays pass through lenses and are refracted at the incident and emergent faces. In the third system the light rays are refracted at the incident

face, are totally reflected internally at the second face, and are again refracted on emergence at the third face. The catoptric system dates from about 1763, the dioptric from about 1786, and the catadioptric from 1823; the two latter were invented by Augustin Fresnel. The catoptric system is not very efficient, since only a portion of the light emitted by the light source is reflected. When the rays from the source of light are distributed evenly into a belt of light around the horizon, being condensed only in the vertical plane, the light is a 'fixed' light. When the rays are concentrated into a pencil or cone of light directed towards the horizon and caused to revolve round the source of light, the light is a 'flashing light.' For sector lights and those throwing a beam over a wider azimuth than the flashing lights, the rays are condensed, both in vertical and horizontal plane, in such a manner as to concentrate the light over an azimuth of the required magnitude. Fixed lights are now very little used, being converted into occulting lights by the use of apparatus which cuts the light off at intervals. Coloured lights are not much used, as the power of a red light is only 40 per cent of the same light through uncoloured glass, and that of green only 25 per cent. Lights are divided by the Admiralty into fixed, flashing, and occulting. The distinction between the two latter is simply one of duration. All lights in which the period of darkness exceeds that of light are termed flashing, whilst all in which the light period is longer than the dark are termed occulting. These are further divided into group flashing, fixed and flashing, fixed and group flashing, and group occulting, according to the duration and combination of light and darkness. An 'alternating' light is one in which different colours are shown alternately without an interval; the term 'revolving' is still retained in Great Britain for a light which gradually fluctuates between eclipse and full. A modern development has been the use of automatic control L.s. These are of sev. designs; there is usually a double or triple set of generators, run by petrol or Diesel engines and set to operate on alternate nights, and to take up the load on the failure of the running set. Time switches bring the light into action at set times, and flags and lights are arranged to warn an attendant of any faults. Remote control has also been developed, the controls being operated where necessary by submarine cable, as at the *Platte Fougère L.* off *Guernsey*.

*Illuminating agents.* As late as the 19th cent. wood or coal was used to give light in L.s; Smeaton introduced candles. Oil-lamps with flat wicks were introduced about 1763, and the invention (c. 1780) of the Argand burner caused a great improvement. Spermin oil was used at first, and later colza oil. In 1868 a burner was invented which would consume hydrocarbon oils (petroleum, etc.). The use of coal gas dates from 1837. Acetylene is

also extensively used, particularly in the case of unattended lights. Its light is intensely bright whether plain burners or mantles are used. The first installation of electric light for L. purposes was in 1858. In the early days the light was produced by arc-lamps, but these have now been superseded by high-power, gas-filled, filament lamps of up to 6 kilowatts. The current is obtained from a local supply whenever possible, or a small generating set driven by internal combustion engines is installed. In the event of failure of the main electrical supply, storage batteries or an emergency gas burner may be brought into use. Some lenses weigh many tons and are mounted upon a carriage which floats in mercury and is rotated by a simple weight-driven clockwork mechanism. The higher power of electric lamps enables lenses to be smaller and lighter, so that the mercury rotating arrangement can be replaced by a ball-bearing mounting, and the clock by electric motors.

*Lighthips, buoys, etc.* The use of vessels in places where L.s cannot be erected dates from 1732 (see LIGHTSHIP). The use of unattended lights dates from 1884. Now electric and oil beacons, fitted with automatic apparatus for lighting, flashing, etc., have been placed at various points, and permanent wick lights, in which the wick is treated so that a deposit of carbonised tar is formed on its upper surface, are also used. Similar apparatus is also fitted to buoys (q.v.). A plant using dissolved acetylene can be installed in a buoy and may be left unattended for a year. For use in fog many forms of mobile signal have been developed, including explosives, sirens, bells, oscillators, whistles, and diaphones. Radio beacons are also used, and radar is being developed; the Decca system employs radio signals which actuate a special receiver, having dials with coloured markings, the relation of these to a special chart giving an exact and instantaneous geographical position. See LIGHT.

Corbin, *Romance of Lighthouses*, 1926; R. Wheeler, *Roman Lighthouses at Dover*, 1930; League of Nations, *Records and Texts of the Conference for the Unification of Buoyage and Lighting of Coasts*, Geneva, 1931; G. R. Putnam, *Lighthouses and Lightships of the U.S.*, 1933; R. L. Jones, *Silent Sentinels*, 1944; and articles by Chance, Douglass, Hopkinson, Brehner, and others in *Proc. Inst. Civil Engineers* (vols. xxvi, xxx, xxxviii, lvii, lxxv, lxxxviii, cxviii, cxlix, etc.).

Lighting, natural and artificial, indoor and outdoor, has come to be the subject of careful scientific study. The standards of a cent. ago would be quite inadequate for modern precision engineering, reading habits, and night traffic. Good seeing conditions depend not merely on the quantity of L. but also on its quality or distribution; glare can interfere with

vision, as well as shadow. This is why vehicle headlamps must be provided with dipping arrangements, but the same principle applies with indoor L. as well.

*Natural lighting*, or daylighting, is taken into account by the architect designing a building. It presents no great problem with the small house, but in designing schools, hospital wards, factory workshops, and large offices much calculation may be needed to ensure that windows are of the right size and in the right places to give enough illumination without glare, at all points where it is needed, keeping in mind that different tasks require different levels of illumination. Indoors a level of illumination of only 2-3 per cent of that existing outdoors under the open sky will be sufficient for most tasks; the eye can adapt easily to that lower level, but only if there is no glare; a patch of white sky seen through a window in the field of vision may set up eyestrain.

*Artificial lighting* is relatively independent of the design of the building, and it may be designed by an illumination engineer rather than by an architect. The same principles as regards quantity and quality apply as with natural L. The units used for measuring source brightness and illumination level, the candlepower and the foot-candle, recall the earliest form of artificial L. Gas, either mains supply or 'bottled,' is still widely used for L., even in some London streets (see WELSBACH). For special purposes, where a very intense but small source is needed, as in film projectors, the carbon arc-lamp is still used; its disadvantages are the amount of heat it produces, the need to adjust the carbon rods as they burn away, and the fire risk. Electric lamps in which the source is totally enclosed by glass are most generally used for domestic, industrial, and street L. There are 3 main types: filament, gas-discharge, and fluorescent. In a filament lamp the current is carried by a wire, which is thereby heated to incandescence; the bulb may contain either a vacuum or an inert gas, so that the filament does not oxidise. In a discharge lamp, usually tubular in shape, the conductor is a gas or a metallic vapour at low pressure; this is also raised to incandescence and emits light of a characteristic colour, depending on the gas; the most familiar are neon (red), sodium vapour (yellow), and mercury vapour (bluish). The fluorescent lamp, which is becoming widely used in shops and offices, and even in the home, looks similar to the ordinary discharge lamp, but the inside of the tube is coated with a substance that emits light (fluoresces) when struck by the extremely small charged particles carrying the current along the tube—the same principle as with the television screen. Discharge and fluorescent lamps produce very little heat, so they are cheaper to run than filament lamps, but the initial outlay is greater.

*Street lighting* is much studied in Great

Britain (at the Roads Research Laboratory) and abroad as a means of reducing traffic accidents. It must be uniform and free from glare and must also take account of reflection off the road, wet or dry, foggy weather, and the lights carried by the vehicles themselves. Red or yellow light, as given by the sodium-vapour lamp, has the advantage of being less scattered by fog or mist. See also ELECTRIC LAMPS; ELECTRICITY IN THE HOME; PHOTOGRAPHY.

See *British Standard Code of Functional Requirements for Buildings*, Chs. I (Day-light, sunlight, and ventilation) and VII F (Provision of artificial light).

**Lightning**, see THUNDERSTORM.

**Lightning-stick**, see BULLROARER.

**Lights**, Ancient, popular name for the easement (q.v.) of right to light. The right to have free access of the sun's light to one's windows without obstruction by others originates either in a grant (q.v.) or by prescriptive title of 20 years. The presumption in favour of the right after 20 years' uninterrupted enjoyment is that it has always existed. If, therefore, the person resisting the right proves that 40 (say) years ago the access was blocked against the claimant or his predecessor in title, the inchoate right is defeated; and the same result follows if he can show that the claimant's enjoyment of light depended on a written leave or licence given by him (the person resisting) or his predecessor for a limited and now expired period. The owner of anct L. is entitled not only to sufficient light for the purpose of his then business, but to all the light which he has enjoyed prior to the interruption he seeks to restrain. A right to anct L. cannot be acquired in favour of open ground, but only in favour of buildings. If a person enlarges old windows, these enlargements can be obstructed with impunity, though the anct L. are still entitled to protection. The right to anct L. is lost only by intentional abandonment. See also EASEMENTS and LAND LAWS.

**Lights**, Artificial, are produced by bringing some substance to a state of incandescence. In the older methods this substance is usually some form of carbon. When a candle or oil-lamp is lit small particles of carbon are produced by the decomposition of the organic substances in the material, and these particles become heated to incandescence. Oils of vegetable and animal origin have been used in lamps, but the introduction of mineral oil in 1853 brought a greater efficiency, and the fall in price on the discovery of oil wells in America brought that illuminant within the reach of all. In the efficient burner introduced in 1784 by Argand, the wick takes the form of a hollow cylinder; a current of air passes upwards and feeds the inner surface of the flame with oxygen. Coal gas was first used as an illuminant by Wm Murdock of Redruth in 1779. The early burners were of the 'batswing' type, in which a flattened flame was produced by a slit in the end of the burner. Later the 'fishtail' flame

was produced by causing 2 jets of gas from 2 small holes in the burner to impinge upon one another, with the result that a flattening of the flame was produced. The Bunsen flame (1828) is non-luminous because the introduction of air into the gas current causes complete oxidation of the carbon with a resulting high temp. But the flame was used to heat a mantle made of oxides of rare earths to incandescence (1855). Later inverted burners were introduced. See ACETYLENE; ELECTRIC LAMPS; LAMPS; LIME-LIGHT.

**Lights**, Northern (*Aurora Borealis*, *Auroralis*, *Polar Light*), natural phenomenon which occurs in many forms, often of great beauty. The prin. types are arcs, bands, rays, curtain or draperies, patches, diffused aurora, and, perhaps most beautiful of all, corona. These all vary in shade from smoky black or grey to brilliant yellow, green, violet, or flaming red. The aurora usually begins with an arch, its apex to the magnetic meridian. It is often better defined on its lower side, and underneath the sky seems darker than the rest of the heavens. Stars are visible through this 'dark segment' as well as through 'the aurora' itself. The bright streamers of light which often extend 20 or 30 degrees upwards are known to the Shetlanders as the 'merry dancers'. Auroral displays are most frequent and most brilliant in higher lat. Recent investigations have located the position of the aurora borealis, which is found to lie within a region from 50 to 300 m. or more above the surface of the earth. Spectrum analysis has identified the pronounced green line in the auroral spectrum as an oxygen line, but the precise nature of the aurora is not definitely known. This much seems fairly certain, however: magnetic storms (see MAGNETISM) and displays of the aurora borealis synchronise with a period of great sun-spot activity. Hence the aurora is in some way connected with emanations from the sun—emanations that must be electrical in nature to create the magnetic storms on the earth. These electrons ejected by the sun reach the earth in about a day or less and the earth's magnetic field produces certain dispositions in their arrangement which are responsible for the aurorae, but there are still sev. things about the actual process which are unexplained.

**Lightship**, stoutly built vessel of steel or iron, fitted with lights and fog-signals, and occasionally with radio beacons to assist in direction finding, and moored at sea near reefs and other dangers to navigation where it is not feasible to erect a light-house. They vary in length from 80 to 120 ft. and have displacements up to 500 tons. The first — L. was that placed at the Nore in 1732, which had a lantern hung at the yard-arm. Later lanterns which surrounded the mast and could be lowered during the day were introduced by Robert Stevenson, this type being universally adopted, though the latest practice is to have a fixed lantern mounted at the top of a short, hollow

steel mast. Prior to 1895 the lights were of the catoptric form, but nowadays dioptric or multicatoptric apparatus is generally fitted.

Because of the rolling of the vessel some means of maintaining the horizontal direction of the beam is necessary. This is accomplished by means of gimbals and counter-balance weights, or by a device called a constant level table, where the lens table is balanced on a pivot in the lantern and connected by vertical wires to a pivoted counter-balance weight placed at the rolling centre of the vessel, which controls the movement of the upper table. The illumination in light vessels is provided by electric filament lamps, except in some very old vessels, which still have oil lamps.

**Ligne, Charles Joseph, Prince de (1735-1814)**, Austrian soldier and writer, b. Brussels, descended from a princely family of Hainault. He distinguished himself in the Seven Years War, afterwards rising to the rank of lieutenant field marshal. In the War of the Bavarian Succession he commanded the Austrian artillery at the siege of Belgrade in 1789. At the conquest of Belgium by the French he lost all his estates, but was given the rank of field marshal and an honorary command at court. From this time onwards till his death he devoted himself to literary work. His collected works, of which *Military Fancies and Prejudices*, 1780, is the best known, appeared in 34 vols. at Vienna during the last years of his life, selections being pub. in French by Mme de Staël. See lives by J. Thürheim, 1877, and V. Du Bled, 1890.

**Lignite** (Lat. *lignum*, wood), mineral substance of vegetable origin like coal, but often showing a distinct fibrous or woody structure. It is light, friable, and porous, closely resembling charcoal, but brown in colour, hence 'brown coal.' It occurs in beds like true coal, but is of much later geological age, dating from the Tertiary Miocene period. Deposits of L. are found in many parts of the world, the chief Brit. deposit being at Bovey Tracey, Devon. It is used as fuel, also in the manuf. of producer gas and synthetic liquid fuel; wax and rosin are obtained from certain types. Jet is a variety of L.

**Lignum Vitæ**, wood of *Guaicum officinale* and native of Cuba, Jamaica, San Domingo, and Porto Rico. Another species, *G. sanctum*, comes from the Bahamas. Contains the fragrant resin known as gum gualacum. It is one of the most outstanding of all timbers, as it is not only one of the hardest and heaviest known woods, but has also the almost unique property of being self-lubricating—that is, of containing sufficient oil or resin to make it suitable for bearings, without either catching fire from friction or needing any oil. It weighs nearly 80 lb. per cu. ft. See **TIMBER**.

**Ligny**, vil. in the prov. of Namur, Belgium, 13 m. N.E. of Charleroi, was the scene of Napoleon's victory over Blücher, 16 June 1815, 2 days before the battle of Waterloo (q.v.). L. has an important

export trade in granite and marble. Pop. 2000.

**Liguori, Alfonso Maria di (St Alphonsus) (1696-1787)**, Rom. Catholic theologian, founder of the Redemptorist order, b. Marianella, near Naples. In 1726 he became a priest, and in 1732 organised the 'Congregation of the Most Holy Redeemer,' being appointed by Pope Benedict XIV founder-general for life. He was canonised in 1839, and declared a doctor of the Church in 1871. Moral theology was the most important dept of his teaching, and his system of casuistry is well known. His chief work is his *Theologia Moralis*. See lives by A. M. Tannoja, 1798-1802; A. Capececiatro, 1893; A. C. Berthe, 1800.

**Liguria**: 1. Dist. of anc't Italy between the Ligurian Sea (Gulf of Genoa) and R. Po, bounded W. and E. by R. Varus and R. Macra. In early times the ter. extended into Gaul. The Ligures were conquered by the Romans in the 2nd cent. BC.

2. Modern region (*compartimento*) of NW. Italy, comprising the provs. of Genoa, Imperia, La Spezia, and Savona (qq.v.). It borders the Gulf of Genoa (q.v.), and is bounded N. by Piedmont and Emilia-Romagna, W. by France, and E. by Tuscany (qq.v.). It is mountainous, containing ranges of the Ligurian Alps (q.v.) and the Ligurian Apennines (see **APENNINES**). There are mineral deposits (manganese, silver) and there are important iron, steel, shipbuilding, and engineering industries. The chief tn is Genoa. Area 2095 sq. m.; pop. 1,602,000. See **RIVIERA**.

**Ligurian Alps**, most S. part of the Alps. The L. A. lie between the low ground NW. of Savona and the Maritime Alps. The chief pass in the W. is the Col di Tenda (6145 ft) and to the E. of it is the Mengioja massif (8629 ft) which sends out spurs overlooking, from 6000 ft, the Riviera. The E. part lies further back from the Mediterranean and is lower.

**Ligurian Republic**, name given to the rep. of Genoa (q.v.) during its last years (1797-1805), when it was reorganised by Bonaparte and made to substitute a democratic for an aristocratic constitution. Till 1802 it was ruled by a Directory, when a doge appointed by Bonaparte became the chief executive. Finally it was annexed to France in 1805.

**Ligurian Sea**, name given to that part of the Mediterranean (q.v.) between Liguria and Tuscany (qq.v.) to the N. and Corsica (q.v.) to the S. It includes the Gulf of Genoa (q.v.).

**Lihnidos**, see **OHRID**.

**Lilac**, name for various species of *Syringa* (family Oleaceae). They are very hardy, deciduous shrubs, bearing large terminal panicles of flowers, which vary in colour from white to blue, violet, and purple, and are in most cases delightfully fragrant. *S. vulgaris*, a native of Persia, with its many modern varieties, is one of the commonest shrubs, and grows under the most unfavourable conditions, but is more floriferous when regularly pruned and its faded flower heads and also its

suckers removed. It is easily forced to produce blooms in mid winter. *S. persica* is a dwarf L., and very free flowering. The buds, leaves, and bark of *S. vulgaris* contain lilacine, an alkaloid with febrifugal qualities, highly valued in S. Europe.

Lilburne, John (1814-57), political agitator and pamphleteer, b. Greenwich. He became the leader of the 'Levellers

(1637-40) for circulating unlicensed books, and, though he served with distinction in the Parl. army, his political views caused his imprisonment under Cromwell. L. had many faults, being quarrelsome and litigious, but he was sincerely concerned

novels, including *Der Mäcen*, 1889, *Kriegsnovellen*, 1895, and a very popular humorous epic, *Pogfred*, 1896. L. is remarkable for his masterly use of language, which is one of the best examples of Ger. impressionism. His *Sämtliche Werke* appeared in 14 vols., 1904-5. See H. Braun, *Liliencronn und der Naturalismus*, 1923; also lives by F. Böckel, 1904, H. Mayne, 1920 and J. Elema, 1937.

Lilienthal, David Eli, see ATOMIC ENERGY COMMISSION.

Lilienthal, Otto (1848-96), Ger. engineer and aviation pioneer. He was one of the greatest figures in the hist. of flying. He was the first scientifically trained inventor to build full-size fixed-wing gliders and fly them successfully and progressively

LILIACEAE: (left) ASPARAGUS; (right) LILIUM REGALE

for what he conceived to be the fundamental rights of the people. He later became a Quaker. See M. A. Gibb, *John Lilburne, 1614-1657*, 1948.

Liliaceae, family of about 2500 species of herbs, bulbous, cormous, rhizomatous, etc., but with flowers usually hermaphrodite and actinomorphic, and 3-merous, with petaloid perianth, stamens in 2 whorls, and superior ovary, with capsule or berry fruits. Of 200 genera, the chief are *Asparagus*, *Allium*, *Aloe*, *Anthericum*, *Asparagus*, *Asphodelus*, *Aspidistra*, *Bulbocodium*, *Calochortus*, *Chionodoxa*, *Colchicum*, *Convallaria*, *Cordylone*, *Draconea*, *Eremurus*, *Erythronium*, *Fritillaria*, *Gallionia*, *Gloriosa*, *Hemerocallis*, *Hosta*, *Hyacinthus*, *Kniphofia*, *Lapageria*, *Lilium*, *Muscari*, *Ornithogalum*, *Polygonatum*, *Ruscus*, *Sansevieria*, *Scilla*, *Smilax*, *Trillium*, *Tulipa*, *Uvularia*, *Xerophyllum*, *Yucca*.

Lilienron, Detlev, Freiherr von (1844-1909), Ger. novelist and poet, b. Kiel. He served in the campaigns of 1866 and 1870-1, and held gov. posts till 1887, when he began to follow the pursuit of literature. His best work, pub. when he was almost 40, is his poetry *Adjutantenritze*, *Gedichte*, *Nebel und Sonne*; he also wrote

(1891-6) whilst studying the subject exhaustively. Through witnesses and widely circulated articles and photographs his work directly inspired many other pioneers, including the Wright brothers (q.v.), who carried on from where he left off and brought the cent.'s efforts to successful fruition. L. crashed and was killed in one of his gliders when trying out a head-harness to work the rear elevator.

Lilith (Heb., 'night-monster'), derived from the Mesopotamian *Lilitu*, and in Jewish mythology a female demon menacing children. Rabbinic tradition made her Adam's first wife, who deserted him to become a fiend.

Lilium, see LILY.

Lille (anc. *Insula*; Flem. *Rijsel*, or *Ryssel*), Fr. city, cap. of the dept. of Nord, on the Scheldt. It was the anc. cap. of Fr. Flanders (see FLANDERS). With Douai, it passed to the counts of Flanders in the 14th cent., then to Burgundy, Austria, and Spain, returning to France in 1668. It underwent a memorable siege in 1708 (see BOUFFLERS, DUC DE), and another in 1792. It was damaged in both world wars, and was in Ger. hands, 1914-18. L. is the seat of a bishopric, and has a univ. The enormous citadel was built by

Vauban (q.v.). There are some fine churches, and the Palais des Beaux Arts has one of the best collections of paintings outside Paris. L. is the centre of a great industrial and commercial dist., which includes Roubaix, Tourcoing, Croix, and La Madeleine (qq.v.). Its industries include the spinning and weaving of woollens, cotton and linen, and metalurgical, mechanical, and chemical manufs. It is an important road and rail junction. It was the bp. of Faidherbe, Lalo, and Gen. de Gaulle (qq.v.). Pop. 188,900. See Van Hende, *Histoire de Lille*, 1874.

Lillebonne (ancient Juliabona), Fr. tn in the dept. of Seine-inférieure, 20 m. E. of Le Havre. The anct. tn was sacked by Caesar, and there are remains of a Rom. theatre and baths. There is a textile industry. Pop. 6000.

Lillehammer, tn on Lake Mjøsa, Norway, 80 m. NNW. of Oslo, the co. tn of Oppland (q.v.). It is a popular holiday centre noted for its collection of anct buildings—De Sandvigske Samlinger at Malhaugen. Pop. 6800.

Lillers, Fr. tn in the dept. of Pas-de-Calais. It has oil works and footwear is manuf. Pop. 8600.

Lillibullero, refrain of an Irish revolutionary ballad, words attributed to Lord Wharton and music to Purcell. The word 'L.' was probably used by the Irish Rom. Catholics during the Protestant massacres of 1641, and the ballad, a scurrilous attack on the Catholics, had great political effect, helping to bring about the revolution of 1688. Commando units adopted the tune as a march in the Second World War.

Lillie, Beatrice (1898- ), revue actress, b. Toronto, Canada; married Sir Robert Peel. She made her first stage appearance at the Chatham Music Hall in 1914 and her first appearance in London at the London Pavilion in the same year in *The Daring of Diane*. She then went into revue at the Alhambra, Leicester Square, under the direction of André Charlot, in *Not Likely*, and her clear-cut style and gift of comedy soon drew attention. She made a very big success in *The Nine o'Clock Revue* at the Little Theatre in 1922. She started in New York in *André Charlot's Revue of 1924* which made her a great favourite with New York audiences. In 1926 she made her first appearance in cabaret, in New York, and was acclaimed. She is the outstanding cabaret performer of modern times and has since spent her time between London and New York, in revue, cabaret, and variety. As a singer of 'point' songs she is unsurpassed and she remains one of the great individual artistes of her time, of the same status and power as the famous music hall performers of the older days.

Lilliput, name of a fabulous kingdom described in Swift's *Gulliver's Travels*, 1726. Gulliver was wrecked on its shores, and the inhab. (Lilliputians) were so diminutive, being merely about the size of a man's finger, that Gulliver seemed a giant to them. Hence as an adjective lilliputian means tiny, dwarfish.

Lillo, George (1693-1739), dramatist, b. London, son of a Dutch jeweller. His first play was produced at Drury Lane in 1730. Of his works, *George Barnwell*, 1731, commended by Pope, and *Fatal Curiosity*, 1736, produced at the Haymarket by Fielding, are the best known. See study by L. Hoffman, 1888.

Lilly, William (1602-81), Eng. astrologer and fortune-teller, satirised in Butler's *Hudibras* as 'Siddrophel'. He issued a series of yearly almanacs: *Merlinus Anglicus, Junior*, 1644-81; *Christian Astrology*, 1647; the *Introduction to Astrology* (last ed. pub. in 1852 by a London publisher, 'with numerous emendations'); *True History of King James I and Charles I*, 1651. See his autobiography, 1715.

Lily, John, see LILY.

Lily (*Lilium*), large genus which includes some of the most beautiful bulbous plants, of the family Liliaceae. There are no true Brit. species of the genus. The various species grow under widely different conditions in most of the warmer parts of the world, but in Brit. gardens the best position for the majority of them is a sheltered one with partial shade and a light loamy soil. The European L.s usually do best in ordinary gardens; the best of these is the Madonna L. (*L. candidum*), with pure white bell-shaped flowers. *L. martagon* (Turk's Cap) bears numerous purple or white flowers on tall stems. Other European L.s are *L. croceum* and *L. bulbiferum*, both orange; *L. pyrenaicum*, with yellow blooms spotted with brown; *L. pomponium*, producing an umbel of scarlet flowers; and *L. chalcedonicum*, also scarlet. One of the most popular species is *L. auratum*, enormous numbers of bulbs being imported annually from Japan. It does best when grown among peat-loving shrubs. A very early species is *L. hansonii*, spotted yellow. *L. speciosum*, white and red, is a valuable plant for providing cut flowers, but is much grown also in pots and borders. *L. tigrinum* (tiger L.), with its orange red and black blooms, is one of the hardest, coming up regularly in borders after once being planted. *L. giganteum* is a native of the Himalayas. From a large fleshy bulb a thick stem rises 10 ft high, and bears numerous trumpet-shaped flowers, white, tinged with purple. The bulb dies after flowering.

Lily, Giant, or Spear Lily (*Dorothyanthus excelsa*, family Amaryllidaceae, not to be confused with *Lilium giganteum*), magnificent Australian flowering plant with ornamental foliage, sometimes grown in large greenhouses. It bears clusters of scarlet blooms on huge stems, 10 to 12 ft tall, in late summer. Old plants throw off suckers very freely, and the plant is easily propagated.

Lily of the Valley (*Convallaria majalis*), native Brit. plant, much grown in gardens. Its fragrant drooping bells rising from the characteristic leaves are highly decorative. The plant forces exceptionally well, and for this purpose large numbers of crowns are retarded by refrigeration, and from these with gentle heat the flowers can be

produced all the year round. A number of fine varieties have been introduced.

**Lilybasum**, see **MARSALA**.

**Lilye**, or **Lily**, **William** (c. 1468-1522), grammarian, b. Odiham, Hants. He became headmaster of St Paul's School and is reputed to have been the first to teach Greek in London. He assisted Colet in compiling the Eton Lat. Grammar, and pub. sev. vols. of Lat verse.

**Lim Yew Hook** (1914- ), Singapore politician, educ. at Raffles College. He became a confidential secretary, and first became prominent in local politics as the secretary of the Singapore Clerical and Administrative Workers' Union. He visited England on a Brit. Council scholarship, 1947. L. was a nominated member of the Singapore Legislative Council, 1948-51, and has since been an elected member of the Council (now called the Assembly). He was labour minister in 1955, and when David Marshall (q.v.), the chief minister, resigned, L. succeeded him (1956). In Mar. 1957 he visited London for talks with the Brit. Gov. which resulted in an agreement (made in April 1957) under which Singapore was to obtain internal self-gov. and a new status within the Commonwealth. See **SINGAPORE**.

**Lima**: 1. Maritime dept of Peru, bounded on the W. by the Pacific. The surface is very mountainous, with fertile valleys in the W. Sugar is produced; nitre, copper, and silver are mined; and there are exports of chinchilla skins and vicuña wool. Area 15,052 sq. m.; pop. 1,230,423.

2. Cap. of above and of Peru, on the Rimac, 6 m. from its port, El Callao, on the Pacific. Among its chief buildings are the cathedral (begun 1535, rebuilt after the earthquake of 1746), a public library with rare books, the univ. (1551), and mint (1565). Founded by Pizarro (1535) as Ciudad de los Reyes it became the seat of the Sp. viceroys of Peru, and later cap. of the rep. The 16th-cent. univ. of San Marcos is one of the two oldest in the New World. Markham College for boys is one of the finest Brit. schools outside the U.K. L.'s manufs. include gold lace, glass, pottery, textiles, tobacco, furniture, cocaine, aircraft, etc., and silver, copper ore, bark, chinchilla skins, vicuña wool, nitre, soap, and cinchona are exported. Pop. 835,468. See J. Valega, *History of Peru*, 1938.

3. City and co. seat of Allen co., Ohio, U.S.A., on Ottawa R., 12 m. SW. of Toledo. It has oil refineries, steam-engine and motor-car works, and manufs. electrical goods, tile-roofing, tobacco products, etc. Pop. 50,200.

**Lima Wood**, see **BRAZIL WOOD**.

**Limán von Sanders**, **Otto Viktor Karl** (1855-1929), Ger. general in Turkish service, b. Stolp, Pomerania, son of Karl L., country gentleman. Receiving a commission in the Grand-Ducal Hessian Foot-Guards, 1875, he was major-general by 1908, and in 1911 was appointed to command the 22nd Div. in Kassel. Ennobled in 1913 he added von Sanders to his name. In the same year he was sent

to Constantinople, made Ger. general, and marshal and inspector of the Turkish Army, Jan. 1914. Commanding the Turkish Fifth Army at the Dardanelles (q.v.), he compelled the allied forces to retire. Just before the end of the war he was preparing for the defence of Palestine; but the Turkish defence collapsed, and L. narrowly escaped capture at Nazareth, 18 Sept. 1918. At Adana, where his forces re-formed, he heard of the armistice, and gave up his command. On his voyage from Constantinople to Hamburg he was detained sev. months by the British at Malta. There he began writing his *Five Years in Turkey* (Eng. trans., 1928).

**Limassol** (Gk Lemesos), second port of Cyprus, on the S. coast. It has a lighterage basin and jetty and is the centre of the Cyprus wine industry. Richard I married Berengaria here (1191). There is a medieval fort. Estimated pop. (1954) 27,300.

**Limavady**, tn of co. Derry, N. Ireland, 16 m. E. of Derry. The famous Irish melody known as the Londonderry Air (q.v.). 'Danny Boy' was first written down in L. by Jane Ross in 1851 from an itinerant fiddler, MacCormick. It is believed to have been composed by Rory Dall O'Cahan, harper-composer of the 16th cent. Pop. 3300.

**Limax**, see **SLUG**.

**Limb** (Lat. *limbus*, border), in astronomy the border or edge of the apparent disk of a heavenly body, especially the sun and moon.

**Limbach**, Ger. tn in the dist. of Karl-Marx-Stadt, 7 m. WNW. of Karl-Marx-Stadt (q.v.). It has textile and engineering industries. Pop. 20,000.

**Limbe**, tn, Nyasaland Protectorate, 5 m. from Blantyre (q.v.); important commercial centre, H.Q. of Nyasaland Railway. Tobacco grows extensively in dist. Pop.: Europeans, 1000; Asians, 1000; Africans, 9000.

**Limber**, that part of a gun-carriage, consisting of 2 wheels and shafts, and forming an ammunition container, to which horses are harnessed or the traction vehicle attached. See **MACHINE-GUNS** and **ARTILLERY**.

**Limless**, **Aids for the**, see **ARTIFICIAL LIMB**.

**Limbo**, or **Limbus** (Lat. 'border,' 'edge'), in Rom. Catholic theology the name given to the place of modified bliss assigned to those departed souls who are unfit for the divine vision, but who possess a natural goodness and have not actually offended God. Dante (*Inferno*, iv) described L. as the uppermost of the 9 circles subdividing Hell, the L. *patrum* containing the spirits of the virtuous heathen and the L. *Infantium* those of unbaptised infants.

**Limborch**, **Philip van** (1633-1712), Dutch Arminian, b. Amsterdam; was pastor at Gouda and Amsterdam, and in 1668 appointed prof. in the Arminian College, Amsterdam. His *Institutiones theologiae christianae* and *Historia Inquisitionis* have been trans. into English.

**Limbourg** (Flem. **Limburg**), old Dutch

prov., since 1839 divided between the Netherlands and Belgium. The Belgian L. is a NE. prov., with Dutch Limburg to N. and E., Antwerp, Brabant, and Liège to W. and S. The Maas (Meuse) R. forms part of the E. boundary. The N. half of the prov. forms part of the sandy Kempen (Campine) plain, agriculturally the poorest ground of Belgium. Industrially, however, this region has a rich future. Extensive coal-fields were located and in 1920 their exploitation began. They are estimated at present to hold a reserve of about 12 milliard tons of coal. Opened to cheap transport by the Albert Canal, this region attracts many industries. To the S. the soil is more productive. Sugar-beet and corn are the most important crops. There are also extensive orchards and the breeding of horses, cattle, and swine is carried on. Hasselt (cap.), Genk, St Truiden, Tongeren, and Lommel are the chief tns. Area 930 sq. m.; pop. (1955) 528,130. See also LIMBURG (Netherlands).

Limburg, prov. of SE. Netherlands, with Germany to the E., N. Brabant (Netherlands), Liège, and Limbourg (Belgium) to the N., W., and S. It is drained by the Maas (Meuse) and the Roer. In the N. is part of an extensive marsh, the Peel. Its cattle are famous, and coal is mined. Maastricht (cap.), Heerlen, and Roermond are the chief manufacturing tns. The prov. was the scene of considerable fighting in Nov. 1944, during the advance of the Brit. Second Army and the U.S. Ninth Army against the Ger. occupying forces. In 1949 a small area of Germany near Maastricht was transferred to Dutch sovereignty. Area 850 sq. m.; pop. 801,135. See also LIMBOURG (Belgium).

Limburg an der Lahn, Ger. tn in the Land of Hessen (q.v.), 22 m. NNW. of Wiesbaden (q.v.). It has a splendid Romanesque cathedral with 7 towers, a 13th-16th-cent. castle, and a 14th-cent. bridge. Iron is mined in the dist., and there are machinery, textile, glass, and leather industries. Pop. 16,000.

Limbus, see LIMBO.

Lime is the common name for calcium oxide, CaO. It can be obtained pure by burning calcium in oxygen, but commercially it is prepared by strongly heating limestone or calcium carbonate,  $\text{CaCO}_3$ , in a lime-kiln:  $\text{CaCO}_3 = \text{CaO} + \text{CO}_2$ . Carbon dioxide escapes, and quicklime, L. shells, burnt L., or caustic L. remains. When wetted a rise in temp. occurs, and the resulting mass is known as hydrated, slaked, or slack L.,  $\text{Ca(OH)}_2$ , chemically named calcium hydroxide. L. is most commonly used by farmers and gardeners. The action of L. upon soils containing a large amount of organic matter is a disorganising one, making plant food available to the crop and burning up decomposing organisms. For this reason L. must only be applied to soils which contain plenty of organic material, such as animal manures or decayed vegetation. On poor light land L. accentuates the poverty. In addition to this action,

freshly slaked L. is of great value as a fungicide. In soils where turnip culture has been impossible owing to club root, applications of L. for 2 or 3 successive seasons have made it possible to grow a good crop. Ground limestone, powdered limestone rock, or chalk is frequently applied to land, and though the action is slower the ultimate effect is the same. Dressings of marl are applied to land, chiefly for the L. contained in it. Much agric. land still depends for its L. on the heavy dressings applied many years ago. Slaked L., as mixed by builders with sand for mortar and plaster, sets by reason of its loss of water and absorption of carbon dioxide from the air, and consequent hardening.

Lime, fruit of sweet L. (*Citrus aurantifolia*) and the W. Indian L. (*C. medica acida*). It is greenish-yellow in colour, about 1½ in. in diameter, and almost globose, but with a nipple at the top, and has a smooth, shiny rind. The juice is very acid, and is much used as a summer drink.

Lime, or Linden, handsome and useful deciduous tree. *Tilia cordata*, the small-leaved L., while hardy and quick growing, is cleaner and handsomer than *T. vulgaris*, the common street tree throughout Europe and in the Berlin promenade, Unter den Linden. *T. platyphyllos* has large, hairy leaves, which often fall in Aug. L. flowers are very attractive to bees.

Lime-light, illuminating effect produced by heating lime to an extremely high temp. The principle of L. is based on the fact that calcium oxide, like the alkaline earths generally and the rare earths, withstands the disintegrating effects of heat to a high degree. They are very difficult to fuse, and are bad conductors of heat, so that when intense heat is applied to the surface of one of these substances the temp. of the area rises immediately to the point at which the radiant energy is emitted in the form of brilliantly white light. This principle has been adopted in the manuf. of gas mantles, which are suspended in an atmosphere of non-luminous flame. L. has been used in the theatre, in signalling apparatus, and in optical or 'magic' lanterns, but for many years electric lighting has rendered it obsolete.

Lime Water, solution of calcium hydroxide. Calcium oxide, or quicklime (CaO), reacts with water with the evolution of considerable heat. The lumps of lime crumble to powder, and the product is called slaked lime (calcium hydroxide,  $\text{Ca(OH)}_2$ ). If sufficient water be added to bring it to a creamy consistency, the product is called milk of lime; when water is added in sufficient amount to produce a clear solution, L. W. is formed. L. W. has an alkaline reaction and has useful medicinal properties. In the chemical laboratory it is used as a convenient test for carbon dioxide, which turns it milky owing to the precipitation of finely divided calcium carbonate.

Limehouse, riverside par. in the bor. of Stepney, E. London, deriving its name from the lime kilns that existed there

from medieval to recent times. The Regent's Canal Dock is on its W. side, and there is a Chinese quarter in and around the street called Pennyfields.

**Limeira**, tn on railway in the N. of São Paulo, Brazil. It is a centre for orange cultivation, and has a modern packing plant. There is also silkworm culture and mulberries are grown. Pop. 30,000.

**Limerick**: 1. W. co. of the Rep. of Ireland, in the prov. of Munster, bounded N. by the estuary of the Shannon. The surface is mostly level, but in the S. and SE. it is hilly, and the Galtee Mts reach a level of 3015 ft. The prin. riv. is the Shannon, navigable up to L. city, and famous for its salmon fisheries, Castleconnell being one of the centres. Above L. are the rapids of Doonas and Castle-troy. The fertile Golden Vale lies mainly in this co., and the pasturage is excellent, the rearing of cattle, sheep, pigs, and poultry being extensive; corn, sugar-beet, and potatoes are grown. Woollen goods are produced, dairy produce marketed, and there are flour- and meal-mills. The co. returns 7 members to the Dail. Area 1062 sq. m.; pop. 90,419.

2. Co. bor. and city of above co. It lies on the banks of the Shannon and includes King's Is. Originally a Dan. settlement, L. has a stormy hist., culminating in the sieges of 1690-1, when the defence, led by Patrick Sarsfield against William III and Gen. Ginkel, resulted in the Treaty of L. (1691). It is divided into 3 parts: Eng. Tn on the is., which is the old city, Irish Tn, and Newtown Pery, the modern quarter. On King's Is. is a fine Norman building, King John's Castle. The cathedral of St Mary on the is. dates from 1142. St John's cathedral and the Dominican, Redemptorist, Jesuit, Augustinian, and Franciscan churches are examples among many of contemporary church architecture. As a port L. is the most important on the W. coast, having a graving dock and about 3000 ft of quay, and considerable trade. The beautiful L. lace is made at the convent of the Good Shepherd. Pop. 50,820.

**Limerick**, 'metrical frivolity' of 5 lines of verse of which the first, second, and fifth rhyme, with an intermediate distich. The following example by Langford Reed celebrates the tn of its origin with, however, a change of accent:

'All hail to the town of Limerick,  
Which provides a cognomen, generic,  
For a species of verse  
Which for better or worse,  
Is supported by layman and cleric.'

The L. originated as a popular song, made up impromptu and sung at Irish feasts of 100 years ago, each L. dealing with an inhab. of some Irish tn. The first printed L. appears in Chap Books (q.v.), dated 1820. The nursery rhyme, *Hickory, Dickory, Dock*, is possibly the oldest L. Lear's *Book of Nonsense*, 1846, started a vogue for L.s to which Rossetti, Swinburne, and Ruskin subscribed. In 1907 a popular L. craze was started by a series of competitions in the *London Opinion* which at

length excited the hostility of the National Anti-Gambling League. See Langford Reed, *Complete Limerick Book*, 1924.

**Limestone**, rock consisting principally of calcium carbonate ( $\text{CaCO}_3$ ). Many varieties contain a good percentage of impurities, which affect the colour of the rock. Pure L. is white; the presence of iron oxides gives a yellowish appearance, iron sulphide causes a bluish colour, and lime silicates in crystalline L.s give rise to many different colours. Silica is often present in stratified L.s in the form of chert or flints. Magnesian L. contains carbonate of magnesium. L.s vary in physical properties according to their constitution, but fairly pure L. has a hardness of 3 and a specific gravity of from 2.6 to 2.8. It is not soluble in pure water, but is readily acted upon by dilute acids, and dissolves in water containing carbon dioxide in solution, which converts it into the soluble calcium bicarbonate. Water in coming through the air as rain, and in percolating through the soil, dissolves quantities of carbon dioxide which is present as the product of combustion or oxidation. In L. regions the water of springs, streams, etc., wears away the rock in a typical manner. Rounded boulders in the beds of streams, deep channels with occasional pot-holes, underground water-courses, caves, and waterfalls are all characteristic of L. dists. Large quantities of dissolved L. are carried out to sea, where it becomes the material from which many marine animals construct their shells or skeletons. When the animals die their skeletal remains fall to the bottom of the ocean, and, in course of time and with alteration of level, form layers of chalk and L. Chalk is the best-known organic L., and is made from the shells of certain species of foraminifera. Oolitic L.s consist of small rounded grains and may contain many fossils. Many varieties of crystalline L.s are formed by regional metamorphism, or by the thermal effects of neighbouring plutonic intrusions. These lose their organic structure and are commonly known as marbles. L. may also be deposited from solution without the agency of any animal; in this way stalactites and stalagmites are formed. L.s are used for the manuf. of lime and cement, as a flux for iron ores, and for building purposes. Crystalline L.s are used for making statuary and erections of an ornamental nature.

**Limit**, in mathematics, is a finite quantity which the sum of an infinite convergent series approaches but never reaches, e.g. the series  $1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \dots$  has 2 as its L. (see GEOMETRIC PROGRESSION). The term is also used for each of the values between which the definite integration of a variable is made.

**Limitation of Estates** means the marking out by the grantor of land (q.v.) to another or others of the quantum of estate (q.v.) or interest which each is to take in the land conveyed. It is advisable always to use recognised technical expressions in limiting an estate, because

unless appropriate words of limitation are employed the intentions of the grantor may be defeated. (See ESTATE as to the words for a grant in fee simple and fee tail; and also under ENTAIL and DE DONIS.) A grant by deed to X without more confers a life estate only, but by the Wills Act, 1837, a devise of real estate without any words of limitation will, in the absence of an apparent intention to the contrary, pass the whole fee simple or other the whole disposable estate or interest of the testator. As to perpetuities or remoteness of limitation, see PERPETUITY and LAND LAWS. See also CONTINGENT REMAINDER; REVERSION; SETTLEMENTS; SHELLEY'S CASE, RULE IN.

**Limitations, Statutes of.** It is the policy of the law to impose a time limit on the right to bring actions, not only that there may be some end to litigation, but because, if not, the resulting harm to vested interests that may have grown up in the meantime on the strength of a certain state of circumstances would probably be altogether disproportionate to the detriment of the individual who has lost his right of action by lapse of time. The various periods of limitation in the different classes of actions are all the creation of statute law, the common law (q.v.) permitting an action to be maintained at any distance of time from the accrual of the cause of action. The earliest of the Statutes of L. is that of 1623, which barred all personal actions, i.e. to recover debts on simple contracts (see CONTRACT; DEBT) and torts (civil wrongs), after 6 years (slander excepted). The Mercantile Law Amendment Act, 1856, extended the Act of 1623 to actions on merchants' accounts. It is to be noted that the Statutes of L. do not, for the most part, expressly destroy the right, they only bar the remedy for its infringement; and though the effect may, generally speaking, be the same, the right may often be available as a set off, e.g. if A sues B on a debt for £50, B can set off a stale debt from A to B; and again a person having an equitable (see EQUIT) charge upon personal property to secure a debt can enforce his security after the debt itself is barred. But the Real Property Limitation Act, 1874, expressly extinguished title to land where the owner, being out of possession, does not sue to recover his land within 12 years. The statutes run from the earliest time at which an action could be brought, e.g. if A sells B goods on credit, A's right to sue for the price arises only on the expiration of the credit, and the period commences from such expiration; similarly if one of the parties to a contract dies before the cause of action arises, the period runs only from the moment there is a personal representative capable of suing. Once time begins to run it does so continuously, notwithstanding the happening of something to prevent a person from bringing an action. But a debt may be revived so as to cause the period to begin to run afresh; for, as said above, the debt itself is not extinguished, and a new promise to pay will be

inferred from (1) part payment, or (2) a written acknowledgment of indebtedness. But such part payment or acknowledgment must be of such a nature as not to be inconsistent with an implied promise to pay the whole debt, e.g. for the debtor to write 'I admit I owe the money but the goods you sold me were so bad that I should not think of paying for them' is not enough; and again if A owes B £50, and after 3 years pays £10 on the supposition that this is all he owes, such part payment will not stop the period from running. An acknowledgment or part payment by 1 of 2 joint contractors or debtors will bind the other. If an acknowledgment or part payment is made by letter written 'without prejudice,' the continuity of the period will not be broken. These and other fundamental principles of the Statutes of L. are for the most part repeated in the consolidated Limitation Acts, 1939-54. Actions for damages for personal injuries caused by the commission of torts (see TORT) or by breaches of contract must be brought within 3 years of the accrual of the right of action. Actions in tort and simple contract (other than for damages for personal injuries), recognisances, and for an account are barred after 6 years. Actions on a specialty contract (i.e. on a deed) or on a judgment are barred in 12 years; actions to recover a penalty or forfeiture, in 2 years. A crown action to recover land is barred after 30 years (but an action to recover foreshore is not lost until 60 years); actions for recovery of land by eleemosynary or spiritual corporations are barred in 30 years; but actions for the recovery of land by any other persons are barred in 12 years. If the plaintiff has been in possession of the land and been dispossessed or otherwise has discontinued his possession, the time begins to run from the date of dispossession or discontinuance. No right of action to recover land accrues or continues unless there is 'adverse possession,' i.e. unless the land is in the possession of some person in whose favour the period of limitation can run. No right of action can be preserved by merely formal entry. An action to enforce a right to present an eccles. benefice (see ADVOWSON) as patron cannot be brought after a period during which 3 clerics in succession have held the benefice adversely to the right of the claimant or 60 years, whichever period last expires. Actions to recover money secured on mortgage or the proceeds of the sale of land and foreclosure actions are barred in 12 years. No period of limitation prescribed by the Act of 1939 applies to an action by a beneficiary under a trust, being an action in respect of a fraudulent breach of trust to which the trustee was a party, or being an action to recover trust property from the trustee; otherwise action by a beneficiary is barred after 6 years. Actions against public authorities are barred after 3 years except where the act, neglect, or default of the authority is a continuing one, when the right of action will only accrue after the act, etc., has

ceased. The Act applies to arbitrations in the same way as to actions in the high court. Persons under disability of infancy, insanity, etc., have 6 years' grace (3 in personal injuries cases) in which to sue after the disability has ceased. A disability arising after the period has begun will not stop the period; nor will ignorance of one's right of action, unless such ignorance was induced by fraud. As to the application of the Statutes of L. to suits in equity, see LACHERS. Actions in tort maintainable against the estates of deceased persons must be brought within 6 months after probate or letters of administration have been granted to their personal representatives.

**Limited Liability, see COMPANY.**

**Lima** (Lat. *lamma*, from; Gk *leipein*, to leave), interval in the musical system of the anc. Greeks, which does not appear in modern music by reason of its smallness. The Greeks determined the L. by subtracting 2 whole tones, each in the proportion of 8:9, from the perfect fourth (3:4), thus obtaining the ratio 243:256.

**Limni, see LEMNOS.**

**Limnos, see LEMNOS.**

**Limoges, Fr. tn, cap. of the dept of Haute-Vienne, on the Vienne.** It has Rom. remains, including a fountain and an amphitheatre. The seat of a bishopric, its cathedral is partly 13th cent. L. enamels were known as early as the times of the Merovingians (q.v.). It is famous for its porcelain, manufactures, shoes and textiles, and has distilleries. Renoir, Vermeilaud, Jourdan, Nadi Carnot, Michel Chevalier, Bugeaud, and Aguesseau (qq.v.) were b. here. Pop. 106,000.

**Limon:** 1. Prov. of Costa Rica (q.v.), on the Caribbean, traversed by the foaming R. Reventazón, and bounded inland by the Talamanca massif of the Meseta Central. Area 3600 sq. m.; pop. 48,760.

2. Chief seaport of Costa Rica, on the Caribbean coast, 103 m. by rail E. of San José. There are steamship lines to New York, New Orleans, and Europe. L. has a fine harbour; most of the country's exports, of coffee, dyewoods, rubber, and some bananas, pass through the port. There is a wireless station and an airport. L. is a popular resort. Pop. 18,830 (largely of Negro extraction).

**Limonite, Brown Iron Ore, Brown Haematite, or Bog Iron Ore,** hydrated ferric oxide with the formula  $2Fe_2O_3 \cdot 3H_2O$ . It does not occur crystalline, but is found in fibrous, earthy, or concretionary masses. Its colour ranges from yellow to dark brown, and its streak is distinctly yellowish. It has a sp. gr. of 3½ to 4, and a hardness of 5½. It is often formed from other oxides or pyrites by the influence of the weather, and is therefore found on the outcrop of other iron ores. Its occurrence in bog or meadow land has given rise to the name 'bog iron ore.' Yellow ochre is clay mixed with L. Abundant deposits of L. have been found in the oolites and other sedimentary rocks.

**Limonium, Sea Lavender,** a genus of 200 ann. or perennial herbs, family

Plumbaginaceae; *L. bellidifolium*, *L. binervosum*, and *L. vulgare* are native to Britain; others are grown in gardens or under glass.

**Limonium, see PORTIERS.**

**Limousin, anct prov. of central France,** now forming the dept of Corrèze, Haute-Vienne, and Creuse, and parts of Charente and Dordogne. In 1152 it came into the possession of the English, Henry II acquiring it with Eleanor of Aquitaine as part of her dowry; but in 1369 it was restored to France. Cap. Limoges.

**Limousins (the Hated L.), group of cardinals, natives of the prov. of Limoges,** who dominated the papal court at Avignon from Clement VI to Gregory XI (1342-78).

**Limoux, Fr. tn, cap. of an arron., in the dept of Aude, on the Aude.** It is a picturesque tn, and produces a semi-sparkling white wine called *blanquette de Limoux*. Pop. 7600.

**Limpets, gastropod molluscs with oval tent-shaped shells firmly attached to rocks or stones.** The adhesion is made with a circular mass of muscle which when raised in the centre forms a sucker. The shell is lined with a fringed mantle which bears a circle of folds that take the place of the gills of other molluscs. Within the L.'s mouth lies a long radula or spiny tongue armed with about 2000 glassy hooks. This is used to collect vegetable food. *Patella vulgata*, the common limpet, is widely distributed on Brit. and other rocky coasts. Some tropical species attain great size.

**Limpopo, Innampura, or Crocodile River,** riv. of S. Africa, rising in the Magaliesberg to the W. of Pretoria in the Transvaal. It flows in a semicircular course, forming the boundary on the W. of the Transvaal. Vessels of 200 tons are able to navigate it for 60 m., but its mouth is obstructed by sandbars. Its prin. trib. is the Olifants. It has a total length of about 1000 m., and is the boundary between N. Transvaal and S. Rhodesia.

**Limpfield, tn and par. of Surrey, England, in Godstone (q.v.) rural dist.** There is a 12th-cent. church. Pop. 3167.

**Lin Yu-tang (1895- ), Chinese-Amer. writer, b. Amoy.** He studied at Harvard and Leipzig, and in 1923 became prof. of Eng. philology at Peking Univ. In 1936 he moved to America, where he spent some years. In 1954 he was appointed chancellor of the new Chinese Univ. at Singapore. Among his chief works are *My Country and my People*, 1935, *The Importance of Living*, 1937, *Wisdom of Confucius*, 1938, *Moment in Peking*, 1939, *A Leaf in the Storm*, 1941, *Wisdom of China and India*, 1942, *The Vigil of a Nation*, 1945, and *Wisdom of Lao-se*, 1948. In 1949 he compiled *The Wisdom of China*.

**Linacre, Thomas (c. 1480-1524), physician, humanist, and divine, b. Canterbury.** He visited Europe and on his return was made court physician to Henry VII. and subsequently to Henry VIII and Mary. In 1503 he took orders and became rector of Mersham and prebend of Wells. He was a founder of the Royal College of

Physicians of London (1518) and its first president. His chief works are his *Lat. trans.* from Galen, amongst them being *De temperamentis* and *Methodus medendi*. He was among the first to teach Greek at Oxford, where Erasmus and Sir Thomas More were among his pupils. See lives by J. Johnson, 1835, and Sir W. Osler, 1908.

**Linaires:** 1. Sp. tn in the prov. of Jaén. It has rich mines, worked since ant. times, of argentiferous lead and copper. Sheet-lead, pipes, rope, and explosives are manu. Near by are the ruins of the Rom. tn of Castulo. Pop. 51,000.

2. Tn of Mexico, prov. Nuevo León, 65 m. SE. of Monterrey, is a sugar and cotton-raising dist. It gives its name to a bishop's see. Pop. 10,000.

3. Inland prov. of S. Chile (q.v.), barren and arid in the centre but fertile in the N., giving typical Andean crops. There are sev. local volcanic peaks, and the prov. is intersected by the headwaters of the R. Maule. Area 3790 sq. m.; pop. 146,260.

4. Cap. of the above prov., a rail and road junction 166 m. SSW. of Santiago, and a market for agric. produce. The prin. industries are milling, tanning, and brick-making. Pop. 17,000.

**Linaria**, genus of about 125 ann. or perennial herbs, family, Scrophulariaceae; *L. cymbalaria* is well known as Kenilworth Ivy, Mother-of-Thousands, Pennywort, and Pennyleaf.

**Linas**, or **Lynas Point**, cape off the N. of Anglesey, N. Wales, 2 m. E. of Amlwch. It has a lighthouse 128 ft high, and is a signalling station for Liverpool vessels.

**Lincoln**, **Abraham** (1809-65), 16th President of the U.S.A., and one of the greatest of America's national heroes, was b. near Hodgson's mill, in what is now Larue co., Kentucky. The log cabin in which he was b. was for many years unprotected, but is now safeguarded in a stone structure. His father, Thomas L., was both ignorant and shiftless, but his mother, Nancy Hanks, was a woman of superior character. The family descent on his father's side has been traced back to a Samuel L., of Hingham, England, who emigrated to the colony of Massachusetts in 1637. L. was left motherless at an early age, soon after the family's move to S. Indiana, where the elder L. married a widow with sev. children, Sarah Bush Johnston, always remembered with gratitude and affection by her stepson. For 10 miserable years this family lived in a log cabin in the forest. Abraham had to make clearings, chop logs, and plough with a crude implement. He grew up physically strong but with little education. He earned his living by splitting rails, keeping a country store, acting as postmaster and surveyor, and working on the riv. as a boatman. On one of his trips he went as far as New Orleans, where he saw something of slavery which made a lasting impression on him. In his small circle he became popular. But he was 25, and nothing had succeeded with him until his neighbours elected him to a term in the Illinois Legislature. He then read law and was admitted to the Bar at the age of

28. He returned to Springfield, and in 1842 married Mary Todd, a marriage which was not entirely happy. In 1846 he was elected to Congress, but served only one term. From 1845 to 1861 he practised law with W. H. Herndon.

It was the question of extension of slavery in the ters. of the U.S.A. which stirred L. into action. In 1854 Stephen A. Douglas, senator from Illinois, had aroused the N. by his Kansas-Nebraska Bill, which repealed the Missouri compromise (see MISSOURI COMPROMISE).

E.N.A.

ABRAHAM LINCOLN

Douglas found himself universally denounced in the N. and soon afterwards (1858), when he was again a Democratic candidate for U.S. senator from Illinois, the Illinois Republicans, regardless of the support which Republicans in the N. were giving to Douglas for his subsequent resistance to the pro-slavery advocates in Kansas, put L. forward as their candidate. The nation at large was surprised, for few people had heard of this Springfield lawyer. When the Republicans nominated him at Springfield L. addressed the delegates and used words which were to be quoted over and over again: 'A house divided against itself cannot stand. I believe that this government cannot endure permanently half slave, half free. It will become all one thing or all the other.' L. then challenged his opponent to a series of joint debates, a daring challenge in view of Douglas's reputation as the greatest orator and debater in the U.S.A. Douglas promptly accepted. L.

more than held his own. He pinned the debates down to one question—that of slavery in the ters. In the end L. had a majority of the popular vote, but the Legislature chose Douglas. L. was shut out of the Senate, where his field would have been limited. But he had an opportunity for bigger things, for now Republicans were looking for a candidate for the presidency in 1860, and his name began to be canvassed. The Democrats had split over the slavery question. It was felt that the Republicans would surely name the next president. Wm H. Seward seemed the outstanding candidate. He had been governor of New York and he was the acknowledged leader of his party. But, though in the S. slave states it was freely said that if L. was elected they would secede from the union, L. was chosen, receiving 180 electoral votes, 152 being sufficient to elect.

The threat of the S. to secede proved to be no idle one. Even before L. was inducted into the presidency 7 S. states led by S. Carolina had proclaimed their formal secession, had formed the S. Confederacy, and chosen Jefferson Davis as president. Very soon the Confederates had seized most of the gov. forts, navy yards, and post offices. During that fateful winter Congress made futile attempts to bring about a peaceful settlement. When L. was inaugurated on 4 Mar. 1861, his address was a conciliatory one. He declared he had no intention of interfering with slavery where it already existed. But he said the union was indissoluble, and that no state had a right to secede from it. He would execute the laws in all the states, and declared the union must and would maintain and defend itself. In April what everybody feared came to pass. The Confederates fired upon and captured Fort Sumter, guarding the port of Charleston. The time for union action had come, and L. was quick to take it. Two days later he issued a call for 75,000 volunteers, and from every vil. men and boys came to enlist. The S. responded. The remaining S. states seceded. L.'s call for volunteers was answered by Davis, who called for 100,000 men. The great civil war, which had been threatening for 40 years, was now a reality. L.'s test had begun. There followed the anxious years in which things seemed to be going against the union. But on 1 Jan. 1863 L. showed how far he had advanced by proclaiming emancipation of the slaves in all the states then in rebellion. By his fiat he freed 4,000,000 human beings. L.'s problem at this time was to find a good general. Eventually he found U. S. Grant. In Mar. 1864 L. made him commander-in-chief of all the union armies. When some averred that Grant was a drinking man L. retorted that he wished Grant would give some of the same brand of whisky to his other generals so that they too might win victories like Grant.

The war stubbornly went on. The N. was despairing. In the midst of this came a presidential election. The leaders

of the Republican party, who never understood and never liked L., were against him. They backed one of his own cabinet, S. P. Chase, for the nomination, but Chase withdrew when his own state declared for L. The Democrats nominated Gen. McClellan who for so long headed the union armies. The war, however, was taking a new turn in favour of the N. Adm. Farragut won a great victory at Mobile Bay. Sherman captured Atlanta, and began his famous march to the sea. Sheridan was sweeping everything before him in the Shenandoah valley, thus ensuring the safety of the cap. The people acclaimed L., who received 212 electoral votes to 21 for his opponent. On 3 Feb. 1865 S. leaders met L. at Fortress Monroe in an attempt to bring about peace. But L. would listen to no overtures save on the basis of a restored union and the total abolition of slavery. He also made it clear that he would not treat with the Confederacy as a gov. On 9 April 1865 the greatest of the S. generals, Robert E. Lee, surrendered to Grant at Appomattox. The war was virtually over. On the night of 14 April 1865 L. attended a theatre. John Wilkes Booth (q.v.), an actor, crept to the box where the president sat and shot him through the brain. On the morning of the 15th he d.

A whole nation mourned his death. He was unique in America's hist. With little formal education he had shown all the qualities of statesmanship and revealed himself one of his country's greatest orators. His humour, his patience, his long silence under misunderstanding and attack, his steadfast grasp of things when the fate of the nation seemed darkest, his courage when others wanted to yield or compromise, the matchless beauty and eloquence of his Gettysburg speech and the charity and kindness of his second inaugural address were remembered by the people after his death. He is considered great not only by his own countrymen but by the whole world. It is no insignificant thing that in England, where men radically differed upon the question of recognising the Confederacy as a belligerent nation, to-day in most prominent places in London and Manchester there stand monuments to the great American.

*Bibliography.* *The Collected Works of Abraham Lincoln*, ed. R. P. Basler, 1953, 1955, is the only fully annotated ed. of L.'s work. There is a selection of L.'s letters and speeches, ed. P. M. Angle, 1958 (Everyman's Library). Many biographies include W. H. Herndon, *Abraham Lincoln, the True Story of a Great Life*, 1930 ed.; P. M. Angle, *The Lincoln Reader*, 1947; B. P. Thomas, *Abraham Lincoln, a Biography*, 1952; C. Sandburg, *Abraham Lincoln: the Prairie Years and the War Years*, 1954. See also J. G. Nicolay and J. Hay, *Abraham Lincoln: a History*, 1890; K. C. Wheare, *Abraham Lincoln and the United States*, 1948; B. Catton, *The Hallowed Ground, the Story of the Union Side of the Civil War*, 1956.

**Lincoln:** 1. Parl., municipal, and co. bor. and city of England, cap. of Lincs, on the R. Witham, 130 m. from London. L. was the anet Brit. tn *Lindos* (marsh or pool). The Romans Latinised the Brit. name as *Lindum*, and the first permanent fortress of the IXth Legion was estab. on the hill top. Its defences have been located by excavation. The title of *colonia* was conferred c. AD 96. The Rom. colony was in the ter. of the Coritani whose cap. was at Leicester. The walls of the colony were extended down the hill slope almost to the riv. in the first half of the 3rd cent.; coin evidence shows that Rom. occupation extended into the 5th cent. Newport Arch, which was the N. gate to the Rom. colony, is the only Rom. archway in the Brit. Isles which still spans a main road used by modern traffic. L. never attained any great size; it was at the Conquest one of the 6 greatest cities of the kingdom, with a considerable trade in wool. Under the Dan. settlement L. was one of the 5 bors. of the Danelaw. The Conqueror decided to build a castle there, and L. was chosen as the seat of a bishopric and the place for a cathedral. At that time L. was divided into separate jurisdictions of which only one, the manor of Hungate, or Beaumont Fee, survived into modern times. Other communities, civil and eccles., were formed; such were the Jews, whose settlement is still represented by the Jews' House. Later came the religious houses: Monks Abbey, a cell of the Benedictine abbey of St Mary of York, and St Catherine's priory of the order of St Gilbert of Sempringham; and the friars, whose only remaining building is the beautiful Grey Friars which later housed the grammar school (founded 1090) and to-day is the museum. In 1301 Edward I granted L. a new charter, and after this there gradually developed a select body of common councilmen, who from the 16th cent. onwards met in the present guildhall over the Stonebow gatehouse. Many years elapsed before this gatehouse was completed, and the S. face with figures depicting the Annunciation was not built before about 1520; the royal arms above the arch probably commemorated the visit of James I in 1617. The prosperity of medieval L. was based on the wool trade. The raw wool was brought to L. mainly along the waterways (Fossdyke, connecting the Witham with the Trent, and the Cardyke connecting the Nene and the Witham), and there made up for export to Flanders and the Hanseatic tns. Cloth was being made in L. by 1157, at which date there was a guild of weavers. In 1741 Richard Ellison acquired a lease of the Fossdyke tolls from the corporation, and his improvement of the navigation brought a steady increase in trade. The first railway to reach L. was opened in 1846 and soon there followed the development of industrial enterprises in the manuf. of agric. machinery and, later, heavy engineering products.

The historical features of L. are the castle, the cathedral (see LINCOLN

CATHEDRAL), the Stonebow, and St Mary's Guildhall, a valuable example of 12th-cent. architecture. The castle was built by William the Conqueror in 1068 to supplement the defences of the city, whose Rom. walls and gates had for the most part survived. The upper tn was annexed to the new castle as a kind of outer bailey, hence the name *Bailgate* of modern time. The castle had 2 gateways, the E. gate opening upon Castle Hill, inside the city, and the W. leading to open country; the E. gate is still in use though the round Norman arch has been covered by a 14th-cent. pointed arch with flanking turrets. L. castle departs from the usual Norman plan in having 2 mounds instead of 1; both stand on the S. side of the castle yard, their bases being only about 200 ft apart. The Stonebow stands on the site of the S. gate of the lower Rom. enclosure. On the roof is the mote bell (1317), still rung to summon council meetings. The most interesting buildings on Steep Hill are the Jews' Houses. In the Strait is the one known as the Jew's House; the front has been mutilated but it preserves its beautifully moulded doorway with interlacing pattern. Next door to it is the Jews' Court, rescued from destruction under slum clearance legislation and restored by the Lincs Architectural and Archaeological Society. These houses and that popularly known as Aaron's House belong to the 12th cent. when L. was at the height of its prosperity as a centre of the wool trade. The Usher Art Gallery contains important permanent collections, including the Usher collection and a collection of works by Peter de Wint (1784-1849), the water-colourist. The High Bridge which spans the Witham and its central portion dates from the 12th cent. On the W. of the bridge are fine examples of half-timbered houses built c. 1540, and on the E. side once stood the wayside chapel of St Thomas of Canterbury, built in the 13th cent. and demolished in 1763. The Grey Friars is approached from the Stonebow by way of Saltergate, but all that now remains is the chapel built about 1230. Adjoining the museum is the central public library, built in 1913 with the aid of a Carnegie grant and designed by Sir Reginald Blomfield. The 3 most interesting medieval par. churches, St Benedict, St Mary-le-Wigford, and St Peter-at-Gowts, are all S. of the riv. In front of St Benedict's is the city war memorial. St Mary-le-Wigford and St Peter-at-Gowts both possess notable Saxon towers. Pop. 70,200. See J. W. F. Hill, *Medieval Lincoln*, 1948, and *Trudor and Stuart Lincoln*, 1956.

2. Tn in Providence co., Rhode Is., U.S.A. It has cotton manufs. and limestone quarries. Pop. 11,270.

3. Co. seat of Lancaster co., Nebraska, U.S.A., and cap. of the state, 50 m. SW. of Omaha. It is the seat of the univ. of Nebraska, Union College, and the Wesleyan Univ., and the centre of a rich agric. area. L. is the second largest city in the state and has 3 airports. It has oil refining and food processing, and manufs.

concrete products, farm, printing, and office equipment, machine parts, bricks, flour, feed, and dairy products. Pop. 98,884.

**Lincoln Cathedral.** The cathedral church of Lincoln exhibits the growth of Eng. architecture from its early Norman stages to the most fully developed forms of Eng. Gothic. On the death of the last Saxon bishop in 1067, King William appointed Remigius, almoner of the abbey of Fécamp, to succeed him and c. 1073 Remigius removed the see of the bishops of Lindsey, traditionally associated with Stow, 10 m. from Lincoln, from Dorchester to Lincoln and here he built a church on the highest part of the city. The central portion of the W. front and the lower stages of the Norman towers are surviving portions of his church, a grim and massive building, half fortress, half church. After a disastrous fire in 1141 this church was restored to more than its former beauty by the third Norman bishop, Alexander the Magnificent. The 3 richly decorated Norman doorways, the arcading above the lateral recesses, the upper stages of the Norman towers, and the gables on the N. and S. faces of the W. towers belong to this period. In 1185 an earthquake shattered the church and a new work of restoration was begun by Hugh of Avalon and carried on by his successors. The choir of St Hugh and 2 bays of the E. wall of the great transept were completed before 1200, and during the next 50 years the nave, the screen surrounding the Norman front, the chapter-house, and the lower stages of the central tower were added to the building. The canonisation of St Hugh in 1220 led eventually to the erection of the Angel Choir, which replaced the apsidal end of St Hugh's church, and into this choir in 1280 the body of the saint was translated and deposited in a costly shrine. The cloister belongs to the closing years of the 13th cent. and the completion of the central tower to the period of Bishop John of Daldersby (1300-20). The latest stage was reached about 1380 by the erection, above the W. towers, of the great belfries which have been described as 'among the noblest towers in Christendom.' Among the various works of restoration in later times the most extensive was begun in 1922 and completed in 1932 at a cost of £140,000, the stability of the building having been prejudiced by various disasters of fire, earthquake, and tempest. A further work of restoration became necessary owing to the discovery, in 1935, of the dangerous condition of the Angel Choir and the tracery of the E. window.

The lattice-work around the arch and windows is a feature of the period of Bishop Grosseteste (1235-53) (q.v.). The statues of kings above the central door were inserted late in the 14th cent. The central tower, the loftiest of Eng. cathedral towers, is 271 ft high. The perfect proportions of this tower and its combination of majesty and grace, of richness and simplicity, constitute it one of the

grandest towers in the world. In it hangs 'Great Tom,' a bell weighing 5½ tons. Begun in 1255 and completed early in the 14th cent., the Angel Choir, with its 5 bays, is one of the crowning achievements of Eng. Gothic architecture. The choir takes its name from the 30 figures of angels in the spandrels of the arches of the triforium. Above the easternmost pier on the N. side is the tiny celebrated figure of the Lincoln Imp. Under the sanctuary arches is a tomb which bears an inscription by Bishop Fuller (1667-75) indicating that the body of Remigius rests here. Some years ago a leaden coffin containing

LINCOLN CATHEDRAL FROM THE NORTH-WEST

relics, with a paten and chalice and a fragment of a pastoral staff, was discovered within the tomb and justifies his attribution. Of the 2 Perpendicular chapels which flank the porch the easternmost was built by Bishop Russell (d. 1494), the other by Bishop Longland (d. 1547). The chapter-house (1220-35), connected with the E. transept by a vestibule and cloister, is the earliest chapter-house in the Early Eng. style.

The nave of 7 bays in the Early Eng. style was completed during 1200-53. The rose windows in the N. and S. ends of the great transept are known as the Dean's Eye and the Bishop's Eye.

From the S. aisle can be seen the beautiful double arcading of the choir, a feature of the work of Geoffrey de Noyers, architect in St Hugh's time. This aisle contains the mutilated shrine of little St Hugh, the Christian boy whose death in 1255 was laid to the charge of the Jews of Lincoln. The story is recalled by Chaucer in the *Priores's Tale*, and is the subject of

anot ballads. In this transept are buried sev. bishops of Lincoln, the most celebrated being Robert Grosseteste, whose tomb was a place of pilgrimage. The original tomb having been destroyed by the Puritans in the 17th cent., a new one was provided in 1953, the seventh centenary of his death. The interest of St Hugh's choir is that it is one of the very earliest examples of the Early Eng. style. The cloister, entered by a covered passage from the N. transept, was built by Bishop Sutton about 1296. The library above it was designed by Sir Christopher Wren. Among the treasures of the cathedral is one of the 4 original copies of Magna Carta.

Lincoln College, Oxford, founded in 1427 by Richard Fleming, Bishop of Lincoln. It was reorganised by Thomas Rotherham, Archbishop of York, and lord high chancellor in 1479, who thus earned for himself the title of second founder. Mark Pattison was rector from 1861-84. John Wesley, Lord Crewe, John Morley, and Edward Thomas were distinguished members of the college.

Lincoln Judgment, The, celebrated Eng. eccles. suit which came up in 1889, the Bishop of Lincoln, Edward King, being cited before the Archbishop of Canterbury (Dr Benson) to answer charges of various ritual offences committed at the administration of Holy Communion in the church of St Peter-at-Gowt's and in Lincoln Cathedral in Dec. of 1887. Proceedings were commenced in June 1888 by a petition presented by the promoters (2 of whom were inhab. of the diocese of Lincoln, and 2 parishioners of St Peter-at-Gowt's) to the archbishop. The matter was referred to a committee and the case then remitted to Dr Benson, who heard it in Lambeth Palace between July 1889 and Feb. 1890. The offences alleged against the Bishop of Lincoln were, for the most part, breaches of various rubrics in the communion service of the Prayer Book, viz. the mixing of water with the wine, the non-visibility of the performance of the manual acts, the making of the sign of the cross at the benediction, etc. It was argued that a bishop is not a 'minister' and thus not bound by the rubrics. Judgment was given by the archbishop in Nov. 1890, but he confined himself to the legal declarations acquitting the bishop on 4 of the 7 charges, and pronouncing no monition in respect of the 3 breaches. King showed his loyalty to authority by altering his practice in these 3 points. The promoters appealed to the Judicial Committee and their appeal was heard in 1891, judgment being given in Aug. 1892, and the appeal failing on all points. The case has a permanent importance, first, because certain disputed questions of ritual were legally decided, and, secondly, because the jurisdiction of the Archbishop of Canterbury to try one of his suffragan bishops for alleged eccles. offences, alone, was declared to be well founded and legal. See G. W. E. Russell, *Edward King*, 1912.

Lincoln Mount, highest peak (14,284 ft) in the Park Range of the Rocky Mts, 12

m. NE. of Leadville, Colorado, U.S.A. Gold, silver, lead, copper, zinc, and molybdenum mines are near.

Lincoln Park, city in Wayne co., SE. Michigan, a residential suburb of Detroit, U.S.A. Pop. 29,310.

Lincoln Sheep, see SHEEP.

Lincoln's Inn, see INNS OF COURT.

Lincolnshire, Charles Robert Wynn-Carrington, 1st Marquess of, and 1st Earl Carrington (1843-1928), politician, eldest son of 2nd Baron Carrington, was educ. at Eton and Cambridge. He was Liberal M.P. for High Wycombe, 1865-8, captain of the Royal Bodyguard, 1881-5, and governor of New S. Wales, 1885-90. Created an earl in 1895, from 1892 to 1896 he was lord chamberlain of the household, chairman of the National Liberal Club, and an energetic member of the L.C.C. President of the Board of Agriculture from the beginning of Campbell-Bannerman's administration, 1905, he resigned that post in 1911, and was lord privy seal till Feb. 1912, when he retired with a marquessate.

Lincolnshire, E. co. of England, bounded E. by the N. Sea and the Wash. It is the second largest co. in England, and possesses, including the shore of the Humber, nearly 110 m. of coast, mostly marshy, but with long stretches of sand. The co. generally is flat, a considerable part being fens and marshes, but there are 2 ranges of hills, the Lincoln Edge, or Heights, or the Clift, on the W. running from Grantham to Lincoln and on again to the Humber, and the Wolds running from Spilsby to Barton-on-Humber. The rivers are the Humber, Trent, Witham, and Welland. A large part of the co. to the SE. of Lincoln is occupied by the Fens (q.v.). The soil as a whole is rich, and it is one of the first agric. cos. in England. It has the largest bulb-growing industry in the U.K. A quantity of grain is grown, the largest crop being barley, and cattle and sheep are reared in large numbers, also a fine breed of horses. Limestone, freestone, and ironstone are quarried. Scunthorpe is one of the largest steel-producing centres in the country, and chemical industries have been estab. on the Humber bank near Grimsby, the largest fishing port in England. The co. has machine and implement factories, and also brick-fields. It is divided into 3 'parts' (Lindsey, Kesteven, and Holland), and 9 parl. divs., each returning 1 member. Area 2640 sq. m.; pop. 705,822. See Victoria Co. Hist.: *Lincolnshire*; T. Allen, *The History of the County of Lincoln* (2 vols.), 1834; *Lincolnshire Domesday and the Lindsey Survey*, trans. and ed. by C. W. Foster and T. Longley (Lincoln Record Society), 1925; C. Brears, *Lincolnshire in the 17th and 18th Centuries*, 1940; A. Mee, *Lincolnshire* (The King's England series), 1949; M. W. Barley, *Lincolnshire and the Fens*, 1952.

Lincolnshire Handicap, see HORSE-RACING.

Lincolnshire Regiment, The Royal, formerly the 10th Foot, was raised in 1865

by the Earl of Bath. It took part in Marlborough's campaigns during the War of the Sp. Succession, and gained honours at Blenheim, Ramillies, Oudenarde, and Malplaquet. In 1801 it fought in Egypt, where it gained the 'Sphinx' badge. During the Peninsular campaign it served on the E. coast of Spain. In 1842 it went to India, and fought at Sohraon, Multan, and Gujrat during the first Sikh war. During the Indian Mutiny it participated in the siege and capture of Lucknow. During Kitchener's Egyptian campaign

Lincolns crossed the Escant Canal and forced a bridgehead over the Turnhout-Antwerp Canal (25 Sept. 1944). The honour title 'Royal' was granted in 1946. The L. R. and the Northamptonshire Regiment are to be amalgamated by 1962.

Lind, James (1716-94), physician, b. Edinburgh. He was apprenticed to a surgeon at the age of 15 and entered the navy as a surgeon 8 years later, serving for 9 years. In 1748 he left the navy, took his M.D. at Edinburgh, and practised in that city. Ten years later he left to

G. Douglas Bolton

#### TULIP FIELDS NEAR SPALDING, LINCOLNSHIRE

(1897-8) it was present at the battles of Athara and Khartoum. It fought at Paardeberg in the S. African war, 1899-1902. During the First World War it raised 19 battalions, which served in France, Flanders, Gallipoli, and Egypt. During the Second World War the L. R. fought on the W. front, in the battle of Normandy, and in the advance to the Rhine. They also fought as part of the Eighth Army in the invasion of Italy and yet other units were part of the Chindits in Burma. The 4th Lincolns were part of the 146th Brigade of the 49th Div., which fought in Normandy in 1944. Previous to fighting in France this div. was in Norway. In France the Lincolns (together with the Durham Light Infantry and the Duke of Wellington's Regiment) particularly distinguished themselves in the bocage country in the battle for Juvigny and Rauray. Later, also, the

become physician of Haslar naval hospital, where he worked for 25 years. During his service at sea, L. saw many tropical diseases and became interested in naval hygiene. He discovered the true nature of scurvy and, in his classical *Treatise of the Scurvy*, 1753, urged the issue of lemon juice in the navy as a preventive; it was owing to him that scurvy was eventually eradicated from the navy. The *Treatise* was reprinted in 1953. L. was the founder of naval hygiene in England; his *Essay on the Most Effectual Means of Preserving the Health of Seamen in the Royal Navy*, 1757, dealt with the appalling conditions in which sailors lived afloat, and advocated measures to improve ships' ventilation and prevent the spread of disease aboard. He also wrote *Essay on Diseases Incidental to Europeans in Hot Climates*, 1768. See life by L. H. Roddis, 1951.

**Lind, Jenny** (1820-87), Swedish singer, b. Stockholm. At the Royal Theatre in Stockholm she made her debut in 1838 as Agathe in Weber's *Freischütz*. She was at once successful, but after 2 years' work decided to continue her studies under Manuel Garcia. She sang in the prin. cities on the Continent, but it was not until 1847 that 'the Swedish nightingale', as she was called, appeared before a London audience. She aroused tremendous enthusiasm and became a popular heroine. In 1852 she married Otto Goldschmidt of Hamburg. She had before this (in 1849) retired from the operatic stage, but she continued to sing at concerts until 1883. In 1859 she had become a naturalised Brit. subject. See lives by H. S. Scott-Holland and W. S. Rockstro, 1891; her daughter, Mrs R. Maude, 1926; H. Headland, 1940.

**Lindau, Paul** (1839-1919), Ger. writer, b. Magdeburg. At first editor of various journals, he later became director of sev. of the Berlin theatres. L.'s works include biographies, essays, criticisms, stories, sketches, and dramatic adaptations. Among his better known plays are *Maria und Magdalena*, 1872, *Tante Therese*, 1876, *Die Erste*, 1895, and *Der Abend*, 1896. His other works include *Litterarische Rücksichtslosigkeiten*, 1872, *Dramaturgische Blätter*, 1875 (essays on Molière and Alfred de Musset), also *Herr und Frau Bewer*, 1882, and *Spitzel*, 1888 (novels). See E. Hadlich, *Paul Lindau als dramatischer Dichter*, 1876; life by V. Klemperer, 1909; and his own *Nur Erinnerungen*, 1917.

**Lindau**, Ger. tn in the Land of Baden-Württemberg (q.v.), built on a small is. in the E. part of Lake Constance (q.v.); it is connected by road and rail with the NE. shore of the lake. Its abbey was founded in 810, and in the Middle Ages L. became an eccles. principality and was an important merchant tn, trading with Italy. The abbey was secularised in 1804. During the Second World War the tn was taken by the Fr. First Army in May 1945. There are numerous anc. buildings, including the abbey church (9th-18th cents.), other medieval churches, a 15th-cent. tn hall, old towers, and fine old houses. The tn is a tourist resort and a port of call for lake traffic. Pop. 21,500.

**Lindbergh, Charles A.** (1902- ), Amer. airman, b. Little Falls, Minnesota. In 1925 he became an officer in the Missouri National Guard, and began to earn his living as a pilot in the gov. air mail service between St Louis and Chicago. Learning that Raymond B. Orteig had offered a prize of \$25,000 for the person who first made a non-stop air flight between New York and Paris, he appealed to some St Louis business men who agreed to finance him. They had built for him the 220 h.p. Ryan monoplane which was named *The Spirit of St Louis*. He left in this plane from San Diego, California, to New York, via St Louis, and arrived at his destination on 12 May, having made a record overland continental flight. His time of departure was 7.52 on the morning of 20

May 1927, and he landed at Le Bourget field, Paris, on the night of 21 May, or 33 hrs after starting. He was promoted to the rank of colonel in the Amer. Army and received many honours. Soon afterwards he met and married Anne Morrow, daughter of the Amer. ambas. to Mexico. In 1933 L. and his wife flew the S. Atlantic from the Gambia to Port Natal (Brazil), a distance of 1900 m., in 16 hrs, thereby completing a survey flight of both the N. Atlantic air route from America to Europe and of the S. Atlantic route. In 1932 his infant son was kidnapped in one of the most sensational crimes in America. The child was found dead and the kidnapper caught and executed. L.'s popularity, however, suffered from his isolationism in the period preceding America's entry into the Second World War, and his public utterances on President Roosevelt's policy suggested that he was not only against Amer. intervention but was bitterly hostile to Britain.

**Lindemann Electrometer**, see ELECTRO-METER.

**Linden**, a SW. suburb of Hanover (q.v.). Germany. It has iron, textile, chemical, and rubber industries.

**Linden-trees**, see LIME.

**Lindesnes**, cape of the extreme S. of Norway, near the entrance to the Skagerrak (Skagerack).

**Lindgren, Waldemar** (1860-1939), Amer. geologist and mineralogist, b. Kalmar in Sweden. He was prof. at the Massachusetts Institute of Technology from 1912 to 1933 and had a considerable influence on the newer developments in the study of mining geology. He pub. *Mineral Deposits* (4th ed.), 1933, and *Ore Deposits of the Western States*, 1935 (with bibliography).

**Lindi**, dist. H.Q. and port of Tanganika, 60 m. N. of the Portuguese E. African boundary. There is a good harbour, but also a sandbar. L. is important as the main distributing centre of the S. Prov., dealing in or exporting grain, ground-nuts, rice, cashew-nuts, cotton, tobacco, beeswax, copra, and mangrove bark. Pop. (dist., 1952) Europeans 472; Asiatics 3694; Africans 227,378.

**Lindisfarne Gospels**, or **St Cuthbert's Evangelistarium**, most celebrated production of the Anglo-Hibernian monastery of Lindisfarne, founded by St Aidan and the Irish monks of Iona or Icolmkill, in 634. St Cuthbert (q.v.) d. in 687 and as a monument to his memory his successor, Eadfrith, caused to be written in Latin this beautiful vol., which is known also as the Durham Book of St Cuthbert's Gospels. It formerly belonged to the dean and chapter of Durham, but is now in the Brit. Museum. The MS., surpassed in grandeur only by the Book of Kells (q.v.) in the same style, was greatly enriched by Æthelwald (Æthelwold), Bishop of Lindisfarne, who succeeded Eadfrith in 721 and caused St Cuthbert's book to be richly illuminated by the hermit Biffrith, who prefixed an elaborate painting of an evangelist to each of the 4 Gospels and also

illuminated the capital letters at the commencement of each book. Bishop Æthelwald had the whole encased in a binding of gold set with precious stones; and in 950 a priest named Aldred (Ealdred) rendered the book still more valuable by interlining it with a Saxon version of the original MS., which is the Lat. text of St Jerome. The peculiar importance of this vol. in the hist. of illumination (q.v.) consists in its clearly establishing, by its coincidence with earlier examples, the class of calligraphy practised by that primitive church and people to whom Gregory the Great sent St Augustine at the end of the 6th cent. The L. G. were ed., with a learned introduction, by Bouterweck in 1857 and by Stevenson and Waring for the Surtees Society in 1854-65.

Lindley, John (1799-1865), botanist, b. Catton, near Norwich. In 1819 he pub. *Observations on the Structure of Fruits* (a trans. from the Fr.), followed the next year by an original work, *Monographia Rosarum*. In 1829 he became prof. of botany at Univ. College, London, lecturer to the Apothecaries' Co., and secretary to the Royal Horticult. Society. Amongst his prin. pubs. are *A Synopsis of the British Flora*, 1829, *Flora Medica*, 1838, *The Vegetable Kingdom*, 1848, and *Theory and Practice of Horticulture*, 1855. In conjunction with Sir W. J. Hutton he also wrote *The Fossil Flora of Great Britain*, 1831.

Lindley, Nathaniel Lindley, Baron (1828-1921), jurist, b. Acton Green, Middx. He was called to the Bar in 1850, beginning practice in the court of chancery. In 1872 he became queen's counsellor and in 1875 a justice of common pleas. In 1881 he was raised to the court of appeal and made a privy councillor. He succeeded Lord Esher as master of the rolls in 1897, and 3 years later was made a life-peer, and thence until 1905 he was a lord of appeal in ordinary. His pubs. are *An Introduction to the Study of Jurisprudence*, 1855, and *Treatise on the Law of Partnership, including its Application to Joint Stock and other Companies*, 1893.

Lindley, William (1808-1900), civil engineer, b. London. In 1838, after travelling in various parts of Europe engaged in railway work, he was appointed chief engineer to the Hamburg-Bergedorf railway. He began by constructing a complete sewerage system, and between 1844 and 1848 he designed the Hamburg water works. He also designed the rebuilding of Hamburg after the fire of 1842, erected the gas works, and executed the trigonometrical survey of the city (1848-1860).

Lindo, Mark Prager (1819-79), Dutch prose writer, of Eng. parentage, b. London. He went to Holland at the age of 19 as a teacher of English. He wrote sketches for the *Amsterdamsche Courant*, afterwards pub. in book form under the pen-name of De Oude Herr Smits ('Old Mr Smits'). In 1856 he founded the *Nederlandsche Spectator*, in which much of his best work appeared. L.'s chief serious original Dutch writing was *De Opkomst en Ont-*

*wikkeling van het Engelsche Volk* (The Rise and Development of the British People) (2 vols.), 1868-74.

Lindsay, Alexander Dunlop Lindsay, 1st Baron Lindsay of Birker (1879-1952), philosopher, b. Glasgow; educ. at Glasgow Academy and Univ. and at Univ. College, Oxford. Shaw fellow, Edinburgh Univ. (1904-9); lecturer in philosophy, Victoria Univ., Manchester (1904-6); fellow of Balliol and classical tutor (1906); Jowett lecturer in philosophy there (1911); prof. of moral philosophy, Glasgow Univ. (1922-4); vice-chancellor, Oxford Univ. (1935-8); Master of Balliol College from 1924 to 1949, when he retired to take up the position of head of the new Univ. College of N. Staffs. His works include *The Philosophy of Bergson*, 1911, *Karl Marx's 'Kapital'*, 1925, *The Nature of Religious Truth*, 1927, *Christianity and Economics*, 1933, *Kant*, 1934, *The Churches and Democracy*, 1934, *The Moral Teaching of Jesus*, 1937, *The Two Moralities*, 1940, *The Modern Democratic State*, 1943, and a trans. of Plato's *Republic*, 1907.

Lindsay, Lady Anne, see BARNARD.  
Lindsay, or Lyndsay, Sir David (1490-1555), poet and Lyon King-of-Arms, b. probably Garmylton, near Haddington. He was attached to the Scottish court in 1508, and later became 'usher' to James V of Scotland, holding this position till 1522. From his writings it is evident that although L. took part in the court life his sympathies were with the people, and he was not afraid of rebuking the vices of the young king, with whom notwithstanding he was a favourite. *The Testament and Complaynt of our Sovereane Lordis Papynge* (Parrot) was written by L. as a satire on the court, prelates, and nobles, and the *Answer to the Kingis Flyting* as a rebuke of the king's licentiousness. His earliest poem is *The Dreame* (c. 1528), an allegory in the style of Chaucer, written in the 7-line stanza. L.'s famous morality play, *Ane Satyre of the thrie Estatis*, denouncing the clergy, appeared in 1540. His longest poem is *The Monarchie*, giving an account of the rise and fall of Syria, Persia, Greece, and Rome. Others include *The Complaynt of Ragsche*, *the Kingis auld Hounde*, *to Rautie*, *the Kingis best beloved Dog*, and *his companyeonis*; *Killeis Confessioun* (an attack on the Church); and *Ane Descriptioun of Pedder Coffeis* (i.e. pedlars), a study in low life. See study by W. Munro, 1938.

Lindsay, David (1856-1922), explorer, b. Goolwa, S. Australia, of Scottish parents. He began his career in the Survey Dept. of the Australian Gov. He explored and surveyed many parts of the country, and in 1888 achieved the feat of crossing Australia on horseback from N. to S. His explorations in the MacDonnell Mts in central Australia in 1889-90 led directly to the opening up of the famous gold-field of W. Australia. In later life he was concerned largely in the development of mining.

Lindsay, Nicholas Vachel (1879-1931), Amer. poet, b. Springfield, Illinois. He studied art in Chicago, and for a time was

a lecturer for the Y.M.C.A. and the Anti-Saloon League. Finding in himself a genuine aptitude for smooth, easy-flowing verse, he imitated the anct bards and minstrels by tramping the highways and securing from unsophisticated everyday folk on the farms a night's board and lodging, in return for which he recited to them some of his own compositions. He may be said to have injected the spirit of jazz into his rhymes, which appear better when recited than when read. Among his books of verse are *General William Booth enters into Heaven*, 1913, *The Congo and Other Poems*, 1914, *The Chinese Nightingale*, 1917, *The Golden Book of Springfield* (prose), 1920, *The Golden Whales of California*, 1920, and *Every Soul is a Circus*, 1929. *A Handy Guide for Beggars*, 1916, was based on his own experiences on the road. See life by E. L. Masters, 1925.

**Lindsay, Norman Alfred William** (1879- ), Australian artist, b. Creswick, Victoria. L. is principally known for his illustrations of Petronius, Rabelais, Villon, and of Aristophanes' *Lysistrata*, trans. by his eldest son Jack who is also a novelist. His etchings were reproduced in a collected ed. in 1927 and with them was a chronology of his work. His work is free and vigorous. Other pubs. are *Creative Effort*, 1924, *Madam Life's Lovers*, 1929, and *Age of Consent*, 1938. His second son, Philip (d. 1958), gained recognition as a writer of historical novels.

**Lindsay, Robert, of Pitcottie** (c. 1530-1590), historian, b. near Pitcottie, Fife. His *History and Chronicles of Scotland* (first pub. 1728) continued the work of Boece (q.v.) from 1437 to 1565 and was written in the vernacular. It is unreliable in many respects but is especially valuable for its detail regarding the early part of the period it covers.

**Lindsay, co. tn of Victoria co., Ontario, Canada**, 70 m. NE. of Toronto. It manufs. carriages, leather, agric. implements, etc., and has a tannery and saw-mills, also knitting and woollen mills. Pop. 10,107.

**Lindsays, Earls of Crawford and Balcarres, see CRAWFORD and BALCARRES, EARLS OF.**

**Lindsey, Benjamin** (1869-1943), Amer. jurist, b. Jackson, Tennessee. Educ. at Notre Dame Univ., Indiana, and the Baptist Univ. of his native tn, he moved to Colorado, and was admitted to the Bar in Denver in 1894. Becoming interested in the fate of juvenile offenders, he secured the passage of the Colorado juvenile court law in 1899 and was named judge of the court in Dec., being re-elected for 10 successive terms. He met with opposition, but succeeded in his aim of enforcing the rights of children. In 1934 he became a judge of the Superior Court of California. His work *Problems of Children* appeared in 1903. Other writings include *The Revolt of Modern Youth*, 1925, and *The Compassionate Marriage*, 1927, both in collaboration with Wainwright Evans. His autobiography, *The Dangerous Life*, was pub. in 1931.

**Lindsey, Earl of, see BERTIE, ROBERT.**

**Lindsey, Parts of**, dist. of Lincs, the largest of the 3 administrative divs. (or 'parts') of the co., occupying the N. half. The SE. dist. of Lincs is called 'Parts of Holland' and the SW. 'Parts of Kesteven.' Area 961,434 ac.; pop. 309,592.

**Line Engraving, see ENGRAVING and PROCESS WORK.**

**Line Islands**, line of coral atolls, running SSE. from the Hawaiian group to the N. part of Fr. Oceania (q.v.). They are uninhabited and, apart from deposits of guano and plantations of coco-nuts, of no great interest. However, in 1930, when it was seen that the ls. might have some value as aviation stations, 8 of them were acquired by Great Britain and 3 by the U.S.A. Most of them were garrisoned by Amer. forces during the Second World War. Three of the Brit. ls., Washington, Fanning, and Christmas, form part of the Gilbert and Ellice (q.v.) group.

**Line of Communications**, route by which, in war-time, supplies and ammunition are conveyed from the base of operations to the main body of the army or the zone of operations. The direction in which the army is preparing to move forward is termed the *line of operations*; thus the latter is followed up closely by the L. of C. which grows in length, and in importance from a strategical point of view, as the march of the army is prolonged. In the olden times armies were absolutely dependent for their supplies upon the resources of the country in which they were campaigning. When one part of the country was no longer able to support it, the army moved on, thus leaving in its train, in the majority of cases, a blighted, devastated countryside. The introduction of Ls of C. brought about a revolution in the art of strategy. Strategical movements and operations have always, from the very beginnings of war, depended ultimately upon the question of supplies. 'An army travels on its belly,' as Frederick the Great is reported to have said, and Napoleon's dictum that 'the secret of war lies in the communications' embodies the same truth. Thus the L. of C. became the all-important factor, for an army could be either forced out of a strong position or checked in its advance when its L. of C. was threatened or cut. If an army could land from the sea at a point near to a L. of C., especially if not well defended, it might force the enemy to renounce any projects against distant points, as the occupation of Plevna stopped the advance of the Russians through Bulgaria. In more recent times Ls of C. have consisted either of the roads of a country, the rivs., the railways, or of the open sea. Railways can supply the needs of an army very quickly, but have sev. attendant disadvantages. The beds of railways are easily wrecked; the army relying on them is too hampered in its sphere of action, and as the carrying power of every railway is known a surprise attack cannot be successfully carried out when properly opposed, as Moltke showed in 1870. The sea is the L. of C. par

*excellence* when it is available, as by its use secrecy and freedom of movement can be obtained and the enemy kept in a continual state of suspense. As has been seen, on the efficiency of its L. of C. depends the efficiency of an army, but if a general is able to cut loose from his L. of C. and change it at will, he gains thereby an enormous advantage, as both Grant and Sherman showed in the Amer. Civil War, and Lord Roberts in his march on Pretoria in the S. African War. In the First World War, with the stabilising of the W. and E. fronts, on which opposed armies of vast numbers occupied many lines of trenches, behind which trench systems whole countries were organised for war, surprise attacks on L.s of C. were out of the question, though the fundamental principles above outlined remained unchanged. Germany's advance into Belgium and N. France was rendered less precarious by reason of the pre-war construction of strategic railways in those parts of Germany whence, in the event of war, the invading armies might well receive reinforcements and supplies. Secrecy and freedom of movement on the seas were by no means easy of attainment by reason of the use of seaplanes and wireless communication. A secret and surprise landing by the Allies at Suvla Bay would have cut off the L.s of C. of the Turkish armies in Gallipoli, but, as events proved, the venture was impossible. The great developments in modern aerial warfare have to some extent modified the above outlined principles. The Ger. conquest of Crete in the Second World War was accomplished entirely from the air, their L. of C. being, in effect, the aerial routes to the conquered airfields in Greece. Again, beleaguered armies and cities were sustained for indefinite periods by air-borne supplies, as in the case of the Ger. army in Staraya Russa. The Brit. garrison in their epic resistance in Tobruk, Libya, were kept supplied both from the sea and the air, but the sea communication was always uncertain and hazardous. Operations of the allied forces in Burma became increasingly dependent upon air supply, both in defence and attack.

**Line Spectrum**, see BETA PARTICLES; SPECTRUM; X-RAYS.

**Línea, La**, Sp. tn in the prov. of Cádiz, just N. of the 'neutral' strip at the Gibraltar (q.v.) frontier. Cork and food-stuffs are manuf. Pop. 80,000.

**Linear Earthworks**, see DYKES.

**Linen**. L. yarns and fabrics are spun and woven from the fibres of flax (*Linum usitatissimum*). The flax plant belongs to the order Linaceae, and grows from 2 to 3 ft high. It is cultivated widely in Europe and Asia. The manuf. of L. was one of the most widely spread and extensive industries of European countries from quite early times. Egypt, too, was long celebrated for its L.s, many L. mummy cloths of fine texture and great age having been found there. The cultivation of flax was extensive in Italy shortly before the Christian era, and it was probably introduced into Britain for

textile purposes by the Romans. In recent times it has ceased to be a domestic industry, and has become an important textile manuf. in certain dists. The inventions of Arkwright, Hargreaves and Crompton in the latter half of the 18th cent. were a blow to the L. trade as it then existed. In 1787 the foundation of machine spinning of flax was laid by John Kendrew and Thomas Porthouse of Darlington, who obtained a patent for the first mill for spinning yarn by machinery which was built at Darlington. Their invention ultimately developed into the present-day system of mechanical spinning. The weaving of L. yarn by power loom was of slower growth than that of cotton, the first really successful factory for the former not being erected till 1812.

The modern L. industry is classified broadly into 4 branches, viz.: spinning, weaving, bleaching-dyeing-finishings, and making-up.

(a) *Spinning*. After the fibre arrives at the spinning mill it has to undergo the processes of hackling and preparing before it is ready for the actual process of spinning. In hackling the stricks of flax are pieced out by hand to a standard size, and the root ends and top ends are drawn sev. times through strong steel pins held in a rectangular block of wood to disentangle the ends of the fibre strands. The 'roughed' pieces are then transferred to a hackling machine in which they are clamped at the centre while one end is combed repeatedly by a series of pinned combs graduated from coarse to fine; the position of the clamp is then transferred automatically to the hackled end and the operation is repeated on the central part and on the second end. The hackled line emerges as pieces in which the subdivided fibre strands are straight and parallel, and are combed clean from end to end. The short and tangled fibres that are combed out in this process are collected, and after being cleaned and made into a sliver on a carding machine, are used for the preparing and spinning of flax tow yarns.

The hackled line then goes forward to the preparing processes. Separate pieces from the hackling machine are converted into a continuous ribbon or sliver on a spread-board; the pieces are laid to overlap each other endways on slowly moving belts by which the fibre is fed into pinned gills from which it is drafted or attenuated and combined into one continuous sliver. This sliver is then drawn out on a series of drawing frames and on a roving frame where a slight twist is imparted and the resulting rove is wound on a bobbin.

The spinning operation itself consists of a drafting or attenuation of the fibrous ribbon to the final size of the yarn and the insertion of more twist. Coarse yarns are spun by drafting roves or slivers in the dry condition, but in the wet spinning operation used for fine yarns, the rove is passed through a trough of hot water before it is drafted between 2 pairs of fluted rollers. Finally, the yarn is reeled off the spinning bobbins into hanks of

standard size or wound on cross-wound cheeses or cones.

The size or number of wet spun yarns is denoted by the number of 300-yd 'cuts' to the pound, and the size of dry spun yarns by the weight in pounds of 14,400 yds.

(b) *Weaving.* Weaving of L. yarn into cloth is accomplished in 6 main operations:

(1) Winding the warp yarns on a number of beams.

(2) Winding the warp yarns from the several beams on to the loom beam; during this operation size materials, lubricants, and softeners are applied to the yarn to enable it to withstand the frictional forces in weaving.

(3) Drawing in the warp yarns (which run the length of the cloth) through heddles and reeds which space the yarns according to the fineness of cloth required.

(4) Putting the loom beam, heddles, and reed into the loom and adjusting the parts ready for weaving.

(5) Winding the weft yarn on pirns for placing in the shuttle.

(6) Weaving the cloth by causing the shuttle to move from side to side of the loom, the weft yarn being interwoven with the warp yarn in the order required by the weave.

The woven cloth is removed from the loom in convenient lengths termed pieces or webs.

(c) *Bleaching-Dyeing-Finishing.* For most purposes, either the yarn or the fabric woven from it require to be scoured and bleached. This treatment may be followed in both cases by dyeing. The yarn may be scoured, bleached, and dyed in the form of hanks or of wound packages. The cloth (in some cases after first having the protruding surface fibres removed by singeing), may be treated in rope form or in open width. Long continuous batches are made by sewing many webs end to end.

Scouring consists in boiling the yarn or cloth in alkaline liquor containing slaked lime or caustic soda or soda ash, and this action prepares the way for the subsequent bleaching by removing much of the non-cellulosic plant tissue naturally associated with the flax fibre.

The yarn or cloth is then bleached in a solution of an oxidising agent, such as hypochlorite, chlorite, or hydrogen peroxide, often in different sequences. It is then washed and dried. Before drying, small amounts of softening or stiffening agents may be added to the bleached or dyed cloth according to the type of finish and handle desired. Cloth is finally brought to width and dried on a stenter frame, and a flat or a polished finish may then be conferred on it mechanically by passing it between the bowls of a calendar under heavy pressure.

(d) *Making-up.* This consists of cutting up the finished cloth, and hemming or stitching the various articles, which may also be adorned by embroidery.

Uses of linen include dress wear, upholstery and curtains, towels, table-cloths, sheets and pillow-cases, handkerchiefs,

sewing threads, cords and twines, canvas and covers. In 1953 the making-up branch of the L. trade in N. Ireland employed some 12,000 people. Belfast is the chief tn in N. Ireland engaged in the manuf. of linen, and in Scotland the chief centre is Dundee. The value of L.s exported from the U.K. in 1955 was £16,648,000. In 1953 the Ulster L. industry provided employment for approximately 48,500 persons. See also FLAX. See T. Woodhouse and T. Milne, *The Finishing of Jute and Linen Fabrics*, 1928; T. Woodhouse and P. Kilgour, *Spinning, Weaving, and Finishing of Flax and Jute*, 1929; A. V. Fringle, *The Theory of Flax Spinning*, 1949.

Linen-fold, see FURNITURE.

Ling, see CALLUNA VULGARIS.

Ling (*Molva*), wide-ranging fish of the *Gadidae*, cod family. It is from 3 to 4 ft long, and is orange-grey or bluish on the back and sides, and silvery on the belly. The caudal fin is rounded at the extremity. When fresh it is not much valued for food, but cured and dried it is consumed in great quantities in S. Europe. The roes sometimes attain a great weight, and the female is one of the most prolific fish known. The liver yields an oil which has been used as a luminant, and is sometimes substituted for cod-liver oil as medicine.

Linga Puja, form of phallic worship practised among the Hindus. The Linga, or emblem of the male generative organ, is the symbol of Siva, under which form that god is worshipped by the Lingayats, an independent Saiva sect. The female counterpart is called the *Yoni*, and the two are grouped together as the *Sakti Puja*.

Lingah, or Bandar Lingah, see LINGEH, or BANDAR LINGEH.

Lingard, John (1771-1851), historian, b. Winchester, studied at the Eng. Rom. Catholic College at Douai, and was from 1795 until 1811 vice-president of Crook-hall College, near Durham. In 1806 he pub. *The Antiquities of the Anglo-Saxon Church*, and 5 years later began his famous *History of England*, the first 2 vols. of which appeared in 1819 and the last in 1830. Its accuracy and detachment have preserved its importance as a standard hist., although it lacks style.

Lingayen, large gulf on the W. coast of Luzon, Philippine Is. The cap. of Pangasinan, a prov. of Luzon, is called L., and is situated on the S. shore of the gulf. The climate is good and rice is extensively cultivated. The coast of L. Bay, which has the naval base of Cavite, was the scene of the Jap. invasion of Luzon on 22 Dec. 1941. Three years later, in Jan. 1945, the U.S. Sixth Army also made landings here, following a naval bombardment of the coast, and estab. beachheads from which the liberation of Luzon was successfully conducted. Pop. 36,806.

Lingen, Ger. tn in the *Land* of Lower Saxony, on the Dortmund-Ems canal, 104 m. W. of Hanover (q.v.). It has textile, engineering, and oil industries. Pop. 16,000.

Lingfield, tn and par. of Surrey, England, in Godstone (q.v.) rural dist. There

is a 15th-cent. church and a racecourse. Pop. 5214.

**Linguaglossa**, tn in Sicily (q.v.), on the N.E. slope of Mt Etna (q.v.), 23 m. N.N.E. of Catania (q.v.). It is well known for its wood-working. Pop. 14,000.

**Linguet**, Simon Nicolas Henri (1736-1794), Fr. advocate and writer, b. Rheims. One of the most celebrated advocates of his time, he quarrelled with other members of the Bar and was dismissed. He then took to journalism, founding the *Journal de politique et de littérature*, but as a result of a clash with the Fr. Academy he had to leave the country, returning some years later as an Austrian councillor of state. He was eventually guillotined in Paris. He wrote *Histoire du siècle d'Alexandre le Grand*, 1762, *Histoire des révolutions de l'empire romain*, 1766-8, *Histoire impartiale des Jésuites*, 1768, *Théorie des lois civiles* (an attack on Montesquieu's *Esprit des lois*), 1767, and *Mémoires sur la Bastille*, 1789. See J. Cruppi, *Un avocat journaliste au 18<sup>e</sup> siècle*, 1895.

**Linguistic Families**. It is not to be assumed that every language belonging to one of the 3 main groups of languages, classified according to their structure (see LANGUAGES, CLASSIFICATION OF), is related to every other of the same group. Until about 150 years ago all languages were referred to as Hebrew in origin, and this was taken for granted since Hebrew was the language of the Bible. In 1767 the Fr. Jesuit Coeurdoux pointed out certain resemblances between Sanskrit and the European languages. Nearly 20 years later Sir Wm Jones described Sanskrit as being more exquisitely refined than Greek and Latin, yet bearing to both of them a stronger affinity, both in the roots of verbs and in the forms of grammar, than could possibly have been produced by accident. In 1816 Franz Bopp, later a prof. in the univ. of Berlin, pub. a comparative grammar of the Sanskrit, Gk., Lat., Persian, and Germanic languages, and thus laid the foundation for the comparative method of linguistics. On the other hand, in 1822 the Ger. encyclopaedic scholar Wilhelm von Humboldt rightly stated that languages are so different in form that it is impossible to classify them both *accurately* and *comprehensively*, or to divide the languages of the world into groups or families in such a way as to account satisfactorily for absolutely *all* of them. Indeed the later and more detailed study of linguistic science has proven many conclusions of earlier scholars to be groundless, and their classifications often inaccurate. Still, nowadays the great majority of forms of speech, including all the important languages, can be classified.

The 19th cent. witnessed the formation and development of a new branch of study known as comparative philology (see PHILOLOGY). Already in the late 18th cent. it was discovered (see above) that certain forms of speech such as Sanskrit, anc. Greek and Latin, Persian, and Germanic showed various linguistic

features which were more likely to have been inherited from a common ancestor of these languages than to have originated independently. Applying the so-called comparative method eminent philologists have attempted to reconstruct the original languages of modern linguistic branches, such as Germanic, Slavonic, Celtic, and so on (these were called proto-Germanic, proto-Slavonic, proto-Celtic, etc.), as well as of larger L. F., or sub-families, such as Indo-European, Semitic, or Finno-Ugrian (called proto-Indo-European, proto-Semitic, proto-Finno-Ugrian). At the same time it was possible to establish the close relationship between the members belonging to the same linguistic family, the closer relationship between the members of a linguistic sub-family, the still closer relationship between the members of a linguistic branch, sub-branch, or group. It must, however, be pointed out that there are still many open questions, and problems which to-day seem to be solved and to-morrow may be considered again open. For instance, until recently the Semitic and the Hamitic languages were considered distinct L. F.; nowadays most authorities regard all the Semitic and Hamitic languages as belonging to the same linguistic family.

With these and other reservations it may be said that the great majority of the 2500-3000 languages of the world may be classified in the following 15 to 30 L. F.: the number depends on the way in which the native languages are classified; whether the various groups be considered as L. F. or sub-families or only branches or sub-branches. Each of the L. F. may be divided into various sub-families or branches, most of which may be again subdivided into sub-branches or further languages or groups of languages. It must be emphasised, however, that the classification of languages is not the same thing as classification of races or nationalities. Languages have spread by military and political conquest, or cultural and religious influence, as well as by wholesale migrations, to peoples biologically quite unrelated to the original speakers. The most conspicuous example is the U.S.A., where 150,000,000 people of Eng., Irish, Welsh, Scottish, Ger., It., Polish, Amerindian, African, Jewish, and other descent all speak a language, which, once a Ger. dialect influenced by Lat., Norman Fr., and other forms of speech, is to-day the richest language in the world. In various parts of the world, and particularly in N. America (where, for instance, according to Voegelin, only 'over half the aboriginal languages are still spoken'), English has driven out other languages temporarily estab. In Lat. America the aboriginal languages are slowly disappearing before Spanish and Portuguese. In Siberia Russian has replaced many aboriginal languages.

**Main linguistic families**. Indo-European languages (q.v.); Semitic-Hamitic (q.v.); and Ural-Altaic (q.v.).

**The Caucasian linguistic family**. The region of the Caucasus Mts to-day presents

a bewildering complexity of diversified tongues spoken by fairly small groups, neighbours to one another, many of which are mutually unintelligible. Of these only one, Georgian or K'art'uli'ona, achieved literary expression at a comparatively early date (4th or 5th cent. AD), while others have remained practically unknown outside their own ter. On the other hand, various important ancient languages, long extinct (e.g. Elamite and Hattic, and perhaps also Lycian and Carian: see ALPHABET and CUNEIFORM WRITING), have been considered as having Caucasian affinities.

*European remnants of linguistic families.* Many more L. F. existed of which very little is known. For many thousands of years languages have been developing, changing, and disappearing throughout Europe as throughout all the other continents, without leaving any trace, because the people who spoke them disappeared and there was no method of recording them for future generations. Other peoples left written documents which as yet cannot be read or cannot be understood. Interesting is the instance of the ancient Cretans or Minoans, who left many thousands of documents written in various scripts, but none of the attempted decipherments has yielded results. Scholars, however, are generally agreed that the language was not Indo-European. (We are not referring to Minoan Linear B script; the documents written in this script apparently are couched in the early Gk language: see M. Ventris and J. Chadwick, *Documents in Mycenaean Greek*, 1956.) Even more interesting from the linguistic point of view is the case of the Etruscans (q.v.), who were the leading power in Italy in the first half of the first millennium BC. Much of their civilisation passed, through the Romans, into the fabric of European civilisation. The simple reading of the numerous Etruscan inscriptions does not present great difficulties, but their language has not yet been deciphered, and its relationship with other L. F. is still uncertain. Another linguistic problem is that of the Basques. Their language is as alien to Indo-European as can be imagined. It has been suggested that the Basques are the remnants of the ancient Iberians who were supposed to have been connected with the ancient Caucasian Iberians. Some scholars consider Basque as the sole surviving fragment of a common speech spoken by Neolithic peoples scattered over Europe long before the conquest or immigration of the Indo-Europeans. Others connect the Basques with the ancient Ligurians, who in Neolithic times apparently inhabited the whole N. part of the W. Mediterranean, and consider the ancient Iberian language as the offshoot of an early Libyan tongue. However, the problem remains unsolved.

*The Tibeto-Chinese linguistic family* has a great number of languages (partly agglutinating and partly isolating: see LANGUAGES, CLASSIFICATION OF) and dialects, and is spoken over a very wide

area, from Peking to Baluchistan, and from Central Asia to S. Burma. It falls into 2 sub-families, Siamese-Chinese and Tibeto-Burmese, the former comprising Chinese, Annamite, Karen, Siamese, Thai Lao, Thai Lu, Thai Ya, Thai Yüan, Thai Mao, Lü, Hkú, Ahom, Khamti, Pal-i; Shukia, and other Shan dialects, the latter comprising the numerous Bhotia languages (including Tibetan) spoken in Tibet, Bhutan, Sikkim, Nepal, Ladakh, and Baluchistan; Burmese; Pyu (extinct); the Lo-lo and Mo-so group of languages; the Mon group (Miao or Miao-tzu, with many dialects in SW. China; Yao or Yao-ming, with various dialects, in the Chinese provs. of Kwangtung and Kwang-sai, and in upper Burma); Li-su (Yunnan); the extinct Tangut or Si-Hia (powerful kingdom, AD 982-1227, between China and Tibet); and other languages and dialects.

*Malay-Polynesian* is another of the most widespread L. F. in the world, extending from Madagascar (Malagasy) through the Malay Peninsula, Indonesia, and the Philippines, to Formosa, New Zealand, Hawaii, and Easter Is. Hundreds of languages and dialects belong to this family, many of them having ancient literatures (especially Javanese) and indigenous scripts (Javanese, Batak, Redjang, Lampong, Macassar, Buginese, Filipino: see ALPHABET). Some of these languages are extinct (e.g. Cham in Indo-China). To-day the entire Malay-Polynesian language problem is simplified by the existence of a kind of lingua franca, 'basic' Malay, known as 'pidgin' or 'bazaar', which is understood in all except the interior districts, of the larger is.

*Dravidian languages* (S. India). Bishop Caldwell, who devised the term Dravidian from *Dramida* or *Dravida*, the Sanskrit form of Tamil, distinguished 12 Dravidian languages or dialects, 6 cultivated and 6 uncultivated. Many other dialects and sub-dialects exist. However, 4 are the main languages: Tamil (18,000,000 speakers), which possesses the earliest Dravidian literature; Telugu (about 22,000,000), the Dravidian speech most widely spoken; Malayalam (about 5,000,000), closely akin to Tamil, but more influenced by Sanskrit; and Kanarese (about 8,000,000), more akin to Telugu than to Tamil.

*Austro-Asiatic linguistic family.* The ancient Khmer language (Khmer is the indigenous name for Cambodia, which is the Europeanised form of the Sanskrit term Kambuja) and the Mon language (the Mon or Talangs, also known as Peguans, were the earliest civilised people of Burma) constitute the Mon-Khmer branch of a family of languages which in the remote past occupied a very extensive area. Kindred languages are still spoken in Assam (Khasi), on the Malay Peninsula (Senoi), and over the whole of Central India (Kolarians or Mundas).

*Other linguistic families of the Pacific.* The numerous languages and dialects of the Australian Aborigines, of the Papuans, of the Tasmanians (extinct in 1876), are

remnants of various L. F. having no apparent affiliation to others.

*Remnants of the Aboriginal or Palaeo-Siberian linguistic family.* The Yukagir, the Chukcha or Tusk, and the Koryak are Mongoloid tribes inhabiting the shores of the Arctic Ocean and Bering Sea in NE. Siberia. They speak Luoravetlan, Siberian Palaeoasiatic 'aboriginal' languages.

*Negro-African languages (q.v.).* Apart from the extremely primitive linguistic family of the Bushmen and the Hottentots, who actually are not Negro peoples, the numerous forms of speech (numbering perhaps 1000) of the Negro peoples of Africa are considered as belonging to the following main L. F.: Bantu, Sudanic or Sudanese (also known as Sudanese-Guinean), and Nilotic.

*Native languages of the American continents.* These languages and dialects, numbering over 1000, are termed American Indian, or Amerind, or else, even more improperly, Red Indian. Their classification is far from easy. Some families have been more or less carefully studied, but the variety is so great that even experts differ widely in their estimates of the numbers of groups, of their mutual cultural interpenetration, and the various results of migration and conquest in the distant or recent past. It must be pointed out that the study of relationship between various languages and groups of languages is extremely difficult when the hist. of the single languages cannot be studied, as is the case of nearly all the Amer. native languages. However, a broad linguistic div. can be made into the following geographical groups: (1) Canada and the U.S.A. (see NORTH AMERICAN NATIVE LANGUAGES): about 10 linguistic groups. (2) Mexico and Central America (see MEXICAN AND CENTRAL AMERICAN NATIVE LANGUAGES): various linguistic groups. (3) S. America (see SOUTH AMERICAN NATIVE LANGUAGES): about 10 L. F.

See F. Müller, *Grundriss der Sprachwissenschaft* (4 vols.), Vienna 1876-88; C. Brockelmann, *Grundriss der vergleichenden Grammatik der semitischen Sprachen*, 1908; F. N. Finck, *Die Sprachstämme des Erdkreises*, 1909; A. C. Haddon, *The Wanderings of Peoples*, 1911; F. Boas, *Handbook of American Indian Languages*, 1911-12; R. *Linguistic Science, or Linguistics.* Is the science or body of knowledge which concerns the speech of human beings, i.e. language (q.v.). L. S. is concerned with the origin of speech (see LANGUAGE, ORIGIN OF); it notes variations in speech, laws governing these variations, and their transmissions to other people, as well as the alliances and the differences between the various languages. A branch, known as historical linguistics, relates how, as a result of the movements of pop. and the migration of peoples, and of various cultural influences, the linguistic families (q.v.) have formed, how they have been brought into contact, and how they have influenced one another. See also LANGUAGE; LANGUAGE, ORIGIN OF; LANGUAGES, CLASSIFICATION OF; LINGUISTIC FAMILIES; PHILOLOGY.

Link, see METROLOGY.

Linklater, Eric (1889- ), novelist and biographer, b. Dounby, Orkney Is. He was educ. at Aberdeen Grammar School and Aberdeen Univ. He served with the Black Watch in the First World War and was invalided out in 1918. After the war he studied medicine but gave this up to take his degree in Eng. literature (1925). He then went to India, where he remained 2 years as assistant editor of *Bombay Times*, and was lecturer in Eng. literature at Aberdeen, 1927-8. He pub. 2 novels in 1929: *White Man's Saga* and *Poet's Pub.* For 2 years until 1930 he was in the U.S.A. as commonwealth fellow. His impressions of America were witty, and sometimes unkindly, fictionalised in *Juan in America*, 1931, a book which helped to make his reputation as a humorous, zestful, and inventive writer. A number of books followed during the next 10 years, including 2 biographies: *Mary Queen of Scots*, 1933, and *Robert the Bruce*, 1934. *Juan in China* appeared in 1937, and *The Impregnable Women* in 1938. On the outbreak of war in 1939 L. took part in the defence preparations of the Orkney Is., and in 1941 went to the public relations dept. of the War Office, for which he wrote *The Defence of Calais*. After the war he became lord rector of Aberdeen Univ. (1945-8). He has written plays for the stage and for broadcasting, and an autobiography, *The Man on my Back*, 1941. His book for children, *The Wind in the Moon*, 1944, won the Carnegie prize. Among his latest books are a novel, *The House of Gair*, and a travel book, *A Year of Space*, both pub. in 1953.

**Linköping**, tn in the prov. of Östergötland in Sweden, 142 m. from Stockholm. It has a fine museum and a cathedral second only in importance to Uppsala (q.v.) Cathedral. It manufs. cloth and hosiery. Pop. 60,973.

**Linley, Thomas** (1733-85), composer, b. Badminton. He estab. himself at Bath and in 1774 went to London, where he remained director of Drury Lane Theatre for many years. He supplied the music to Sheridan's (q.v.) *Duenna*, as well as to other stage pieces. Sheridan married his daughter, Elizabeth (1754-92), a singer, and his other 2 daughters and 3 sons were musicians also. All but the last 2 sons died young.

**Linlithgow, John Adrian Louis Hope**, 1st Marquess of (1860-1908), son of the 8th Earl of Hopetoun, received, in 1902, the title of Marquess of L. as a mark of appreciation for his services as first governor of the commonwealth of Australia. He d. 6 years afterwards, when his eldest son succeeded him as second marquess. The earldom of L. was a title held by the Livingstones in the beginning of the 17th cent., some of whom also held the title of Earl of Callender. His son, **Victor Alexander John Hope**, 8th Earl of Hopetoun and 2nd Marquess L. (1887-1952), soldier and administrator, was chairman of the joint select committee on Indian constitutional reform, which prepared the L. report, 1933. He was viceroy and Governor-General of India, 1936-43.

**Linlithgow**, royal and parl. burgh, and cap. of W. Lothian, Scotland, 17½ m. W. of Edinburgh. L. Palace (now a ruin) was the bp. of Mary Queen of Scots, and is a quadrangular building, dating in its present form from the 15th-17th cents., with a tower at each corner. It overlooks Loch L. (1 m. in length). Pop. 4000.

**Linlithgowshire**, see WEST LOTHIAN.

**Linnaeus**, or von Linné, Carl (1707-78), Swedish botanist, b. Rasnult. He was intended for the Church, but his leanings towards botany led to his being given the charge of Prof. Rudbeck's botanical gardens and acting as deputy lecturer for Rudbeck in 1730. From the age of 24 he began to work at his famous classification of plants according to their reproductive organs, which he began to describe in his *Hortus Upsalensis*. In 1732 he undertook botanical explorations through Lapland and Dalecarlia, and in 1735 he went to Holland, where he met Gronovius and Boerhaave. While in Holland he completed his *Systema Naturae*, *Fundamenta Botanica*, and *Genera Plantarum*. In 1736 he visited England and France, and returned to Sweden in 1738, when he estab. himself as a physician in Stockholm. In 1741 he became prof. of botany at Uppsala. Besides the work already mentioned he pub. *Bibliotheca Botanica*, 1738, *Critica Botanica*, and *Classes Plantarum*, 1738, *Phytographia Botanica*, 1750, and *Species Plantarum*, 1753. L.'s contributions to natural history, especially botany, are of great importance. Although much of his work consists of the summing up of conclusions already

reached by his predecessors, and although his classifications are sometimes at fault, the passion for order which he introduced into natural science, and his terse descriptions, proved of inestimable value to later botanists. His method of classification was based upon the examination of pistils and stamens. First he distinguished the plants without flowers from those which have flowers, redividing the latter according to their special characteristics. To him later naturalists owe the definition of genera and species and the uniform use of generic and specific names (i.e. the binomial system, under which the first name is that of the genus and the second that of the species, e.g. *Homo sapiens*); species named by him are distinguished by the letter L. following the scientific name, as *Bellis perennis* L. His style is a model of brevity and precision, with no possibility of ambiguous meaning; he methodically treated of each organ in its proper turn and used a special term for each, which never varied in meaning. The library and herbarium of L. were purchased by Sir James Edward Smith and transferred to England in 1784; they are now preserved in the rooms of the Linnean Society (founded 1788) at Burlington House, Piccadilly, London. See C. Linné, *Observations on Himself*, 1823; J. V. Carus, *Geschichte der Zoologie*, 1872; J. Sach, *History of Botany*, 1875 (Eng. trans., 1889); W. Junk, *Linné im Lichte neuer Forschung*, 1925; K. Hagerberg, C. Linnaeus, 1939; F. Moulton, J. J. Schifferes, *The Autobiography of Science*, 1945; also lives by D. H. Storer, 1792, and H. P. Malmsten, 1879 (in German), and E. M. Fries (in *English Botanical Year-book*), 1907.

**Linnankoski, Johannes**, see PELTONEN, VIKTORI.

**Linnet**, *Carduelis cannabina*, small bird of the finch family, which is very abundant in Britain, Europe, Asia, and NW. Africa. It received the name L. partly from its partiality for the seed of the flax plant (*Linum*), but it feeds readily on other seeds. The colours red, grey, or brown indicate the sex as well as the seasonal changes. The L. barely measures 6 in. in length, begins to breed in April, and generally chooses some low-lying bush for its home. The eggs, ranging from 4 to 6 in number, are a delicate pale blue streaked with a purplish brown.

**Linnhe**, Loch, inlet (35 m. long and 1-5 m. wide) between the cos. of Inverness-shire and Argyllshire, Scotland, at the head of which stands Fort William. At this point Loch L. joins Loch Eil (lying at right-angles to it), and the Caledonian Canal system begins. Loch L. is divided in two by the Eran Narrows, below which it is entered by Loch Leven. The is. of Eismore lies at the mouth of the inlet.

**Lino-cuts**. Lino-cutting is a relief process of printing. High-quality linoleum is mounted on a wood block, and the design cut thereon and transferred to paper by pressure or rubbing, exactly as in wood-cuts (q.v.). Lino-cutting is a 20th-cent. development of the printer's art, but

despite being easy to use the process is inferior to woodcut when fine work is required. See A. M. Hind, *A History of Engraving and Etching*, 1923, and M. Dobson, *Block Cutting*, 1928.

**Linolenic Acid** ( $C_{18}H_{32}O_2$ ), organic acid, found in linseed oil and in most seed fats, and partly the cause of the drying properties of that oil.

**Linoleum**, name given to a specific type of floor covering which was invented in 1860 by an Englishman, Frederick Walton. It is a hard-surfaced, pliable floor covering prepared by pressing or calendering a plastic mass in a smooth sheet on to jute canvas or some similar material. The plastic mass is derived initially from linseed oil. Walton observed the rubber-like properties of thick dried paint films and conceived the idea of making a rubber-like product by drying thick films of linseed oil. In his first process, the so-called scrim process, he dissolved lead drier in linseed oil (the lead speeds the drying) and flooded the oil from the roof of a tall building on to sheets of fine cotton material, called scrim, hanging in the building. The oil in this film form dries to a skin. By repeated floodings at daily or more frequent intervals, over a period of sev. months, quite thick skins, sometimes 1 in. in thickness, are built up. The skins are cut down and after a suitable maturing period they are made into 'cement' by heating with resin and gum in a steam-heated vessel. At the correct point the cement is discharged on a cooling floor and cut up. L. composition in various colours is made by mixing the cement so formed with fillers, such as ground cork or wood flour, and colouring material, using conventional mixing machinery such as is used for rubber or plastic compounding. The compound can be obtained in sheet or granulated form and various pattern effects can be obtained by the way the granulated or sheet material is fed to the calender during the process of calendering, or hot pressing the mix on to the jute fabric. After calendering, the L. is given a stoving treatment in warm stoves, and this sometimes lasts for as long as 12 days. The backing may be protected with a paint surface.

L. can be made in various grades and patterns. Thus plain, jaspé, moiré, granite, and marble L.s are common. Alternatively the plain material can be given a pattern effect by printing, using print paints. A special type of L. is that called inlaid. In the square and parquet designs this is made by hand-assembling shaped pieces on the jute fabric prior to entering the calender. Fancy designs can be made on a separate horizontal machine, whereby coloured L. composition in particle form is fed through stencils on to the backing, prior to hot pressing.

Walton can claim to have invented the same product twice. Thus in his alternative process he mechanically oxidised the linseed oil, using steam-heated vessels fitted with strong blades. The oil, heated in the vessel, is churned up by the rotary arms while air is blown through the mass.

The product is discharged just before it becomes semi-liquid, and is then made into cement in the normal way. At the other end of the process he invented an inlaid machine in which sheets of various coloured L. (unbacked) are fed to a rotary machine, when automatic dies cut out a portion of the sheet to press on to the hessian.

The variety of L.s has been much increased since the recent wide development of the plastics industry. The chief centre of L. production in Britain is Kirkcaldy in Fifeshire, but there are other centres in Dundee, in Lancs, and at Staines in Middx.

L. is not to be confused with felt-base floor covering. This is made by printing a design on to a bitumen saturated felt. The back is given a protective coating too. Felt base is a hard-wearing but quite cheap floor covering (see FLOORCLOTH). See F. Walton, *The Infancy and Development of Linoleum Floorcloths*, 1925.

**Linosa**, see PELAGIAN ISLANDS.

**Linosyris**, family Compositae, genus of perennial herbs, of which *L. vulgaris* (synonym *Chrysocoma linosyris*), Goldilocks, is a rare yellow flower of limestone cliffs in S. Britain.

**Linotype**, see TYPE-CASTING AND TYPE-SETTING MACHINES.

**Linseed**, seed of the flax plant *Linum usitatissimum*, is a shiny brown colour and of a flat oval shape. It contains from 36 to 42 per cent of oil, which is one of the most important for industrial applications. L. oil is obtained by expression or solvent extraction and used in paints, varnishes, linoleum, etc., while the cake or meal residue is used in animal foods. L. is used for poultices, but should never be applied to open wounds. See LNSEED OIL.

**Linseed Oil**, extracted from the seed of the flax plant *Linum usitatissimum*, grown originally for its fibre (linen) but also cultivated on a large scale specially for its seed. Main producing countries are the U.S.A., the Soviet Union, Argentina, India, and Canada. Extraction is by pressing in hydraulic presses or continuous screw presses (expellers) and to a lesser extent by solvent extraction (see OILSEEDS, PROCESSING OF). Linseed contains 36 to 42 per cent of golden-yellow oil which is liquid at ordinary temps. but, when exposed to the air in the form of a thin layer, sets to a dry film, due to the absorption of atmospheric oxygen. The crude oil contains various impurities, including phosphatides, gums, and colouring matter, which can be removed to some degree by refining. Prolonged storage in tanks has been used extensively to allow most to settle out as 'foots' and give a clear oil, but precipitation is now speeded up by the addition of water, and a continuous process with high-speed centrifuges is used for removal of the foots. Although the bulk of phosphatides are removed by these methods, some invariably remain dissolved or in colloidal dispersion in the clear oil and appear as a reddish-brown gelatinous mass called 'heat break' when the oil is heated to about 250° to 260° C. The

'foots-free' oil is thus suitable only for use in products prepared at low temp. or in which colour is not important. If required for high-temp. processing, as in the production of pale varnishes, it must be refined by the addition of an alkali (caustic soda) or acid (sulphuric) which settles out all suspended matter, 'break' and colouring matter. Large quantities of L. O. are also processed to produce 'boiled,' 'blown,' and 'stand' oils of improved drying properties. Boiled oil is produced by blowing the heated oil in the presence of small quantities of 'driers' containing lead, manganese, and/or cobalt, which have the effect of speeding up the oxidation. Blown oil is made by blowing air through it at temps. up to about 150° C. to raise its viscosity to a desired level by a combination of oxidation and polymerisation; and stand oil is prepared by heating refined or 'varnish' oil to 280° to 300° C. and maintaining the temp. until the desired viscosity is obtained. The thickening process by which stand oil is made is generally known as a process of polymerisation. L. O. is produced primarily as a technical oil for use in oil paints and varnishes, printing and lithographic inks, linoleum and oilcloth, and for water-proofing fabrics, etc., but it is also used in limited quantities as an edible oil. Saponified with alkalis, it gives soft soap of a thin character. Main fatty acid constituents are—unsaturated: oleic (13 to 19 per cent), linoleic (17 to 30 per cent), and linolenic (47 to 55 per cent); saturated (8 to 12 per cent). Linseed cake residue from the oil extracting process is used extensively in cattle foods. The seed contains a cyanogenetic glucoside, and an enzyme capable of decomposing it to produce the poisonous hydrocyanic acid, but this enzyme can be destroyed by the high temp. used during processing and the cake is thus rendered harmless.

Linsingen, Alexander Adolf August Karl Klaus Othmar von (1850-1935), Ger. general; b. Hildesheim, Hanover, son of Wilhelm Friedrich Klaus von L. (1815-1889). Entering the infantry in 1868 he saw active service in 1870-1. In various corps he was captain, 1882, major, 1889, and colonel, 1897. He was major-general commanding 81st Infantry Brigade, 1901, lieutenant-general commanding 27th Div., 1905, and general commanding 2nd Army Corps, 1909. In Jan. 1915 he took command of the S. Army, and in July that of the army of the Bug—afterwards amalgamated with a group of armies with which he held back the Russians, 1915-17. In Mar. of 1918 he advanced into Ukraine, and in June was made chief in command of the Mark of Brandenburg.

Lint, material consisting of the fibres of the inner bark of the flax plant, is used for manufacturing the stoutest fabrics as well as the finest cambrics. It is also a special dressing for wounds, consisting of soft, fluffy, untravelled linen cloth.

Linthwaite, see COLNE VALLEY.

Linton, William James (1812-98), wood

engraver, b. London. After some years' experience as journeyman engraver, he entered into partnership with John Orrin Smith in the production of the *Illustrated London News*. He became acquainted with Mazzini (q.v.), the It. revolutionary, whose ideals and theories he eagerly embraced. He started a political journal, the *English Republic*, which proved a financial loss, and he was compelled to try his fortunes abroad. He set up a printing press in America, and wrote valuable treatises on wood-engravings, some verse, and a vol. of memoirs.

Linton, small tn. of Cambs, England, on the R. Granta, 11 m. SE. of Cambridge. The par. church is of 12th-cent. origin. Barham Hall, how a farmhouse, stands on the site of a priory of Crutched Friars, founded about 1292. Here is L. College, one of the 5 vil. colleges of Cambs, a centre for further education and local community activities. Pop. 1800.

Lintot, Barnaby Bernard (1875-1736), publisher, b. Southwater, Horsham, Sussex. He figured as one of the victims of Pope's attacks in the *Dunciad* and Prologue to the *Satires*. He pub. works of Steele and Gay.

Lintz, see LINZ.

Linum, or Flax, genus of hardy annuals and perennials of the family Linaceae. The toughness of the fibre contained in the slender stems and the oil derived from the seeds make the genus of great economic importance. The Common Flax (*L. usitatissimum*) is not indigenous to Britain, though it is now being cultivated on an increasing scale, but 3 species are true natives: *L. catharticum* (Purging Flax) is a small plant common on dry pastures bearing cymes of small white flowers. *L. anglicum* is occasionally found in chalky places. Its petals are a beautiful but fugacious sky-blue. *L. bienne* has lilac flowers. The perennials are good rockery plants. *L. grandiflorum* and its varieties are rose and scarlet. *L. arboreum*, of shrubby habits, is yellow. For L. in industry see FLAX and LINEN.

Linus, formerly a heroic figure in Gk legend, now typifies a dirge or lamentation. Homer mentions the L. song, and the word is conjectured by most authorities to be derived from the Semitic *alenu*, 'we to us.' The ordinary legend treats L. as a youth who has either succumbed to the fury of some god or goddess, or has been subjected to a violent death.

Linyanti, see CHOBÉ.

Linz, or Lintz, Austrian tn, cap. of the prov. of Upper Austria, on the Danube. It is the third city of Austria, and is mainly on the r. b. of the riv.; the N. suburb, Urfahr, is on the l. b. It is the seat of a bishopric, and has a fine modern cathedral, sev. Baroque churches, and a Baroque prov. assembly house (Landhaus). Hitler (q.v.) was, as a child, a pupil in a school here. There is a large steel works, and machinery and textiles are manuf. L. was heavily bombed during the Second World War. Pop. 184,700.
